The study, jointly carried out by the Policy Research Center and the Ministry of Public Service and Human Resource Development, has focusedon what it called rent-seeking, a practice by middle-men and fixers as wellas government officials at all levels who are engaged in bribery, kickbacksand favoritism, even for the conduct of mundane official duties by government offices. The study, which government officials claim to be scientific and representative, has met serious criticism by Ethiopians at large and political analysts.

Critics say the meeting, where officials of the government were seen preaching about good governance, was just political posturing and empty rhetoric. They say it is a public knowledge that the same officials sitting atthe meeting and their cronies are involved in high level and widespread looting and embezzlement of public and private properties.

Many agree the ostentatious commitment shown by the officials at the meeting in fighting corruption was a pretence; and one that is aimed at creating the perception that they are serious in combating widespread andmassive corruption and plunder of the resources of the state and the people such as eviction of citizens and communities from their homes andland, a widespread practice throughout the country.

The televised meeting was just staged to divert the attention of the Ethiopian public away from the real issues at hand, namely the famine, freedom of the press, democracy and the rule of law. Former Minister d’état for Communication Affairs, who lives in exile in the US, currently apolitical analyst with ESAT,

Ermias Legesse, says the study ignores the main dimensions of good governance. He cites rule of law, transparency and most of all, freedom of the people, as the main areas that the studydeliberately missed. Ermias further mentions the the private sector and opposition political parties that have huge following in Ethiopia, did nottake part in authoring the study.

The focus of the study, according to Ermias, was only on the economic dimension of the problem of good governance in Ethiopia. Most of the attention was given to corruption linked to the lease and sale of urban andrural land, on which army generals who are members of the ruling Tigray People's Liberation Front (TPLF) and high level government officials were involved in unbridled plunder in a broad day light. He underscored good governance would never be attained where fundamental freedom and rights of citizens, the rule of law, a vibrant free press as a watch dog, accountability and transparency do not exist.

He further questions the legitimacy of the government saying the people of Ethiopia do not have confidence on the government and they don’t trustofficials are serious about ending corruption. He said the claim by the government that the study was a representative study does not hold water. And that the same staged show of ending corruption and institutinggood governance has been undertaken by the regime at high levels time and again. The former minister said the study should have been done by independent think- tanks, not by an institution that is run by the same people who also run the government, de facto.

Ethiopian political commentators who also agree with Ermias say they believe the aim of the recent bravado by the ethnocentric government is to cover up and divert the attention away from the political and economiccrises it is facing. This is yet another show to impress and hoodwink the Ethiopian people and the international community that the regime is handling the multidimensional crises it is facing. They say it could also bea show staged in a bid to get good ratings by the international community, particularly the WB and IMF.

The three month study conducted by the government that covers the Amhara, Tigray, Southern Ethiopia, as well as the capital Addis Ababa finds rampant corruption by government officials at various levels who work with middle men in the sale of land, services and other properties. The study that covers land, trade, investment, justice, transportation sectors has found lack of competence on the part of the officials who run the sectors. The finding by the study makes it clear that the officials, through the middle-men, receive kick backs from investors who come to their offices for routine paper work. The government experts who presentthe study say people are now forced to pay bribes even to obtain government issued ID cards and driving licenses.

The justice sector was also highlighted in the study as a major failure. Tardiness on the part of Judges and failure to give the proportionate sentence on convicts who give bribes were mentioned. Prosecutors and judges work hand in glove in accepting bribes in high profile cases of crimes. People with money and connection with the higher-ups do not serve their prison sentences fully. A case in point was a wealthy businessman from Tigray who was sentenced to prison terms, but conducts his business in the day and goes back to his cell at night. He wasbrought back to the court after he hit a pedestrian in a traffic accident.

Goods and food products meant to be rationed to the people have been illegally sold to traders who then sale the items to the public at sky high prices. Businessmen with connections to government officials do not paytaxes while huge taxes were levied on petty traders, who live hand-to- mouth. There is no quality control on imported products and people haveno option but to buy goods that fall far below the standard, according to the government study.

The study, however, does not mention nor specify any government official or their cronies by name for the massive corruption and pervasiveplunder that has become the hallmark of the Ethiopian regime . For this reason, Ethiopians wonder whether the government is really genuine to fight corruption this time around, when the very people involved in rampant plunder were also the ones sitting at the helm and even among those at the meeting chaired by Hailemariam Desalegen, the prime minister, and a fact admitted by him during the same televised meeting.

In the past, it is well known that a number of studies on fighting corruption and instituting good governance were conducted by the EPRDF government with no action taken against the perpetrators. Many believe no amount of studies and meetings would do away with the root cause of systemic corruption and the all around economic and political crisis plaguing the country. The remedy against systemic corruption, many agree, is to remove the regime and replace it with a popular representative government; and establish institutions that are pillars of genuine democracy and rule of law in Ethiopia. Only the presence of transparent and accountable institutions with a vibrant free press can stopcorruption.

BBC-Ethiopia PM Hailemariam Desalegn ‘open to criticism’ Ethiopia's prime minister has told the BBC he is not afraid of criticism fromjournalists, despite the country's reputation for stifling free speech. "Free media is very essential for the democratic process and... development," Hailemariam Desalegn said. He insisted some bloggers and reporters arrested last year were not real journalists and had terror links. Charges of terrorism have been dropped against all of the so-called Zone 9 bloggers. Five were freed in July after more than a year in jail ahead of USPresident Barack Obama's visit; the other four were acquitted of terrorismcharges by a court last month. The Zone 9 website had carried pieces critical of the government.

'We are not perfect'

But Mr Hailemariam said that their profession had not prompted their arrests, rather evidence linking them to groups wanting to destabilise the government. "This has to be very clearly underlined because that shouldn't be confused with the noble profession, journalism and the work that journalists do in this country," he told BBC World Service Africa editorMary Harper. "We are ready to be criticised by any journalists because weknow we are not perfect," he said.

The diversity of Ethiopia meant that democracy and human rights were central to its survival and success. "There is a a young, dynamic population in this country, with all the social media information flow - so without democratic discourse it's not possible to continue as a country -we believe we're on the right track."

Ethiopia and the al-Shabab:

Ethiopian troops have been helping Somalia's government fight al-Shabab and Mr Hailemariam said the Islamist militant group was "now diminishing". Concern now centred on how the Somali-based group, whichis aligned with al-Qaeda, might become linked with so-called Islamic State(also known as Isil) and other groups.

Ethiopia was working with the global community, including countries in theMiddle East, "to control Isil's infiltration in Somalia and al-Shabab", he said. "But this is a very tricky job and we have to be very careful and be vigilant in this regard."

The prime minister said any decline in the global economy, be it in theEuropean Union - Ethiopia's biggest export market - or China did not affect the country too badly as private sector investment was the mainfocus of its economy. Cheaper labour costs in Ethiopia could be an advantage in such an environment. "More manufacturing can relocate from China to Ethiopia so it's an advantage in that sense," he said.

Ethiopia has been enjoying rapid economic growth in recent years and also enjoys a close relationship with China. The prime minister said anydecline in the global economy, be it in the European Union - Ethiopia's biggest export market - or China did not affect the country too badly asprivate sector investment was the main focus of its economy.

China's slow-down:

Cheaper labour costs in Ethiopia could be an advantage in such an environment. "More manufacturing can relocate from China to Ethiopia soit's an advantage in that sense," he said.

Five ways China's economic crisis will affect AfricaChina brings jobs to Ethiopia

Eritrean migrants:

Eritreans are among the largest groups of people trying to get into Europe, along with Syrians, Afghans

and Iraqis. The international community should press for change in Eritrea if it wants to prevent Europe's migrant crisis from worsening, Ethiopia's leader said in the BBCinterview.

"The regime is putting all the young people into concentration and militarycamps in the name of military service - this has to stop," he said. Ethiopiaand Eritrea remain bitter rivals since a bitter 1998-2000 border war that killed some 70,000 people. Mr Hailemariam said his government was ready to support Eritreans fleeing by providing education, training, and in some cases jobs, but he added that Ethiopians already had problems of their own.
First risky step to Europe
How Ethiopia has cracked down on people smugglersEritrean migrants face new asylum battle

Eritrea's ambassador to the UN Girma Asmerom dismissed Mr Hailemariam's claim of a link between military service and migration as"pathetic and ridiculous". He told the BBC Focus on Africa radio programme that Ethiopia should deal with its own internal problems first. "There are 15 million Ethiopians in need of food assistance and thousands of people are fleeing the country.

The BBC and Ethiopia
He was also asked about a BBC proposal to introduce a news service for Eritrea and Ethiopia on medium- and short-wave radio. Details of the suggestion, which would need UK government approval, are not known. "Iam not sure what kind of services you're going to launch, but my concern is that you have labelled Ethiopia with some countries like North Korea, sothat's a very dangerous move and I think we oppose that."

Promised Land No More?

Rastafarians struggle in Ethiopia, stateless and not allowed to ownproperty, or even pay taxes (24 online) November 16, 2015:

Promised land no more? Rastafaris struggle in Ethiopia, stateless and not allowed to own property, or even pay taxes Rastafarianism jettisoned to worldwide notice in the 60s and 70s with the music of reggae stars and committed Rastafaris Bob Marley and Jimmy Cliff. THEY came from acrossthe world to Ethiopia in search of their “promised land”, but for many Rastafarians, struggling to win even basic rights, the dream never materialised.

“How did we survive so far? I wonder,” said Reuben Kush, the grey- bearded president of the Ethiopian World Federation, a branch of Rastafarianism. Kush left his home in Birmingham in Britain a decade ago to join a Rastafarian community based in the southern Ethiopian town of Shashamane, 250 kilometres (155 miles) south of Addis Ababa. But in decades of existence, the settlement’s around 500 members have failed towin legal rights to property, education or work.

Celebrating the 85th anniversary this month of the 1930 crowning of theirmessiah, Ethiopian emperor Haile Selassie, the dreadlocked group sway ina circle chanting to a drum beat “Emperor Selassie I, Jah Rastafari”.

Rastafarianism— which jettisoned to worldwide notice in the 1960s and 70s with the music of reggae stars and committed Rastafaris Bob Marley and Jimmy Cliff—first emerged as a spiritual movement in the 1930s among descendants of African slaves in Jamaica, who adopted Haile Selassie as their leader at a time when he stood out as the only independent black monarch in Africa. They even took their name from hispre-coronation title, “Ras” for “head” and his birth name “Tafari Makonnen”. The “King of Kings” was deposed then killed by a military junta in 1974.

A supporter of decolonisation and cooperation among African states then largely under European control, Haile Selassie in the 1950s set aside 500 hectares (1,200 acres) in Shashamane to welcome back descendants of slaves seeking to return “home”. “Ethiopia is our land, for we blacks in theWest,” said

Kush. Rastafarians say it was the “divinity” of the land that drew them to Ethiopia, mentioned in the Bible more than 30 times and believed to be the birthplace of the Queen of Sheba, who visited the wise King Solomon. Junta confiscated plot In the late 1970s, Mengistu Haile Mariam’s Marxist-Leninist regime confiscated the Shashamane plot, prompting most Rastas to flee its authoritarian rule.

When Mengistu’s rule was toppled in 1991, some returned. But life in thepromised land remains a struggle, with exile followed by exclusion. “The Emperor had given us 500 hectares – today we live on six or seven hectares,” said Kush. “Today, we have no control over our property.”

Though many turned their backs on their country of origin by not renewing their passports, they have not been granted Ethiopian nationality, leaving them effectively stateless. In tightly controlled Ethiopia,still run by Communist-inspired ex-rebels, land is a sensitive issue with Rastas neither allowed to file building permits or own property.Nor can they work, pay taxes or send their children to university. “What’s disappointing is that I have to confess to my relatives back home that wearen’t integrated here either,” Kush said.

On the recent anniversary of the emperor’s coronation, Rastafarians gathered as reggae music played and psalms were sung in a church painted red, yellow and green—the colours of both the Ethiopian and Rastafarian flags. “We want to be identified as natural Ethiopians now –not as Jamaican, nor American!” said Paul Phang, a Rastafari leader, without fully clarifying what he meant.

In legal limbo

The Rastas’ political wing, the Ethiopian World Federation, started in the1930s but is still lobbying for their basic rights. “We’re here to stay. Wehaven’t been kicked out of Ethiopia after all these years, that means weare accepted,” Kush said.

But they remain in legal limbo.

“Our needs are basic human rights needs,” Kush added. “We need to be able to tell our children that they have a state. Children are being born here and being classed as stateless—not able to get identification here and not able to get IDs from the countries where their parents come from.So we’re in a limbo.”

But with each Rastafarian church celebrating its own way, there are political divisions within the movement too. “If every one of us was in accord, then these natural rights would have been granted to us already,”said Phang, a priest from the Bobo Ashanti Rastafari group. “So because of this different ideology, different thinking, it’s like we cannot approach the government in our oneness.” (AFP)

Is TPLF Giving Shape To Reconciliation Ideas?

ህወሓት ክፍፍልዋ በጣም ተባብሶ በረሃብ እየሞተ ያለው ህዝብ እስከ መርሳት ኣድርስዋታል።

(ምኒሊክ ሳልሳዊ November 16, 2015)

ህወሓት ክፍፍልዋ በጣም ተባብሶ በረሃብ እየሞተ ያለው ህዝብ እስከ መርሳት ኣድርስዋታል። ከሶስት ሳምንት በላይ የዘለቀ ስብሰባ እያካሄዱ ለማመን የሚያስቸግሩ ወንጀሎች እንደተሰሩ እየሰማን ነው። ስለ ግምገማዋ ሌላ ቀን እመለስበታለሁ። ሰሞኑ ኣቶ ኣባይ ወልዱ ኣፅቢ፣ ሳዕሲዕ ፃዕዳ እምባ፣ ኢሮብ በረሃብ የተጠቁ ወረዳዎች እየጎበኙ ይገኛሉ። በጉብኝታቸው ወቅት ኣንድ ግራ የሚያጋባ ተማፅኖ በረሃብ ተቆፍድዶ እየሞተ ላለው ለህዝባችን "እርዳን" የሚል ኣስገራሚ ንግግር ኣድርገዋል። ስለዚህና የሚልዮኖች ሂወት እንዴ ኣደጋ ውስጥ እንዳለ መረጃ ልስጣችሁ። "የመጣው የእርዳታ ከታው ትንሽ ስለሆነ ህዝባችን ተባበረን፣ ቅድምያ ሊረዳ የሚገባው ራስህ በመጠቆም ለባሰው እንዲዳረስ እርዳን"ኣቶ ኣባይ ወልዱ በጉብኝታቸው የተናገሩት።

"ድርቅ ያጠቃን ቤት ሳይለይ ነው። እገሌ ከእገሌ ይሻላል የሚያስብል ምክንያት የለንም። መንግስት እንደምንም ብሎ ሊረዳን ይገባል፣ ልጆቻችን በረሃብ እየሞቱብን ነው። "የሳዕሲዕ ፃዕዳ እምባ ኑዋሪዎች የተናገሩት። "የውሃ ችግር ድሮም የ7ሰዓት መንገድ ተጉዘን በማምጣት ነው የምንጠጣው። ኣባይ ይሄ ነገር ኣንተራስህ ምታውቀዋለህ። ኣሁን ምንጮቻችንም ደርቀዋል። ችግሩ ከኣቅማችን በላይ ሆኖብናል "የኢሮብ ኑዋሪዎች።

Which countries wanted to colonize Ethiopia?

Eros Mek Lives in Addis Ababa, Ethiopia July 28

Italia wanted to colonize Ethiopia and relocate 3 million Italians to the nation permanently as was done in South Africa and Australia.

Emperor Menelik II of Ethiopia.
Egypt wanted to colonize Ethiopia backed by the Ottoman Turk Empire to change the demography and the religion of the nation by getting rid of the ruling royal line and destroying the Ethiopian Orthodox Church.

Adal sultanate backed by Somalians wanted to colonize Ethiopia in1531 led by the Imam and Sultan Ahmad ibn Ibrahim Al-Ghazi or known here in Ethiopia as “Ahmed Gragn” meaning Ahmed the Lefty (left handed); the culture of the Ethiopians sees being a lefty predominantly as an “unusual” thing. The Adal ideology was the same as the Egyptian-Ottoman ideology — to colonize and destroy the Orthodoxy of the Ethiopians and Islamize the nation.

The History of Famine In Ethiopia

A historical reflection on famine in Ethiopia *(excerpt from a book entitled "Red Tears" which's relevant to the current drought in Ethiopia)*

Ethiomedia: By Dawit Wolde Giorgis November 23, 2015 Drought is a natural phenomenon but it is often the reaction of society and governments that creates a famine. This article examines the reactions of past rulers to food shortages in Ethiopia. One of the gifts ofhistory is that it can teach us what may happen through what has happened so that society and governments learn from them but rarely do. They would rather commit the mistakes and then regret their own decisions because it results in the unnecesary death and suffering of many, or the demise of the regimes.

The current crisis as stated by The Famine Early Warning System (FEWS)is summarized: '*The Ethiopia Humanitarian Country Team (EHCT) has early estimates that 15 million people will likely need food assistance in 2016, around half covered through the Productive Safety Net Program (PSNP) and the rest through emergency assistance. Needs are likely to beparticularly high in July and August 2016 during the peak of the lean season in Meher-producing areas. In many areas of the country, lean season may start early this year.'*

Ethiopia's history is filled with terrible famines, because life for rural Ethiopians has changed so little over the centuries. To understand faminein Ethiopia, it is necessary to under-stand how the peasants live.

Life for the Average Ethiopian

Less than 20% percent of the Ethiopian population (90 million) is urban. The vast majority of Ethiopians have always supported themselves through subsistence farming or by raising cattle, sheep; or goats. They live on the edge of survival; their methods of farming and their lives are primitive. Each family grows what it consumes. The chief source of poweris the draft ox; in some parts of Ethiopia, the camel is used for plowing.

Many farmers have to borrow or rent oxen because they are too poor topossess their own. Wealth in the pastoral regions is measured in cattle,valued not for their meat, but for their potential as a source of oxen.

The daily work is quite strenuous. They expend a great deal of energy, buteven in the best of times they never have much to eat; consequently they are often undernourished. There are many lean years when harvests are poor, and there is always the threat that a crop could fail completely, affecting not just a few scattered individuals as in the Western World, butentire communities or even entire provinces. Severe famine is, and has always been, within the living memory of every village.

The ultimate irony is that even if nature is kind and harvests are good, thepeasants' lives remain unaffected: they gain nothing from their best yearsbecause they are not allowed to accumulate wealth,

even in the form of food stores. In times of plenty the state, church, or landlords have always stepped in to seize the surplus, leaving the peasants just enough to scrape by until the next harvest. For the subsistence farmer, regardless ofthe harshness or benevolence of the physical environment, there are no good years.

This has been the pattern of existence in Ethiopia for centuries. The peasants, survival is so precarious that the least break in the pattern threatens them with shortages and hunger. Once that shortage is upon them, it is the government that will determine the degree of suffering, either helping or hindering the effects of famine. Whether the masses starve or survive depends both on preventive steps before and effective measures after, the onset of trouble.

Early Famine

Ethiopia`s written history dates from the early middle ages, when droughts and plagues of natural pests such locusts, caterpillars, or rateswere the most common causes of crop failure. Historical portrayals of famine-stricken regions could easily have been describing the scene in 1984 or the crisis the country faces now. . An observer writing of the northern famine of 1625-6 describes once thriving farmlands left utterly barren, ``as if someone had put fire to it`` and starving peasants who
looked more like exhumed people than live ones because all their bonesshowed on them.

In those days Ethiopians who were spared the effects of deprivation sold their possessions to aid the starving, and the Emperor gave food and clothto the refugees so many occasions. The Ethiopian people regarded the Emperor as their natural benefactor. His role, from ancient times until the 1974 Revolution, was one of father to his people; he was in the minds of the peasants, a sacred personage, the Elect of God by virtue of his decentfrom King Solomon. This was the role taken seriously by most Emperors and by none more so than by Menelik a century ago, during the most devastating famine up to that time.

The Famine of 1888-1892

This famine was extraordinary both in its extent and its origins. The Italiannation, joining the rush for an African empire, had chosen Ethiopia as likely prizes. They were already wresting ports from the empire along the coast of Eritrea, where in 1887 they landed a shipload of cattle at Massawa. Unknown to anyone, the cattle were infected with the highly contagious rinderpest (cattle plague) which spread with deadly effect overthe entire Horn of Africa. By 1890, fully 90 percent of the cattle and oxen in the country were dead. This disaster multiplied, for deprived of their oxen, peasants were too demoralized or weakened from chronic malnourishment to prepare their fields with hoes. Beginning in 1888, a large percentage of land lay fallow and the famine began.

In the pastoral regions, it was even worse. Food had always been obtained by trading animals and hides.

Wealth was calculated in herds, which now were exterminated overnight. There were suicides among the once-rich herdsmen.

To make matters worse, the ‘rinderpest’ was coupled with several years ofsevere drought and devastating invasions of locusts and cater-pillars.
From 1888 through 1892, grain became scarce, prices rose to astronomical heights, and people began to starve in great numbers. Martini, an Italian who later became Governor of Eritrea, records frightening images which could have been taken from any of the sheltersin 1984 a century later:

“The dead awaited the hyenas, the living awaiting death. From a thicketissued a thin murmur of voices…we are accosted for help, and from theirdeath beds suddenly rises a mob of skeletons whose bones can be seen under the taut skin as in the mummified skeleton of saint Bernard. Theytry to follow us, they also crying out meskin, meskin [alms, alms] …I stumble on young boys searching in the excrement of camels to find a grain of durra. I flee, horrified, hiding my watch chain in shamed of the breakfast I had eaten, of the dinner which awaited me.”

According to this author (Martin) bandits roamed the countryside looting anyone or anything they could find. Parents sold their children as slaves tothe Arabs rather than see them starve. Anything remotely resembling foodwas eaten: cow-hides were ground to powder and baked in to cake; horses, dogs, carrion or even the carrion-eaters themselves were consumed. Cannibalism broke out, and there were appalling stories of mothers devouring their children. Lions, leopards, Jackals, and hyenas became so bold that they entered even the largest cities to feast on the victims lying in the streets. In some villages they would attack the living who, too weak to defend themselves, were dragged screaming in to the night.

Those strong enough to walk quit their homelands in droves, trekking great distances in search of food. Large tracts of land in the North weredepopulated, and in some cases completely abandoned, creating in theminds of the Italians the illusion that the land was ripe for conquest-a political dynamic that would continue for the next 40 years. Refugees headed either for the coast where they hoped grain might be imported, orto the cities. The Italians, in control of Asmara, were so alarmed by the number of refugees that they closed the gates to the city and turned theirbacks on the starving people.

Emperor Menelik, behaved with the fullest humanity and generosity toward those in need. The record of Menelik`s efforts to aid his people portrays a truly benevolent ruler doing everything in his power to bring relief to his subjects. In the first year of famine he opened his private granaries throughout the country, until they were entirely depleted. Many victims flocked toward the capital, Entoto, as the heart always

heart of theempire and home of the father protector of whom they had always heard. Menelik, in contrast to the Italians at Asmara, welcomed them and spent part of everyday distributing alms to the needy. When Entoto became filled with refugees, Menelik had an additional building erected to shelter them. He imposed austerity measures at the palace; beef was forbidden and any meat became a rarity. He unsuccessfully attempted to import grain. Aware of the peasants` reliance on their oxen, he encouraged themto hoe by hand. He went in to the fields himself with a hoe, so the entire country might hear about it and follow his example. Hearing that some chiefs and noblemen were hoarding grain in the provinces, he sent his officials to seize it and distributes it among the poor. When his own herds had finally been replenished after the famine, he generously gave away hundreds of cattle to restore the provinces to their former productive state.

Menelik was, in short, an Emperor who cared about his people and theirtroubles, a leader who faced problems with resolution and imagination. Subsequent rulers, including his nephew, Haile Selassie, could have learned a great deal from his example.

The 1972-1973 Famine, locally known as the “Wollo Famine”

Haile Selassie was not an evil man, but his priorities were misplaced. He was so concerned with establishing a strong central government and modernizing the country that he failed to meet the challenge of natural disaster. Like Menelik, he viewed himself as the father of the people. He was in fact very religious and was horrified when he learned the true degree of disaster, but he made the error of relying on an untrustworthy bureaucracy. In it’s final stage, the 1972-1973 famine reached such deadly proportions that the emperor`s image of wisdom and fatherliness was shattered, and the people no longer had faith in him. He then made the mistake of trying to cover up his negligence. He and his ministers tookthe position that they were not to blame. It was this false pride, this lack of courage to admit mistakes that brought about his downfall

Most of the facts about the 1972-1973 famine and it’s cover up wereuncovered by a commission of Inquiry set up at the beginning of theRevolution Its Chairman was Professor Mesfin Wolde Mariam, whose findings form the basis of this summary. The 1972-1973 famine caused 200,000 deaths from starvation and its attendant diseases, but it will bestbe remembered for its political implications: it led directly to the end of the Empire and the rise of Mengistu. Like the 1984-1985 famine it need never have happened; it was brought about by the indifference and disorganization of the government.

As early as 1964 there were reports of extensive hunger in Wollo province; chronic food deficits continued throughout the decade. Warningsand urgent requests for food brought very little response. A trickle of reliefgrain entered the province sporadically, but no measures were taken to stockpile grain from other areas. No attempt was made to improve agricultural yield through technological innovations, even though everyoneknew the region was prone to sever natural disasters.

Consequently, when after years of poor rainfall in Wollo the 1971 rains didnot come at all, the government was completely unprepared. In a nightmare of red tape and bureaucratic incompetence, local authorities languidly exchanged letters of concern. The pace was maddeningly slow.
Days would go by before replies were made to requests for more information; months sometimes passed before there were answers to demands for food. Despite sharp warnings from some local administrators, there was no sense of urgency in the central government. Not until five months after the failure of the rains was a committee formed to look in to the problem. Not until a year and two months after grain was first requested, did some finally arrive, and that was pathetically inadequate.
Thousands were already dead and thousands more would die.
In 1972 the rains failed again in Wollo and Tigray; again there would be no harvest for this region. Now two million people were affected. All the horrors of widespread famine were set in motion, as some victims were driven to stealing, and disease spread through the shelters. The governmental committee felt it needed more time to study the situation. Their study eventually showed that a problem did indeed exist –but only one-tenth of the estimated food requirement was available and even thatcould not be transported.

By the beginning of 1973 the capital was full of whispers of famine in Wollo. Up to this point the ministries had been indifferent to the problem.Now, with rumors sweeping through the streets and people demanding answers, they resorted to the cover-up: they denied ever having heard ofa famine. Through the media they gave assurances that the situation wasnormal, that there were in fact surpluses. Their lies were exposed and therumors were confirmed when bands of ragged, starving peasants arrived at the outskirts of the capital in February 1973. Police were ordered to prevent them from entering the city, but it was too late. Small groups from the city were able to talk with the peasants and obtain the first definite confirmation that famine existed.
The government then grew indignant. Like Mengistu a decade later, they claimed that rumor-mongers were fabricating a crisis in order to discredit the government. A high government official appeared on television in February saying that there was no famine, and if there was it was the people`s fault. He reasoned that it was ``the obligation of the people to inform higher authorities whenever there is drought. Since this was not done by the people, it appeared that they were not aware of their obligations.” The university was instrumental in unraveling this disinformation campaign, sending a camera team in to the famine region and exposing the true state of the peasants in a continuing exhibition at the geography department. The people of Addis became convinced that the government was lying and could not understand why the Emperor wasdoing nothing.

It is uncertain whether the Emperor knew anything about it. His ministerswere deliberately keeping news of the famine from him. In their view, their first duty was to protect the ruler from bad news. To understand their reasoning, one must understand the role of Haile Selassie for Ethiopians. He was not just a ruler. He was the oldest, most prestigious ruler in Africa. Any claim Ethiopia could make to greatness was embodied in him. He was a world figure who had been feted by Eisenhower, Kennedy, and Nixon. His uncle Menelik had successfully resisted attemptsto colonize Ethiopia, and at the battle of Adwa had led Makonen, had beenone of the leaders in the battle. Ethiopia`s entire sense of self, the pride that it felt as a nation and a people, were embodied in Haile Selasie. In keeping with that feeling, any blemish, any hint of trouble, could not be contemplated. As far as the officials were concerned, Ethiopia could have no major problems, and the Emperor didn't need to hear about the small ones.

There was a certain amount of self-survival in the official cover-up as wellGovernment officials were almost invariably aristocrats, members of the ruling class in a feudal society. Their political, social, and economic well- being depended upon the survival of the Emperor and the system which he perpetuated. Protecting him was protecting their own interests.
Another factor was his advanced age. He was over 80 and his mind wasnot as quick as it once had been.

Finally, however, the rumblings reached even the Emperor`s ears and he decided to act. He sent the Minister of Interior on a fact-finding mission toWollo. When the minister returned in May 1973, he under-played the severity of the famine in his oral report to the Emperor. Nine days later, ina written report, he described the scene more bleakly; crowds of ragged, famished people were lining the main high way north of Addis Ababa, stopping cars and buses to beg for food.

Throughout 1973 the government was sending some relief grain to the stricken areas, but in inadequate amounts even by their own estimates. At the same time, with grim reports sitting on their desks, the various ministries continued to deny the existence of the famine. In Addis peoplewere so disgusted and distrustful that they took up private collections to aid the starving, and even paid for the own transport to distribute it themselves.

Rumors and denials continued throughout the year, and agitation grew. But it was not until a British journalist, Jonathan Dimbleby, went to Wolloin September 1973 and filmed the horrifying scenes of the unknown Famine (sometimes referred to as The Hidden Hunger) that the situation exploded. The film aired on television around the world, showing the misery in Wollo in all its ghastly detail. Ethiopian embassies were instructed to deny the validity of the film, a tactic that only added to the revulsion felt by the world community toward the Haile Selassie regime. Ethiopian students in Europe wrote home of what

they had seen on television; anti-government feeling grew in the capital.

During the civil unrest of 1974, the old regime was discredited by contrasting the sufferings of the people with the opulent lifestyles of the Emperor and his men. Posters appeared showing an emaciated peasant beside a picture of the Emperor feeding meat to his dogs from a silver tray. On the night before the Emperor was deposed, re cut version of Dimbleby`s film was shown, juxtaposing starving peasants against scenesof the Emperor squandering money on banquets. Overnight the people turned against him. No one thought of standing up him when he was jailed the next day.

In late 1974 I became the Deputy Commissioner of the RRC and was involved in relief and rehabilitation efforts in the affected areas. We set out to demystify the Emperor and show the people how ruthless he and his regime had been (and how benevolent and caring the revolution was)Dimbleby's film was repeatedly shown around the country, and Dimblebyhimself was one of the foreigners to be honored by the revolutionary government.

Then history began to repeat itself. Mengistu gradually became the new monarch. He enveloped himself in an aura of awe and terror. In England,Dimbleby spoke out against the Red Terror in 1977; he was publicly condemned in Addis and banned from ever returning to Ethiopia. His film was never shown again. The pictures we had been using in exhibits aboutthe revolution started disappearing. The one of the Emperor feeding meatto his dog was blown up to life size for the opening of the National pictorial Exhibition. Then it was given a sharp look of disapproval by Mengistu, and it vanished from sight soon after.

And indeed for Mengistu they merely generated cynicism. Why hold thesepast events up to public ridicule when Mengistu was now throwing away more on a high lifestyle than the Emperor ever had?

Lessons

The famine of the 1980s was the third large-scale famine in one hundred years. The crisis has shown how little has changed. Far from the benevolence of Menelik, and even worse than the incompetence of Haile Selassie`s regime, Mengistu and a few of his cronies willfully, ruthlessly turned their backs on the suffering of the people. For them the end alwaysjustified the means, and that end is the political metamorphosis of Ethiopia to a structured and regimented society. The faster they arrive at that goal, the better they will like it, regardless of who falls by the way side. They were in effect tapping that mystique and aura of divinity that always surrounded the old emperors and rerouting it in to a worship of Marx, Lenin, and Mengistu.

Even as the famine raged, Mengistu declared the creation of a new state structure that made him president of the Democratic Republic of Ethiopia.There was another colorful celebration costing millions of dollars, even asthe specter of famine was hovering again over the northern provinces.
Meanwhile, in another six-hour speech, Mengistu extolled the glories of the Revolution and it's achievements under his leadership. Thanks to theefforts of the RRC the international community responded in unprecedented manner. It became the largest humanitarian operation since the Second World War. Despite the cold war, East and West joined hands and showed remarkable historic cooperation to save lives. As a result, millions of lives were saved. But far too many perished as a resultof Mengistu's reluctance to receive aid from the West. (*For details read my book: Red Tears*)

We hope that the drought of this year (2015 and 2016) would not lead tosuch kind of tragedy. According to the Famine Early Warning System (FEWS) there are 15 million people affected by the current drought. FEWS predicts that: *"Delays in humanitarian assistance or in thedistribution of PSNB resources will result in increase in the local prevalence of malnutrition as households further reduce their food consumption*".

If this happens it will be another huge catastrophe and the rhetoric of the EPRDF on the so called growth will be deluding itself and will sound hollowwhen it resonates on an empty stomach.

How Bad Is The Drought In Ethiopia? IRINewsPERSPECTIVE (November 20, 2015)

Alarm bells are ringing for a food emergency in Ethiopia. The UN says 15million people will need help over the coming months. The government, wary of stigma and therefore hesitant to ask for help, has nevertheless said more than eight million Ethiopians need food assistance. Extra imports to stem the crisis are already pegged at more than a million tonnes of grain, beyond the government's means. Inevitably, comment and media coverage compare the current situation with 1984 – the year Ethiopia's notorious

famine hit the headlines. Reports suggest this is
the worst drought in 30 years. One declares it a“code red” drought. Sohow bad actually is it?

The country of close to 100 million people is huge, spread over an area of more than a million square kilometres that ranges from semi-desert to swamp to mountain ranges and fertile farmland. The weather systems andagricultural patterns are diverse and complex. Even within the higher- altitude areas of the country, the most densely populated, the typical rainy seasons vary and crops are grown at different times of the year. Thisyear, the weather has been prone to even greater variation due to the global climate phenomenon El Niño, last seen in 1997-1998.

Ethiopia produces more than 90 percent of its own food. Last year, the cereal harvest was estimated to be 23 million tonnes, but imports in recent years averaged 1.2 million tonnes – just five percent of that. So even if 2015 and 2016 are bad years (the impact of a poor harvest is felt months later as food stocks run out), the vast majority of Ethiopian peoplewill support themselves and eat produce from their own country. But in a giant like Ethiopia, 15 percent of the population is 15 million people – more than the entire humanitarian caseload of the Syrian crisis. An extra five percent of cereals is another 1.2 million tonnes.The costs and logisticsbecome formidable at this scale.

WEATHER

The weather is only one part of the equation in whether people go hungry.Politics, economics, the availability of seeds and fertiliser, conflict, trade and labour markets, population pressure, social habits, and a host of otherfactors matter too.

While the science and sociology of food security is complex and layered, international agencies working on drought and hunger-prone countries, including Ethiopia, use a scheme called the Integrated Food Security and Humanitarian Phase Classification Framework (IPC) to simplify the mass ofunderlying data into a five-step scale – from minimal food security pressure to famine. Some parts of northern Ethiopia are already flagged as being in “Phase 4”, one step from the worst category. More are expected to follow, unless sufficient resources can halt the slide.Even getting a single view of one year’s weather, let alone humaninteraction with it, is no simple matter.

For more than 30 years, meteorologists have gathered a giant archive of satellite data for Ethiopia. US satellites, in particular METOP-AVHRR, churnout petabytes of data. Triangulating that with other sources, including ground-based measurement, farm assessments, nutrition, and price monitoring provides a rich toolkit to estimate vegetation, rainfall, soil moisture and temperature – ultimately giving an idea of food on the table.Considering all the variables, the drought and famine watchdog FEWS NET, established in the wake of the 1984 famine, has used direct, but not alarmist, language to describe the prospects: its latest report for Ethiopia is titled “Large-scale food security emergency projected for 2016”. The UN’s

Food and Agriculture Organization, meanwhile, warned: “food security conditions sharply deteriorated.”

Political sensitivity, donor pressures, logistics, media distortion, inefficiency and scepticism may yet conspire to tip more Ethiopians into “Phase 4.” Even in the best-case scenario, the financial resources will be hard to find – $270m is still needed for 2015 alone, according to UN’s emergency aid coordination body, OCHA, and needs are set to rise sharply(the US, the UK and China havepledged relatively early to the response, according to the government). To illustrate the complexity of weather patterns in Ethiopia and attempt to demonstrate a link with El Niño, IRIN analysed 30 years of satellite imagery to provide some visual evidence of the complex and erratic picture of weather in the Horn of Africa.
ETHIOPIA VEGETATION HEALTH INDEX 1984 – 2015
Above: a snapshot of just one of the datasets used by FEWS NET and theUN to monitor vegetation health – based on a combination of “greenness”as seen from space, combined with estimates of rainfall and temperature.In this, 1991 stands out as a bad drought year, with 1997 showing the impact of heavy rains in the south – these too associated with El Niño.
Each column represents a month, January to December, left to right. Redcolours indicate poor vegetation health. (Text ends)

National Electoral Board of Ethiopia (NEBE) & The ElectoralPolitical Climate for Rival Parties In Ethiopia.

Is the NEBE fighting for democratization and the rule of law inEthiopia?

*Elections for Federal and Regional parliamentary seats would be held onmid May:e*lections for low level (local Kebeles/Woredas) administrative councils would be held in the next April)

*TPLF, the central component to the ruling EPRDF is locally known as "*Woyanne" where as still known as in it's English term the TPLF which is an abbreviated form for "Tigrai Peoples Liberation Front", is a derogatory term for the current ethno-centrist regime in Ethiopia as for the military "Duerg", which was also a term for the previous ruling military council whose came to rule Ethiopia for over seventeen years until it was toppled by the TPLF (the Woyannes) led coalition known as the EPRDF (locally known as e-ha-deg) in May 1991. The term EPDRF is an umbrella name for a political front (nom-de-politique) mainly led by the Tigrean People's Liberation Front (TPLF), a brand that the TPLF uses to project a bogus image of a political coalition known as the Ethiopian Peoples RevolutionaryDemocratic Front (EPRDF) comprise of, Tigrai Peoples Liberation Front (TPLF), Amhara National Democratic Movement (ANDM) Oromo Peoples Democratic Organization (OPDO), Southern Peoples Democratic Movement (SPDM), Afar National Democratic Party (ANDP), Ethiopian Somali PeoplesDemocratic Party (ESPDP), Harrari National League (HNL), Gambela Peoples Democratic Movement (GPDM), Benishangul Gumuz Peoples Democratic United Front (BGPDUF)

Eritrea: from colonialism to independence

(By Martin Plaut) It is remarkable is quite how well the history of Eritrea was captured in early photography. Eritrea's colonial masters were keen to celebrate their successes via photos. These are from my collection. For the Italians the use of images had been an important element of the Risorgimento, with Garibaldi's campaigns photographed and distributed bypopular *carte de visite*. The British too had an appetite for colonial photography, both to illustrate the extent of their imperial conquests and to capture the 'ways of the native.'

Britain, furious that the Ethiopian Emperor Tewodros II imprisoned severalmissionaries and two representatives of the British government, sent a vast army to release them. Some 13,000 British and Indian troops arrivedfrom Bombay on 280 vessels they landed at Zula on Eritrean coast 48 km south of Massawa, preparing to attack the Emperor inside Ethiopia
itself. Having defeated and killed the Emperor and looted his palace, theBritish departed. However London was worried about expanding French influence in Africa, and chose to encourage Italy to take Massawa. The Italians were ideal candidates to play this role: they already had an Eritrean foothold.
In 1896 Italy decided to use Eritrea as a base from which to attack Ethiopia itself. This was a mistake. In a rare reversal of the normal run ofclashes between European and African nations, the Italians were decisively defeated at the battle of Adua. The defeat was a major blow tothe Italians, who lost thousands of troops killed and captured. With the rise of fascism under Mussolini, Italy was determined to avenge this loss of face and extend its presence in the Horn of Africa.

In October 1935 Italy invaded Ethiopia from the territory it controlled inEritrea. What is remarkable about the occupation of Eritrea and the invasion of Ethiopia is that the Italians were extremely proud of the fact that they had raised thousands of Eritrean local troops – or
'askaris'. These were formed into individual battalions and each had a postcard made to celebrate its achievements. The postcards portray the Eritreans in a distinctly heroic light and there was certainly no attempt todenigrate the 'askaris' on whom the Italians relied.

Despite the League of Nation's condemnation of the Italian action aggression it was not until the outbreak of the Second World War that theworld took a decisive stand against their aggression. Using tanks, aerial bombardment and nerve gas the Italians captured Addis Ababa on 5 May 1936. The emperor had left for exile in Britain but Ethiopian guerrilla forces continued the fight.

By 1941 Emperor Haile Selassie had been returned to his throne by a combined force of British, South African, Indian and Sudanese troops fighting alongside Ethiopian patriots. When the war was over Britain wasuncertain quite what to do with Eritrea, which had been run by a temporary British Military Administration after it was captured in March 1941. In 1949 London referred the matter to the United Nations, which sent a mission to investigate quite what should happen to Eritrea.

In 1952 the United Nations finally to decide that the territory should befederated with Ethiopia.
Emperor Haile Selassie on 3 October 1952, using 'golden scissors to severtape on boundary between his country and Eritrea Oct. 3, marking federation of Eritrea and Ethiopia,' as the caption reads.
There matters might have rested.

However, the Emperor's absolutist rule alienated the Eritrean population by a series of decrees. These included outlawing the teaching of Eritrean languages, replacing them with Amharic (the official language of the empire), dismantling industries and removing them to Addis Ababa and repressing the trade union movement and political parties allowed under the British military administration. In 1962 the Federation was ended andEritrea became a province of the Empire.
By the early 1960's this repression was being met by armed resistance from the Eritrean Liberation Front. The ELF, drawn mainly from the Muslimpopulation of the lowlands, attacked key installations.

The railway line blown up in December 1970.

In this period the ELF took western hostages, as bargaining tools againstEthiopia.

Most – including these two Americans – were well treated and released inJanuary 1976.

By 1981 the ELF had been forced out of Eritrea by the Eritrean People'sLiberation Front (EPLF) in a bloody civil war. At the same time the war against Ethiopian continued.

By June 1990 the EPLF took the port of Massawa and this photograph is captioned: 'A EPLF rebel stands in front of a captured Soviet-made cannonused in the taking of the port of Massawa. The EPLF says it has an enormous supply of weapons, all Soviet-made and captured from the Ethiopians.'

With Massawa having fallen the Ethiopians used their air superiority tobomb the city. Here civilians are seen in June 1990 taking refuge in a culvert to escape the attacks.

Finally, after a war of liberation lasting three decades, the EPLF enteredAsmara on 24 May 1991. Greeted with jubilation, many of the fighters were seeing their capital for the first time.

The EPLF decided against declaring immediate independence, preferring tohave the UN oversee an independence referendum in 1993. The result was 99.83% in favour, with a 98.5% turnout. Independence was declaredon 27 April 1993. Eritrea had emerged as a fully fledged member of the UN and the Organisation of African Unity.

It was the culmination of three decades of sacrifice – some moments of which had been captured in the photographs of the journalists and photo-reporters who had visited the country. (Text ends)

Ethiopia's May-2005 post-Election Disturbances:

The "Damn No-vember" - 10 Years after the June & Novembermassacres of May-2005 elections

Every November for the last nine years, the victims of the Meles massacres of 2005 remembered by writing a commemorative tribute for their personal sacrifices to establish democracy in Ethiopia.

Incredibly, Meles shamelessly threw his entire police and security force under the busto exonerate himself from any moral and legal responsibility in the massacres. Meles said the "post-election violence" was the result of "lack of professionalism on the part of the police force in terms of managing such events. The government recognized that the police were under- trained for the task and under-equipped for the task. As a result we have worked on this and I believe it is now adequately addressed." Simply restated, Meles said, "Blame the ignorant militiamen I authorized to use deadly force against the unarmed protesters, not me." Meles, the "commander-in-chief" (massacrer-in-chief) sold his troops, lock, stock andbarrel, down river to exonerate himself from charges of crimes against humanity. But Meles and his underlings are directly responsible for the massacres, not just the "under-trained" and "under-equipped" security forces Meles tried to depict as nothing more than clodhopping militiamen.

Meles security forces would not have fired on unarmed protesters over a period of months culminating in the killings of November 1-4, 2005 unlessthey were given specific authority to shoot-to-kill. Those responsible for supervision of the security forces could have stopped the killings at the very first instance.

The Fact Speaks:

In 2006, under pressure from his foreign aid quartermasters, Meles established an Inquiry Commission to look into what he euphemisticallydescribed as "the post-election disturbances."

The Inquiry Commission examined 16,990 documents, and receivedtestimony form 1,300 witnesses.

The Inquiry Commission visited prisons and hospitals, and interviewedmembers of the Meles regime over several months.

The Inquiry Commission by an overwhelming vote concluded Meles Zenawi and his lieutenants are guilty as sin on all counts in the 2005massacres.

During a Congressional hearing held on November 16, 2006, the InquiryCommission released its findings.

The Inquiry Commission determined 8 to 2 vote

There was no property destroyed [by the unarmed protesters] There wasnot a single protester who was armed with a gun or a hand grenade (as reported by the government-controlled media that some of the protesterswere armed with guns and bombs). [parenthesis original]

Shots fired by government forces were not to disperse the crowd of protesters but to kill by targeting the head and chest of the protester. Forthis reason, it was clear that the law was violated, and government

forceshad used excessive force. Police and security officials intentionally shot and killed 193 persons and wounded 763.

On November 3, 2005, during an alleged disturbance in Kality prison that lasted 15 minutes, prison guards fired more than 1500 bullets into inmatehousing units leaving 17 dead, and 53 severely wounded.There was no evidence that any security officers involved in the shootings were attackedor killed by the demonstrators.

Security forces which are alleged to be killed by demonstrators were not taken to autopsy, even there is no evidence of either photograph or deathcertificate showing the reason of death and couldn't be produced for policeas opposed to that of civilians.
The Inquiry Commission Chairman Judge Frehiwot Samuel noted: "Manypeople were killed arbitrarily. Old men were killed while in their homes, and children were also victims of the attack while playing in the garden."

Remembering the November & June 2005 victims:
Rebuma E. Ergata, 34, mason; Melesachew D. Alemnew, 16, student; Hadra S. Osman, 22, occup. unknown; Jafar S. Ibrahim, 28, sm. business;Mekonnen, 17, occup. unknown; Woldesemayat, 27, unemployed; Beharu
M. Demlew, occup. unknown; Fekade Negash, 25, mechanic; Abraham Yilma, 17, taxi; Yared B. Eshete, 23, sm. business; Kebede W. G. Hiwot, 17, student; Matios G. Filfilu, 14, student;Getnet A. Police and security officers killed by friendly crossfire shots (security officers killed in each other's crossfire): Nega Gebre, Jebena Desalegn, Mulita Irko, Yohannes Solomon, Ashenafi Desalegn, Feyisa Gebremenfes.

The Bloody Election:
Remembering the massacres inside Kaliti Prison on November 2, 2005: Teyib Shemsu Mohammed, age unknown, male, charged with instigatingarmed insurrection. Sali Kebede, age unknown, male, no charges indicated. Sefiw Endrias Tafesse Woreda, age unknown, male, charged with rape. Zegeye Tenkolu Belay, age unknown, male, charged with robbery. Biyadgligne Tamene, age unknown, male, charges unknown.

Gebre Mesfin Dagne, age unknown, male, charges unknown. Bekele Abraham Taye, age unknown, male, charged with hooliganism. Abesha Guta Mola, age unknown, male, charges unknown. Kurfa Melka Telila, convicted of making threats. Begashaw Terefe Gudeta, age unknown, male, charged with brawling [breach of peace]. Abdulwehab Ahmedin, ageunknown, male, charged with robbery. Tesfaye Abiy Mulugeta, age unknown, male, charged with instigating armed insurrection. Adane Bireda, age unknown, male, charged with murder. Yirdaw Kersema, age unknown, male, no charges indicated.

Balcha Alemu Regassa, age unknown, male, charged with robbery. Abush Belew Wodajo, age unknown, male, no charges indicated. Waleligne Tamire Belay, age unknown, male, charged with rape. Cherinet Haile Tolla, age unknown, male, convicted of robbery. Temam Shemsu Gole, age unknown, male, no charges indicated. Gebeyehu Bekele Alene, age unknown, male, no charges indicated. Daniel Taye Leku, age unknown, male, no charges indicated. Mohammed Tuji Kene, age unknown, male, nocharges indicated. Abdu Nejib Nur, age unknown, male, no charges indicated. Yemataw Serbelo, charged with rape. Fikru Natna'el Sewneh, age unknown, male, charged with making threats. Munir Kelil Adem, age unknown, male, charged with hooliganism. Haimanot Bedlu Teshome, ageunknown, male, convicted of infringement. esfaye Kibrom Tekne, age unknown, male, charged with robbery. Workneh Teferra Hunde, age unknown, male, no charges indicated.

Sisay Mitiku Hunegne, charged with fraud. Muluneh Aynalem Mamo, age unknown, male, no charges indicated. Taddese Rufe Yeneneh, charged with making threats. Anteneh Beyecha Qebeta, age unknown, male, charged with instigating armed insurrection. Zerihun Meresa, age unknown, male, convicted of damage to property. Wogayehu Zerihun Argaw, charged with robbery. Bekelkay Tamiru, age unknown, male, no charges indicated. Yeraswork Anteneh, age unknown, male, charged withfraud. Bazezew Berhanu, age unknown, male, charged with engaging in homosexual act. Solomon Iyob Guta, age unknown, male, charged with rape. Asayu Mitiku Arage, age unknown, male, charged with making threats. Game Hailu Zeye, age unknown, male, charged with brawling [public disorder] Maru Enawgaw Dinbere, age unknown, male, charged with rape. Ejigu Minale, age unknown, male, charged with attempted murder. Hailu Bosne Habib, age unknown, male, convicted of providing sanctuary. Tilahun Meseret, age unknown, male, no charges indicated.
Negusse Belayneh, age unknown, male, charged with robbery. AshenafiAbebaw, age unknown, male, no charges indicated. Feleke Dinke, age unknown, male, no charges indicated. Jenbere Dinkineh Bilew, age unknown, male, charged with brawling [public disorder].

Tolesa Worku Debebe, age unknown, male, charged with robbery. Mekasha Belayneh Tamiru, age unknown, male, charged with hooliganism.Yifru Aderaw, age unknown, male, no charges indicated.

Fantahun Dagne,age unknown, male, no charges indicated. Tibebe Wakene Tufa, age unknown, male, charged with instigating armed insurrection. Solomon Gebre Amlak, age unknown, male, charged with hooliganism. Banjaw Chuchu Kassahun, age unknown, male, charged with robbery. Demeke Abeje, age unknown, male, charged with attempted murder. 58. Endale Ewnetu Mengiste, age unknown, male, no charges indicated. Alemayehu Garba, age unknown, male, detained in connection with Addis Ababa University student demonstration in 2004. Morkota Edosa, age unknown, male, no charges indicated.

Shool teacher and human rights activist set himself ablaze outside a publicmeeting hall in the town of Tarcha located in Dawro Zone in Southern Ethiopia. Yenesew died three days later from his injuries. Before torching himself, Yenesew told a gathered crowd outside of a meeting hall: “In a country where there is no justice and no fair administration, where humanrights are not respected, I will sacrifice myself so that these young people will be set free.”

HISTORIC RECORDS

Victims of the massacres of June and November 2005?

[1] For additional data on the victims of the Meles Massacres, see Testimony of Yared Hailemariam, Ethiopian Human Rights Defender, “CRIME AGAINST HUMANITY IN ETHIOPIA: THE ADDIS ABABA MASSACRES OF JUNE AND NOVEMBER 2005” before the EXTRAORDINARYJOINT COMMITTEE MEETING THE EUROPEAN PARLIAMENT COMMITTEES ON DEVELOPMENT AND FOREIGN AFFAIRS, AND SUB-COMMITTEE ON HUMAN RIGHTS May 15, 2006.

[2] The Commission’s list of 193 victims includes only those deaths that occurred on June 6-8 and November 1-4, 2005, the specific dates the Commission was authorized to investigate. The Commission has an additional list of victims of extra-judicial killings by regime police and security forces which it did not publicly report because the killings occurred outside the dates the Commission was authorized to investigate.(Text ends)

GENETIC SCIENCE:

A Short Note on Meqmeqo (Rumexabyssinicus)By Fekadu Fullas, PhD

November 22, 2015 ***Meqmeqo*** is a weed plant that grows in cultivated as well as disturbed lands. It grows in tropical Africa, especially in central andEastern Africa. It is a perennial herb that can grow to a height of 3-4 meters with a fleshy rhizome. In 1984, a group of anthraquinones were isolated by Ethiopian chemists. The plant is also reported to contain oxalicacid, tannins, saponins, flavonoids, terpenoids and steroids.

The tender and young shoots are edible as a raw or cooked food item. In the 18th century, the Scottish traveler James Bruce noted that the *Agews* at *Gesh* used it as a cosmetic plant. Brides used the dye from the tuber to paint their feet, nails and the palms of their hands. This practice appearsto be more common in the northern parts of Ethiopia. The dye is also usedto color grass used in basketry. Coarse carpets are colored yellow with theplant. It is a common practice to dye the robes of monks yellow by using

meqmeqo. The roots are used as a condiment in butter. When processingmelted butter, they are added to impart color, flavor and taste.

In Ethiopian traditional medicine, the rhizomes are used for treatingmalaria, gonorrhea, poisoning, hepatitis, constipation, sciatic neuralgia, hypertension, migraine, rheumatism, breast cancer, stomach distention, earache, liver disease, hemorrhoid, typhus, rabies, scabies and wound. In *Ada'a* district, bruised eye is treated by drinking a solution prepared by boiling the roots with butter. The leaf is used for gonorrhea and abscesses. In Ethiopian traditional veterinary practice, ***meqmeqo*** is also used to treat animals with blackleg and scabies.

Some relevant studies

Several scientific studies have been conducted on the various properties of***meqmeqo***. The wound healing property was demonstrated in mouse models, in which wound was induced by excision and incision in the respective groups. Thus, topical application of ointment prepared from extracts of the plant showed significant increase in wound contraction and epithelization rate when compared to controls. In the same model, an
anti-inflammatory activity was demonstrated by a reduction in swellingthat was induced on the paws of mice prior to experiment.

The plant has been shown to have antibacterial activity against *Streptococcus pyogens* and *Staphylococcus aureus* and strong antiviral activity against CVB3 and influenza A virus. It has also exhibited anti-inflammatory activity through inhibition of the synthesis of inflammatory prostaglandin (PGE2). The antibacterial and anti-inflammatory activity mayexplain the use of ***meqmeqo*** for the treatment of skin diseases. Inanother study, extracts of the rhizomes of *R. abyssinicus* have shown dose-dependent analgesic (pain-relieving) and diuretic (water-pulling out) effect, thus confirming the folkloric use of the plant for pain and hypertension, respectively. The analgesic effect was determined by administering the extract to mice with a previously heat-induced pain. Thediuretic effect was comparable to that of furosemide which is often used inmodern medicine, while the analgesic effect was comparable to that of morphine and aspirin. In yet another study, an extract of the roots of the plant showed a strong anti-plasmodial activity when tested against both chloroquine-sensitive and resistant strains of *Plasmodium falciparum*. However, cytotoxicity was also observed at the dose levels tested. Preliminary studies on ***meqmeqo*** have demonstrated anti-cancer activity when tested in various tumor cell lines, inclusive of prostate, brain, breastand leukemia cell cultures.

Conclusion

A cosmetic for women and a plant to dye robes and basketry, ***meqmeqo*** (*R. abyssinicus*) also finds wide application in treatment of various health-related complaints. The use of the plant for constipation may emanate from its anthraquinone constituents which are generally known for their laxative effect. The traditional use of ***meqmeqo*** for cancer, hypertension, malaria, pain, wound healing and certain infections also appears to be supported by scientific studies. However, most of the studies were carried out in mice, or cell lines in the case of anti-cancer testing. Extrapolating the results to real-life clinical situations is not warranted, but the few studies reported so far provide a rationale for the use ***meqmeqo*** in Ethiopian traditional medicine in certain conditions. Many of the traditionalclaims for ***meqmeqo*** require further elucidation through rigorous scientificstudies.

Can Ethiopia's railway bring peace to Somalia?

By Mary Harper Africa editor, BBC World Service News, AddisAbaba November 23, 2015:

It is a Saturday, but this thoughtful, intelligent man is busy working.

Except for the guards at the gate, nobody else is at the office. Across theroad, a white and green train whisks up to a station platform. It is part ofAddis Ababa's newly opened light rail (or tram) system, the first in sub- Saharan Africa. Mr Getachew shows me diagrams of a vast planned railway network, snaking its way across landlocked Ethiopia, linking Africa's second most populous country to Djibouti, Sudan, South Sudan and Kenya. The railway is his baby. Like many Ethiopians, he left the country during the

harsh years of dictatorship, but returned with a doctorate in engineering and a vision.

It all started when he took a trip with his family. "We were driving through the countryside when we came across a railway track. Like so many boys, my sons loved trains and insisted we wait for one. It never came. I asked somebody when it might arrive. He told me it had been 10years since the last train. I decided to try to do something about it. Now they call me Ethiopia's Brunel, after the famous British civil engineer."

Pan-African dream

The dream is that one day, the railway will extend from the Red Sea inDjibouti all the way across Africa to the Atlantic Ocean. A few wars willhave to end first.

Due to the urgent need to feed the 8.2 million people Ethiopia says are suffering from the drought, the Addis Ababa-Djibouti line opened ahead ofschedule on 20 November.

The first train to travel along the nearly 800km track delivered more than3,000 tonnes of grain from Djibouti port to drought-affected areas. The United Nations says more than 15 million people will be in need of emergency food aid by the beginning of 2016.

The ERC says the railway will completely transform the way humanitarian assistance is delivered, in a country regularly affected by drought. "The trains will deliver bulk quantities of food aid very close to drought-affectedpeople. It will do this in a matter of a few hours," says ERC technical adviser, Muluken Mesfin.

"One thousand five hundred trucks a day leave Djibouti port for Ethiopia,"says the chairman of the Djibouti Port Authority, Abubaker Hadi. "It is projected there will be 8,000 a day by 2020. This is not feasible. That is why the railway is so desperately needed."

Mr Getachew agrees: "It can take trucks two to three weeks to reach Addis from Djibouti. They break down all the time and the road gets congested. Once it is fully operational the railway will cut the journey toabout five hours, as the trains will travel at 120 km/h. This will save money as well as time."

Chinese track

The Chinese-built track runs parallel to the abandoned Ethio-Djibouti railway, built more than 100 years ago by France for Emperor Menelik. Costing some $3bn (£2bn), it starts at sea level in Djibouti. It then makesits way through Ethiopia's dramatic, challenging terrain until it reaches Addis Ababa, about 2,500m

above sea level.

Mr Getachew expresses bewilderment at the World Bank and Western donors such as the European Union, who, he says, were reluctant to fund the railway project. "I think the road lobby was too strong. We ended up with the Chinese, who are not only constructing the railway, but providingmost of the funding too."

Potential for peace

The economic potential of Ethiopia's planned 5,000km rail network isobvious. But the railway might do a whole lot more, both in terms ofregional integration and maybe even peacemaking.

Railways are being constructed all over Africa. The East African Railway Master Plan hopes to revive existing lines in Kenya, Uganda and Tanzania,eventually extending them to Rwanda, Burundi, South Sudan and Ethiopia.

Mr Getachew hints at another potential role. He shows me how the Addis- Djibouti line lies close to Ethiopia's border with Somaliland, which declaredindependence in 1991 but has not been recognised internationally.

There has long been talk of linking Ethiopia with Somaliland's underusedand underdeveloped Berbera port, which is 854km by road from Addis Ababa.

Ethiopia would then have an alternative to Djibouti, which is one of the world's most expensive ports and is becoming ever-more congested dueto the increased demands of Africa's fast-growing economies.

'Win-win'

A railway could also bring wealth to Somalis, suggests Mr Getachew. Somalia has the longest coastline in Africa, and has rich fish stocks. ButSomalis are not keen on eating fish.

"Ethiopians have two fasting days a week when we only eat fish. As a landlocked country, we only have Nile perch and tilapia. As our economygrows, at about 10% a year, demand increases for more variety. This could be a win-win situation."

Constructing a rail link to Berbera would be a major challenge. This is mainly because Somaliland's ambiguous status means it would be difficultto secure vital international funding. But the territory is

relatively stable, and, unlike in conflict-ridden southern and central Somalia, a railway lineis unlikely to face threats of sabotage.

Somalia has several ports, and the potential for many more. It is possibleto envisage rail lines linking Ethiopia and the Somali interior with ports allthe way down the country, from Zeila in the north-east to Kismayo in thesouth.

This prospect for economic growth might serve as an incentive for the weak, sometimes directionless Somali government, and indeed foreign donors who have poured billions into the country since it fell apart nearly30 years ago, often to little effect.

Perhaps the idea of a railway would spur on Somalis and their allies todrive out violent groups, including the al-Qaeda linked movement al- Shabab, which controls much of the country.

As one Ethiopian rail enthusiast put it: "Maybe Mr Getachew will be remembered not only as Ethiopia's Brunel but as a peacemaker for theentire region."

Tracking China's rail investments in Africa

In April, China Railway Construction Corp signed a $3.5bn (£2.3bn) contract to build an intercity rail line in Nigeria. That followed a $12bn contract for another Nigerian rail line last year, which at the time was thebiggest foreign contract won by a Chinese state-owned firm. The line is planned to run 1,400km along the Nigerian coast. China is also building major rail projects in Angola (under an infrastructure-for-oil deal), DR Congo, Kenya and Tanzania. Chinese infrastructure investments overseasare commonly underpinned by finance from Beijing-backed lenders such as China Development Bank. The rail projects are expected to generate billions of dollars in export orders for Chinese trainmakers. Big Chinese investments in Africa have been controversial for several reasons, including use of imported Chinese labour, alleged poor treatment of workers and lack of transparency at the state-owned companies involved. Many African countries have a compelling need for new or
upgraded rail links, to boost trade, investment and development, but theyhave lacked finance. Much of the existing network was built by mining companies in the colonial era to link industrial sites to ports. Passenger services account for less than 20% of African rail traffic, according to the African Development Bank. (Text ends)

November 23, 2015 (KHARTOUM) - TPLF የትግራይ ነጻ አውጪ ሞንግስት to givepart of Amhara region to Sudan next month

The Ethiopian People's Revolutionary Democratic Front (EPRDF) under theruling minority Tigray

people's Liberation Front said that redrawing the borders between Sudan and Ethiopia will begin next month according to aprevious agreement with Sudan's President Omer al-Bashir. In November 2014, Ethiopian prime minister Hailemariam Desalegn and Bashir instructed their foreign ...ministers to set up a date for resuming borders demarcation after it had stopped following the death of Ethiopia'sformer Prime Minister, Meles Zenawi.
Sudan's state minister for foreign affairs Kamal al-Din Ismail told the official news agency (SUNA) that Desalegn told 2nd vice-president Hassabo Mohamed Abdel-Rahman on Monday that the demarcation will beresumed next month.

According to Ismail, Abdel-Rahman, who is currently visiting Addis Ababa,discussed with Desalegn the border and economic issues between the twocountries. He added that the meeting underlined the outcome and recommendations of the recent meeting of the Joint Sudanese- Ethiopian Higher Committee (JSEHC), stressing importance for cooperation in the various domains. The Sudanese minister further pointed that Abdel- Rahman visited Bole Lemi industrial zone in Addis Ababa and learned about the various industrial products.

Farmers from two sides of the border between Sudan and Ethiopia used todispute the ownership of land in the Al-Fashaga area located in the south-eastern part of Sudan's eastern state of Gedaref. Al-Fashaga covers an area of about 250 square kilometers and it has about 600.000 acres of fertile lands. Also there are river systems flowing across the area includingAtbara, Setait and Baslam rivers.

Sudan's Gadarif and Blue Nile states border Ethiopia's Amhara region. Theborders between Sudan and Ethiopia were drawn by the British and Italiancolonisers in 1908. The two governments have agreed in the past to redraw the borders, and to promote joint projects between people from both sides for the benefit of local population. However, the Ethiopian opposition accuses the ruling party of abandoning Ethiopian border territories to Sudan. (ST)

FM Tedros Adhanom – A disgrace to Ethiopia's once ReputedDiplomacy
By Engidu Woldie November 23, 2015
Ethiopia's top diplomat, Tedros Adhanom, gave a lengthy interview to the Voice of America's Tizita Belachew of the Amharic service in which he onceagain brought shame on himself and his TPLF comrades. We will revisit here some of the ridiculous remarks he made while he was answering, or rather, evading questions by the VOA broadcaster as well as pertinent questions by listeners of the VOA, thereby unmasking who the individuals claiming to rule Ethiopia really are. The malaria expert turned Ethiopia's Foreign Minister (anything is possible under the rule of the TPLF – with all due respects to malaria

scientists out there – and any person with close ethnic ties to the powersthat be can assume government positions; merit has no place) was full ofa hodge-podge of nonsensical ideas. Indeed unbecoming of a diplomat.

He started by saying that there were fewer proportion of people who needed food aid in the current drought than the 1984 famine. Tedros brought in a mathematical argument, that only 8.2 million, out of the 96 million, needed food aid this time; and according to this math genius, the proportion of people who needed food aid this year is far less than that of the 1984 famine in which 500,000 out of the 32 million were affected. "It is only 8.2 million, of the 96 million; the 88 million is ok!" he hammered athis point and gave credit to his own government for bringing the proportion of the starving people far lower than the proportions in the previous regimes. Mathematical argument aside, it is extremely depressing to hear that the 8.2 million starving population (although UN estimates 15 million by the turn of the coming year) were mere mathematical figures and proportions to this diplomat. Not to mention his remark that "no person has lost his life this time, but only cattle were dying." He also used the now well-liked argument by Ethiopian oligarchs indefending their failures and covering up their mess: *"there is drought in California too*," trying in vain to draw a parallel between two countries: the richest country on earth and…., well, you got the idea.

It is evident that the small-time diplomat and his gang of criminals at thehelm of the TPLF did not take any lesson from past regimes who commit colossal mistake in covering up the 1974 and 1984 famines, that resultedin the death of hundreds of thousands, which human rights defenders sayamounts to crimes against humanity.

And here is Teddy's classic: Andargachew Tsige, Ethiopia's true son and torch bearer of freedom, who was kidnapped in Yemen almost two years ago, now held incommunicado by the ruthless regime, "has finished writing a book on his lap top provided by the government." Andargachew,according to this joke of the year, "was shown around the various development projects underway in the country," and it is possible that "hecould be pardoned if he repents his mistakes."

The Honorable Foreign Minister has not heard the news months ago that Andargachew has spoken to the British Ambassador to Ethiopia, Greg Dorey, about his condition in solitary confinement. Andargachew told the Ambassador, who was allowed to visit him three times since his abduction,that he was held in the most inhuman way unimaginable with no access tolawyers and medical treatment; and that he actually didn't know what his charges were. Andy, as he was called affectionately by his followers and admirers, had actually told the ambassador that he did not see the point of being alive anymore and that he would

prefer being put to death. *"Seriously, I am happy to go – it would be preferable and more humane*,"Andy told the ambassador as reported by Al Jazeera.

The ne'er-do-well diplomat however want us to believe that his government, that sentenced Andy to death in absentia on trumped up charges, had provided him with a fancy laptop to write a book and talk to his family via Skype from his cell; and that he had been shown around thecity to see the glass and cement sky scrapers, proof of the so-called economic progress in Ethiopia. It is also worth mentioning here that the diplomat has said in the interview that the struggle launched to free Ethiopia of the cancerous TPLF was a "foolish endeavor" and the leader of the struggle, Andy, was "a fool" for struggling to bring democracy to his country.

Faced with the question why elections were not free and fair in Ethiopia, and when the country will see democracy, the diplomat without an integrity but a veneer of a smooth operator, resorted to the usual mumbojumbo that dictators at the helm of electoral authoritarianism resort to – that "democracy is a process" and "blacks were not allowed to vote in theUS fifty years ago." Instead of comparing apples and oranges, he should have looked at Ghana and others, in our own continent. Ghana has become a vibrant democracy in shorter years than his TPLF/EPRDF, whichcame to power 25 years ago.

What has been unfolding in Ethiopia could be characterized, and so called "process" that Tedros brought as a cover up is not as a process of progression on the democratic trajectory from infancy to maturity as a political system with its own rules of the game but a total regression to anelectoral authoritarianism, a police state, and worse since, in particular, the 2005 national election. Electoral Authoritarianism is state that orchestrates the semblance of having periodic elections, displays other superficial facets of the democratic process, but in actuality and substance it is an authoritarian state not amenable to a genuine, open, and accountable process and procedures of a democratic political order , to be worthy of its name, that includes holding free and fair elections that meets internationally accepted standards, a vibrant independent press, an independent electoral board, and an independent judiciary that is not subservient to political manipulations and interferences.

Such substantive and basic conditions for Tedros' democratic "process" donot exist in TPLF/EPRDF's Ethiopia especially since 2005. But for Tedors comparing Ethiopia and Ghana or discussing the theories and practice of democracy as a system or as a drama /show , which is the hallmark of thesystem instituted by the TPLF/EPRDF in Ethiopia, would be tantamount to opening the Pandora's box which Tedros , who has neither the integrity nor more than a superficial and cadre like knowledge about such matters as to pontificate what is democracy, what are the pillars of such a politicalsystem, what are the fundamental

liberties and rights of citizens under a democracy, what are the basic mechanisms of checks and balances that limit state power (the basic and foundational thesis of a democratic and liberal political order) and protect the fundamental rights of the citizens, the role of civil societies, and that of a vibrant independent press that serves as watch dog and speaks truth to power; what constitutes the ruleof law and how it is upheld , functions, and protected from the political and executive machinery of the state; and how the judiciary has real power that makes it immune from the executive branch, etc, etc.

Instead and as expected, he tried to bring the attention of listeners to the 2005 election, the election in which the opposition Coalition for Unity and Democracy (CUD), a.k.a Kinijit, won in a landslide victory. He was referring to the very election that his regime reversed the results through the barrel of a gun, massacring 200 innocent citizens who took to the streets demanding their vote to be respected and incarcerated tens of thousands under inhuman conditions. He accused the now leader of the armed resistance, Prof. Berhanu Nega, of refusing to take the mantle of the city mayor, when we all know that Tedros' master, Meles Zenawi, the Prime Minister at the time, brought all the major departments of the city and even the armed forces under his command at the stroke a pen, relegating the mayoral position to that of a clerical duty and handed to theoutsider Mr. Berhane Deressa, the person mentioned by Tedros as well.

Tedros denied the presence of hidden dungeons in Ethiopia where dissenters of the regime have been held incommunicado without due process of law, subjected to the cruelest treatment and torture, usually by TPLF Tigrayans who dominate the security and intelligence apparatus of the regime and run all the secret safe houses where torturing political prisoners are routine practices in Addis Ababa and elsewhere in Ethiopia. This, ladies and gentlemen, is not to mention the genocide perpetrated bythe regime against the people of the Ogaden, the Gambella, the persecution of Oromos, and the persecution of the Amaharas in various parts of Ethiopia, as well documented by international human rights groups and organizations, including by US State Department's Bureau of Human Rights and Labor annual reports on the Human Rights conditions in Ethiopia. To the public's surprise and dismay, there is no single TPLF official that faced justice and made to account to all the gross violations ofrights and crimes against humanity committed in all these years against tens of thousands of Ethiopians in many parts of the country.

He also dodged the question why it was seen unlawful by his government when Ginbot7 and other even peaceful and legal opposition groups, whosehuge supporters were not represented in the government, and who tried all peaceful means to come to power democratically, have resorted to armed struggle because his regime has made all conditions to struggle peacefully and bring about a democratic change almost impossible in Ethiopia. He also reiterated his government's trade mark cliché that "thereare no political

prisoners in Ethiopia." His other laughable remark was that he and his comrades were in a way responsible for the death of Meles Zenawi, because as Tedros said, they have "forced him to stay at his party and government position and work under enormous stress," against his will; a reference also used by the latedictator every time he was asked why he was in power for over 20 years and if he would resign. Tedros is so delusional that he thinks they would have spared Meles' life if he and his comrades "did not force him to stay inpower and work under stress."

One of the Foreign Minister's outright denials came when he was asked if he admits the fact that Ethiopia at the moment is a rule by oligarchy; and Tigrians control the intelligence and security, military and even the major business conglomerates in the nation. The reason why almost all of the army generals and top officers were from Tigray, according to Tedros, wasbecause the government "had to take merit into consideration." To Tedros, the skilled army generals and officers, who were tested in the battlefield, but who happen to belong to another ethnic group, have no merit at all.

Does Foreign Minister Tedors know that in 25 years, a captain in the armed forces could reach a rank of general if the system is merit based? How many non-Tigrayans are in the leadership positions of the Defense forces in Ethiopia? In terms of percentage and distribution of the major ethnic groups including the Oromo and Amharas, how many of them havereached the rank of a general? Why does Tedors think that he can hoodwink the Ethiopian people, when in fact, according to recent studies,90% of the generals and commanders commanding cores, divisions, and regiments are Tigrayans, who represent only 4% of the Ethiopian population?

It is a well-known fact that the overwhelming majority of these TPLF Tigrayan generals and high ranking officers at the apex of the command ,control and communications of the armed forces of the Ethiopian DefenseForces, have no academic background beyond 8th and 9th grade to even understand Military Science, a hallmark of a military professional, leave alone, educational base that allows them to master the science and arts of commanding and coordinating conventional armed forces – ground, air force, airborne, mechanized, etc. – that requires real and adequate theoretical and practical education, training, and experience in the profession. Here we are not referring to a guerrilla army, due to its own logic which does not require much by way of an education in the scienceand art of the military profession, from which these TPLF generals and high ranking officers hail from, by far distinguishable from conventional armed forces that require another set of education, norms, institutional system of promotion, reward, and discipline, and with its own set of scientific body of knowledge for the military professional developed since the days of the German general staff in the 19th century as well as other aspects of running and managing a vital edifice such as a country'sdefense infrastructure and institutions.

It is sickening to see that such a man lacking an iota of honesty, integrity,and depth of knowledge, is sitting on the desk of Prime Minister Aklilu Habtewold, diplomat par-excellence and a tough negotiator in the international diplomatic stage, when it comes to the country's interest, in the heydays of Ethiopia as a key player and harbinger of African independence.

So much about Teddy Adhanom, considered by cronies and benefactors ofthe ethnocentric regime, as one of the best and competent individuals who could fill the big shoes of Meles Zenawi, the butcher of Ethiopia (as the title of the butcher of Addis Ababa has already been bestowed upon his predecessor, Mengistu Hailemariam), who kicked the bucket a couple of years ago. Aklilu Habtewold must be turning in his grave. (Text ends)

Single Mum Shares £7.5m Lottery Winnings with EthiopianOrphans (Local Press November 24, 2015)

"Because of my good fortune, I will never have to worry about moneyagain, but these children have been left vulnerable and orphaned by problems that aren't their fault." –Jane Surtees

Many people dream of winning the lottery. Oh, the things they could do with a million dollars! Perhaps they'd purchase a new house, invest in thestock market, or travel the world. But there's a difference between dreaming about such good fortune and fate actually knocking on your door with the good news. Such a moment must have been quite surreal for single mother JaneSurtees, who has certainly dreamt about what she would do with
such winnings over the years. Whether or not she contemplated helping orphans if/when she won the lottery of it was a spur-of-the-moment decision, her actions speak louder than any media source can broadcast.Shortly after scooping up a £7.5 million jackpot, Surtees set out plans tohelp orphaned children in Ethiopia, reports *The Sun*.
She traveled to Ethiopia's captial, Addis Ababa, and headed straight to theKidane, Mehmet Children's home, which cares for 120 orphans. The age ofthe orphans in this home range dramatically. The youngest is 3 days old, the oldest is 17. Because the Mehmet Children's home runs purely on donations, it is cramped and can only feed the kids three small meals per day. Meat is a once-a-week treat and toys and books are scarce. Jane wasstruck by how contented the kids seemed to be living in such conditions. Reports *ChoiceNews*, Surtees was especially moved by the story of 15- year-old Workeneh Fanetay. After losing his parents to tuberculosis when he was just four, Fanetay was responsible for bringing up his two-year-old brother alone. He was one of many homeless children in the city and brought minimal food with money he earned running errands on a buildingsite and helping neighbors.

18 months ago, thankfully, his luck changed. He joined the Children’s Home and now lives in a modest mud house with his brother. They plantvegetables on their plot and both attend school – something that will change both of their lives. Jane is beyond grateful for her good fortune and the ability to have met such amazing children. She is sharing an undetermined amount of money with the Ethiopian orphans and is just one more example of the goodness which does exist in this world. (Text ends)

FLASHBACK: Margareth Thacher's top secret plan to destabilizethe pro-Soviet government in Ethiopia

Recently released documents show that in 1985, the PM Great Britain wrote to the Foreign Office seeking action on the Marxist and pro-Sovietregime in Ethiopia.

(By Martin Plaut November 29, 2015)

Towards the end of 1985, at the height of the worst famine in modern Ethiopian history, Margaret Thatcher contemplated helping to topple the Ethiopian government. The documents – marked Top Secret and Personal

- have now been placed in the National Archive:

The British prime minister had long made no bones about how much she disliked the military regime led by Colonel Mengistu Haile Mariam. The British government was among the most generous donors to the Ethiopianfamine appeal, but the regime itself – Marxist and pro-Soviet – was exactly the kind of authority Thatcher loathed. By late 1985 the prime minister's patience was wearing thin. Charles Powell, her private secretary, wrote to the Foreign Office asking what steps might be taken.

The FCO, taking is normal, cautious approach wrote back on 27 Novembersaying that: "Barring an assassin's bullet, Mengistu looks secure, and the opposition movements inside and outside Ethiopia remain deeply divided. The choice is between seeking to influence the present regime, and a policy of containment." This did not satisfy Thatcher at all. *"The Prime Minister continues to believe that it is not enough just to jog along in our relations with the distasteful regime in Ethiopia," came the reply from her*

private office, justtwo days later. "If the conclusion is that our present relations offer no serious scope for exercising beneficial and positive influence, she would like serious thought given to ways in which we could make life harder for the Ethiopian regime. These might, as examples, include:"

The letter then lists four options – the first two of which were explosive.

"i) support for the rebels in Eritrea and Tigray;

ii) a more active effort in conjunction with the Americans to identify andperhaps encourage opponents of Mengistu within Ethiopia"

The other two options were more conventional: asking other western powers to criticise the Ethiopian government and taking a "more robustline" when examples emerge of the abuse of aid.

The Foreign Office – and Geoffrey Howe as foreign secretary – must havefound these suggestions very hard to digest. Certainly it took some morethan a month for a suitable response to be drafted. "The Foreign Secretary agrees that jogging along with the Ethiopian regime would not be right," came the reply on 10 January 1986.

But, noting that some progress was being made, the Foreign Office urged caution. Backing the rebels would – Sir Geoffrey believed – not work, driving Mengistu further into the arms of the Soviets and (a killer argument with Mrs T) it was also noted that the Eritrean and Tigrayan rebel leaders were "…as extreme in their broadly Marxist political attitudesas the Derg [the Ethiopian government]." The letter concludes: "We do not believe that support for the rebels would work to our advantage."

What is interesting to note is that the British government was – if this correspondence is to be believed – unaware that aid that international charities were providing through the Sudan based rebel movements was already being diverted to purchase weapons. A programme I produced forthe BBC in 2010 detailed this evidence. Bob Geldof objected – saying thatnone of Band Aid's money had gone astray (a suggestion the programme never made). The BBC Trust apologised to Geldof for the apparent mistake. I was subsequently contacted by the head of a major British aid agency who substantiated the claims that aid had gone astray, without commenting on which agency's resources had been used to buy arms and ammunition. Ethiopia Growth Clashes With Politics as Oromo Protests Rise

More than 50 people killed while demonstrating, activists sayUnrest shows conflict of authoritarian plans, ethnic rights **(Bloombeg Business) By William Davison Updated on December16, 2015**

Ethiopia’s rapid economic growth needs a burgeoning capital and less dependence on traditional farming. That’s pitting the government againstmembers of its largest ethnic group, more than 50 of whom have allegedly been killed in protests in the past month.

Demonstrations by Oromo residents against a blueprint for the expansion of Addis Ababa have rocked at least 30 towns and prompted more than 500 arrests since Nov. 19, says the Oromo Federalist Congress, an opposition group. The unrest -- rare in the Horn of Africa nation -- highlights the conflict between Ethiopia’s authoritarian development modeland its system of federalism, which guarantees the rights of more than 80ethnicities.

It’s also the biggest challenge the ruling coalition has faced since it came to power after unseating a military regime 25 years ago, according to Milkessa Midega, a doctoral candidate at the Center for Federal Studies atAddis Ababa University.

“The party looks to have neither developed the society -- we are begging food aid now -- nor democratized the state-society relationships in Ethiopia,” he said. “The Oromo protest movement burns out of the generalsocio-economic and political marginalization and exclusionary features of the current regime.”

Economic Growth

Ethiopia will have sub-Saharan Africa’s fastest-growing economy this year,according to the International

Monetary Fund. The government says a rateof 10 percent is achievable even as drought in the eastern half of the country leaves about 10 million people needing food aid next year. The state-planned economy may open up more to foreign investors following its sale of $1 billion of Eurobonds last year.
Such growth is already visible in parts of the capital, where shopping malls and luxury hotels are sprouting up. The government has a 25-year plan that seeks to build housing, industry, parks and retail zones and complementary infrastructure. Despite Ethiopia's decentralized system, power is concentrated in the multi-ethnic Ethiopian Peoples' RevolutionaryDemocratic Front, which, along with allied parties, won every seat in federal and regional legislatures in May.

'Rational Development'
Communications Minister Getachew Reda said the plan is about rationaldevelopment, not ethnic politics, and will ensure Addis Ababa develops harmoniously with surrounding Oromo towns so everyone benefits. He said five people have died in the protests.
"If there is still a need for further discussion with communities that is thepath the government will definitely take," Getachew said. "It will do everything to explain why the master-plan is not an attempt to expand the territory of Addis Ababa."

Planners estimate the population of Addis Ababa and five Oromo satellite towns will more than double to 8.1 million by 2040 and require developingan area 20 times the current boundaries of the capital. Addis Ababa was an Oromo village before it was conquered by Emperor Menelik II in 1886, who then imposed the Amharic language, Milkessa said in an e-mailed response to questions. Ever since, the city has expanded to displace Oromo farmers, he said.

"The Oromo feel that they are completely denied their various rights in thecity," he said. "It is on top of this age-old linguistic and cultural discrimination and political and economic marginalization of the Oromo in the city that the master-plan appeared."

Fighting Expansion
The Oromo people, one of the continent's largest ethnic groups, compriseabout a third of Ethiopia's 99.5 million population, according to the CIA World Factbook.

Bekele Gerba, deputy leader of the Oromo Federalist Congress, is amongthose fighting the expansion.

"What does development mean when it's evicting hundreds of farmers that do not have any skills, that do not have any means of subsistence other than their land?" he said by phone. "They are evicted and they are

made homeless and there is no effort to develop and to take into consideration all their cultural, their social and the environmental well- being of the indigenous people that used to live there."

Four people died when security forces opened fire on a demonstration in Wolenkomi in west Oromia on Tuesday, according to witnesses. A group burned down the local administration office and the police station on Dec. 11, and there is no government presence in the town, which is about 60 kilometers (37 miles) from the capital. By mid-Wednesday, protesters hadblocked the road with trucks and the military patrolled, shooting every fewseconds. The most significant human-rights abuses in Ethiopia include restrictions on freedom of association, including through arrests, politicallymotivated trials, and harassment and intimidation, according to the U.S. State Department.

Addis Ababa, Ethiopia's largest city and commercial hub, is surrounded byOromia region and is also the regional capital. The constitution declares the "special interest" of Oromia in the capital should be respected, although this hasn't been defined by law.
Falmata Sena, 34, an Oromo resident of the town of Burayu, which comesunder the master-plan, says the government's development plan means the Oromo losing autonomy, language and culture as investors move intotheir neighborhoods, repeating a process that's occurred in Addis Ababa. "The upper layer is development, but the hidden agenda is how to assimilate Oromos," he said. (Text ends)

Fresh violence in north Gondar claims lives, injuries
(APA December 16, 2015) Fresh violence has erupted in Ethiopia's northGondar zone in the Amhara Regional State that has claimed the lives of dozens and wounded many others. Chief Administrator of the regional state Gedu Andargachew said, adding however that the security problemhas been brought under control.

The Chief Administrator said the state deeply regretted the loss of life anddamage to property caused by the instability which occurred in some kebeles (districts) in Metema and Chilga woredas of the zone. "Following the joint efforts of the security forces and the community, the situation isnow under control," Gedu said.

The Chief Administrator commended the role of the public in the efforts tobring the situation under control. He said the government will take necessary measures on the "anti-peace forces" who he said attempted to disrupt the peace, urging the residents to also help to safeguard the peacein the region as usual. Ethiopia Politics: Government warning sounds like a declaration ofwar Ethiomedia December 16, 2015

Getachew Reda, the government's communications minister, has given apress conference, and his statement sounds like a declaration of war.

Roughly, the points he made are:

(1) - Forces behind the "Master Plan" have now upped their antenna intoanarchy where asphalted roads are dug up, farms burned, and publicproperty set on fire and destroyed.

(2) Develoment enterprises owned by foreign and Ethiopian investorshave been damaged, and the destruction is going on as we speak.

(3) We are now in a stage where the conditions are forcing the people toask the government to take measures and stop the mayhem.

(4) The forces of destruction widely involved in the violence are both thehome-based legally registered groups as well as those banned ones operating fromoverseas.

(5) We [EPRDF regime] are now in a stage of taking measures to containthe 'devils' who are wrecking havoc and spreading terror.

Legend People: Royal Princess Aida Desta Damtew?

Princess Aida Desta (1927 – 15 January 2013) (Baptismal name Bisrate Gabriel), was the eldest granddaughter of Emperor Haile Selassie of Ethiopia, the second child of of Ras Desta Damtew and Princess Tenagnework. She was the wife of Leul Ras Mangesha Seyoum Mengesha,Prince of Tigray, son of Ras Seyoum Mangasha, and great-grandson of Emperor Yohannes IV. Her godmother (baptismal mother) was Empress Zewditu Menelik of Ethiopia.

Legend People: Plant Scientist Gebisa Ejeta

Gebisa Ejeta was born and raised in a small rural community in west- central Ethiopia. He completed his early education in his native country including a BS in Plant Sciences from Alemaya College in 1973. He attended graduate school at Purdue University earning his Masters (1976)and PhD (1978) in Plant Breeding & Genetics. In March 1979, Gebisa joined the International Crop Research Institute for the Semi-arid Tropics (ICRISAT) and conducted seminal sorghum research in Sudan ...for five years. In January 1984, Dr. Ejeta returned to Purdue University as an Assistant Professor in the Department of Agronomy. Since then, he has led a comprehensive educational and research program at Purdue with emphasis on African agricultural research and development. He currentlyholds the position of Distinguished Professor of Plant Breeding & Geneticsand International Agriculture at Purdue University.

Professor Ejeta has served on numerous science and program review panels, technical committees, and advisory boards of major research and development organizations including the international agricultural researchcenters (IARCs), the Rockefeller Foundation, the Food and Agricultural Organization (FAO) of the United Nations, and a number of national and regional organizations in Africa. He was a member of the team that launched the Alliance for Green Revolution in Africa, a joint effort of the Rockefeller and Gates Foundation. Dr. Ejeta has served the Consultative Group for International Agricultural Research (CGIAR), the largest publiclyfunded agricultural research consortium in the world as member of its Science Council (2008-2010) and currently as member of its Consortium Board. He is also a board member of Sasakawa Africa Program. Dr. Ejeta was recently designated special advisor to USAID Administrator Dr. Rajiv Shah. **Biography Credit: to Purdue Agriculture**

US “deeply concerned” by protester deaths in Ethiopia

PR WASHINGTON, December 18, 2015

The US expressed deep concern on Friday over the recent clashes in the Oromia region of Ethiopia that have resulted in the deaths of numerous peaceful protestors, State Department Spokesperson Mark Toner said in astatement. “We urge the government of Ethiopia to permit peaceful protest and commit to a constructive dialogue to address legitimate grievances,” said Toner. “We also urge those protesting to refrain from violence and to be open to dialogue.” Protesters have been labeled “terrorists” by Ethiopian authorities to suppress protests against potential land seizures, indicated Amnesty International, a human

rights organization. Toner argued, “The government of Ethiopia has stated publicly that the disputed development plans will not be implemented without further public consultation. We support the government of Ethiopia’s stated commitment to those consultations and urge it to convene stakeholders to engage in dialogue as soon as possible”. Below isthe statement:

The United States Concerned by Clashes in Oromia, Ethiopia

(Press Statement)Mark C. Toner

Deputy Department SpokespersonWashington, DC

December 18, 2015

The United States is deeply concerned by the recent clashes in the Oromiaregion of Ethiopia that reportedly have resulted in the deaths of numerousprotestors. We greatly regret the deaths that have occurred and express our condolences to the families of those who have lost their lives.

We urge the government of Ethiopia to permit peaceful protest and commit to a constructive dialogue to address legitimate grievances. We also urge those protesting to refrain from violence and to be open to dialogue. The government of Ethiopia has stated publicly that the disputeddevelopment plans will not be implemented without further public consultation. We support the government of Ethiopia’s stated commitmentto those consultations and urge it to convene.

VIEWS: My message to the Government of Ethiopia: "Woyanne has a policy of killing all Ethiopian opponents" -Herman Cohen

December 19, 2015: Hank Cohen's Africa Blog on Ethiopia:

The more citizens you kill for no reason, the more difficult it will be for youto govern in peace - Herman CohenThe political leaders of the Ethiopian Government have a policy of killing all opponents who take to the streets to demonstrate against them. Other opponents who do not demonstrate but make public statements instead, are sent to jail for long periods. I fail to understand why the Ethiopian regime feels it necessary to exercise suchextreme control to the point of committing murder periodically against their own citizens. The government is receiving good marks from the international community for its investments in infrastructure and agriculture. If it could relax and loosen up its controls, it could become popular. For example, the Ethiopian constitution establishes a federal system with “independent” states. Indeed, the constitution allows the individual states to secede from the federation if the population so desires. If the government would allow the people of the individual statesto govern themselves, I am sure that none of them would vote to secede.At the same time, their self-government would attract the investments of their own business communities. At the same time, the current regime could continue to rule at the federal level. With decentralized power, the requirement for the Ethiopian government to kill citizens in order to remain in power at the Federal level would disappear. My message to the Government of Ethiopia is, “relax and loosen up. Let the people govern themselves at the state level. The more citizens you kill for no reason, themore difficult it will be for you to govern in peace.”

Gluten-free Teff, the Ethiopian superfood that used to be banned -CNN

(CNN December 19, 2015))

Gluten-free and rich in protein, fiber and minerals, Teff is starting to gaina foothold as a new “superfood”, along the likes of quinoa and spelt. Thegrain has been grown in Ethiopia for thousands of years, but its export was banned by the government until this year. Now it is appearing on supermarket shelves worldwide.

It’s also the main ingredient of injera, the flat pancakes that are the centerpiece of Ethiopian food and the source of livelihood for around 6.5million small farmers. “When you look across Ethiopia, Teff is the most important commodity for Ethiopia, both on the production side as well as the consumption side,” says Khalid Bomba, the CEO of the Ethiopian Agricultural Transformation Agency. “Teff is native to the country, but isalso a huge part of our culture.”

The Ethiopian government ended the export of raw teff in 2006, as rising grain prices prompted fears of a

food crisis. Processed teff — in the form of injera — was still exported, mainly to the Ethiopian diaspora in northernEurope, the Middle East and North America.

The export ban was partially lifted this year, after investments in mechanization and better farming techniques increased yields by 40%. “The concern that the Ethiopian government had in the past about exporting was in making sure that there was sufficient amount of supply for the domestic market — for urban consumers, as well as the rural poor,” Bomba says. “[Rising yields] have given the government confidencethat systematic exports of Teff can gain smallholder farmers in Ethiopia… increased income, without harming the domestic consumers.”

Lifting the ban could create a new and lucrative export industry for Ethiopia, as consumers in Europe and North America latch onto the nutritional properties of teff. Teff flour sells for around $6-10 per pound, and the gluten-free seeds are now in high demand at health food shops the world over. Hailu Tessema, CEO of Mama Fresh, which exports injera to the US and Scandinavia, says that the demand is growing, and importers from countries across Europe and Africa have approached him looking to secure supplies. “Every year, the demand increases by foreigners from 7-10%,” he says. “So that is good for us, we have got thebusiness in our hands; we have a market.” stakeholders to engage in dialogue as soon as possible. Oromo Protests Updates From Sululta:

By William Davison December, 20, 2015:

The following updates was posted by journalist William Davison on hisFacebook page today

There were maybe 20 Federal Police guarding the fuel depot yesterdaynear Sululta, an Oromo town 20 kilometers north of Addis Ababa. That may have allowed for a reduced presence inside Sululta, which experienced a protest, rampage, and overwhelming response by securityforces on Thursday.

On the edge of town, a group in their late teens eagerly described Thursday's incident, showing a video of whooping, youthful protesters buzzing around a main road strewn with rocks. Part of a Meles Zenawi Foundation property was burned, allegedly due to land grievances, they said. Presumably it was the 800-million birr Meles Zenawi Leadership Academy under construction in the area. The group said three people were killed after 15 vehicles of Federal Police and military arrived. Thosewho've been released from jail said 608 had been arrested. I was unableto verify the claims because of reporting difficulties. The young lady saidthat protesters were exercised over the masterplan, evictions without adequate compensation, the right to self-determination, human-rights abuses, and the arrest of student demonstrators. Resistance may recur when security is ratcheted down and if demands aren't met, she said.

There was talk of a planned demonstration yesterday 25 kilometers northof Sululta in Chancho. The authorities were informed and Federal Police inanti-riot gear wandered around the small town. It was hard to imagine people being rash enough to congregate in their presence, so it was interesting to note a U.S.-based Facebook activist reporting a protest in Chancho yesterday. Three groups we spoke to said the town had been peaceful throughout the protests, which was confusing because of opposition reports of deaths. We didn't get out of the car to interview because of the Federal Police presence.

On our way back we tried the China-Africa Development Fund-backed $67million China-Africa Overseas Leather Products factory on the northern fringe of Sululta. Its gold plaque by the gate had been bashed around andburnt tyres lay outside the guard's house, which had broken windows. Thezebegna let us into the compound and there were around 30 red-beret soldiers and a clutch of federals by the main building. The guard said a crowd of hundreds with stones and sticks overran the compound on Thursday and threatened him as they vandalized the property. "Oromia belongs to us," they chanted. Within minutes, the commanding military officer approached and politely asked in English for our media accreditation and resident ID. He read both, handed them back, and beckoned us in. This positive response by security to the accreditation wasunprecedented for me in Ethiopia; it was also the first time I'd been dealing with the military.

At the main building, a mini-bus, glass front door and multiple windows were smashed. In the car park, the Federal Police had collared two young men. We think they were detained minutes before after gathering by the compound wall to collect water among women with jerry cans. One had got a kick in the [deleted] from a federal by the gate. In the car park, with us 15 meters away, Federal Police cuffed them round the head and askedwhy they'd come. The detainees were then told to crawl along the car park for a few meters on their forearms. Shortly after, they were taken away.

The Chinese deputy manager and his assistant were welcoming, and even,of their own volition, printed out an incident report sent to the Ministry of Industry, and gave us three copies. They said the local lads being questioned in the car park were rooted out using CCTV footage of the incursion.

As we prepared to enter the building, a slightly hostile federal banned us from taking any photos or videos. A red-beret soldier recognized me fromWolenkomi and protested at shots I'd taken of the military there. He was satisfied with my reply, 'makalakia fotos yellegnem', which was the truth.The Chinese asked us to return the letter so they could tweak it. I skim read it, noting there was a crowd of 400 and a complaint that initially onlythree Federal Police had arrived as back up.

Inside the building, there were more smashed windows and eight PCs hadbeen destroyed. We found the deputy manager for a promised interview, but he'd changed his mind – presumably after official intervention. Also, they'd decided against giving copies of the letter. We protested, arguing incomplete information was more problematic than giving us a thorough rundown, but they didn't budge. The assistant manager said as the embassy and government were involved, now wasn't the time to go public. The "accident" had taken them by surprise, she said. I wonder if folk at the Chinese embassy have a more sophisticated view of events.
After giving up, and being promised that we would receive information on-the-record in due course, we asked for contact details – they declined.

It was time to go, but Federal Police who'd arrived weren't happy with ourpresence. They promptly pointed at us to get in the back of their truck, but we were also talking to the military officer. He'd contacted the relevant authorities and the message seemed to be that we shouldn't be there, but should be allowed to head back to Addis. That we did, giving upon more reporting, and were escorted by federals until we were through Sululta town. If the federals had been controlling the factory, we'd have been detained.

A vandalized bus seen earlier was on the road being towed to Addis. One local said that a Selam bus had

also been attacked by farmers north of Chancho. Someone who got caught up in the violence reported there weresmall groups of youths with sticks and Molotov cocktails roaming the edgeof Sululta on Thursday. One threatened to throw a rock at him, but decided against it when he looked petrified. (Text ends)

Legend People: The Habesha model contestant of her time The First International Habesha Model At the age of 24, a stunningbeauty, models in Europe in 1964. She represented Ethiopia in international stage. She appears in many modeling magazines andpostcards. Now she is 86-years old.

Oromo Protesters in Ethiopia reject authoritarian developmentmodel

By Awol Allo December 21, 2015

Social media is full of images of dead and injured students from Ethiopia'sOromia state. At least 50 protesters have been killed, hundreds injured and thousands more arrested in monthlong protests across the region.

Tensions escalated sharply this week after authorities accused the demonstrators of terrorism and confirmed deploying military forces.

The government continues to take a hard line. On Dec. 17, Communications Minister Getachew Reda described the protesters as "terrorists" and "demonic." Prime Minister Hailemariam Desalegn has threatened to take "merciless action against any force bent on destabilizing the area," echoing pronouncements by the country's counterterrorism task force, which has promised "legal and proportionate"measures.

This is an old tactic in Ethiopia, where protests and public proclamation of dissent are criminalized. Addis Ababa often dismisses genuine local grievances as evil designs of anti-development elements. Over the last decade, the government in Addis Ababa used the "war on terrorism" and the rhetoric of development to silence independent voices and curtail democratic debate. The press is effectively muzzled, and independent civicand political organizations face an array of government tactics, including manipulation, co-optation and violent repression.

The immediate trigger for the crisis is the Integrated Regional Development Plan for Addis Ababa and the Surrounding Oromia Region, commonly known as the Master Plan, which aims to expand the Ethiopian capital's jurisdiction to Oromia. But the movement is a reflection of long- simmering ethnic tensions and deeper historical injustices. The Oromo, who constitute nearly half of Ethiopia's 100 million people, have long beenpushed to the periphery of Ethiopia's economic, social and political life.

The anger and defiance of the last few weeks is a spontaneous responseto decades of systemic and

structural marginalization of the Oromo.

Despite the government's claim, the ongoing largely peaceful protestspose no threat to Ethiopia's economic or national security interests.
However, the government's heavy-handed crackdown on protesters andthe implementation of the Master Plan presents a clear and present danger to the well-being of the Oromo.
Why are Oromos protesting?
These protests are not new. In April and May 2014, similar protests brokeout when the government unveiled the controversial Master Plan. Dozensof people were killed and many more wounded. Authorities insist that thedraft plan will better coordinate development activities and facilitate the delivery of public services to remote areas. The protesters say it is a blueprint for annexation and will displace millions of Oromo farmers.

Addis Ababa, one of the fastest-growing cities in the world faces a population explosion. The city has sprawled into neighboring Oromo villages, farmlands and forests. In the last 10 years, more than 150,000 Oromo farmers have been evicted from their ancestral lands without adequate compensation and proper relocation. Displaced farmers are becoming daily laborers on lands taken from them. Oromo activists and opposition politicians fear that the Master Plan will lead to a new and unrestrained land grab that could radically alter the region's demographicsand cultural makeup. The protesters say such expansion would cleanse the Oromo people and culture from the area.

Oromo protesters want a human-centered development that places peopleat the center of government policies and programs and allows everyone toget a fair share of what belongs to all.

Addis Ababa lies in the heart of Oromia. The Ethiopian Constitution recognizes the state's "special interest" over the city and mandates Parliament to enact laws that would regulate the "provision of social services or the utilization of natural resources" between Oromia and Addis Ababa. However, two decades after the constitution's adoption, no such laws have been enacted. Meanwhile, Addis Ababa's expansion into surrounding Oromo towns continues unabated. This advance, which is in part fueled by demand for land by foreign and private investment, has hadserious economic and ecological consequences for the area.

Human-centered Development
The government has appealed to developmental goals to silence such concerns, but its approach to development is narrow. Ethiopia follows a developmental state model that doesn't guarantee democratic

participation and representative procedures necessary to scrutinize the legality, viability and proportionality of state-led projects. Its five-year Growth and Transformation Plan is mainly funded by foreign aid, includingfrom the United States. The plan envisions the relocation of people from lands slated for infrastructure construction, industrial parks and large- scale agricultural development. These programs are often implemented through intimidation, violence and other repressive tactics.

Ethiopia happens to be a key U.S. ally in the “war on terrorism.” In 2006the U.S. provided technical and financialsupport for Ethiopia’s invasion ofSomalia under the pretext of targeting the Somali armed group Al-Shabab. Since 2011, the U.S. has been flying armed reaper drones frombases in Ethiopia as part of its counterterrorism mission in East Africa.
Washington acknowledges the ruling party’s increasingly authoritarian tactics but has consistently ignored human rights concerns. The U.S. StateDepartment on Friday expressed concern about reports of deaths and urged the Ethiopian government “to permit peaceful protest and commit to a constructive dialogue.”

The protesters oppose policies that disregard the will of the people. They are calling for a system grounded in fair processes, driven by equitable outcomes and the effective participation of affected communities in defining the scope of development programs. In short, they want a human-centered development that places people at the center of government policies and programs and allows everyone to get a fair shareof what belongs to all.

These protests are unprecedented in many ways. They are broad based and resilient as well as creative. They are using roadblocks, sit-ins, lunchboycotts and striking hand gestures and other symbols of civil disobedience to capture asymmetries of power and governance.

Their nonviolent resistance transcends deep political fault lines and is building interethnic solidarity among Ethiopia’s key political players. Overthe last two weeks, several non-Oromo political parties and civic organizations have expressed solidarity with the protesters. This in and ofitself is a remarkable achievement in a country sharply divided along ethnic lines.

This movement may not end the subordination of the Oromo people and the displacement of its farmers, but its legacy will endure. It leaves behind traces and reminders that will serve as the seedbed of indignationand frustration, providing inspiration for future struggles for equality andjustice in Ethiopia.

EOTC Legends: His Eminence Abune Matewos,

Archbishop of Jerusalem and Patron of Ba'eta Le Mariam Monastery Church and the Menelik II Mausoleum. His Eminence Abune Matewos wasamong the first Bishops consecrated by Ethiopia's first native Archbishop Abune Baslios in 1953. Previous to becoming a Bishop, Abune Matewos served as Liqe Liqawint of Ba'eta Le Mariam Monastery in Addis Ababa, aswell as several other prominent church postings. His Eminence began his clerical journey at the Monastery of Debre Li...banos. After Abune

Basilioswas elevated to Patriarch, he raised Abune Matewos from Bishop to Archbishop of Jerusalem in succession to Abune Philipos.

In September 1974, when the Dergue regime removed Emperor Haile Selassie I from his throne, and the Orthodox Church accepted this act, Abune Matewos from his diocese in Jerusalem issued a statement denouncing the coup, and accusing the members of the Holy Synod of violating their oaths of loyalty to the Emperor. He was recalled to Addis Ababa and confined to the Debre Libanos Monastery, as the Patriarch Abune Tewophilos and other Bishops were imprisoned. Abune Tewophilos was executed in 1977, and Abune Matewos remained in detention until themid 1980's when he was released from his monastic detention. Abune Matewos served as the special advisor to the Patriarch Abune Tekle Haimanot until the Patriarch's death in 1988, and was suspected by the Communist regime of having steered the Patriarch into an increasingly adversarial relationship with their regime.

Upon the election of Abune Merkorios as Patriarch in September, 1988, Abune Matewos found himself once more in disfavor, and he was orderedrestricted to the role of presiding at the Church of the Savior (Mehane Alem) known as Miskea Hazunan, and endured many hardships in the later days of Communist rule in Ethiopia. Following the fall of the Dergueregime and the removal of Abune Merkorios as Patriarch, Abune Matewos was returned as Archbishop of Jerusalem by Patriarch Abune Paoulos in 1993, and served until 1998 when he returned to Ethiopia and retired dueto his advancing age and deteriorating health. He was assigned the Ba'etaLe Mariam Monastery Church as his altar in Addis Ababa, and as such wasthe assisting cleric at the Funeral Mass of Emperor Haile Selassie I led by Abune Paulos when the Emperor was re-buried on November 5th, 2000.

Abune Matewos was a very principled man, staunch in his Orthodox faith and loyal to his Ethiopian identity. He was a deeply spiritual and holy man.His Eminence was buried at the Debre Libanos Monastery. (Text ends)

ROYAL ANTIQUITY:

A historical pocket watch (displayed during an auction preview in Genevain 2009) made for Ethiopian Emperor Menelik “The Negus Watch” dates from 1893. The Watch was a gift to Léon Chefneux in recognition of his contribution to the implementation of Ethiopia’s first railway line. Inscribedon the inside of the case ‘Don de Sa Majesté Menelik II Empereur d’Ethiopie. It was an 18K yellow gold chronometer pocket watch.

LEGEND PEOPLE:

The Honorable Dejazmatch Woldegebriel's diplomatic mission toParis, 1919.

French Foreign Ministry archives- A french newspaper that briefly mentions the visit of an Ethiopian delegation to Paris in 1919. They had anaudience with the then President Raymond Poincaré, gave him gifts sent by Negest Zewditu and Ras Teferi (the newspaper says: a warrior's costume, two elephant tusks and an Ethiopian dress for his wife). .....The
pictures show them seeing a military cannon shooting (a popular demonstration at the time) and military

airplanes. The last picture withthe four gentlemen is of Dejazmatch Weldegebriel (former Royal Chamberlain), Negadras Zaogas(?), Shibeshi(?) Negest Zewditu's uncleand an interpreter. The delegation was accompanied by M de Coppet, Ambassador of France to Ethio

LEGEND PEOPLE: Michel Papatakis (1927-2014)

His father, Asterio Papatakis was a forceful, charming man who had a large house, and a hotel called Majestic House. His mother, Wro Wolete Amanuel Woldeyes was a heroine and patriot who rallied along with the Ethiopian resistance force to kick the invading Italian army out in 1936.She was awarded a medal for her heroic deeds that Michel treasure. Michel Papatakis is considered as a success story in pioneering the Ethiopian cinema by realizing the potential of the film medium to both entertain and inform society. Not only did he run his own production company, he also wrote, directed, filmed, and edited his own films. The major one was Guma (Blood Money) that he produced around 1974 but hehas also many documentaries to his credit. Filmography Guma (Blood Money), 1974 Konso, 1993 Rest In Peace !

The experience of Sugar sweetning in Ethiopia

SUGAR!!! Every body needs it. In house hold use from tea up to home made cake baking we use sugar. From infant age until last breath we use sugar. So that we can say sugar is one of the most important item in our nutrition. However we can't imagine how heavy going is its production. Weknow that it is obtained from sugar cane. If we see the details of the process we will understand its value. Think about the process of plantationof the sugar cane merely. It may take few years to be ripen for the harvest. Imagine how many mental and physical energy has been invested to bring it to this stage. It requires certain amount of expense depending the inputs added and salaries of man power who participated inthe process. When we were immature we consumed it daily in abundant.

The remainder will transported to the factory. We know what we did while the sugar cane traveled to its destination. After all this hazards, the indoorprocess has been taken place and the final out put was obtained. Again in this process a lot of imputs were added and mental and physical exerciseswere exerted on it. We can imagine the production cost for one kilo of sugar. Our fathers and mothers did their best to produce it with minimum production cost while we did the inverse. So that the sugar that we take from its vendor is not simply sugar if we recognize how the process of the production is. Whenever I use sugar , I can't take with out thinking it all the time. Wherever there is sugar there will be sprit of our home town. You can't escape this if you are Wonjian I think.

LEGEND PEOPLE:

The Land of Ethiopia Addicted to the blood of its citizens?

After a 17 years of rule by the ruling military Duerg, who overthrew the Imperial regime of Haile Selassie, which itself ruled the country for more than 55 years. Now after 24 years of EPRDF rule as the

Tigray Peoples Liberation Front (TPLF) in the centre, still another popular uprising is getting prepared to overthrow the TPLF led government. All of them singthe same rithm, and talk the same talk ….. 'THEY WANT TO BUILD A DEMOCRATIC ETHIOPIA AND CHANGE ITS POVERTY' And all of them say they are fighting for the people, and to the people. But none of them haveever listened their own people. Why the land is addicted to blood? In the past 40 years millions of Ethiopians are slaughtered by their own so calleddemocratically elected leaders. This loop of blood shed.... this loop of drought.... this loop of The people doesn't know, and we know more than the people mentality... would it be over?

LEGEND PEOPLE:

Hailu Mergia, the D.C. Cab Driver is Music Star In Ethiopia

Hear an unusual session today with Hailu Mergia, a keyboard player and Ethiopian music star who now lives in the U.S. He came to World Cafe‘s attention throughAwesome Tapes From Africa, the website where Brian Shimkovitz posts cassette tapes of African music he discovers. That’s whatled Shimkovitz to Mergia. He first became enchanted with a solo cassette Mergia recorded, then went out to find him. Now, Shimkovitz has put out the better-known 1977 album Tche Belew, which Mergia recorded with thetop Ethiopian band The Walias. Mergia was at the forefront of musicians inEthiopia who were melding blues, rock, jazz, funk and Afrobeat into a unique sound in the ’70s; their sound has had a deep effect on all African music. Hailu relocated to the U.S. in the 1980s. Since this reissue, and that of the initial cassette of Mergia’s solo keyboard recordings, he’s been in demand. Which, in turn, may impact his day job as a cab driver in Washington, D.C. In thisWorld Cafe session, he’s backed by the New York City band Low Mentality.

LEGEND PEOPLE: Affeworq Gebre Eyesus aka Ze-Bihere Zegie Afeworq Gebre Eyesus (1868 – 1947) was a writer, who wrote the firstnovel in Amharic, Tobyia: Libb Wolled Tarik ("A Heart-born Story").

Afeworq was born in zege peninsula in gojjam province where he receiveda traditional church education. However in 1887 he would travel to Milan Italy, to study fine art at a college. However he would turn out to be a very controversial figure, even though he was a pioneer in the field of art and literature in Amharic. He betrayed his countr...y twice for the Italian cause, in both the Adwa war and the Second Italo-Abyssinian War he sided with enemy over his homeland. Afaworq was caught in Addis whilst working for defeated fascist regime by the restored Ethiopian government.He would be tried for treason, and sentenced to death—a sentence subsequently commuted to life imprisonment. He was exiled to Jimma where Afaworq, by then blind, died4, 1937:

February 2, 1937: Ras Desta Damtew, son-in-law of the emperor and the last patriotic commander-in-chief to remain in arms against the Italians was captured to be executed at a local market in Hagere

Mariam local vicinity, 125 miles south of Addis Ababa. The great patriot was retreated into the jungle after a skirmish following the mis-timely bomb attempts onMarshal Rodolfo Graziani in Addis Ababa. March 8, 1937: Dejazmach Desta Damtew, the patriotic fighter appears on
the war tribunal for his interrogation after he was captured by ColonelTucci's column before he was sentenced to death.

LEGEND PEOPLE:

Female author Guenet Ayele creates Amharic keyboard

Guenet Ayele, a well known Ethiopian author made her way in creating Amharic alphabet keyboard, first in Ethiopia. The author captured Ethiopian readers when she first published a book about the escapee Ethiopian former president Colonel Mengistu Hailemariam, meeting him inHarare, Zimbabwe where he lives in exile. Now it is another remarkable work of her in coming up with such a first time creative work. Amharic is alanguage that has 126 alphabets which is a bit difficult to use the regular English keyboard. Guenet's new keyboard makes everything easier since every letters are represented by one key on the computer keyboard. The Ubuntu version tailored specifically for this laptop gives native access to Ge'ez characters as opposed to the application-based solutions.

Ethiopia's fake economic growth borrows from ENRON'saccounting

Economic Analysis by J Bonsa analyses

Ethiopia's economic growth over the last ten years. (December 24, 2015)(Africa at LSE UK) More than 70 people have been killed and dozens wounded in an ongoing crackdown on peaceful protesters in Oromia. Oneof the underlying causes of the prevailing tense political situation is Ethiopia's bogus claim about "miraculous" economic growth in the last decade.

The youth is not benefitting from the country's supposed growth and doesn't anticipate the fulfillment of those promises given the pervasivenepotism and crony capitalism that underpins Ethiopia's developmentalism.

The ruling Ethiopian People's Revolutionary Democratic Front (EPRDF) came to power in 1991 and briefly experimented with democratic transition. However, a little over a decade into its rule, the party's former strongman, the late Meles Zenawi, realized that their pretentious experiment with liberal democracy was not working. Zenawi then crafted adubious concept called, "developmental state."

Stripped of the accompanying jargon and undue sophistication, Zenawi was simply saying that he had abandoned the democratic route but wouldseek legitimacy through economic development guided by a strong hand of the state. This was a ploy, the last ditch attempt to extend EPRDF's ruleindefinitely.

Using fabricated economic data to seek legitimacy and attract foreign direct investments, the regime then advanced narratives about its double-digit economic growth, described with such catchphrases as Ethiopia rising, the fastest growing economy in the world and African lioness. The claims that EPRDF has delivered economic growth at miraculous scales has always been reported with a reminder that it takes several decades tobuild democratic governance. The underlining assumption was that, as long as they deliver economic growth, Ethiopia's leaders could be excusedon the lack of democracy and human rights abuses associated with the need for government intervention in the economy.

EPRDF spent millions to retain the services of expensive and well- connected Western lobbying firms to promote this narrative and create apositive image of the country. These investments were also accompaniedwith a tight grip on the local media, including depriving foreign reporters'access if they cross the government line. Ethiopia's communication apparatus was so successful that even serious reporters and analysts started to accept and promote EPRDF's narrative on rapid economic growth.

However, a few recent events have tested the truthfulness of Ethiopia's economic rise. Drought and the resulting famine remain the Achilles heels of the EPRDF government. The government can manipulate data on any other sector, including the aggregate Gross Domestic Product, and get away with it, but agriculture is a tricky sector whose output is not so easyto lie about. The proof lies in the availability of food in the market, providing the absolute minimum subsistence for the rural and urban population.

The sudden translation of drought into famine raises serious questions. For example, it is proving difficult to reconcile the country'sdouble-digit economic growth with the fact that about 15 million Ethiopians are currently in need of emergency food aid.

Rampant famine

Except for some gullible foreign reporters or parachute consultants, who visit Addis Ababa and depart within days, serious analysts and students ofEthiopian economy know that authorities have often fabricated economic statistics in order to generate fake GDP growth. To the trained eye, it does not take a lot to find inconsistencies in the data series. In fact, Ethiopia's economic growth calculus is so reminiscent of Enron accounting. (See my recent pieces questioning EPRDF's economic policies, including anomalies in the alleged achievements of millennium development goals, crony businesses, devaluation, external trade and finance.)

The tacit understanding in using GDP as a measure of economic growth isthat responsible governments generate such data by applying viable international standards and subjecting the data to scrutiny and consistency checks.

Unfortunately, these standards are not foolproof; irresponsible governments with mischievous motives can abuse them. There is credibleevidence that shows Ethiopian authorities deliberately inflated economic statistics to promote feel-good, success stories.

Let's take the agricultural data, which is timely and topical given the ongoing famine. This came to light recently as the European Union tried tounderstand anomalies in Ethiopia's grain market, particularly persistent food inflation which the EU found incompatible with the agricultural outputreported by the Central Statistical Authority (CSA) of Ethiopia.

The EU's Joint Research Centre (JRC) then developed the technical specification for studying the scope of the Cereal Availability Study in order to account for the developments in the Ethiopian cereal markets. The International Food Policy Research Institute (IFPRI) was selected tocarry out the study.

The EU-sponsored survey and the Ethiopian government's survey produced by the CSA. I am using the data for 2007/08 for comparison.
The negative numbers indicate that the IFPRI estimates were consistentlylower than the CSA data. For instance, CSA overstated cereal production by 34 percent on average. This ranged from 29 percent for maize to 44 percent for sorghum. The actual amount of *Teff* produced is lower by a third of what's reported by the CSA.

The research team sought to explain this "puzzle" by examining the sources of the confusion, the methodological flaws that might have led CSA to generate such exaggerated economic data. Toward that end, theycompared CSA's crop yield estimates with comparable data from three neighboring countries: Kenya, Tanzania, and Uganda.

From 2000 to 2007, the average increase in cereal yield for these countries, including Ethiopia, was 19 percent. Yet the CSA reported awhopping 66 percent for Ethiopia's yield growth. The country was not experiencing an agricultural revolution to justify such phenomenal
growth. It is unrealistic that Ethiopia's yield growth would be greater thanthe neighboring East African countries, particularly Kenya, where the agricultural sector is at a much more advanced stage. If anything, the reality in Ethiopia is closer to Uganda, which did not report any yield increase during that period.

This reveals the extents of data manipulation by Ethiopian authorities to create an inexistent economic success story and seeks political legitimacy using a bogus record. We now know the widespread distortions in official statistics on cereal production thanks, in no small part, to EU's intervention in sponsoring a study and explaining the disparities. Cereals represent only a sub-sector in the agricultural realm. It is likely that worsedistortions would be revealed if similar studies were done on Ethiopia's growth statistics in other sectors, including manufacturing and service divisions.

'Poverty reduction'

The IMF has praised Ethiopia for achieving accelerated growth with a focuson equity and poverty reduction, a challenging dilemma for most countries. However, a closer look at three interconnected facts turns this claim on its head.

First, as noted above, Ethiopia's agricultural output has been inflated by 34 percent on average. Second, a 33 percent poverty reduction since 2000 is widely reported. Third, there is a consensus that poverty reductionhas happened mostly in rural Ethiopia. Now we put these three facts together and apply a simple logic to establish that the 33 percent poverty reduction is explained by the 34 percent exaggerated agricultural outputs.Notice that it is not by accident that the two percentage points are almost identical. Therefore, the ups and downs cancel each other out. In the
best-case scenario, poverty rate must remain at the same level as in2000.

The World Bank, IMF and other donors have often anchored their conclusions on poverty reduction on alleged changes in the agricultural sector, where the bulk of the poor live and work. Little do they know thatthe data they used to compute the poverty index comes from agriculturalstatistics with hugely inflated yield assumptions as shown above.

This raises the question: where has the billions of dollars in bilateral and multilateral aid pumped into Ethiopia in the name of poverty reduction andthe millennium development goals gone?

'The enclave economy'

The 'Ethiopia rising' storyline is a standard set by foreign correspondents who often repurpose official government press releases, or reports based on the construction projects in the capital, Addis Ababa. For example, Bloomberg Africa's William Davison, often uses the proliferating high-rise buildings in Addis Ababa as tangible evidence of Ethiopia's double-digit economic growth. In his latest whitewash, Davison writes, "such growth isalready visible in parts of the capital, where shopping malls and luxury hotels are sprouting up." That a veteran reporter for a business website unashamedly passes judgment on economic

success by referring to heights and width of buildings underscores his shallow understanding of the country's social and political fabric.

Here are some of the questions that reporters aren't asking and seeking answers for: Who owns those building? Where did the investment moneycome from? Are there any firm linkages between these physical infrastructures and the rest of the Ethiopian economy? I have partially answered some of these questions in a previous piece and will soon provide additional insights. For now, I would like to draw attention to the *existence of an "enclave economy" within the mainstream Ethiopian economy.* This enclave is made up of highly interconnected crony businesses, which are owned and operated by Tigrean elites, who also have a tight grip on the political and military command structures. Take, for example, the Endowment Fund for Rehabilitation of Tigray (EFFORT), abusiness conglomerate affiliated with the Tigrean People's Liberation Front(TPLF). EFFORT has its humble origin in the relief and rehabilitation arm ofthe TPLF. However, it has undergone amorphous growth and now controlsthe commanding heights of the Ethiopian economy. By some estimates, EFFORT now controls more than 66 business entities.

The EFFO*RT* controlled enclave and related military engineering complexeshave created a semi-autonomous economy in Ethiopia. They made smart choices and specialized in engineering and construction businesses. This means they do not have to rely on the Ethiopian public for their products; instead, each specialize in separate industrial branches and buy from eachother and also sell to the government, which is also in their hand. The huge government infrastructural projects necessitated by the "developmental state" model create business opportunities for theseengineering companies.

The enclave economy is only loosely linked to the mainstream economy and it does not benefit the bulk of the Ethiopian people in any meaningfulway. The luxury hotels and supermarkets that Davison refers to cater for the needs of the affluent business classes, their families, and the expatriate community. In other words, Ethiopia's miraculous economic growth, if it in fact exists, must have happened only in the enclave economy. Statistically, it is possible to generate a double-digit economic growth at the national level through a combination of some real astronomical growth in the enclave component and stagnation or declineshidden, through some accounting tricks, in the rest of the economy.

Lock-in style of reporting

Unfortunately, the unquestioned reporting on Ethiopia's economic success has continued. Even the EU study appears to have been shelved, or deliberately ignored despite the significant findings. Even as a fifth of the population is in need of emergency aid, the World Bank is sticking with theoutdated data and has recently released a sensationalized report entitled "Ethiopia's Great Run: the growth acceleration and how

to pace it.” The ensuing famine has shaken the foundation of Ethiopia’s growth narrative, yet western NGOs and media outlets appear to suffer from the lock-in effect in adopting consistent storylines. They continue to link and refer to the World Bank, IMF and others reports and indexes by multilateral organizations. That’s why we continue to see comical headlines such as “Ethiopian Drought Threatens Growth as Cattle Die, Crops Fail,” which assumes that Ethiopia’s growth is actually occurring. This acquiescence does not only display ignorance, but it also underscores an effort to evadeaccountability for previous mistakes and failure to report accurate information.

In a recent interview with The Ethiopian Reporter, Prime Minister Hailemariam Desalegn made a rare and fateful admission: “if we crave fortoo much praise for our achievements, we might run the risk of undermining the challenges we are facing. These challenges could grow bigger and become irreversible and that would be detrimental.” Over the past 25 years, the EPRDF worked tirelessly to create a distorted image of the country and began craving and lobbying foreigners for praises. Enron’ssuccess involved an elaborate scam, but the firm was named “America’s Most Innovative Company” for six consecutive years. This fame did not stop Enron from crumbling. EPRDF’s fate will not be any different. The Oromo uprising has already started the unraveling of its elaborate scams devised to attain legitimacy on the back of non-existent economic and democratic advancement. **J. Bonsa is a researcher based in Asia. This article was first published on OPride. 4. የወያኔ ባለስልጣኖች ወደውጭለጉብኝት በሚሄዱበት ጊዜ እንደአይጥ ተደብቀውእንጂ እንደድሮውበነጻነት

እንዳያደርጉ በመታቀባቸው፤ ይህም ተቃአውሞውን ኢሳት ስለሚዘግበውና በኢትዮጵያ ህዝብም ስለሚታይ--ያ ደግሞ በህዝብ ውስጥ ወያኔ የዘራውን ፍርሃት ስለሚገፍና ለህዝቡም የልብ ልብ ስለሚሰጥ

5. ውጭ ያለው ተቃዋሚ የልብ ልብ ተሰምቶት ኤምባሲ ሰብሮ ገብቶ የህወሃትን ባንዲራ አውርዶ መቅደዱና ያምበኢሳት መዘገቡ ተቃዋሚው ለበለጠ ትግል እንዲዘጋጅ አድርጓል፡፤ ...የጀብደኛውን የኤምባሲ ዘበኛ ጥይት ከመጤፍ ሳይቆጥሩ ሽጉጥን ከእጁ እስከመቀማት የደረሰ ፍጥጫ ማድረጋቸው ተቃውሞው ወደሌላ ደረጃ እያደገ መሆኑን ጠቁሟል ..... ስለዚህ ስብሃት ነጋ እንደበፊቱ አሜሪካ ቡና ቤት ቁጭ ብሎ በሰላም ቡናውን የሚጠጣበት ዘመን አብቅቷል።

6. በኢሳት ቀስቃሽነት ለትጥቅ ትግሉ የሚሆን ከፍተኛ ገንዘብ መሰብሰብ መቻሉ

7. በኢሳት አማካኝነት -የኢትዮ-ኤርትራ የህዝብ ግንኙነት ወደተሻለ ደረጃ እንዲደርስ ውይይት መጀመሩ

..የመቀሌ ትግሬዎች ለኔ በማይገባኝ ምክንያት ሌላውኢትዮጵያዊ ከኤርትራውያን ጋ ወዳጅ እንዲሆን ፈጽሞው አይፈልጉም። ሊቆጣጠሩት፡ የማይችሉት ቅናት ያድርባቸዋል።

በአጠቃላይ ኢሳቶች የትግሉን እሳት በማፋፋም ትልቁን ድርሻ እየተወጣችሁ ቢሆንም "አብሮ-መኖር" የሚለውንአባባል "መጀመሪያ-መኖር" በሚለው ተክታችሁ አማራው ላይ እየደረሰ ያለውን ሰቆቃና ግፍ በማስረጃ እያስደገፋችሁ ያለምንም መታቀብ መዘገባችሁን ቀጥሉበት። በናንተ ስራ ስንቱ አማራ እንደነቃ ቤቱ ይቁጠረው። ይህ ንቃት "ክሪቲካል-ማስ" ላይ እንዲደርስ የማድረግ ትልቅ ሃላፊነት አለባችሁ። ከዚያ በኋላ ሁሉም ቁልቁለት ይሆናል።

አማራ አማራ ስል ሌላው ብሄር ተመቸቶታል ለማለት አይደለም። ሁሉም እንደሚያውቀው በዛሬዪቱ ኢትዮጵያ ትግሬአንደኛ ዜጋ ነው። ሌላው ብሄር እንደሁለተኛ ዜጋ ነውየሚታየው። አማራውደግሞእንደሶስተኛ ዜጋ ነውየሚታሰበው። ያ ሳያንስ በትግሬ ጭራቅ ደህንነቶች ተባባሪነትና አስተባባሪነት በሚኖርበት መሬት ላይ ሁሉ እንደእንስሳ እየታደነ የሚገደልበት ሁኔታ ነውያለው። ታዲያ ይህ እውነት ካልተነገረ ምን ይነገራል!! (Text ends)

በኢትዮጵያ "የዘ-ህወሀት ታሪክ ፍጻሜ" መቃረቡ ነውን?

Amharic Translations By almariam On December 29, 2015

ከፕሮፌሰር አለማየሁ ገብረማርያም ትርጉም በነጻነት ለሀገሬ

የዘራፊ ህዝባዊ ወያኔ ሀርነት ትግራይ ወሮበላ የዘራፊ ቡድን ስብስብ (ዘ-ህወሀት) የሙት ዓመት ታሪክ ቀደም ሲልየመንግስት ኮሚኬሽን ጉዳዮች ሚኒስትር በነበረውእና አሁን በህይወት የሌለውየዘ-ህወሀት አድራጊ ፈጣሪ ጭንቅላት የነበረው ወንጀለኛው መለስ ዜናዊ እና ቀደም ሲል የኢትዮጵያ ህዝቦች አብዮታዊ ዴሞክራሲያዊ ግንባር (ኢህአዴግ) እየተባለ የሚጠራው እና በዘ-ህወሀት የሚዘወረው አስመሳይ ድርጅት ምክትል ጠቅላይ ሚኒስትር እናየኢህአዴግ ምክትል ሊቀ መንበር አዲሱ ለገሰ ጓደኛ በሆነው በበረከት ስምኦን ባለፈው ዓመት ተጽፏል፡፡

በአንድ በሚስጥር ተመዝግቦ በተያዘ ውይይት በረከት እና አዲሱ ግልጽ በሆነ መልኩ ለቡድን ደጋፊዎቻቸውበኢትዮጵያ የዘ-ህወሀት ጊዜውእያለቀ መሆኑን፣ የመጨረሻዎቹ ቀናት እየደረሱእና ቀኑ እያለቀበት መሆኑን ተናግረዋል፡፡

አዲሱ እንዲህ በማለት ተናግሯል፡

"አሁን ካለንበትነባራዊ ሁኔታአንጻር ስንመለከተውነገሮችሁሉ ከእጆቻችን እየወጡ ነው፡፡ ስለዚህ ጉዳይ ምንምዓይነት ጥያቄ የሚያስነሳ አይደለም፡፡ ይህንንምየመምሀራን ድርጅቶች ምን እየሰሩ እንዳሉ በግልጽ ልንመለከት እንችላለን፡፡ ሁለት ሶስተኛ

የሚሆነውየትምህርት ሰውየእኛ ፓርቲ አባል ቢሆንም ከዚህ በተጻረረ መልኩ እኛን በመቃወም ሰላማዊ ሰልፍ በማድረግ ላይ የሚገኙ ሲሆን ይህም የታሪኩን ፍጻሜ ያመላክታል፡፡ አረና ፓርቲ ብቻ ነውብዬ አላስብም፡፡ ግንቦት ሰባትም አብሮ አለ፡፡ በባህርዳ ከተማውስጥ ጸረ ህወሀት የሆኑ በራሪ ወረቀቶች ተበትነዋል፡፡በስብሰባውየነበሩ ተሳታፊዎች በዚህ ጉዳይ ላይ ስምምነት ያላቸውመሆናቸውን በምላሻቸውግልጽ አድርገዋል፡፡ ከዚህም በተጨማሪ ወረቀቶች በባህራዳር ውስጥ ተሰራጭተዋል፡፡ ሆኖም ግን ምን ለማለት እንደፈለግሁ የምታውቅ ከሆነ ይህንን ነገር አናውቅም፡፡ በራሪ ጽሁፎች በመበተን ላይ መሆናቸው በተጨባጭ ታይተዋል፡፡ ስለሆነ ምይኸ ጉዳይ በየቦታው በሴል ደረጃ እየወረደ በመተግበር ላይ እንዳለ አስባለሁ፡፡ እራሱን በማደራጀት ላይ ያለ አንድ ነገር ያለ ይመስላል፡፡ ስለሆነ ምይኸ ነገር ከግንቦት ሰባት የሚመጣ ይመስለኛል፡፡ (አጽንኦ ተሰጥቷል፡፡)“

በረከት የዘ-ህወሀት ቀን እያለቀ መሆኑን አሁን እየተመለከተው ያለው ምልክት ለዚህ ማሳይ ምሳሌ እንደሆነ አምናለሁበ ማለት እንዲህ የሚል ምላሽ ሰጥቷል፡

“ስብሰባ ነበር፡፡ በዚያ ስብሰባ ላይ በመገኘት ተገኝቼ ነበር፡፡ ቁርስ በመብላት ላይ ነበርኩ፡፡ ሁለት ሰዎች ከመጡበኋላ ከእኔ ጋር ማውራት ጀመሩ፡፡ ከእኔ ጋር ሲነጋገሩ በነበሩበት ጊዜ ሀሳቦቻቸውን በእኔ ላይ ለመጫን ጥረት ሲያደርጉ ነበር፡፡ ነገረ ሁኔታቸው ሁሉ አላስደሰተኝም ነበር (ምቾት አልሰጠኝም)፡ ይህንን ጉዳይ ስመረምረውእነዚህሰዎች ከከተማው የመሬት አቅርቦት የመጀመሪያዎቹ ተጠቃሚዎች ናቸው፡፡ የመጀመሪያዎቹ!እነዚህ ሰዎች ግራ እና ቀኝ በማለት እያታለሉ ከሚገባውበላይ መሬትን ተቆጣጥረውይገኛሉ፡፡ ሆኖምግን የእኛን ጓደኞቹ ለመከሰስ ድፍረቱነበራቸው፡፡ ክስ ለመመስረት ዝግጅት እያደረጉ ነበር፡፡ ይህንን አደረጉ፣ ያንን አደረጉ፡፡ ስለሆነ ምይህንን ነገር ስትመለከቱት ስለምንድን ጉዳይ ነውበመነጋገር ላይ ያሉት? በትክክል ለመነጋገር እኔ ስለዚያ ጉዳይ በጣም በተሻለ መልኩ ምላሽ ለመስጠት ጥረት እንደማደርግ አስብ ነበር፡፡ ይህንን ነገር ማንም ሊቀበለው የማይችል ክስ ነው፡፡ ሆኖምግን ሊታመን የሚችለውነገር ለእኔ ማንም ቢሆን አንድ ነገር ለማለት ድፍረቱ ያለው እንደዚህ ያሉት ግለሰቦች በከተማዋ ውስጥ ታላቅ ቀውስ ሊፈጥሩ እንደሚችሉ መመልከት ይቻላል፡፡ ስለሆነ ምፕሮፓጋንዳ በማስፋፋት ላይ የሚገኙት እና እንደዚህ ያለ ነገር የሚሰሩ ሰዎች ተለይተው መውጣት አለባቸው፡፡ እናም ማግለል አለብን፡

፡ እንደዚሁም ሁሉ ከብዙ ጊዜ ጀምረው የእኛ ጓደኞች ሆነው የቆዩት እንዲህ በማለት በሚያስደንቅ ሁኔታ እና በማሾፍ በመናገር ላይ ይገኛሉ፡፡ ኦ!አትጨነቂ፡፡ የምርጫው ወቅት ሲደርስ እንተያያለን እና የመሳሰሉትን በመናገር ላይይገኛሉ፡፡ እንደዚህ ያሉ ንግግሮች ደስ አያሰኙህም…(አጽንኦ ተጨምሯል፡፡)“

በረከት፣ አዲሱ እና የዘ-ህወሀት ኩባንያ በእርግጠኝነት ምንድን በማለት ላይ ነውየሚገኙት?

እንደኛ፡ ሁለቱ የዘ-ህወሀት ተልዕኮ አስፈጻሚዎች የዘ-ህወሀት ቀን መጠናቀቂያው እቀረበ መሆኑን በመፍራት ላይይገኛሉ፡፡ ግልጽ በሆነ መልኩ እንዲህ ብለዋል፣ “የዘ-ህወሀት የመጨረሻውጊዜ ነው፡ ፡ “

በረከት፣ አዲሱ እና የዘ-ህወሀት ኩባንያ የታሪኩ መጨረሻ መሆኑን ያውቃሉ፣ ምክንያቱምበስልጣን ርካብ ላይ እንደ መዝገር ተጣብቀው ለመቆየት ያለ የሌላቸውን ማስመሰያ እና ማታለያ መንገዶችን ሁሉ ከመጠቀም ወደ ኋላ አይሉም፡ ፡

ለ24ዓመታት ያህል ዘ-ህወሀት የከፋፍለህ ግዛ ጨዋታቸውን በመተግበር የጎሳ እና የኃይማኖት ጽንፈኝነት የጥላቻ ተግባራትን ሲያራምዱ ቆይተዋል፡፡ ጥላቻ ዒላማውን እንደሳተ ሚሰየል ተመልሶ መጥቶ የጥላቻ ፈልፋዩን ጭንቅላት የሚበረቅስ መሳሪያ ነውበማለት አንድ ሰው ተናግሮ ነበር፡፡ ደህና ዘ-ህወሀት ለ24ዓመታት ያህል ኢትዮጵያን የጥላቻ ሀገር እንድትሆን ዒላማ አድርጎ ሲሰራ የቆየውን እንጠላለን፡፡ የዘ-ህወሀት ጥላቻ የፈጠረው ጥላቻ በአሁኑ ጊዜየዘ-ህወሀትን ጭንቅላት የሚበረቅስ መዶሻ ፈጥሯል፡፡ ለ24ዓመታት ዘ-ህወሀት የጎሳ ፌዴራሊዝምን ጨዋታ ሲጫወቱ እና ሁሉም መሬት የመንግስት ነውበማለትአውጀው ሲዘርፉ እና የመሬት ቅርምት ሲያደርጉ ቆይተዋል፡፡

ሆኖም ግን መንግስቱ የማን ነው?

ዘ-ህወሀት እና ዓለም አቀፍ የመሬት ቅርምት ፈጻሚዎች፣ አጭበርባሪዎች እና የድህነት አቃጣሪዎች የህዝቦችን መሬትይገዛሉ፣ ይሸጣሉ፣ እንደዚሁም ሁሉ ያጨርታሉ፣ ይዘርፋሉ፣ ይቀማሉ፡፡

እ.ኤ.አ ታህሳስ 2015የዘ-ህወሀት የመሬት ተቀራማቾች እና አጭበርባሪዎች እንዲህ የሚል የመጨረሻ ማስጠንቀቂያ ሊሰጣቸው ይገባል፡ "ከዚህ በኋላ የእኛን መሬት እና ሌላውንም ሀብት እንድትሰርቁ አንፈቅድላችሁም፡፡በቃ በቃ ነው!"

እ.ኤ.አ ታህሳስ 2015ለዘ-ህወሀት የተላለፈው ጽናት የተመላበት የህዝብ መልዕክት እንዲህ የሚል ነው፡

ለ24ዓመታት ያህል ክብራችንን ገፍፈሽን ቆየህ፣ እናም በውርደት ተጀቡነን ቆየን፡፡ በአሁኑ ጊዜ ግን "በቃ በቃነ ው!"

ለ24ዓመታት ያህል ሰብአዊ መብታችንን ደፍጥጠህ ቆየህ፣ እናም የሁለተኛ ዜግነት ደረጃን ተቀብለን አንገታችንንደፍተን ቆየን በአሁኑ ጊዜ ግን "በቃ በቃ ነው!"

ለ24ዓመታት ድምጻችንን እና አንደበታችንን ዘግተህ ቆየህ፣ አንገታችንን ደፍተን ቆየን፣ በአሁኑ ጊዜ ግን "በቃ በቃነ ው!"

ለ24ዓመታት ያህል የልጆቻችንን የወደፊት ብሩህ ተስፋ አጨልመህ በተስፋቢስነት ዝምብለን አንገታችንን ደፍተንስንመለከት ቆየን፣ በአሁኑ ጊዜ ግን "በቃ በቃ ነው!"

ለ24ዓመታት ያህል አንዱ ምርጫሲያልፍ ሌላውን እየዘረፍክ እና በአደባባይ የህዝብን ድምጽ እየሰረቅህ ቆየህ፣ በዚህ በሳለፍነ ው ዓመት ደግሞ በቂስል ላይ እንጨት ስደድበት እንዲሉ የይስሙላ የቅርጫ ምርጫውን መቶ በመቶአሸነፍኩ ብለህ በእብሪት ተወጥረህ ያለምንም ሀፍረት በድፍረት ተናገርክ፡፡ በአሁኑ ጊዜ ግን "በቃ በቃ ነው!"

ለ24ዓመታት ያህል ስብዕናችንን ገዝተህ ቆየህ፣ የደፈጠጥከው ስብዕናችን ወደነበረበት ቦታው እንዲመለስእንጠይቃለን፡፡ በአሁኑ ጊዜ ግን "በቃ በቃ ነው!"

ለ24ዓመታት ያህል አባቶችን እና ቅድመአያቶቻችን ደማቸውን አፍስሰውአጥንታቸውን ከስክሰውያቆዩትን መሬታችንን እየዘረፍክ ተባባሪ ለሆኑት ዓለም አቀፍ የመሬት ተቀራማቾች እና ለድህነት አቃጣሪዎች በቁርጥራጭሳንቲም ለግብር ዓላማህ ስትችበችበውዝም ብለን ስንመለከትህ ቆይተናል፡፡ አሁን ግን "በቃ በቃ ነው!"
መሬታችንን ለመጠበቅ ስንል በመሬታችን ላይ እንሆናለን ወይም በመሬታችን ውስጥ እንገባለን፡፡

ኃይልን በመጠቀም ብትገድሉንም፣ ሰላማዊ አመጻችንን ለማፈን የፈለገውን ያህል የኃይል እርምጃ ብትወስዱብንም፣ ብትፈጁንም፣ ብትገፉንም፣ ብታባርሩንም ወይም ደግሞ ብትለያዩንም በምንም ዓይነት መልኩ አናጎበድድም!

በአሁኑ ወቅት እናንተን አንገት እስካላስደፋን ድረስ አናጎነብስም!

ሁለተኛ፡ በረከት እና አዲሱ የዘ-ህወሀት ታሪክ መጠናቀቂያ የመጨረሻው ጊዜ መድረሱን ያውቃሉ ምክንያቱም ድህነት፣ ረሀብ እና ባለፉት አስርት ዓመታት ህዝቡን ስቃይ ፍዳውን እያሳዩት ባለበት ሁኔታ የምጣኔ ሀብቱ በሁለት አህዝ ዕድገት አስመዝግቧል በማለት የሸፍጥ ፕሮፓጋንዳቸውን በማሰራጨት የቁማር ጨዋታ በመጫወት ላይ ይገኛሉ፡
፡ ዘ-ህወሀት በፍርሀት ቆፈን ውስጥ የተጀቦኑ የድህነት አቃጣሪዎችን (ይቅርታ አማካሪዎችን) መላሾ እና ጥቅማ ጥቅምእየሰጠ በሀሰት ምንም ዓይነት የምጣኔ ሀብት በተጨባጭበመሬት ላይ የሌለውን አለ እያሉ የሀሰት ምስክርነት እዲሰጡበማድረግ ላይ ይገኛሉ፡፡ የዓለምባንክ፣ የዓለምአቀፍ የገንዘብድርጅት፣ ዩኤስኤይድ እና ሁሉምየዓለምአቀፍ የድህነት አቃጣሪዎች ዘ-ህወሀት ታምራዊ የሆነ የምጣኔ ሀብት አስመዝጋቢ ኃይል እንደሆነ አድርገውሀጋዊ ለማስመሰል የሀሰት የቁጥር ድርደራ በመስጠት የለየለት ቅጥፈታቸውን በመፈጸምላይ ይገኛሉ፡፡

እኛ የእነርሱን ተራ ውሸት እና እርባና ቢስ ቅጥፈት የማናውቅ ድሁሮች፣ ደደቦች እና ደንቆሮዎች እንደሆንን አድርገው ያስባሉ፡፡

ደህና እነርሱእንደሚያስቡት ደደቦች እና ደንቆሮዎች እንዳልሆን ግን እየተገነዘቡት ነው፡፡

ባለፉት 24ዓመታት ዘ-ህወሀት በከተማው ውስጥ ብቸኞቹ ተጫዋቾች እነርሱ እንደሆኑ አድርገውሰይመዋል፡፡ ኢትዮጵያን የሸፍጣቸው የመጨወቻ ሜዳ አድርገዋታል፡፡ ኢትዮጵያን የመጨወቻ አሻንጉሊት አድርገዋታል፡፡ የስሜታቸውማርኪያ መዝናኛቸው አድርገዋታል፡፡ ምንጊዜምለማሸነፍ ብቻ ይጨወታሉ፣ ሆኖምግን በመጨረሻውእራሳቸውን ከጨዋታው ውጭ አድርገዋል፡፡

አሁን ጨዋታው በዘ-ህወሀት ላይ ነው!
ወይም ደግሞ የአዲሱን የማስታወሻ ቃላት በመጠቀም የዘ-ህወሀት ታሪክ እያለቀ ነው፡፡
ሶስተኛ፡ በረከት እና አዲሱ የዘ-ህወሀት ታሪክ ጊዜ እያለቀ መሆኑን ያውቃሉ ምክንያቱም ዘ-ህወሀት በኢትዮጵያውስጥ ምንም ዓይነት

ጓደኛ እንደሌለው ያውቃሉ፡፡

በረከት እና አዲሱ ሎሌዎቻቸውእና ጨማላሾቻቸውበእነርሱ ተመልካችነት ሲዘርፉ እና ያለአግባብ በህዝብ ሀብትሲበለጽጉ ወንጀሎቻቸውን ለበርካታ ጊዚያት እየሸፈኑ የነበሩት ጓዶቻቸው በአሁኑ ጊዜ የእነርሱ ጓደኞች አለመሆናቸውን በአድናቆት በመመልከት ላይ ናቸው፡፡ የሸክስፒርን አባባል በመዋስ የእነርሱ ጓደኞች "በፈገግታ ጥርሶቻቸውን እያሳዩ ሸፍጥ የሚሰሩ" ጓደኞች ናቸው፡፡

በአሁኑ ጊዜ በረከት፣ አዲሱ እና ዘ-ህወሀት ምንምዓይነት ጓደኛ እንደሌላቸውእየተገነዘቡነው፡፡

በፖለቲካ ዓለምእውነተኛ ወዳጅ እንደሌለ ማወቅ ይኖርባቸውነበር፡፡ ሻርኮች ብቻ በዙሪያቸውያለውን ማንኛውምነገር ዘንጥለው እና በስተውበደምባህር እንዲጥለቀለቅ አድርገውወደ ውኃውየውጨኛ አካል ላይ ብቅ ይላሉ፡፡

እንዲሰርቁ እና ህዝቡን እንዲዘርፉ ፈቅደውላቸው የኖሩት የዘ-ህወሀት ጓደኞች በአሁኑ ጊዜ ሻርክ በመሆን አካባቢውን ወርረው በመያዝ ዘንጥለው እና በስተውበውሀ ውላይ ደም እንዲታይ በማድረግ በስሜታዊነት ከቁጥጥር ውጭ በመሆን ከሌሎች ጋር በመሆን የዘረፉትን ለመቀራመት ይሞክራሉ፡፡

በረከት፣ አዲሱ እና ዘ-ህወሀት ለማመን አስቸጋሪ የሆነባቸው እውነታ በዘራፊዎች፣ በሌቦች እና በሸፍጠኞች መካከል ምንም ዓይነት ክብር የሌለ መሆኑን መገንዘብ ያለመቻላቸው ጉዳይ ነው፡፡ በዘራፊዎች መካከል በእርግጠኝነት ምንም ዓይነት ክብር የሚባል ነገር የለም፡፡

በረከት፣ አዲሱ እና የእነርሱ ጓደኞች በዘ-ህወሀት ውስጥ ተንከባክበው ያሳደጓቸው የሙስና የቢዝነስ ሰዎች እና የእነርሱ አጉራሽ የሆኑት በዝቅተኛው እርከን ላይ የሚገኙት ጓደኞቻቸው የእነርሱን ክብር ለመጠበቅ ሲባል የዘረፉትንሀብት እንዲመልሱ እና በእውነት ተናግረው ወደ እስር ቤት እንዲገቡ ይፈልጋሉ፡፡

በድን ሆኖ የደነገጠው በረከት እንዲህ ይላል፣ “ጉዳዩ የዘ-ህወሀትን በሙስና መዘፈቅ እና ከሕግ አግባብ ውጭስልጣንን መጠቀምን በሚመለከት ማንም ቢሆን ሊቀበል የመቻሉ ጉዳይ አይደለም፡፡ ሆኖም ግን ሊታመን የማይችለውጉዳይ ማንም ቢሆን እንደዚህ ያለውን ነገር በድፍረት መናገር የመቻሉ ሁኔታ ነው፡፡“

በረከት እና አዲሱ ያለምንምክትትል እና ቁጥጥር በሙስና ገበታ ውስጥ እንደፈለጉ ሲዘርፉ እና ስልጣናቸውን ከህግአግባብ ውጭ ለበርካታ ጊዚያት ሲጠቀሙእንዲቆዩ ያሰለጠኗቸው ውሾች በአሁኑ ጊዜ ሲመግቧቸው የቆዩትን እጆቸወደ መንከስ ደረጃ የተሸጋገሩ መሆናቸውን ሊያምኑ አልቻሉም፡፡

ሆኖም ግን በረከት የሸክስፒርን አባባል በመዋስ እንዲህ ይላል፣ “ከፍተኛ ተቃውሞ የተነሳ ይመስለኛል፡፡“

ደህና ለምንድን ነው በሙስና የተዘፈቁ በዘ-ህወሀት የተፈጠሩ የቢዝነስ ሰዎች እና ወንጀለኛ የአካባቢ ባለስልጣኖች እንደዚህ ባለ ድፍረትን በተቀላቀለ ሁኔታ፣ ንቀትን በሚያሳይ እና ምንም ዓይነት ፍርሀት በሌለበት መንገድ ከቁንጮባለስልጣኖች ጋር መነጋገር የጀመሩት ዘ-ህወሀት ወደፊት በኢትዮጵያ ህዝብ ላይ ምንም ዓይነት ዋጋ የሌለው እርባናቢስ ድርጅት ካልሆነ በስተቀር በሌላ በምን ሊባል ይችላል?

በረከት እና አዲሱ ሊውጡት ያልቻሉት ደረቅ እውነታ ጓደኞቻቸው እና ደጋፊዎቻቸው በወገባቸው ላይ ጎራዴ በመታጠቅ የመጀመሪያ መሆናቸውን እና የተሳፈሩበት ጀልባ የውኃ ስርገት መፍሰስ ሲጀምር ገና በመጀመሪያው ምንምዓይነት ዕድል ሳይሰጡእያወጡወደ ባህሩ የሚወረውሯቸው መሆኑን ያለመገንዘባቸው ነው፡፡ የተማሩ እና የእኛ የተሻሉ ጓደኞች ያልናቸው የፓርቲ አባሎቻችን እኛን በመቃወም በእኛ ላይ ያምጻሉ...ይኸ የታሪኩ መጨረሻ ነው በማለት አዲሱ የተሰማውን ሀዘን ግልጽ አድርጓል፡፡

በረከት እና አዲሱ የሁኔታውን አሳሳቢነት ዘግይተው የተገነዘቡት ይመስላል፡፡

በመጨረሻም “ኮፍያው ለማን እንደሚስማማ“ በሚል ርዕስ ቦብ ማርለይ ያቀረበውን እና እንዲህ የሚለውን የሙዚቃትርጉም ተገንዝበውታል፡

ማን እንደሚታመን በፍጹም አታውቅም፣ብትሰጥ ብታበላ ከየትም ከየትም፣ ዘርፈህ ምቀምተህ ከሀገር ከህዝብም፡፡

ደመኛ ጠላትህ፣ ሞት የደገሰልህ፣ በቀጭኑ አንገትህ፣ ሽምቀቅ ያስገባልህ፣ገልበጥ ይልና፣ ወዳጅ ይሆንና፣ ደግሞም እንደገና፣ መኖር ይጀምራል ይመሳሰል እና፡፡ አፍቃሪው ወዳጅህ ጥሩ የሚመስለው፣በነጋ በጠባ ካንተ እማይለየው፣

ገና ሲያስነጥሰህ መሀረብ አቅራቢው፣ አቤት ወዴት የሚል ገና ሳታዝዘው፣ አብልቶ እሚያበላ ረዥም እጅ ያለው፡፡ ወዳጄ ነው ብለህ እንቅልፍ ስተተኛ፣ ደጋፊ ነው ብለህ ጠንካራ ሁነኛ
ባንዴ ተገልብጦ ይሆናል ደመኛ፡፡

ጥቂቶች ካንተ ጋር አብረው ይበላሉ፣ መጠጥ በመጠጣት ይመሳሰላሉ፣ ከበስተጀርባ ግን ሀሜት ያስባሉ፣ በስለት ቢላዋ ስጋን ይቆርጣሉ፡፡

ጥቂቶች አምርረው ፍጹም ይጠሉሀል፣ አሁን ወዳጅ መስለው ፍጹም ይቀርቡሀል፣ ከበስተጀርባቸው ሞት ይስቡልሀል፣ በምትሄድበት ላይ ፈንጅ ይቀብሩልሀል፣ ዕድሉን ቢያገኙ ሳትሞት ይቀብሩሀል፡፡

ዘ-ህወሀት በኢትዮጵያ ውስጥ ምንም ዓይነት ወዳጅ የለውም፡፡ ዘ-ህወሀት በኢትዮጵያ ውስጥ 100 ሚሊዮን ጠላት አለው፡፡
ዘ-ህወሀትን ወዳጅ ከማድረግ ይልቅ ሲናደፉ መቅን አሳጥቶ ከሚቆጠቁጠው ከተናዳፊ ጊንጦች ጋር ጓደኛ መሆን በእጅጉ የቀለለ ነው፡፡

የዘ-ህወሀት መሪዎች በአሁኑ ጊዜ ምሁራን በማመጽ ከህደት የተፈጸሙባቸው መስሎ ቢሰማቸውም የወታደሮችን፣ የሲቪል ሰርቫንቱን፣ የቢዝነሱን ማህበረሰብ፣ የንግዱን ማህበረሰብ እና የታይማት መሪዎች ገና ጀርባቸውን እስኪያዞሩባቸው መጠበቅ ይኖርባቸዋል፡፡

የዘ-ህወሀት መሪዎች በአሁኑ ጊዜ ምርጥ የሆኑ ጓደኞቻቸውነገ ደመኛ ጠላቶቻቸውእንደሚሆኑ ሊገነዘቡ ይገባል፡፡ የዘ-ህወሀት ታዛዥ ሎሌዎች በ 100 መቶ ሚሊዮን ሻርኮች ባህር ውስጥ እንደሚዋኙ ማወቅ ይኖርባቸዋል::
የዘ-ህወሀት መሪዎች ያለማንም ደጋፊነት ብቻቸውን መለመላቸውን መቆማቸውን በውል ሊያጤኑት ይገባል፡፡

በአሁኑ ጊዜ ውስጥ የዘ-ህወሀት መሪዎች፣ ታማኝ ሎሌዎች እና ደጋፊዎች እንዲህ የሚሉትን የማርቲን ሉተር ኪንግን ቃላት ማስታወስ ይኖርባቸዋል፣ “በመጨረሻ የእኛን ጠላቶች ቃላት አይደለም የምናስታውሰው፣ ሆኖም ግን የጓደኞቻችንን ጸጥ ማለት ብቻ ነው የምናስተውለው፡፡ “

የዘ-ህወሀት የመጨረሻ ታሪክ በሚነገርበት በአሁኑ ጊዜ የዘ-ህወሀት ጓደኞች እንደ መቃብር ጸጥ ርጭብለውበ ማስተዋል ላይ ናቸው፡፡

አራተኛ፡ በረከት እና አዲሱ የዘ-ህወሀት ታሪክ የመጨረሻው መሆኑን ያውቃሉ ምክንያቱም በህብረተሰቡ ውስጥ ፍርሀትን ማንገስ እና ጥላቻን መቀስቀስ የማያዋጣቸው ተራ ሽፍጥ እየሆነ መምጣቱን እየተገነዘቡ የሚገኙበት ሁኔታላይ ናቸውና፡፡ ተስፋ የቆረጠው በረከት እንዲህ ብሏል፣ “ሆኖም ግን ሊታመን የማይችለውነገር እኔ አሁን እንደምለው የመናገር ድፍረቱን አግኝቷል፡፡ “

ተስፋ የቆረጠውአዲሱ እንዲህ ብሏል፣ “በየቦታውእስከ ሴል ደረጃ ድረስ ሄደዋል፡፡ እራሱን እያደራጀ ያለ አንድነገር ያለ ይመስላል፡፡ “

የአምባገነኖች ትልቁ መሳሪያቸው እየጨቆኑት ያለው ህዝብ አዕምሮ ነው፡፡
ፍርሀት እና ጥላቻ ብዙሀኑን ህዝብ በፍርሀት ቆፈን ውስጥ በማስገባት አምባገነናዊ አገዛዞች ህዝቡን ለመቆጣጠር የሚያስችላቸው መስሎ ይታያቸዋል፡፡

ሁሉም አምባገነኖች ህዝቡን በፍርሀት ቆፈን ሸብበው፣ በጥላቻ ከፋፍለው እና በድህነት አሬቂተው በማዛት የስልጣንዘመናቸውን የሚያራዝሙይመስላቸዋል፡፡

ፍርሀትን በማንገስ አምባገነኖች እራሳቸውን የማይበገሩ እና የህዝቦች ሁሉ እዳኞች አድርገውያቀርባሉ፡፡ እነርሱእስከሌሉ ድረስ በሀገሪቱ ውስጥ ሁከት፣ ብጥብጥ እና ውድመት እንደሚከተል ህዝቡን ለማሳመን ተስፋ ያደርጋሉ፡፡

ጥላቻን በማራገብ ህዝቡን ለመከፋፈል እና ለማዛት ጥረት ያደርጋሉ፡፡ነጻነቱን በማፈፍ በድህነት በዳሸቀውህዝብላይ ባርነትን ይጭናሉ፡፡

ዘ-ህወሀት ህዝቡን 5ለ1እየተባለ በሚጠራውየቁጥጥር ሰንሰለት ፕሮግራም ጠርንፎ በመያዝ የሌሎችን ኢትዮጵያውያን ህዝብ ማለትም የጓደኞችን፣ የቤተሰብ አባላትን፣ የስራ ባልደረቦችን፣ እና የጎረቤቶችን የቀን ተቀን ውሎእና እንቅስቃሴ እጅ ከወርች ጨምድዶ በመያዝ በመቆጣጠር ላይ የሚገኝ ቢሆንምዘ-ህወሀት በታችኛውየእርከን ደረጃ የተደራጅእና እነርሱን አሽቀንጥሮ የሚጥል ኃይል እንዳለ በፍርሀት ቆፈን ተውጠውበመናገር ላይ ይገኛሉ፡፡ አዲሱእንዲህ ብሏል፣ “በየቦታውእስከ ሴል ደረጃ ድረስ የወረደ እንቅስቃሴ እንዳለ እገምታሁ፡፡ እራሱን ያደራጀ እና ውስጥ ለውስጥ የሚንቀሳቀስ አንድ ኃይል ያለ ይመስላል፡፡“

በረከት፣ አዲሱ እና ዘ-ህወሀት ላፉት 24ዓመታት ያህል በኢትዮጵያውያን ልቦች እና አዕምሮዎች ውስጥ መጠነ ሰፊየሆኑ ጸጥ ያሉ አመጾች እየተካሄዱ መሆናቸውን ሆን ብለውበድንቁርና እየተመለከቷቸውያሉበት ሁኔታ ያለ ይመስላል፡፡

በአሁኑ ጊዜ ዘ-ህወሀት እነዚህን ጸጥ ብለውበመንቀሳቀስ ላይ ያሉትን አመጾች በግልጽ እየተንጸባረቁ ያሉበትን ሁኔታምስክርነት በመስጠት ላይ ይገኛል፡፡ ይኸ ለሁሉም የሚታይ ግልጽ የሆነ እውነታ ነው፡፡

በኢትዮጵያ የፕሬስ ነጻነት ተምሳሌት ቀንዲል የሆነችውጀግኒቷ ርዕዮት ዓለሙባለፈውሳምንት ሰላማዊ ትግን በመተው በትጥቅ ትግል ለመፋለም እና ዘ-ህወሀትን በትጥቅ ትግል ለማስወገድ በጽናት መወሰኗን ባወጀች ጊዜ ይኸ“የ ታሪኩ መጨረሻ” መሆኑን በግልጽ ያመላክታል!

ርዕዮት ሀሳብን ለማለጽ ብቻ ሲባል እንደሚደረግ ተራ ሰውአይደለችም፡፡ ርዕዮት እንደ እርሷ ሁሉ በጸረ ዘ-ህወሀትላይ ለተነሱት ለሌሎች ጀግኒቶች እና ጀግናዎች የቆመች መንፈሰ ጠንካራ ጀግኒት ናት፡፡ በምንምዓይነት መልኩ አታጎ በድድም! በፍጹም!

ርዕዮት ከሌሎች ሴቶች በላይ ልዩ የሆነ ድፍረት፣ ጽናት እና የአዕምሮ ጉብዝና ያላት ጀግኒት ናት፡፡ ርዕዮት ለእርሷ ትውልድ ላለው ህዝብ ድምጽ እና መልዕክተኛ ናት፡፡

ርዕዮት የሰላማዊ ትግል በሀገሪቱ ውስጥ ያበቃለት መሆኑን እና የእርሷ ትውልድ ለትጥቅ ትግል መዘጋጀት እንዳለበትበግልጽ በመናገር ላይ ትገኛለች ምክንያቱም ዘ-ህወሀት ሁሉንም የፖለቲካ አማራጭ ሀዳሩን ዘግቶታል፡፡
ወጣቱ ትውልድ ለትጥቅ ትግል ቆርጦ በሚነሳበት ጊዜ የታሪኩ ፍጻሜያን ጊዜ ይሆናል፡፡

ርዕዮት በሰላማዊ እና በትጥቅ ትግል መካከል ምርጫ አልመረጠችም ሆኖም ግን ዘ-ህወሀት ርዕዮትን የአመጽ እናየትጥቅ ትግልን እንድትመርጥ አስገድዷታል፡፡

ዘ-ህወሀት በቅርቡ በርዕዮት ላይ ስም የማጠልሸት ዘመቻውን ይጀምራል፡፡ እንዲህም ይላሉ፣ ርዕዮት "አሸባሪ" ናት፡፡ አሸባሪውን ቡድን ተቀላቅላለች፡፡ በመጀመሪያ ደረጃ አስረዋት የነበሩበት ምክንያትም በሽብርተኝነት ተሳታፊ በመሆኗ በሚል ምክንያት ነው፣ ሌላም... ሌላም... ሌላም...

በቅርቡ የርዕዮትን ስም ለማጠልሸት እና ስሟን ለማጥፋት ዘመቻ ይጀምራሉ፡፡ ስለእርሷ ውሸት እና ተራ ቅጥፈትማሰራጨት ይጀምራሉ፡፡

ዘ-ህወሀት ስለርዕዮት ስለሚያስበው ጉዳይ ማንም ጆሮ እንደማይሰጠው እና ከጉዳይ እንደማይቆጥረው መገንዘብይኖርበታል፡፡

ይልቁንም ዘ-ህወሀት በውል ሊገነዘበውየሚገባውጉዳይ ርዕዮት በተስፋየተሞላ፣ ራዕይ ያላት እና ከኢትዮጵያ ህዝብ70በመቶ የሚይዘውየኢትዮጵያ ወጣት ትውልድ ነጻነቱን ለመጎናጸፍ በጽናት መታገል እንዳለበት የሚያስችል ስብዕናን የተጎናጸፈች ጀግኒት መሆኗን ነው፡፡

ዘ-ህወሀት ማወቅ ያለበት ጉዳይ ቢኖር እንደ ርዕዮት ሁሉ ሌላውምየኢትዮጵያ ወጣት እንደ ኢትዮጵያ ጽጌረዳ እያበበእና እየፈካ ሀገሩን ከውድቀት በማዳን ለነጻነት ጉዞውእየተገሰገሰ መሆኑን ነው፡፡

እኔ ለወደፊቷ ኢትዮጵያ የማስተውለውነገር ቢኖር ይህንን ነው፡፡ በአሁኑ ጊዜ ኢትዮጵያ ከጨፍ አስከታች በፈኩየጽጌረዳ አበባዎች ተሸፍና እመለከታለሁ፡፡

አምስተኛ፡ የዘ-ህወሀት መሪዎች የታሪካቸው መጨረሻ መሆኑን ማወቅ አለባቸው ምክንያቱም ለማጥፋት የሚፈልጉትእራሳቸው ሰይጣን ሆነውያሉበትን ነገር ነው፡፡

የትግራይ ማኒፌስቶ በማለት ዘ-ህወሀት ባዘጋጀውሰነድ (ገጽ 18)ላይ እንዲህ በማለት አውጇል፣ “የትግራይ ህዝብግብ እና ዓላማ የጸረ አማራ ጭቆና ትግል መጀመር እና የትግራይ ዴሞክራቲክ ሬፐብሊክን መመስረት ነው፡፡“

ማንም ቢሆን ስለዚህ ጉዳይ ለማወቅ የሚፈልግ ሰውቀደምሲል የዘ-ህወሀት ዋና አባል የነበረውእና ዘ-ህወሀት ሁሉንም ኢትዮጵያውያን በተለይም አማራን እንደሚጠላ በማጋለጥ የማጭበርበሪያ እና የጥላቻ ርዕዮት ለዓለም አቀፉማህበረሰብ የሚያጋልጠውን የገብረ መድህን አርአያን ንግግር መስማት ብቻ በቂ ነው፡፡ ስለገብረ መድህን አርበኝነት እና በኢትዮጵያ ላይ ስላለው ፍቅር እና እውነት ወዳድነት የላቅ ክብር አለኝ፡፡

ዘ-ህወሀት ከ24ዓመታት በላይ ለሆነ ጊዜ የአማራን ስም በማጠልሸት፣ በማስፈራራት፣ በማዋረድ የፍርሀት እናየጥላቻ ዘመቻውን ቀጥሎበት ይገኛል፡፡

ዘ-ህወሀት ከ24ዓመታት በላይ “አማራ ሰይጣን”የሆነ ለምንምየማይጠቅምህዝብ ነውበማለት ስትራቴጂ ቀይሶተንቀሳቅሷል፡፡

ዘ-ህወሀት ከ24ዓመታት በላይ ሰይጣኑ አማራ ሰዎችን በመግደል፣ ኢትዮጵያዊ ወንድሞቹን እና እህቶቻቸውን በመፍጀት ኖረዋል በማለት ሲሰብክ ቆይቷል፡፡

ዘ-ህወሀት ከ24ዓመታት በላይ ሰይጣኑ አማራ መሬቱን በመዝረፍ እና ህዝቡን ባሪያ በማድረግ ኢትዮጵያዊወንድሞቹን እና እህቶቹን ሲጨቁን ቆይቷል ብሏል፡፡

ዘ-ህወሀት ከ24 ዓመታት በላይ ሰይጣኑ አማራ ስልጣኑን ከህግ አግባብ ውጭ በመጠቀም እና አማራ ያልሆኑ ሰዎችንመብት በመንፈግ ሲገዛ ቆይቷል ብሏል፡፡

ዘ-ህወሀት ከ24 ዓመታት በላይ ሰይጣኑ አማራ በመልክ አስፈሪ ሰይጣን ቀርጾ በህዝቡ ላይ የፍርሀት እና የጥላቻዕ ኩይ ተግባራትን ሲያራምድ ቆይቷል፡፡

ዘ-ህወሀት ላለፉት 24ዓመታት እኛ ከሌለን "ሰይጣኖቹ አማሮች ተመልሰው በመምጣት በስልጣን ኮርቻው ላይ ይቀመጣሉ" ሲል ቆይቷል፡፡ ሰይጣኖቹ አማሮች ሌላው ብሄረሰብ በቋንቋው እንዳይጠቀም ይከለክላሉ እያለ ሲያደናግር ቆይቷል፡፡ ህዝቦች የእራሰቸውን ባህል መተግበር በመጀመራቸውአማራ ይቀጣቸዋል ሲል ቆይቷል፡፡ አማራሌሎች ህዝቦች እራሳቸውን ማስተዳደር እንዳይችሉ ያደርጓቸዋል ሲል ቆይቷል፡፡

ላለፉት 24ዓመታት ዘ-ህወሀት ሰይጣኑ አማራ እንደገና ወደ ስልጣን በመመለስ መሬታቸውን እንደሚወስድባቸውለማመን እንዲችሉ ለማድረግ እኩይ ድርጊቱን ሲሰራ ቆይቷል፡፡

ላለፉት 24 ዓመታት ዘ-ህወሀት የመሬታቸው ባለቤት የሆኑትን ኢትዮጵያውያን መሬት እየነጠቀ ለቻይናዎች፣ ለህንዶች፣ ለሳውዲዎች እና ለቱርኮች ሲቸበችብ ቆይቷል፡፡

ከ24ዓመታት በኋላ ዘ-ህወሀት ወደ "አዲሱ እና የተሻሻለው ሰይጣን አማራነት"ተሸጋግሯል፡፡

ፍሬድሪክ ኒቼ "ከበጎ እና ከሰይጥንነት በላይ በሚል ርዕስ እንዲህ በማለት ጽፏል፣ "ከጭራቆች ጋር የሚታገል እርሱ እራሱ ጭራቅ ላለመሆኑ እና እንደማይሆን ማወቅ ይኖርበታል፡፡ እናምለብዙ ጊዜ በአስቸጋሪው ሁኔታ ላይ አፍጥጠህስትመለከት አስቸጋሪው ሁኔታ እራሱ ወደ አንተ ያፈጣል፡፡ "

ዘ-ህወሀት ሰይጣኑን አማራ ለመታግል ስትራቴጂ ነድፎ ሲታግል ከቆየ በኋላ በመጨረሻውታሪኩ እርሱ እራሱ ወደአዲስ እና የተሻሻለው ሰይጣን አማራነት ተሸጋግሯል፡፡

ስድስተኛ፡ ዘ-ህወሀት የታሪኩ መጨረሻ መሆኑን መገንዘብአለበት ምክንያቱም ለሀልውናቸው አስጊው ሁኔታ የመጣው ከሚቃወማቸው ቡድን ሳይሆን አመራር ከሌለው የወጣት እንቅስቃሴ እና ሊበገር ከማይችል እንቅስቃሴነው፡፡

በሚስጥር ተይዞ ተመዝግቦ በተቀመጠው ውይይት ላይ አዲሱ እንዲህ ብሏል፣ "እራሱን ያደራጀ አንድ ኃይል ያለይመስላል...በራሪ ጽሁፎች በመሰራጨት ላይ እንደሆኑ ታይተዋል፡፡ ስለሆነም በየቦታውእስከ ሴል ደረጃ ድረስ ወርደው ተደራጅተዋል ብየ አስባለሁ" ብሏል፡፡

የአዲሱእና የዘ-ህወሀት ፍርሀት አመራር አልባ፣ ፓርቲ አልባ፣ ድርጅት አልባ እንቅስቃሴ በህዝቡ ውስጥ ተሰራጭቶእና ዘልቆ ገብቷል የሚል ነው፡፡

እነርሱን ለመቃወም በተደራጀ መልኩ ከተነሱት ተቃዋሚዎች ይልቅ እራሱን ያደራጀ አንድ ነገር አለ በሚለውላይ እኔም እራሴ እስማማለሁ፡፡ ያ እራሱን ያደራጀ አንድ ነገር ማዕከላዊ አመራር የለውም፣ የእዝ ሰንሰለት ጠገግ የለውምእንደዚሁም ደግሞ የተለየ ርዕዮት ዓለምየለውም፡፡ ያ የተደራጀ አንድ ነገር በየትኛውምቦታ እስከ ሴል ደረጃ ድረስወርዶ ተሰራጭቶ ይገኛል፡፡

ያ የተደራጀ አንድ ነገር ዘርፈ ብዙ የጎሳ እና ዘርፈ ብዙ የኃይማኖት እንቅስቃሴ እንደሆነ አምናለሁ፡፡

ወጣቱ እስከ ሴል ድረስ ወርዶ በመደራጀት ነጻ በሆነ መልኩ እንደ አካባቢውተጨባጭሁኔታ ወይምደግሞ ጠባብ ፍላጎቶችን በመከላከል የአጻፋ ምላሹን ሊሰጥ ይችላል፡፡

ዘ-ህወሀት ከሁሉም የበለጠ የሚፈራውነገር በጋራ እምነት እና በሰብአዊ እና በዴሞክራሲ መብቶች መከበር ዙሪያ ላይ ትኩረት በማድረግ የዘ-ህወሀትን ጨቋኝ አገዛዝ ገዝግዞ ለመጣል ጥረት በማድረግ ላይ ያለውን አመራር የለሹን የወጣቱን እንቅስቃሴ ነው፡፡ በሴል ደረጃ ወጣቱ አንድ በአንድ እየቀሰቀሰ በዘ-ህወሀት ላይ በመነሳት ላይ ይገኛል፡፡

አመራር የለሹን እንቅስቃሴ ማጥፋት አይቻልም፡፡

ምንም ዓይነት የሚደመሰስ ነገር ስለሌለ እንደዚህ ያለውን እንቅስቃሴ ማጥፋት አይቻልም፡፡
ቀላሉ እውነታ እንዲህ የሚል ነው፡ የኢትዮጵያ ወጣቶች ተባብረዋል በፍጹም ሊሸነፉ አይችሉም!!! ለኢትዮጵያውያን ወጣቶች እንዲህ የሚል ምክር አለኝ፡ በዓረቡ ዓለም አመጽ ጊዜ የግብጽ ወጣቶች ሲጠቀሙባቸው
የነበሩትን ስትራቴጂዎች ለይቶ በማውጣት እና በማጥናት ተመሳሳይ ስህተት እንዳትፈጽሙ እርግጠኞች በመሆን ታገሉ እላለሁ፡፡

ሰባተኛ፡ የዘ-ህወሀት መሪዎች የታሪካቸውን መጨረሻ ለማራዘም የሚችሉ መስሎ ይታያቸዋል ምክንያቱም ህዝቡን ሲጨርሱ፣ ሲያሰቃዩ እና የእነርሱን ተቃዋሚዎች ሁሉ ሲፈጁ ዝም ብለው የዝሆን ጆሮ ይስጠኝ በማለት አሜሪካ እና የአውሮፓ ህብረት ጆሮ ዳባ ልበስ ብለው ተቀምጠዋል፡፡ ያቀረቧቸው ታሳቢዎችም ምንም ዓይነት መሰረት የሌላቸውና ችሎ ለማለት አልችልም፡፡
የዘ-ህወሀት ዋና የገንዘብ ምንጭ የሆኑት አሜሪካ እና የአውሮፓ ህብረት እ.ኤ.አ በ 2005 አድርጎት የነበረውን የይስሙላ የቅርጫ ምርጫ ተከትሎ ተፈጥሮ በነበረው ውዝግብ ዘ-ህወሀት ሰላማዊ ህዝቦችን ሲፈጅ፣ ወደ አንድ ሺየ ሚሆኑ ዜገችን አካለ ጎደሎ ሲያደርግ ጆሮዳባ ልበስ በማለት ዝም ብለው ተመልክተዋል፡፡

በእርግጥ በሁለት ዓመት እልቂት እና ፍጅት አሜሪካ እ.ኤ.አ በ 2005 ወደ 1.8 ቢሊዮን ዶላር የነበረውን እርዳታዋን እ.ኤ.አ በ 2008 ወደ 3.5 ቢሊዮን ከፍ አድርጋለች፡፡ እናንተ ለመግደል ያብቃችሁ እንጅ እኔ ለገንዘብ ምጽዋቱ ችግር የለም ማለቷ ነው፡፡

አሜሪካ እና የአውሮፓ ህብረት እ.ኤ.አ ታህሰስ 2004 ዘ-ህወሀት በጋምቤላ ክልል በመቶዎች የሚቆጠሩ ሰላማዊ ዜጎችን ሲፈጅ አላየሁም፣ አልሰማሁም ብለው አልፈውታል፡፡

አሜሪካ እና የአውሮፓ ህብረት ዘ-ህወሀት በኦጋዴን አካባቢ እ.ኤ.አ ከ 2007-08 በሺዎች የሚቆጠሩ ሰላማዊ ዜጎችን ሲፈጁ አላየሁም፣ አልሰማሁም በማለት ጆሮ ዳባ ልበስ ብለው አልፈውታል፡፡

አሜሪካ እና የአውሮፓ ህብረት ዘ-ህወሀት እ.ኤ.አ ከ 2006-09 ድረስ በሺዎች የሚቆጠሩ ሶማሌያውያንን ድንበር ተሻግሮ ሲፈጅ እና ሲያፈናቅል እንዲያውም በሚሊዮኖች የሚቆጠር ዶላር በመጽወት አልሰማንም፣ አላየንም በማለት ጆሮ ዳባ ልበስ ብለው አልፈውታል፡፡

አሜሪካ እና የአውሮፓ ህብረት ዘ-ህወሀት እ.ኤ.አ ታህሳስ 2015 ተቃውሞ ባሰሙንጹህን ዜጎች ላይ እንደገና ሌላየእልቂት እና የፍጅት ዘመቻ ሲፈጽምእና ይህንንም ዕኩይ ድርጊት እ.ኤ.አ በ 2016 በአዲሱ ዓመት አጠናክሮእንደሚቀጥልበት እያዩ ዝም ብለው አላየሁም፣ አልሰማሁም በማለት ጆሮ ዳባ ልበስ ብለው መመልከት ይኖርባቸዋልን?
እኔ የማውቀውነገር የለም፡፡

እኔ የማውቀው ነገር ቢኖር እንዲህ ከሚለው ከሄንሪ ማቱሳላህ ኪሲንገር አባባል ትምህርት የወሰድኩ መሆኔን ነው፣
“አሜሪካ ዘላቂ ጥቅም እንጅ ቋሚ ወዳጆች ወይም ጠላቶች የሏትም“ ብለዋል፡፡

ይህንን አባባል ሰፋ ባለ መልኩ ሳፍታታውነገሮች ገፍተው በሚመጡበት ጊዜ በእርግጠኝነት አሜሪካ እንደዚሁም የአውሮፓ ህብረት እና ቻይናም እንኳ ቢሆኑ የእነርሱን ፍላጎት የማያሟሉ እስከሆኑ ድረስ እርግፍ አድርገው በመጣልበቅርጫት ወስጥ ተደርጎ እንደሚጣል ቆሻሻ ወደ ጓሮ ይወረውሯቸዋል፡፡

እ.ኤ.አ በ2012የግብጽ ህዝብ በጨቋኙ አገዛዝ መሪ በሆስኒ ሙባረክ ላይ ሆ ብሎ በተነሳ ጊዜ አሜሪካ ወደ ጎንነ ውየ ጣለችው፡፡ በዚያን ጊዜ ባራክ ኦባማእንዲህ ብሎነበር፡

“የግብጽ ህዝብ ተናገረ፡፡ ድምጻቸውመሰማት አለበት፡፡ እናምግብጽ እንደቀድሞው መቀጠል የለባትም፡፡ ፕሬዚዳንትሙባረክ ከስልጣኑ እንዲወርድ ተደርጎ ለለውጥ ለተራበው የግብጽ ህዝብ ተገቢውን ምላሽ ይስጥ፡፡ ሆኖምግን የግብጽሽግግር የመጨረሻው አይደለም፡፡ ገና የመጀመሪያውነው፡፡ እርግጠኛ ነኝ ወደፊት ፈታኝ የሆኑ ቀናት ይጠብቃሉ እናምበርካታ ያልተመለሱ ጥያቄዎች ምላሽ ሳያገኙ ቀጥለውይገኛሉ፡፡ ሆኖምግን እርግጠኛ ነኝ የግብጽ ህዝብ ሰላማዊ በሆነ መንገድ፣ ገንቢ በሆነ እና በአንድነት መንፈስ እነዚህን ያለፉ ጥቂት ሳምንታትን ከግንዛቤ በማስገባት ምላሽ ለመስጠት ችለዋል፡፡ ለግብጻውያን ቅን የሆነ ዴሞክራሲያዊ ስርዓት ከማራመድ በስተቀር ሌላ ምንም ዓይነት
መንገድ እንደሌለ ግልጽ አድርገዋል“ብሏል፡፡

እ.ኤ.አ መጋቢት 2011የሊቢያ ህዝብ በሙአማር ጋዳፊ ላይ በተነሳበት ጊዜ የሊቢያ ህዝብ ወደ ታሪክ ቆሻሻቅርጫት ውስጥ ከመጣሉ በፊት ኦባማአስቀድሞ ጥሎታል፡፡ እንዲህ ብሎምነበር፡

“ጋዳፊ ከተቃዋሚኃይሉ የበለጠኃይል አለውብየ አላስብም፡፡ ጋዳፊ በተሳሳተውየታሪክ ጎን ያለ መሆኑን አምናለሁ፡
፡ የሊቢያ ህዝቦች ለነጻነት እና ከበርካታ አስርት ዓመታት እስከ አሁን ሲጨቁነውየቆየውን ሰውለማስወገድ ጉጉት እንዳለው አምናለሁ፡፡ ከዓለም አቀፉ ማህበረሰብ ጋር በመመካከር ጋዳፊ ከስልጣን መንበሩ እንዲወገድ ከተቃዋሚዎቻቸን መቆም አለብን“ ነበር ያለው፡፡
የኢትዮጵያ ህዝብ በህወሀት ላይ በሚነሳበት ጊዜ ኦባማበተመሳሳይ መልኩ እንዲህ ይላል ብዬ ከልቤ አስብነበር፡

“የኢትዮጵያ ህዝብ ተናገረ፡፡ ድምጻቸውመሰማት አለበት እናምኢትዮጵያ በቀድሞውዓይነት ልትራመድ አትችልም፡፡ ዘ-ህወሀት ከስልጣኑ በመውረድ ለኢትዮጵያ ህዝብ የለውጥ ረሀብ ምላሽ መስጠት አለበት፡፡ የመጀመሪያውነው፡፡ ሆኖምግን የኢትዮጵያ ሽግግር የመጨረሻውአይደለም፡፡ ገና የመጀመሪያውነው፡፡ እርግጠኛ ነኝ ወደፊት ፈታኝ የሆኑቀናት ይጠብቃሉ እናምበርካታ ያልተለሙ ጥያቄዎች ምላሽ ሳያገኙ ቀጥለውይገኛሉ፡፡ ሆኖምግን እርግጠኛ ነኝ የኢትዮጵያ ህዝብ ሰላማዊ በሆነ መንገድ፣ ገንቢ በሆነ እና በአንድነት መንፈስ እነዚህን ያለፉ ጥቂት ሳምንታትን ከግንዛቤ በማስገባት ምላሽ ለመስጠት ችለዋል፡፡ ለኢትዮጵያውያን ቅን የሆነ ዴሞክራሲያዊ ስርዓት ከማራመድ በስተቀር ሌላ ዓይነት መንገድየለምብየ አምናለሁ፡፡ የኢትዮጵያ ህዝቦች ለነጻነት እና ከበርካታ አስርት ዓመታት እስከ አሁን ሲጨቁነውየቆየውን ሰውለማስወገድ ጉጉት እንዳለው አምናለሁ፡፡ ከዓለም አቀፉ ማህበረሰብ ጋር በመመካከር ዘ-ህወሀት ከስልጣን መንበሩ እንዲወገድ ከተቃዋሚዎቻ ጎን መቆም አለብን“ይላል ብዬ ነበር የምጠብቀው፡፡

የዘ-ህወሀት የደናቁርት ስብስቦች አሜሪካ፣ አውሮፓ እና ቻይና እስከመጨረሻው ድረስ ከእነርሱ ጋር በጽናት የሚቆሙ ይመስላቸዋል፡፡

የዘ-ህወሀት እርጥባን ሰጭዎች የሆኑትን የቻይናዎችን መርህ ግልጽ አድርጊያለሁን?እንዲህ የሚለውን ጥንታዊ መርህይከተላሉ፣ “ምንም ዓይነት ሰይጣናዊ ድርሀጊት አላየሁም፣ ምንም ዓይነተር ሰይጣናዊ ድርጊት አልሰማሁም፣ ምንምዓይነት ሰይጣናዊ ንግግር አልተደረገም፡፡ “

ህዝቡ በዘ-ህወሀት ላይ ሆብሎ በሚነሳበት ጊዜ ኦባማእና አጋሩ የአውሮፓ ህብረት፣ ቻይና እና እንደዚሁምሌላውቀሪውሁሉ በመስመጥ ላይ ባለ መርከብ ውስጥ እንዳለች አይጥ ሁሉ ዘ-ህወሀትን እየተውውልቅ ውልቅ ይላሉ፡፡

እንዲህ ይሉታል፣ ቻውዘ-ህወሀት ደህና ሁን!አንተን ማወቃችን ጥሩ ነው!እዚህ ላይ ወራጅ አለ!

ጊዜውበሚደርስበት ጊዜ እና የኢትዮጵያ ህዝብ በሚነሳበት ጊዜ በእርግጠኝነት ሊሆን የሚችለውእንደዚህ ነው፡፡ ይነሳሉ፡፡ እንዲህ የሚሉትን የማያ አንጌሎን የግጥም ስንኞች በመጠቀም መነሳታቸውንም እውን ያደርጋሉ፣ደግሞ እንደጨረቃ እንደ ጸሐይ ሁሉ፣
ሌት ቀን ለሚያበሩት ፍጥረታቶች ሁሉ፣እርግጠኛ ሆነን ባመጽ በማዕበሉ፣ ነጻነት ማስፈን ነው በዱር በገደሉ፡፡

እንደሚፈነጥቅ የጸሐይ ብርሀን
እንደ ሌት ጨረቃ እሰኪሰጥ ወጋገን፣ ተስፋችን ይፈንጥቅ ለሰውቤዛ ይሁን፡፡

እንደ ጨረቃ እና እንደ ጸሐይ ሁሉ ኢትዮጵያውያን ይነሳሉ፡፡ ሆኖምግን ኢትዮጵያ እጆቿን ወደ እግዚአብሄርትዘረጋለች፡፡

የኢትዮጵያ ህዝብ እንደ ጸሐይ እና እንደጨረቃ በሚነሳበት ጊዜ አሜሪካ ዘ-ህወሀትን ልታድነውእና ልትጠብቀውከቶ አትችልም፡፡

የኢትዮጵያ ህዝብ ሆብሎ በሚነሳበት ጊዜ አሜሪካ ዘ-ህወሀትን እንደተመረዘ ቦታ እርግፍ አድርጋ ትታውነውየምትሄደው፡፡

አሜሪካ እ.ኤ.አ በ1959 በኩባ ውስጥ ፋልጌንሲዮ ባቲስታንን እንደዚህ ነው ያደረገችው፡፡

እ.ኤ.አ በ1960 ጆን ኬኔዲ ለፕሬዚዳንታዊ የምርጫቅስቀሳ በሚያካሂዱበት ጊዜ ገዳዩ እና ሰይጣኑ ባቲስታ በማለትያወገዙበትን እንዲህ የሚለውን ንግግር አንብቤ አስታውሳለሁ፡፡
“ፋልጀንሲዮ ባቲስታ በሰባት ዓመታት ውስት 20ሺ ኩባውያንን ገደለ…እናምፍጹምበሆነ የፖሊስ መንግስት –ሁሉንም የግለሰብን ነጻነት በማፈፍ ኩባን ወደ ዴሞክራሲያዊ ስርዓት ቀየረ፡፡ ሆኖምግን የእኛ የኩባ እርዳታ እና የማይሰሩ

ፖሊሲዎቻችን ዩናይትድ ስቴትስ ይህንን አሸባሪ የባቲስታ አገዛዝ ከሚረዱት ሀገሮች ስምዝርዝር ውስጥ እንድትመደብ አድርጓታል”ብለውነበር፡፡

የኢትዮጵያ ህዝብ በሚነሳበት ጊዜ እና ለዘ-ህወሀት መውጫ በሚያሳይበት ጊዜ በኦባማ ወይም ደግሞ እሱንበሚተካው የሚደረግ እንዲህ የሚል ተመሳሳይ መግለጫ ለማሰብ እችላለሁ፡

“ዘ-ህወሀት ባለፉት ሁለት አስርት ዓመታት ጊዜ ውስጥ በመቶዎች እና በሺዎች የሚቆጠሩ ኢትዮጵያውያንን ገድሏል፡፡ ለዘ-ህወሀት የምንሰጠውየእኛ እርዳታ እና የማይሰሩ ፖሊሲዎቻችን ዩናይትድ ስቴትስ ይህንን አሸባሪ የዘ-ህወሀትን አገዛዝ ከሚረዱት ሀገሮች ስምዝርዝር ውስጥ እንድትመደብ አድርጓታል”ብለውነበር“ይላሉ ብየ አስባለሁ፡፡

አሜሪካ እ.ኤ.አ በ1979የኒኳራጓ አምባገነን መሪ የነበረውን አናስታሲዮ ሶሞዛ ግራሲያን በዚህ ዓይነት መንገድነበር ያስተናገደችው፡፡

አሜሪካ እ.ኤ.አ በ1979የኢራኑን አምባገነን መሪ የነበረውን መሀመድ ሬዛ ሻህ ፓህላቪንን በዚህ ዓይነት መንገድነበር ያስተናገደችው፡፡

አሜሪካ እ.ኤ.አ በ1981 የፓናማ አምባገነን የነበረውን ኦማር ቶሪጆስን በዚህ ዓይነት መንገድ ነበር ያስተናገደችው፡፡

አሜሪካ እ.ኤ.አ በ2011 የቱኒሲያ አምባነን የነበረውን ኤል አቢደን አሊን እና እ.ኤ.አ በ2012 የየመኑን አምባገነንመሪ አሊ አብደላ ሳለህን በዚህ ዓይነት መንገድ ነበር ያስተናገደቻቸው፡፡

ምንም ዓይነት ክርክር አያስፈልግም፡፡ ምንም ዓይነት ሁከት አያስፈልግም፡፡ አሁን እነርሱን ይይዛሉ፣ ቀጥለውእነርሱኑያጣሉ፡፡ ዋሺንግተን ዲሲ ላይ ያለውመገለባበጥ እንግዲህ የሚያሳየውይህንኑ ነገር ነው::

አሜሪካ ዘላቂ ጥቅምብቻ እንጅ ቋሚወደጃ እና ጠላት የላትም ያለውሁኔታ ይኸውነው!

ስምንት፡ የዘ-ህወሀት መሪዎች የታሪካቸው መጨረሻ ይዘገያል ብለው ያምናሉ ምክንያቱም በአሁኑ ጊዜ ያለውአመጽእንደ ነፋስ እንዴ ሸው ብሎ የሚጠፋ እና ነገሮች ሁሉ ተመልሰውእንደ ቀድሞውእንደተለመደውየሚሆን ይመስላቸዋል፡፡

ከሁሉም በላይ ዘ-ህወሀት በሰላማዊ የሙስሊም አማጺዎች ላይ የኃይል እርምጃ በመውሰድ ጸጥ አድርጊያቸዋለሁ ብሎያስባል፡፡ እውን በእርግጥ ጸጥ አድርጓቸዋልን?
በተቃዋሚየፖለቲካ ፓርቲዎች ላይ የኃይል እርምጃ ወስደዋል፡፡ ሆኖምግን ምንምየተሻሻለ ነገር የለም፡፡ በነጻ ፕሬሱ ላይ የአፈና እርምጃ ወስደዋል፡፡ ግን ምንምየተሻሻለ ነገር አልታየም፡፡
በሰላማዊ መንገድ ያመጹ የዩኒቨርስቲ ተማሪዎችን ገድለዋል፡፡ አሁንም ምንምየተሻሻለ ነገር የለም፡፡

በጋምቤላ፣ በኦጋዴን እና በሶማሊያ የዘር ማጥፋት ወንጀል ፈጽመዋል፡፡ ሆኖም ግን ምንም የመጣ ነገር የለም፡፡

በአሁኑ ጊዜ 15 ሚሊዮን የሚሆኑ ኢትዮጵያውያን በረሀብ እንዲቀጡ እያደረጉ ነው፡፡ ሆኖም ግን ምንም የሆነ ነገርየለም፡፡

በአሁኑ ጊዜ ልዩ የሆነውነገር ታዲያ ምንድን ነው?

የዘ-ሀወሀት መሪዎች የህዝቡን ጥያቄ፣ ተስፋ፣ እና ህልም የመምታት የቁማር ጨዋታ በመጨወት መዝለቅ እንደሚችሉያምናሉ፡፡ የህዝቡን ጥያቄ ለሌላ ሳምንት፣ ወር እና ዓመት ማዘግዜት ይቻላል የሚል እምነት አላቸው፡፡
የዘ-ሀወሀት መሪዎች አንድቀን በስልጣን መቆየትምትልቅ ነገር አድርገውነው የሚቆጥሩት፡፡ በስልጣን ላይ አንዲትምቀን ቢሆን እስከቆዩ ድረስ ለዘ-ሀወሀት ስበስቦች መልካምነገር ነው፡፡

የዘ-ሀወሀት የደናቁርት ስብስቦች ሆን ብለው በድንቁርና ምንም ዓይነት የተቃውሞ ነፋስ ቢነፍስ በኃይል ለመጨፍለቅበሚያደርጉት ነገር ላይየበለጠቁጣ፣ ንዴት፣ ጥልቅ ጥላቻ፣ ጥላቻ፣ ምሬት እና ሊመለስ በማይችል መልኩ የበቀል እርምጃ እየገነባ እንደሚሄድ ያለመገንዘባቸው እውነታ ነው፡፡

ምናልባትም በአሁኑ ጊዜ ያለውተቃውሞሊቆም ይችል ይሆናል፣ ግን ይቆማል ብየ አላስብም፡፡

በተከታታይ በዘላቂነት ተቃዋሚዎቻቸውን እና በሰላማዊ መንገድ ተቃውሟቸውን የሚገልጹትን ንጹሀን ዜጎች በማደል ለምን ያህል ጊዜ እንደሚቆዩ ስትራቴጂ ነድፈውመንቀሳቀሳቸውሁልጊዜ እነሱ በሚያስቡት መንገድ ብቻ የሚቀጥል ስለሚመስላቸው ዘ-ሀወሀት አልፎ በሚሄድ የነፋስ ውሽንፍር እና ድብልቅልቁን በሚያወጣው ታላቅ የነፋስሞገድ መካከል ያለውን ልዩነት ማወቅ መቻል ብልህነት ነው፡፡

ዘጠነኛ፡ የዘ-ሀወሀት መሪዎች የመጨረሻው ጊዜ እየቀረበ መሆኑን በማወቅ የዘረፉትን ገንዘብ በመያዝ ለመሮጥበዝግጅት ላይ ናቸው፡፡

እኔ እናውቃለን ብለው በሚያስቡት ሳይሆን በሚያውቁት መመራት አስፈላጊ እንደሆነ አምናለሁ፡፡ እናም የዘ-ሀወሀትመሪዎች መጨረሻቸው መድረሱን ተገንዝበውከህዝብ ዘርፈውያስቀመጡት ገንዘብ ወዳለበት ሀገር በሚሄድ ለመጨረሻ ጊዜ በሰላም ለመኖር ይሞክራሉ፡፡

ስለደከሙበመስጠም ላይ ያለውን መርከብ ለማንቀሳቀስ አልቻሉም፡፡ መርከቡ ሰምጦ እያንዳንዳቸው ህይወታቸውንከጣታቸው በፊት ተስፋ በቆረጠ ሁኔታ ከመርከቡ ላይ በጥድፊያ በመውረድ ላይ ይገኛሉ::

የዘ-ሀወሀት መሪዎች፣ የእነርሱ ግብረ አበሮች እና ደጋፊዎች የመጨረሻ ምርጫቸው መሮጥ እንደሆነ ያውቃሉ፡፡

ከህዝብየዘረፋችሁትን ገንዘብ ያዙና በሰውልጆች ላይ ሁሉንምዓይነት ወንጀል ሰርተውለሚሄዱባት ሁሉ እጆቿንዘርግታ እንኳን ደህና መጣችሁ ወደሚባልባት ምድር ወደ አሜሪካ ፈርጥጡ፡ ፡

በሰውልጆች ላይ ወንጀልን ለተፈጸመባቸው የግፍ ሰለባዎች ተመልሶ እስከመጣ ድረስ የዘረፋችሁትን ገንዘብ ሁሉይዛችሁ ወደ አሜሪካ ፈርጥጡ፡ ፡

የዘ-ህወሀት የመጨረሻውታሪክ የመፍረጠጫጊዜ ደረሰ፡፡ ለዘ-ህወሀት ተደቁሶ ከመቅረት መሮጥ የተሻለ ነው፡፡

አስረኛ፡ ዘ-ህወሀት የታሪኩ መጨረሻ መድረሱን ያውቃል ሆኖምግን ታሪካቸውእንዴት መፈጸምእንዳለበት የሚያውቁት ነገር የለም፡፡ ታሪካቸው እጅግ መጥፎ በሆነ ሁኔታ እንደሚደመደም እንደሚገነዘቡ አውቃለሁ፡፡ ሰዎችየዘ-ህወሀት አምባገነናዊ ስርዓት መቼ እና እንዴት እንደሚጠናቀቅ ይጠይቁኛል፡፡

የዘ-ህወሀት የመጨረሻ ታሪክ እንዴት ወይም ደግሞ መቼ እንደሚጻፍ ምንም ዓይነት ሀሳብ የለኝም፡፡

የዘ-ህወሀት ታሪክ የመጨረሻውምዕራፍ ከቀናት፣ ሳምንታት፣ ወራት ወይምዓመታት በኋላ ሊጻፍ ይችላል፡፡ መተንበይ አልችልም፡ ፡ የነብይነት ኃይል የለኝም፡ ፡ ሆኖምግን የማለምኃይል ነውያለኝ፡ ፡

የዘ-ህወሀት የጭቆና አገዛዝ የመጠናቀቂያውጊዜ መሆኑን ነገ ጸሐይ ትወጣለች የማለትን ያህል እርግጠኛ ሆኜ መናገርእችላለሁ፡ ፡ ግን ይህንን ከእኔ አትጠብቁ፡ ፡

ይልቁንምከበረከት ስምኦን እና ከአዲሱ ለገሰ ጠይቁ እና እወቁ፡ ፡ የዘ-ህወሀት የመጨረሻ ጊዜውየቀደረሰ መሆኑንአሳምረው ይነግሯችኋል፡ ፡ ማህተመጋንዲ በአንደ ወቅት እንዲህ ብለውነበር፣ “በታሪክ ውስጥ ምን ጊዜምቢሆን ለጊዜው ጨቋኞች እና ገዳዮችይኖራሉ፡ ፡ ለጊዜውየማይበገሩ ኃይለኞች መስለውይታያሉ፡ ፡ ሆኖምግን በመጨረሻውሰዓት ተንኮታኩተው ሁልጊዜ ይወድቃሉ ሁልጊዜ፡ ፡ “
በመጨረሻ ጨቋኞች ሁልጊዜ ይወድቃሉ በሚለውእና ለጨቋኞች የታሪካቸው መጨረሻ ነውበሚለውአባባልመካከል ያለውልዩነት ምንድን ነው?

ስለሆነ ምእኔ እስከሚገባኝ ድረስ ጥያቄ ሆኖ መቅረብ ያለበት ጉዳይ የዘ-ህወሀት ታሪክ በኢትዮጵያ የሚጠናቀቀውበጡጫ ወይስ ድግሞ በሹክሹክታ ነውየሚለውነው፡ ፡

የዘ-ህወሀት ፍጻሜእንደማስበውበተፈጸመጊዜ “ባዶ ሰዎች“በሚል ርዕስ የተዘጋጀውን የቲ.ኤስ ኤሊዮትን የግጥምስንኞች አዳምጣለሁ ብየ አስባለሁ፡ ፡

የባዶ ሰዎች እና የአዋቂ ሰዎች ዕጣፈንታ ዘ-ህወሀት በጡጫወይስ በአሾክሿኪዎች ነውየ ሚወድቀውከሚለውአባባል ጋር አንድ ናቸውን?

ኤሊዮት ባዶ ሰዎች እና አዋቂ ሰዎች የ ሚወድቁት በጡጫሳይሆን በአሾክሿኪዎች ነውብለዋል፡፡ በዘ-ህወሀት ላይ ግን ይኸ የ ሚሆን ለመሆኑ እርገጠኛ አይደለሁም፡፡

እሳት እና በረዶ የ ሚሉት የ ግጥምስንኞች ለእውነታውእንደ ሚቀርቡ ይሰማኛል፡፡

የባዶ ሰዎች እና የአዋቂ ሰዎች የታሪክ ፍጻሜእሳት ወይም ደግሞ በረዶ እንዳልሆነ አምናለሁ፡፡ የእነርሱ መጥፊያጥላቻ ነው፡፡ ከዚህ ጋር በተያያዘ መልኩ እስቲ የፍሮስትን የ ግጥም ስንኞች እንደ ሚከተለው እንቃኝ፡ በእሳት ነው እምትጠፋ ዓለምን ይላሉ፣ የለምበበረዶ ሌሎችም ይላሉ፡፡

እኔ ግን ፈትሸ እንዳረጋገጥኩት፣ በበረዶ ሳይሆን ትጠፋለች በእሳት፡፡

ቢሆንም ግን ዓለም ሁለቴ ከጠፋች፣ በበረዶምሳይሆን በእሳቶች ፍንካች፣ በጥላቻ ጦር ነውበሰይጣን አመልካች፡፡

በዘራፊነት ልዩ ሙያ የተካንኩ የአምባገነንነት ተማሪ ነኝ፡፡ ሁሉንም ዓይነት አምባገነንቶች ሁሉ እጸየፋለሁ፡፡ ከዚህም የበለጠ ደግሞ ዘራፊነትን እጸየፋለሁ፡፡

ስለአምባገነኖች እንዲህ በሚሉት የዊንስተን ቸርችል ገለጻዎች ሙሉ በሙሉ እስማማለሁ፡

“አያችኋቸው እነዚህን አምባገነኖች በወታደሮቻቸው ሳንጃዎች እና በፖሊሶች ቆመጦች ታጅበው ከምቹ ወንበሮቻቸውላይ ተቀምጠዋል… ሆኖም ግን በልቦቻቸው ውስጥ የማይነገር ፍርሀት ታጅሏል፡፡ ቃላትን እና ሃቦችን ይፈራሉ፣ በውጭ የሚነገሩ ቃላትን እና በቤት ውስጥ የሚቀሰቀሱ ሀሳቦችን ኃይል አላቸው በማለት የሚያስፈሯው በመሆናቸውምክንያት ይከለክላሉ፡፡ በክፍል ውስጥ ትንሽ ሀሳብ ካለ እና ትልቅ ስልጣን ያለውቢሆንምአንኳ አይፈቀድለትም፡፡“

የ ዘራፊ ወሮበላ አምባገነንነት የ ሚለውን ሀልዮት “ዘራፊነት የአፍሪካ አምባገነኖች ከፍተኛውደረጃ /Thugtatorship, the Highest Stage of African Dicatatorship“ በ ሚል ርዕስ ለመጀመሪያ ጊዜ ሀሳቡን ያቀረብኩት እኔ እንደሆንኩ አምናለሁ፡፡

ለአብዛኞቹ አምባገነኖች ታሪክ ፍጻሜ የ ሚሆነውበሌላ አምባገነን በመፈንቅለ መንግስት ሲተኩ ብቻ ነው፡፡ አንዳንድጊዜ ድሀረ አምባገነን አገዛዞች የዴሞክራሲያዊ አስተዳደር ባህሪ ያላቸውበመምሰል ለቃሉ አዲስ ስያሜበመፍጠር በአሜሪካ በተለይ እና በምዕራቡ ዓለም በአጠቃላይ በመቀባት ህጋዊነትን በማላበስ አዲስ አገዛዛቸውን ይጀምራሉ፡፡

የአፍሪካ አምባገነኖች በወታደራዊ ኃይል በመደገፍ በሌላ አምባገነን እየተተኩ በአሁኑሩ ከስድስት አስርት ዓመታትበላይ ዘልቀው ይገኛሉ፡፡

እ.ኤ.አ በ1946 እና በ2004 መካከል በአፍሪካ ወደ 400 አካባቢ የ ሚጠጉ መፈንቅለ መንግስቶች ተካሂደዋል፡፡ በዚህ ጊዜ በጣም

ጥቂት የሆኑ እውነተኛ ዴሞክራሲያዊነትን በተላበሰ መልኩ ሰላማዊ ሽግግር ተደርገዋል፡፡

በአፍሪካ አምባገነኖች የሚካሄዱ አብዛኞች ዴሞክራሲያዊ ምርጫዎች እየተባሉ የሚጠሩት ምርጫዎች በሸፍጥ የታጀቡእና በውስጥ ለውስጥ በኃይል በታጀበ ጡንቻ እየተነጠቁ ለአምባገነኖቹ ስልጣን ጥቅም ሲውሉ ይታያሉ፡፡

ጥቂት የአፍሪካ ምርጫዎች ከፍተኛ የሆነ ሸፍጥ እየተደረገባቸው በአገዛዝ ላይ ያለውገዥ አካል ስልጣንን በኃይልየ ሚይዝበት አስደናቂ አጋጣሚበመሆን ምንምዓይነት ፋይዳ ሳይፈይድ ሲቀር ይስተዋላል፡፡

እ.ኤ.አ ግንቦት 2015 ተደርጎ በነበረው የይስሙላ የቅርጫ ምርጫ ዘ-ህወሀት መቶ በመቶ በማሸነፍ የፓርላማውንወንበሮች ሙሉ በሙሉ መቆጣጠሩን አወጀ፡፡

በኢትዮጵያ ህዝብ ቁስል ላይ እንጨት መስደድ እንዲሉ ዘ-ህወት ባራክ ኦባማየተባለውን አስመሳይ ቀጣፊ በሙስናወደተጨማለቀው እና የሸፍጥ ጓዳቸውእንዲመጣ በመጋበዝ እርሱም ህሊናውን ሸጦ እውነቱን እያወቀ ሀሰትን በማነገስ መቶ በመቶ በዘ-ህወሀት አሸናፊነት የተጠናቀቀው ምርጫ መቶ በመቶ ዴሞክራሲያዊ ነው በማለት እንደ አቡጀዲ በመቀደድ ወደ ሀገሩ ተመልሷል፡፡

“ኃይልን በመጠቀም መንግስትን ለማስወገድ የሚሞክሩትን ቡድኖች በዴሞክራሲያዊ መንገድ የተመረጠውን የኢትዮጵያን መንግስት ጨምሮ በጥብቅ እንቃወማለን“ በማለት ኦቦማ ጋዜጣዊ መግለጫ ከመስጠቱ በፊት ዘ-ህወሀትሸፍጡን በማዘጋጀት ኦባማን ያታለለው በመሆኑ አሁንም የሚያስገርመኝ ነገር ነው፡፡

ባራክ ኦባማ በአፍሪካ ምሀረት የለሽ ወሮበላ የዘራፊ አምባገነኖቹ መካከል ቆሞ “የኢትዮጵያ መንግስት ዴሞክራሲያዊ በሆነ መልኩ የተመረጠ መንግስት ነው“ብሎ ከተናገረባት ቀን የበለጠ በኦባማ ላይ ያፈርኩበት ቀን እስከ አሁን ድረስበፍጹም የለም፡፡

አንድ ወሳኝ ክስተት በጣጊዜ ከስተቱን እራሱን እኔ ውእወስነዋለሁ ወይምደግሞክስተቱ እራሱ እኔን ይወስነኛልየ ሚለውን ነገር ቀደም ሲል ትምህርት አግኝቸበታለሁ፡፡

እ.ኤ.አ በ2009 ኦባማበጋና አክራ ላይ በመገኘት ለአፍሪካ ህዝቦች እንዲህ የሚል መልዕክት አስተላልፎ ነበር፣ “አፍሪካ ጠንካራ ሰዎችን አትፈልግም፣ ይልቁንም አፍሪካ የምትፈልገው ጠንካራ ተቋማትን ነው፡፡“ በዚያው ቀን ባራክኦባማ ክስተቱን ወስኗል፡፡

እ.ኤ.አ ሀምሌ 2015 ባራክ ኦባማበአዲስ አበባ ከተማበመገኘት ከወሮበላ ዘራፊዎች ጋር ትከሻ ለትከሻ ተቃቅፎ በመቆም መቶ በመቶ የምርጫውጤት እየተባለ ለሚጠራውየሸፍጥ ምርጫዴሞክራሲያዊ ነውበማለት ቅጥፈት ተናግሯል፡፡ በዚያውዕለት ባራክ ኦባማክስተቱ እራሱ ኦባማን ወስኖታል፡፡ እንግዲህ ኦባማበዚህ ዓይነት ሁኔታ ነውከክብር ወርዶ በቅሌት ምንጣፍ ላይ በመንከባለል ላይ ያለው!

ለአምባገነናዊነት መጨረሻ ማስረጃውትንሽ ነውሆኖም ግን ዘራፊ ወሮበላነት በተለየ መልኩ ከተለምዶው ተራአምባገነንነት

ሊጠናቀቅ እንደሚችል አምናለሁ፡፡

ለወሮበላ ዘራፊ አምባገነንነት ታሪክ መጨረሻ በህብረተሰቡ ላይ ከፍተኛ ዋጋ ሊያስከፍል የሚያስችልን ኪሳራ በመያዝ ማቀጣጠል እና ለፍጻሜ ማብቃት ይቻላል የሚል እምነት አለኝ፡፡

የዘ-ህወሀት የፍጻሜ ታሪክ እንዴት እና መቸ እንደሚነገር የማውቀውነገር የለም፡፡
በድረ ገጼ በኩራት በጽናት እንደማቀርበው ሁሉ በስልጣን ላይ ላሉት እውነት ተናገሩ /Speak truth topower የሚለው ይገልጻል፡፡ ይህም ማለት ስልጣናቸውን ከሕግ አግባብ ውጭ የሚጠቀሙትን እና ኃይል አምላኪዎችን ሁሉ ያጠቃልላል፡፡

OROMO PROTEST: Arrest of Respected Politician Escalating Crisisin Ethiopia

By Felix Horne, HRW January 7, 2016

Over the past eight weeks, Ethiopia’s largest region, Oromia, has been hitby a wave of mass protests over the expansion of the municipal boundary of the capital, Addis Ababa. The generally peaceful protests were sparked by fears the expansion will displace ethnic Oromo farmers from their land,the latest in a long list of Oromo grievances against the government.

Security forces have killed at least 140 protesters and injured many more,according to activists, in what may be the biggest crisis to hit Ethiopia since the 2005 election violence.

The crisis has taken another worrying turn: on December 23, the authorities arrested Bekele Gerba, deputy chairman of the Oromo Federalist Congress (OFC), Oromia’s largest legally registered political party. There had been fears he would be re-arrested as the government targets prominent Oromo intellectuals who they feel have influence over the population. He was first taken to the notorious Maekalawi prison, where torture and other ill-treatment are routine. The 54-year-old foreignlanguage professor was reportedly hospitalized shortly after his arrest buthis whereabouts are now unknown, raising concerns of an enforced disappearance. Other senior OFC leaders have been arbitrarily arrested inrecent weeks or are said to be under virtual house arrest.

This is not the first time Bekele has been arrested. In 2011, he was convicted under Ethiopia’s draconian counterterrorism law of being a member of the banned Oromo Liberation Front – a charge often used to silence politically engaged ethnic Oromos who oppose the ruling EthiopianPeoples’ Revolutionary Democratic Front (EPRDF). He spent four years in prison and was only released shortly before the elections last May. The OFC ran candidates but the EPRDF coalition won all 547 parliamentary seats, a

stark reflection of the unfair electoral playing field.

Bekele is deeply committed to nonviolence and has consistently advocatedthat the OFC participate in future elections, despite the EPRDF’s stranglehold on the political landscape. By treating both opposition politicians and peaceful protesters with an iron fist, the government is closing off ways for Ethiopians to nonviolently express legitimate grievances. This is a dangerous trajectory that could put Ethiopia’s long-term stability at risk.

The Ethiopian government should release unjustly detained opposition figures including Bekele and rein in the excessive use of lethal force by thesecurity forces. They should also allow people to peacefully protest and to express dissent and ensure that farmers and pastoralists are protected from arbitrary or forced displacement without consultation and adequate compensation.

These steps would be an important way to show Oromo protesters that the government is changing tack and is genuinely committed to respectingrights. Without this kind of policy shift, desperate citizens will widen their search for other options for addressing grievances. (Text ends) ሕወሓትን ማመን ቀብሮ ነው። **.....**

Integration of Ethiopian Traditional Medicine with ModernMedicine

By Fekadu Fullas (RPh, PhD) January 27, 2016

A discussion of the intricate and detailed relationship between Ethiopiantraditional medicine and modern medicine is timely. The purpose of thiscommentary is, however, to highlight the need for cooperation betweenthe two systems. It should be emphasized that the two systems do co- exist, and the question is whether they can cooperate, or even integratewith each other.

Although modern medicine, as practiced in hospitals, clinics, health centers, health stations and remote health outposts, is the official health- care delivery system of Ethiopia, a significant majority of the population, more so in rural areas, primarily use traditional medicine for their day-to- day healthcare

needs. It is reasonable to surmise that the farther out fromthe center of big towns to peripheral and remote areas one travels, the more prevalent is the use of Ethiopian traditional medicine. In bigger towns, traditional medicine is used to complement conventional medicine. Even here, in most instances, people tend to procrastinate treatment, or prefer to self-medicate with over-the-counter (OTC) medications and/or herbs, especially for illness symptoms that are considered to be transient in nature or resolve easily. It is not uncommon for people to seek help in modern healthcare facilities for acute or chronic diseases, only when the symptoms reach a point of affecting their daily lives and activities.

While there is no denying the fact that historically modern medicine grewout of traditional medicine, this aspect is usually overlooked. The nexus between the two systems can amply be discerned if one were to review, for example, the list of modern OTC and prescription drugs that are available in the market today. A significant number of them were directlyderived from medicinal plant sources, which in most cases were used in traditional medicine for the same purpose as they were used in modern medicine. On the other hand, a long shadow of doubt has been cast on traditional medicine by many modern medicine practitioners, due to a sweeping assumption that some traditional practices defy scientific explanation, lack supportive evidence, and tend to be secretive. As a result, these practices may even be frowned upon as being bogus and bordering on charlatanism/quackery. This notion held by modern healthcare providers may be justifiable in a few cases; however, it shouldn't nullify the many time-tested practices and treatment modalities of traditional medicine. One of the main factors that contributes to this attitude towards Ethiopian traditional medicine is perhaps lack of adequatetraining of healthcare professionals, especially medical students, in the basic history of traditional medicine, its close association with modern medicine, the evolutionary relationship of the two systems of medicine and current scientific research on traditional (alternative/complementary) medicine.

In medical schools in Ethiopia, courses specifically geared towards traditional medicine are virtually non-existent. The same is true for the status of traditional medicine in the training programs of other allied health fields, perhaps with the exception of pharmacy schools, where some variations of traditional medicine, such as pharmacognosy and natural products chemistry, are taught. The end result of this deficiency is the possible difficulty that health professionals face to fully understand patients when they venture out to the real world, especially in the rural setting, to start their practice careers. After all, it is held that medicine is not only a science; it is also an art. The health well-being of a society is measured not only by the absence or presence of disease symptoms, but is also equally gauged by how members of the society feel about their health from social, psychological and cultural standpoints. A citizen who doesn't believe in modern medicine is most likely to be non-compliant witha physician's prescriptions, medical advice and follow-up care. On the other hand, the disconnect between modern healthcare and

traditional medicine can be remedied by a holistic approach towards patients' care.

Several surveys conducted in Ethiopia have shown that the majority of modern health professionals believe that traditional medicine is importantin the care of the ill. The results of surveys have also indicated that the two systems need to work together. One particular survey conducted among medical students at Addis Ababa University showed interesting results. Of 380 medical students surveyed, 60% felt that they lacked in- depth knowledge of traditional medicine, while 80% of the respondents were in favor of the integration of the two systems (Zelalem Petros, *Pharmacologyonline* 3: 1023-8; 2011). This is a rather revealing finding, and points to the fact that medical trainees need exposure to Ethiopian traditional medicine in order to be well-rounded and effective future practitioners.

The foundation for integration between the two systems can be laid early on through providing courses to medical students on the subject. A coursedesigned to critically review Ethiopian traditional medicine can equip the would-be physician with a useful tool to fully evaluate the needs of patients. In the broader national arena, research institutions, relevant agencies, traditional and modern medical associations need to work together to bring harmony and eventually integration between the two systems. The Chinese, the Indians, and other nations have done it. Giventhe right environment, it can also be accomplished in Ethiopia.

United States Calls for Meaningful Dialogue About OromoCommunity Concerns

Press Statement (updates)

John Kirby: Spokesperson, Bureau of Public AffairsWashington, DC January 14, 2016:

The United States is increasingly concerned by the continued stifling of independent voices in Ethiopia, including the detention of Oromo politicalparty leaders. These arrests have a chilling effect on much needed publicconsultations to resolve legitimate political grievances in Oromia. We support the Government of Ethiopia’s December commitment to public consultation with affected communities. For these consultations to be meaningful, all interested parties must be able to express their views freely. We reaffirm our call on the Ethiopian Government to refrain from silencing dissent and to protect the constitutionally enshrined rights of allcitizens, including the right to gather peacefully, to write, and to speak freely as voices of a diverse nation. We call for the release of those imprisoned for exercising their rights, such as political party leaders and journalists.

EU asked to break silence on killing of Oromo protesters inEthiopia - DW January 13, 2016

Rights groups claim that Ethiopian security forces have killed at least 140protesters. The Ethiopian foreign minister is in Brussels to answer questions by members of the European Parliament on the alleged offences. Human Rights Watch (HRW) last week alleged that Ethiopian security forces had killed at least 140 protesters and injured many more.Opposition parties and activists asserted thousands of Oromo protesters had been arrested and injured since the protests started in mid- November.

In a surprise move on Wednesday (13.01.2016), the Oromo Peoples' Democratic Organization (OPDO) party, which is part of the ruling coalition, announced that it wanted to halt the so-called "Addis Ababa Masterplan" which is at the root of the ongoing crisis. The plan involvesthe expansion of the capital into the surrounding Oromia region.
Government spokesman Getachew Reda told reporters that the government would respect this decision, but that they would stillprosecute those who had participated in the protests.

The plans to expand Addis Ababa were hotly contested by members of Ethiopia's largest ethnic group. Universities across the country turned intobattlefields, with police firing live bullets to disperse the crowds. On socialmedia, Ethiopians united under the hashtag #OromoProtests and Ethiopians of all ethnic backgrounds staged vigils all around the world.

On the eve of the hearing of Foreign Minister Tedros Adhanom in Brussels,rights groups insisted that EU officials "should convey serious concerns about Ethiopian security forces against the Oromo protesters." Another topic on the Brussels agenda is the recurrent drought that has hit the country. Estimates say that as many as 15 million people could be threatened by hunger this year.

Donor darling Ethiopia

With Ethiopia ranking fifth on the table of aid recipients globally, raking insome $3.8 billion (3.5 billion euros) in 2014, donor countries have a responsibility to follow up on how the government handles human rights issues, Daniel Bekele, Executive Director with HRW's Africa Division, told DW.

His concern is echoed by EU advocacy director at HRW, Lotte Leicht, whosays "[the] European Union should break its silence and condemn Ethiopia's brutal use of force to quell the Oromo protests." Being the single largest donor, the EU "should press the Ethiopian government to respond with talks rather than gunfire to the protesters' grievances."

The US State Department earlier urged the Ethiopian government "to permit peaceful protest and commit to a constructive dialogue to addresslegitimate grievances." The Ethiopian government denies the alleged death toll of 140. Government spokesman Reda instead accused the Oromo protesters of "terrorizing civilians."

Ethiopian legal expert Awol Kassim Allo said he would like to see a space for all Ethiopians to participate in the political arena. "Only with such an approach can there be a possibility of paving a way to move forward," hetold DW. In the last general elections in May 2105, Ethiopia's ruling coalition, the Ethiopian People's Revolutionary Democratic Front (EPRDF),won 100 percent of the seats in parliament.

'Cultural genocide'

In a recent debate, Bekele Naga, Secretary General of the opposition Oromo Federalist Congress (OFC), told DW's Amharic Service that "the constitution of the country proclaims that the land belongs to the people."He added that the Ethiopian government "has been engaged in land- grabbing, leading to cultural genocide [of the Oromo people]." Another Ethiopian legal expert, Tsegaye Ararsa, complained that no government officials, including Prime Minister Hailemariam Desalegn, have publicly voiced regret over the loss of young protesters' lives. He believes there should be an independent fact-finding committee to look into the case. (Text ends)

ETHIOPIA HISTORICIZE

UN Security Council meets in Africa/Addis Abeba

The UN Security Council meets in Africa/Addis Abeba for the first time in January 1972 G.C. The Emperor of Emperor of Ethiopia addressed thesecurity council meeting followed by the US ambassador to UN GeorgeBush, the latter President of US.

ETHIOPIA: HISTORICIZE DIARIES

1- Assab, between 1869 and 1882 becomes Italian domain2- Massawa, in 1885 was occupied by Italian troops

3- Asmara, was occupied in August of 1889

The Emperor Yohannes IV died in March of 1889.

The Emperor Menelik was crowned in November of 1889....

In January 1890 Eritrea was officially declared Italian colony.

In this group I have read that some attribute the responsibility of the Eritrea's colonization to the Emperor Yohannes IV, that would have prevented Ras Alula to drive the italian away from Massawa and later not

to have himself fought them in Sahati.

Others say that the responsibilities of the colonization were caused by theWuchale's Treaty, signed in May 1889 by the Emperor Menelik and Italy.

Others that Eritreans were the main responsible for not having foughtagainst the Italian, letting them to arrive on the highlands.

Maritime News update:

Ethiopia's Need for Berbera Port of Somaliland

On May 3, 2016 Bringing an end to years of uncertainty, the President of Somaliland Ahmed Mohamed Mahamoud, known as Silanyo, finally awarded the contract to extend, refurbish and operate the port of Berberato the Dubai operator DP World (DPW). The Somaliland port is of high strategic value as it is situated opposite Yemen and so attracted the interest of the major international groups, Bolloré in the lead.

But the operation – and the $442 million investment by the UAE that goeswith it – is not without consequences for the self-declared republic of Somaliland which wants international recognition. With the economic disputes between the countries in the Horn of Africa and traditional tensions, it may be some time befoe DPW docks on the Somaliland coast!

PHILOSOPHY

The Power of Propaganda by Wikipedia Definition

"Propaganda is a form of biased communication, aimed at promoting or demoting certain views, perceptions or agendas. Propaganda is often associated with the psychological mechanisms of influencing and alteringthe attitude of a population toward a specific cause, position or political agenda in an effort to form a consensus to a standard set of belief patterns. Propaganda is information that is not impartial and is used primarily to influence an audience and further an agenda, often by presenting facts selectively (perhaps lying by omission) to encourage a particular synthesis, or using loaded messages to produce an emotional rather than a rational response to the information presented."

US Securities and Exchange Commission (SEC) Ethiopia's Electric Utility Sold Unregistered Bonds in U.S.SEC June 10, 2016

Washington D.C. - The Securities and Exchange Commission today announced that Ethiopia’s electric utility has agreed to pay nearly $6.5 million to settle charges that it violated U.S. securities laws by failing toregister bonds it offered and sold to U.S residents of Ethiopian descent.

According to the SEC’s order instituting a settled administrativeproceeding:

Ethiopian Electric Power (EEP) conducted the unregistered bond offering tohelp finance the construction of a hydroelectric dam on the Abay River in Ethiopia.

EEP held a series of public road shows in major cities across the U.S. andmarketed the bonds on the website of the U.S. Embassy of Ethiopia as well as through radio and television advertising aimed at

Ethiopians livingin the U.S.

EEP raised approximately $5.8 million from more than 3,100 U.S. residents from 2011 to 2014 without ever registering the bond offeringwith the SEC.

“Foreign governments are welcome to raise money in the U.S. capital markets so long as they comply with the federal securities laws, including registration provisions designed to ensure that investors receive importantinformation about prospective investments,” said Stephen L. Cohen, Associate Director of the SEC’s Division of Enforcement. “This settlement ensures that investors get all of their money back plus interest.”

The SEC’s order finds that EEP violated Sections 5(a) and 5(c) of the Securities Act of 1933. EEP admitted the registration violations and agreedto pay $5,847,804 in disgorgement and $601,050.87 in prejudgment interest. The distribution of money back to investors is subject to the SEC’s review and approval. Investors seeking more information should contact the administrator of the distribution, Gilardi & Co. LLC, at 844- 851-4591.

The SEC’s investigation was conducted by Carolyn Kurr and Daniel Rubenstein and supervised by C. Joshua Felker. The SEC appreciates theassistance of the U.S. Department of State.

Former Derg Executive Member And EPLF Member Captain Michael Gebredengle Haile Visits Hoover Archives

By Issayas Tesfamariam Tuesday, March 13, 2018

On Friday, March 9, Hoover Archives hosted a visit by Captain Michael G. Haile, one of the former executive committee (Planning Committee) members of the military junta known as the Derg which ruled Ethiopia from 1974 to 1987. The Derg, also known as the Coordinating Committee of the Armed Forces, Police and Territorial Army, overthrew Haile Selassie, the former Emperor of Ethiopia.

Haile served the Derg for seven months in 1974–75 and then left to join the Eritrean People's Liberation Front (EPLF) in 1975. From 1975–1991 he served the EPLF in various capacities: as the Foreign Economic Affairs in Kuwait and Rome; the Foreign Relations Bureau in Brussels and London; and EPLF representative at the U.N. Commission for Human Rights in Geneva.

After Eritrea's independence in 1991 he became the Deputy Commissioner of the Eritrean Police Force. Currently, he is working for the Eritrean Ministry of Justice as coordinator and member of the Law Drafting Committee.

While in the Derg, Capt. Haile was the only person (out of 108 Derg members) who kept notes of everything that went on during his tenure, including the infamous meeting ("Vote of Death") whereby

sixty people (Emperor Haile Selassie's Government officials, two Derg members and, the Chairman of the Derg, Lt. General Aman M. Andom) were condemned to death by voting.

As a police officer (trained in Israel in the 1960s), a criminologist (trained in West Germany in the 1960s–70s), and a lawyer, he was the only Derg member who vehemently objected in writing to the illegality, cruelty, and inhumanity of that infamous day's process. Lt. Col. Mengistu Hailemariam (who later became a leader of Ethiopia until he escaped in 1991 to Zimbabwe, where he still resides) who chaired the “infamous meeting” of the Derg read Captain Haile’s letter of objection during the “Vote of Death”; Captain Haile’s life was perhaps spared due only to the fact that Hailemariam did not reveal the name of the letter’s author.

Captain Haile has visited Hoover three times to view collections related to Africa; during his most recent visit he consulted the papers of Tom Killion, which contain a series of interviews Captain Haile conducted in 1985. Haile has just published a book entitled *Downfall of an Emperor: Haile Selassie of Ethiopia and the Derg's Creeping Coup*, a first-hand account of the inner workings of the first seven months of the Derg.

Lt. General Aman Mikael Andom was not a member of the Derg but was appointed simbolc Military Head of State by Derg members to be their chairman.

COUNTRY FACT FILE

In East Africa

Official title of the State

የኢትዮጵያ ፌዴራላዊ ዲሞክራሲያዊ ሪፐብሊክ (in national Amharic: abbreviated asኢ.ፌ.ዲ.ሪ) - Federal Democratic Republic of Ethiopia (in English: abbreviated as FDRE) (English)

Flag description:

i) Tricolor was originally anticipated in 1897, but had then the red stripe atthe top and imperial weapon in the middle of the flag. The current design stems from April, 1941, and the version with the new coat of arms was officially estimated.

ii) Imperial era flag: The flag has three equally wide horizontal stripes of green, yellow and red and the coat of arms (Lion of Judah) in the middle.In the Ethiopian imperial times symbolized the red color of power and faith, the yellow church, peace and nature's wealth and love, the green land and hope. The colors were also seen in connection with the Trinity and the country's three provinces

iii) Duerg & PDRE era flag: In the Duerg military regime's time had flagged Provisional Military Administrative Council (PMAC) Coat of Arms inthe middle. The current interpretation is that the flag symbolizes the Ethiopian nation's glory and beauty: The red represents the lives that have been sacrificed to defend the national independence, the yellow of religious freedom in the country and the green the country’s fertility. The Ethiopian flag colors were the basis for the Pan-African colors and used byRas-Taffari movement.

v) FDRE era: Three equal horizontal bands of green (top), yellow, and red,with a yellow pentagram and single yellow rays emanating from the angles between the points on a light blue disk centered on the three bands; green represents hope and the fertility of the land, yellow symbolizes justice and harmony, while red stands for sacrifice and heroism in the defense of the land; the blue of the disk symbolizes peace and the pentagram represents the unity and equality of the nationalities and peoples of Ethiopia.

Note well: Ethiopia is the oldest independent country in Africa, and the three main colors of her flag (adopted ca. 1895) were so often adopted byother African countries upon independence that they became known as the Pan-African colours; the emblem in the center of the current flag was added in 1996.

The National Flag script In the Amharic term

(ሰንደቅ አላማ)የኢትዮጵያ ሰንደቅ አላማ ቀን በዓል መከበር የጀመረው በአዲሱ ሚሊኒየም መጀመሪያ ላይ ነው፤ የኢትዮጵያ ህዝብ ተወካዮች ምክር ቤት ያፀደቀው የሰንደቅ አላማ አዋጅ በዓሉ በየአመቱ በመስከረም ሁለተኛ ሳምንትሰኞ እንዲከበር ይደነግጋል፤ አዋጁ መስከረምን የመረጠውወሩ ለሃገራችን የዘመን መለወጫና አዲስ የተስፋ የስራና የለውጥ መንፈስ የሚፈጠርበት መሆኑን ታሳቢ በማድረግ ይመስላል፤

የሰንደቅ አላማው አረንጓዴ ቢጫና ቀይ ህብረ-ቀለማት ያለፈውም ሆነ የመጨውጊዜ በልማት የመለወጥ፣ በነፃነትና በተስፋ የመኖር ራዕያችን አሻራዎች ናቸው፡፡ የአግድም ቀለሞች አረንጓዴ-ስራ፣ ልምላሜና እድገት ፤ቢጫ-የተስፋ፣ የፍትህና የእኩልነት ቀይ-ለነጻነትና ለእኩልነት መስፈን የሚደረግ የመስዋዕትነትና የጀግንነት ምልክትነው፡፡ ይህን የቀለም ህብረት ኢትዮጵያ መጠቀም የጀመረችው ከአድዋ ጦርነት በፊት መሆኑን ታሪክ ይናገራል ፤ በርካታ የአፍሪካ ሀገራት ይህን የቀለምህብረት መጠቀምየጀመሩት ከዚያን ጊዜ ጀምሮ እንደሆነ ይታወቃል ፤ ኢትዮጵያ የአፍሪካ የነጻነትና የቅኝ አለመገዛት ተምሳሌት የሆነች ሀገር በመሆኗ በርካቶች ይህን ለመጠቀማቸው ቀዳሚምክንያን መሆኑን የታሪክ ምሁራን ይናገራሉ፡፡

Side note: Large numbers of Ethiopian nationals are thrilled to see that inthe near future the ethnic and divisive flag of the regime to come down and the symbol of unity and strength the plain colors (green, yellow, red colors flag) of the great Ethiopia without any ethnic emblem on it to cometo shine and rise above, according to wishful citizens.

Local divisions

Officially Ethiopia is a ‘Federal State’, each region is strictly divided based on their language and ethnic lines. The ruling-EPRDFs project of Ethnic Federalism which devolved power from the centre to all the ethnic nationalities of Ethiopia under one federal constitution guaranteeing freedom and equality for all, and the right to secede from the federated unit.

12 Non-Geographically based (Ethnic-based) National Regional States(Biherawi Kililoch).

Addis Ababa: is one of two chartered cities in Ethiopia

The other being Dire Dawa a chartered city is divided administratively into two districts, the city proper and the non-urban woreda of Gurgura.Dire Dawa city established as an administrative council (Mestedadir Mikre-bet).

Government type

Federal Republic - with an ethnic based Federal parliamentary assembly.
Legislation chamber Bicameral Parliament House of Peoples Representatives (HoPR) , House of Federation Council(HoFC).

Form of State
Ethiopia is technically a multiparty parliamentary democracy, like Britain,but it is effectively run like a one-party state, with 99.8 percent of parliamentary seats controlled by one ruling party, the Ethiopian People'sRevolutionary Democratic Front, or shortly EPRDF.

Ethnic-based Federal Parliamentary Assembly with two legislative houses.The entire Killil regionalization concept of governance is neither new nor federal. It goes backdate to the Italian fascist occupation of Ethiopia b/n 1936-41. This unpopular process of ethnicization of the country was specifically designed by Benito Mussolini for the conquest and occupation of Ethiopia.

House of the Federation (FC), the lower house, 112 seats, members represented by nations & nationalities (National regional States) to servefor five-year terms.

House of People's Representatives (HPR), the upper house, 547 seats,members are elected by popular vote to serve for five-year terms.
President elected by the House of People's Representatives for a six-yearterm. President is eligible for a second term. The premier has all the formal executive powers
Executive branch
President is the Chief of State.
Prime Minister is the Head of Government. Separated by Chief of State and Head of Government, with executive power in the central government, and legislative power in both the government and parliament. The Head of State is designated to serve as ceremonial president elected by the HPR as a non-ruling party member, for six-year terms, eligible for a second term. Head of government is to be designatedby the party in-power, following national legislative elections.
A political power left onto the head of Government, according to the 1995constitution.
Former rulers of the modern and unified Ethiopia1855 - 1868 Emperor Theowdros II
1868 - 1872 Emperor Tekle-Giorgis II
1872 - 1889 Emperor Yohannes VI
1889 - 1913 Emperor Menelik II
1913 - 1916 Eyassu V (born to be Lij Kifle Yaqub)
1916 - 1930 Empress Zawditu Menelik who rules through a regent. 1930 - 1936 Emperor Haile Selassie I

(HRH Ras Taffari Makonnen as regent)
1936 - 1941 King of Italy; Vittorio Emanuele III (in title only)
1941 – 1974 Emperor Haile Selassie I

THE UN POLITICAL ARRANGEMENT: “Eritrea Federation with Ethiopia” :-September, 1962 to May, 1991: When Eritrea entered into a federation with Ethiopia, previously landlocked Ethiopia briefly enjoyed the use of Massawa as the headquarters of the now defunct Ethiopian Navy ultimately, Ethiopia dismantled the federation and forcibly annexed and occupied Eritrea. This led to the Eritrean War of Independence (1961– 1991).

In February 1990, units of the Eritrean People's Liberation Front captured Massawa in a surprise attack from both land and sea. Known as OperationFenkil, the attack utilized both infiltrated commandos and speed boats.
The success of this attack cut the major supply line to the Second Ethiopian Army in Asmara, which then had to be supplied by air. In response, the then leader of Ethiopia Mengistu Haile Mariam ordered Massawa bombed from the air, resulting in considerable damage. As of2005 the Eritrean government is rebuilding and repairing this damage.

Ato Tedla Bairu - Chief Executive -
From 15th September, 1952 to 29th July, 1955 (in de-facto) - From 8thAugust, 1955 to December, 1959 (in de-jure)

Ato Asfaha Wolde Michael -
Chief Executive - From December, 1959 to 20th May, 1960 (in de-jure).

Imperial Ethiopian Administration in Eritrea
HRH Tenagnework Haile Selassie - Ras Andargatchew Messai - Vice Roy &Vice Rein of Eritrea.
Sept. 15, 1962 to Sept. 12, 1974 - Brigadier-General Abiye Abebe –Crown Reprsentative - 14th November, 1962 to July, 1964
Leul Ras Asrate-Medhin Kassa - Governor-General- July, 1964 toDecember, 1970
Lt. General Debebe Haile-Mariam – Military Emergency Governor – Dec.1970 to Aug. 1974

Eritrea Federation With Ethiopia

Eritrea Federation With Ethiopia or commonly called the Ethiopian– Eritrean Federation: was a federation of the Ethiopian Empire and Eritrea.It was created by the approval of the Federal Act in Ethiopia and the

Eritrean Constitution on 15 September 1952. Prior to the annexation of Eritrea, the Chief Justice of Eritrea was removed and the official Eritrean languages were eliminated in favor of Ethiopia's national language Amharic. During the Federation, the encroachment of the Ethiopian Crown

was felt on the Chief Executive of Eritrea. This was in direct contraventionof the UN Resolution 390-A(V) which had established the Federation.

The federal structure, or some semblance of it, existed between 15 September 1952 and 15 November 1962. On 15 November 1962, following pressure from the Imperial Government of Ethiopia on the Eritrean Assembly, the Federation was officially disolved and Eritrea wasannexed to Ethiopia.

The Task of Chief Executive of Eritrea

The Task of Chief Executive of Eritrea & The Federation of Ethiopia And Eritrea as mentioned in the federal constitution, the Chief Executive of Eritrea Federation with Ethiopia was the premier position of the Federationbetween Eritrea and Ethiopia. It was first held by Ato Tedla Bairu while its last occupant was Lij Abiye Abebe.

On the 20th May 1960 the post was dissolved and replaced by the Governor-General of Eritrea, which was appointed directly by the Emperorof Ethiopia. This in effect dissolved the independent Federal structure andwas a prelude to the official, possibly illegal, annexation of Eritrea as 14th province of Ethiopia on 14 November 1962 sparked rebellion.

List of Chief Executives of Federation of Ethiopia And Eritrea (1952–1960)Tedla Bairu ----------
-- September 15, 1952 to July 29, 1955
Asfaha Wolde Mikael ----------August 8, 1955 to December 1959
Abiye Abebe ----------December 1959 to May 20, 1960
Abiye Abebe ----------May 20, 1960 to November 14, 1962

Eritrea Under Imperial Ethiopian Government
November 14, 1962 to 1964 ----------Lij Abiye Abebe Governor-General
July 1964 to December 1970 ----------Leul Ras Asrate Medhin KassaGovernor-General
December 1970 to August 1974 --------- Lt. General Debebe Haile Mariam(Emergency Governor)

Ethiopian province of Eritrea: September 1974 to May, 1991;
August 1974 to 29 May 1976 ----------Amanuel Amde Mikael, ChiefAdministrator
Brigadier General Getachew Nadew --- Military Administrator Aug.19,1976 to Aug.19, 1976
Ammanuel Amde-Michael - Chief Administrator --- From August, 1974 to29th May, 1976, and again from May 29, 1976 to 19th August, 1976
Ato Fikrou Wolde-Tinsae - Chief Administrator from August, 1981 to 29thMay, 1983

Majour-General Merid Negussie – Military Commander & Administrator

Majour Dawit Wolde-Giorgis – Chief Administrator/Provincial Party secretary August, 1983 to August, 1987: And again from 19th August,1987 to 18th May, 1989:

Brigadier-General Affeworki Wolde-Mikael (younger brother of unionistAsfaha Wolde Mikael) - Chief civilian administrator from 19th August, 1989 to 28th May, 1991;

Lt. General Tesfaye Guebre-Kidan: Emergency Administrator & MilitaryCommander of the ground forces in Eritrea.

List of heads of government in Ethiopia

Fitawrari Habte Giorgis Dinagde - Chief Minister 1909 to 1927 Ras Taffari Makonnen Chief Minister - 1927 to May 1, 1936 Bitwadad Wolde-Tsadik, Chief Minister - May 1, 1936 to 1942 Bitwadad Makonnen Endalkatchew - 1942 to November 1, 1957

Ras Abebe Aregai Bichire - November 27, 1957 to December 15, 1960

Leul Ras Imru Haile Selassie Abayneh - December 11, 1960 to December15, 1960 (briefly)

December 15, 1960 to April 17, 1961 – vacant post until April 1961

Aklilu Habtewold Habtneh - April 17, 1961 to 1962

Tsahafi Taezaz Aklilu Habtewold Habtneh - 1963 to March 1, 1974 againLij Endelkachew Makonnen Endalkachew - 1 March 1974 to 22 July 1974

Lij Mikael Imru Haile Selassie - August 3, 1974 to September 12, 1974Post of premiership abolished – September 12, 1974 to September 10,1987

Cap. Fikre Selassie Wogderess - 10 September 1987 to 8 November 1989

Colonel Hailu Yimenu - Acting - November 8, 1989 to April 26, 1991

Ato Tesfaye Dinqa - Acting - April 26, 1991 to May 27, 1991

Ato Meles Zenawi Asresu – Transitional head of state May, 1991 to August23, 1995

Ato Tamirat Laine - Transional head of government May, 1991 to August23, 1995

Ato Meles Zenawi Asresu – Head of government of FDRE August, 23, 1995to August 20, 2012

Ato Haile Mariam Desalegn Boshe - Acting PM - August 21, 2012 toSeptember 21, 2012

Ato Haile Mariam Desalegn Boshe - PM September 21, 2012 to Present

Post- Imperial Ethiopia:

Lt. General Aman Mikael Andom (September 12, 1974 – November 17,1974)

Majour Mengistu Haile Mariam (November 17, 1974 – November 28,1974) (1st term acting)

Brigadier General Taffari Benti (November 28, 1974 – February 3, 1977)
Majour Mengistu Haile Mariam (February 3, 1977 until February 11, 1977)(2nd term, acting)

Mengistu Haile Mariam (September 10, 1987 until May 21, 1991) (civilianturned PDRE president)

Lt. General Tesfay Guebrekidan – May 21, 1998 until May 28, 1991(civilian acting PDRE president)

Post-Duerg era:

Transitional Government of Ethiopia (TGE) – Federal Democratic Republicof Ethiopia (FDRE)

Meles Zenawi Asresu, transitional head of state of the TGE - May 28, 1991to August, 1995

Dr. Negasso Gidada Solon, chief of state of the FDRE - August, 1995 toSeptember, 2001

Lieutenant Girma Wolde-Giorgis, Chief of State of the FDRE - September,2001 to 2011

Dr. Mulatu Teshome, Chief of State of the FDRE - September, 2011 –current Judicial chamber
Federal Supreme Court; Federal Court of Appeals; President and vice president of the Federal court appointed by the executive with the HoPRapproval.

Capital city
Addis Ababa Altitude 2451 mtrs/8039 ft.Geographic coordinates 9.02N , 38.42E.
New Flower: is the literal English translation for the Amharic word "AddisAbaba", located in the center of the country. The present site of Addis Ababa was chosen as a village by Empress Taitu Betul Menelik, the city was officially founded in November, 1886 by her husband, Emperor Menelik II. Addis Ababa replaced Intoto as capital of Abyssinya two yearslater.

Addis Ababa is home to nearly all the ethnic groups of Ethiopia; considered the melting pot of the

nation’s diverse culture; it is also the political capital of Africa, over 120 African and non-African governmentshave diplomatc representation in Addis Ababa; it has a population of around five million; Addis has an average temperature of 22-26 degree Celsius. These are objective facts that are not hidden from an average person.

Currently Addis Ababa city has the status of city region. Addis Ababa lies at an altitude of 2, 451 mtrs as what geographers termed as “the roof-topof Africa”.

The Federal capital ‘City Region of Addis Ababa’, is the chartered seat ofthe African Union Commission (AUC), and the United Nation’s EconomicCommission For Africa (UNECA) often called, "Capital of Africa".

The city of Addis Ababa which was founded during Emperor Menelik’s reign has transformed into a major city in the past decades. Addis Ababa founded at the bottom of the 3,200-metre (10,500-ft) high Mt. Entoto It has grown steadily in terms of buildings, roads and also the size of its inhabitants. Currently, there are lots of buildings and road constructions everywhere and part of the plan is gradually to replace all the wattle and daub houses by concrete/storey buildings at least in the city centre but public parks and childrens’ play grounds are very minimal or non-existent in the city. Once the current constructions are completed, Addis Ababa willbe a very beautiful city. The fate of those people who are losing their properties or lands due to demolishment is unknown whether they will geta replacement or compensation according to the market value. Many havesome rather contentious views on this issue. This plan or policy might leave many people destitute. Some have been offered to move into newly built condominiums. However, these new buildings range between three toseven floors with no elevator which is very daunting task for old and disabled people. Some of these buildings are already showing signs of deterioration in less than a year of completion. The number of foreigners and Ethiopians from abroad make Addis Ababa an exciting polyglot city. The city is full of myriads of bars, hotels and night clubs in every corner and some of the hotels are really opulent. The ubiquity various small business of Khaldis coffee shops and other outlets are everywhere in the city. People are usually sitting at coffee shops or by the side of the road and some of them are gazing pensively at no specific things and lost in thoughts. The main streets and squares are full of people who travel around and peddling their wares. There are a lot of beggars everywhere; some of whom squat around churches and on the side of streets in plasticshacks.

A Festival city: To a great many other people, Addis is a perfect spot where to experience a mosaic of cultures and religious performances. These people would mention to you how soul touching and educative Epiphany, Mesquel, and Easter holidays are. The most colourful festivals are Epiphany (Timkhat) which

rests on the 19th January, and The Holy Cross Day (Mesquel) rests on the 27th of September to be celebrated annually. Believed the Ethiopian Orthodox worshipers have accepted the holy cross (Mesquel) before 2900 years as history told, and many of EOC worshippers term the holy cross as “Holy cross is our title (Mesquel Simene)” “Holy cross is our force (Mesquel-Hailene)”, “Holy cross is for our livelihood (Mesquel Medhanitne-Lenefsine)”, “Holy cross is our saviour(Mesquel Bezane)”. Ethiopia is not known only by it’s christianity, but alsothe one in the region to adapt Islam. They are also surprised by the fact that Christian and Muslim religious institutions are only a fence away fromeach other. And they are amazed by the fact that both churches and mosques conduct their respective services with tolerance, simultaneously and without any conflict. This group of people would definitely make your day and you would walk tall and proud. These are tourists, pilgrims, and human rights advocates.

Dream city: To the many, Addis Ababa is more of a dream city. This groupof people holds a special place for the capital for various reasons. The manwho fought and demolished the apartheid structure in South Africa, NelsonMandela (Madiba), has, for instance, this kind of view of Addis Ababa. In his autobiography, Nelson Mandela explained how and why Ethiopia/Addis Ababa occupied a special place in his imagination and life. In his protracted struggle for freedom, he was inspired by his experiences of Addis. He dreamt that South Africa could be as independent, proud, and unique as Addis: “Ethiopia has always held a special place in my own imagination and the prospect of visiting Ethiopia attracted me more strongly than a trip to France, England, and America combined. I felt I would be visiting my own genesis, unearthing the roots of what made me an African. Meeting HRH Emperor Haile Selassie I of Ethiopia, would be like shaking hands with history… We then changed flight to an Ethiopian Airways to Addis. Here I experienced a rather strange sensation. As I was boarding the plane, I saw that the pilot was black. I had never seen a black pilot before…I only hoped it was a vision of what lay in the future for my own country”. It is true that for many Ethiopian Diaspora, visiting Addis/Ethiopia is much more edifying and profitable (in terms of satisfaction and fulfillment) than visiting the mega cities of Europe and North America. Several take their vacations in Ethiopia. Several others tryto contribute to the socio-economic and political development of Ethiopia while residing abroad.

The Ethiopia's capital, Addis Ababa, is in transformation. Addis Ababa, called sometimes the Slum capital of the World. Currently the home of approximately five million inhabitants, the city might triple its size within the next 30 years due to the increasing rural to urban migration, as well as natural growth. Already today, Addis Ababa suffers from a housing shortage of estimated 300.000 units. And, according to UN-Habitat, 80%of the existing dwellings are in 'sub-standard, slum like' conditions. Thus,in 2004, the government launched a large-scale mass housing program with the ambitious plan to erect 200.000 condominium units within 5 years. To date, 100.000 units were built during the last 7 years, out of which

nearly 70,000 are handed over to end users so far. In Addis Ababa85% of the population lives in slums. They are living on less than 1 dollarper day. Migration to urban areas is usually motivated by the hope of better living conditions. Addis Ababa Sex Guide advises you where to findsex, working girls, prostitution, street hookers, brothels, red-light districts, prostitutes, erotic massage parlors, strip clubs and escorts in Addis Ababa, Ethiopia.

With a population of nearly 7 mln (2013 estimate), the city is the largest in the country. In Addis Abeba, only 64% of the people have access to tapwater. Only 2% of the population has a sewer connection. Many of the wealthiest people live in the southeast (Bole), southwest (old airport), CMC, Ayat and Lamberet parts of town. There are more than 120 embassies and international missions in Addis Ababa, making the city a hub for international diplomacy concerning Africa. The headquarters of theAfrican Union (AU) and the UN Economic Commission for Africa (UNECA) are both in the city. The European Union and the United States of Americaboth have two delegations in Addis Ababa, one for bilateral relations with Ethiopia and one accredited for the African Union.

Names of main towns

Dire Dawa, Gondar, Adama (Nazareth), Dessie, Harrar, Mekelle, Jimma,Bahir-Dar, Hawassa.

Date of independence

It’s an independent state with the exception of five years of occupation (1936 to 1941) by Italian fascist armies. The only African nation never colonized, Ethiopia is also one of the world's oldest: at least 2,900 years.Considered the one among the oldest nations in the world.

Religions (Major)

Ethiopian Orthodox Tewahdo Christian (EOTC) 45 %, Muslim (mainlySunni) 34%, others 17%.

EOTC and Islam are the dominant ones. Traditional Oromo religion (Waaquefeta) and evangelical Christians make up significant minorities. Itis not uncommon to hear the Islamic call to prayer emanating from a mosque's minaret and then an hour later hear the prayers from a Christian Church on the same street. There is also a strong Judaic influence throughout the country although nearly all of the country's Jewshave emigrated to.

Main spoken languages

Amharic is the official language and their official script/alphabet is the ‘Saba Ge’ez Alphabet’. The three main spoken languages (Amharic, Tigrigna and Afan Oromo) are most likely to be considered main

spokenlanguages in Ethiopia.

Ge'ez language, the ancient Ethiopic language, remains the liturgical language of the Ethiopian Orthodox Tewahdo Church (EOTC). The modernAmharic language, which is the national language of Ethiopia, believed developed out of the ancient Ethiopic language Ge'ez while the Saba Ge’ezAlphabet is still under use.

Amharic is also the commercial language of Ethiopia spoken by about half of the population in the area of the capital, Addis Ababa and the regions tonorth of it. Amharic belongs to the semitic language group but within the Ethopic branch of this group it is directly descended from the ancient classical Ethiopian or Ge’ez tongue.

Ge’ez Tongue: The classical literary language of Ethiopia, a semitic language thought to have been introduced from South Arabia in the 1st Century BC. It is the ancestor of all the modern Ethiopian languages suchas Amharic, Tigrigna, Agew, and survives only in the liturgical language ofthe Orthodox religion churches in Ethiopia.

The Oromo language is an Afroasiatic language. It is the most widely spoken tongue in the family's Cushitic branch. This language is spoken asa first language by more than 30 million Oromos and neighboring peoplesin Ethiopia and parts of northern Kenya. About 95 percent of Oromo speakers live in Ethiopia, mainly in Oromo inhabited areas. Although, numerically speaking, Afan Oromo speakers are LARGER THAN Tigrigna and Amharic speakers COMBINED; the language remains the most disfavored language since the Oromo people still remain the most disenfranchised and least organized society in Ethiopia.

Ethiopia is home to at least 80 different languages in addition to Amharic,the official language which itself has more than 200 dialects and it's own alphabet. Oromiffa, Tigrigna, Somali, Guraghe, Afari are the main ones. Ethiopia retains it's own alphabet, writing and official language, Amharic. English, is a major foreign language taught in highschools, Colleges, Universities and used in commercial businesses. Few other languages that are widely taught and spoken include French, Arabic, andItalian.

Currency unit ,
Ethiopian Birr (Eth.Birr) =100 cents. The Birr (Amharic: ብር) is the unit of
currency in Ethiopia. Before September, 1976, Eth. Dollar was the officialEnglish translation of Eth. Birr (ETB). Today, it is officially Birr in English as well.

Area in Km2 1,104,300,00.

Country area comparison in Africa10 out of 55 states.

Demographic terms;-
Urban population: 17% of the total population Average annual population growth rate 3.202 %Birth rate 43.34 births per 1,000 population Death rate 11.29 deaths per 1,000 population Male 53.28 ; Female 58.39 years
Average life expectancy ; 55.8 years

Side note: Ethiopia's population is predominantly young.
Youth unemployment exceeded at 60 %. This is according to the United States Central Intelligence Agency July 2013 estimate of Ethiopia's population: 0-14 years olds are 44.4% of population, while the 15-24 agegroup is 19.9% of the population. The sum of the under 24 year old demographics is 65% of Ethiopia's population, which amounts to more than 60 million people. (The 44.4% is more than 41 million, the 19.9% a little under 20 million).

Main Export Items
Coffee, Hides & skins, livestock, pulses, grains, cut-flowers

Economy is based on:
Agriculture 85 %. Ethiopia has an agriculture-based economy, with 75 per-cent of it's exports being agricultural products such as coffee, sesameseeds and flowers. Meantime, Ethiopia's economy is largely

sustained by outside money – aid, loan, and remittances – not by the surplus created internally. Many say if these three sources were to stop flowing suddenly,
the government and indeed the country could go bankrupt over night. Oneof Ethiopia's greatest natural endowment are investors, other than tourist attraction,

Driest Month December 5mm average Rf. Wettest Month August 300mm average Rf.
Please note;- June to mid-September are rainy and very chilly months in Addis Ababa. In addition, Addis Ababa is the highest altitude place in Africa which is about 2, 500 meters above sea level, often called the "rooftop of Africa"

Measures
Metric system & Local measures used.
Local measures for space (land) used: eg. 1 Tiffir (timmad)=5 ha., 8 Tiffirs (Timmad)=1 Gasha =40ha.
Local measures for length (distance) used: 1 Sinzir=0.25m 2 Sinzirs=1 Kind=0.50m, 2 Kinds =1mtr.
Local measures for weight (tonnage) used: eg. 1 qunnaa =estimated at 8 to 10 kgs. , 1 farrasula =estimated at 17 kgs. , 1 inquib=estimated at 25 kgs. , 1 dawulla=estimated at 1 quintal (90 to 100 kg) level. Qalad – equivalent to a "Rope unit", the system of land-measurement, or the termused for a "measured land plot"

Other local measures also used: are mixed up of various kinds of systems:the traditional and local measures, such as local Oromo measures, the British system and the American system. Let us give some examples.Coffee had been measured in traditional units called "farasullaa"(one farasulla=17 kg) and

dawulla (one dawulla=5 farasulla=nearly 1quintal). But in recent years, “killo gram” and “quintal” are more preferred to use. As local Oromo measures, grains are measured in units called “suguda” (one suguda=2.5 kg), “qunnaa” (1qunnaa= 8 kg) and “dawulla” (1 dawulla=90 to 100 kg). When grains and cereals are retailed for individuals, a unit called “xaasaa” or “xaasaa milishaa” is used (five xaasaa=1 kg). The oilseeds are usually measured by a smaller unit called “lambaa” (15 lambaa=1kg). This “lambaa” is a can in which tomato souce (called “salsa” by the people of Harrarghe) is packed. After the tomato souce used the can is taken out for measuring. Likewise, xaasaa” or “xaasaa milishia” is a can in which “shiro” (bean soup) is packed.

Time zone
3 hours ahead of GMT/UTC

Public holidays
January 7 Ethiopian christmas (Ghenna), January 19th (every year "Timkat" i.e. "Epiphany" has to be celebrated according to the Ethiopian Orthodox Tewahdo Church -EOTC faith), March 2 (Day of Adwa victory),April 4 (second Ethio-Italo war veterans' day), April 12 (Good Friday), April 14 (Easter), May 1 (labour day), May 28th (downfall of the Duerg regime), September 11 (Ethiopian New year), September 27 the Holy- cross day (Masqal), All Muslim holidays.

Ethnic groups
Oromo (kushetic) 34.5%, Amhara (semitic) 27.2 %, Somali (kushetic) 6.2
%, Tigrawai (semitic) 6.1 %, Sidama 4.0 %, Guraghe 2.5 %, Walaita 2.3
%, Hadiya 1.7 %, Affar 1.7 %, Gamo 1.5 %, Gedeo 1.3 %, others 11.0
%. Ethiopia has the second-largest population in Africa, with more than 90million people, divided among over 84 ethnic-groups. The country is divided among Christians, who make-up to 62% of the total population
i.e. 43% EOTC, 19% other christian denominations, and Muslims, who make-up to 34%, has a high population growth rate of 3.2 %, and 65 %of the population is young under 30 years of age.

Side note: Ethiopia is the second most populous country in Africa next toNigeria, with a population of well over 90 million, more than 80 ethnic groups, speaking at least as many languages, reside in Ethiopia. The vastmajority of Ethiopians live in rural areas or small towns; Addis Ababa is the only major city which is remarkable given the population. An Amhara,a nomadic Afar, a Mursi of the southern people, or a Gambella, all are very much Ethiopian, but each ethnic group is quite distinct in appearance, language, and culture. The major ethnic groups are the Oromos, predominantly in the central and south, the Amhara

and Tigrai from the central, northern, and northwestern highlands, the Somali, the Sidama, the Guraghe, and numerous smaller groups. Over 80 languages are spoken with Amharic as the official state language. Even with this wide diversity, the Ethiopians show a degree of tolerance and acceptancetowards other cultures that much of the world would do well to emulate. Ethiopians from all walks of life are extremely hospitable and welcoming and although you may receive additional attention as a foreigner, this is almost always due to a genuine curiosity about you and your homeland.

Topographic & Environmental concern

Ethiopia, is the most populous landlocked country in the world. The Ethiopian Highlands are a rugged mass of mountains in Ethiopia. The Ethiopian Highlands form the largest continuous area of its altitude in thewhole continent, with little of its surface falling below 1500 m (4,921 ft),while the summits reach heights of up to 4550 m (14,928 ft). It is sometimes called the Roof of Africa due to its height and large area.

Ethiopia divided into five climate zones namely, highland (Degama), mid-weather (Woina-Degama), lowland (Qolama), semi-Desertic (kefil- Berahama) and Desertic (Berahama).

The chief head-stream of the Nile-waters volume rises in Tana Haiqe (Lake-Tana) in north-western Ethiopia. A high central plateau b/n 1830 mtrs/6000 ft & 3050 mtrs/10,000 ft high rises to higher mountains near the Blue-Nile and other rivers cross the plateau which descends to plains on both W. and SE. Indeed its fertile soil, and abundant rainfall produces atwo time crops yearly. Environment: The Lake Qoqa environmental disaster is coming the most serious concern for environmentalists. Some people were sick and dying from drinking the polluted waters of Lake- Qoqa, once a pristine lake, located some 70 km south of Addis Ababa. A world renowned scientist from the University of Durham, U.K., analysed water samples from Lake Qoqa and found “high concentrations of the microcystis bacteria”, which said are among “some of the most toxic molecules known to man.” Ethiopia is facing an ecological catastrophe: pollution, deforestation, desertification, soil erosion, overgrazing, water shortages in some areas from water-intensive farming and poor management, and population explosion. The Ethiopian Agricultural Research Institute says Ethiopia loses up to 200,000 hectares of forest every year. Between 1990 and 2005, Ethiopia lost 14.0% of its forest cover (2,114,000 hectares) and 3.6% of its forest and woodland habitat.

If the trend continues, it is expected that Ethiopia could lose all of itsforest resources in 11 years, by the year 2020.

Economic Overview

Landlocked Ethiopia, Africa’s second-most populous nation, produces no oil orgas and was reliant on gold, coffee and other agricultural commodities for export earnings.

Industry

Agro-processing, textiles, beverages, leather products, chemicals, metal-processing, cement, sugar, cut-flowers to west European markets.

Side note;- Production of high value agricultural products such as horticulture, textile and leather garments, livestock and meat could be themain areas of cooperation in Ethiopia. A vast spectrum of untapped resources for possible investment exists in areas like agriculture, mining, energy and construction, among others.

Tourism & Wildlife

Abundance of unique and endemic wildlife; Ethiopia has about nine National Parks and six Wildlife Sanctuaries. Ethiopia's highlands are home to at least 20 species of mammals, and 30 species of birds that are found nowhere else. Animals Found only in Ethiopia include, Black Lion, BleedingHeart Monkey (ጭላዳ), Walia Ibex, Ethiopian Wolf, Mountain Nyala, MenelikBushbucks , Swayne's Hartebeeste, Wild Ass, The Bale Mountain Vervet are the ones.

In the park include Plains Zebra, Grant's Gazelle, Dik-dik, and the GreaterKudu as well as one of the last three populations of the endangered Swayne's Hartebeest, endemic to Ethiopia. A stretch of the northwest shore of Lake Chamo is known as Crocodile Market, where hundreds of Crocodiles gather to sun themselves. The park also has populations of bushbuck, bush pig, Anubis baboon, velvet monkeys, black-backed jackaland Burchell's zebra.

Bale Mountains National Park;

Ethiopia boasting some of the most impressive historical sites in all of Africa; an abundance of unique and endemic wildlife; dramatic landscapes; and an ancient culture renowned for its hospitality; Twice thesize of France, Tis-Abay, the Blue Nile Falls, near the source of the Blue Nile. At just over 1,100,000 square kilometers (425,000 square miles,) Interms of area size, Ethiopia is twice the size of Kenya, France, or the stateof Texas and has more UNESCO World Heritage sites than any other African nation. Ethiopia should be on all travelers' "must see" lists.

Established in 1970 is situated at about 400 kilometers from Addis Ababa.It is a magnificent high altitude (average elevation of over 4000 meters) plateau with numerous dramatic volcano plugs, tiny seasonal alpine lakes and cascading mountain streams. It stretches over an area of 2,400 square kilometers. Here

are the largest Afro-alpine moorlands in the world. The dyna...mic of this ecosystem extends far beyond Ethiopia and is responsible for environmental changes and climatic conditions in Somalia and East Africa. As it is a place of endemism, the Bale mountains National Park inhabits endemic mammals such as mountain Nyala, Red foxand Menelik's Bush-buck. Moreover it is the shelter of Ethiopia's seven of 28 endemic birds. Formed by the Wabi River as it changes its course in the distant past and carved out a new channel through limestone foothills,the Sof Omar systems is an extraordinary natural phenomenon of breathtaking beauty. The cave which is now an important Islamic Shrine was named after the saintly Sheikh Sof Omar who took refuge here many centuries ago. The cave has a religious history that predates the arrival of the Muslims in Bale - a history calculated in thousands of years.Sofomar can be visited with Bale Mountains National Park Trip.

Awash National Park:

Lying in the lowlands at the east of Addis Ababa and striding the Awash River, the Awash National Park is one of the finest reserves in Ethiopia. The Awash River, one of the major rivers of the horn of Africa, waters important agricultural lands in the east of Ethiopia and eventually flows into the wilderness of the Danakil Depression. The dramatic Awash Falls, as the river tumbles into it...s gorge, is the sight not to be missed in the national park. Awash national park, surrounding the dormant volcano of Fantale, is a reserve of arid and semi-arid woodland and savannah, with riverain forests along the Awash River. Forty six species of animals have been identified here, including beisa oryx and Swayne's hartebeest. The bird life is prolific especially along the river and in the nearby Lake Besakaand there are fine endemic amongst the 392 species recorded birds. A special attrNationwide is the beautiful clear pools of the Filwoha hot springs.

Historic Archaeological Sites:

Axum

Axum was one of the four great powers in ancient world, along with China,Persia and Rome. It is during the 4th century that King Ezana of Axum introduced Christianity to Ethiopia as well as the first minting of coins. Theancient town offers the obelisks (the large pieces of stone erected), tombs, monuments, castles, and Mariam Tsion church which is strongly believed by the Ethiopian orthodox believers that it resides the original arcof the covenant or the Tablet of Moses. A visit to Axum can be extended to the 800 BC pre-Axumite temple at Yeha, 55 km east of Axum, and a little further, the 7th century monastery at Debre Damo.

Fact & Stat: The Obelisk of Axum

1700 + years old24 meters tall granite

weighing 160 tonnesCity of Axum Ethiopia

Harrar Walled City:

Harrar is a holy center for Muslims and is situated in Eastern Ethiopia. Thiswalled city is a fascinating place, filled with Islamic and Christian history.

The city's location gives wonderful views of the surrounding country - thevast Danakil desert to the north, the fertile Harrar Mountains to the west,and the cattle rich Ogaden plains to the south. With its 99 mosques, including the 16th cent...ury Grand Mosque with is beautiful twin towers and slender minaret, it is considered to be the fourth most holy city in Islam after Mecca, Medina and the Dome of the Rock in Jerusalem.

The 5 walls, Rimbaud museum, the colourful and well organized Harari tribe's house and the Hyena man are the most important places of interestfor visitors. In addition, Medhane Alem church, built at the end of the 19thcentury, is in the town centre and contains excellent examples of traditional regional art. The 16th century Grand Mosque, with is beautiful twin towers and slender minaret lies on the road to the Erer Gate (Womenare not permitted inside the mosque). The Ahmar Mountains around Harrar produce some of the best coffee in Ethiopia.

LALIBELA Rock Hewn Churches:

A series of rock hewn churches built by Priest King Lalibela At the end of the 12th and beginning of the 13th centuries. There are 11 rock hewn churches found in town which are constructed by the priest king with the help of Angels and considered as one of the wonders in the world. Other interesting churches outside Lalibela which are highly recommended to bevisited are Asheton Mariam, Yemrehane Kristos and Genete Mariam churches.

Gondar Castles:

Is distinguished by its castles, imperial compound and its churches, particularly Debre Brehan Selassie church whereby its walls and ceiling are completely covered by unique murals. It was the capital of the Ethiopian Empire almost 200 years and the gate to the Semien MountainsNational Park where you can see the highest peak in Ethiopia named mount Ras Dashen measuring 4543 meters above sea level.

BahirDar Sightseeing:

Situated at the shore of Lake Tana is found 564 kilometers from Addis Ababa or 55 minutes flight from Addis Ababa by airplane. The island monasteries on Lake Tana are the major sites to visit followed by the BlueNile falls. It is possible to cross the lake to Gorgora and vice-versa to visitthe nice and recently restored medieval church of DebreSina Mariam.

Addis Ababa City:

Addis Ababa is an english meaning for new flower is established in 1881 after Emperor Minelik made his permanent capital at Entoto (3000 metersabove sea level) which is rich in Eucalyptus trees line up at the right and left side of the road. However, Entoto was soon decided not to be a site for the capital due to its cold weather. Therefore, Empress Taitu was said to have led the move down to the plain of Finfine, an...d to have named the new capital Addis Ababa, in Amharic the New Flower. Since then, Addis Ababa became the official capital of Ethiopia. If you have a short time in Ethiopia, we offer you to visit the historical town - Addis Ababa with its museums, nearly 200 old houses, monuments, churches and the Grand market in East Africa - Merkato.

Yeha: Ethiopia's first capital city

When visiting Yeha, Ethiopia's first capital, one can notice a head of a Lionappearing from the mountain. Yeha is located in the Tigray regional state of Ethiopia. Yeha is described as “a large Bronze Age archaeological site and the most impressive site in the Horn of Africa." There are roads leading to a building constructed as far back as the 7th century BC. Yeha was the capital of Ethiopia's Damot Empire and predates the Axumite Empire, which emerged following the decline of its power. Ethiopia and the representation of a lion have existed since the beginning.

Tiya Stelae & Standing Stones:

Tiya in southern Ethiopia is an archeological site, which is distinguished by36 standing stones or stelae. They are marking a large, pre-historic burialcomplex of an ancient culture in the region.

Birds & Mammals**:**

Nechisar National Park is considered an important habitat for bird populations particularly those migrating. It has a noted population of kingfishers, storks, pelicans, flamingos and eagles. Other birds include Falco naumanni and Circus macrourus, which are fairly common on passage, while small numbers of Phoenicopterus minor have been reported on Lakes Chamo and Abaya. Species typical of bush land habitats include Phoeniculus somaliensis, Lanius dorsalis and Cisticola bodessa andthe open plains support three species that are very unknown elsewhere inEthiopia: an isolated population of Mirafra albicauda, the endemic Caprimulgus solalaand the rare C. stellatus. The south-western corner of Lake Abaya supports one of only two Ethiopian populations of Myrmecocichla albifrons. Other species of note include Accipiter ovampensis, Aviceda cuculoides, Gypaetus barbatus, Macheiramphus alcinus, Chelictinia riocourii, Francolinus levaillantii, & Podica senegalensis.

Abijatta Shalla:

Lakes Abijatta & Shalla are located in the heart of Rift valley, near Langano is 225 kilometres south of

Addis Ababa and comprises 887 square kilometres. The two lakes are separated by three kilometres of hilly land. The altitude of the park ranges from 1540 to 2075 meters, the highest Mount Fike, which is situated between the two lakes. Lake Shalla is thought to be the deepest lake in Africa (250 meters dee...p), north of the Equator. Despite their natural beauty, these lakes are best known for their bird life. Different kinds of water birds such as greater and lesser flamingos along with white-necked cormorants, several species of herons, storks, spoonbills, African ducks, gulls and Sterns can be seen around the these lakes. During the northern winter thousands of Asiatic and Europeanducks and Waders migrate to the Lake Abiyatta shores. Lake Shalla is wellknown for its large colony of great white pelicans, undoubtedly the most breeding site for these species in Africa.

Simien Mountain National Park;

Simien mountains is one of the major highlands of Africa, rising to the highest point in Ethiopia, Ras Dejen (4543m), which is the fourth highest peak in the continent. Although Simien is in Africa and not too far from the equator, snow and ice appear on the highest points and night temperatures often fall below zero. The national park has three general botanical regions. The higher lands are moun...tain grasslands with fescuegrasses as well as heathers, splendid Red Hot Pokers and Giant Lobelia. Ethiopia's best for wildlife, and resident within its boundaries are three ofEthiopia's endemic large mammals; the gelada baboon"bleeding heart onits chest",Ethiopian wolf and Walia ibex. The baboons are the most common of the three, and Walia Ibex is limited at camp site of Chennek.Ethiopian wolf is rare here but probable to be seen at Bale Mountain National Park. Over 50 species of birds have been reported in the SimienMountains.

Yangudi Rassa:

Located in the Afar Region, the park's 4730 square kilometres of territoryinclude Mount Yangudi and the surrounding Rassa Plains, with altitudes from 400 to 1459 meters above sea level. This national park was proposed in 1977 in specific to protect the African Wild Ass. Other animalsendemic to the park include Beisa Oryx, Soemmering's and Dorcas gazelle, gerenuk and Grevy's zebra. The Awash - Assab highway crosses the Yangudi Rassa National Park, as does the Awash River.

NechSar National Park:

It was established in 1974, located to the east of Arba Minch, Park elevations range between 1108 and 1650 meters above sea level.The ParkProtects the Nechisar "White Grass" Plains as well as the two lakes and the mountainous 'Bridge of God' dividing the lakes. There is a rich habitat density here, from acacia scrub to open grasslands, and there are 70 mammal and around 340 bird species... that can be found here. There arealso 15 endemic butterflies, and 8 endemic dragonflies which can be seen on the lakeshores. The

park is beautiful and unusual, largely to the two lakes.

Omo National Park:
One of the most beautiful national parks in Ethiopia, its 4068 km of wilderness bordered by the Omo River, is home to an amazing range of wildlife. 306 species of birds have been identified here, while large herdsof eland, some buffalo, elephants, giraffe, cheetah, lion, leopard, and Burchell's zebra are not uncommon.

Gambella National Park:
The Gambella National Park was established primarily to protect two species of endangered wetland antelopes: the White-eared kob and the Nile Lechwe. Other wildlife reported as living here include populations ofelephant, African Buffalo, lion, roan antelope, tiang, Lelwel Hartebeest, olive baboon, and Guereza monkey. Several birds only found in this areainclude the shoebill stork, the Uelle Paradise Whydah and the Red- throated and Green Bee-eaters. In Gambela Region Aguak and Nuer ethnic groups are dominant.

Chief crops:

Coffee Ethiopia's main export item. Cereals, pulses, oil-seeds, cotton, sugarcane, potatoes, qhat (mental stimulant chewing-plant), cut-flowers.hides, sheep, goats, few fishing. Live animals: Ethiopia is now the tenth largest producer of livestock in the world.

The history of chief crop Coffee bean goes at least as far back as the thirteenth century. A region known as Kaffa, is it's birth place. And the Kaffitcho people, who are at present inhabiting in the Kaffitcho zone in the South were the first to discover and recognize the energizing effect of theCoffee bean plant. Coffee is embraced as mental stimulant-plant commonly served 2 to 3 times daily, as means of meeting among familiesin the community as well as a cash-crop that would provide on
the way Coffee-farmers a better life. Coffee is the part of daily life in Ethiopia, whenever there is a gathering, Coffee is there! The Coffee ceremony is performed regularly in most Ethiopian households, starting with the roasting of raw beans and an appreciation of the heady aroma before the pouring of the liquid "Bunna" from a traditional Coffee pot known locally as "Jebena" into small cups. Grain-sorghum and Castor- bean, are two other major crops believed to have originated in Ethiopia. People who have tried green bean coffee extract say it: Improves blood circulation Lowers blood pressure: Reduces body fat & weight promotes energetic feeling and better mood: some survive on selling chat, a local stimulant plant that mostly men chew in their sparetime . Though this plant has drugging effects, it is legally

recognised and considered a lesserevil than marijuana.

Geological studies have identified a favourable geological environment hosting a wide variety of mineral resources. In addition to gold, there arelarge deposits of tantalum, platinum, nickel, potash and soda-ash. Amongconstruction and industrial minerals are marble, granite, limestone, clay, gypsum, gemstone, iron-ore, coal, copper, silica, diatomite and others.
The potential geothermal energy, natural-gas, hydro-power, arable landsand suspected deposits of Petroleum in the Ogadien and Gambella is alsogood. Gold has lately become Ethiopia's second largest export item, nextto Coffee. Though, there is substantial foreign investment in agriculture, other fields such as agro-processing, mining, textiles and leather industries. Packaging also offer a huge opportunity for investment to foreign investors.

Natural Resources – Once called Breadbasket of the Horn of Africa - cereals including wheat, barley, sorghum, maize, Teff; exports includes coffee, oil seeds, hides and skins; it has the largest livestock holding in Africa; forestry - houses all the forest and wildlife reserves of the Horn including unique species like Nyala-lbex, Colobus monkey and the red fox,and various minerals - two of three mineral belts of the region including gold, silver, platinum, uranium, marble, Nickel, and natural gas.

Commercial Sea port:-
Currently Ethiopia is an Inland state. Ethiopia the continent's biggest Coffee exporter is a country forcefully turned into a landlocked nation after Eritrea, it's former northern province, retained the entire coastline along the Red sea upon it's de-jure independence from Ethiopia on April, 1993. There’s a main route access for motorized cargo-transportation to and from the abandoned Red sea port city of Assab, as perhaps a more reliable and relevant port-facility for Ethiopia. Instead of the port of Assabthe port of Djibouti which is located on the terminus of Addis Ababa- Railway, as well as the aviation transport has played an increasingly important role in the international cargo transport services since 1997.

Landlocked Ethiopia, according to government officials, has so far managed to construct major highway

that links it with five neighboring countries to boost trade relations and to get to access to the sea. Eritrea gained independence from Ethiopia in April, 1993 leaving the latter with no access to the sea. The lack of access to the sea has left a strong impact on Ethiopia's economic, political, strategic interest and access to trade. This was made worse after Ethiopia and Eritrea fought a 1998-2000border war that led to the closure of Ethiopia's access to Eritrean ports.
Ethiopia's access to sea depends upon Eritrea, Djibouti, Sudan, Kenya, orSomalia.

Currently Ethiopia depends on Djibouti port for about 98% of its international trade. To ease the high reliance on Djibouti, Ethiopia is now seeing other alternative routes to the sea. In 2005, Addis Ababa reached an agreement with neighbouring Somaliland - a region of Somalia that is agitating for independence - to access the Berbera port. Ethiopia is also using Port Sudan after it built a highway that connects Ethiopia's northerntown of Metama with Port Sudan via Gedarif in eastern Sudan. All tracks lead to Djibouti: The Addis-Djibouti corridor has always been an importantstrategic route for Ethiopia. The new 781km route eastward to Djibouti - offering the shortest distance from Addis Ababa to a Seaport - is expectedto haul about 11.2 million tonnes of freight in its first year of operation by2016, rising to 24.9 million tonnes by 2025. The new line could be carrying passengers by 2016.

Passenger trains are also planned to run on the line, which will wind around Ethiopia's highland plateau and vertiginous topography before dropping 2,500m to sea level. The new railway linking Addis Ababa to theport of Djibouti, 780 km away, grants the landlocked nation access to the sea and was built by the China Railway Group (CREC) and the China Civil Engineering Construction Corporation, a subsidiary of the China Railway Construction Corporation (CRCC). The three-lane Modjo-Hawassa highway at a cost of $700 million, is also being built by the Chinese, as was the
$500 million light rail system that cuts through Addis Ababa's traffic. Thetwo-line system is the first to be built in sub-Saharan Africa.

Development Prospect;-
As Africa's biggest coffee producer, Ethiopia's economy remains based on agriculture, which accounts for 46 percent of gross domestic product and 85 percent of employment. But its nearly 94 million population - the second biggest in Africa - is attracting the attention of foreign investors hungry for new markets. Ethiopia has also the largest livestock populationon the African continent.

In the case Ethiopia's GDP growth, on a slim economic base for that matter, does not explain improvement in the quality of life of citizens in terms of fair distribution of wealth, according lead economists. The previously recorded high rate of economic growth has started to slip as inflation has

soared, spelling trouble ahead for the stability of the financialsystem. Ethiopia came out of the 2011 drought emergency relatively well with its early-warning systems and Poverty Reduction Strategy Programme. Indications are that 2012 will see a return to more normal weather patterns. The government hoped to see an eighth year of double-digit growth in 2011, but the IMF forecast a lower rate of 7.5 percent, falling to 5.5 percent in 2012. Growth was undermined by the surge in inflation, which soared to 40 percent in August. The government launched a highly ambitious five-year Growth and Transformation Plan (GTP) in late2010. It regards the first year's performance as satisfactory with agriculture-sector targets achieved. It intends to build on this over the next year and bring down inflation by reorganising the food supply chain. The government is also attempting to address private-sector developmentthrough the joint public-private partnership forum setup in 2010 and it has implemented a competition law. Outstanding issues that need attention include overall improvement in the business climate, good governance, improvement of tax administration and access to land and finance. Although the government plans to borrow nearly EB400m ($23m)to invest in industry and infrastructure by 2015, the World Bank has expressed concern that this may lead to problems. Over the medium term, Ethiopia will need to scale up external financing and to limit import growth. A significant project in the Growth and Transformation Plan (GTP) is the Grand Renaissance Dam on the Nile, expected to generate 5,250MWwhen completed in 2017 at a cost of ETB 80bn ($4.6bn). This is being funded domestically through the sale of bonds to individuals in Ethiopia and the diaspora, to private companies and to banks, as well as from the development budget. The dam is seen as a national symbol of Ethiopia's renaissance, launched at the Ethiopian Millennium in September 2007, and its economic resurgence. The Chinese continue to dominate infrastructure development projects in the country. They are building the country's most expensive roads in various parts of the country, at over USD 500 million. The government has launched a Growth TransformationPlan (GTP) mainly aimed at infrastructural development i.e. tarring of main roads and developing Hydro energy grids over a five years period. The Chinese are set to continue to enjoy the large chunk of road construction contracts. Currently there are over 100 road projects underway in Ethiopia.

ECONOMY:

Ethiopia has secured a sum of 408 million dollars under the Special Drawing Rights (SDR) programme of the International Monetary Fund (IMF).

On the table since March this year, the allocation took effect on August 23, 2021, three weeks after the IMF Board of Directors approved a record-high 456 billion in SDR units (around 650 billion dollars based on current market prices) to 190 member countries. While the figure is significantly higher than the previous allocation of 182 billion in 2009, it is one of four major allocations since

the inception of SDRs in 1969, bringing the total to 660 billion. “Countries can use the space provided by the SDR allocation to support their economies,” reads a communique issued by Kristalina Georgieva, IMF's managing director.

Special drawing rights are foreign exchange reserve assets defined and maintained by the IMF, representing a claim to currency held by member countries. They are allocated based on the shareholder quota countries hold at the IMF, determined using a set of criteria such as the GDP, economic receptiveness, diversity, and foreign currency reserves. Historically, Ethiopia's quote was a little over 100 million dollars.

The latest allocation is part of IMF's efforts to curb the impacts of COVID-19 on the global economy and help countries, especially low-income economies under financial stress, boost their liquidity. According to the IMF, Ethiopia's economy experienced the slowest growth in a decade and a half, reaching two percent last year in the aftermath of the pandemic. However, Ethiopian authorities claim the GDP growth was four percentage points larger than the IMF data.

Ethiopia's government officials, sitting on a forex reserve that is only enough to cover two and a half months of imports, are chuffed with the decision. The Birr is fast losing its value against a basket of foreign currencies, particularly the Dollar. Late last week, a Dollar was exchanged for 46.28 Br in the official market, 20 Br less than what the parallel market offered. "The decision is a boost to the country's assets," said Fikadu Digafe, vice governor and chief economist of the National Bank of Ethiopia (NBE). "It's great news from the IMF."

Ethiopia has been under financial stress lately. With the freezing of financial aid by different development partners, including the EU and the US, the government has struggled to finance its budget deficit, which is slated to hit 144 billion Br this fiscal year.

There have also been debt rework attempts by authorities, with the latest being a request made to G20 countries to restructure sovereign debt under a new deal. But this has pushed important creditors to review their policies towards Ethiopia, including the Export-Import Bank of China, which has withheld the disbursement of 339 million dollars in loans while conducting a review of the country's debt standing .
Officials have several options to utilise the new allocation from the IMF, including withdrawing or leaving it in the IMF reserve. SDR units can be exchanged into five currencies – the Dollar, the Pound Sterling, the Euro, the Chinese Yuan, and the Japanese Yen. Interest rates are updated

weekly, based on the average value of the representative currencies' exchange rates. "Nothing has been decided yet," Eyob Tekalign (PhD), state minister for Finance, told Fortune. "Taking the SDR units as a loan from the quotas of developed countries that are not using it is also an option."

The US holds the largest quota, 17.4pc, followed by Japan (6.5pc) and China (6.4pc). In contrast, Ethiopia's 0.06pc is even less than the quotas held by neighbouring Kenya (0.11pc), which has been granted 520 million in SDR, and Sudan (0.13pc), receiving over 600 million.

Alemayehu Geda, a professor of economics at the Addis Abeba University, believes utilising the funds is too important of an opportunity to miss but warns that withdrawing the money would come with strings attached.
"Taking a penny from organisations such as the IMF has its own consequences, such as forcing a country to follow their liberalisation agendas and policies unconditionally," he cautioned.
Even though the IMF provides the funds in concessional loans upon a withdrawal request, Alemayehu warns that repayment would be difficult as it would be in forex, and the value of SDR units might increase.

"It would most probably grow from a concessional loan to a commercial loan by the time it's paid back," he said.

The latest allocation is the highest made to Ethiopia since the IMF approved a 2.9-billion-dollar loan in 2019, 700pc larger than the country's quota. When the IMF approved the loan, Ethiopia was expected to shift from a statist to private-led growth, lower debt levels, increase exchange rate flexibility and implement other structural reforms.

An agreement was reached with authorities in Ethiopia in February last year on policy measures to complete the first and second reviews under the arrangements, but this is yet to be approved by the IMF Executive Board, pending financing assurances from international partners.

ሰለ መልካም አስተዳደር

በስብሰባ ጋጋታ ከተጠያቂነት ለማምለጥ አይቻልም

ኢትዮ ሚድያ - Ethiomedia በቀለ ጅራታ February 16, 2016

Why is Ethiopia such a poor and undeveloped country?

Anthony Anderson Advocate (2021–present) April 18

Ethiopia is not a poor and undeveloped country. It is one of the fastest growing economies in Africa.

Most Ethiopians live in poverty. Ethiopia was an undeveloped country by the 20th century. When Haile Selassie came to power in 1916 he began a process to modernize the nation.In 1936, Haile Selassie was later removed from power by the Invading Italian forces, The Italians occupied Ethiopia including the capital Addis ababa. The Italians successed in abolishing slavery, modernizing the country as well.When Haile Selassie was reinstalled to power in 1941 by allies during the Second World War, he congratulated the Italians for modernizing the nation and the modernization process continued. Later Haile Selassie would later be deposed in a coup in September 1974 staged by the Derg. Today, Ethiopia is one of the fastest growing economies in Africa.

The reasons for poverty in ethiopia is:

Ethiopia wasn't colonized by European powers

However, the Italians tried to conquer Ethiopia but they were soon defeated at the battle of Adowa. In 1936, they successed in occupying Ethiopia and started the process of modernizing the country and abolish slavery which they did. Today, in Ethiopia there are architecture and buildings in the country which were built by the Italians.

Historical oppression by the Derg regime.

When the Derg came to power in 1974, they began violent oppression and ruined the country's economy and development. However, literacy rate in ethiopia during the Derg regime was growing faster but the country's economy and Infrastructure was damaged and in ruins due to the country experiencing civil unrest in Tigray and Eritrea and other parts of the country.

Mengistu Haile Mariam tried to modernize the nation but he failed due to the country experiencing civil unrest as I said.

Corruption

Ethiopia has been ruled by corrupt politicians and corruption is the reason why ethiopia has much poverty rate.

Conflicts Conflicts in other parts of the country have hindered Ethiopia's development on infrastructure and the army has been spending on restoring order.

Why does Ethiopia remain poor when it has a potential?

What facts about Ethiopia do foreigners not believe until they come to ETHIOPIA?

Was Egypt once a part of Ethiopia, or was Ethiopia once a part of Egypt?

Daniel Getachew 2y

This is a good question. Well what we do know for sure is that the Nile flows from Ethiopia to Egypt. The Blue nile starts in the Ethiopian highlands (4000m above sea level) and is then fed into Lake Tana (1800m above sea level). It goes through Sudan to reach South Egypt (around 200m above sea level). Practically speaking it would make sense that civilization came from higher elevation. Herodotus, a famous ancient greek historian that travelled the world, once said that ‘Egypt is a gift of the nile‘. My theory is that Ancient Egypt was an offshoot of an Ancient Ethiopian empire that finally outmatched it. The astronomy, mathematics, engineering, etc.. that Ancient Egypt is known for would have first come from Ethiopia. I believe at the time the people were physically indistinguishable from one another. This would have been pre 10,500 BC. Then again who really knows what happened then. Follow Daniel Getachew

RE: Was Egypt once a part of Ethiopia, or was Ethiopia once a part of Egypt?

Mohamed S. Yousef lives in Egypt Answered Oct 20, 2017

Ethiopia was once a part of Egypt. Egypt boarders changed many times through history.

This map shows the greatest space Egypt occupied one day, and it shows that Ethiopia was once part of it (1000 B.C)

Then the below one is Egypt today.

<u>HYDRO ECONOMIC OVERVIEW:</u>

THE REGIONAL NILE DIPLOMACY AND THEECONOMIC IMPACT of THE BLUE NILE

Hydro-power plants, Power Grids, Agro-Irrigation,Environmental concerns et-al …

A nationalist & heroic chanting describes, “The Blue Nile River” locallytermed as “Tikur Abay Wonz” (ጥቁር ዓባይ ወንዝ)” as, “What did the brave person say?”

A group of young nationalist men replying, “I will not give the Blue Nile toother people.”

Abay is the Ethiopian name for the Blue Nile River River or in the nationalAmharic term “Tikur Abay Wonz” (ጥቁር ዓባይ ወንዝ). The Blue Nile, which is actually turquoise for several thousand years continually is mainly the backbone of Egyptian economy.

Blue Nile (ጥቁር ዓባይ ወንዝ):- Ge'ez ጥቁር ዓባይ Ṭiqūr ʿĀbbāy (transliterated to English: Black Abay, Blue Nile) ‘Nile River’, Arabic ‘Bafir Al-Nīl’ or ‘Nahr Al-Nīl’ river, the father of African rivers and the longest river in the world. It rises south of the Equator and flows northward through northeastern Africa to drain into the Mediterranean Sea. –Encyclopidia Britanica

THE NILE IN BIBLE PROPHECY: the drying of River-Nile course to the“Doomsday of Egypt”

The Book of Issaiah 19: 1 The burden of Egypt. Behold, the LORD ride upon a swift cloud, and shall come into Egypt: and the idols of Egypt shallbe moved at his presence, and the heart of Egypt shall melt in the midst of it. 2 And I will set the Egyptians against the Egyptians: and they shall fight every one against his brother, and every one against his neighbour; city against city, and kingdom against kingdom. 3 And the spirit of Egypt shall fail in the midst thereof; and I will destroy the counsel thereof: and they shall seek to the idols, and to the charmers, and to them that have familiar spirits, and to the wizards. 4 And the Egyptians will I give over into the hand of a cruel lord; and a fierce king shall rule over them, saith the Lord, the LORD of hosts. 5 And the waters shall fail from the sea, andthe river shall be wasted and dried up. 6 And they shall turn the rivers faraway; and the brooks of defence shall be emptied and dried up: the reedsand flags shall wither.

The Book of Issaiah 1: 1 There will be massive civil war in Egypt. 2) Theriver will be diverted and no water shall reach Egypt.

The Book of Ezekiel 30: 4 And the sword shall come upon Egypt, and great pain shall be in Ethiopia, when the slain shall fall in Egypt, and they shall take away her multitude, and her foundations shall be broken down. 5 Ethiopia, and Libya, and Lydia, and all the mingled people, and Chub, and the men of the land that is in league, shall fall with them by the sword. 12 And I will make the rivers dry, and sell the land into the hand ofthe wicked: and I will make the land waste, and all that is therein, by the hand of strangers: I the LORD have spoken it. According to ezekiel, not only will the river dry up, the survivors of the drought will be ruled by a cruel occupier from another land.

The Book of Zachariah 10: I will bring them again also out of the land of Egypt and gather them out of Assyria; and I will bring them into the land of Gilead and Lebanon; and place shall not be found for them. 11 And he shall pass through the sea with affliction, and shall smite the waves in thesea, and all the deeps of the river shall dry up: and the pride of Assyria shall be brought down, and the sceptre of Egypt shall depart away. The Egyptians will be exiled and won’t find a refuge and the Nile will dry up. (Text ends)

The Blue Nile River - Ethiopia and the Blue Nile River (Tikur Abay Wonz) The source of over 80pc of the water that eventually enters the Nile Riversystem. The Blue Nile starts in Lake Tana in Ethiopia and flows through tall, narrow chasms to the Sudan border. Within Sudan, the Blue Nile meets the White Nile, in Khartoum, and from there flows into Egypt. For many years, all the Nile's water has been divided between the Sudan and Egypt; any other country that dared to touch the Nile was met with stern threats

from Egypt and its protectors: first The Great Britain. The Blue Nile where its source and 90% of the total water volume share is from Ethiopia as a result of its tributary rivers is still continuing at its controvertial agreement signed by the blue nile basine countries. .the westerns and middle East nations have a political and economical strategy

interest on Blue nile river beyond the read sea. If one has a control overon Blue nile would control Egypt by and its areab allience countries

የዓባይ ተፋሰስ

በኢትዮጵያ የአባይ ተፋስስ፡ የሚጠቃለሉ ወንዞች፣ ተከዜና፣ ባሮ አኮቦ፣ ናቸው። ከተፋሰሶቹ አባይ 75.550፣ ተከዜ
5.910እና ባሮ አቦኮ 19.250የውሐ ሃይል አለኝታ በጊጋዋት ስዓት በአመት የማመንጨት አቅም አላቸው፣ 3ቱም ወንዞች በምዕራብ ኢትዮጵያ በኩል ነው የሚወጡት። የእነዚህ ወንዞች ተፋሰስ አማራን 38በመቶ፣ ኦሮሚያን 24በመቶ፣ ቤንሻንጉልን 15በመቶ፣ ትግራይን 11በመቶ፣ ጋንቤላን 7በመቶ፣ ደቡብን 5በመቶ ይሸፍናል። ከዚህ ውስጥ የአባይ ተፋሰስ፣ በሰሜን ማዕከላዊና ምዕራባዊ የሀገሪቱ ክፍሎች ይፈሳል። በዚህም ከሰሜን ወደ ደቡብ400ኪ.ሜ ከምስራቅ ወደምዕራብ 550ኪ.ሜይሸፍናል። አባይ ከጣና እስከ ኢትዮ.ሱዳን ድንበር 1000ኪ.ሜ.ይጓዛል። አባይ ከአገሩ ተነስቶ ከነጭአባይ ጋር ካርቱም ላይ እስኪገናኝ 1.529ኪ.ሜ.ይጓዛል። ነጭአባይ የሚነሳውከመካከለኛው አፍሪካ ታላላቅ ሐይቆች ነው። ዋነኛ መነሻውደቡብሩዋንዳ ነው። የእኛውአባይ ከነጭአባይ ጋር ሲቀላቀል ናይል የሚል ስያሜን ይይዛል፡ የአማረኛ አቻፍቸውምወንዝ እንደማለት ነው። ናይል በአፍሪካ እረዥሙወንዝ ሲሆን ከአለምደግሞ ከሚሲሲፒ ቀጥሎ ሁለተኝነቱን ይዟል። ዓባይ እና ጸረ-ኢትዮጵያ አቋም ከዓባይ ተፋሰስ ጋር በተያያዘ ኢትዮጵያ ጠላተ ብዙ ሆና ቆይታለች፡ ዛሪምባላንጣዎቿ በርካታ ናቸው። ሀገራችን ባሳለፈቻቸው ዘመናት ሁሉ፡ አባይን ለብቻቸው መጠቀም ከሚሹ ጎረቤቶቿ፡ ጥቃት ሲሰነዘርባት ኖራለች።
እነዚህ ጎረቤቶቻችን ጊዜ ጠብቀውለመጀገን ሞክረዋል፣ ጸረ ኢትዮጵያ ሃይሎችን አደራጅተዋል፣አሰልጥነዋል፣ አስታጥቀዋል፣ ፕሮፓጋንዳ ነዝተዋል፣ በውስጥ ጉዳያችን ጣለቃ ገብተዋል።
የዐባይን ወንዝ በተመለከተ የኢትዮጵያ ሕዝብ ስር የሰደደ የረዥም ጊዜ ሀዘን፣ እሮሮና ቁጭት አለበት። ዐባይ ግብጽን የመሰለች፣ በተደጋጋሚበኢትዮጵያ ላይ ጦርነት የከፈተች፣ አጼ ዮሐንስን ከጦር ጀኔራላቸው ከራስ አሉላ ዕቁቢ (አባ ነጋ)እና ከሰራዊታቸውጋር እረፍት አሳጥታ ስታንከለክል የኖረች፣ ብዙ ንብረትና የሰውሕይወት መስዋእትነትን ያስከፈለች ባላጋራ የፈጠረብን ወንዝ ነው። የዐባይን ወንዝ የመጠቀም አቅም እንዳይኖረን (ለኢትዮጵያ ጠላቶች ከለላ በመሆን፣ የውስጥ ብጥብጥንና መከፋፈልን በመፍጠር፣ ብጥብጡእንዳይበርድ በማራገብ፣ ለውጭጠላቶቻችን ድጋፍ በመስጠት፣ በተለያዩ ዓለምአቀፍ ድርጅቶች ውስጥ ስውር ደባ በመፈጸም ወ.ዘ.ተ)ድክመትና ውድቀታችን ስትመኝ የምትኖር፣ አብሮ መጠቀምና መተባበር እማይታያትን፣ ግብጽን የመሰለ አውራ ባላጋራ ያፈራብን ወንዝ ነው። ዐባይን ባስጠቂነቱ እንጂ በጠቃሚነቱ አናውቀውም።
ታሪክ እንደሚያስረዳው፡ ግብጾች በተለይ 18እና 19ኛው ክ/ዘ.ሱዳንን በወረራ ይዘውነበር። ተከሻቸው አበጠና የአባይን እራስ ለመያዝ ባደረጉት እንቅስቃሴ፣ ወደምዕራብ ኢትዮጵያ ተረማምደው 1834ከሰላንና 1868መተማን ተቆጣጥረዋል። እንዲሁም 1840ሰሜን ጎንደር ደባርቅ ድረስ በመግባታቸውካጼ ቲዎድሮስ ጋር ተዋግተዋል፡ 1846 ምጽዋን ለመያዝ ሞክረዋል፤ 1868ካጼ ዩሃንስ ጋር ተዋግተዋል፡ ይህንን ተከትሎ በ1869 ኩናማን 1875ሃረርን ለመያዝ ያደረጉትን እሩጫታሪክ ዘግቦታል፡ ቅጥረኛውየጦር መሪ መሀመድ አሊን ጨምሮ፡በእግሩ የተተካውይስሀቅ አባስና፡ የመሀመድ አሊየልጅ ልጅ፡ እስማየል ፓሻ፡ የግብጽን የአባይን ከእነ ምንጩ ለመቆጣጠር ከንቱ ምኞት ለማሳካት፡ ጸረ ኢትዮጵያ አቋም በማራመድ ተጠቃሽ ናቸው። ግብጽ በተደጋጋሚበሞከረችው ወረራ የሽንፈት ጽዋ ተጎንጭታለች። ግብጽ ከዚህ ባለፈም፡ የውጭጉዳይ ፖሊሲዋን ተጠቅማየአባይ

ወሃን ፖለቲካ እንደእንዝርት ለማሾር ጥራለች። በተለይምእንደ አውሮፓ አቆጣጥር ከ 1865 እስከ 1885 ምጽዋን ከ 1875 እስከ 1884 ሰሜን ኤርትራን ተቆጣጥሪያለሁ በሚል በኤርትራ ላይ የይገባኛል ጥያቄ አቅርባለች። ጥያቄዋ ውድቅ ሲሆንባት በወቅቱ የግብጽ መሪ የነበሩት ጋማል አብዱል ናስር የናይል ሸለቆ ህብረት የሚል፣ የናይል ወንዝ የማይመለከታቸውንም ያካተተ ዘመቻ ይዘው ብቅ አሉ አላማው ኢትዮጵያን፣ ሱዳንን፣ ሶማሌን፣ ዩጋንዳንና ኬንያን በግብጽ ቁጥጥር ስር ማዋል ነበር። ግን ዘመቻው ተጨናገፈ።

ጋማል አብደል ናስር በ 1928 የኢጣሊያ ወረራ ምክናያት፡ ቀዳማዊ ሃይለስላሴ፡ ሱዳን በነበሩበት ወቅት፡ ለማነጋገር ቢጥሩ ሳይሳካለቸው ይቀራል። ናስር ቂምቋጥረውይቀመጣሉ፡ እንደገናምናስር ስልጣን ላይ ሲወጡሀይለ ስላሴግብጽን እንዲጎበኙ ቢጋብዟቸውንጉሱ ጥሪውን ሳይቀበሉት ይቀራሉ፡ ግን ተደጋጋሚውን ጥያቄ በወቅቱ በሱዳን የኢትዮጵያ አምባሳደር የነበሩት፡ መለስ አነዶም፡ ካይሮ በመሄድ እንዲያዳምጡ፡ በንጉሱ በመታዘዛቸው፡ እ.ኤ.አ. ዲሴምበር 1956 በመሄድ ከናስር ጋር ባደረጉት ውይት፡ አለመግባባት ተፈጥሮ መለስ አንዶም ኢትዮጵያ በምንምአይነት እንደማትንበረከክ እቅጩን ተናግረው ይመለሳሉ።

ጋማል አብደል ናስር በዚህ ተናደውየዓለምአቀፍ ህግን በመጣስ፡ ኢትዮጵያን የማፈራረስ ተንኮልን በውጭጉዳይ ፖሊሲያቸውእንዲነደፍና እንዲተገበር አደረጉ። ወዲያውሬዲዮ ካይሮ ጸረ ኢትዮጵያ ዘመቻ እንዲከፍት፡ አላዛሃር ዩነቨርስቲየአክራሪ ኤትራውያን ከፍት እንዲሆን፣ ወታደራዊስልጠና እንዲሰጥ ወ.ዘ.ተ.መመሪያ ሰጡ። ኢድሪስሞሀመድ አደም፡ የቀድሞውየኤርትራ ፓርላማ ፕሪዘዳንት፣ ኢብራሄምሱልጣን የእስላማዊ ሊግ ዋና ጸሃፊና፡ ወልዳብ ወልደማርያም፣ የኤርትራ ሰራተኛ ማህበር ፕሪዘዳንትና ሌሎችም ወደ ግብጽ እንዲገቡ ተደረገ። በተለይ ወልደ.አብ ወልደ.ማርያምየሬዲዮ ካይሮን በመጠቀምየሃይለስላሴን ስርአት ማብጠልጠሉን ተያያዘው፡፡ እ.ኤ.አ.በ 1960 ኤርትራ ከኢትዮጵያ ጋር መቀላቀሏን፡ ግብጽ እንደ ትልቅ አጋጣሚተጠቀመችበትና፡ የኤርትራነጻ አውጭግንባር ካይሮ ላይ ጽ/ቤት እንዲከፍት አደረገች።

እናም ግብጽ የብዙ ሽዎችን ህይወት ለቀጠፈው፣ አያሌ ንብረት ላወደመው፣ የእርስ በርስ ጦርነት፣ ቀዳሚ ተዋናይ ሆና ያሰበችውን አሳክታለች። የእሷን ፈለግ ተከትለው፡ አማጽያንን ካገዙ ሀገራት መካከል፡ ሶሪያ፣ ኢራቅ፣ የመን፣ ሊቢያ፣

ኩዌትና ሌሎችም የአረብ ሀገሮች ተጠቃሽ ናቸው። የሶማሌ መንግስት እ.ኤ.አ. 1964፣ 1977-1978 ኢትዮጵያን በወረረበት ወቅት ግብጽ ከሰውሃይል እስከ ቁሳቁስ፡ ጠንካራ ድጋፍ አድርጋለች። የሃይለስላሴን ስርዓት የተካው፡ የደርግ ስርዓት በውስጥም በውጭም ጦርነት፡ በተወጠረበት ወቅት በጂኦ.-ፖለቲካ አባይንና ቀይ ባህርን የተንተራሱ፡ ሀገሮች በግብጽ አስተባባሪነት፡ እንደ ጅብ ተጠራርተው፡ በኢትዮጵያ ላይ የጥፋት እጃቸውን ሰንዝረዋል፡፡ ይሁንና ኢትዮጵያ በአባይ ተፋስስ መዘዝ፡ የሚሰነዘርባትን ጦርነቶችና የተሸረቡባትን ደባዎች ሁሉ፡ ስታከሽፍ ኖራለች፡

:

የኢትዮጵያና የግብጽ አቋም በዐባይ አጠቃቀም ላይ

የኢትዮጵያ አቋም፡ ኢትዮጵያ የያዘቺውየክርክር አቋም በ 1966 ዓ.ም በወጣውየሄለስንኪ ደምብ (Helsinki Rules) በመባል በሚታወቀውየሀገር አቋራጭወንዞች አጠቃቀምድንጋጌን የተመረከዘ ነው። የኢትዮጵያ አቋምየዐባይን ወንዝ ውሀ ‘ሚዛናዊ’ (equitable distribution) በሆነ መልኩ ‘ተዛዝነን’ (fairly) እንጠቀምበት የሚል ነው። ዐባይ ወንዛችን ነውና (ለግብጽ የሚያስፈልገው ውሀ ሳይዛባ) እኛም ተጠቃሚዎች መሆን ይገባናል። በሀገራችን ክልል ውስጥ የሚገኘውን የተፈጥሮ ሀብት እንዳንጠቀም መከልከል የተባበሩት መንግሥታት ያጸደቀውንያንድን ሀገር ሉዐላዊ መብት መጋፋትና መድፈር ነው። ስለዚህ የሱዳንንም ሆነ የግብጽን ሕዝብ ጥቅም በማያናጋ መንገድ

ወንዛችን እንጠቀምበታለን የሚል ነው። የዐባይን ወንዝ (ለግብጽም፣ ለሱዳንም፣ ለኢትዮጵያም) ሚዛናዊና ተመጣጣኝ (equitable) በሆነ መልኩ እንድንጠቀም ግብጽ ፈቃደኛ ካልሆነች፣ ኢትዮጵያ (የግብጽን አወንታሳትጠብቅ) በግዷ ትወስናለች ወይም እርምጃ ትወስዳለች (unilateral decision) የሚል ነው የኢትዮጵያ አቋም።

የግብጽ አቋም፡

የግብጽን የመከራከሪያ አቋም በሁለት ከፍሎ ማየት ይቻላል።

ከ 5,000 ዘመናት በላይ ከኢትዮጵያም ሆነ ከምስራቅ አፍሪካ ሀገሮች ተነስቶ ወደግብጽ የሚፈሰው (የጥቁር ዐባይና የነጭ ዐባይ) ውሀ ታሪካዊ ተጠቃሚነኝ። አሁንም ዋናዋ ተጠቃሚ (primary user) እኔ ነኝ፣ የውሀ ውታሪካዊ ባለቤትም እኔ ነኝ ባይናት። ግብጽ ይህን ታሪካዊ ተጠቃሚነት መከራከሪያ የምታደርግበት ምክንያት፣ በተባበሩት መንግሥታት ተቀባይነት ያለው "ዓለምአቀፍ የሕግ ኮሚሽን" (International Law Commission/ILC) ካወጣቸው ሕግጋት አንዱ "መጀመሪያ የውሀ ውተጠቃሚየሆነ፣ የውሀ ውባለመብት ይሆናል። በኋላ የመጣውየመጀመሪያውን ተጠቃሚመብት ሊገስስ አይችልም"5 ስለሚል ነው። እንደዚህ ያለውንባለመብትነት በእንግሊዝኛ acquired rights or prior appropriation እያሉ ይጠሩታል። ግብጽ ይህንን ደምብ ተንተርሳ፣ በስተላይ ካሉት የተፋሰስ ሀገሮች አዲስ የሚወጠን ፕሮጀክት ሁሉ ታሪካዊ ጥቅሜን ማዛባቱ አይቀርም (leads to 'appreciable' harm) ትላለች። በዐባይ ተፋሰስ ላይኛው ክፍል (upper catchments) የሚታቀድና የሚወጠን የልማት ስራ ሁሉ ታሪካዊ ጥቅሜን ስለሚነካ፣ እኔ ያየሁት/ያወቅሁት፣ ያመንኩበት፣ የተስማማሁበትና ያጸደቅሁት ካልሆነ በስተቀር፣ የሚታቀደውየልማት ስራ ተፈጻሚነት ወይምተግባራዊነት አይኖረውም የሚል ነው። ስለዚህ ግብጽ የያዘቺው አቋም ባጭሩ፣ በዐባይ ተፋሰስ ውስጥ ለሚታሰቡና ለሚወጠኑ ፕሮጀክቶች ሁሉ ፈቃጅና ከልካይ፣ ሰጪና ነሺ እኔ ነኝ የሚል ነው። በእንግሊዞች አማካይነት በ 1929ዓ.ም፣ በኋላ ደግሞ በ 1959ዓ.ም በግብጽና (በእንግሊዞችና በግብጽ ጣምራ ግዛት ስር /Anglo-EgyptianCondominium በነበረቺው) በሱዳን ከተፈረሙ የዐባይ ውሀ አጠቃቀምስምምነት ውጪ፣ ከዐባይ ተፋሰስ ሀገሮች ጋር ሌላ ድርድር አልደራደርም፣ ሌላ ውል አልዋዋልም፣ ሌላ ፊርማ አልፈራረምም የሚል ነው።

አንዳንድ ምንጮች እንደሚጠቁሙት ይህ ውል (የቋንቋ አተረጓጐም ውዝግብ በማስከተሉ) በኢትዮጵያ በኩል አልተፈረመም/አልጸደቀም (not ratified) ይላሉ። በ 1929ኙና በ 1959ኙ የውል ስምምነቶች ሌሎቹ የዐባይተፋሰስ ሀገሮችም አልተሳተፉበትም። ምክንያቱም ኮንጐ በቤልጅየም ስር ነበረች። ሌሎቹ የምስራቅ አፍሪካ ሀገሮች በሙሉ ነፃነት ያልነበራቸው፣ የራሷ የእንግሊዝ ቅኝ ግዛቶች ነበሩ።

የ 1929ና የ 1959የውል ስምምነቶች ባጭሩ

የአንባቢዎቼን ትውስታ ለመቀስቀስ ያህል፣ የዐባይ ጉዳይ በተነሳ ቁጥር የ 1929ዓ.ም እና የ 1959ዓ.ም የውል ስምምነቶች በየመድረኩ በተደጋጋሚ (በተለይ በግብጾች) የሚነሱናቸውና ባጭር ባጭሩ እንደሚከተለውላቅርብላችሁ።

የ 1929ኙ የዐባይ ውል ተፈራራሚዎች፣ 1) ከቅኝ ተገዢነት ነፃ የወጣች ቢሆንም በብዙ መልኩ (በተለይ በመንግሥት አስተዳደር ዘርፍ) ገና በእንግሊዞች ተጽእኖ ስር የነበረቺው ግብጽ ናት። 2) በእንግሊዝና በግብጽ ጣምራ ተገዢ የነበረቺው ሱዳን ናት። አድራጊ ፈጣሪዋ እንግሊዝ ብትሆንም የ 1929ኙ የውል ስምምነት (በተለምዶ) ግብጽና ሱዳን የተስማሙበት ውል እንደሆነ ተቆጥሮ ነው የሚወሳው። የ 1929ኙ ውል ባጭሩ የሚከተለውን ይመስላል።

በዚያን ጊዜ በእንግሊዞች አማካይነት ግብጽና ሱዳን በተማሙኑበት መሠረት በያመቱ በጠቅላላ 80ቢሊዮን ሜትርኩብ (cubic meters) ውሀ ግብጽ/አስዋን ይደርስ ነበር። ከዚህ 80ቢሊዮን ሜትር ኩብ ውሀ ውስጥ ግብጽና ሱዳን በዚያን ጊዜ ሊጠቀሙበት ይችላሉ ተብሎ የተተመነ የውሀ መጠን (utilizable water) 52ቢሊዮን

ሜትር ኩብ ነበር። ይህም ማለት (80 – 52 = 28) ወደ 28 ቢሊዮን ሜትር ኩብ ውሀ ከግብጽ ተርፎ ወደ ሜዲትራኒያን ባሕር እንደሚገባ ነበር የታመነበት።

ግብጽና ሱዳን ሊጠቀሙበት ይችላሉ ከተባለው 52 ቢሊዮን ሜትር ኩብ ውሀ (cubic meters) ውስጥ ሱዳን 4 ቢሊዮን ሜትር ኩብ (7.7%) ውሀ እንድትጠቀም፣ ግብጽ ደግሞ 48 ቢሊዮን ሜትር ኩብ (92.3%) ውሀ እንድትጠቀም ተስማሙ።

በበጋ ውቅት (ከጥር መጨረሻ እስከ ሐምሌ አጋማሽ ድረስ /January 20 to July 15) የሚፈስሰው የዐባይ ውሀ ግን ሙሉ በሙሉ ለግብጽ ጥቅም ብቻ እንዲውል ተስማሙ።

በላይ በኩል የሚገኙትን የዐባይ ተፋሰስ ሀገሮች ለመቆጣጠር (monitor) የግብጽ መብት የተጠበቀ ስለመሆኑ ተስማሙበት።

በላይ በኩል ያሉትን የተፋሰሱን ሀገሮች ፈቃድ ሳታገኝ (without the consent of upstream riparian states) በዐባይ ላይና ከዐባይ ጋር የሚገናኝ ማንኛውንም ፕሮጀክት ለመስራት የግብጽ መብት የተጠበቀ መሆኑን ተስማምማ ት።

እንግዲህ አንባቢዎች እነዚህን ውሎች አይታችሁ የየራሳችሁን ሚዛናዊ ፍርድ ስጡ። እነዚህ ውሎች በሁለቱ ሀገሮች መካከል ብቻ መፈረማቸውልክ ነውን?በነዚህ ውሎች የማን መብት ተጠበቀ?የማን መብት ተደፈረ?ከውሎቹእንደምትረዱት ይህ ውል የዐባይን ተፋሰስ ሀገሮች6በሙሉ የሚመለከት ነው። ተደራዳሪዎቹና ተፈራራሚዎቹ ግን ‘ግብጽና’ ‘ሱዳን’ብቻ ናቸው። የላይኞቹ የዐባይ ተፋሰስ ሀገሮች ከዐባይ ወንዝ ውሀ የተተወላቸው ድርሻ የለም። በኔ እይታ ይህ ውል በላይ በኩል ያሉትን የዐባይ ተፋሰስ ሀገሮች ሉዐላዊነት ገፍፎ፣ መብታቸውን ደፍሮ፣ አድራጊ ፈጣሪዋግብጽ ብቻ እንድትሆን ያደረገ ውል ነው።

ሕጋዊ ታዋቂነት ያላቸውና የዐባይ ተፋሰስ ሀገሮች በመባል የሚታወቁት ሀገሮች፡ግብጽ፣ ሱዳን፣ ዩጋንዳ፣ ኮንጐ፣ ሩዋንዳ፣ ቡሩንዲ፣ ታንዛኒያ፣ ኬንያ፣ ኢትዮጵያና ኤርትራ ናቸው።

የ 1959ኙ የዐባይ ውል ስምምነት ሱዳን ከእንግሊዞች ቅኝ ተገዢነት ነፃ ከሆነች በኋላ (ማለትም በሁለት ነፃ ሀገሮች) በግብጽና በሱዳን መካከል የተደረገ ስምምነት ነው። የስምምነቱ ዋና ዋና ነጥቦች ባጭሩ የሚከተሉት ናቸው።

አስዋን ላይ ለሃምሳ ዓመታት ያህል ተለክቶ የተገኘ ነው በማለት ጠቅላላው የዐባይ ውሀ 84 ቢሊዮን ሜትር ኩብ ነው ብለው ተሙኑ። ከዚህ 84 ቢሊዮን ሜትር ኩብ ውሀ ውስጥ 10 ቢሊዮን ሜትር ኩብ በትነትና (surfaceevaporation) በስርገት (seepage) ሊጠፋ/ሊባክን ይችላል ተብሎ ተገመተ።

ቀሪውን 74 ቢሊዮን ሜትር ኩብ ውሀ ግብጽና ሱዳን ላገልግሎት ያውሉታል ተብሎ ታመነበት። ይህ ተመን ከ 1929ኙ ተመን የ 22 ቢሊዮን ሜትር ኩብ ውሀ ብልጫ ያሳያል። በዚህ ተመን መሠረት ወደ ሜዲትራኒያን ባሕርየሚገባ የዐባይ ውሀ የለም።

ይህንን 74 ቢሊዮን ሜትር ኩብ ውሀ፣ ሱዳን 18.5 ቢሊዮን ሜትር ኩብ (25%) ውሀ እንድትጠቀም፣ ግብጽደግሞ 55.5 ቢሊዮን ሜትር ኩብ (75%) ውሀ እንድትጠቀም ተከፋፈሉ።

ሱዳን ነፃ ከወጣች ከሁለት ዓመት በኋላ (በ 1958 ዓ.ም) የተስማሙበትን፣ የዐባይን ወንዝ ውሀ ሙሉ በሙሉይይዛል ብለው ያመኑበትን፣ የአስዋንን ግድብ ግብጽ እንድትገነባ ስምምነታቸውን አጸደቁ።

ሱዳን የውሀ ኮታዋን እስካላለፈች ድረስ ሮሲዬርስ (Roseires Dam) የተባለውን ግድብ ጥቁር ዐባይ ላይ ገድባ ለኃይል ማመንጨና ለመስኖ አገልግሎት እንድትጠቀምበት ተስማሙ።

ሱዳን ከግብጽ ጋር በመስማማት የዐባይን ውሀ ፍሰት እሚያጠነክሩ (ወደ ሱድ/Sudd ረግረግ እየገባ በትነት የሚባክነውን ውሀ የሚቀንሱ) በኋላ እንደተወጠኑት እንደነ ጆንገሌይ ቦይ (Jongelei Canal) የመሳሰሉ ፕሮጀክቶች አውጥታ መስራት እንደምትችል፣ ይህ ዓይነቱ ስራ በሚያስከትለው ወጪና ገቢ ግብጽ ተሳታፊ/ተካፋይእንደምትሆን ተስማሙ።

በስተላይ ከሚገኙ የተፋሰሱ ሀገሮች የሚሰነዘር አቤቱታ ቢኖር ጉዳዩን ግብጽና ሱዳን በጋራ ሊያዩትና፣ በጋራ ሊያስተናግዱት ስምምነት አደረጉ።

ከሁለቱ ሀገሮች (ከሱዳንና ከግብጽ) ውጪ የዐባይ ውሀ ይገባኛል የሚል፣ በተፋሰሱ ውስጥ የሚገኝ ሀገር ቢነሳ፣ የቀረበውጥያቄ በግብጽና በሱዳን ከታመነበት፣ አስዋን ግድብ የሚደርሰውየዐባይ ውሀ ተለክቶ በሚገኘውየውሀመጠን መሠረት፣ ለጠያቂውሀገር ተቀንሶ የሚሰጠውን ውሀ ግብጽና ሱዳን እኩል ሊካፈሉ ተስማሙ።

ቴክኒካዊ የሆኑ የውሀ ልማት ስራዎችንና ትብብሮችን የሚያከናውን ቋሚየጋራ የቴክኒክ ኮሚሽን (PermanentJoint Technical Commission/PJTC) እንዲቋቋም ተስማምተው አቋቋሙ።

እነዚህን ውሎች ነው ግብጽ በድፍረት የዐባይ ተፋሰስ ሀገሮች የጋራ ውሎች በማስመሰል በያጋጣሚው በተደጋጋሚ መከራከሪያ ነጥብ እያደረገች የምትጠቅሳቸው። በነዚህ የውል ስምምነቶች እኛ አልተሳተፍንባቸውም በማለት ሌሎቹ የተፋሰሱ ሀገሮች (riparian states) ቢወተውቱም፣ ግብጽ በአዲስ መልክ በሚረቀቅ ሌላ የውሀ አጠቃቀም ወይምክፍፍል ላይ ለመደራደር ፈቃደኛ አለመሆኗን እስካሁን እንዳጸናችነች። በ1995ዓ.ምየግብጽ የውጭጉዳይ ምንስቴር ረዳት ሚኒስትር የነበሩ (ማርዋን በድር/Marwan Badr) የተባሉ ግብጻዊ “የሕዝባቸው ቁጥርናኢኮኖሚያቸውእያደገ የመጣው የዐባይ ተፋሰስ ሀገሮች የውሀ ጥያቄ፣ ፖለቲካ ብቻ ሳይሆን እውን እየሆነ ነውና ግብጽ ከ1959ኙ የውሀ ኮታ ለየት ባለ የውሀ ድርሻ ላይ ለመደራደር መዘጋጀት አለባት” የሚል (ካንድ ግብጻዊ ባለስልጣን እማይጠበቅ) ሀሳብ በማቅረባቸውከፍተኛ ተቃውሞደርሶባቸዋል። የግብጾች ግትር አቋም በ1959ዓ.ም ከሱዳን ጋር ተደራድረን ካገኘነው (55.5 ቢሊዮን ሜትር ኩብ ውሀ) የተለየ መደራደሪያ ሀሳብ እንቀበልምየ ሚል ነው።

ምዕራብ አፍሪካ፡

ሴኔጋል ወንዝ (Senegal River) እሚፈስባቸውሀገሮች (ማሊ፣ ሞሪታኒያ፣ ጊኒና ሴኔጋል) የወንዙን አጠቃቀምና እንክብካቤ በሚመለከት ተደራድረውየጋራ ስምምነት ተፈራርመዋል። ማሊ ውስጥ የሚገኘው ማናንታሊ (Manantali Dam) የተሰኘውግድብ በተፋሰሱ ሀገሮች ኅብረት በትብብር የተሰራ ነው። ግድቡ ማሊ ውስጥ ቢሆንምየተፋሰሱ ሀገሮች በሙሉ በጋራ ባለቤትነት የሚያ(ዝ)ዙበት፣ የሴኔጋል ሸለቆ ባለስልጣን (OMVS/ Office de Mise-en-Valeur du Vallee du Senegal) ብለውባቋቋሙት ቢሮ የሚተዳድር የኅብረት ግድብ ነው፡፡

የናይጀር ወንዝ (Niger River) ተፋሰስ ማሊን፣ ናይጀሪያን፣ ኒጀርን፣ ጊኒን፣ በርኪናፋሶን፣ ካሜሩንን፣ ቤኒንን፣ አይቮሪኮስትን፣ ቻድን ያጠቃልላል። እነዚህ የናይጀር ወንዝ ተፋሰስ ሀገሮች የውል ስምምነት ተፈራርመው የተፋሰሱን ውሀ በጋራ ይጠቀሙበታል። ባንዳንዶቹ የተፋሰሱ ሀገሮች ቅሬታ መሰንዘሩ ባይቀርምእንደ ዐባይ ጐልቶ የወጣ ችግርየለባቸውም።

መካከለኛው አፍሪካ፡

የዛምቤዚ ወንዝ (Zambezi River) ተፋሰስ ዛምቢያን፣ ዚምባቡዌን፣ ሞዛምቢክን፣ ማላዊን፣ አንጐላን፣ ናሚቢያን፣ ቦትስዋናን፣ ታንዛኒያን ያካትታል። ከነዚህ ሀገሮች መካከል ዛምቢያና ዚምባቡዌ የጋራ አጠቃቀም ስምምነት ተፈራርመዋል። እንዲያውም ካሪባ ግድብ (Kariba Dam) የሚባለውን ከአፍሪካ ታላላቅ ግድቦች አንዱ የሆነ ውን ግድብ በጋራ ነውየገደቡት። የዛምቤዚን ወንዝና የግድቡን አጠቃቀምየሚከታተልና የሚያስተዳድር (Zambezi River Authority የሚባል) ባለስልጣን መስሪያ ቤትምበጋራ አቋቁመዋል። ሌሎቹ የዛምቤዚተፋሰስ ሀገሮች በወንዙ ውሀ አጠቃቀምላይ እምብዛምስለሆኑ፣ በተፋሰሱ አጠባበቅ ግዴታ ውስጥ መግባት ስላልፈለጉ ይመስላል የስምምነ ቱ ተሳታፊ አልሆኑም።

ካጌራ ወንዝ (Kagera River) ሩዋንዳና ቡሩንዲ የሚነሳ ወደ ቪክቶሪያ ሀይቅ የሚገባ ትልቅ ወንዝ ነው። በዚሁወንዝ

ሩሱሞ ፏፏቴ (Rusumo Falls)ላይ የኃይል ማመንጫግድብ ገድበውየኤሌትሪክ ኃይሉን ለታንዛኒያ ለመሸጥ ፕሮጀክት ወጥነውነበር። የገንዘብ አቅማቸውን ለማጐልበት ከሩዋንዳና ከቡሩንዲ በተጨማሪ ታንዛኒያንናዩጋንዳን አስተባብረው (አባል አድርገው)የካጌራ ሸለቆ የልማት ድርጅት የሚባል አቋቋመውነበር። ነገር ግን በመካከል አካባቢው በጦርነት ስለተመሰቃቀለ ፕሮጀክቱ በውጥን ቀርቷል።

አውሮፓ፡

የዳኒዩብ ወንዝ (Danube River)ተፋሰስ ሀንጋሪን፣ ዩጐዝላቪያን፣ ሮማንያን፣ ኦስትርያን፣ አልባኒያን፣ ፖላንድን፣ ጣሊያንን፣ ስዊትዘርላንድን፣ ቡልጋሪያን፣ ስሎቫኪያን፣ ጀርመንን፣ ቼኮዝለቫኪያን፣ ራሽያን (የድሮውን ሶቪዬት ኅብረት)ያካተተ ነው። እነዚህ ሀገሮች ሁሉ በተፋሰሱ አያያዝና አጠቃቀም ላይ ተፈራርመው ወንዙን በጋራ ይጠቀሙበታል።

የራይን ወንዝ (Rhine River) ደግሞ ቤልጅዬምን፣ ኔዘርላንድን፣ ኦስትሪያን፣ ፍራንስን፣ ስዊትዘርላንድን፣ የሚያስተሳስር ስለሆነ በዚህ ወንዝ አያያዝና አጠቃቀም ላይ እነዚህ ሀገሮች የጋራ ስምምነት ተፈራርመዋል። ሰሜን አሜሪካ፡

ኮሎራዶና ሪዮ-ግራንድ (Colorado and Rio Grande)አሜሪካንና ሜክሲኮን ስለሚያስተሳስር ሁለቱ**ሀገሮች የስምምነት ውል ተፈራርመዋል።**

ኮሎምቢያና ታላላቆቹ ሀይቆች (Columbia and the Great Lakes) ካናዳና አሜሪካ በጋራ**ስለሚከቀማቸው ስምምነት ተፈራርመዋል።**

ደቡብ አሜሪካ፡ ፕሌት ወንዝ (Plate or La Plata)የሚባለው ብራዚልን፣ አርጀንቲናን፣ ፓራጉዋይን፣ ኡራጉዋይን፣ ቦሊቪያንያስተሳስራል። ስለሆነ ምእነዚህ ሀገሮች በዚህ ወንዝ ውሀ አጠቃቀም ላይ የውል ስምምነት ተፈራርመዋል። አማዞን ወንዝ (Amazon River)ፔሩን፣ ኢኳዶርን፣ ኮሎምቢያን እና ብራዚልን የሚያስተሳስር፣ በዓለምከታወቁት ታላላቅ ወንዞች አንዱ ነው። የአማዞን ተፋሰስ ሀገሮች (በጀግራፊያዊ አቀማመጣቸውየተነሳ)ከሚፈልጉትበላይ ከዓመት እስከ ዓመት ዝናምያገኛሉ። ስለሆነ ምየመስኖ ውሀ አያስፈልጋቸውም። የገንዘቡን አቅምካገኙት ከአማዞን ገባር ወንዞች ለኃይል ማመንጫየሚሆኑ ግድቦች ሊገድቡ ይችላሉ። ስለዚህ በአማዞን ተፋሰስ ውስጥ ከላይ እስከታች ውሀ እንደልብ ስለሚገኝ የውሀ ክፍፍል ውል አልተፈራረሙም። በአማዞን ተፋሰስ ውስጥ ያለውችግር የድንግል ጫካዎች አጠባበቅና አያያዝ ጉዳይ ነው።

የላይኛው ዐባይ ተፋሰስ ሀገሮች አቅምና የትብብር ተስፋ

የላይኛው ዐባይ ተፋሰስ ሀገሮች በሙሉ አቅመቢሶች ስለሆኑ ከግብጽ ጋር (በኢኮኖሚ፣ በወታደራዊ ኃይል፣ በተማረና በሰለጠነ የሰውኃይል)በእኩልነት ሊሰለፉ የማይችሉ፣ ለግብጽ ዓይን የማይሞሉ ደካሞች ናቸው። ዩጋንዳ?ኬንያ? ታንዛኒያ?ኤርትራ?ሩዋንዳ?ቡሩንዲ?ኮንጐ?ኢትዮጵያ?ከነዚህ ሀገሮች መካከል ግብጽን የመመዘን አቅም ያለውሀገር የትኛውነው?መልሱ ግልጽ ይመስለኛል። የትኛቸውም ሚዛን የሚደፉ አይደሉም። ስልጣን ለመጨበጥ ሲሉ ለዘመናት እርስ በርሳቸው (በጐሳ፣ በዘውግ፣ በምን? -----) ሲጨፋጨፉና ሲገላባበጡ፣ በኢኮኖሚ ግምባታ፣ በወታደራዊ ድርጅትና በሰለጠነ የሰውኃይል ወደኋላ የቀሩ፣ አንዳንዶቹም ከወደቁበት ለመነሳት ያልቻሉ፣ ገና በመንፈራፈር ላይ ያሉ ናቸው። በዚሁ የስልጣን አያያዝና ተቃዋሚቡድኖችን በማስጠጋት የተነሳ እስካሁን ድረስሩዋንዳ ከኮንጐ ጋር፣ ኮንጐ ከዩጋንዳ ጋር፣ ዩጋንዳ ከሱዳንና ከሩዋንዳ ጋር ከመናቆር ያልተቆጠቡ ናቸው። ስለዚህአንድ ጠንካራ ግምባር ፈጥረውግብጽ ለአዲስ ድርድር እንድትሰለፍ አስገዳጅ ሁኔታ የሚፈጥሩ አይደሉም። ከዚህም በተጨማሪ ዐባይን በተመለከተ የሁሉም የተፋሰሱ ሀገሮች ችግር፣ አንድ ወጥ ያልሆነና እኩል ክብደት

የሌለውስለሆነ፣ የግብጽን እብሪት ለማርገብ እስካሁን ድረስ አንድ ህብረት ወይም ግምባር አልፈጠሩም። ቢፈጥሩም በችግሮቻቸው መለያየትና በመካከላቸው በየጊዜው በሚፈጠረው ፖለቲካዊ ፍትጊያ የተነሳ የሚፈጥሩት ህብረትና ግምባር ጠንካራ ይሆናል የሚል እምነት የለም። የዐባይን ውሀ አጠቃቀም በተመለከተ፣ ችግራቸውና ፍላጐታቸውየ ተለያየ መሆኑን ለማየት እንድንችል ባጭር ባጭሩ እንደሚከተለው አቅርቤዋለሁ።

1.ኮንጐ፡ አብዛኞቹ ወንዞቿ ወደራሷ ክልል የሚፈስሱ ናቸው። የገንዘብ አቅሙካላቸውየፈለጉትን የኃይል ማመንጨ ግድብ በፈለጉት መጠን መገንባት ይችላሉ። ሞቡቱ ሴሴሴኮ “ኢንጋ”የተባለውን ትልቅ ግድብ በኮንጐ ወንዝ ላይ ሲሰሩ፣ (ወንዙም ግድቡም ከኮንጐ ድምበር ውስጥ ስለሆኑ) ከየትኛውም ሀገር ጋር አላጋጨቸውም። እንዲያውም ኮንጐ ብዙ ኃይል ሊያመነጭ የሚችል የውሀ ኃይል ስላላት፣ በ1989 ከግብጽ ጋር ተነጋግራ (ተሻርካ) ለምስራቅ አፍሪካ ሀገሮች፣ ለሱዳን፣ ለግብጽ፣ ለቱርክና ለደቡብ አውሮፓ ሀገሮች የውሀ ኃይል ለመሸጥ አስባ ነበር። ይህንንም ሀሳብ ግብጽ ትደግፈውስለነበር ኮንጐና ግብጽ የቅርብ ወዳጆች እንጂ በዐባይ የተነሳ የሚፎካከሩ አይደሉም።

2.ዩጋንዳ፡ ነጭ ዐባይ ከሚወጣበት ከቪክቶሪያ ሀይቅ ጫፍ፣ ጂንጃ (Jinja) ከሚባለው ቦታ ላይ ከሚገኘውኦውን (Owen Falls) ፏፏቴ ላይ ኦውን የሚባል (Owen Dam) ግድብ ገድባ በቂ የኤሌትሪክ ኃይል ታገኛለች። እንዲያውም ከራሷ አልፋ ተርፋ የኤሌትሪክ ኃይል ለኬንያ ትሸጣለች። ዩጋንዳ ይህን ግድብ (ኦውን ግድብ) በመገደቧ ከግብጽ ተቃውሞ አልተሰነዘረባትም። እንዲያውም ከግብጽ ድጋፍ ታገኛለች። በ1947 ዓ.ም ቅኝገዢዎች በነበሩት እንግሊዞች አስተናባሪነት፣ ዩጋንዳዊያን የኦውንን ግድብ በአንድ ሜትር ከፍ ቢያደርጉ፣ ግብጽ ለዩጋንዳ አንድ ሚሊዮን ስተርሊንግ ፓውንድ (£1,000,000) እንደምትከፍል ተስማምታለች። ክፍያውም ያንዴብቻ ሳይሆን ቀጣይነት እንደሚኖረው ተዋውለዋል። ግብጽ ይህን ውል የተዋዋለችበት ምክንያት፣ በሱዳንና በግብጽ በረሃ በትነት የሚባክነውን ውሀ ለመቀነስ፣ ማለትምየቪክቶሪያን ሀይቅ እንደ ውሀ ማጠራቀሚያ ገንዳ አርጋ ለመጠቀም ስለፈለገች ነው። የዩጋንዳ ምድር አብዛኛውከዓመት እስከ ዓመት በቂ የዝናም መጠን የሚያገኝ ስለሆነ ዩጋንዳዎች የዐባይን ውሀ ለመስኖ ስራ አይጠቀሙበትም፣ አይፈልጉትም። ስለዚህ ከዐባይ የሚያጡት ጥቅም የለም። በዚህም ምክንያት ዩጋንዳዊያን ዐባይን በተመለከተ (ከግብጽና ከሱዳን መገላገያ ለማግኘት ያህል አንዳንዴ ከሚያንገራግሩ በስተቀር) ብዙውን ጊዜ ገለልተኞች ናቸው።

3.ኬንያ፡ ከኬንያ ምእራባዊ ከፍተኛ ቦታዎች (Western Highlands) ተነስተው ወደ ቪክቶሪያ ሀይቅ የሚገቡ አጭር ወንዞች አሉ። እነዚህ ወንዞች የረባ የኤሌትሪክ ኃይል ሊያመነጩ የሚችሉ አይደሉም። በነዚህ ወንዞች ምክንያትም ኬንያዊያን ቀረብን የሚሉት ጥቅም የለም። ይሁን እንጂ የቪክቶሪያ ሀይቅ እሩቡ (1/4th) ያህል በኬንያ ክልል/ድምበር ውስጥ ነውና፣ ከቪክቶሪያ ሀይቅ ውሀ ጠልፈን ለመስኖ መጠቀም እንፈልጋለን ብለውሱዳንንና ግብጽን፣ ዩጋንዳንም ጭምር ማስፈራራት ይችላሉ። ዩጋንዳ የምትፈራበት ምክንያት የውሀ ኃይል የምታመነጭበት ግድብ ውሀው የቪክቶሪያ ሀይቅ ስለሆነ፣ የቪክቶሪያ ሀይቅ ሲቀንስ የግድቡ ውሀ ስለሚቀንስባት ነው። ያም ሆነ ይህ እስካሁን እንደታየው ኬንያዊያን በሽምግልና ከሚሰለፉ በስተቀር የዐባይ ውሀ አጠቃቀምእምብዛም ደንታ አይሰጣቸውም።

4.ሩዋንዳና ቡሩንዲ፡ ከሩዋንዳና ከቡሩንዲ ተራራማ ቦታዎች ተነስተው ወደቪክቶሪያ ሀይቅ የሚገቡ ወንዞች አሉ። ወደቪክቶሪያ ሀይቅ ከሚገቡት ወንዞች መካከል ትልቁ ከሩዋንዳ ከፍተኛ ቦታዎች የሚነሳው ካጌራ (Kagera River) የሚባለው ወንዝ ነው። ሩዋንዳና ቡሩንዲ ካመት እስከመት በቂ ዝናም የሚያገኙ ሀገሮች ስለሆኑ የካጌራንና የሌሎቹንም ወንዞች ለመስኖ የመጠቀም ፍላጐት የላቸውም። ይሁን እንጂ ኃይል ለማመንጨት የካጌራን ወንዝ ለመገደብ የተጠና ጥናት

አላቸው። ገንዘቡ ተገኝቶ የካጌራ ወንዝ ለኃይል ማመንጫቢገደብም ሱዳንንና ግብጽን ስጋት ላይ የሚጥል አይደለም። ምክንያቱም፣ ሀ)የኃይል ማመንጫ ግድብ ስለሆነ ወደቪክቶሪያ ሀይቅ የሚገባውን የውሀ መጠን አይለውጠውም፣ ለ)የኃይል ማመንጫው ግድብ በዝናማማውና በደጋማው አካባቢ ስለሆነ (ወደ ሱዳንና ወደግብጽ ሲደርስ)በትነት መልክ የሚባክነውን ውሀ ይቆጥባል። ሩዋንዳና ቡሩንዲም በዐባይ ውሀ ክፍፍል ላይ ከመነታረክ ይልቅ፣ የካጌራን ወንዝ ለመጠቀም ከሌሎች አጐራባች ሀገሮች ጋር በጣምራ መስራት ይሻላል በሚል ሩዋንዳ፣ ታንዛኒያ፣ ቡሩንዲና ዩጋንዳ በአባልነት የሚገኙበት የካጌራ ሸለቆ ድርጅት (Kagera Basin Organization)የተሰኘ ድርጅት አቋቁመው የድርጅቱ አባል ሀገሮች የጋራ ተጠቃሚየ ሚሆኑበትን ብልሀት በማፈላለግ ላይ ናቸው። ስለዚህ የግብጽን እብሪት ለመግታት ከኢትዮጵያና ከሌሎቹ የዐባይ ተፋሰስ ሀገሮች ጋር ህብረት ለመፍጠር የሚገፋፋቸው ችግር የለም።

5.ታንዛኒያ፡ አብዛኛው 2/3 ያህል)የቪክቶሪያ ሀይቅ በታንዛኒያ ክልል ውስጥ ነው። ታንዛኒያ (የጀርመን ቅኝ ግዛት በነበረችበት ጊዜ)በቅኝ ገዢዋቿ አማካይነት የቪክቶሪያን ሀይቅ ውሀ ጠልፋ በቦይ (canal)ወደ መሀል ታንዛኒያ በመውሰድ የመስኖ እርሻ ለማስፋፋት አቅዳ ነበር። ግብጽም ያንን የድሮ ቅኝ ገዢዎች ጅምር ስለምታውቅ፣ በንቃት በዓይነ ቁራኛ የምትከታተለው (ከኢትዮጵያ ቀጥላ)ታንዛኒያን ነው። ያንን የቅኝ ገዢዎች ውጥን እገፋበታለሁ ካለች፣ የቪክቶሪያን ሀይቅ ውሀ፣ ብሎም ወደ ዐባይ የሚገባውን ውሀ በጣም የሚቀንስ/የሚያዛባ ስለሚሆን፣ የግብጽን ብቻሳይሆን የነጭ ዐባይን ተፋሰስ ሀገሮች ሁሉ ቀልብ የሚስብ ይሆናል። እስካሁን ግን የግብጽን ትዕቢትና ለትብብር አለመዘጋጀት እያስተዋለች ግብጽን ከምትተቸ በስተቀር፣ ግብጽን ስጋት ላይ የሚጥል ፕሮጀክት አልወጠነችም። የጥንቱን ውጥኗንም አልቀሰቀሰችም።

6.የቪክቶሪያ ገበቴ ሀገሮች ተሰባስበው የቪክቶሪያ ገበቴ ቡድን (Lake Victoria Basin Group)የተሰኘ ድርጅት አቋቁመዋል። የተቋቋመው ቡድን አትኩሮቱ በሀይቁ አጠቃቀምና አጠባበቅ ላይ እንጂ፣ ከሱዳንና ከግብጽ ጋርበቀጥታ የሚያነካካ አይደለም። አብዛኛውን ጊዜ ቡድኑ የሚያተኩረውበቪክቶሪያ ሀይቅ ላይ በሚንሳፈፈው ቅጠል/አረም (water hyacinth)፣ በሀይቁ ብክለት (pollution)፣ በሀይቁ ላይ ስለሚካሄደው የአሳማጥመድ ጉዳይና በሀይቁ የመጓጓዣ ጉዳይ ላይ ነው።

ባጭሩ ለማጠቃለል ያህል የምስራቅ አፍሪካ (የዐባይ ተፋሰስ)ሀገሮች በግብጽና በሱዳን የውሀ ድርሻ ላይ ህብረት/ግምባር የሚያስፈጥር ጥብቅ ችግር የለባቸውም ማለት ይቻላል። ፊታቸውን ወደ ሶቪየት ኅብረት ያዞሩትንየግብጹን ገማል አብደል ናስርንና የሱዳኑን ጀኔራል አቡድን ቂም ለመወጣት ብለው፣ እንግሊዞች (ከ 1959 ዓ.ም እስከ 1961 ዓ.ም ድረስ)የምስራቅ አፍሪካ የዐባይ ተፋሰስ ሀገሮች ግምባር (ኅብረት)እንዲፈጥሩ ለማስተባበር ሞክረው ነበር፣ ግን አልተሳካላቸውም። ከእንግሊዞቹ ጅምር በመነሳት የዐባይ ተፋሰስ ሀገሮች ያለባቸውን ትንሽ የመቆጨት አዝማሚያ በመጠቀም ግምባር እንዲፈጥሩ በማባባቱ፣ በመቀስቀሱና በመጐትጐቱ በኩል መታገል የነበረባት ኢትዮጵያ ነበረች። አቅም (የኢኮኖሚም ሆነ የተማረና የሰለጠነ ሰው)የላትምና፣ በአቅመቢስነቷም የተነሳ ተደማጭነት የላትምና አላደረገቺውም። ኢትዮጵያ የማስተባበር አቅምእንደሌላትም ግብጾች ጠንቅቀው የሚያውቁ ይመስለኛል።

ቀደምብየ እንደጠቀስኩት እነዚህ የምስራቅ አፍሪካ/የዐባይ ተፋሰስ ሀገሮች፣ ሀ)ለግብጽ ዓይን የማይሞሉ (በኢኮኖሚ፣ በፖለቲካ፣ በጦር ኃይል)ደካሞች ናቸው። የዐባይን ችግር በሰላማዊ መልክ በድርድር ካልፈታሁ፣ ያለኔተሳትፎ የራሳቸውን እርምጃ ይወስዳሉ የሚባሉ አይደሉም። ለ)አብዛኞቻቸው የዐባይ ወንዝ ውሀ ቀጥተኛ በሆነ መልኩ ስለማይነካቸውአይቆረቁራቸውም። ከግብጽና ከሱዳን ጋር የሚያፋጥጥ ጉዳት አልደረሰባቸውም። በግብጽ በኩልም ሲታይ፣ እነዚህ ሁሉ ሀገሮች ተደማምረው ለግብጽ ከሚደርሰው የዐባይ ውሀ ከ5%እስከ 14%ብቻ ነው

አስተዋጽኦ የሚያደርጉት። ስለዚህ ግብጽ ከምስራቅ አፍሪካ (የዐባይ ተፋሰስ) ሀገሮች የምታገኘው የውሀ ድርሻ ከፍ እንዲልላት፣ ወዳጅነት እየፈጠረች (ለምሳሌ፣ የዩጋንዳዎችን ግድብ ከፍታ በመጨመር፣ የአልበርትን ሀይቅ በማስገደብ፣ ወደ ሱድረግረግ የሚሄደውን የነጭ ዐባይ ውሀ እንደ ጆንገሌይ ቦይ በመሳሰሉት) ከነጭ ዐባይ ተጨማሪ ውሀ ለማግኘት ከምትጥር በስተቀር፣ በቀንደኛ ባለጋራነት የምትሰለፍበት ጉዳይ የላትም።

ለግብጽ ያለ ናይል መኖር ዕርምነው

ናይል በተፋሰሰ አገሮቹ ብቻ ሳይሆን በአጎራባች ሰሜን አፈሪካና በመካከለኛው ምስራቅ አገሮች ሕልውና ላይ ወሳኝ ደርሻ አለው። ግበጽና ሱዳን ደገሞ ሕልውናቸው የተሳሰረውከናይል ጋር ነው። በተለይ ለግብጽ ያለ ናይል መኖር አይታሰብም። ይህን በማስመልከት የብሪታናያ ጠቅላይ ሚኒስቴር የነበሩት ዊንስተን ቸርችል በአንድ ወቅት ሲናገሩ ናይል ልክ እንደ አንድ ግዙፍ የዘንባባ ዛፍ ነው። ግንዱ ያለው ግብጽና ሱዳን ነው። ሰሮቹ ከተነቀሉ ዛፉ ይደርቃል፣ የሚል ነበር። ቸርችል ምንም እንኳን በቀጥታ ኢትዮጵያን ባይጠቅሱም የግብጽና የሱዳን ህልውና የተመሰረተውበጥቁርና በነጭአባይ መሆኑን አልደበቁም።

አንዋር ሳዳትም የግብጽ ህልውናን ከናይልና ከአፍሪካዊነት ጋር አስተሳስረውየገለጹበት ሁኔታ ነበር። ታሪክ እንደሚያስረዳው ሳዳት እናታቸው ጥቁር ነበሩ። እናም እራሳቸውን ከግብጻዊነት ይልቅ ከሌሎች አፍሪካዊ ሃገሮች ጋር አስተሳስረውያዩ ነበር። በአንድ ወቅት ከጋዜጠኛ ሙሳ ሳብሪ ጋር ባደረጉት ውይይት እኛ ያለናይልና ያለ አፍሪካ መኖር አነችልምበማለት ገልጸውለታል። ይህ ጽንስ ሃሳብ በመላውግብጻውያን ንቃተ ህሌና ለዘመናት ተቀምጦ ያለ ነው። ስለሆነ ምበራስጌ ሀገራት የሚካሄድ ፕሮጀክት የግብጽንና የሱዳንን ህልውና የሚያናጋ አድርገውነው የሚመለከቱት።

ለአብነት ያህል የሚከተለውን መጥቀስ ይቻላል፣ እ.ኤ.አ. 1989 ሀይድሮሎጂስቲክ ወይንም የውሃ ባለሙያዎች ወደ ኢትዮጵያ መጥተውበአባይ ላይ ግድቦች የሚገነቡባቸውን ስፍራዎች የመነሻ ሃሳብ አቀረቡ። የግብጽ ውጭጉዳይ ሚኒስቴር ባለስልጣናትም፣ በወቅቱ በግብጽ የኢትዮጵያ አምባሳደርን በማስጠራት እስከ ማስፈራራት መድረስ ብቻ ሳይሆን ወዲያውየጦር መርከብ በማንቀሳቀስ ልዩ ሞቺ ጦር ሃይል ወደ ኢትዮጵያ አስጠግታ ነበር። እንዲህ ውጥረቱ ባየለበት ጊዜ የኢትዮጵያ መሪ የነበሩት ፕሬዘዳንት መንግስቱ ከተለያዩ ዓለማቀፍ ድርጅቶች ግድቦችን ለማስገንባት የሚያስችል ጥቂት ገንዘብና ደጋፍ አግኝተውነበር። ግብጽ ግን ሱዳንን ጭምር ተጠቅማ ውጊያ ለመክፈት ወታደራዊ ስልት ነድፋ ነበር።

የግብጽ የጨካ ስልጥን ጦር

ግብጽ አርባ በመቶ የሚሆነውግዛቷ ምንም ጨካ የሌለውና ዲንጋያማ ነው። በመደበኛነት በጨካውጊያ የሰለጠነ ተዋጊ አየር ወለድ ብርጌድ ጦር ግን አላት። የሚዲል ኢሰት ኒውስ ዘጋቢ አዴል ዳርዊሽ ባንድ ወቅት እንደዘገበው፣ ይህ ጦር ኢትዮጵያን ጨምሮ ጨካ ካላቸው ከናይል ተፋሰስ አገሮች መልካ ምድራዊ አኗኗርና ሌሎች የተፈጥሮ ሁኔታጋር ተጣጥሞ የሰለጠነ ነው። በተለይ እ.ኤ.አ. አፕሪል 1994 በሩዋንዳ ተሰለፎ የዘመቻ አዞ ጭራ ወታደራዊ ተልኮ እንዲሳካ አድርጓል። አያሌ ወታደራዊ ባለሙያዎች፣ የሀገር መሪዎች፣ የውሃና የግጭት ተመራማሪዎች፣ ፖለቲከኞች፣ ጋዜጠኞች፣ ጸሃፍትና የተለያዩ ምሁራን በሚገባ መደራጀቱን የገለጹለት የግብጽ የጨካ ተዋጊ ጦር፣ የኢትዮጵያ መሪዎችንም ያሳሰበበት ሀኔታምነበርና። ፕሪዝዳንት መንግስቱ ሃይለማረያምየስፓርታ፣ ተራራ ኩማንዶና አየር ወለድ ክፍለጦራቸንን ትኩረት ሰጥተውእንዲጠናከር አድርገውት ነበር።

ከበረሀውአግራሞት በስተጀርባ

በአፍሪካ ውስጥ በከፈተኛ ሁኔታ ውሃን እየተጠቀመያለውየግብርናውክፍለ ኢኮኖሚነው። የተለያዩ ጥናቶች

እንደሚያመለክቱት፣ ክፍለ ኢኮኖሚው 88በመቶ ውሃ ይጠቀማል። በዚህም መሰረት ማናቸውንም በቶን የሚገመትእህል ለማምረት አንድ ሺ ቶን ውሃ ያስፈልጋል። ከዚህ አንጻር የመካከለኛውምስራቅና የሰሜን አፍሪካ ሃገሮች በአመት የሚያስገቡትን የእህል ምርት ለማምረት የሚያስፈልገውየውሃ መጠንና የናይል አመታዊ የውሃ ፍሰሽ መጠንእኩል ሆኖ ተገኝቷል። ይሁንና አባይን ጨምሮ ትላልቅ ወንዞችና ሌሎች የውሃ አካላት ያሏት ኢትዮጵያ በድርቅና በርሃብ እየተጠቃች፣ አባይ ግን ወደ ሲና በርሃ ልብ ውስጥ ገብቶ ፍራፍሬና አትክልት በማልማት ተወዳዳሬ አልተገኜለትም። ለአብነት ያህል ለመጥቀስ በግብጽ የሚገኘውየአፍሪካ ትልቁ እርሻ የአል.ሆዳ እርሻ ያለ አባይ ህልውና የለውም። በዚህ እርሻ የሚመረተው ምርት ከግብጽ አልፎ እንግሊዝን ጨምሮ ለበርካታ አውሮፓ ሀገሮች ሱፐርማርኬቶች በማቅረብ ታዋቂነትን አትርፏል። ቢቢሲ በጥር 25ቀን 97ዓ.ም.ባሰራጨው ዜና ግብጽ ቋጥኝ የበዛባትና በርሃማናት አባይን ተጠቅማግን የበርሃ ገነት ሆናለች ብሏል። በሌላ ንጽጽር የቀረበ አንድ ዘገባ ደግሞ፣ የግብጽ መንግስት በቅርቡ በ.ቶሽካ ፕሮጀክት፡ የቶሽካ ሸለቆን ተጠቅሞ የግብጽ በርሃን ለማልማት የሞት ሽረት ትግልእያደረገ ይገኛል፡ የአባይ እናት ኢትዮጵያ ግን ለምግብ ልመና ተጋልጣለች።

ግብጽ እና ሱዳን -እሳት ጨሪ የውሃ ስምምነቶች

ሱዳን

ሱዳን በአፍሪካ በቆዳ ስፋቷ በ3ኛ ደረጃ ላይ ትገኛለች። ። የቆዳ ስፋቷ 1, 861, 484 ሰኩዌር ኪሎ ሜትር ነው። በውሐ 129.810 ሰኩ ኪ.ሜ.ትሸፍናለች፡ የባህር በሯ 853 ኪሎ ሜትር ይረዝማል። እንደ ቆዳ ስፋቷ ሁሉ፣ 15 ክልላዊ አስተዳድሮች አሏት። በአቀማምጧ ጠፍጣፋና ዝርግ አካባቢ ይበዛባታል። ከደቡብ እራቅ ብሎ በሰሜን ምስራቅና ምዕራብ ተራራዎች አሉባት። ሰሜኑ ደግሞ በርሃ ያመዘነበት ነው። ጊዜን ጠብቆ በሚከሰት ድርቅና ጎርፍ የምትጠቃ አገር ናት። ከሚያዚያ እስከ ህዳር ተለዋዋጭ የሆነ የዝናብ ሁኔታ አላት። በመካከለኛው ሱዳን ካርቱም አካባቢ ያለው አመታዊ የዝናብ መጠን ከ200 ሚሊ ሜትር አይበልጥም። የተሻለ ዝናም አለው የሚባለው

ደቡባዊ የሀገሪቱ ክፍል አማካይ አመታዊ ዝናብ መጠኑ 700 ሚሊሜትር ነው። እ.ኤ.አ. በ2005 የሚታረሰውመሪት 6 ነጥብ 78 በመቶ ነበር። እንዲሁም ቋሚ አዝዕርት 0 ነጥብ 17 በመቶ፣ ሌሎች 93 ነጥብ 05 በመቶ ይሸፍኑ ነበር። በጣም ትንሽ የዝናብ መጠንን ጨምሬ ሙሉ በሙሉ ማለት ይቻላል በመስኖ የምትተማመን ሀገር ናት። ከህዝቧ 80 በመቶ በእርሻ፣ 7 በመቶ በኢንዱስትሪና 13 በመቶ በአገልግሎት መስጫዎች ተሰማርቷል። ናይልን ተጠቅማ ጥጥ፣ ለውዝ፣ ማሽላ፣ ሰሊጥ፣ ሽንኮር አገዳ ታመርታለች። የቀንድ ከብትም ታረባለች። እ.ኤ.አ.2005 አጠቃላይ አመታዊ ገቢዋ 22 ነጥብ 75 ቢሊየን የአሜሪካን ዶላር ነበር።

ኢትዮጵያ

ኢትዮጵያ 1,104,300 ስኩዌር ኪ.ሜ.ቆዳ ስፋት አላት። በመሬት ቆዳ ስፋት ከአፍሪካ በ10ኛ ደረጃ ላይ ትገኛለች። የመሬት ቆዳ ስፋቷ 119.683 ሰኩዌር ኪ.ሜ.ነው። ወንዞች፣ ምንጮችና፣ ግድቦችን ጨምሮ የውሃ አካሏ 18.587 ሰኩዌር ከ.ሜ.ሲሆን፣ የባህር በር የላትም። የቆዳ ስፋቷ በአባይ፣ ተከዜ፣ ባሮ አኮቦ፣ አሞ፣ ጊቤ ስምጥ ሸለቆ፣ ገናሌ፣ ዳዋ ወይብ፣ ዋቢ ሸበሌ፣ ተከዜ ፣ መረብ፣ ኦጋዴን፣ አይሻና ደናክል ተፋሰሶች የተከፋፈለ ነው።

በመሬት ጅቡቲ 349 ኪ.ሜ.ሱማሌያ 1.600 ኪ.ሜ.ኬንያ 861 ኪ.ሜ.ሱዳን 769ና ደቡብ ሱዳን 837 ኪ.ሜ ኤርትራ 912 ኪ.ሜ. ያዋስኗታል። ከፍትኛ ስፍራዋ እራስ ዳሽን ሲሆን፣ ከባህር ወለል በላይ 4.620 ሜትር ከፍታ አለው። ዝቅተኛው የደናክል ሸለቆ ከባህር ወለል በታች 125 ሜትር ዝቅ ይላል። አገሪቱ በታላቁ ስምጥ ሸለቆ የሚፈጠር የመሪት መንቀጥቀጥ የእሳተ ገሞራ ፍንዳታና ተከታታይ ድርቅ የተፈጥሮ አድጋ የምትጠቃባቸው ናቸው። እንዲሁም የደን መጨፍጨፍ፣ ከመጠን በላይ የግጦሽ መሬት፣ የአፈር መሸርሸር፣ በረሃማነት እየሰፋ መምጣት፣ የውሃ እጥረትና የውሃ ማኔጅመንት ችግሮች አሉባት። አማካኝ የዝናብ ማግኘት መጠኗ፣ በሰሜን ምስራቅ 100 ሚሊ ሜትር፣ በደቡብ ምዕራብ 2.800 ሚሊ ሜትር የደርሳል። አገሪቱ 10 ስርዓተ-ምህዳሮች አሏት። እነርሱም የውርጭና ውርጭቀመስ፣ የግራር ከርቤ፣ የእርጥባማ ተራሮች ደን፣ ተራራማው የሳር መሬት፣ የደረቅ ተራራዎች ደንና ቅጠላቸው የማይረግፍ ቁጥቋጦ፣ የአባሎና አኩማ፣ የቆላማው ክፍል ቅጠል አርጋፊ ደን፣ የበሳማውና ከፊል በሳማው፣ እረግረጋማ መሬቶችና የውሃ አካላት ስርዓተ ምህዳሮች ናቸው። ኢትዮጵያ ከአለምየብዝሀ ሕይወት ማዕከላት አንዷ ናት። እጅግ ብዙ የዕጽዋት ዝርያ ከሚገኙባቸው

የአፍሪካ አገሮች መካከል ከፍተኛ ደረጃ ላይ ትገኛለች። በዚህ መሰረት 7.000 ያህል የጽዕጽዋት ዝርያዎች አሏት። በሀገሪቱ ከሚገኙ 240 የአጥቢ እንስሳት ዝርያዎች 22ቱ ከ 845 የአዋፍ ዝርያዎች 24ቱ፣ በኢትዮጵያ ብቻ የሚገኙ ናቸው። የህም በአዋፍ ዝርያ በኩል ከአፍሪካ ቀዳሚ አድርጓታል። እንድሁም በኢትዮጵያ ብቻ የሚገኙ 33 የተራማጅ እንስሳትና 6 ተሳቢ ዝርያዎች ባለቤት ነች። ከአመታዊ አጠቃላይ ምርቷ ለእርሻ 46 ነጥብ 7 በመቶ፣ ኢንዱስትሪ 12 ነጥብ 9 በመቶና አገልግሎት መስጫ 40 በመቶ በላይ ይሸፍናል።

የሃይድሮ ኤሌክትሪክ ሃይል አቅም

የናይል ሃይድሮ.ኤሌክትሪክ ሃይል አቅም ከፍተኛ ነው። ነገር ግን ከግብጽ በስተቀር የተፋሰስ አገሮች የማምረት አቅም አናሳ ነው። ከ 4 አስርተ አመታት በፊት የኢትዮጵያ መንግስት እንደገለጸው የናይል አጠቃላይ የሃይድሮ.ኤሌክትሪክ ሐይል አቅም በግምት 8.000 ሜጋዋት ይሆናል። እ.ኤ.አ .1997 በነበረው መረጃ መሰረት ግብጽ 803 ኢትዮጵያ ግን 21 ኪሎዋት በስአት አመታዊ ፍጆታ ነበራቸው። ልዩነቱን ልብ ይሏል። በናይል ተፋሰስ ከተገነቡ ግድቦች ግብጽን የሚወዳደር የለም። ተከታይዋ ሱዳን ናት። ብትሰራበት ኢትዮጵያ በጥቁር አባይ 172 ቢሊየን ኪሎዋት የማመንጨት አቅም አለው። ይህም ማለት ግብጽና ሱዳን በጋራ ካላቸው የሃይድሮ ኤሌክትሪክ ሃይል 2

እጥፍ ሊበልጥ ይችላል። ኢትዮጵያ በሀይድሮ ኤሌክትሪክ ሃይል ላይ የተጠናከረ ስራ ብትሰራ ከእራሷ አልፋ ግብጽና ሱዳንን ጨምሮ የአረብ ልሳነ ምድርን ተጠቃሚ ማድረግ ትችላለች።

የውሃ ግጭት ፍንጮች

የተፋሰስ ሃገሮች የህዝብ ቁጥር ከመጠን በላይ እያሻቀበ ነው። እንደመስኩ ምሁራን ዘገባም የምግብና የእርሻ ፍላጎት በፍጥነት እየጨመረ ነው። የውሃ እጥረቱም እንዲሁ፣ ለዚህ ቅድሚያ ፍጥጫውስጥ የሚገቡት ግብጽ፣ ሱዳንና ኢትዮጵያ ናቸው። ፍጥጫውን እያባባሰች ያለችው ደግሞ ግብጽ ነች። ለዚህ ተጠቃሽ የሚሆነው፣ ወጭው በኩየት የተሸፈነውና 1ነጥብ 62 ቢሊየን የአሜሪካን ዶላር የወጣበት የሰላምቦይ ተብሎ የተሰየመው ግድብ ጥቅምት 16ቀን 1990 ዓ.ም የተመረቀ ዕለት በወቅቱ የሃገሪቷ ፕሪዝዳንት የነበሩት ሆስኒ ሙባረክ ባደረጉት ንግግር፣ የዚህ ቦይ መሰረት የናይል ወንዝን በስዊዝ ካናል በኩል ወደ እስራኤልና ሲናይ በርሃ ለማድረስ ነው ማለታቸው፡ በተለይ የላይኛው ተፋሰስ ሀገራት ከናይል ትንሽ እንኳን ቢቆነጥሩ ከእስራኤል ጋር መጣላት እንዲችሉ የተጠነሰሰ ሴራ ተደርጎ

ተወስዷል። እንደ ማሳያም የእስራኤል የውያ መሐንዲሶች ለቴክኒክ እርዳታ ወደ ኢትዮጵያ በመጡበት ወቅት ግብጽ በእስራኤል ላይ ቡራከረዩ ማለቷ ይሆናል፡፡ የናይልን ውሃ በአስዋን ግድብ ላይ አሳልፈው ውሃውን ወደሚናፍቀው በርሃ በማስገባት እስራኤልን ተጠቃሚ በማድረግ ምናልባት የውሃ ግጭት ቢነሳ እስራኤልን ከጎኗ አሰልፋ በአመንጭዎቹ አገሮች ላይ ለመዝመት የሚደረግ ዝግጅት ነው። 88 ቢሊየን ዶላር እየፈሰሰበት ያለው ይህ የሴራግንብ የቶሽካ ሸለቆ ትልቁ የእሳት መጫሪያ እንደሆነ ታምኖበታል። ሌላው ቀርቶ አንቱ የተባሉትና እጅግ በጣም ተደማጩ የአል.አህራም ፖለቲካዊና እስትራቴጃዊ ጥናቶች ማዕከል ተመራማሪ የሆኑት ማግዳይ ሶብሃይ የቶሽካ ሸለቆን ባጭር ቃላት ከእውነታው የራቀ ሲሉ ተችተውታል።

ይህ በዚህ እንዳለ ኢትዮጵያ እ.ኤ.አ .በ 1980 እስከ 1990 አባይን ገድባ ለመስኖ ልማት ለማዋል ከአፍሪካልማት ባንክ ብድር ለማግኘት ያደረገችዎን ጥረት ግብጽ የሸንጥ ውጋት በመሆን እየተከታተለች ስታመክንባት ቆይታለች። ሌሎች የነጭ አባይ ተፋሰስ አገሮች፣ ማለትምኬንያ፣ ታንዛንያ፣ ብሩንዲ፣ ዩጋንዳ፡ የነጭአባይ መነሻን የቪክቶሪያ ሐይቅን ለመጠቀም የትብብር ስምምነት ላይ ደርሰዋል። ሩዋንዳ ኮንጎ ዲሞክራቲክ ሪፑብሊክ

ደግሞ የሃይድሮ ኤሌክትሪክ ፕሮጀክቶችን ለማስፋፋት እየተንቀሳቀሱ ነው ኢትዮጵያ ግን ውልፍት እንዳትል በግብጽ በሻጥር ተከባለች።

በውሃ ጦርነት ዙሪያ ያሉ አስተምህሮዎች

በርካታ ምሁራን በውሃ ዙሪያ ባካሄዱት ጥናት የደረሱበት ማጠቃለያ አለ። ይህም በሃብት እጥረትና በግጭት መካከል አወንታዊ ግንኙነት መኖሩን ነው። በተለይ ውሃ በጣም ጠቃሚየተፈጥሮ ሀብት መሆኑን አምነ ውበታል። ስለዚህ መንግስታት ውሃን የመቆጣጠር ፍላጎታቸውከጊዜ ወደጊዜ እየጨመረ መጥቷል። ለዚህ ደግሞየህዝብ ቁጥር መጨመር፣ በእርሻላይ ጥገኛ መሆን ይጠቀሳሉ። እንደምሁራኑ አባባል ናይል ተፋሰስ ስር ያሉና በኢኮኖሚያቸውያልበለጸጉ ታዳጊ አገሮች ይካተታሉ። በዚህ የተነሳ በተለይ የናይል ተፋሰስ አገሮች ግጭት ውስጥ ሊገቡ ይችላሉ። የሚለውን አስተሳስብ የሚያራምዱ አሉ። ከሀሳቡ አራማጆች መካከል በግንባር ቀደምትነት የሚጠቀሱት ግብጻዊዩ ቡትሮስ ቡትሮስ ጋሊ ናቸው። ጋሊ በተደጋጋሚ ለዓለም.አቀፍ ግጭቶች መንስኤው ውሃ ነው ሲሉ ተደምጠዋል። የአፍሪካ የውሃ እጥረት ወሳኝ የጸጥታ ችግር ፈጣሪ እንደሚሆን በርካታ ጥናቶች ያመለክታሉ። እ.ኤ.አ.አውገሰት 1979 በቀድሞው የሶቪት ፕሬዚዳንት በሚካኤል ጎርባቾቭ የሚመራው ዓለማቀፉ አረንጓዴ መስቀል የምርምር ቡድን በአፍሪካ የውሃ ሃብት አጠቃቅምን አስመልክቶ ባቀረበው ጥናት ለግጭት ይዳርጋሉ ያላቸውን 16ነጥቦች አስቀምጧል። በተለይም ግበጽ ካላት መሬት ለእርሻ የሚውለው 2ነጥብ 6በመቶ ብቻ ነው። ከአካባቢ አገሮች ዝቅተኛዋ እሷነች፡ ለአብነት ያህል አልጀርያ 3በመቶ ቱኒዚያ 10በመቶና ሞሮኮ 20በመቶ ለእርሻ የሚውልመሬት አላቸው። ግብጽ እንዳለ በማይቆጠረውዝናብ ሳይሆን የምትተማመነ ውበአባይ ውሃ ነው።

እንደ ጥናቶች በ20ኛው ክፍለ ዘመን 2ኛ አጋማሽ በአባይ ተፋሰስ የተለያዩ ግጭቶች ተከስተዋል። ከእነሱም ውስጥ እ.ኤ.አ.ከ 1950እስከ 1959ከ 1960እስከ 1969ከ 1970እስከ 1979እና በ 1990የነበሩት ተጠቃሽ ናቸው። ድንበር ተሻጋሪ ወንዞችን የሚጋሩ አገሮች ለውሃ ግጭቶች መፈጠር ግንባር ቀደም ተጠቃሽ ናቸው። በዚህ እረገድ የናይል ተፋሰስ ሀገሮች ቀዳሚውን ስፍራ ይይዛሉ። ከእነሱም ግብጽ ናይልን በጉልበት የመቆጣጠር አዝማሚያ ማሳየት ከጀመረች ሰንበትበት ብላለች። ይህነን ጠቆሚየሚሆነውም የጦር ሃይሏን ማግዘፏነው።

በዓለማችን ፈጣንና ለውጊያ የተዘጋጀ ጦር አጠቃላይ ሁኔታ ሲቃኝ፣ ግብጽ ከሃያላኖቹ ጀርመን፣ ፈረንሳይ፣ ጃፓን፣ እንግሊዝ፣ ጣሊያንና ዩክሬን የበለጠ ጦር አላት። ሌላውቀርቶ ጃፓን ያላት 239.000ፈጣን ጦርና ዩናይትድ ኪንግደም ያላት ለውጊያ የተዘጋጀ 187.970ሠራዊት ቢደመር የግብጽ ፈጣን ጦር ሠራዊት ቁጥርን አይስተካከሉትም፡፡ ግብጽ 1.109.000ጦር ያላት ሲሆን 3.680እጅግ በጣም ዘመናዊ ታንክ 680እጅግ በጣም ዘመናዊ ተዋጊ አውሮፕላን (ጀት)አላት። በዚህ መሰረት ከስሀራ በታች ካሉ አገራት አንዱም አይወዳደራትም። ከአውሮፓም ቢሆን ከእራሽያ በቀር በውጊያ አውሮፕላን ብዛት ግብጽን የሚበልጥ አንድምአገር የለም።

በአፍሪካ የውሃ ጦርነት የመነሳት እድል

ወንዞች የተፈጥሮ ፀጋ ናቸው። ወንዞቹ በሚፈስሱበት አቅጣጫየሚገኙ ሀገሮች ሁሉ ሊጠቀሙባቸው ይገባል። አጠቃቀሙግን ካገር አገር መለያየቱ የማይቀር ነው። ምክንያቱምየተለያየ የውሀ አቅርቦት አማራጭ (ዝናም፣ ሀይቅ፣ ምንጭ፣ የከርሰ ምድር ውሀ፣ ሌላ ወንዝ)ያለውሀገር አለ። እንደ ግብጽ ያለውደግሞ ከወንዝ ውሀ በስተቀር ሌላ አማራጭ የሌለው (primary user)ሀገር አለ። በእድገት ደረጃውከፍተኝነት ምክንያት የውሀ ፍላጐቱና ፍጆታው ከፍተኛ የሚሆንበት ሀገር አለ። ኋላ-ቀርና ብዙ ውሀ እማይጠቀም (እማያስፈልገው)ሀገር አለ። ኋላ-ቀር የነበረውሀገር በኢኮኖሚእያደገ ሲሄድ የውሀ ፍላጐቱና ፍጆታውም እየጨመረ ስለሚሄድ የውሀ ድርሻው/ኮታው በየጊዜው መታየት ይኖርበታል። ባጭሩ ለማስቀመጥ ያህል የውሀ ፍላጐትና ፍጆታ ከጊዜ ጊዜ ይለዋወጣል። የውሀ ክፍፍልም እንደዚሁ በየጊዜውእየተጠና መስተካከል አለበት። አንድ ጊዜ የተመደበ የውሀ ኮታ ለዘላለም ቋሚሁኖ መኖር የለበትም። ግብጽ ይህንን ሁሉ አላጣቺውም፣ ግን ልትቀበለው፣ ሊዋጥላት አልቻለም። ይህንን (የወንዝን ውሀ)

የመሰለ የተፈጥሮ ሀብት በድርድር መከፋፈል እንደሚገባ የዓለም ሕዝብ ያምንበታል። የተባበሩት መንግሥታት ያጸደቃቸው የድምበር አቋራጭ ወንዞች አጠቃቀም ደምቦችና ሕግጋት አሉ። በጋራ ወንዞቻቸው አጠቃቀም ላይ የተለያዩ ሀገሮች (በፍሪካ ውስጥም ካፍሪካ ውጭም) ስምምነት 7 እየተፈራረሙ ሲጠቀሙባቸው እናያለን። በዓለማችን 1 ነጥብ 3 ቢሊየን ሰዎች ለውሃ እጥረት ተጋልጠዋል። ይህ አሃዝ እ.ኤ.አ. በ 2025 ብዛቱ ወደ 2 ነጥብ 7 ቢሊየን ይደርሳል ተብሎ ተገምቷል። እንዲሁም 2 ነጥብ 5 ቢሊየን ሰዎች ተገቢ ሳኒቴሽን በሌለው ሁኔታ ውስጥ ይኖሉ። በእየአመቱ 5 ሚሊየን ያህል ሰዎች ከውሃ ጋር በተያያዙ በሽታዎች ህይወታቸው ያልፋል። በአፍሪካም 275 ሚሊየን ወይም 40 በመቶ የሚሆኑ ነዋሪዎች ንጹህ ውሃ አያገኙም። በምግብ እህል ምርትና በሃይድሮ ኤሌክትሪክ ሃይል ፍላጎት መጨመር ፍጥጫ ውስጥ የሚገቡት የናይል ተፋሰስ አገሮች ናቸው። በተለይ ግብጽ፣ ሱዳንና ኢትዮጵያ የፍጥጫው ተዋናይ የሆናሉ። በዚህ ፍጥጫ ግብጽ ወታደራዊ ሀይል ልትጠቀምትችላለች ተብሎይገመታል። ኔዘርላንዳዊው የውሃ እንጅነርና የዩኒስኮ ባለሙያ ፕሮፌሰር ዛን ሉዊጂንዲክ ባንድ ወቅት ኢትዮጵያ ከአባይ ገባር ወንዞች በአንዱ ላይ እንኳ ግድብ ለመስራት ከወሰነች ወዲያውኑ ከግብጽ ጋር ጦርነት መግባቷ አይቀሬ ነው ብለዋል። ግብጽ ከዋናውየናይል ውሃ አመንጭና ባለቤት ከኢትዮጵያ ጋር ይቅርና ከታንዛንያና ከኬንያ ጋር በተለያየ ጊዜ ግጭት ውስጥ ገብታለች። ግብጽ ሌላ አገር በናይል ላይ ምንም አይነት ፕሮጀክት እንዳይሰራ በሙያ፣ በገንዘብ እርዳታ፣ እንዳይገኝ ከማከላከል ጀምሮ በጦር ሀይል እስከ ማስፈራራትና መዛት ደርሳለች። የሚዛትባት ለውጊያ በከፍተኛ ደረጃ ዝግጅት የሚደረግባት ደግሞ ኢትዮጵያ ናት።

የግብጽ አትኩሮት በኢትዮጵያ ላይ

ከሁሉም የተፋሰሱ ሀገሮች የበለጠ ግብጽ እምታተኩረው ኢትዮጵያ ላይ ነው። የኢትዮጵያ ጉዳይ ከላይ ከዘረዘርኳቸው የምስራቅና የመካከለኛውአፍሪካ (የዐባይ ተፋሰስ) ሀገሮች በጣምየተለየ ነው። ኢትዮጵያ እንደሌሎቹ የዐባይ (ላይኛው) ተፋሰስ ሀገሮች ሁሉ አቅመ ደካማ ብትሆንም፣ ለግብጽና ለሱዳን የምታበረክተውየውሀ መጠን በጣምብዙ ነው። ጠቅላላ ስፋት 32%9 (ወይም 365,449 km2) የሚሆነ ው ለግብጽ ውሀ የሚያቀብል ነው። ከዚህ ሰፊ መሬት (365,449 km2) ላይ የሚዘንመውየዝናምውሀ ሁሉ በጥቃቅን ገባር ወንዞች አማካይነት ወደ ጥቁርዐባይ፣ ወደ አኮቦ-ባሮና ወደ ተከዜ ተቀላቅሎ በመጨረሻ ወደዋናውዐባይ 10 የሚገባ ነው። ሦስቱ ትልልቅ ተፋሰሶችከነ ስፋታቸው እንደሚከተለው ቀርበዋል።

Note readers: arre kindly advised to refer - John Waterbury (2002) "TheNile Basin: National Determinants of Collective Action; Yale University Press, London"

Nile River: is the longest river in the world and runs through Rwanda, Ethiopia, Tanzania, Uganda, South Sudan, Sudan and Egypt, but instead of the being the great uniter, the Nile has become the great divider because of a dispute that is causing serious tension between two of those countries. Since the twelveth

century AD, Christian Ethiopian kings have warned Muslim Egyptian sultans of their power to divert waters of the BlueNile, often in response to religious conflicts. But these were hypothetical threats. Ethiopia: Water Resources And Use’

Ethiopia has 12 river basins with an annual runoff volume of 122 billionm3 of water and an estimated 2.6 - 6.5 billion m3 of ground water potential. This corresponds to an average of 1,575 m3 of physically available water per-person per year, a relatively large volume.

DOWNSTREAM EGYPT - Gift of the Nile? NILE - Gift for Egypt?

The opening sentence of Egypt's recent constitution describes the countryas the river Nile's gift to Egyptians. It is a grand claim, but one that helps explain Egypt's indignation at the ongoing construction of a blockage on the Nile, thousands of miles upstream. The founding myths of many ancient civilizations center on famous rivers — the Euphrates and the Tigris (Babylon), the Yangtze (China) and the Ganges (India), to name a few. However, not many are as inextricably dependent on a single river for their livelihood as Egypt is on the Nile. Egypt’s history is defined as much by the flooding and drying beds of the Nile as by the pyramids. For a country described by Herodotus as “the gift of the Nile,” control over themajestic river has been an existential Egyptian preoccupation since antiquity.

The world’s longest river is made up of a maze of tributaries. Nineteenth-century explorers went on a wild goose chase to locate the mysterious river’s murky origin before tracing it to Lake Tana in Ethiopia and the Great Lakes in Central Africa. Two of the river’s main tributaries are the Blue Nile and the White Nile. The Blue Nile, accounting for upwards of 80percent of the Nile waters, originates in northern Ethiopia. It makes a steep descent from Ethiopian highlands — carrying brown silt — before itjoins the White Nile in Khartoum, Sudan’s capital, augmented by several large rivers from southwestern Ethiopia. The White Nile originates in Burundi and flows northward from the Great Lakes region, crossing Tanzania, Uganda, and South Sudan.

Egypt and the vitality of the Nile river flow: Literal quotation on to therelated to life issue of the Nile River:

Who he controls Ethiopia, (no power on Earth ever controlled Ethiopia)can control source of the Nile.

Who he controls the source of the Nile river, can control the whole life inEgypt.

who he controls the whole life in Egypt, can also control the Suez canalMaritime passage.

Who he controls the Suez canal passage, thus, can control the partialeconomy of the entire world.

The Nile has been essential for civilization in Egypt and Sudan. Without that water, there would have been no food, no people, no state, and no monuments. As Herodutus famously wrote in the 5th century B.C.E., “Egypt is the gift of the Nile.” For millennia peoples have travelled along the banks of the Nile and its tributaries. Scores of ethnic groups in Egypt, Ethiopia, and Sudan share architecture and engineering, ideas and traditions of religion and political organization, languages and alphabets, food and agricultural practices. In 3000 B.C.E., when the first Egyptian dynasty unified the lower and upper parts of the Nile River, there were nostates in Eastern or Central Africa to challenge Egypt’s access to Nile waters. The Nile was a mysterious god: sometimes beneficent, sometimesvengeful. Floods between June and September, the months of peak flow,

could wipe out entire villages, drowning thousands of people. Floods alsobrought the brown silt that nourished the delta, one of the world's most productive agricultural regions, feeding not only Egypt but many of its neighbors.

Nile's central importance to life in Egypt:

As captured in A Hymn to the Nile, recorded in Papyrus Sallier II:

Hail to thee, O Nile, that issues from the earth and comes to keep Egyptalive! …

He that waters the meadows which He created …He that makes to drink the desert …

He who makes barley and brings emmer into being …He who brings grass into being for the cattle …

He who makes every beloved tree to grow …

Oh, Nile, verdant art thou, who makes man and cattle to live.

The Nile's seasonal flooding is a central theme in Egyptian history. The river flow follows regular patterns, increasing between May 17 and July 6, peaking in September, and then receding until the next year. But the rivervolume is very unpredictable, as documented by nilometers (multi-storied structures built in the river to measure water heights). Successive empiresof Pharaohs, Greeks, Romans, Christian Copts, and Muslims celebrated the rising waters of the Nile and dreaded floods or droughts. Five millenniaof Nile history show how years with high water have produced ample food,population growth, and magnificent monuments, as during the first five dynasties from 3050 B.C.E. to 2480 B.C.E. Periods with low water have brought famine and disorder. The Book of Genesis describes seven years of famine that historians associate with the drought of 1740 B.C.E. From the time of the Pharaohs until 1800 C.E., Egypt's population rose and fell between 2 to 5 million, due to food availability and epidemics. The irrigation projects of the 19th century Ottoman ruler Mohammad Ali allowed year-around cultivation, causing population growth from 4 to 10 million. Since the opening of the Aswan High Dam in 1971, Egypt's population has increased from about 30 to 83 million.

The Sources of the Nile: Despite the extraordinary importance of the Nile to people downstream, the origin of the great river was a mystery until the middle twentieth century. Herodotus speculated that the Nile arose between the peaks of Crophi and Mophi, south of the first cataract. In 140

C.E. Ptolemy suggested the source was the Mountains of the Moon, in what are now called the Ruwenzori Mountains in Uganda. The 11th century Arab geographer al-Bakri postulated West African origins, confusing the Niger River, which empties into the Atlantic Ocean, with theNile River. In 1770 the Scottish explorer James Bruce claimed his discovery of the source in Ethiopia, while in 1862 John Hanning Speke thought he found it in Lake Victoria and the equatorial lakes. The river's limited navigability only increased its mystery. The Blue Nile River descends 4501 feet in 560 miles from Lake Tana in the Ethiopian highlands through a deep gorge with crocodiles, hippopotamuses, and bandits to the Sudan border and the savannah. Despite the efforts of scores of intrepid adventurers, the Blue Nile in Ethiopia was not

successfully navigated until 1968 by a team of British and Ethiopian soldiers and civilians equipped by the Royal Military College of Science. Further south up the White Nile in the lakes and rivers of Burundi, Rwanda, Kenya, Tanzania, and Uganda, the Egyptian cultural influence is less pronounced, due to the Sudd, a gigantic and impassable swamp which absorbs waters from the equatorial lake tributaries. The Nile River historian Robert O. Collins reports that “no one passed through this primordial bog” until 1841. Not until the 20th century did it become clear that the Nile is part of a vast river system with dozens of tributaries, streams, and lakes, stretching from the Mediterranean Sea to the remote mountains of Burundi, in tropical central Africa, and to the highlands of Ethiopia, in the Horn of Africa. Spanning more than 4,200 miles, it is the longest river in the world. It has also become clear that the volume of water which flows through the Nile is relatively small—a mere two percentin volume of the Amazon’s and fifteen percent of the Mississippi—and mostly (86%) from Ethiopia.

Who owns the River Nile?

Egypt and Sudan are utterly dependent on the waters of the Nile River.Over the past century both of these desert countries have built several dams and reservoirs, hoping to limit the ravages of droughts and floods which have so defined their histories.

The Nile’s origin being outside its borders did not prevent Egypt from getting the lion’s share of its waters. The claim for exclusive ownership ofthe Nile waters is premised on a 1929 treaty between Egypt and Britain’sEast African colonies, Burundi, Kenya, Rwanda, Tanzania and Uganda.

These colonies gained independence from Britain in the 1960s. The treaty awarded 57 percent of the waters to Egypt while also requiring other nations to clear with Cairo before launching any major water project on the river. Another treaty, signed in 1959 between Egypt and Sudan, raisedEgypt’s share to 66 percent. The two signatories, divvying up virtually all of the Nile waters, did not even consult Ethiopia, the main source of the river. After the 1959 accord, both Egypt and Sudan built mega-dams to exploit the water for irrigation. For years, upstream Nile Basin countries —Burundi, Ethiopia, Kenya, Rwanda, Tanzania and Uganda — nursed misgivings about the colonial-era accord, in which they had no say. However, they grudgingly acquiesced mainly because, unlike Egypt and Sudan, whose arid lands are watered by the lone river, they are not wholly reliant on the Nile. But, finding the challenge of feeding their growing populations on rain-fed subsistence farming unbearable, upstream countries initiated negotiations in 1999 to find an equitable andreasonable way to share the Nile waters. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream countries, was rejected outright by both Egypt and Sudan. Touted as “anAfrican solution for an African problem,” the agreement calls for the creation of a commission to oversee development projects on the Nile. It needed ratification by the legislatures of each of the signatory countries. But its implementation is in limbo until another Nile Basin country — for

example, the Democratic Republic of the Congo, which is now sitting onthe fence signs it. The Nile Basin Initiative (NBI) is composed of ten countries: Egypt, Sudan, Ethiopia, Uganda, Kenya, Tanzania, Burundi, Rwanda, Democratic Republic of Congo (DRC), as well as Eritrea at observer status.

Ethiopia, Egypt, and the Historical Struggle for the Nile's Waters' Ethiopia and Egypt have had a long relationship of both harmony and discord, the latter the result of religious issues and access to Nile water, among other factors. Ethiopia's first well documented government was inAksum, a city-state that controlled a large empire from the Ethiopian highlands across the Red Sea to Yemen. From 100 until 800 C.E. Aksumites participated in Mediterranean and Indian Ocean trade. The cultural relationship between Egypt and Ethiopia was institutionalized when the Aksumite King Ezana converted to Christianity in 330 C.E. For 16 centuries (until 1959) the Egyptian bishop of the Ethiopian Orthodox

Church was appointed by the Egyptian patriarch in Alexandria, often underthe influence of the Egyptian government.

Ethiopia is one of 10- or so on to become 11, with the newly reemerged state of South Sudan "Nile Basin Riparian countries". With over eighty fivemillion population is gifted with diversified and eye-catching cultural, historical and natural heritages. One of the natural resources is water. Thenation is home of 12 international potential rivers. The land dispenses andcotributes a lion share of water to the neighbouring countries, the countryis said to have over 128.3 billion cubic meter under surface water. Thus, Ethiopia is called "water tower of Africa". Awash, Wabe-Shebelle, Omo, Baro, Mereb, tekeze, Abbay, Ganalle some among others are potential rivers those originate from Ethiopian highlands and discharge into Djibouti, Somalia, Kenya, Sudan, and Egypt. For the peoples of Egypt, Sudan and Somalia, life would be impossible without Nile rivers. They carry millions of tons of rich soil to Egypt, the Sudan and Somalia every year. Somalia depends heavily on the Gannaallee (Juba) and Wabee (Shaballe) rivers, which come from Ethiopia. Ethiopia supplies almost 100 per-cent of the fresh water for Somalia and Djibouti. At present the Ethiopian government depends heavily on Awash in local Oromos known as "Hawas" water as a source of electric power for its industries and irrigation water to grow sugar cane, cotton and fruits. The Wonji and Matahara sugar estates are good examples. There is a great potential in all these rivers for the production of electric power and for irrigation.

Qoqaa, Fincha, Malkaa Waakkenna, Gibee-Tiqqaa, Gibe II, dams are examples of where hydro-electric power is already being produced or in the process of being harnessed. Among the lakes are Tanna, Abbaya, Langanno and Shalla. Many of these lakes possess a great variety of fish and birds on their islands and shores. The river Wabe Shebelle flows to the Indian Ocean crossing Somalia. These rivers have been flowing to thestated destinations carrying millions tons of fertile soil and waters every year without benefiting to its own people since creation. The people of Ethiopia had been deprived of benefiting from the country's water resources. As a result, they were exposed to repeated shocking drought

and famine which had claimed hundreds of thousands of lives. Ethiopian tributaries contribute about 84 % of the water that flows through Sudan and reaches the Aswan Dam in Egypt. Earlier treaties of 1929 and 1959 between Egypt and the Sudan allocated three-quarters of the water to Egypt and one-quarter of it to Sudan. A lot has been said, patriotic poemshave been composed, beutiful songs has sung in its honor, accords has have been signed, major-wars were fought and boundaries were demarcated, about the River-Abbay and the Blue-Nile as a whole. And on the other side, "Egypt is a gift of the Nile", people like to say in a country that worshiped the river as a God in ancient Egypt. "If Egypt is a gift of the Nile, then the "Nile is a gift of Ethiopia", Ethiopians back-fire sympathyregarding the "tikur-Abay", which is meaning for "Blue-Nile". Most of the water meandering down the lower reaches of the Nile, the world's longest river, comes from the Ethiopian highlands. "In 1805, by the time Mohammed Ali began to rule Egypt, many threats had been made by the Ethiopian emperors to stop the water reaching Egypt, most were just empty threats, but some were valid, everytime there was a new ruler in Egypt, they would threaten him and blackmail him so that, he paid gold asa gift to the Ethiopian emperor. Historically, the most important relationships Israel built in the African continent were with Uganda, Ethiopia and Kenya. And it's no coincidence that all of them are upstream countries where the Nile originates. They did build relationships with othercountries too. But the River-Nile was the major factor behind the formation of Israeli foreign policy and strategy", according to Egyptian historians. These fears have made Egypt suspicious about reported plans to divert the Nile to it's former enemy, possibly Israel. And they have led it into a tense stand-off with another country, possibly Ethiopia, an upstream country with the potential to dramatically affect the amount of water reaching Egypt. The battle for control of the Nile is at the heart of geo-political rivalries with Israel and Ethiopia on the Nile remains focal, asEgyptian-Israeli affairs expert.

In 1959, Egypt & Sudan met and agreed on how to share the waters of the Nile as it flowed through their largely arid lands on the way to the Mediterranean. It was a renewal of river rights they had enjoyed since theBritish signed an agreement with the two countries in 1929. Ethiopia, which provides an estimated 85 percent of the flow into Lake Nasser fromthe Abay and other watersheds to the south, was not invited. Emperor Haile Selassie wrote a letter of protest, to no avail. After the 1979 Camp David agreement returning the Sinai Peninsula to Egypt, with the announcement of late president Anwar El-Sadat the launch of the Salaam Canal which would divert Nile waters to the Peninsula by siphoning the waters beneath the Suez Canal. Lt Colonel Mengistu Haile Mariam, then ruler of Ethiopia, protested to the United Nations, to no avail. Tekezie andthe Tana-Beles projects in Amhara and Tigrai regions, the issue of Nile politics has resurfaced once again. It is obvious that Ethiopia is located in or the proximity of a region where water is becoming a scarce resource and will likely be the source of future conflicts or wars. The pressure on ordemand for this resource is increasing as a consequence of increasing

population and unfavourable climatic changes in the region. Despite facingpersistent and devastating famines, the Nile issue is getting onto a vital component of the national interest of Ethiopia. A study on a river basin development made in Ethiopia in the early 1960s with the help of the Americans, speaks of no less than one hundred sites naturally suited for tapping hydro-electric power and huge irrigation potential that allow multiple harvesting or crops in a given year in the Blue-Nile basin alone.

Add the eastern river basins- the Wabe-Shebelle and Ghenalle. Of course, Ethiopia has not used or underused it's water resources including the waters of the Blue-Nile for various reasons, it is ironical to witness Ethiopia which is also called "Afica's water tower" suffering from periodic drought related famines, droughts or failing rains are not the sole causes of famine in Ethiopia, where in control of the fertile or productive lands of the country as perhaps on a land-selling spree a regime also should take it's significant share of blames. Ethiopia has many big rivers, about elevenlakes, nine saline lakes, four crater lakes, and over twelve major swampy areas. Almost all of the rivers flow from highlands of Ethiopia to the lowlands neighboring countries. Eg. about eighteen Ethiopian rivers flow to the Sudan and cross the border at six different places, three of them being big perenial rivers from southern Ethiopia while the other three are seasonal rivers of the north. Also some four rivers from the Arssi-Bale highlands flow toward Somalia in different directions, three of them merging at the Ethio-Somali border to form the Wabi-Shebelle as known as Juba-River in Somalia. The Omo-River flows from the southwest highlands of Kaffa region to Kenya and forms "Lake Turkana", the biggest desert lake in the world. The Awash-River ends up in lake Abbe at the Ethio-Djibouti border. Unlike what is traditionally claimed, major Ethiopianrivers do not originate from the semi-arid semien highlands of Abyssinya or from the desert lowlands of Afar or Ogadien. Instead, Ethiopian primarywater sources are formed from the streamsand lakes of the countrys rainforest regions. Rivers that arise from the northern semi-arid highlandsof the Amhara and Tigrai regions do flow westwards in the direction of theSudan. Those rivers arise from the west side of the rift valley in Arssi, Bale, Chercher and Gara-Mulatta mountains flow towards Somalia. Those originating from Tulama (in central region of Shoa) and from the rift valleyarea flows towards Djibouti, whereas numerous others originating from the tropical rainforest highlands of southwestern Ethiopia flow in three directions to the Blue-Nile, to the Black-Nile and to the Omo-River. The locally known, Abay-wonz a main tributary of the Blue-Nile originates fromLake-Tana, as lakes are reservoirs, and they discharge an amount of the river proportional to intakes coming from inflowing streams, rivers and precipitations.

Since decade the Nile is at the centre of geo-political rivalry within the region, under the existing accord, Egypt has veto power over developmentprojects over the Nile, but upstream countries say they should not be bound by unfair British colonial era pacts. Since the Nile is an internationalcross-border river, no country can justify sole ownership or an equitable use of it's waters and efforts aimed at having in place agreements for

equitable and fair use of this resource are of crucial importance. An arrangement which is known to be based on the British colonial interests favouring especially Egypt & the Sudan is unjust and unfair and is not legally binding, the parties much related to the Nile can not be bound by it. Egypt and the Sudan can exploit Ethiopia's current weak position or absence to retain or secure the former colonial treaties of 1929 and 1959 on the use of the Nile waters, for example the first treaty on Nile-sharing was signed b/n Great Britain and Egypt in 1929 granted the Sudan 4 bln cubic metres of water while 48 bln cubic metres of water granted to Egyptalone, the second water-sharing treaty of 1959, granted the Sudan 18.5 bln cubic metres of water while 55.5 bln cubic metres of water given to Egypt alone, meaning that one-fourth for Sudan and three-fourth for Egypt excluding headwater countries. As stated above, these treaties are known to favour only Egypt and has remained contentious, for this reason,Egypt's direct and indirect hand, through other fellow Arab states to distabilise Ethiopia is known to be connected to the Nile issue. Ethiopia is not only the source of most of the waters of the Nile but almost all of the fertile and rich-soil making particularly significant contributions to Egyptian agriculture.

The Nile has played a significant role in the emergence and growth of theancient Egyptian civilization and is the lifeline of the present day Egypt.

The late president Anwar El-Sadat quoted as saying in 1980, "If Ethiopia takes any action to block our right to the Nile waters, there will be no alternative for us but to use force, tampering with the rights of a nation towater is tampering with it's life and a decision to go to war on this score isindisputable in the international community". Various expeditions were launched to find the source of the Nile, thus a lot is at stake in the Nile issue. The Egyptians use of the Nile reached at 95% while the Sudan's useof the Nile reached at 77%, believed the Blue-Nile contributes approximately 80 to 85% of the Nile river discharge and 96% of the transported sediment carried by the Nile originates in Ethiopia with 59% of the water from the Blue-Nile, the rest being from Tekeze, Atbara, Sobat, and small tributaries. The erosion and transportation of silt only occurs during the Ethiopian rainy season in the summer, when rainfall is especially high on the Ethiopian plateaus. Egypt maintains it's heavy utilization for various projects, wasting over 20% of the water, (it's more than what all up-stream countries demand to use) due to inefficient dams built in the desert. For Ethiopia, if there is a single war worth sacrificing the blood of it's children, it is the fight to break-open Egypt's century-old blockade of the Nile river. In Ethiopia, it is long held conventional wisdom that Egypt is directly or indirectly behind most domestic, regional and international crisis situation affecting Ethiopia at any given time. Ethiopianempires and regimes have for long pointed-out gross Egyptian interference including among others that Egypt ; Attempts and often has succeeded in blocking or modifying Ethiopian requests and interaction withinternational financial institutions: provides political, diplomatic and operational support to virtually any group organised against the Ethiopia;-holds as a strategic objectives to do what ever it takes to keep Ethiopia

poor, weak and devided;- Egypt greatly resents any sign of Ethiopian influence in the region in Somalia, Djibouti, the Sudan and Yemen;- At it'sheart Egypt, where suspicions about former enemies and tensions with anold-age civilization reveal deepseated fears about water scarcity and losing control of the river. For such a reason, Egypt interferes in Ethiopia'srelations with the Arab world too. Year after year, lacking technical, financial, and most importantly determined leadership, Ethiopian farmers watch as the rainfall washes their fertile soil away and gives it to Egypt, thus there has always been basis for popular resentment and anger towards Egypt for it's unjust use of the Nile. The above riperian as well as the down-stream countries of the Nile need to work-out and accept a fair and just agreement for the equitable and sustainable use of the Nile waters. Egypt, which have been struggling to keep Ethiopia landlocked, it's strategic motive is expressed constantly by its politicians, has been to keep Ethiopia, which is vastly more fertile than Egypt and which controls the headwaters of the Blue-Nile, which provides Egypt and the Sudan withmost of it's waters from posing a strategic threat to Egypt by potentially, cutting-off the flow of Blue-Nile waters & it's tributaries. Destabilising and weakening successive Ethiopian governments has been Egypt's most efficiently exploited strategy to protect it's monopolistic use of the Nile water. Cognizant of the internal contradictions and historical animosities among various Ethiopian constituencies. In 1979 Egyptian President Anwar El-Sadat threatened war on violators of what he saw as his country’s rights to Nile waters. Upriver countries Ethiopia, Kenya, Uganda,Rwanda, Burundi, and Tanzania argue that they too need the water that originates on their lands. Egypt has often supported rebel groups fighting against Ethiopian rulers, this support has been bothdirect and indirect, in the past it armed the Eritrean scessionist movements, with continuous training, sanctuary in the Sudan, even until the EPLF itself making a significan challenge to the Sudanese government, and the Tigrean rebels, backed the Oromo & Somali-insurgents in Ethiopia, and also supported former President Siad Barre's invasion of Ethiopia in the summer of 1977, reportedly there was even a plan to resettle millions of Egyptians in Somalia in order to couter-balance Ethiopia's growing population. Ethiopiahas also alleged that Egypt took sides with Eritrean regime during the 1998 to 2000 border conflict. There is little doubt that Egypt has been using Eritrea to channel it's support for various Ethiopian and Somali insurgents. This pointedly, also, meant that Egypt supported a policy of "constraining the headwaterland or by weakening Ethiopia", by any meansfrom easy access to the Red Sea, which Ethiopia had once been dominated at it's lower reaches, through the ex-Ethiopian Naval Force.

And many believed, this Egyptian strategy has been fruitful given the unfortunate fact that every Ethiopian ruler has relied heavily on violent suppression of dissent, and the implementation of policies that favours one ethnic-group over the other, thus creating favourable domestic conditions for armed insurgency. The revised agreement signed Burundi Ethiopia, Uganda, Tanzania, Kenya, and Rwanda have signed the treaty sofar, to plans allow irrigation and hydro-electric projects to go ahead

without Egypt's consent, the Congo has to sign within a year period in an attempt to end Egypt's historical control over the Nile's water. Ethiopia is the biggest source of the Blue-Nile waters contributing over 85% of it although Egypt and Sudan benefit from more than 90% of the water resource as a hangover from colonial era agreement. As still there is tension among Egypt and the Nile Basin Initiative countries with the NorthAfrican state refusing to sign onto a new agreement made by the other members. It has to be recalled that the four Nile-upstream countries led by Ethiopia, signed in May, 2010 to a new treaty in Entebe, Uganda, seeking a more equitable water-sharing agreement.

Under the original Nile-water sharing-agreement, Egypt is facing water shortages by 2017, is entitled to 55.5 billion cubic meters a year from the Nile's total flow of around 84 billion cubic meters, some 86% of the watersoriginate in Ethiopia. The Ethiopian government had commissioned an independent survey that proved the new Mega-dam would benefit both Egypt and the Sudan by decreasing siltation in their irrigation projects andby reducing water wastage, some scientific overviews have been conducted by the US Department of Interior, Bureau of Reclamation, 1964, Land and water resources of the Blue-Nile Basin; Ethiopia. And recently by a committee endorsed by Egypt itself, in 2008 and 2010, according to these last surveys, Egypt and the Sudan could greatly benefitfrom the Mega-dam's energy production.

Ethiopia denies Egypt an access to examine a new Mega-dam it intends to build on the Nile unless Cairo links a new deal relinquishing it's veto-powers over allocation of the river'swater, said it would not agree to an Egyptian demand to see plans for the proposed dam unless Egypt joined the new Nile-cooperative framework agreement, signed by six-upstream countries which gives this option only signatories countries namely, Burundi, the Congo, Kenya, Rwanda, Tanzania and Uganda whose have banded together to rewrite the 1959 water-sharing treaty that favours Egypt only. Egypt has been locked-up for more than a decade in a dispute with other countries through which the river passes, refusing changes to colonial-era treaties contested by Ethiopia and other upstream nations. After decades of strong population growth, it's to be recalled that Ethiopia has overtaken Egypt as Africa's second most numerous nation. The total population of the upstream countries estimated 270 million against 130 million for the down-stream duo of Egypt, 85 million and the Sudan, 45 million, whose 14 million southern Sudanese will soon be independent State and are being courted by both sides.

In recent years the Ethiopian prime minister have told lawmakers, "Ethiopia has been more willing to go it alone, announces numerous plansto errect water-dams for irrigation and electricity along the Nile", which ithas angered the Egyptians, who demand a lions share of the water since the British colonial era treaties. "Eritrea has been training and deploying the Somali Al-Qaida affiliated Al-Shaabab and others home-grown destructive forces to terrorize our country, but Egypt is the direct force behind these destructive elements in order to dissuade the nation from developing its Nile-waters, and he called on "the Egyptians to realise that

Ethiopia is not their enemy, Ethiopia's plan to build a major-dam on the Nile will also benefit the down stream countries, we want the Egyptian people to realise that we do not want to hurt them" he said. Ethiopia has plans to use it's Nile waters for agricultural projects, says it would be forced to finance the mega-dam from it's own coffers and from the sale of government bonds because Egypt was pressuring donor-countries and international financiers not to fund it's dam projects. Egypt feels such projects would threaten it's water supply, and point-out that they don't benefit from rains like the upstream-countries. The Ethiopian premier has quoted as saying "Egypt will not be able to stop Ethiopia from building Dam or irrigation schemes on the Nile. That is history--and that will not bepart of the solution--Ethiopia is able and willing to use it's own resources to build dams on the Nile, and never seek any kind of permission from anyside. The way forward is to seek a win-win solution through diplomatic efforts, not for Egypt to try and stop the unstoppable". Ethiopia has a hydro-power potential of 45, 000 Megawatts (MW), the second-largest capacity in Africa after the Congo, according to the World Bank. Ethiopia says the new military government in Egypt is moving to build better relations with Ethiopia. In May, 2011, Egypt had sent a 48-members popular public-diplomacy delegation to pave a new approach and smooth it's relations with Ethiopia and other Nile-upstream countries on their long standing dispute over the Nile-waters. A week later, the new Egyptian prime minister, Essam Sharaf arrived in Ethiopia where he held talks with senior Ethiopian government officals to mark a new chapter of cooperationbetween the two countries. His visit was welcomed by Ethiopian authorities as a major step toward in solving their differences over the Nile-water. The two are looking to put past disagreements over the use of the Nile-waters behind them after the Ethiopian premier has recently visited Cairo to discuss the two counties future relations, water was a top subject discussed on the agenda. It was the first to Egypt by the Thiopian premier since a poular uprising toppled the former government of Mohammed Hosni Mubarak in February, 2011. During Hosni Mubarak's time in office, Ethiopia and Egypt had long disputed water-sharing along the Nile. But noted hydrologists fear "Ethiopia is offering Egypt and the Sudan to create a trilateral team of technical experts committee to manage the Nile-water crisis, and review of the dam that is being built inside Ethiopia. This will of course serve more the Egyptians, since the committee would evaluate reviving the centennial dam project and it's effect. It's a critical breakthrough on the issue. But noted hydrologists stillin a fear "a head waterland offering Egypt and the Sudan an olive-branch in their bitter dispute over sharing the waters of the Nile-River, such offer include a possible joint ownership of huge Ethiopian hydro-power projects that Egypt has trying to block" saying that, "how a mindful premier can offer an olive-branch in ownership for countries those have been bitter enemies of the nation since time immemorial because of the Blue-Nile where this dam is going to be constructed? Others claim reservation on such focal issue, saying "be opponents or propponents of the ruling-EPRDFgovernment, now every citizen believes that there are no convincing

reasons not to support such construction of a Mega-dam on the River-Nileat this juncture, which could benefit majority Ethiopians and be a symbol of national pride and patriotism. However, agricultural lands in densely populated areas of the highlands has deteriorated alarmingly and markedly over recent decades. Deforestation and Soil erosion are most problematic in the marginal areas of subsistence agriculture.
The government has made substantial investments in the Hydro-power sector including the building of a number of dams. In a push for development, Ethiopia will build one of Africa's largest hydro-power dams in the Omo River that flows into Lake Turkana and provides 90 per-cent ofits water. For instance, the Fincha Power Station is a hydroelectric power plant of the Omo River in Ethiopia. It has a power generating capacity of 100 MW enough to power over 66,900 homes. The USD 2 billion dollar dam called Gibe III is said to nearly double the East African nation's powercapacity and transform it's southern wilderness into highly productive cultivated farmlands, irrigated by the dam's regulated outflow. According to the Ethiopian government, the dam will develop the region and end a "backward lifestyle" in the area, transforming it's southern wilderness intoa highly productive cultivated farmland, irrigated by the dam's regulated outflow. It says that domestic and foreign investors will grow sugarcane and other cash crops on a large-scale in the south, an area known for its numerous indigenous tribes. Ethiopia's government has determined on a massive dam-building project, which it hopes will generate alternative sources of power and also help to turn the country's economy around. Butthe idea is not without controversy, and critics have said the endeavour will be an environmental disaster. Ethiopia became more determined to push massive development of roads, bridges and dams with the considerable assistance of Chinese loans and expertise. With a series of new hydro-electric dams coming online, Ethiopia wants to become this corner of Africa's hydro-electric power center. China's role in funding Ethiopian dam draws ire' Ethiopia says construction of a dam along the Omo River will create needed electrical power for itself and Kenya, and channel water for food production. Environmentalists worry it could drain a Kenyan desert lake central to people's livelihoods. Nairobi, Keny Kenyanenvironmental activists want the Industrial and Commercial Bank of Chinato hold off on a promise to invest $500 million in Ethiopia's $1.7 billion Gibe III Hydro-electric Dam, which they say threatens Lake Turkana – theworld's largest permanent desert lake, and a crucial source of water for half a million people. The controversial dam is being built on the Omo River in eastern Ethiopia, which supplies the lake in northwestern Kenya with 90 per of its water. Once completed, the dam will affect the livelihoods of some 200,000 in the river valley and 300,000 more near thelake, the activists warn. Friends of Lake Turkana – a Kenyan organization representing indigenous communities in northwestern Kenya whose livelihood depend mainly on the lake – had earlier estimated that that Gibe III could shrink the lake, which straddles the Kenyan-Ethiopian border, by 10 meters (about 30 feet). This could cause an increase in salinity in the lake's water, making it undrinkable for indigenous groups

who live around the lake with their animals. Recently, resource-related conflicts have ignited between the nomadic pastoralist communities, and are expected to increase if the dam is completed. “Lake Turkana is home to large number of some of the most massive Nile crocodiles, hippos, and other large animals, all which would find it hard to survive without the lake,” said Dr. Richard Leakey, a renowned Kenyan conservationist and paleoanthropologist. There are also a wide variety of unique birds and other wildlife all of which would find it hard to survive without the lake or if the water nutrients were to change as drastically as studies have predicated will happen if Gibe III is successfully completed, according to the groups. The lake's survival hangs in the balance as China decides whether to fund the dam project, says Ikal Angelei, founder of Friends of Lake Turkana and the winner of the 2012 Goldman Environment Prize for Africa. “The lake is in the danger of drying unless the Kenyan governmentand international agencies step in to stop the unsustainable development both within and outside Kenya,” said Ms. Angelei at a news conference in Nairobi. “While many would-be financiers have withdrawn, China still holds [to its] promise,” she added. But according to opposition politicians,someone has to note well that the Ethiopian government is not democraticor democratically elected; but the election of EPRDF by 99.6% is not a sign of democracy, undoutedly a one-party rule. In 2010: Egypt
discussed taking military action in cooperation with Sudan against Ethiopiato protect their stake in Nile River, according to internal emails from the
U.S. private-security firm Stratfor. Water wars in the Middle East and North Africa are not uncommon. Then-King Hussein bin Talal of the (normally docile) Jordan said in 1994 when he officially recognized Israelthat “he would not go to war with Israel again except over water.”
On the Grand Ethiopian Renaissance Dam (GERD)’
For many years, all the Nile's water has been divided between the Sudan and Egypt; any other country that dared to touch the Nile was met with stern threats from Egypt and its protectors: first England. then the UnitedStates of America. When Ethiopia sought World Bank (WB) financing for such dam more than 20 years ago, the US leaned on the Bank to say no. The Grand Renaissance Dam project was announced in 2011 by the Ethiopian government, in a unilateral move that is not sitting very well with its upstream neighbors. Egypt and Sudan say Ethiopia is threatening their greatest natural resource. About 1,287 kilometres south of this Egyptian city where the Nile river pours into Egypt, construction has begun on a massive dam being built in Ethiopia that could destabilise Egypt in a way that would make the last year of political upheaval look minuscule, analysts say. If constructed at specifications revealed last year, the Grand Ethiopian Renaissance Dam would result in cuts in electricity, a reduction in agricultural lands and water shortages across major cities in Egypt, new studies say. "In short, it would lead to political, economic and social instability," said Mohamed Nasr El Din Allam, who was Egypt's minister of water and irrigation until early last year. He editeda book-length collection of studies on the dam published last month. "Millions of people would go hungry. There would be water shortages

everywhere. It's huge." Those dire forecasts stem from Ethiopia's decisionlast year to announce an increase in the size of the dam, which is already under construction 40 kilometres from the Sudanese border. Ethiopian officials revealed the depth of the dam would be enlarged to 150 metres from 90m, alongside plans to boost electricity production and use water pooling behind the dam to irrigate more than 500,000 hectares of new agricultural lands. Ethiopia's announcement has created new tensions in water-rights negotiations among the 10 countries that form the Nile Basinand emerged as one of the biggest diplomatic challenges for a growing Egypt. More than any of the other countries along the basin, Egypt and Sudan are dependent on the water from the river because of their lack of secondary water resources and little rainfall. Egypt receives 55 billion cubic metres and Sudan receives 18.5bn cubic metres per year, under a series of agreements that date back to a 1929 treaty drawn up by Britain when it held power over much of North Africa. Those agreements have long irked upstream countries, which they describe as a colonial-era injustice because of treaties' favourable distribution of water to Egypt and Sudan, as well as giving them the right to veto projects that would be "harmful" to their national interests. The Nile Basin Initiative was established in 1999 to establish an equitable agreement among the countries. But divisions emerged from the start, hinging on Egypt's and Sudan's unwillingness to negotiate their share of the water and insistence on retaining veto rights. Ethiopia, Uganda, Tanzania, Rwanda and Kenya signed their own deal, known as the Entebbe Agreement, that said projects could be built as long as they don't "significantly" affect the waterflow. Egypt, which sees the wording as a precursor to cuts of its share, called the agreement a "national security" threat. Ethiopia in particular has struck a defiant stance, with Prime Minister Meles Zenawi saying in a television interview in 2010 that "some people in Egypt have old- fashioned ideas based on the assumption that the Nile water belongs to Egypt and only Egypt. The circumstances have changed and changed forever". Just a month after the uprising in Egypt forced Hosni Mubarak toresign and hand power over to the military, the Nile river tensions escalated to new levels when Ethiopia announced new details of the GrandEthiopian Renaissance Dam. Ethiopian officials said there would be no impact on Egypt, but analysts and officials in Egypt argue the impact would range from bad to devastating. The problems would start with the filling of the 62bn cubic metre reservoir behind the dam, which would immediately reduce the flow of water to Egypt and Sudan. How bad the impact would be depends on the rate they decide to fill it.

Ethiopia officially launched the GERD construction’

Ethiopia, Uganda, Rwanda, Tanzania and Kenya and later Burundi signedthe Entebbe agreement in April 2010, to reverse colonial era treaties seeking equitable water utilization on Nile water. While Cairo denied anyintention of attacking the dam, the country’s Water Resources and Irrigation Minister Mohamed Bahaa el-Din said on Saturday that his country was maintaining its concerns about the construction of the Renaissance Dam in Ethiopia. He did say that officials at the Ethiopia

foreign ministry “assured Egypt and Sudan that in case there was any impact on their water quota to the dam, other projects will be carried out to collect lost water and cover shortages.” It is the latest in the ongoing battle for the world’s largest river’s water, with Egypt and Sudan continuing to remain obstinate in amending any of the colonial treaties that guarantee their countries with a lion’s share of water from the Nile. The International Monetary Fund (IMF) this month called on Ethiopia to slow its construction and planning for the dam, citing economic concerns for the country. Whistleblower site WikiLeaks released documents this month that revealed Egypt and Sudan had been planning to attack an Ethiopian dam project to “protect” their rights over Nile water based on colonial era treaties. In documents revealed by Wikileaks, the Egyptian and Sudanese government appeared ready to develop a launching pad foran attack by Egypt against the dam. Wikileaks has leaked files allegedly from the Texas-based global intelligence company, Stratfor, which quote an anonymous “high-level Egyptian source,” which reported that the Egyptian ambassador to Lebanon said in 2010 that Egypt “would do anything to prevent the secession of South Sudan because of the political implications it will have for Egypt’s access to the Nile.” Ethiopia’s massive dam project has seen much concern from Cairo and Khartoum, who fear the establishment of Africa’s largest dam would affect previous colonial deals on Nile water-sharing. It is to be built some 40 kilometers upstream from Sudan on the Blue Nile. But even before the official announcement ofEthiopia’s prime minister’s passing on August 20, Egyptian officials told Bikyamasr.com that they believed a post-Meles region could bring forth new negotiations and compromise over Nile water. An Egyptian ministry ofwater and irrigation told Bikyamasr.com last month, two weeks before Zenawi was pronounced dead, that with the combination of Egypt’s new President Morsi and the potential of seeing a new leader in Ethiopia, they hoped the tension over Nile River water could be resolved.

Sudanese Launchpad for Egyptian attack on Ethiopian Grand Dam' Egyptian authorities fearful of a monopoly on Nile waters received agreement from Khartoum to build an airbase in Sudan, to launch attacks on Ethiopian damming facilities, claims the anonymous media outlet; Wikileaks. Wikileaks has leaked files allegedly from the Texas-based globalintelligence company, Stratfor, which quote an anonymous "high-level Egyptian source," claiming the Egyptian ambassador to Lebanon said in 2010 his nation would do anything to prevent the secession of South Sudan because of the political implications it will have for Egypt's access to the Nile. The Nile is vital in providing fresh water to the people and agricultural projects of Egypt. Also in the Nile Basin and reliant on its waters are Sudan, Eritrea, Ethiopia, Uganda, the Democratic Republic of Congo, Rwanda, Kenya, Tanzania and Burundi. As Egypt is at the end of the river it is a particularly politically precarious situation. Ethiopia's planned massive hydroelectric damming project has sent shockwaves throughout the region, highlighting the faults in previously-signed treaties on Nile-sharing. The Grand Ethiopian Renaissance Dam will be Africa's largest hydroelectric facility and will be built 40km upstream from Sudan

on the Blue Nile. Ethiopia has denied Egypt's requests to inspect the dam,unless it relinquishes its veto on water allocation. Although, according thesource, Ethiopia has agreed not to use the reservoir waters for irrigation, there are concerns about the extent of water loss due to evaporation fromthe dam's reservoir. According to Wikileaks, a 2010 internal email recordsSudanese president Omar al-Bashir's agreement to host an Egyptian airbase in Kursi in the west of Sudan's Darfur region. This base would be used to launch an Egyptian assault on the Ethiopian dam, if diplomatic efforts fail. The anonymous source cites the "useful case-study" of Egypt's1976 sabotage of an Ethiopia damming project. However, the viability of joint Sudanese-Egyptian military operations have been brought into question in light of their fractious relationship. According to Wikileaks, theStratfor source claimed that "if it comes to a crisis, we will send a jet to bomb the dam and come back in one day, simple as that. Or we can sendour special forces in to block/ sabotage the dam." Although they agree upon the Nile Basin Treaty, the contested Halayed Triangle, in 2010, to Bashir accusing Egypt of occupying Sudanese territory. The immediacy and extent of the Ethiopian threat to Egyptian freshwater access is questionable but its domestic political usefulness for the now ousted Mubarak regime is not. The continued political application of the Ethiopianthreat is, allegedly, now being exerted on the incumbent government by the Muslim Brotherhood. On 26 August Egypt denied allegations that the new government is under pressure to persuade key regional investor, China, to not back such Nile development programmes. The UN estimatesthat by 2050 the world's population will have increased by 3.5 billion, withthe majority of the growth in developing countries where water stress is already in key issue, potentially making access to freshwater more incendiary than access to fossil fuels in the coming decades. Although Egypt was a perennial economic underachiever during the Mubarak regime's years of mismanagement, it has the potential to be a powerhouse. This makes its need to secure future access to resources all the more important and potentially domineering.

Egypt denies deal with Sudan to strike Ethiopian dam'

An Egyptian official has emphatically denied the veracity of allegations that his country had reached an agreement with neighboring Sudan to useits territories as a launchpad for potential attacks on Ethiopian damming facilities over the dispute of Nile water-sharing. Sudan Tribune reported the allegations last month citing a 2010 internal e-mail leaked by the whistle-blowing website Wikileaks, which suggested that Sudan president Omer Al-Bashir had agreed to build an Egyptian airbase in his country's western region of Darfur to be used for assaults on The Grand Ethiopian Renaissance Dam (GERD) should diplomatic efforts fail to resolve the dispute between Egypt and Ethiopia over Nile water-sharing. But Egypt's state minister for military production, Rida Hafiz, on Monday strongly denied the allegations saying they are "totally bare of truth" According to Egypt's state-run news agency MENA, Hafiz added that the report is "designed to disturb Egyptian-Ethiopian relations." Egypt - and Sudan to alesser extent - are involved in a drawn-out conflict with the Nile Basin's

upstream countries over Nile Water rights as the latter, mainly Ethiopia, continue to contest and attempt to alter the shares dictated by colonial- era treaties giving Egypt the lion share in Africa's longest river. The North African country is concerned that Ethiopia's GERD, a massive hydroelectricdam on the Blue Nile, about 40 kilometers from the borders with Sudan, will affect its vital flow of fresh water when completed with a capacity to create a reservoir of 65 billion cubic metres. President Omer Al-Bashir reportedly told his Egyptian counterpart Mohammed Morsi this month thatSudan shares "identical position" with Egypt on the Nile water issue. The dam on Blue Nile may take over a decade to build. Sudan Tribune September 26, 2012

Egypt pushes Ethiopia to scrap Nile dam – UPI'

Egypt increasingly views Ethiopia's plan to build a massive 6,000MW hydroelectric dam on the Nile River as a threat to its national security because it will seriously cut the Arab state's water supplies. Egypt depends on the Nile for virtually all of its water and is mounting a major diplomatic and economic campaign to scupper the plan. "Even direct military action by Egypt cannot be ruled out," observed the U.S. global security consultancy Stratfor. Both countries have undergone major political upheavals recently, which have added to the tension in a long- running battle for control of the world's longest river which rises in the Ethiopian highlands. Egypt's Muslim Brotherhood now controls the presidency and Parliament following the February 2001 downfall of longtime dictator Hosni Mubarak and is locked in a struggle for supremacywith the military. Longtime Ethiopian ruler, Prime Minister Meles Zenawi, as harsh a dictator as Mubarak and whose ethnic Tigray group has long dominated the military, died Aug. 20, leaving a leadership vacuum and internal rivalries. Meles, who came to power in 1991, had long opposed the domination of the Nile's water flow by Egypt, and to a lesser extent Sudan, under colonial agreements that left the upstream African states —Ethiopia, Kenya, Uganda, Burundi, the Democratic republic of Congo, Rwanda and Tanzania — with almost no control of the river's resources.

He found Cairo's hard-line position on the Nile particularly galling because85 percent of the river's water flows from the Ethiopian highlands.

There were years or fruitless negotiations between Cairo and the upstream states in the Nile Basin initiative, a forum set up in 1999 by all the Nile states. But in 2010, Egypt found its domination of the river heavily challenged. Ethiopia and four African states — later joined by twomore — threw out a 1959 agreement imposed by British colonial rulers that gave Cairo control of 90 percent of the Nile's water and veto power over dam construction upstream that would limit its water supplies. Theycontend they need more water because of burgeoning populations, industrialization and agricultural projects. The fall of Mubarak, who had fiercely opposed surrendering any of Egypt's control of the Nile, left Cairoadrift. Meles, who had already built seven small dams on the Nile, took advantage of Egypt's disarray to announce his plan for the $5 billion Grand Ethiopian Renaissance Dam on the Blue Nile and start work on it. "Cairo fears that once the dam is completed in 2017, it will take two to

three years, depending on rainfall, to fill up the 67 billion cubic meter reservoir, which could reduce the amount of water that flows into Egypt by 25 percent," Stratfor observed. "After the reservoir fills up, there is noguarantee that Egypt will maintain its present share of the water, and Ethiopia is already planning multiple agricultural projects on Nile tributaryrivers flowing from the Ethiopian highlands. "Speeding up the diversion ofwater would put added pressure on Cairo," Stratfor noted. So far Cairo has focused primarily on diplomatic efforts with Ethiopia and its African allies, concentrating on these countries' parliaments whose agreement ona new water-sharing arrangement will be necessary if it is to be legally binding to supersede the 1959 agreement.10/19/12 Top News, Latest headlines, World News & U.S News – Upi.com upi.com/BusinessNews/Energy-Resources/2012/10/19/…/ print 2/2 According to documents released by WiliLeaks in September, the Egyptianand Sudanese governments had planned to attack the Grand RenaissanceDam. WikiLeaks claimed the documents originated with Stratfor. The Texas-based consultancy's computer system was penetrated before the leaks and that may have been how the alleged documents were uncovered. One 2010 email quoted a "high-level Egyptian source" as saying "we are discussing military cooperation with Sudan" against Ethiopia, establishing a base there from which to fly Egyptian Special Forces to destroy the Ethiopian project. Egypt denied it had such a plan.

But Stratfor noted that if diplomacy fails, "Egypt's next most likely approach is to support proxy militant groups against Ethiopia" as it did in the 1970s and 1980s. Stratfor said direct military action "was the least likely approach and one Cairo would undertake only if the dam was completed and significantly interrupted the water flow. "Such a course willalso largely depend on Egypt's new leadership .. but whatever its political inclination, a largescale reduction in water from the Nile would be intolerable to any Egyptian government." October 19, 2012 (UPI) Cairo

A new research tries to mitigate Egyptian concern over the Nile damproject'

New research has suggested there is sufficient water in the Nile to supportall 10 countries it flows through. This emerged on Monday as Ethiopia's massive dam-building plans continued to cause disquiet in downstream Egypt. Simon Langan, the head of East Africa and Nile Basin Office of the International Water Management Institute, said: ""We would argue that physically there is enough water in the Nile for all the riparian countries." He made this statement as Ethiopia and Egypt are at each other's throats over the former's actions along the Nile River.

Top Ethiopia government officials have reportedly said they are looking atjumpstarting the massive Renaissance Dam project along the Nile River inan effort to increase water resources and energy for the East African country. Political analysts have said this could threaten regional stability. The International Monetary Fund (IMF) has also called on Addis Ababa to push the dam project to the backburner in order to focus on other economic initiatives.

While Cairo has denied any intention of attacking the dam, as reported bywhistleblower website Wikileaks, the country's Water Resources and Irrigation Minister Mohamed Bahaa el-Din has reportedly said that Egypt was maintaining its concerns about the construction of the Renaissance Dam in Ethiopia. "What we really need to do is make sure that there is access to this water… Poverty rates are about 17 percent in Egypt but forfive of the upstream riparian countries it is more like 50 percent. So, this access to water is very important," Langan said, speaking at the Addis Ababa launch of the River Nile Basin.
VENTURES AFRICA November 20, 2012
Ethiopia/Egypt-War over Nile River?
OPINION: It seems that every few weeks, commentary is published sugggesting that Egypt and Ethiopia are ready for military battles over thefuture of the Nile River. Recently Robele Ababiya wrote a piece titled "Likely war over the Blue Nile River?" that highlighted the growing concernin Ethiopia over the future of Egypt's tenuous democracy that has seen massive unrest in recent days. Ababya wrote: "The matter is so serious that I gave it a rather scary title after a lot of soul-searching, but the arrogant stance of prominent Egyptian leaders begged for it as mentioned in the paragraph below – notwithstanding my long held dream that democratic Ethiopia and Egypt will one day emerge as powerful allies working together as keepers of stability and engines of economic growth in the region and beyond in the African continent." Ababiya added that with the ongoing turmoil in Egypt and the uncertainty over their ability to reach compromises, the future relations with Ethiopia, despite an optimistic tinge, are not looking positive. "But the new Egyptian regime appears to have dimmed any hope of engendering a secular democratic state given that liberal democratic political forces that have spearheaded the Egyptian revolution have withdrawn from drafting the constitution. It seems the government is bent on following in the footsteps of its predecessors," Ababya continued. That precedent does not engender a warm feeling in many Ethiopians, who have seen decades of Egyptian obstinate behavior over Nile water. Now, with the government in Cairo teetering on collapse, Ethiopia remains concerned over the future of what the government and its people believe is a right to water resources.
Ethiopia and Egypt have been butting heads for some time over water resources and who has a right to the Nile River. With the first-ever Nile Basin Initiative (NBI) report on the status of the Nile River published lastmonth, the situation between Egypt and Ethiopia and the angst betweenthe two foes finally has some statistics and analysis to deal with.
However, it is unlikely to see any changes in the current policies that haveboth countries eying future water resources along the world's longest river.
Top Ethiopian government officials have told Bikyamasr.com that they arelooking at jumpstarting the massive Renaissance Dam project along the Nile River in an effort to increase water resources and energy for the EastAfrican country.The moves could threaten the regional stability after the Egyptian government said it remained "concerned" over Ethiopia's actions

along the Nile River. The International Monetary Fund (IMF) has also called on Addis Ababa to push the dam project to the backburner in order to focus on other economic initiatives. While Cairo has denied any intention of attacking the dam, as reported by whistleblower website Wikileaks, the country's Water Resources and Irrigation Minister MohamedBahaa el-Din said last month that his country was maintaining its concernsabout the construction of the Renaissance Dam in Ethiopia. He did say that officials at the Ethiopia foreign ministry "assured Egypt and Sudan that in case there was any impact on their water quota to the dam, other projects will be carried out to collect lost water and cover shortages." It is the latest in the ongoing battle for the world's largest river's water, with Egypt and Sudan continuing to remain obstinate in amending any of the colonial treaties that guarantee their countries with a lion's share of water from the Nile. WikiLeaks released documents this month that revealed Egypt and Sudan had been planning to attack an Ethiopian dam project to "protect" their rights over Nile water based on colonial era treaties. In documents revealed by Wikileaks, the Egyptian and Sudanese government appeared ready to develop a launching pad for an attack by Egypt against the dam. WikiLeaks has leaked files allegedly from the Texas-based globalintelligence company, Stratfor, which quote an anonymous "high-level Egyptian source," which reported that the Egyptian ambassador to Lebanon said in 2010 that Egypt "would do anything to prevent the secession of South Sudan because of the political implications it will have for Egypt's access to the Nile." Ethiopia's massive dam project has seen much concern from Cairo and Khartoum, who fear the establishment of Africa's largest dam would affect previous colonial deals on Nile water- sharing. It is to be built some 40 kilometers upstream from Sudan on the Blue Nile. But even before the official announcement of Ethiopia's prime minister's passing on August 20, Egyptian officials told Bikyamasr.com that they believed a post-Meles region could bring forth new negotiations and compromise over Nile water. An Egyptian ministry of water and irrigation told Bikyamasr.com last month, two weeks before Zenawi was pronounced dead, that with the combination of Egypt's new President Morsi and the potential of seeing a new leader in Ethiopia, they hoped the tension over Nile River water could be resolved. "While this can in no way be official policy at this point, I believe that there would be more maneuvering with a new leadership in Ethiopia because there would be the ability to communicate and not be seen as antagonistic," the official said, adding that they were not authorized to speak to the media. "Let us be frank about the situation between Egypt and other Nile countries," the official continued. "We in Egypt have not been the best at compromise so I think overall, there is so much that can be done to help bring countries together, and Ethiopia has been a leader in its criticism of Egypt so starting there would be good." With the Nile comes a new set of issues, and with Egypt holding onto a lion's share of water from the world's largest river, upstream countries such as Ethiopia have taken it on their own to begin building dams and other water related endeavors, much to the anger of Cairo. However, officials hope that solutions can be had in

the new post-revolution Egypt that could see the growing tension betweencountries along the Nile reduce. “While Egypt never wants to mingle in another country’s affairs, a new leadership in Ethiopia would go a long way to changing how things are run, just like it has in Egypt,” the official added. BM, Mohammad Awad (November 26, 2012)

Grand Ethiopian Renaissance Dam (GERD) --Will fears turn south? Analysis: The African Research and Studies Centre at the International University of Africa held a forum last week titled "Ethiopian Renaissance Dam and Its Effects on Egypt and Sudan." The minister of electricity andirrigation, Dr. Tabitha Butrus; the Ethiopian irrigation minister; the Ethiopian ambassador to Sudan, Abadi Zemo; and many experts in agriculture, irrigation, and environment attended the forum. Ethiopia denies any intention to block water from Egypt and the Sudan. The Ethiopian irrigation minister, denied any intentions to block water sayingthat Ethiopia only wants to use the dam to generate electricity. He mentioned that late Ethiopian Prime Minister Meles Zinawi called on bothSudan and Egypt to take part in establishing the dam, but they have

not. He promised that Ethiopia has no hidden agenda. "The dam has manypositive effects on the Nile Basin countries," he claimed. He continued, "Forums like these offer the chance to exchange points of view, opinions, and more research." He explained that the dam will help maintain the water level all year round and increase fishery production. Sudan will also benefit immensely, considering that there will be an abundance of water supply, especially in River Atbara, that can be used to improve agricultureand develop areas on the border between Sudan and Ethiopia. He called for partnerships to be built among Nile Basin countries to realise mutual benefits. Again, he denied that there is any reason for Egypt and Sudan tobe wary of the dam. Former Irrigation Minister Professor Saif Aldin Hamadsaid Ethiopia has 123 billion cubic metres of water, of which 97% is not used. He added that very little land is cultivated where water is scarce.

The area surrounding the dam is not incapable of cultivation, he continued, but Sudan will benefit from the dam, considering it is dependent on the natural flow of the Nile and does not have and does nothave the means to store its waters. That is where the Ethiopian dam comes in. It will help by storing up water, from which Sudan will benefit inmore than way, such as: limited evaporation and doubled electricity production in Roseiris, Sinnar, and Meroe. The benefits from the Ethiopiandam can be fairly imaginable, given that it stores up 74 billion cubic metres of water.

Advantages of the dam: The Ethiopian minister of energy and mining, Alfakki Ahmed Najash, said Ethiopia and Sudan will benefit immensely from this dam in irrigation and agriculture. But, he added, Nile Basin countries have different opinions on it. Engineer Abdulhalim Alturabi saidthere are many benefits that can be reaped from this dam, but cooperation in establishing and running it is a prerequisite. He went on tosay, "Ethiopia does not have vast land that can be farmed, and Sudan does. Ethiopia, therefore, cannot afford hostile relations with Sudan. The two countries must build their relations around

being totally open with

each other. They must exchange benefits because, in Sudan’s perspective,Ethiopia has a lot of potential and a work force that Sudan is in need of".

Importance of Consensus on the Dam: A political analyst, Professor Hassan Alsaori, said it is important for the Nile Basin countries to have a consensus on the dam, especially as Ethiopia will control 86% of the Nile’swater after the dam is completed. He said consensus is important, because without it, Ethiopia will have the upper hand and leverage in any dispute among Nile Basin countries because it will hold the “Nile water card.” He said it is only fair that Egypt and Sudan take part in establishingand running the dam to be certain that their part of the Nile is safe. Fears are steered south: Many experts argue that Ethiopia does not want to make a unilateral move regarding the dam to ensure it does not threaten regional security. In that regard, it is most careful to reassure Sudan and Egypt. But the same experts were wary of South Sudan, considering that it controls the White Nile, the other source of the Great Nile. That is problematic because the West and Israel could use their influence with South Sudan to put pressure on Egypt. Sudan and Egypt have doubts thatthe newly founded and politically unstable country of South Sudan would take unilateral steps to decrease the portions of Nile water to which Sudanand Egypt are entitled. Such a step would jeopardise the regional and national security of Egypt and that of Sudan in the process. Sudan Vision, by Ibrahim Al-Jack

Grand Ethiopian Renaissance Dam (GERD) - Mega dam with potentially mega consequences'

OPINION:Without greater oversight, Ethiopia's secretive new dam could have disastrous environmental, social and political impacts. While Egypt was undergoing dramatic political changes last year, Ethiopia was secretly moving to unveil "Project X" - a huge hydropower dam it intends to build on the Blue Nile, 40 km from the Sudanese border. Political commentators, environmental experts and hydrologists have all voiced concerns about the dam's ecological impact, the strain it might place on relations between the three eastern Nile nations, and the financial burden of this mega-dam on Ethiopian citizens. Now renamed the Grand Ethiopian Renaissance Dam, the project (due for completion by 2015) is set to become the largest hydroelectric power plant in Africa. The scale of the project is staggering: the plant will be capable of producing almost double the electricity of Aswan High Dam in Egypt, while its 63 billion cubic metre (bcm) reservoir is double the size ofEthiopia's largest natural lake. Crucially for Ethiopia's Nile neighbours, thefilling of this huge reservoir is also likely to greatly reduce the flow of water to Egypt and Sudan for several years, and could even permanently alter the amount of water those countries are able to draw from the river. Details trickling through: The planning and implementation of this project has all been decided behind closed doors. Its $4.8 billion contract was awarded without competitive bidding, for example, to Salini Costruttori, an Italian firm favoured by the ruling party; Salini is also building the controversial Gibe III Dam on Ethiopia's Omo River. Furthermore, the nature of the project was kept under wraps until after site preparation hadalready begun, to the great surprise of regional governments, Nile

planning agencies, and Ethiopia's Western donors. It was especially shocking to Norwegian agencies who were working with the Ethiopian government on a similar project for the same stretch of the Nile, now made obsolete by the Renaissance Dam. This level of official opacity hasworryingly prevailed beyond the initial announcement of the project.

Expert analysis that would normally accompany such a titanic project haseither not been undertaken or kept characteristically secret. No environmental assessment is publicly available for the project. And no steps were taken before its launch to openly discuss the dam's impacts with downstream Nile neighbours Egypt and Sudan.

Do the environmental and social plans hold water?: The consequences for Ethiopia's downstream neighbours could potentially be catastrophic. The Renaissance Dam's reservoir will hold back nearly one and a half times theaverage annual flow of the Blue Nile. Filling the reservoir - which could take 3 to 5 years - will drastically affect the downstream nations' agriculture, electricity and water supply.

Evaporative losses from the dam's reservoir could be as much as 3 billion cubic metres per year. The dam will also retain silt. The Ethiopian government argues that this will bea net positive as it will increase the lifetime of other dams downstream, particularly in Sudan where, for example, the Roseires Dam has been nearly incapacitated by sedimentation. But what about the life expectancyof the Renaissance Dam itself? This is a serious issue for the dam's viability, and there are no known plans for watershed management or soil conservation to address it. In addition, the retention of silt by the dam reservoir will dramatically reduce the fertility of soils downstream.

Sediment-free water released from dams also increases erosion downstream, which can lead to riverbed deepening and a reduction ingroundwater recharge.

Some have predicted even more calamitous consequences of the dam's construction. The Grand Renaissance Dam site is in the Great African Rift Valley near the Afar Depression, an area in which tectonic turmoil is so great it could, according to some accounts, eventually tear the continent in two. The dam could be at risk from damage by earthquakes, yet no oneknows if it has even been analysed for this risk, or the largest earthquake it is being designed to withstand. The failure of such a huge structure puts the more than 100 million people living downstream at risk. On top of thatrisk is that of 'reservoir induced seismicity'. A dam with a reservoir as large as this is not just vulnerable to seismic events - it can cause them.

Scientists believe that there have been more than 100 instances on six continents of large reservoirs inducing earthquakes. The most serious todate was China's devastating magnitude 7.9 earthquake in 2008, which some experts believe was induced by Zipingpu Dam.

Holding back the tide of criticism: However, some of the most pressing concerns regarding the dam's construction are political. Although its timing coincided with Egypt's political upheaval, the sudden unveiling of the project nevertheless resulted in an outcry. Egypt's primary fears are areduction of its main

water supply from the Nile, and diminished nutrientsand sediment essential for agriculture. Towards the end of the late Prime Minister Meles Zenawi's rule, Ethiopia adopted a more aggressive stance over the Nile, moving swiftly to build a number of large hydropower dams.However, tension in the region regarding control of the Nile waters has not all be centred on Ethiopia. In May 2010, five upstream Nile states (Ethiopia, Kenya, Uganda, Rwanda and Tanzania) signed a Cooperative Framework Agreement (CFA) to access more water from the Nile. The move was strongly opposed by Egypt, which brandished a colonial-era treaty from 1929 asserting its exclusive rights to the Nile's water supply.

With the Renaissance Dam, these tensions seemed to be coming to a head. Following its announcement in March 2011, Egyptian authorities were quick to lobby international support and strongly hinted that a military response was not deemed disproportionate to protect such a vitalresource. Indeed, Wikileaks recently released documents detailing a planned Egyptian attack on the dam from Sudan. However, attitudes appear to have since softened, and dialogue was opened last month between Egypt, Ethiopia and Sudan. In a bid to allay Egypt's wrath, the Ethiopian government proposed an International Panel of Experts (IPoE) to review and assess the dam's impacts on downstream neighbours. The panel of ten consists of two members from each of the three countries eastern Nile countries, plus four international experts. Their names have not been released and their meetings are behind closed doors, but they are expected to announce their findings four months from now. This seems to have placated Ethiopia's neighbours for now. Egypt has toned down its opposition to the dam, while President Omar al-Bashir of Sudan has even pledged Sudanese support for the project. Yet whatever the IPoE's findings, the Ethiopian government seems adamant the dam will continue. In September 2012, the Ethiopian Ministry of Foreign Affairs declared that Ethiopia would never halt or slow the construction of the dam due to external pressure, calling into question the significance of thepanel. Needless to say, many in Sudan and Egypt still have serious concerns about the project. Whatever the outcome of political arbitration,it remains irresponsible for Ethiopia to build Africa's biggest hydropower project, on its most contentious river, with no public access to critical information about the dam's impacts - a flawed process which can hardlyresult in a sustainable project. If the Ethiopian government is serious about maintaining good relations with its Nile neighbours, and if it truly wishes to develop projects that will carry its people and the broader region into prosperity, it must begin by allowing some light to penetrate this secretive development scheme.

Ethiopia: Nile Dam Project - A Hydro-power hope, but regional sore point’Analysis: Ethiopia has begun construction of a 6,000 megawatt (MW) hydroelectric dam on the Blue Nile river, a move that has been greeted enthusiastically by many Ethiopians but that is causing concern in the downstream nations of Sudan and Egypt.The project, which is scheduled to take six and a half years to complete, is being managed by the state- owned power utility company, Ethiopian Electric Power Corporation (EEPCo). The dam is being built about 900 km (560 miles) north-east of the capital, Addis Ababa, and just 40 km (25 miles) from the Sudanese

border. Ethiopia's government hopes to capitalize on the energy potential of a river that is revered by the Ethiopian population but that until now has not been significantly exploited to feed the country's growing need forelectric power.Ethiopia is the source of the Blue Nile, and its territory contributes up to 86 percent of the river's water. The Blue Nile in turn is responsible for more than half of the water in the Nile, the world's longest river system. The other main source, the White Nile, originates on the Ugandan side of Lake Victoria. The new project is not the first dam to be constructed on tributaries of the Nile in Ethiopia. Three smaller projects with a combined capacity of about 760 MW have already been completed, and EEPCo is seeking financing for a 278 MW dam on another tributary, the Chemoga-Yeda River. But the planned Grand Renaissance Dam (GRD) dwarfs these projects in scale and cost. The 6,000 MW dam will be built byItalian construction company Salini Costruttori, which received the construction contract in late 2010, while electromechanical work is being done by a local company, Metal and Engineering Corporation. Ethiopia hasbeen dubbed "the water tower of east Africa" because of its numerous river and lake systems. The Nile is an emblematic part of the country, immortalized in poems and songs and even on coins and bank notes. But its potential for hydroelectric power has until now gone largely unused.For many Ethiopians, the new planned dam is not only about lighting their houses and providing power for businesses and to export, but it also holdsa symbolic significance, a way of looking forward from memories of famineand conflict.

Worried neighbours: Despite its popularity among Ethiopia's population, the dam project has caused consternation in neighbouring Sudan as well as in Egypt, both downstream countries that rely upon the Nile for almost all their water and fear the dam will cause a reduction in water available to them.The new dam will eventually create a lake containing more than 60 billion cubic metres of water, twice as much as Lake Tana, Ethiopia's largest body of water.There are also concerns about the potential environmental impact of the dam, although the scale of opposition has been smaller than that provoked by the Gibe III dam. Gibe III has provoked opposition from groups concerned about the drying up of Kenya's Turkana Lake, the world's largest desert lake, which is fed by the Gibe river, and the possible displacement of tribal people in Ethiopia and Kenya.Gossaye Mengiste, an official of the ministry of water and energy, which oversees EEPCo, said he believed the environmental impact of the project would be minimal and that because the area around the dam is sparsely inhabited, no mass relocation of people would be necessary."The dam will lessen evaporation in downstream areas in Sudan and Egypt, as well as (providing) a reduced risk of flooding and siltation which the Aswan dam in Egypt is particularly affected by," Mengiste said.Ethiopia has periodically had tense relationships with Egypt and Sudan, countries which rely heavily upon the Nile for water and agriculture. Concerns aboutthe effects of an Ethiopian dam upon water levels in the Egyptian Nile dateback to the late 1970s, when then-president Anwar Sadat reacted angrily to Ethiopia's announcement of a plan for a dam on the Blue Nile. Recent

articles in Ethiopian newspapers, referring to documents leaked to Wikileaks, have suggested that Egypt might be preparing contingency plans to sabotage the dam with air strikes if it is built. Magdy Amr, Egypt'sassistant foreign minister for Nile Basin state affairs, dismissed the reports, pointing out that the files in question date back to 2010, before construction of the new dam was even announced. Egypt has about $2 billion in business investments in Ethiopia.Abdelrahman Sirelkhatim, Sudan's ambassador to Ethiopia, firmly dismissed Ethiopian fears that his country is conspiring with its northern neighbour to damage the dam, widely known by its initials, GRD."I don't know how we can threaten the GERD when we are trying to contribute financially to build the dam, and our engineers are contributing technically," Abdelrahman said. GoE (November 23, 2012)

Gilgel Gibe III Dam: Feasibility study, Design, and Construction' The Gilgel Gibe III Dam is an under construction 243 m high roller-

compacted concrete dam with an associated hydroelectric power plant on the Omo river in Ethiopia. Once completed it would be the largest hydroelectric plant in Africa with a power output of about 1870 Megawatt (MW), thus more than doubling total installed capacity in Ethiopia from its2007 level of 814 MW. The Gibe III dam would be part of the Gibe cascade, a series of dams including the existing Gibe I dam (184 MW) andGibe II power station (420 MW) as well as the planned Gibe IV (1472 MW)and Gibe V (560 MW) dams. The existing dams are owned and operated by the state-owned Ethiopian Electric Power Corporation (EEPCo), which isalso the client for the Gibe III Hydroelectric dam. As of February 2011, according to the project company the project was 41% completed and thecompletion of the dam was tentatively scheduled for July 2013. Full commissioning is scheduled for June 2013 after the reservoir will have filled and the hydroelectric plant will have been completed.

Design - The Gilgel Gibe III Dam will be a 610 m-long (2,000 ft) and 243 m (797 ft) high roller-compacted concrete dam. It will withhold a reservoirwith a capacity of 14 km3 (3.4 cu mi) and a surface area of 210 km2 (81 sq mi), collecting with a catchment area of 34,150 km2 (13,190 sq mi).

The reservoir's live (active or "useful") storage will be 11.75 km3 (2.82 cumi) and dead storage 2.95 km3 (0.71 cu mi). The normal operating level of the reservoir will be 892 m (2,927 ft) above sea level with a maximum of 893 m (2,930 ft) and minimum of 800 m (2,600 ft). The dam's spillwaywill be 108 m (354 ft) long and floodgate-controlled with having a maximum discharge capacity of 18,000 m3/s (640,000 cu ft/s). Water above 873 m (2,864 ft) above sea level can be discharged through its gates. Feeding the dam's power house will be two penstocks that each branch into five separate tunnels for each individual turbine. The power house will contain ten 187 MW generators supported by Francis turbines for a total installed capacity of 1,870 MW. The initial design of the dam foresaw a rock-fill dam. However, due to difficulties with obtaining proper and sufficient insurance coverage for the rock-fill dam, the design has been changed to roller-compacted concrete. The rock-fill design has been criticized by an independent feasibility study submitted to the African

Development Bank in 2009. In particular, the study questioned the structural stability of the dam, saying that the risk of a catastrophic failurewas "not insignificant".

Gilgel Gibe III dam could help Ethiopia's development, but it might also bedisastrous for the environment and threaten half a million people's livelihoods' There are concerns that more than half a million people's livelihoods along the Lower Omo Valley in Ethiopia and Kenya could be threatened by the construction of the Gibe III Dam project. The work, which has been ongoing since 2006 and is now over halfway to completion, faces overwhelming pressure from environmentalists who have raised concerns over dangers associated with the dam. Often compared to China's Three Gorges, the Gibe III Dam is to be the world's fourth largest hydropower project and will generate over 1,800 megawattsof power. The Ethiopian government expects to earn over $400 million annually from power exports Awash with environmental concerns: But Ethiopia's methods for achieving this goal have been widely condemned.

In addition to displacing local Ethiopian communities in the vicinity of the dam, the completion of the $1.7 billion project could also wreak havoc in Lake Turkana, a major source of livelihood to more than 500,000 people downstream in Kenya. Considering the Omo accounts for 90% of the lakeswater supply, opponents of the project argue that water levels in Lake Turkana could seriously suffer. Levels could drop by as much as 22 metres(the average depth being only 30 metres). Of particular concern in this scenario is the depletion of the lake's fisheries. These are the main sourceof protein for local communities, while trade in dried fish is also a major source of income. Back in 2009, the World Bank's Vice-President for Africa, Obiageli Ezekwesili, raised an alarm over the way in which the Ethiopian government was managing the project. In particular, she queried the Environmental Impact Assessment report, saying it was "not conclusive". She also questioned the manner in which the Ethiopian authorities awarded the contract to an Italian firm Salini Costruttori without competitive bidding.

This compelled the African Development Bank (AfDB) to commission a study arguing that the initial Environmental and Social Impact Assessment(ESIA) had not captured important aspects of the project. A more recent audit of the project by a group of researchers from CEE Bankwatch Network Poland revealed that the entity set up by the Ethiopian government to monitor the environmental impact of the project had limited capacity to carry out work. It further said that it had no clout to enforce compliance with environmental safeguards. "The team said the construction of such a mega-sized dam would compromise a fragile and unique ecosystem, which is identified as a protected area", said Jakub Gogolewski, Coordinator for CEE Bankwatch Network. But the group claimed that its team of researchers could not actively pursue the extent of this impact due to concerns of government persecution. Regardless, environmental and humanitarian organisations remain acutely concerned. A paper published by International Rivers this month has warned that the dam's completion will likely "generate a region-wide crisis for indigenous

livelihoods and biodiversity and thoroughly destabilize the Ethiopia- Kenyan borderlands around Lake Turkana". The reduced flow of sedimentsinto the lake will "lead to the loss of the ecologically productive floodplain used by wild species, fish, domestic stock and agriculture". Of even graverconcern is the potential for conflict as a knock-on effect of this ecological turmoil. The paper asserts that those who lose their livelihoods and homelands are "likely to seek out resources on their neighbours' lands in the Kenya-Ethiopia-Sudan borderlands. Well armed, primed by past grudges, and often divided by support from different state and local governments, these conflicts can be expected to be bloody and persistent." Investment drying to a trickle: The European Investment Bank and the African Development Bank withdrew funding consideration from the project in 2010, citing social and environmental risks. Partially because of disrespect from an Ethiopian official allegedly telling the European Investment Bank it could "go to hell" over its policies regarding displacement of indigenous peoples, and partially because the terms of the uncompetitive contract with Salini violate the Bank's procurement policy. The World Bank also has no current plans to support the project. Itis China then, through the Industrial and Commercial Bank of China (ICBC) and the Dongfang Electric Corporation, which is to provide most of the necessary $500 million sub-contract. This has also been met with displeasure; details on the power deal between the two countries were made public after the Ethiopian government released an Environmental Impact Assessment report that was widely rejected. Ikal Ang'elei, the founder of the Friends of Lake Turkana, and winnerof the 2012 Goldman Environment Prize for Africa says campaigns to push China out of the project have been unsuccessful. And she says that lack of support from the Ethiopian and Kenyan governments have made the organisation's attempts to defend the lake's environment more difficult. Although it will not fund the dam itself, the World Bank is also under scrutiny by campaigners. In July, the Bank agreed to give a $684 million loan to Ethiopia to build a 1,000-kilometre electricity transmission line from Gibe III into Kenya. "This could be a signal that the Bank has endorsed the project despite its withdrawal of funding two years ago", says Richard Leakey, a renowned conservationist and founder of the Turkana Basin Institute. Leakey says the fight will go on until the lake is finally secured. Power prospects in a parched land: While the social and environmental impacts of the project are huge, supporters of the dam remain convinced of eventual benefits from the sacrifices. "Ethiopia's electricity generation capacity will go up; power cuts will be reduced; and electricity will be extended to at least some of the more than 70% of the population withoutaccess", says Seleshi Bekele, a senior researcher with the Addis Ababa- based International Water Management Institute. He claims the power exports will bring important revenue into the country, helping to lift annual per capita GDP (PPP) above $1,100. Neighbouring Kenya is expected to import more than 500 megawatts to check the recurring power outages that have had a chilling effect on the manufacturing sector.

The Ethiopian Electric Power Corporation says more than 200 megawatts will be exported to both Djibouti and Sudan. In addition, a study was conducted to examine the feasibility and profitability of exporting electricity to Yemen through Djibouti, Somalia, Eritrea and Egypt. As the controversy engulfing Gibe III rages on, plans are on the table regarding the construction of two more energy plants - Gibe IV and Gibe V. These are expected to cover Ethiopia, Kenya and Sudan. "We are not opposed tobuilding power plants in the region. Certainly, we need affordable and reliable power. But we cannot sacrifice our environment for such developments", says Ang'elei. But, she believes, prior and independent studies need to be carried out to ensure sustainability and conservation ofthe ecosystem as well. THINK AFRICA PRESS - Mark Kapchanga is a researcher at Kenya Association of Manufacturers in Nairobi and a publisher at Media One International.

Egypt and Ethiopia heading toward a war over water'

In the coming years, Egypt and Ethiopia may be forced to fight a “water war” because Ethiopia’s ambitions contradict Egypt’s historical and legal rights in the Nile waters. Ethiopia can only be deterred by the regional andinternational balance of powers, which in recent years has favored Ethiopia.

For any Egyptian government, Egypt’s water share and securing the Nile’s headwaters are the top national security priorities, irrespective of the Egyptian government’s ideology or domestic policies. This fact is dictated by geography. For thousands of years, Egyptian rulers have been aware how important water is for Egypt. Water is the lifeline of Egypt (97.5% of Egypt is barren desert). Egyptian rulers have always used any means to defend their country’s historic rights to the Nile waters. As Greek historianHerodotus said, "Egypt is the gift of the Nile.” Egyptian civilization, which is one of history’s greatest civilizations, depends on the Nile. To illustrate the Nile’s importance, we should remember that Egypt is the largest desert oasis in the world. Life in Egypt is concentrated on the river banks where 90 million people live. In short, any Egyptian government should have one eye on the Horn of Africa — on Ethiopia, where the source of theNile lies — and another eye on the Sinai Peninsula and the Levant, and thebalance of power there. History has shown that most of Egypt’s invaders entered through that door.

Egypt’s sentries against the country’s internal and external foes have beensleeping on the job. Their first eye failed to notice the developments at the Blue Nile’s source in Ethiopia (the Blue Nile constitutes 86% and the White Nile 14% of the Nile water volume. The two tributaries meet in Sudan before flowing to Egypt). Their second eye had lost the ability to distinguish friend from foe. Now, with the worsening economic crisis and the political deterioration between the ruling Muslim Brotherhood and the opposition, the balance of power is more and more tilting toward Ethiopia,which may unilaterally increase its water usage. That will affect Egypt’s historic rights of the Nile water and cause a serious threat. In the report below, we will try to shed light on the Nile conflict and on why Ethiopia’s negotiating position toward Egypt has improved. We will end with a

recommendation. The conflict over the Nile waters: The two groups fighting over the right waters are as follows: the first group are the downstream countries, it includes Egypt and Sudan. The other group arethe upstream countries which includes Ethiopia, Eritrea, Uganda, Congo,Burundi, Tanzania, Southern Sudan, Rwanda and Kenya.

Egypt depends on the Nile River for 95% of its water needs for drinking, agriculture and electricity generation. The growing Egyptian population is increasingly dependent on Nile water. Egypt has historical rights to these waters under the Nile Water Agreement signed with Britain in 1929. It gave Egypt the right to veto any project in upstream countries affecting Egypt's share of water flowing to it. It is worth mentioning that the 1929 agreement is binding for the three upstream countries — Tanzania, Kenyaand Uganda — on the grounds that Britain, which colonized these countries, was their legal representative and could sign binding international agreements on their behalf. Egypt codified its legal status in an agreement with Sudan in 1959. The agreement gave Cairo 55.5 billioncubic meters of water (or 66% of the total water flow), which would go tothe Aswan Dam, and Sudan received 18.5 billion cubic meters (22%). Theremainder, 12%, is lost to evaporation.

The downstream countries argue that they were not a party to those agreements at the time, and therefore do not recognize their legitimacy. The upstream countries want to modify the water-sharing agreement andkeep more of the water by building dams, which will directly affect the water share of the downstream states, Egypt and Sudan. The problem is compounded by the projected large population increase in the Nile basin.The UN projects that the population in the 11 basin states will reach 860 million people by 2050. This is pressuring both sides to try to improve their positions in the conflict over the Nile waters.

In May 2010, Ethiopia drafted the Entebbe Agreement to modify the historical and legal basis for the sharing of water. Most upstream countriessupported the agreement but Egypt and Sudan refused it. It is true that the Entebbe Agreement is not legally binding for Egypt and Sudan, but it does show that Ethiopia is aware of the balance of power and its ambition to impose facts on the ground regarding the construction of dams, which will necessarily affect Egypt's share in the Nile waters and thus represent an existential threat to Egypt. It is true that Ethiopia cannot force Cairo tosign, but the Entebbe Agreement shows that a major crisis between Cairo and Addis Ababa is on the way. What follows is an explanation of the Ethiopian diplomatic attack on Egypt and Sudan.

Geopolitical framework strengthens Ethiopia's position'

In recent years, the geopolitical framework has clearly shifted in Ethiopia'sfavor, and it shifted the balance of power between Ethiopia and Egypt.

The geopolitical changes that favor Ethiopia can be seen in six keyindicators:

First, the disintegration of Somalia, Ethiopia's traditional rival with which itfought a tough war over the Ogaden region, removed the geopolitical balance facing Ethiopia's political ambitions in the region. Ethiopia exploited Somalia's disintegration to strengthen its regional presence in

the Horn of Africa. For years, Ethiopia has been “fighting terrorism” emerging from Somalia. Ethiopia has been doing that under an American umbrella from 2006 to 2009 and then again since 2011 until now.
The second indicator is represented by the partition of Sudan into two states: Sudan and South Sudan. That development has weakened Sudan (and thus Egypt) in the Horn of Africa and allowed Ethiopia to participate, since2012, in the UN peacekeeping forces in the Abyei region, which is disputed between Sudan and South Sudan.
The third indicator is the following: the weakening of Sudan has shifted the balance of power in Ethiopia’s favor. The crisis in Darfur and the international isolation of the Sudanese president (an international arrestwarrant was issued against him by the International Court of Justice in The Hague in 2009) has significantly limited Khartoum’s ability to maneuver in the Nile conflict.
The fourth indicator is the improved relationship between Ethiopia and theWest in general, and between Ethiopia and the US in particular, after Addis Ababa emerged as a reliable partner in the Horn of Africa. Every year, Ethiopia gets $4 billion in military, development and food assistance.But the matter is not limited to direct aid. The West has started looking atEthiopia differently in regard to development projects, such as the construction of dams in Ethiopia. The West had opposed such projects for decades because they were considered a threat to regional security.
The fifth indicator is about China. China is Ethiopia’s primary trade partnerand Beijing has expressed willingness to finance a dam construction in Ethiopia and offered Chinese expertise in building large dams. China wishes to have a foothold in the region. There is oil in South Sudan and the Congo has mineral resources.
The sixth indicator is the weakening of Egypt’s political weight in the Hornof Africa. Egypt has no role in Somalia and was not even a key party in the negotiations between Sudan and South Sudan. Egypt’s preoccupationwith internal matters is weakening its ability to confront regional and international players, such as China. Even though Egypt is the biggest market for Chinese goods among the 11 basin countries, China has favored other considerations over Egyptian priorities and Egypt’s rights inthe Nile waters. So much so that China has offered its technological expertise in constructing dams, which is a complete disregard to Egyptianrights. What will Egypt do about all that? Only God knows.
A recommendation: In the coming years, Egypt and Ethiopia may be forced to fight a “water war” because Ethiopia’s ambitions contradict Egypt’s historical and legal rights in river waters. Ethiopia can only be deterred by the regional and international balance of powers, which in recent years has favored Ethiopia. The government of Hisham Qandil (an irrigation expert, not a diplomat, legal expert or strategist) seems unable to manage such a complex issue with legal, political, economic, military and international aspects. His government is unable to solve everyday problems that are less complex, such as security, traffic, and fuel and foodsupplies. This portends dire consequences for Egypt.

What is needed is a way to manage the crisis and use Egyptian soft powertoward Ethiopia, especially the Coptic Orthodox Church, which is the Ethiopian Church's mother church. It is necessary to form a fixed Egyptianteam to manage this highly sensitive issue. The team should go beyond party affiliation and include leading Egyptian Nile specialists. Ideological orreligious affiliation should not be a factor in choosing that Egyptian crisis team. What is important should be the capabilities and competencies of the team members, who will come from the "clay" of the country, not from a particular group, party or political current. Clay, to those who don'tknow, is what Egyptians call their country's soil, which is a fertile soil resulting from the mixing with the Nile water.

Will Egyptian President Mohammed Morsi realize the seriousness of the situation and deal with that issue as a major national matter and quicklyimplement the required policies and procedures, or will he hesitate, as usual, and go down in history as someone who squandered the historic rights of Egypt and its future generations? By: Mustafa al-Labbad Translated from As-Safir (Lebanon).

South Sudan rebuffs Egypt on Nile waters agreements'

WIC - Addis Ababa, March 22, 2013: South Sudan has expressed its opposition to a 1959 Nile Water agreements between Sudan and Egypt. The country said it was already on its way to join the Cooperative Framework agreement, which Ethiopia, Kenya, Uganda, Rwanda and Tanzania signed in 2010, and later Burundi in 2011. "South Sudan does not recognise - and underline does not recognise – the content of the 1959 agreement," said Water and Irrigation minister Paul Mayom Akech."Having been under Sudan at the time, we could not say anything, todaywe say, we have nothing to do with this agreement," the minister said.

Riparian countries that signed the Cooperative Framework agreement are discontent with the 1959 deal that gives Sudan and Egypt a larger share of the Nile waters. "We have joined the NBI (Nile Basin Initiative) and are already a long way to joining the Cooperative Framework agreement, being an entity within which all the Nile Basin countries come together anddiscuss how best they could utilise the water resource," Mr Mayom said.

He told a local radio station that; "Egypt, Sudan and the DR Congo have refused to ratify the agreement for reasons that it contravenes the 1959 agreement". Egypt dispatched a high profile delegation led by Prime Minister Hisham Qandil to South Sudan last week to, among others, seek support for its position against the Cooperative Framework agreement. MrQandil signed Memorandums of Understanding (MoUs) with Vice-PresidentRiek Machar on education, health, agriculture and investment. There was none on Nile waters. Mr Mayom said Juba was planning the launch of a draft document for technical cooperation with Egypt. (African Review) Egypt continues to downplay any talk of a military confrontation with Ethiopia over Ethiopian damming sources of the Nile River' - March 24, 2013 - Well it should, because revolutionary Egypt already has enough political and economic turmoil. However, Egypt and Ethiopia do have a significant difference of opinion over a very precious resource: water. The

Egyptian government has said that it seeks its equitable share of Nile
River water. The Egyptian government equates equitable to traditional; upstream nations, like Ethiopia contend that the traditional division favors Egypt. Both Egypt and Ethiopia value good relations with the European Union and the U.S., if only because the EU and the U.S. provide them both with economic aid. Saber-rattling, much less warfare, would give the EU and U.S. political fits. Water war? Not likely. Hardball water diplomacy?That is already happening. (Austin Bay)

However, Ethiopia's political and geographic position makes it a tough adversary for Egypt. Ethiopia is unquestionably the dominant political actor in the Horn of Africa. Somalia remains chaotic but the situation there, compared to a decade ago increasingly favors Ethiopia. Eritrea, which would love to ally with Egypt against Ethiopia is broke. Every monththere are new rumors of coups and infighting among Eritrean factions.

Sudan, another likely Egyptian ally in a war with Ethiopia, is on the outs politically with the region and the UN. Worse yet Sudan faces numerous insurgencies, from Darfur to South Kordofan. Nile River water is absolutelyessential to Egypt's existence. This isn't news – it has been that way for atleast 7,000 years. Currently Egypt gets 95 percent of its water from the Nile. Ethiopia's dam projects are on the Blue Nile (which starts in the Ethiopian highlands), the source of 85 percent of all Nile River water. No wonder every so often Egyptians say they will go to war with Ethiopia overwater rights.

Ethiopia also objects to the 1929 Nile Water agreement (engineered by Great Britain) which gives Egypt the right to veto upstream water projects. Ethiopia did sign the agreement. However, the 1929 agreement does affect Uganda, Kenya and Tanzania. In 2010 Ethiopia authored a new regional water sharing proposal, the Entebbe Agreement. This is alsocalled the Cooperative Framework Agreement and Nile Basin Initiative.

This agreement would give Uganda, Kenya and Tanzania a diplomatic mechanism for altering the 1929 division of water rights. Rwanda and Burundi also support the Entebbe agreement. Kenya and Uganda are Ethiopian allies and have forces serving in Somalia. Egypt refused to consider the Entebbe Agreement. Sudan also rejected it. Today, South Sudan's government said that South Sudan will support the Entebbe agreement. Sudan and South Sudan are always five minutes away fromgoing to war with one another.

East Africa - Half a million Kenyans, Ethiopians face conflict, hunger due toDam – Report'

AlertNet: April 15, 2013: Half a million Kenyans and Ethiopians are likely to be displaced, go hungry and face conflict due to a controversial dam linked to a forcible resettlment programme 'bankrolled' by British taxpayers, the lobby group Survival International said. The Gibe III hydropower dam, due for completion in 2014, is being built on the Omo River in southern Ethiopia. It will reduce the flow of water to farmers and pastoralists living downstream, including those 600 kilometres to the south in Kenya, where the river flows into Lake Turkana, the world's largest desert lake. The British government's Department for InternationalDevelopment (DFID) is one of many international donors funding

Ethiopia's Protection of Basic Services (PBS) programme, which subsidisesbasic services and local government salaries. This includes areas where people are being relocated to make way for the dam, part of a wider programme to resettle people into designated villages - known as villagisation - begun in 2010. Survival argues that the forced resettlment of thousands of tribal people could not be carried out without the DFID-funded PBS programme. "UK money is bankrolling the destruction of some of the best-known pastoralist peoples in Africa," Stephen Corry, director of Survival said in astatement. "The UK government is renowned for only paying lip service tohuman rights obligations where tribal peoples are concerned. When it comes to human rights in Ethiopia, DFID's many commitments are worthless." It is not the first time that the PBS programme has come under fire. Last year, the London-based law firm Leigh Day began legal action against DfID on behalf of an Ethiopian man, known as Mr O, who claims he suffered severe abuse under the villagisation programme. DFIDvisited the Lower Omo, where it heard reports of rape and intimidation, but it has not been able to substantiate the claims. Survival International cites three recent reports by Oxford University, International Rivers and the Africa Resources Working Group to support its case.

The Africa Resources Working Group report warns of "an impending human rights and ecological catastrophe" and a "very real threat of mass starvation and armed conflict in the border region." The International Rivers report says that those who lose their homes and livelihoods are "likely to seek out resources on their neighbours' lands in the Kenya- Ethiopia-Sudan borderlands." "Well armed, primed by past grudges and often divided by support from different state and local governments, theseconflicts can be expected to be bloody and persistent," it said. The Ethiopian government is planning to use the water to develop large-scale irrigation schemes, create jobs and generate huge amounts of electricity to power the region.

Egypt rejects Entebbe agreement's decisions on Nile water’

April 17, 2013: Minister of Water Resources and Irrigation Mohammed Bahaa el-Din said Egypt will not agree on any decision to divide the water of the Nile, if it is taken without its participation. He added that Egypt would use the appropriate international mechanisms in the right time. Theminister pointed out that there are continuing Egyptian-Sudanese contactswith Nile Basin countries, adding that cooperation is the best way to achieve development and stability for the peoples of the region. Bahaa el- Din stressed that the ministry takes all negative impacts, which may resultfrom the establishment of the Ethiopian Dam, into account. The Minister said Ethiopia cooperates with Egypt and presents all studies and information about the dam. The final report will be submitted by the end of May 2013. The minister explained that there is a new mechanism for cooperation between the Eastern Nile Basin countries aside from the Entebbe Agreement the State of South Sudan is invited to join. Egypt State Information Service (Cairo)

Eritrea offers support to Egypt's "historic rights" over the Nile’

GoE: April 18, 2013: Eritrean Foreign Minister Osman Saleh and Presidential Adviser for Political Affairs, Yemane Gebreab, handed a message from President Isaias to President Morsi of Egypt on Monday (April 13th) this week. According to Egypt's State Information Service, President Morsi, who said he looked forward to meet Eritrea's President, praised Eritrea's support for Egypt's claim to "historic rights" to the Nile water. This is the claim has led Ethiopia, Kenya, Uganda, Rwanda and Tanzania, and later Burundi to reject the colonial era Nile Water agreements between Egypt and Sudan. All these Nile Basin countries havesigned the Cooperative Framework Agreement to provide for reasonable and equitable utilization of the river. South Sudan has yet to sign but has also expressed its opposition to the 1959 Nile Water agreements between Sudan and Egypt. Government of Ethiopia (Addis Ababa)

NILE Politics - Military option was not considered - Egyptian Minister' CAIRO - April 30th, 2013: Minister Dr Mohamed Bahaa El Din, Minister of Water Resources and Irrigation, dismissed that news report that Egypt is preparing to attack Ethiopia to preserve. It is to be recalled that MiddleEast NewsLine claimed last week that: "[Egypt's] military has been preparing for the prospect that air strikes would be ordered to stop construction or simply destroy the Ethiopian dam," Minister El Din claimedthat the news is baseless and there has not been such discussion in the government. He made the remarks in an interview with a channel of Al- Jazeera on Saturday evening. Dr. El Din claimed that he, as a member of the government, would not recommend military solutions for handling theRenaissance dam issue. This is not a weakness, the Minister noted, rathercommitment to negotiation and the language of dialogue, which are certain to bring much better results. He added that talks of threats and war come back with negative results.

The Minister hopes that South Sudan will not rush to sign of the Nile BasinCooperative Framework Agreement (CFA), claiming that the signing wouldnot add anything as it is already signed by 6 countries. The Minister is apparently saying that the CFA's requirement of the signature of 6 countries is fulfilled and they can start ratification process with or without South Sudan anyways. There are non-military measures On the other- hand, former Minister of Water Resources and Irrigation, Dr. Mohamed Nasr Allam claimed there are effective measures - far from the use of violence – to pressure Ethiopia, In an interview with an Egyptian newspaper last Friday, the former Minister ruled-out the military option to prevent Ethiopia from completing Renaissance dam, explaining that there are alternatives to solve the problem, including convincing Ethiopia to reduce the dam's reservoir capacity from 74 billion cubic meters to 14 billion or to build smaller dams.

Dr. Allam suggested that there are many political measures which can be applied in coordination with "the brotherly State of Sudan" to pressure Ethiopia. Refusing to buy electricity from Ethiopia could be one of such measures, he said. Dr. Allam urged Egyptian officials to work with donors to prevent the provision of "any financial support, technical, technicians, based on the Egyptian-Sudanese booklet that shows damage to the dam".

He also recommended strengthening ties with countries in the region suchas Eritrea, Somalia and Djibouti. Dr. Allam suggested lobbying the Nile Basin countries by explaining Egypt's perspective, the impact of dam and that Egypt is not aganst the development of Ethiopia. In a related development, spokesperson of Egypt's President downplayed tensions withEthiopia last Wednesday. He was quoted as saying that: Ethiopia will not let its construction Renaissance Dam affect Egypt, if the dam has a negative impact, Ethiopians will "understand the situation and not allow harm to befall Egypt in the light of the historic ties between the two counties and the other Nile Basin countries"

Egypt drowns in the Nile ‘water war’

The Nile is the longest river in the world and runs through Rwanda, Ethiopia, Tanzania, Uganda, South Sudan, Sudan and Egypt, but instead of the being the great uniter, the Nile has become the great divider because of a dispute that is causing serious tension between two of thosecountries.

Analysis: By Abdel Latif el-Menawy - May 6, 2013 - Three years ago I warned of the water crisis and the Renaissance Dam via a series of articles. I traveled to Ethiopia and Eretria and met with late Ethiopian premier Meles Zenawi and Eritrean president Isaias Afewerki in an attemptto communicate and provide the public with the opportunity to know what’s going on. I have also done so out of my belief that journalism always has a role that when played properly and within the boundaries of national goals especially on foreign fronts, it can be a factor that helps achieving solutions. Back then, my concern was the crisis threatening Egypt; a war over the Nile’s water. So I went to Ethiopia, Eritrea, Sudan and South Sudan in an attempt to get a clearer picture and understand.

Our problem is that we always have a prejudgment on people and certain issues, and such an attitude sometimes leads us to the wrong conclusions.My aim was to understand what is currently going on regarding the Nile water war, to understand the reason for the Ethiopian stance and to understand where we currently stand regarding this matter. Back then, the suggested solution was that Egypt will not allow building any dams that affect its share of water. The international law actually stands on Egypt’s side regarding this point. At the same time, however, as studies were conducted to establish dams on the Nile from upstream countries, Egypt showed its willingness to contribute and cooperate in establishing them as long as no harm is done to Egyptian national security interests. I believe this is right path towards resolving this crisis: cooperating, studying and negotiating at the same time. The nine countries that share the Nile with Egypt are considered unstable countries which are incapable of launching giant projects on the river or incapable of agricultural land reclamation. These countries also suffer from local crises. Some of them suffer from civil wars, tribal struggles and economic problems. Huge projects also require international funding which cannot be provided without feasible studies approved by all countries that benefit from the river. Egypt’s entrance to deal with this crisis comes here. This point as

well brings up the probability that there is no imminent danger thatthreatens the Nile's flow to Egypt in the foreseeable future.

Political moves: During that phase, Egypt made several political moves. The most important of them was Egypt's concern over its strong ties with the Nile countries particularly Ethiopia which is connected through the river to Egypt and Sudan. Another move was Egypt's concern that developing the resources of the water cannot be carried out without the effective participation of all three countries since most of the Nile Basin countries enjoy more than one source of water. Egypt's share of rainfall however does not exceed 20 millimeters whilst in some of the Nile Basin countries, it can reach 20,000 millimeters. This means that Egypt suffers from a water deficit that reached more than 30%. It overcomes this deficit through recycling water. On this basis, we must know that any expense, burden or effort carried out in the area of the Nile Basin countries is not a waste of resources but a form of direct colonization in the future. And therefore, cooperating and strengthening ties with these countries is an important fateful issue. We must understand that any expense, burden or effort carried out in the area of the Nile Basin countries is not a waste of resources but a form of direct colonization in the future This is why the presidential initiative back then to establish a commission for the Nile Basin countries was important regardless of signing the Nile Basin Initiative now among the Nile Basin countries. Another important move was the concern not to escalate the rhetoric when addressing this issue yet emphasize that Egypt's historical rights of the Nile water are nonnegotiable. But at the same time, some of us must not be carried away with enthusiasm or with the desire to achieve fake heroic acts and end up escalating the rhetoric to reach the extent of making threats and sounding the drums of a war when there are no drums!

The issue must be resolved through maintaining patience, resuming negotiations and emphasizing that the concept of cooperation is the basisto compensate what was lost and the basis to maintain our rights that willnot be harmed. Although it has been three years since all of this, the group ruling Egypt drowned in its failure, greed and fake renaissance anddrowned us with it. According to media reports, the Brotherhood has not yet awaken from its slumber and is still studying the experts' commission's final report on the Ethiopian Renaissance Dam. The report will be submitted before the end of May in order to be put before the presidents of Egypt, Sudan and Ethiopia. The report indicates that Ethiopian studies on the dam "are incomplete." This is the same conclusion drawn by the experts' commission's last progress report. A practical study has also confirmed that the expected results from establishing the dam will be "disastrous" and will lead to displacing millions of Egyptian families. Amidst all this, what is really strange and what really raises a lot of questions is that the prime minister who is supposed to be aware of the repercussions of the upcoming water crisis since he served as chief of two ministers' offices for five years and then later served minister of irrigation has in fact added salt to the wound and further drowned us in the Nile crisis.

"We want to live and Ethiopians want to live – Egyptian Minister ofDefense'

Ahram Online: May 12, 2013: Defence Minister Abdel-Fattah El-Sisi dismisses notion of using military force as means of resolving longstanding dispute over Egypt's share of Nile water. Minister of Defence Abdel-Fattah El-Sisi stressed his refusal to resort to military force in orderto solve an ongoing saga over Egypt's share of the Nile water. "We want to live and they [Ethiopians] want to live, so we have to find a peaceful solution for this file which was abandoned for so long [during the reign offormer President Hosni Mubarak]," El-Sisi said while at a military base in Dahshour, Giza governorate. Fears over probable shortages of potable water in Egypt rose after a technical report on the impact of a new Ethiopian mega dam had revealed possible concerns of potential negativeinfluence on Egypt's share of the Nile Water. The report, according to a government official, is not suggesting that the 'Renaissance Dam' will drive Egypt into "water starvation but it is certainly saying that certain measures have to be followed to make sure that Ethiopia gets the water necessary for storage in the dam in line with Egypt's consent and needs." Irrigation minister said, 'Egypt not opposed to Ethiopia's Renaissance Dam'.

Ethiopia diverts Blue Nile for controversial dam build'

Ethiopian News: Ethiopia diverted the Blue Nile to begin building its largest dam project to date, the 6,000 MW Grand Ethiopia Renaissance Dam (GERD) – a move that angered Egypt, which fears its water supply will shrink over the many years it will take to fill the huge reservoir. "Ethiopia has reportedly neglected to formally consult with downstream Sudan and Egypt on the scheme, a decision which could further strain relations between the countries" Besides the tensions this huge project iscausing politically, there is growing concern that the dam will not producenearly as much power as it has been designed to." "While there are no known studies about the dam's impacts on the river's flow, filling such a huge reservoir (it will hold up to 67 billion cubic meters of water, and could take up to seven years to reach capacity) will certainly impact Egypt, which relies almost totally on the Nile for its water supply. Development Today magazine reports that the Nile flow into Egypt could be cut by 25% during the filling period. Many fear the project could set offa water war in the region, and indeed, in mid-2013, tensions flared dramatically. Climate change could increase the project's many risks. The potential for conflict is probably the main reason international funders have shown no interest in supporting the project."

Egypt and Sudan are concerned that the dam will affect vital water supplies Ethiopia has started diverting a stretch of the Blue Nile to makeway for a $4.7bn (£3.1bn) hydroelectric dam that has caused a dispute with countries downstream, state media say. The Great Ethiopian Renaissance Dam, which is currently under construction, is part of a

$12bn (£8bn) investment project to boost power exports. The Blue Nile isone of two major tributaries of the Nile – one of the world's longest rivers.Egypt and Sudan object to the dam. They say it violates a colonial-era

agreement, which gives them rights to 90% of the Nile's water. 'Fair use' The Grand Renaissance Dam, which is being built in the Benishangul- Gumuz region bordering Sudan, will eventually have a 6,000 megawatt capacity, according to the Ethiopian government. This is the equivalent ofat least six nuclear power plants. "The dam's construction… does not cause any harm on any country" said Alemayehu Tegenu Ethiopia's Energy Minister. "The dam is being built in the middle of the river so you can't carry out construction work while the river flowed," Mihret Debebe, chief executive officer of the state-run Ethiopian Electric Power Corporation (EEPCo), told the Reuters news agency. "This now enables usto carry out civil engineering work without difficulties. The aim is to divertthe river by a few metres and then allow it to flow on its natural course." Ethiopia claims to be the source of about 85% of the total water in the Nile.

The Blue Nile originates in the country's Lake Tana and flows hundreds ofmiles north into Sudan and then Egypt before eventually flowing into the Mediterranean. Egypt is particularly dependant on the water supply, withgrowing populations placing it under increasing strain, although Sudan also relies on the source. Egypt's Deputy Foreign Minister for African Affairs, Ali Hifni, said that the diversion of the river was not something toworry about, according to the Egyptian state-run news agency Mena. ButMr Hifni said that the dam itself was of concern. Experts from Ethiopia, Egypt and Sudan are set to announce findings of a study into the impact of the Ethiopian dam on the Nile's flow in the coming weeks. Ethiopia's energy minister, moved to dispel fears over the dam's impact, Reuters reports. "The dam's construction benefits riparian countries, showcases fair and equitable use of the river's flow and does not cause any harm onany country," Alemayehu Tegenu said.

Egypt could use Suez Canal to retaliate against Ethiopia dam move' Ahram Online: May 30, 2013 - updates - Opposition figure Hamdeen Sabbahi says Egypt could block Suez Canal to ships from countries that help Ethiopia build controversial dam on Blue Nile. Egypt could close the Suez Canal to ships from countries that help Ethiopia build a controversialdam on the Blue Nile in the event that the dam threatens Egypt's supply of Nile water, Egyptian Popular Current leader Hamdeen Sabbahi said Wednesday. "The state is capable of holding talks with the countries financing Ethiopia's Renaissance Dam project, especially China and Italy,"Sabbahi said. He went on to assert that Egypt was capable of prohibiting ships from those countries from transiting the Suez Canal "until they stopharming Egypt's interests." He also said that Ethiopia's decision to go ahead with the project – only days after President Mohamed Morsi's statevisit to the country – was "extremely humiliating to Egyptians."

In comments reported by Al-Ahram Arabic news website, Sabbahi also called on Egyptians to support the government in its dispute with Ethiopiaover the dam. On Tuesday, Ethiopia began diverting the course of the Blue Nile, one of the Nile River's two major tributaries, as part of its 'Renaissance Dam' project for electricity production, a move that raised concerns in Egypt and Sudan that the flow of water could be disrupted. A

final report on the impact of the planned dam by a joint committee of Egyptian, Sudanese and Ethiopian representatives is expected within days. “We will not accept any pressure when it comes to our water supply,” Sabbahi said. “Solutions must be presented to avoid conflict.” If Ethiopia continues with projects that harm Egypt, the nation will unite to deter an attack on its interests, he added. Sabbahi said that while he fullysupports Ethiopia’s right to increase its energy production, Egypt would not accept any reductions in its annual water supply.

If matters escalate, he said, a drop of water would exceed a drop of bloodin value. The best way to avoid conflict is to open new initiatives for strategic cooperation in the Nile Basin, he added. During the 21st African Union summit, President Morsi said Ethiopia’s Prime Minister Hailemariamhad vowed to consider Egypt’s interests regarding the dam. Egypt’s ambassador in Addis Ababa, Mohamed Idris, said Ethiopia’s intention to divert the Blue Nile had been known since November 2012. According to the state-run National Planning Institute, Egypt will require an additional 21 billion cubic metres of water per year by 2050 – on top of its current annual quota of 55 billion metres – to meet the needs of a projected population of some 150 million. Correction: Ahram Online had earlier quoted Sabbahi as saying that Egypt was capable of barring Ethiopian ships from crossing the Suez Canal. This is incorrect. Rather, he said thatships from those countries that financed the dam project could be prohibited from transiting the canal.

Egyptians up in arms as Ethiopia builds giant hydro dam on Nile; minister rules out war' Associated Press: June 1, 2013: Ethiopia's construction of Africa's largest hydroelectric dam on the world's longest river threatens toaffect flows of water to Nile-dependent, water-starved Egypt, where there is growing outrage, anger and fear. Egypt in the past has threatened to goto war over its "historic rights" to Nile River water but diplomats from bothcountries this week played down the potential for conflict. "A military solution for the Nile River crisis is ruled out," Egypt's irrigation and water resources minister, Mohammed Baheddin, said Thursday amid newspaper reports recalling the threats of war from Egypt's two previous leaders, Anwar Sadat and Hosni Mubarak. Ethiopia on Tuesday started diverting the flow of the Blue Nile for construction of the Grand Ethiopian Renaissance Dam. Eighty-five percent of Nile waters originate in Ethiopia yet the East African nation whose name has become synonymous with famine thus far utilizes very little of those waters. Ethiopia's decision challenges a colonial-era agreement that had given downstream Egypt and Sudan rights to the Nile water, with Egypt taking 55.5 billion cubic meters and Sudan 18.5 billion cubic meters of 84 billion cubic meters, with 10 billion lost to evaporation. That agreement, first signed in 1929, took no account of the eight other nations along the 6,700-kilometer (4,160-mile) river and its basin, which have been agitating for a decade for a more equitable accord.

And Ethiopia's unilateral action seems to ignore the 10-nation Nile BasinInitiative to promote cooperation. Ethiopia is leading five nations threatening to sign a new cooperation agreement without Egypt and

Sudan, effectively taking control from Egypt of the Nile, which serves some 238 million people. Mohammed Abdel-Qader, governor of Egypt's Gharbiya province in the Nile Delta, warned the dam spells "disaster" and is a national security issue for the North African nation. "Taking Egypt's share of water is totally rejected ... The Nile means everything to Egypt," said Gov. Abdel-Qader. Baheddin said Egypt already is suffering "water poverty" with an individual's share of 640 cubic meters well below the international average of 1,000 cubic meters. Egypt protests that others along the Nile have alternative water sources, while the Nile is the sole water source in the mainly desert country. Ethiopian officials say the dam is needed to provide much-needed power for development. At a ceremonymarking the diversion of the Nile, Deputy Prime Minister Demeke Makonnen said Ethiopia could export cheap electricity from the dam to energy-short Egypt and Sudan. He insisted the dam would not affect the flow of water to Egypt. Experts say otherwise.Alaa el-Zawahri, a dams engineer at Cairo University and an expert on a national committee studying the ramifications of the Ethiopian dam, said Egypt stands to lose about 15 billion cubic meters of water — 27 percent of annual share — each of the five years that Ethiopia has said it will take to fill the dam. Thecountry's current share already is insufficient. Egypt also would lose between 30 and 40 percent of its hydropower generation, he said.

"If I was more of an optimist, I would say it will cause significant damage (to Egypt)," he told The Associated Press. "If I was being pessimistic, it is a catastrophe.""Potentially catastrophic" is the opinion of Haydar Yousif Hussein, an Italian-based Sudanese hydrologist who has worked on Nile water issues for 35 years. The dam's reservoir "will hold back nearly one and a half times the average annual flow of the Blue Nile" and "drastically affect the downstream nations' agriculture, electricity and water supply," he said in an article published in the South African magazine Infrastructure News. Given the massive size of the dam, it could lose as much as 3 billion cubic meters of water to evaporation each year, Yousif added. Makonnen said the dam construction is at 21 percent and should be complete by 2015. Ethiopia has said the massive dam, located 60 kilometers (37 miles) from Sudan's border, is being built with a storage capacity for 74 million cubic meters of water and generating power of 6,000 megawatts — 30 percent more than the electricity produced by Egypt's Aswan Dam, built on the Nile in the 1960s. But very little other information is available. "It remains irresponsible for Ethiopia to build Africa's biggest hydropower project, on its most contentious river, with no public access to critical information about the dam's impacts," Yousif wrote. He urged Ethiopian officials to "allow some light to penetrate this secretive development scheme." Ethiopia has timed the dam's construction while Egypt is at its weakest. The government announced theproject in March 2011, when Egypt's government was overwhelmed by the Arab Spring revolution. The Nile diversion came the day after leaders of the two countries met in Addis Ababa, the Ethiopian capital, on the sidelines of an African Union summit, and days before Ethiopia, Egypt and Sudan were due to issue a technical report on the dam.

Information about the funding of the project is also unclear. The World Bank and other donors have refused involvement, reportedly because of Egyptian lobbying of countries like the United States, which considers Egypt a key ally and pivotal to security in the region. The contract for the
$4.8 billion project was awarded without competitive bidding to the Italiancompany Salini Construttori, according to Yousif and other experts.

Ethiopia says it is funding the massive project on its own, urging citizens to buy bonds that earn 5 or 6 percent interest. Norway's Development Today magazine quoted Kjetil Tronvoll of Oslo's International Law and Policy Institute as saying that government employees are being pressed todonate one month's salary to the dam and, when people protested, they were arrested. A journalist who wrote an article criticizing the fund-raisingmethods, Reeyot Alemu, was arrested, tried for terrorism and sentenced to two years' jail, according to the Committee to Protect Journalists (CPJ). The issue of the dam also highlights traditional differences between Africa's northern Arabs and the blacks of the south. That perception must be corrected, Egypt's assistant for foreign affairs, Essam el-Haddad, wroteon Egypt's foreign policy blog. "Egypt's rejection of the project reinforces a negative stereotype of Egypt that is spreading among the people of Africa ... that this country is the reason for the absence of development and economic progress in African countries because it has acquired, unduly, the largest share of (Nile) water for its development," he wrote. "Egypt seeks to be a real partner in development in Africa."

Striking Ethiopia's Nile dam bad for Egypt - Ex-commander of Egyptianforces at Gulf war’

Egypt Independent Analysis: June 1, 2013 - General Mohamed Ali Bilal ex-commander of Egyptian forces during the Gulf war, said that it is “impossible” to strike the Ethiopian Renaissance Dam because such a decision would be issuing a challenge to the entire world. Bilal told al- Arabiya satellite channel on Wednesday that such an attack would bring Egypt into conflict with those countries, such as China and Israel, whose citizens are involved in the construction of the dam. Egypt is not in a position to stand up to all those countries, he added.

He also said that, when the US launched Desert Storm and invaded Kuwait, it did so under the auspices of the UN. Besides, he added, there seems to be international consensus that Ethiopia has the right to build the dam. He emphasized that the US had planned its construction and that Israel is providing technical support. In Bilal’s view, the only way to tackle the crisis is to persuade the US to intervene on Egypt's behalf and convince the Ethiopians to mitigate the impact construction of the dam willhave.

Major General Ahmed Abdel Halim, a security and strategic expert, said that a diplomatic solution is the best way of handling this issue, while adding that striking the dam would not bring the aspired results. He also said that, as a last resort, Egypt could present its case to the InternationalCourt of Justice, the Security Council, and the International Criminal Court.

Ethiopia’s studies on Nile dam fall short, Egypt says'

Reuters CAIRO - June 2, 2013 – Ethiopia has not thought hard enough about the impact of its ambitious dam project along the Nile, Egypt said on Sunday, underlining how countries downstream are concerned about its impact on water supplies. The Egyptian presidency was citing the findings of a report put together by a panel of experts from Egypt, Sudanand Ethiopia on the impact of the plan to build a $4.7 billion hydroelectricdam. Ethiopia triggered deep concern in Egypt last week when it began work to divert the river as part of the project. Egypt depends on the Nile for nearly all its water. Egyptian President Mohamed Mursi, who met the Egyptian members of the tripartite committee on Sunday, referred the report to his government for "urgent action" with Sudan and Ethiopia to agree on steps to safeguard the river's flow.

Citing the findings of the report, the presidency said Ethiopia's "studies were not adequate for a project of this scale, and the committee's report recommended more studies of the economic and social aspects, the security of dams and water resources, not to mention the environmental aspects". Ethiopia has laid out plans to invest more than $12 billion in harnessing the rivers that run through its rugged highlands, to become Africa's leading power exporter. Centerpiece to the plan is the Grand Renaissance Dam being built in the Benishangul-Gumuz region bordering Sudan. Now 21 percent complete, it will eventually have a 6,000 megawatt capacity, the government says, equivalent to six nuclear powerplants.

Egypt warns not 'one drop' of Nile lost to Ethiopia dam'

June 3, 2013: President Mohamed Mursi Monday warned that Egypt wouldnot allow its share of the Nile to be diminished by "one drop" after Ethiopia began diverting the Blue Nile as part of a giant dam project. "Wecannot let even one drop of Nile water be affected," Mursi said during talks with political and religious leaders broadcast live on state television. The talks revolved around a report of a tripartite Egypt-Sudan-Ethiopia commission on Ethiopia's decision to divert the Blue Nile for a massive dam project, sparking fears of a major impact on downstream states Egypt and Sudan. "It is necessary that we take steps to ensure Egyptian water security," Mursi said on his official Twitter account without elaborating. "The current situation necessitates unity among our ranks to prevent anythreat against Egypt." Egyptian officials estimate that Ethiopia's move is largely technical and will not alter the water flow that is vital for both Egypt and Sudan. But Khaled al-Kazzaz, an adviser to Mursi, said the issue was one of "national security" for Egypt, with the cabinet last Wednesday reiterating that Cairo was opposed to all projects which couldaffect the flow of the Nile.

The Blue Nile joins the White Nile in Khartoum to form the Nile river whichflows through Sudan and Egypt before emptying into the Mediterranean.

Ethiopia has begun diverting the Blue Nile 500 meters from its natural course to construct a $4.2 billion (3.2 billion euro) hydroelectric projectknown as Grand Renaissance Dam. The first phase of construction is expected to be complete in three years, with a capacity of 700

megawatts. Once complete the dam will have a capacity of 6,000 megawatts. Egypt believes its “historic rights” to the Nile are guaranteed by two treaties from 1929 and 1959 which allow it 87 percent of the Nile’sflow and give it veto power over upstream projects. But a new deal was signed in 2010 by other Nile Basin countries, including Ethiopia, allowing them to work on river projects without Cairo’s prior agreement.

Opposition leader Mohammed El-Baradei calls on Morsy to apologize toEthiopia'

Al-Masry Al-Youm: June 4, 2013 - Mohamed El-Baradei, National SalvationFront Coordinator, called on President Mohamed Morsy to apologise to Ethiopia and Sudan for “the irresponsible utterances” made during the national dialogue session held on Monday to discuss the Ethiopian Renaissance Dam crisis. On his Twitter account, ElBaradei –also the President of the Dostour Party– demanded that Morsy offer similar apologies to both countries in the name of Egyptians. The live broadcast of the national dialogue on Monday sparked criticism by participants in thedialogue, including Ayman Nour –president of Ghad al-Thawra party. He called for holding responsible those who decided to broadcast on air what was supposed to be a closed dialogue session.

Pakinam al-Sharqawy, assistant presidential adviser for political affairs, extended her apologies for "any unintended embarrassment caused to anyof the political leaders who attended the national dialogue session to discuss the report submitted by the tripartite committee on the Ethiopian Renaissance Dam." On her Facebook page, Sharqawy said the decision forthe live broadcast of the dialogue session was taken just before the session, due to the significance of the Nile water dossier.

The most controversial contribution during the session was made by Ayman Nour, who suggested that Egypt disseminate rumors that it is seeking advanced aircrafts. He said this is an intelligence technique of intimidation. “It might not be realistic, but it will bring results on the diplomatic path”, he said. Nour, however, stated he believes diplomatic efforts will not yield great outcomes: “Ethiopians have taken the decision,and it is highly difficult for them to backtrack”. Chairman of the moderateIslamist Wasat Party, Abul Ela Mady, suggested sending army destroyers to the Bab al-Mandab strait and spreading rumors that Egypt is about to strike the dam.

Egyptian politicians sabotage Ethiopia's new dam'

CAIRO - By Hamza Hendawi: June 4, 2013 - Politicians meeting with Egypt's president on Monday proposed hostile acts against Ethiopia, including backing rebels and carrying out sabotage, to stop it from building a massive dam on the Nile River upstream. Some of the politicians appeared unaware the meeting with President Mohammed Morsi was being carried live on TV. Morsi did not directly react to the suggestions, but said in concluding remarks that Egypt respects Ethiopia and its people and will not engage in any aggressive acts against the EastAfrican nation. Morsi called the meeting to review the impact of Ethiopia's

$4.2 billion hydroelectric dam, which would be Africa's largest. Egypt in

the past has threatened to go to war over its "historic rights" to Nile Riverwater. Morsi's office later said he had directed his foreign and irrigation ministers to maintain contact with the Ethiopian government to obtain more information on the dam and its likely impact on Egypt's share of theNile water. His office's statement included an ominous-sounding note, saying: "Egypt will never surrender its right to Nile water and all options (to safeguard it) are being considered."

Ethiopia last week started diverting the flow of the Nile to make way for its hydroelectric plant dubbed the Grand Ethiopian Renaissance Dam. On completion, it is expected to produce 6,000 megawatts, and its reservoir is scheduled to start filling next year. An independent panel of experts hasconcluded that the dam will not significantly affect downstream Sudan andEgypt, which are highly dependent on the water of the world's longest river, said an Ethiopian official, who spoke Saturday on condition of anonymity because he was not authorized to speak publicly on the

topic. But in Cairo on Monday, Younis Makhyoun, leader of an ultraconservative Islamist party, said Egypt should back rebels in Ethiopiaor, as a last resort, destroy the dam. He said Egypt made a "strategic error" when it did not object to the dam's construction. Makhyoun said Ethiopia is "fragile" because of rebel movements inside the country. "We can communicate with them and use them as a bargaining chip against the Ethiopian government," he said. "If all this fails, then there is no choice left for Egypt but to play the final card, which is using the intelligence service to destroy the dam," said Makhyoun, whose Nour party won about 25 percent of parliament's seats in elections in late 2011and early 2012.

Another politician, liberal Ayman Nour, proposed spreading rumors aboutEgypt obtaining refueling aircraft to create the impression that it plans anairstrike to destroy the dam. "This could yield results on the diplomatic track," Nour said. Abu al-Ila Madi, leader of the pro-Morsi Islamist Wasatparty, suggested that a rumor that Egypt planned to destroy the dam could scare the Ethiopians into cooperating with Egypt on the project.

Magdy Hussein, another Islamist politician, warned that talk of military action against Ethiopia is "very dangerous" and will only turn Ethiopians into enemies. He suggested soft diplomacy in dealing with the crisis, including organizing a film festival in Ethiopia and dispatching researchersand translation missions.

Ethiopia's decision to construct the dam challenges a colonial-era agreement that had given Egypt and Sudan rights to the Nile water, with Egypt taking 55.5 billion cubic meters and Sudan 18.5 billion cubic meters of 84 billion cubic meters, with 10 billion lost to evaporation. That agreement, first signed in 1929, took no accountof the eight other nations along the 6,700-kilometer (4,160-mile) river and its basin, which have been agitating for a decade for a more equitableaccord.

Ethiopian Minister of Water and Energy Alemayehu Tegenu has said Egyptshould not worry about a diminished water share. "We don't have any irrigation projects around the dam. The dam is solely intended for electricity production ... So there should not be any concerns about a

diminished water flow," Alemayehu told The Associated Press on Saturday. Eighty-five percent of Nile waters originate in Ethiopia, yet thenation utilizes very little of them, and the country has become synonymous with famine. Source: Associated Press

Egypt, Ethiopia and the GERD'

Al-Ahram Weekly - June 5, 2013: The Ethiopian dam project could constitute a threat to Egypt, but only if Ethiopia is pushed into going it alone, instead of being coaxed onto a different path by genuine cooperative aid, writes Adel Amer. Ethiopia has begun operations to diverta portion of the Blue Nile preparatory to the construction of a major dam. Although this project had been anticipated for many years and in spite of repeated assurances from Addis Ababa that it would not affect Egypt, the Ethiopian decision to commence operations triggered anger and alarm among Egyptian public opinion, reactions reminiscent of the Iraqi and Syrian responses to the Ataturk Dam project many years ago. The crisis over the diversion of the course of the Nile dates back to May 2010, when six upper riparian countries in the Nile Basin, meeting in Entebbe, signed anew Nile Waters Treaty, giving Cairo and Khartoum a year's grace period to join. The Entebbe Treaty states that cooperation between the countries of the Nile Basin initiative is founded on the principle of fair and reasonable use on the part of the state parties. Recently, the signatory states began ratification procedures through their parliaments. Once the treaty goes into effect, it will bring an end to Egypt and Sudan's historic quotas under the 1929 and 1959 Nile Waters Agreements, in accordance with which Egypt obtained 55.5 billion cubic metres a year and Sudan 18.5 billion. The six countries that have signed the new treaty are Ethiopia, Uganda, Kenya, Tanzania, Rwanda and Burundi. The Democratic Congo joined Egypt and Sudan's refusal to sign. In March 2013, the newlyindependent South Sudan announced that it would join the treaty. Cairo and Khartoum have charged that the Entebbe Treaty "violates all international agreements" and vowed to alert donor nations to the illegality of funding any water projects on the Nile or its tributaries. They added that they would lobby against the Ethiopian dam project, in particular, which will cost an estimated $4.8 billion, according to the late Ethiopian Prime Minister Meles Zenawi. Ethiopia and the other signatory countries were unfazed by such protests and warnings, and on 1 April 2011, Ethiopia formally inaugurated the Great Millennium Dam project, or the Renaissance Dam, for the production of hydroelectric power for the Benishangul-Gumuz region, which is adjacent to the Sudanese border. Thedam, which is due to be completed in 2015, will create a reservoir of approximately 63 billion cubic metres of water.

Following the 25 January 2011 revolution, Egyptian popular leaders pressed the need to address this vital issue, stressing that it had to be handled objectively and in a spirit untainted by the "arrogance that had characterised the approach of the governments of former president HosniMubarak". On 29 April 2011, a "people's delegation", consisting of representatives of the revolutionary youth, political parties and other public figures, set off to Addis to discuss the Millennium Dam project.

Such actions inaugurated a new climate for handling dam initiatives and other issues related to the Nile waters. Perhaps because of this, Egyptianswere all the more shocked by the Ethiopian announcement of its decision to press ahead with the diversion of the Blue Nile within hours of PresidentMorsi's visit to Addis Ababa to attend the African Summit. On the sidelinesof this summit, Morsi met with Ethiopian Prime Minister Hailemariam Desalegn and raised Egyptian concerns with respect to the dam. Experts on the joint Egyptian-Ethiopian-Sudanese committee on this project foundthat "the studies that the Ethiopian side had submitted with respect to thedam were insufficient to prove that its construction would not be harmful to Egypt." In light of this, the tripartite committee will ask for additional studies, which will be undertaken by international experts on the committee. The committee is made up of six local members (two each from Egypt, Sudan and Ethiopia) and four international experts on dam engineering and hydrology, water resource management and the social, economic and environmental impact of dams.
The construction of the dam on the upper reaches of the Nile poses an enormous challenge to Egyptian agriculture. The consequent water shortage could lead to reduced domestic food production as well as to a reduction by approximately 500 kilowatts per year in the electricity generated by the High Dam and the Aswan Dam. Such a spectre induced the Sudan and Nile Basin Studies Unit of Al-Ahram Centre for Political andStrategic Studies to convene a seminar on this question. It hosted Mohamed Allam, former minister of irrigation and water resources, who had been responsible for this issue during one of the tensest periods in Egyptian-Ethiopian relations over a number of essential differences regarding the dam. Allam presented a paper to the forum discussing the various phases of this question, from the Egyptian perspective in particular. By way of background, Allam underscored a number of weaknesses on the Egyptian side: the scientific and technological lag, thespread of corruption, the deterioration in public services, and economic, social and cultural underdevelopment. He also mentioned the decline in Egypt's regional and international status and influence. At the same time,important political changes were taking place elsewhere in the Nile Basin.Ethiopia and Uganda were experiencing periods of economic growth and growing international support. In addition, Israeli influence in countries ofthe upper Nile Basin was increasing, while Egyptian influence remained minimal. Such factors contributed to augmenting the pressures on Egypt on one of its most crucial concerns, namely issues related to the Nile Basin initiative. Water projects on the Blue Nile, whether in Ethiopian highlands or in Sudan, would have a major impact on Egypt, as the Blue Nile accounts foraround 90 per cent of the water that reaches Egypt. Egypt is heavily dependent on the Nile for its water needs. As Allam pointed out in his paper, the Nile furnishes 55.5 billion cubic metres a year of water (under the current quota), while Egypt receives only a billion cubic metres a yearin rainfall, which falls primarily on the Mediterranean and Red Sea coasts and parts of the Sinai. There are subterranean water sources, but these

are non-renewable. The subterranean reserve in the Western Desert permits for the extraction of no more than three to five billion cubic metres per year over the next 50 to 100 years. Meanwhile, the costs of desalinisation are very high, and the quantities that this method supplies come to only 200 million cubic metres a year. According to Allam, Egypt'scurrent water needs amount to over 75 billion cubic metres a year, whichis about 30 per cent higher than the available resources. The deficit is made up for by recycling. The per capita share of water is only 700 cubic metres a year. However, by 2050, and given current population growth figures, per capita share of water will decline to 350 cubic metres per year. Water projects on the upper Nile would further imperil the situation.Large tracts of agricultural land would be lost. Hydroelectric power production would drop sharply and compel increasing reliance on gas-powered generators. Water purification plants and a number of other industries along the Nile would be severely affected, and the quality of irrigation water would deteriorate. In addition, there would be greater seepage of sea water into the northern coastal areas and the quality of the water in the northern freshwater lakes would decline.

TOWARDS A ROADMAP: Sudan and South Sudan are Egypt's most important partners in the foreseeable future, said Allam. Both need Egyptian support, expertise and investment. They also have water resources that could increase the yield of the Nile, large tracts of land suitable for cultivation and livestock, and mineral wealth. In addition, theyoffer promising markets for emergent Egyptian industries and skilled Egyptian labour. Politically, their unification would undermine regional andinternational designs to set the two countries against each other to the detriment of them both. Clearly, they would be well advised to create a joint technical body to examine the potential effects of the Ethiopian barrages on them both and to review the results of the Egyptian- Sudanese studies that had been conducted on this matter in the interest of formulating a unified vision on the dams on the basis of the bilateral agreement of 1959 that governs the Egyptian-Sudanese relationship with respect to the Nile waters. In his paper, Allam also discussed why Ethiopiaattaches such importance to the dam project. It has long been an Ethiopian dream to control the headwaters of the Blue Nile, he said.

Ethiopia would reap huge profits from the export of hydroelectric power toneighbouring countries, generating a major source of national revenue that would stimulate a qualitative leap in economic and social development, and enhance Addis Ababa's influence in the Horn of Africa and elsewhere in the continent. The net profit from the production and export of the electricity from the Mandaya Dam alone exceeds $7 billion ayear. The power — and hence income — generating capacity of the Renaissance Dam could be considerably greater. However, Addis also realised that these dams would not have this anticipated economic value unless they received the blessings of Egypt and Sudan, which would translate into the purchase of large quantities of the electricity they produce. Currently, Ethiopia, itself, does not have the domestic infrastructure or market capable of consuming a major portion of the

amount of electricity that could be generated, while the only two other major consumers would be Egypt and Sudan. Therefore, Egypt and Sudan's refusal to participate in a network would delay Ethiopia's ability tobenefit economically from the dams, at least until it develops a sufficient infrastructure and market locally, which would take several decades.

Egypt's regional and international drives concerning the Renaissance Dam project began in earnest in the middle of last year. Egypt rejected the feasibility studies for their failure to take into consideration the detrimental effects of this project on Sudan and Egypt. It sent its comments in this regard to the secretariat of the Nile Basin Initiative, to the technical bureau of the Eastern Nile Basin Commission, to the World Bank, to the European Market, to the Canadian Advisory Bureau, and to the Norwegian Consultancy Bureau that performed the feasibility and design studies for the project. It has also sustained talks with donor agencies and with China in order to drive home the severe detrimental repercussions of the dam on both Egypt and Sudan. In the course of thesetalks, Egyptian officials stressed that they are not opposed to the development drive in Ethiopia, but that they are determined to safeguard Egypt's water rights and their country's future. The fact remains that Ethiopia suffers a major water shortage. Indeed, it has the greatest deficiency in water of all the Nile Basin countries in spite of the fact that it is the major contributor to the Nile waters. At the same time, the Ethiopian highlands are not naturally suited to the construction of large dams and water reservoirs, regardless of the technology brought to bear, and even less to the transport of reserved water across its rugged terrain.Therefore, there is little need for the excessive alarm that has been stirredby some segments of the media recently. Still, the problem is not insignificant and there is a rift in Egypt's relations with other countries of the Nile Basin. In view of these considerations, Egypt needs to sustain a policy towards those countries based on the spirit of African brotherhood and cooperation, as opposed to confrontation and political blackmail. In this spirit, it must continue to offer aid and assistance to African countries,especially those in the Nile Basin, and not just in the realm of water resource development but also in a range of other fields, from agriculture to trade and industry and education.

The key to resolving the current crisis begins with Ethiopia, which should be given priority among the Nile Basin countries, in the construction of water projects. Ethiopia has the lowest rate of electricity consumption in the world — less than 1,000 megawatts (80 per cent of Ethiopians live without electricity). Nor will it affect Egypt and Sudan's share of Nile waterif Ethiopia undertakes small water projects commensurate with its topography, such as electricity generating plants that capitalise on steep inclines or agricultural projects, whether dependent on precipitation or irrigation, which in any case would be relatively limited in view of the ruggedness of the Ethiopian terrain. However, "Ethiopia can not divert a tributary of an international river shared by nine other nations. This is not just about Egypt and Sudan. International rivers are governed by laws and conventions, in accordance with which any action that affects water

quotas requires advanced notice and guarantees against possible harm," said Allam. Experts predict that by 2050, Egypt will require 21 billion cubicmetres of water above its current quota in order meet the needs of its population, which is expected to climb to 150 million by then. The writer ishead of Al-Masryeen Centre for Strategic Studies.

Conflicting reports emerge on visit of Egypt's spy chief to Sudan'

ST KHARTOUM: (June 5, 2013) Egyptian President Mohamed Morsi meetswith Defense Minister Abdel Fattah al-Sisi with the Head of Egypt Intelligence Mohamed Raafat Shehata and Interior Minister Mohamed Ibrahim at El-Thadiya at the presidential palace in Cairo on 23 May 23.

The Sudanese foreign ministry and the Egyptian embassy in Khartoum said today that have no knowledge of a visit by the director of the Egyptian intelligence as reported by government-owned and private media outlets in Cairo. Several Egyptian newspapers quoted security sources at Cairo airport as saying that a delegation led by spy chief Mohamed Raafat Shehata has boarded Egypt Air plane to Khartoum on Wednesday morning.

It was reported that Shehata was set to discuss Ethiopia's Grand Renaissance Dam and its move last week to divert a stretch of the Blue Nile river to make way for the $4.7 billion hydroelectric plant. The Blue Nile joins the White Nile in Khartoum to form the Nile which flows throughSudan and Egypt before emptying into the Mediterranean. But the Egyptian consul-general in Khartoum Mutaz Mustafa Kamel denied to the independent Khartoum newspaper any truth to reports of Shehata's visit. The Sudanese foreign ministry said that while it has no knowledge of the visit, it suggested that it could have taken place in coordination between Egyptian President Mohammad Morsi and his counterpart Omer Hassan al-Bashir. Morsi phoned Bashir yesterday to discuss the issue of the Ethiopian dam, state media reported.

Egypt, which has been involved in years of troubled diplomacy with Ethiopia and other upstream countries, said Ethiopia must now halt work on the dam and cautioned that all options are on the table to deal with this development. "It is Egypt's right to defend its interests, and other people have a right to follow their own interests. But there must be assurances the Ethiopian dam will not affect Egypt, otherwise all options are open," Ayman Ali, an adviser to Egyptian President Mohammad Morsi,warned on Wednesday according to Egypt's media. Pakinam el-Sharkawy,another presidential adviser, told the official MENA news agency that Egypt would demand that Ethiopia cease the construction of the dam, AFPreported.

The presidency considers the dam as a "national security" issue for Egypt,Sharkawy added. "Demanding of Ethiopia to stop construction of the dam it intends to build on the Blue Nile will be our first step," she said, according to MENA. Cairo has also grown concerned over what it views as Sudan's reluctance to adopt its stance and condemn the Ethiopian project prompting criticism from some Egyptian politicians including opposition figure Ayman Nour who described Khartoum's stance as "disgusting". The Sudanese information minister and government spokesperson Ahmed Bilal

Osman called on Egyptian officials to refrain from insulting his country. “Our view would not please the Egyptians and will upset them but Sudanwill benefit greatly from the [Ethiopian] dam,” Osman said in a TV interview. “The hurtful talk [against] Sudan does not serve the interests [of Egypt]” he added.
The Sudanese official further said the dam will enhance the flow of water from the huge reserves and feed the underground water while reducing dependency on rainfall. He said the benefits of the Ethiopian project will be shared by both nations. The first phase of construction is due to be finished in three years, with a capacity of 700 megawatts. Once fully complete, the dam will have a capacity of 6,000 megawatts.
Egypt believes its “historic rights” to the Nile are guaranteed by two treaties from 1929 and 1959 which allow it 87 percent of the Nile’s flow and give itveto power over upstream projects. But a new deal was signed in 2010 byother Nile Basin countries, including Ethiopia, allowing them to work on river projects without Cairo’s prior agreement. Sudan has refused to join this accord in solidarity with Egypt.
Our view would not please Egyptians but Sudan will benefit from theGERD –GoS spokesman’
(KHARTOUM) – June 5, 2013: The Sudanese foreign ministry and the Egyptian embassy in Khartoum said today that have no knowledge of a visit by the director of the Egyptian intelligence as reported by government-owned and private media outlets in Cairo. Several Egyptiannewspapers quoted security sources at Cairo airport as saying that a delegation led by spy chief Mohamed Raafat Shehata has boarded EgyptAir plane to Khartoum on Wednesday morning. It was reported that Shehata was set to discuss Ethiopia’s Grand Renaissance Dam and its move last week to divert a stretch of the Blue Nile river to make way forthe $4.7 billion hydroelectric plant. The Blue Nile joins the White Nile in Khartoum to form the Nile which flows through Sudan and Egypt before emptying into the Mediterranean. But the Egyptian consul-general in Khartoum Mutaz Mustafa Kamel denied to the independent Khartoum newspaper any truth to reports of Shehata’s visit.
The Sudanese foreign ministry said that while it has no knowledge of the visit, it suggested that it could have taken place in coordination between Egyptian President Mohammad Morsi and his counterpart Omer Hassan al-Bashir.Morsi phoned Bashir yesterday to discuss the issue of the Ethiopiandam, state media reported. Egypt, which has been involved in years of troubled diplomacy with Ethiopia and other upstream countries, said Ethiopia must now halt work on the dam and cautioned that all options areon the table to deal with this development. “It is Egypt’s right to defend its interests, and other people have a right to follow their own interests.
But there must be assurances the Ethiopian dam will not affect Egypt, otherwise all options are open,” Ayman Ali, an adviser to Egyptian President Mohammad Morsi, warned on Wednesday according to Egypt’s media. Pakinam el-Sharkawy, another presidential adviser, told the officialMENA news agency that Egypt would demand that Ethiopia cease the construction of the dam, AFP reported. The presidency considers the dam

as a “national security” issue for Egypt, Sharkawy added. “Demanding of Ethiopia to stop construction of the dam it intends to build on the Blue Nilewill be our first step,” she said, according to MENA.
Cairo has also grown concerned over what it views as Sudan’s reluctance to adopt its stance and condemn the Ethiopian project prompting criticismfrom some Egyptian politicians including opposition figure Ayman Nour who described Khartoum’s stance as “disgusting”. The Sudanese information minister and government spokesperson Ahmed Bilal Osman called on Egyptian officials to refrain from insulting his country. “Our viewwould not please the Egyptians and will upset them but Sudan will benefitgreatly from the [Ethiopian] dam,” Osman said in a TV interview. “The hurtful talk [against] Sudan does not serve the interests [of Egypt]” he added. The Sudanese official further said the dam will enhance the flow ofwater from the huge reserves and feed the underground water while reducing dependency on rainfall. He said the benefits of the Ethiopian project will be shared by both nations.

Hydro-politics - Why Kenya needs to heed belligerent noises from both Egypt and Ethiopia' By Charles Onyango-Obbo, Daily Nation - June 6, 2013: Kenya could soon be in for a shock. Why? Well, with a new government that is still taking shape, the country is understandably preoccupied with domestic affairs. The same is true of most of the rest of East Africa. Uganda is in the throes of a messy squabble over President Yoweri Museveni’s succession. Tanzania has its hands full of former and current US presidents visiting, and figuring out who will step into President Jakaya Kikwete’s shoes when he leaves office in 2015. Up north,however, Ethiopia and Egypt are coming dangerously close to a nasty
face-off over Addis Ababa’s move to build the giant Renaissance Dam on the River Nile. Reports have it that at 6,000 MV, the dam will be the largest hydroelectric power plant in Africa, and 14th largest in the world. In March 2011, when Egypt was still distracted by the uprising that had just ousted its strongman Hosni Mubarak, Ethiopia awarded the contract for the building of the $8.4 billion dam, and a month later on April 2, Prime Minister Meles Zenawi laid the foundation stone. By the time the dust settled in Cairo, the dam deal was done. On Sunday, Egypt’s President Mohamed Morsi, a man who lately has had no time for the political parties in his country except his own Muslim Brotherhood, called ameeting with them to discuss Ethiopia’s dam plans. Egypt in the past has threatened to go to war over its “rights” to River Nile waters, given by a

discredited 1929 colonial treaty that gave it and Sudan 90 per cent of theriver's water.
On Tuesday press agencies reported Egypt's minister of Water Resources and Irrigation Mohamed Bahaa-Eddin arguing that the 74 billion cubic meters of Nile water stored behind the Egyptian High Dam would be diverted to Ethiopia's intended dam. "We are living in an era of water shortage and we will not allow any reduction of Egypt's share of Nile water(which is 55.5 billion cubic meters)," he said. "Life in Egypt depends on the Nile, water is a national security matter for us, and we will never relent on this issue."
Tough words. With growing populations and economies in the Nile Basin countries, more and more of them will dam the Nile and divert water to irrigation. Add to that, Ethiopia is a stubborn country. Its population today is nearly 90 million. Egypt's is close to 83 million. Egypt is an African power in decline. Ethiopia is an Africa power onthe rise. Everyone hopes that Egypt is smart enough, and won't go to war.It would be an expensive conflict. It does not share a border with Ethiopia,so it will have to get [north] Sudan to join it or allow it to use its territory to attack Ethiopia. But generals can be mad men. In any case, if Egypt loses just 25 per cent of the water it is receiving from the Nile, it could collapse.
Such a war could see millions of Ethiopians flooding Kenya. So Kenya, andEast Africa for that matter, can take early steps to minimise the fall-out.
First, and most critically, South Sudan needs to be supported to get itshouse in order and become a strong state with a modern military.
Secondly, Ethiopia must bury the hatchet with Eritrea and bring it into its fold of allies. From South Sudan and Eritrea, Ethiopia could choke off any Egyptian-Sudan southward advance from the flanks. But even more important, Somalia needs to be helped to stabilise. That will allow Kenya to move its troops to the border with Ethiopia, but also a stable Somalia will allow Ethiopia to secure its rear. Indeed, if I were Egypt, I would fightthe war over River Nile in Somalia and support not just anti-Addis Al Shabaab militants, but also back Ogadeni nationalists intent on retaking the Ogaden Province from Ethiopia (not surprisingly, two Egyptian generals were in Somalia this week to discuss military training). Just keeping its long border with Somalia protected, and preventing the Ogaden from being pried away, would leave Ethiopia no time or resourcesfor anything else, including pushing ahead with the Renaissance Dam. It might be a good thing for journalists covering regional security to take to sleeping lightly.
Egypt ups the status quo-ante on Nile dispute with Ethiopia'
CAIRO, UPI (June 6, 2013) – Updates: Egypt's dispute with Ethiopia over the Nile River has gotten sharper with calls by political leaders for direct action to stop Addis Ababa from building a massive dam Cairo says will cut off water on which the Land of the Pharaohs depends for survival. An independent panel of experts reported Sunday Ethiopia's $4.7 billion Grand Renaissance Dam on the Blue Nile will not significantly affect Egypt and neighboring Sudan. But that does not seem to have pacified the Egyptians who under a 1929 colonial-era agreement get the lion's share of

the Nile's flow of 85 billion cubic meters a year and refuses to surrender any of it. The Ethiopians' massive hydroelectric dam, 20 percent built, would reportedly cut that by 18 billion cubic meters annually, which Cairosays is well below the minimum it needs for its 82 million people.

Ethiopia began diverting the Blue Nile May 29 to allow the main dam wall of the planned 6,000 megawatt hydroelectric project to be built. That caused consternation and anger in Cairo about the long-term threat to irrigation and electricity supplies. At a meeting Monday of Egyptian political leaders hosted by President Mohamed Morsi, several politicians, unaware the gathering was being televised live called for hostile action against Addis Ababa, including sabotage and attacks by local insurgents. Younis Makhyoun, leader of an ultra-conservative Islamist party, urged the government to retaliate by supporting Ethiopian rebels, or as a last resort, "using the intelligence service to destroy the dam." This is just the latest chapter in a long confrontation over the Nile between Cairo, backed by neighboring Sudan, and Ethiopia and several other upstream African states over sharing the Nile's waters. Ethiopia is particularly proprietorial since the Blue Nile, a major tributary of the world's longest river, starts in the Ethiopian highlands. In the Arab world, where conspiracy theorists thrive, many see the Ethiopian action as an African plot against the Arabs.In February, Saudi Arabia's deputy defense minister, Prince Khaled bin Sultan, declared Riyadh takes a dim view of Ethiopia's ambitious dam- building on the Nile. He accused Addis Ababa of seeking to harm Arabs, and ventured: "There are fingers messing with the water resources of Egypt and Sudan which are rooted in the mind and body of Ethiopia. They do not miss an opportunity to harm Arabs." There has been no shortage ofaccusations of subterfuge and intrigue by both camps. In November 2010,the late Ethiopian dictator Meles Zenawi boasted he would swiftly vanquish any attempts by Cairo to use military force. "I'm not worried that the Egyptians will suddenly invade Ethiopia. Nobody who has tried that has lived to tell the story." In August 2012, WiliLeaks quoted an alleged 2010 internal email from the U.S. global security consultancy Stratfor in which an unidentified "high-level Egyptian security/intel source in regular direct contact with" then President Hosni Mubarak and his late intelligence chief, Gen. Omar Suleiman, spelled out Cairo's military options. "If it comes to a crisis," the source wrote, "we will send a jet to bomb the dam and come back in one day, simple as that. "Or we can send out Special Forces to block/sabotage the dam. Look back at an operation Egypt did in the mid-late 1970s, I think 1976, when Ethiopia was trying to build a large dam. "We blew up the equipment whileit was traveling by sea to Ethiopia. A useful case study." Another reported plan by Egypt was coordinating with southern neighbor Sudan, which would also be affected by the Ethiopian dam, to build a military base in itsterritory from which to bomb the Grand Renaissance and other Ethiopian dams. The secret base, according to other sources, would be located at Kursi in the western Darfur region. The dictatorial Meles is reported to have drawn up plans to attack Egypt's Soviet-built Aswan Dam on the Nile, believing a regional version of the Cold War's threat of mutual

assured destruction would prevent open warfare. In May, there were media reports the Ethiopian regime had released insurgent prisoners fromthe Benshangul People's Liberation Movement which operates out of Sudan, as part of a peace process aimed at protecting the Grand Renaissance Dam from attack. The guerrillas had earlier threatened to attack the dam, which is near the Sudanese border.

Egypt demands Ethiopia halt Nile dam, upping stakes’

CAIRO (Reuters) - Updates: June 6, 2013: Egypt will demand Ethiopia stop building a dam on one of the main tributaries of the Nile, a senior government aide said on Wednesday, ramping up a confrontation over theproject that Egypt fears will affect its main source of water. Ethiopia set off alarm bells in Cairo last week when it began diverting a stretch of the river to make way for the $4.7 billion hydroelectric plant. Countries that share the river have argued over the use of its waters for decades - and analysts have repeatedly warned that the disputes could eventually boil over into war. The high stakes involved were underlined on Monday when senior Egyptian politicians were caught on camera advising President Mohamed Mursi to take hostile action to stop the project, and one went asfar as suggesting Cairo destroy the dam. Egypt, which has been involved in years of troubled diplomacy with Ethiopia and other upstream countries,said Ethiopia must now halt work on the dam. "Demanding that Ethiopia stop construction of the dam it plans to build on the Blue Nile will be our first step," said Pakinam el-Sharkawy, the presidential aide for political affairs, in comments carried on the state news agency MENA. "The national committee that will be formed to deal with this issue will determine the steps that Egypt has to take." No one from the Ethiopian government was immediately available to comment.

CAUGHT ON CAMERA:

Senior Egyptian politicians called in to discuss the crisis with Mursi on Monday were apparently unaware their meeting was being broadcast live on television. The leader of Egypt's Ghad party, Ayman Nour, suggested spreading false reports that Egypt was building up its air power. "We can 'leak' news information claiming that Egypt plans to buy advanced aircraftto increase its aerial presence etc., to put pressure, even if not realistic, on diplomatic discourse," he said. Younis Makhyoun, leader of the Salafi Islamist al-Nour party, was filmed saying Egypt should back rebels in Ethiopia or, as a last resort, destroy the dam. The broadcast triggered widespread ridicule, particularly among Egypt's vast army of users of social networks. "Among Mursi's achievements: the first 'secret' meeting in the world to be aired live," read one joke that made the rounds.

Egypt has so far not apologised to Ethiopia for the broadcast - el- Sharkawy's main response on Twitter was to say she was sorry membersof the meeting did not know they were being broadcast. The most prominent expression of regret came from leading opposition figure Mohamed ElBaradei, who was invited to the meeting but did not attend. "Sincere apologies to the people and governments of Ethiopia and Sudanfor the irresponsible utterances at the president's national dialogue," he tweeted. Ethiopia has laid out plans to invest more than $12 billion in

harnessing the rivers that run through its rugged highlands to become Africa's leading power exporter. The centrepiece of the plan is the Grand Renaissance Dam being built in the Benishangul-Gumuz region bordering Sudan. Now 21 percent complete, it will eventually have a 6,000 megawatt capacity, the government says, equivalent to six nuclear powerplants. Cairo argues that Ethiopia has not properly considered the dam's impact on the river, saying that a report put together by experts from Egypt, Sudan and Ethiopia is insufficient.

Ethiopia summons Egypt's ambassador over Nile dam attack proposals' Associated Press: ADDIS ABABA, Ethiopia — June 7, 2013: Ethiopia's Ministry of Foreign Affairs said Thursday it is demanding an official explanation from Egypt after comments from politicians suggesting Egyptattack or sabotage a Nile River dam Ethiopia is building. Dina Mufti, a spokesman for the ministry, said that Egypt's ambassador to Ethiopia hasbeen summoned to explain the "hostile remarks." The spokesman said Ethiopia is awaiting a response. Ethiopia a week ago started diverting theflow of the Nile River to make way for its $4.2 billion hydroelectric plant, dubbed the Grand Ethiopian Renaissance Dam. Egypt fears the dam will mean a diminished share of the Nile River. Egyptian political leaders who met their president on Monday proposed aiding rebels against the Addis Ababa government. Sabotaging the dam itself was also mentioned by politicians who appeared not to know their meeting was being televised. Egyptian Foreign Minister Mohammed Kamel Amr, in a statement Thursday, said Egypt will seek to coordinate with Sudan and Ethiopia overthe issue of the dam going forward. Amr also said Egypt's water security cannot be ignored or hurt.

"There is a large window for dialogue and discussion between Egypt, Ethiopia and Sudan to arrive at the ideal form for the dam that ensures safeguarding Egypt's water interests, realizing the development objectivesof all three nations and avoiding any negative effects that may hurt downstream nations," he said. On Wednesday, a close aide of Islamist President Mohammed Morsi announced that work was under way to createa national commission to deal with the issue. She said demanding that Ethiopia halts work at the dam will be given priority, but added that the decision to make a formal request will rest with the proposed commission.Another Morsi aide, Ayman Ali, said there was no proof that Monday's televised remarks have hurt Egypt's position. "It may have actually servedthe Egyptian position because the views stated, while some were radical, have shown the extent of alarm felt by the Egyptians," Ali said. Dina said Ethiopia's construction plans have been "vindicated" by a 10-man panel ofexperts who found after a year of study that the renaissance dam will not significantly affect Egypt or Sudan. The panel was composed of four international experts and two from Egypt, Sudan and Ethiopia. Dina said Ethiopia is ready to negotiate with both Egypt and Sudan for "mutual benefits."

Why has the Nile River becomes a battleground? – IR

The Nile in Egypt: Lifeline in a desert. – NASA By Lori Pottinger (June 7,2013) - This week, Ethiopia announced it was diverting the flow of the

Blue Nile to begin building the huge Grand Ethiopian Renaissance Dam.Within days, water-stressed Egypt – a downstream Nile Basin nation – called for Ethiopia to halt its work on the giant new dam. This followed
a live televised drama in which Egyptian politicians (unaware the cameraswere running) brainstormed ways to stop the project, some of which involved hostilities. In a more tempered response, President Morsi's officehas announced that Egypt would create a national commission to addressthe dam and its impacts on transboundary water sharing on the Nile.
Ethiopia has reportedly summoned Egypt's ambassador in Addis Ababa toexplain the hostile response.
Why is the Grand Ethiopian Renaissance Dam causing such strife? In addition to Egypt's fears that it will reduce its lifeline of Nile waters, the tensions have been fanned by the project's "SAD" planning process:
Secretive: Although it is Africa's biggest dam project and will have lasting impacts on its longest river, it has been developed under a veil of secrecy.Autocratic: The dam will impact Ethiopians and downstream neighbors, yet its planning process has been top-down and unilateral. The public anddam affected people have not been given a meaningful opportunity to critique the project or process.
Dismissive: Ethiopian government officials have flatly stated they will notmake changes to the project, and have asserted that the project will not have impacts on downstream countries.
The Blue Nile starts in the Ethiopian highlands and flows into the Sudans and Egypt. The dam poses a number of risks to these downstream neighbors; one reason for the growing tension is that these risks have notbeen properly analyzed. Egypt has virtually no other sources of water for its people, and is already making do with less water per person than the international average. By at least one estimate, the Grand Renaissance reservoir could evaporate 3bn cubic meters of water a year – three times Egypt's annual rainfall, and enough to meet the basic needs of up to half amillion people. The reservoir could take 3-5 years to fill, reducing Egypt's water supply by up to 25%. A Kenyan journalist writes: "If Egypt loses just 25% of the water it is receiving from the Nile, it could collapse." Climate change, that cruelly unpredictable specter, will only intensify the region's water conflicts.
Like all nations, Ethiopia has the right to exploit its natural resources for its own development aspirations. And there is widespread acknowledgment that Ethiopia deserves a fairer apportionment of Nile waters – after all, a colonial-era treaty that excluded Ethiopia and grantedthe lion's share of Nile waters to Egypt is an outdated roadmap for water sharing in this century. However, damming off a shared river in a secretive and unilateral fashion is a provocative approach to resolving conflict in a water-stressed basin such as the Nile. Says Mohamed Allam, former minister of irrigation and water resources in Egypt: "This is not justabout Egypt and Sudan. International rivers are governed by laws and conventions, in accordance with which any action that affects water quotas requires advanced notice and guarantees against possible harm."

The Nile situation is not an isolated incident. Ethiopia is being similarly aggressive over the development of the shared Omo River, where it is building the controversial Gibe III Dam and developing large-scale plantations. These developments threaten Kenya's Lake Turkana, which derives 90% of its water from the Omo River. Rather than consulting with communities of the Lower Omo River Valley affected by schemes to lease land to foreign agribusiness and control the flow of the river, affected communities have instead been subjected to a wide range of human rightsviolations and repression.

Shared rivers should be handled in a way that protects the livelihoods of those who depend on them, helps prepare the most vulnerable for adapting to a changing climate, and increases cooperation among neighboring states. The approach that governments take in managing shared rivers can either divide or unite. With construction beginning on GERD, Ethiopia is literally dividing the Nile with a huge wall, and letting the chips fall where they may. It's a shortsighted approach that may playwell at home, but its unintended consequences could be far-reaching.

Egyptian saber-rattling aside, the responsibility rests with Ethiopia to takethe next steps to reduce this crisis, and resolve its failures in the planningand execution of this dam.

But what if Ethiopia refuses to engage? Some believe the International Court of Justice should be called in. – a move that Ethiopia rejects. Othershope Ethiopia's major donors will use their diplomatic leverage to intervene. And still others hold out hope that the crisis will prove to be anopportunity to improve cooperation over the Nile.

Western donors have thus far mostly stayed out of the debate on Ethiopia's dam building. Yet Ethiopia is one of the world's largest recipients of foreign aid. The US has been the largest donor to the country, through a range of programs. Ethiopia has been receiving $3.5 billion on average from international donors in recent years – a critical portion of its national budget. This assistance explains how such a poor nation can afford to build costly dams and irrigation infrastructure withoutdedicated funding. Western donors such as the United States have a responsibility to step up diplomatic pressure on Ethiopia and call for moreopenness in this process, and a more collaborative approach to managingthe Nile River.

Egypt lawmakers lambast PM over Ethiopia dam'By MAGGIE MICHAEL — Associated Press

CAIRO — June 10, 2013 - Angry Egyptian lawmakers accused the country's prime minister and government on Monday of doing nothing to prevent Ethiopia from completing a dam that threatens to leave Nile- dependent Egypt with a dangerous water shortage. Prime Minister Hesham Kandil had just finished addressing parliament about how the government planned to work diplomatically, legally and technically to negotiate with Ethiopia over the dam when the session heated up. He called the dam's construction an "act of defiance" and stressed that Egyptwill not give "a single drop of water," but then hurriedly left the chamber despite calls for clarification over how to handle the situation if Ethiopia

rejects overtures. “Egypt will turn to a graveyard” if the dam is completed,geologist and Egyptian lawmaker Khaled Ouda shouted to parliament. “The prime minister didn’t provide anything.” “We have to stop the construction of this dam first before entering negotiations,” he said.

Egypt in the past has threatened to go to war over its “historic rights” to the waters of the Nile River. Last week, Egyptian political leaders caused uproar after proposing to aid rebels against the Ethiopian government or even sabotaging the dam itself. Ethiopia demanded an official explanation.Egypt faces the prospect of its current water shortage worsening when theso-called Grand Ethiopian Renaissance Dam is completed. Ethiopia’s decision challenges a colonial-era agreement that had given downstream Egypt and Sudan rights to the Nile water, with Egypt taking 55.5 billion cubic meters and Sudan 18.5 billion cubic meters of 84 billion cubic meters, with 10 billion lost to evaporation. That agreement, first signed in1929, took no account of the eight other nations along the 6,700- kilometer (4,160-mile) river and its basin, which have been agitating for adecade for a more equitable accord. Ethiopia’s unilateral action seems to ignore the 10-nation Nile Basin Initiative, a regional partnership formed in1999 that seeks to develop the river in a cooperative manner.

Ethiopia is leading a group of five nations threatening to sign a new cooperation agreement without Egypt and Sudan, effectively taking control from Egypt of the Nile, which serves some 238 million people. Experts estimate that Egypt could lose as much as 20 percent of its Nile water in the three to five years needed for Ethiopia to fill a massive planned reservoir. Abdullah Badr, who leads the ultraconservative Salafi caucus in parliament, held up a blank notebook after Kandil’s speech andsaid: “I have been taking notes and the page for solutions is blank.” “Where are the studies? Where are the solutions?” He added. “There is nothing more dangerous than this. This is about water security and thereare enemies outside and inside – what is the role of the government and what did it do?” he said. Ethiopian officials have downplayed he effect thedam will have on Egypt, saying it is needed to provide much-needed power for the country’s development.

Egypt warns all options open for Ethiopia Nile dam’

By AYA BATRAWY and MAGGIE MICHAEL, Associated Press, June 11, 2013Updates: CAIRO (AP) — Egypt's president on Monday hardened his stanceagainst Ethiopia and its construction of a Nile dam, warning that "all options are open" in dealing with the project that threatens to leave Egyptwith a dangerous water shortage. Speaking in a live televised speech before hundreds of supporters, Mohammed Morsi said Egypt is not calling for war, but it is willing to confront any threats to its water security. "If it loses one drop, our blood is the alternative," he said to a raucous crowd oflargely Islamist supporters that erupted into a standing ovation.

Ethiopia's $4.2 billion hydroelectric dam, which would be Africa's largest, challenges a colonial-era agreement that had given Egypt and Sudan the lion's share of rights to Nile water. Experts estimate that Egypt could loseas much as 20 percent of its Nile water in the three to five years needed for Ethiopia to

fill a massive reservoir. "If Egypt is the Nile's gift, then the

Nile is a gift to Egypt," Morsi said in his opening remarks. The president's speech reflected the importance of the Nile River to Egypt. It provides almost all of the fresh water to a country that is otherwise largely parcheddesert. As much as 85 percent of the Nile's water comes from Ethiopia. "We are not calling for war, but we will not allow, at all, threats against our water security," Morsi said before adding, "all options are open." Morsiappeared to be using concern about Ethiopia's mega project to whip up nationalistic fervor ahead of protests planned against him later this month.

In the conference hall where Morsi delivered his speech, some of his supporters chanted slogans against Israel and accused it of colluding with Ethiopia to harm Egypt. Blaming Israel for Egypt's problems is common here. Israel denied any connection to the construction of the dam. Morsi said he would be willing to approach opposition groups in order to unite Egyptians around a common position with regard to the dam. This came after two prominent opposition parties declined an invitation to meet Morsilast week, citing a lack of transparency in dealing with national issues anda failure to listen to them. "The great Nile is that which all our lives are connected to. The lives of the Egyptians are connected around it ... as one great people," Morsi told the crowd. Shifting his tone later in the speech, Morsi said that Egypt considers Ethiopia a "friend" and noted he has visited the country twice since taking office. He said his administration is in continuous dialogue with Ethiopia and Sudan to discuss water rights.

Earlier in the day, angry Egyptian lawmakers accused Morsi's premier ofdoing nothing to prevent Ethiopia from building the dam. Prime MinisterHesham Kandil had just finished addressing parliament about how the government planned to work diplomatically, legally and technically with Ethiopia over the dam when the session heated up. Kandil called the dam's construction an "act of defiance," but then hurriedly left the chamber despite calls for clarification over how to handle the situation ifEthiopia rejects overtures. "Egypt will turn to a graveyard" if the dam iscompleted, Egyptian lawmaker Khaled Ouda, a geologist, shouted to parliament. "The prime minister didn't provide anything."

Abdullah Badr, who leads the ultraconservative Islamist Salafi caucus in parliament, held up a blank notebook after Kandil's speech and said: "I have been taking notes and the page for solutions is blank." "Where are the studies? Where are the solutions? This is about water security and there are enemies outside and inside — what is the role of the government and what did it do?" he said. The crisis plays into a wider feeling of malaise in Egypt. A diverse spectrum of the population is growing increasingly impatient with Morsi's handling of the country's instability, including a security breakdown and a struggling economy, more than two years after an uprising toppled longtime President Hosni Mubarak. Opposition activists are hoping to harness the frustration of Egyptians into mass protests planned on the anniversary of Morsi's takingoffice June 30. Suggestions last week by some political leaders to aid rebels against the Ethiopian government or even sabotage the dam itself

also heightened concerns in Egypt. Ethiopia has demanded an officialexplanation.

Egypt faces the prospect of its current water shortage worsening when theGrand Ethiopian Renaissance Dam is completed. The crisis started last month when Ethiopia diverted the flow of the Blue Nile, one of the Nile's sources, to make way for the dam — before a 10-member panel of experts from Egypt, Sudan, Ethiopia and other countries released a study on the dam's impact. The move took the Egyptian government by surprise. Ethiopia's unilateral action appeared to ignore the 10-nation Nile Basin Initiative, a regional partnership formed in 1999 that seeks to develop the river in a cooperative manner. Egypt complained that the 10- member panel did not give concrete answers to the impact of the dam, because Ethiopia failed to provide enough updated data to the panel.

Ethiopia said the report assured that the dam will not harm Egypt. It wasnot possible to obtain a copy of the report to independently examine its conclusions.

Egypt escalates war of words over Ethiopia’s Nile Dam Project' Updates: Addis Ababa — June 11, 2013 - Tensions between Egypt andEthiopia heightened on Monday after Cairo threaten Addis Ababa in connection with its first dam project along the Blue Nile. Egypt, which has long been opposing the construction of the $4.8 billion dam, said it will nottolerate any attempt by the horn of Africa’s nation that diminishes its water share. Addressing to Egyptians on a live televised speech, Egyptian President Mohammed Morsi warned that his country is ready to confront any threat that would endanger the country’s water security. “Egypt’s water security cannot be violated at all,” said Morsi. “As president of the state, I confirm to you that all options are open.”

The Egyptian president however said that he is not calling for war but warned that he would not allow any type of threats against water security.President Morsi’s comments come after Egyptian politicians this week intensified pressure on him for doing not doing enough to stop the Grand Renaissance Ethiopian Dam (GERD). Although Ethiopia is the source of 85 percent of the Nile’s water, a colonial-era treaty grants Egypt the use of over 70 percent of it, supplying the North African nation with 55 billion cubic meters of water per year. The new dam on the Blue Nile river whereEthiopia is building Africa’s largest hydroelectric plant is considered by some Egypt politicians to be a security risk considering how much the largely desert nation relies on the Nile’s water. Experts estimate that Egypt could lose up to 27% of its share of the Nile’s water when Ethiopia fills the GERD, which, when complete will be the Africa’s biggest reservoir with a capacity of 63 billion cubic meters. Egypt has in the past threatened to go to war against any country that violates to its historic rights over the Nile river. Egypt argues that other countries along the Nile have alternative water sources, but the Nile is the only water source available to Egypt and its historic water rights should be respected. “If it loses one drop, our blood is the alternative,” president Morsi said. “The lives of the Egyptians are connected around it as one great people. If it diminishes by one drop then our blood is the alternative.”

REACTIONS IN ETHIOPIA: Ethiopia’s foreign ministry responded on Tuesday, saying that the construction of Nile dam will not be stopped “even for a second” despite what Egyptian politicians say. Addis Ababa’s foreign ministry spokesperson Dina Mufuti said the sabotage proposals suggested by some Egyptian politicians were unacceptable. However he welcomed the remarks by Sudan’s information minister, Ahmed Bilal Osman, in support of the dam project. Osman said the ten-member international panel, which has been studying the impacts of the dam on Sudan and Egypt in its final report last week, had dispelled all concerns raised about the dam. The Sudanese spokesperson said that his country will send experts and technicians to help in the construction of the dam. Ethiopians were caught by surprise last week when Egyptian politicians last week were aired live discussing sabotage plans to stop the Nile dam, which currently is 21% completed. Politicians suggested that President Morsi take military action or support Ethiopian rebels to destroy the Dam,outraging many Ethiopians. “We are ready for an armed confrontation to any attacks by Egypt” Mesfin Nega, a 32 year old Ethiopian told Sudan Tribune. “Words of war are not the smartest ways to deal with Ethiopia” he said. “Egypt better stop making provocative remarks. It should refer back and learn in to how Ethiopia defeated the Italian invaders.” Speakingto state television, Egyptian Foreign Minister, Mohamed Kamel Amr, said “No Nile – no Egypt.” He declined to detail possible actions Cairo would take in connection with Ethiopia dam but said “We have a plan for action, which will start soon. We will talk to Ethiopia and we’ll see what comes of it.” The Egyptian foreign minister is expected Addis Ababa within the coming few days to discuss with Ethiopian officials over the controversial massive dam project.

Ethiopia dismisses psychological warfare’

News24 Addis Ababa (June 11, 2013) – Updates: Ethiopia dismissed Egyptian talk of military action against a giant dam it is building on the Nile as "psychological warfare", and said on Tuesday it would defend itself and carry on with the work regardless. Bellicose rhetoric between two of Africa's most populous and fastest-growing nations has raised fears of conflict over water, though both sides are also pursuing diplomatic compromise over what would be the biggest hydro electric plant on the continent. Responding to a speech on Monday by President Mohamed Mursi, in which he said Egypt did not want "war" but would keep "all options open" to avoid losing any water, Ethiopia's Foreign Ministry spokesperson said: "This sort of bragging won't divert our attention". The spokesperson, Dina Mufti, added: "Ethiopia is not intimidated by Egypt's psychological warfare and won't halt the dam's construction, even for seconds". Egypt's previous military rulers had contingency plans to attack Ethiopian dams that might disrupt the flow of the Nile. Some politicians were caught on camera last week talking of air strikes or backing Ethiopian rebels after the start of major new work on the project took Cairo by surprise late last month. Asked if Addis Ababa was looking at measures to defend the Ethiopian Grand Renaissance Dam, Dina said: "Nocountry operates without precautions, let alone Ethiopia, which has a track

record of defending its independence from all forces of evil". Mainly Christian Ethiopia and Muslim Arab Egypt share a long history of suspicionand friction, including over the Nile. Egypt's foreign minister, who has saidhe will give up "not a single drop of water", is to visit Addis Ababa. Mursi hoped for a political solution with Ethiopia, a "friendly state", whose demands for economic development he said he understood.

Impact: One bone of contention is a technical analysis of the impact of the

$4.7bn dam being built by an Italian firm on the Blue Nile near the borderwith Sudan, which supports the plan. Ethiopia says a joint report, still keptunder wraps by both governments, supports its assurances it will do "no appreciable harm" to Sudan and Egypt downstream. It has no plan to use water for irrigation and says that once the reservoir is filled, all the river's water will be free to flow through its turbines. Mursi, however, said Egypt had carried out studies that showed "negative consequences". Less water would flow while the reservoir is filling. Once full, more water may evaporate. Egypt, whose 84 million people use almost all of the Nile's supply that reaches them to meet their needs, cites colonial-era treaties guaranteeing it the lion's share of the water. Ethiopia and other upstream neighbours say those claims are outdated. "Ethiopia cannot remain poor," Foreign Minister Tedros Adhanom said in a statement. "It must utilise its resources to lift its people out of poverty." Despite its lack of means, Ethiopia insists it can fund the project itself without help from international lenders wary of the diplomatic dispute. It has been aided by a $1bn loan from China to build power transmission lines. It says the project, on which work to divert the river temporarily began in May, is 21% complete. With a target generating capacity of 6 000 megawatts, it is part of a plan to make Ethiopia the biggest electricity exporter in Africa.Ethiopia rejects Egyptian protests over Nile dam’

Construction of Grand Renaissance dam to continue despite Eygptian concerns over impact on water supply and farming - The Guardian By Patrick Kingsley in Cairo Updates: June 12, 2013 Ethiopia has refused to halt work on a controversial giant dam across the river Nile that Egypt fears will severely curb its water supply. The refusal came after the Egyptian president, Mohamed Morsi, promised to "defend each drop of Nile water with our blood" and other senior Egyptian politicians called for the dam's destruction. A spokesman for the Ethiopian prime minister saidon Tuesday that Morsi's speech was irresponsible and that the project would proceed as planned. "Nothing is going to stop the Renaissance Dam. Not a threat will stop it," Getachew Reda said via telephone. "Noneof the concerns the Egyptian politicians are making are supported by science. Some of them border on what I would characterise as fortune- telling."

Ethiopia hopes its Grand Renaissance dam – which will cost more than

$4.3bn (£2.8bn) – will form Africa's largest hydropower plant. But Egyptian authorities have contested its construction after water experts claimed it would drastically lower the level of the Nile, which supplies almost all of Egypt's water, and could reduce cultivated farmland by up to 25%. In a speech to Islamist

supporters on Monday night, Morsi called the

Nile "God's gift to Egypt", and ambiguously veered between calls for peaceful dialogue, and veiled military threats. He said that while Egypt did"not want war … we do not accept threats to our security", and claimed that all possible responses to the dam remained open to Egypt – a line that has been interpreted as a threat of force.

Last week, other senior Egyptian politicians were filmed discussing aggressive measures against their upstream neighbours – apparently unaware that their discussion was being broadcast live. Younis Makhyoun,the leader of Egypt's second largest political grouping, the ultraconservative Nour party, suggested to Morsi in a televised meeting that as a last resort Egyptian intelligence forces could destroy the dam. Inresponse to the embarrassing gaffe, Ethiopia summoned the Egyptian ambassador in Addis Ababa to explain Egypt's stance. Morsi's own aggressive speech is aimed at a domestic audience as much as a foreign one, as he seeks to regain support ahead of anticipated large protests against his presidency on 30 June. However insincere his military threats may be, they are nevertheless rooted in very real and widely held Egyptian fears about the dam's effect.

Dr Bahaa Alkoussey, the former chairman of Egypt's National Water Research Centre, and a one-time senior official in the ministry of water resources and irrigation, claimed the Ethiopian plans copuld reduce waterflow to Egypt by more than 10bn kilolitres. "Then you might cross the Nile on the back of a camel," he said. "It's not a joke. This is a seriousmatter. The Egyptians already have a deficit in their water supply of about10bn kilolitres. If you add just 1 kilolitre to that, it will be a disaster. Now it's already a problem. If you add more reductions, then you'll have a catastrophe." Alkoussey claimed the dam would make it harder for ferries to travel up the Nile, and would cause more pollution, harming fish farms.Most seriously, Alkoussey claimed the dam would devastate the farming community. "Every 1bn kilolitre reduction in natural flow to Egypt will cause 200,000 feddans [207,600 acres] of land to go out of production, and 500,000 farmers to be out of work – which will affect 2.5 million families," he said.

Supporters of the dam have argued that Egypt could solve the crisis by using its water more efficiently. But Hani Raslan, an expert on water politics at Cairo's government-affiliated Al-Ahram Centre for Political and Strategic Studies, argued Egypt recycled much of its water. "Egypt is one of the most efficient countries with water consumption," he said. "Our supplies are 55bn cubic meters but we consume 70bn, which means we'rerecycling 15bn cubic meters." Ethiopia disputes the Egyptian experts' conclusions, claiming the dam has been largely exonerated by a recently completed, but as yet unreleased report written jointly by scientists from Egypt, Ethiopia and Sudan. "Of course we are going to go ahead with the project, because we believe we are justified," Reda said. "Why would a self-respecting government spend $4.5bn simply to spite Egypt? It's beyond reason and it's beyond science. None of the concerns of the Egyptians [are] really something you can remotely associate yourself with." Additional reporting by Mowaffaq Safadi

Ethiopia - EMoFA discards Egypt threats over Nile Dam’

Aljazeera June 12, 2013 - Ethiopian Ministry of Foreign Affairs says it is not intimidated by Egypt's "psychological warfare" and dam project will proceed. Ethiopia has dismissed Egyptian talk of military action against a giant dam it is building on the Nile as "psychological warfare". Dina Mufti,Ethiopia's foreign ministry spokesman, said on Tuesday that his country was "not intimidated by Egypt's psychological warfare and won't halt the dam's construction, even for seconds." Responding to a speech a day earlier by Egypt's President Mohamed Morsi, in which he said Egypt did not want "war" but would keep "all options open" to avoid losing any water, Mufti said the project would not be distracted by their neighbours. Asked if Addis Ababa was looking at measures to defend the Ethiopian Grand Renaissance Dam, Dina said: "No country operates without precautions, let alone Ethiopia, which has a track record of defending its independence from all forces of evil." Some politicians were caught on camera last week talking of air strikes or backing Ethiopian rebels after the start of major new work on the project took Cairo by surprise late lastmonth. Egypt's foreign minister, who has said he will give up "not a singledrop of water", is to visit Addis Ababa. Morsi hoped for a political solution with Ethiopia, a "friendly state", whose demands for economic development he said he understood. One bone of contention is a technical analysis of the impact of the $4.7bn dam being built by an Italian firm on the Blue Nile near the border with Sudan, which supports the plan.

Divergent views: Ethiopia says a joint report, still kept under wraps byboth governments, supports its assurances it will do "no

appreciable harm" to Sudan and Egypt downstream. It has no plan to usewater for irrigation and says that once the reservoir is filled, all the river'swater will be free to flow through its turbines. Morsi, however, said Egypthad carried out studies that showed "negative consequences". Less waterwould flow while the reservoir is filling. Once full, more water may evaporate. Egypt, whose 84 million people use almost all of the

Nile's supply that reaches them to meet their needs, cites colonial- era treaties guaranteeing it the lion's share of the water. Ethiopia andother upstream neighbours say those claims are outdated. "Ethiopia cannot remain poor," Foreign Minister Tedros Adhanom said in a

statement. "It must utilise its resources to lift its people out of poverty."Despite its lack of means, Ethiopia insists it can fund the project itself without help from international lenders wary of the diplomatic dispute. Ithas been aided by a $1bn loan from China to build power transmission lines. It says the project, on which work to divert the river temporarily began in May, is 21 percent complete. With a target generating capacityof 6, 000 MW it is part of a plan to make Ethiopia the biggest electricity exporter in Africa.

Ethiopia - Nothing will stop Nile Dam Project’

ADDIS ABABA, Ethiopia (AP) June 12, 2013 - Ethiopia's leader has vowed that no one will stop a $4.2

billion energy project that is diverting the flowof the Nile River after Egypt's president warned that all options were beingconsidered to halt the dam. In an interview aired on state television and

radio, Ethiopian Prime Minister Hailemariam Desalegn said Tuesday that he did not think Egypt would start a war over the vital river. “All options' include a war. I don't think they will take that option unless they go mad,"Hailemariam said during the interview. "I urge them to abandon such an unhelpful approach and return to dialogue and discussion.” Ethiopia started diverting the flow of the Nile River in late May to make way for its
$4.2 billion hydroelectric plant, which will be Africa's largest. The projecthas been under construction for over two years on the Blue Nile River inEthiopia's Benishangul-Gumuz region near the Sudan border. Egypt fears that the project will mean a diminished share of the Nile River.Egyptian political leaders last week told President Mohammed Morsi to consider hostile acts against Ethiopia. Apparently unaware their discussionwas being televised live, the leaders recommended spreading rumors, aiding rebels and even sabotaging the dam itself in a meeting with Morsi. During the meeting, Morsi said that Egypt will not engage in any aggressive acts against Ethiopia. However, he hardened his stance on Monday, warning that "all options are open." Hailemariam then accused Egyptian leaders of using the dam issue to divert attention away from local issues. He said it was wrong of Egyptian politicians to use the Nile dam as "a distraction to escape the strong domestic opposition they are facing."
A 10-person Egypt-Sudan-Ethiopia experts' panel has concluded that the dam will not significantly affect water flow to both Egypt and Sudan, Hailemariam explained. The finding of the experts' panel, which includes four international experts, was fully accepted by Sudan, Hailemariam said."I like to thank the government and people of Sudan for their support anddetermination to work for mutual benefit. Others should learn from this," he added. In a further escalation of the conflict, the Ethiopian foreign affairs ministry in a statement issued Tuesday condemned the "belligerentrhetoric" coming from Cairo. The ministry said Ethiopia "will not even for asecond" stop the construction of the dam due to Cairo's rhetoric. Ethiopia is currently leading a group of nine countries that signed the new Cooperative Framework Agreement for the Nile. The new agreement replaces colonial-era deals that awarded Cairo veto powers over projects on the Nile. Ethiopia, Kenya, Rwanda, Tanzania and Uganda signed the agreement in 2010, and Burundi did so a year later. Sudan and Egypt have been strongly opposed to the deal. Ethiopian parliament since April isreviewing the deal. It is expected to approve it in few days' time.
Ethiopia ratifies Nile Treaty in snub to Egypt'
ADDIS ABABA, ETHIOPIA (Reuters) June 14, 2013: Ethiopia's parliament unanimously ratified on Thursday a treaty that strips Egypt of its right to the lion's share of the Nile river waters, raising the political temperature ina dispute between Cairo and Addis Ababa over the construction of a dam. The parliament's move follows days of irate exchanges between two of Africa's most populous nations over Ethiopia's new hydroelectric plant, which Egypt fears will reduce a water supply that is vital for its 84 million people. Egyptian President Mohammed Morsi said Monday he did not want“war” but would keep “all options open.” That prompted Ethiopia to say it

was ready to defend its $4.7-billion Great Renaissance Dam near the border with Sudan. Six Nile basin countries including Ethiopia have signeda deal effectively stripping Cairo of its veto, which is based in colonial-eratreaties, over dam projects on the Nile, which is the source of nearly all Egypt's water. Ethiopia's late leader Meles Zenawi had delayed parliamentary ratificationuntil Egypt elected a new government. “Most of the upstream countries have approved it through their parliaments. We delayed it as a gesture ofgoodwill to the people of Egypt until a formal elected government was in place,” said Ethiopian government spokesman Bereket Simon. “We have aprincipled stance on the construction of dams. We are determined to see our projects brought to completion,” said Simon. Another government spokesman, Shimeles Kemal, said Ethiopia's 547-seat legislature had voted to “incorporate the treaty into domestic law.”

Diplomatic efforts

Egyptian Foreign Minister Mohamed Kamel Amr is expected to travel to Addis Ababa on Sunday for talks about the dam, though Ethiopia's foreignministry has said there can be no question of suspending construction. AnEthiopian foreign ministry spokesman has said the talks with Egypt are “inthe spirit of Ethiopian interests.” The African Union has urged both sides to hold talks to resolve the row. Under a 1929 pact, Egypt is entitled to

55.5 billion cubic meters a year of the Nile's flow of around 84 billion cubicmeters. Along with other upstream neighbors such as Kenya and Sudan, however, Ethiopia argues that this pact is outdated. Ethiopia also has dismissed the talk of military action as “psychological warfare.” Officials inAddis Ababa say technical analysis compiled by experts from Ethiopia, Sudan and Egypt provides assurances to downstream nations that the dam being built by an Italian firm will not have a negative impact on the river's water levels.

Is Mohammed Morsi serious about his stance of “water with our blood”? Analysis by Terefe Masresha: The dispute between Egypt and Ethiopia concerned with the latter’s Grand Renaissance dam has now new reached new heights with increasing intimidation and threats aimed at maintainingEgypt’s “historical rights” to use the lion’s share of the Nile waters. Egypt is aggressively defending its interests and is expressing concern about reduced water quantity. Regrettably, there is very little statement from Ethiopia except the brief diplomatically loaded language issued by the Spokes Person of the Ministry of Foreign Affairs. So far, the Foreign Minister or the Prime Minister has said very little. Is it an acceptable diplomatic tactic in view of what is at stake? Egypt is trying to justify its cause for concern and alarm by issuing conflicting statements veering from diplomacy to what is beginning to seem a declaration of war. The international media is reporting from Egypt with voices of ordinary citizenswho say that their country will become a desert if the flow of water from Nile is reduced because of the construction of Ethiopia’s dam. The views ofEgyptians are based on the understanding that “Egypt is the gift of the Nile’. However, most of their opinion about Ethiopia in relation to the Nile is influenced by propaganda that has been

instilled in Egyptian’s hearts

and minds for generations. In what seems to be an act of living to the same legacy, Egypt's President Mohamed Morsi said on Monday June 11 he would be willing to approach opposition groups in order to unite Egyptians around a common position with regard to the dam. Given the high level of emotion around the issue and the rhetoric concerning the importance of the Nile to Egypt, the President will not have a difficult task.What about Ethiopia's leaders? How do they relate to the majority of Ethiopians who are disillusioned because of the government's failure to deliver on equality, justice and rule of law?

The Government of Ethiopia is managing Egypt's reaction to the construction of the dam with disturbing silence. The few statements that have been issued by the Ministry of Foreign Affairs are weak and do not match Egypt's aggressive public relations approach. Against this background, it is important to raise the following questions: a) Is Ethiopia's current communication and diplomatic approach a sign of weakness or has the government opted for quiet diplomacy? b) Is there adequate preparedness to thwart any direct and indirect aggression whichcould humiliate our country? c) What is the government doing to mobilize public opinion to ensure support in case of an outright destructive approach by Egypt? d) Is the government sure that the public is completely behind it to defend the country from an attack? e) Can it rely on the support of Sudan to prevent any threat on the dam? The answers to the above questions are found in the political malaise that currently grips Ethiopia. The Government of Ethiopia needs to take immediate action to respect human rights and release all political prisoners who are considered prisoners of conscience by Ethiopians and the international community. Furthermore, it needs to instil a spirit of unity and dignity within the public. A majority of Ethiopians are alienated because of the misguided polices the EPRDF has been following over the past 22 years.

Despite claims of continued economic growth and progress made in infrastructure development, there is widespread discontent about the lackof tangible benefits. This is exacerbated by unemployment, under employment, the high cost of living and the amassing of wealth by croniesof the EPRDF largely through corrupt practices. All of these trigger anger and frustration within the public, which is invariably forced to doubt government intentions, plans and achievements.

In my article on 'Dispelling the Curse of the Nile', I stated that Ethiopia and the spirit with which we hold our nationality is much bigger than the issues which divide us. The path of division, character assassination, blindfaith, and the 'what is in it for me' attitude will not facilitate our emergence from the quagmire that we are in. The increasing threat by Egypt, if realized, could further deepen the crisis we are in and could evencause irreversible damage. We need to note that a call for unity isn't a callfor inaction against the undemocratic practices of the government or an attempt to reconcile irreconcilable differences. What is suggested is to unite around key national issues that could affect all Ethiopians regardlessof political persuasion. We, therefore, need to take action to get our united voice heard in various forums. The actions that are being taken by

the government aren't reassuring. We have unalienable right to be involved in the affairs of our country, particularly when there is a potentialexternal aggression. This is not a responsibility we can delegate to a government we do not support because it's wrong polices and poor performance in the political, economic and social arena. We need to take action now against Egypt's propaganda campaign through objective analysis of the developing situation; the current state of our country and getting our untied voice heard loud and clear to guarantee the long-term interests of Ethiopia. If we don't act now, it might be too late when we decide to act. The view that Egypt is currently embroiled in its own crisis and isn't in any position to take drastic overt or covert military action against the dam is wishful thinking. Ethiopia should not adopt such a position. Our collective responsibility must be to think the unthinkable andto brace ourselves for any eminent danger that the curse of the Nile couldexpose the country. We must take Morsi seriously on his words, because his views aren't moribund in Egypt.

ETHIOPIA - How Egypt might Ethiopia's dam project try to stop?

Forbes Stratfor - June 15, 2013 - Ethiopia's initiation of a dam project on the Blue Nile has quickly drawn the ire of Egypt, which is critically dependent on it as a source of much of the country's freshwater needs. AsEgyptian Foreign Minister Mohamed Kamel Amr said June 9 following Ethiopia's refusal to halt construction of the dam and ahead of his trip to Addis Ababa to discuss the project, Egypt will not give up a "single drop ofwater from the Nile." "No Nile, no Egypt," he said. While Egypt has struggled to attract diplomatic intervention on its behalf to thwart Ethiopia's dam construction, tensions have reached the point where Egypthas suggested the use of force to keep the dam from potentially lowering the Nile's water levels downstream to unacceptable levels. There will be serious international pressure to keep the dispute over the dam in the realm of diplomacy, but there are also fairly significant constraints on the physical possibility of an Egyptian military solution.

It varies depending on the dimensions of the dam, but dams can be and usually are very tough targets to destroy. In World War II the British proved that it could be done despite considerable difficulties and were thefirst to seriously develop the art of dam busting. The British used delayed-action bouncing bombs from Lancaster bombers, but fortunately for the Egyptians, advancements in weapons technology would enable them to target the Ethiopian dam in a less risky way. The best way for Egypt to knock out a standing dam is to use retarded and delayed-action bombs deployed from very low altitudes, or even better, delayed-action joint direct attack munitions deployed at medium altitude. The difficulty is that the bomb needs to be deployed at the very base of the dam, underwater, where the concussive effect and pressure wave is greatly amplified.

Preferably more than one bomb would be deployed in this manner, and the force would be sufficient to breach the dam. To avoid the hassle of hitting a standing dam and creating major flooding downstream in Sudan and even potentially Egypt, Cairo would probably prefer to hit it while it isunder construction. But it also has to be careful not to hit the dam too

early, because then Ethiopia may not be fully deterred from restarting theproject.

Distance is a major obstacle for the Egyptian military option. Ethiopia is simply too far from Egypt, and since Egypt has not invested in any sort ofaerial refueling capability, it is beyond the combat radius of all Egyptian aircraft staging from Egyptian airfields. The only consolation for Egypt is that the dam is very close to the Sudanese border. Access to Sudanese airfields would place some of Egypt's air force within range. However, operating from Sudanese territory could be politically complicated and would have international repercussions for Sudan along with Egypt.

Sudan's proximity to Ethiopia would also leave it vulnerable to direct military retaliation. Another option is the insertion of special operations forces into Sudan. From there, the forces could move across the border and either harass the construction of the dam or attempt to sabotage thestructure under the guise of militants. This would allow Khartoum to realistically pledge that it had no idea there were "militants" there. The harassment tactic by special operations forces or militants would likely only delay the project, not arrest construction.

Special operations forces teams would face their own series of obstacles intrying to destroy the dam. Dams are critical infrastructure and routinely protected relatively well in most countries by dedicated military units.

Ethiopia would be no exception, especially with all the contention already surrounding the project. So Egyptian special operations forces would needluck and skill to gain access to the dam successfully. There is also the problem that a small team of ground forces, no matter how elite, would likely be physically unable to carry enough ordnance to critically damage or destroy the dam. Egypt does have military options, but distance will heavily constrain its ability to project the full force of its military. Any option Cairo chooses to exercise will be risky at best and will also come with severe international consequences.

Egypt's Nile threats weaken case to secure water: David Shinn former USambassador to Ethiopia'

By William Davison & Salma El Wardany – June 17, 2013: Egypt must drop its objection to an Ethiopian dam on the main tributary of the Nile River or it may struggle to ensure adequate supplies from the world's longest waterway, former U.S. Ambassador to Ethiopia David Shinn said. A $4.3 billion, 6,000-megawatt hydropower plant, set to be Africa's largest on completion in 2017, has raised concern in Egypt that it will cut supplies of water allocated by accords put in place more than five decadesago. President Mohamed Mursi told supporters in Cairo on June 10 his government will "defend each drop of Nile water with our blood" if the country's water security is threatened. The Grand Ethiopian Renaissance Dam project, funded solely by Ethiopia's government, is a "game-changer"because Egypt has historically blocked international financing for large upstream Nile projects, Shinn said on June 12. The best way for Egypt to secure its water needs is by cooperating on the project that could be "transformational" in terms of industrializing East African economies, he said. "Ethiopia is the only country in the region that has the water to

make a huge contribution to increased availability of electricity," Shinn said in an e-mailed response to questions. "It could solve all of Ethiopia'spower needs, sell power at a profit to neighbors, help control periodic flooding in Sudan and contribute significantly to regional economic integration."

River Diverted: Ethiopia announced the project on the Blue Nile River, thelargest of the Nile's two tributaries, a month after former Egyptian President Hosni Mubarak was deposed in February 2011. Last month, Ethiopia diverted the flow of the Blue Nile as part of the construction process. Ethiopia is the source of 86 percent of the water that flows into the Nile, a river that runs 4,160 miles through 11 countries from Burundi in the south to Egypt, where it empties into the Mediterranean Sea. A study on the dam released last month found the project wouldn't cause "appreciable" harm downstream nations, according to Ethiopia's government, which says it won't use the dam for irrigation. The joint report was inadequate because it failed to "clarify in detail the impacts of the dam," the Egyptian presidency said in a statement on June 3. The dispute over the dam resonates in Egypt, where the Nile has long been viewed as much of a symbol of the country as its primary water source.

Mursi, in a speech before an Islamist audience on June 10, said that ifEgypt is the "'gift of the Nile,' then the Nile is God's gift to Egypt."

Sugar, Wheat: Egypt relies on irrigation from the Nile to grow almost all ofits cereals, fruits and vegetables. The country is Africa's biggest wheat grower and the continent's second-largest sugar producer after South Africa, according to the Food and Agriculture Organization. In meetings between Mursi and Ethiopian Prime Minister Hailemariam Desalegn, the Egyptian leader was "only interested in constructive engagement," according to Hailemariam's spokesman, Getachew Reda. That contrasts with antagonism in the past, he said in a phone interview. "Egypt will lose the upper hand if they decide to opt out from cooperating as the upstreamcountries will go ahead with their industrial revolutions with or without Egypt," said Ana Cascao at the Stockholm International Water Institute. "The best way for Egypt to secure the water it needs in the long term is byentering into a new era of cooperation."

Power Lines: Mursi and Hailemariam met at an African Union summit last month in Ethiopia's capital, Addis Ababa, where Mursi suggested Egypt may fund a transmission line from the dam, Getachew said. Ethiopia plansto sell 2,000 megawatts of power to Egypt by 2020. "With the coming to power of President Mursi there is a changing dynamic," he said on June 9."They would rather benefit from the dam." Egypt's foreign minister arrivesin Ethiopia today to engage in more "constructive dialog," Egyptian Ambassador to Ethiopia Mohamed Edrees said in a phone interview on June 12. "We are working to find a mutually agreed way forward." Mursi'scomments to his supporters may be aimed at deflecting domestic criticism, said Nadia Ahidjo, a Nairobi-based analyst at advisory group africapractice. Opposition groups plan to hold mass rallies on June 30, a year after Mursi was sworn in as Egypt's first democratically elected

civilian president, in a bid to remove him from office and trigger newelections.

Domestic Constraint:The instability constrains Mursi from rallying support for his position on the dam, said Ahidjo. “When you don’t have domestic support it’s very difficult to embark on a regional agenda,” she said. The Nile discharges about 85 billion cubic meters (3 trillion cubic feet) of waterannually, according to Austin, Texas-based, Stratfor Inc., which is enough to fill almost 2.5 Hoover Dams. Under a 1959 quota agreement between Egypt and Sudan that excluded other nations in the Nile Basin, Egypt was given 55.5 billion cubic meters a year and Sudan 18.5 billion cubic meters,the Texas-based consulting firm said in a May 28 note sent by e-mail. Therest evaporates. Egypt’s requirement for an additional 21 billion cubic meters by 2050 for its growing population will mean there is “little water to spare,” Stratfor said. An equitable distribution of water based on needs and resources may give Egypt about 50 billion cubic meters, according to Cascao.

Significant Potential: The dam, 30 kilometers (18 miles) from the Sudanese border, may allow Sudan to boost its agriculture output by using the regulated outflow of the dam for irrigation, Cascao said. “It increases the irrigation potential significantly” from three months to 12 months, she said. Sudan backs Ethiopia’s dam, which will “bring many benefits and blessings for us,” Information Minister Ahmed Bilal Osman told reporters in the capital, Khartoum, on June 9. While Ethiopia is open to discussions about technical aspects of the dam with its neighbors, suchas how long it will take to fill the 74 billion cubic-meter reservoir, it’s unwilling to halt or downsize a key project, Water and Energy Minister Alemayehu Tegenu said in a June 11 phone interview. Egypt’s best optionis to sign a cooperation agreement already agreed to by Ethiopia and six riparian nations, including Uganda and Kenya, said Debay Tadesse, a regional analyst at the Institute for Security Studies in Addis Ababa. The accord, known as the Cooperative Framework Agreement, has previously been rejected by Egypt and Sudan. Once it’s ratified by legislatures in sixout of 10 nations in the Nile Basin, a commission will be created to oversee projects on the river.

Sudan Agreed: Sudan has already said it wants to sign the CFA, accordingto Cascao. Signing up to the agreement would ensure Egypt has a means to protect its water rights as growing upstream nations increasingly look to use the river, Debay said. “According to the CFA, if they exceed allocated water then Egypt can take legal action,” he said. “Without signing the document it will be virtually impossible to do that. The solutionis cooperation.”

Is Egypt's stance on the Blue Nile Dam legally justified?

Analysis by Dr Zeray Yihdego: Egypt and Ethiopia are in a war of words concerning the damming of the Blue Nile. Ethiopia intends, and has already completed twenty-one percent of the construction of the dam, to generate 6000 megawatts of electricity, which is equivalent to six nuclear power plants, in order to support and improve its sustainable developmentstanding, thereby increasing the living standards of millions of its citizens.

Egypt opposes the project, fearing that the dam will reduce the flow of thewater. Interestingly, Sudan sees the dam as beneficial to all downstream and upstream Nile Basin countries. Egypt has declared that "all options are open" to stop a reduction of "even one drop of Nile water" as a result of the construction of the dam, including involving the military, arming opposition groups and sabotaging the dam, although it says that it does not want to go to war with Ethiopia. This controversy poses several criticallegal issues.

The first concerns the legal basis of both sides for using Nile waters and resources. Egypt argues on the basis of "inherent" or "historic" title, as enacted in colonial treaties, including in the 1929 and 1959 Nile Water Treaties between Egypt and Sudan. The latter treaty entitles Egypt to use eighty-seven percent of the Nile which amounts to 55 billion cubic meters of water per annum, while Sudan is entitled only to eighteen and a half percent. The rest evaporates into the air. Ethiopia and other upstream riparian counties including Kenya, Tanzania, Burundi, Uganda, Rwanda, the Democratic Republic of the Congo rely on the principle of "equitable and reasonable use and utilization" of the Nile River waters and resources.This principle has been codified in Article 5 of the 1997 Convention on the Law of Non-Navigational Uses of International Water Courses, which is considered a codification of customary principles. In the River Oder Case of 1929 [PDF], the Permanent Court of International Justice (PCIJ) explicitly proclaimed that the "community of interest of riparian States" forms the "basis of a common legal right...of all riparian States..." It mustbe noted that Ethiopia had opposed the colonial treaties on the Nile since their inception, and all upstream countries are oppose relying on colonial treaties, considering them unfair and discriminatory.

Egypt might argue, however, that colonial treaties must be honored, which includes those agreements entered into between the British colonyand most upstream countries not to use or "arrest" the Nile waters without receiving permission from Egypt and Sudan. This argument is rather weak, as Ethiopia had persistently objected to the treaties, and allupstream (and downstream) countries were under colonial rule and thus not legally bound by such treaties as newly independent countries. The "clean state" doctrine, as codified under Article 16 of the Vienna Convention on Succession of States in Respect of Treaties of 1978, submits that countries that gain independence are not obliged to succeedto colonial treaties excepting boundary issues.

The exception of "special regimes" such as Article 13 of Rome Statute of the ICC, which imposes obligations on non-party states, is less likely to apply to these colonial treaties which were created to pursue self-interest rather than common values and shared interest among the Nile Basin states. This is why most Nile riparian countries have entered in to the NileBasin Cooperative Framework Agreement in 2010 which is based upon equality, and cooperation, rather than the status quo ante; it will also establish a joint Commission to oversee the River's management. From this, it can fairly be argued that contemporary international law does not recognize the "inherent" or "historic" use "principle" to exclusively utilize a

water course without ensuring the fair share of other riparian states. For that matter the 1997 UN Convention expressly rejects the "inherent" use claim as a bar to the equitable and reasonable use of international waters.However, as a second legal issue, upstream countries must not inflict a significant harm upon downstream states in their use of an international river like the Nile as stated in Article 7 of the UN Convention 1997 and Article 12 of the Berlin Rules. For example, the "minimum individual water requirements" of the people in downstream countries must not be jeopardized by a dam or other projects in upstream countries. Ethiopia insists that its Blue Nile mega dam project will not affect the flow of the water, and thus not only that it will not significantly affect Egypt or Sudanese interests but also that will be beneficial to most riparian countries, including Sudan and Egypt. The electricity generated will be exported to neighboring countries and the project will increase the flow ofwater to both countries. Conversely, Egypt argues that Ethiopia has not done enough studies on the impact of the dam on downstream nations, especially on fishing, crops and developing new and major hydro-electric power plants in Egypt.

This problem seems to be related to the first legal controversy; Egypt is not willing to risk a reduction of "a drop of water" from the Nile as that iscontrary to its "inherent" or "historic" title to fully use and utilize the Nilewaters. However, the duty not to inflict a significant harm is founded on the principle of "equitable and reasonable use" of a trans-boundary river and thus does not rely on the prior will or permission of one concerned party. It does not allow one party to expand its projects while denying others to use the water for their sustainable development and poverty reduction endeavors. Of course, establishing "a significant harm" is a technical matter, but what seems to be clear is that Ethiopia is vindicatedby the Tripartite Commission's findings in that its project will not harm Egypt and Sudan significantly.

However, this poses a third legal issue. Egypt appears to call upon Ethiopia to halt its project, without providing a legal ground. It may well be justified to urge halting a significantly harmful project based upon evidence and reason but not based on a threat of violence and intervention. Even if the project will significantly harm Egypt, according tothe 1997 UN Convention, Ethiopia might only be required to: "take all appropriate measures..., in consultation with the affected State, to eliminate or mitigate such harm and, where appropriate, to discuss the question of compensation."

Finally but most importantly, Egypt vows to use all available options including military force, intervention, sabotage, etc. As the country's economy and livelihood is dependent on the Nile, it may argue, even if remotely, that the Blue Nile dam is a threat to its survival and thus entitled to defend itself under Article 51 of the UN Charter. In light of Article 2 of the UN Charter, however, states can only use force to defend themselves if and when they are militarily attacked. Moreover, using forceas a means of national policy including to secure water interests is totally banned under current international law.

However, whether Egypt has violated its Charter (or African Union) legal duties is not entirely clear. It may be said that Egypt threatened to use military force in violation of Article 2 of the Charter and Article 4 of the AUConstitutive Act, and thus responsible for such persistent military threats against Ethiopia, in accordance with Articles 1, 40, 41, and 42 of the International Law Commission Draft Articles on the Responsibility of States 2001

The opposing, and may be a more sound argument, is that what (some) Egyptian politicians have done, and are doing, is a sheer propaganda to intimidate and frightened Ethiopia, and thus no concrete breach is committed by Egypt of its duty owed to Ethiopia and the International Community at large. In fact, The Egyptian Nobel Peace Laureate MohamedElBaradei called upon the President to make an apology to Ethiopia and Sudan for "the irresponsible utterances" made against them. It cannot be concluded at this point therefore that Egypt has, or has not, violated international law, as this will depend on how the situation progresses.

As the African Union and the USA rightly urged, and as codified in Article 13 of the 1997 UN Convention and related rules, the way forward is to settle all problems peacefully, and to work together to maximize the benefits to all and minimize any possible harm of the dam on downstreamnations and peoples. The solution lies on Egypt accepting the rights and entitlements of riparian countries in accordance with twenty first century international law, while Ethiopia making sure that its dam does not significantly impact Egypt and Sudan; if diplomacy fails both parties mustopt for judicial or arbitral settlement.

Zeray Yihdego is a Senior Lecturer In Public International Law at the University of Aberdeen, Scotland where he teaches various postgraduate and undergraduate courses of public international law. He is the author of The Arms Trade and International Law (Hart; Oxford, 2007) and other peer-reviewed journal articles on peace and security, humanitarian law, arms control law and democratic governance and sustainable developmentissues. He serves as a member of the UN Expert Group on global firearms control and as a Consultant to the United Nations in his area of legal expertise.

Egypt-Ethiopia conflict over Nile waters flares’

By Mey Dudin and Carola Frentzen, DPA June 18, 2013 CAIRO, Egypt/ADDIS ABABA, Ethiopia - When an Egyptian officer said recently onnational television that the conflict with Ethiopia over the waters of the Nile was "not yet" a military one, his words sounded more threatening than reassuring. Colonel Ahmed Mohammed Ali may have been trying to calm tempers, but long-standing animosities between the two countries has flared up with renewed bitterness.

The Egyptians see the river as a gift from God – to them. Without the Nilethere would have been no Ancient Egypt and its great heritage, only desert. The Nile remains a vital artery. But Ethiopia, where most of the river's water originates, also wants to make use of it and has been planning a huge dam for years. On completion the Renaissance dam, costing $4.3 billion and spanning the Blue Nile at the border

with Sudan,

is to generate 6,000 megawatts of electricity. At the end of last month, Ethiopia began to change the course of the river, displacing it by severalhundred meters, in a move that has outraged Egypt and generated nearpanic over future water supplies.

Egypt depends on the Nile for 98 per cent of its water - and water is in increasingly short supply. The Arab world's most populous country has seen its population soar from 53 million in 1990 to more than 80 million today. Wasteful use of water, for example in agriculture, has caused demand to rise. It is closely watching developments on the Blue Nile, which rises at Lake Tana in northern Ethiopia and which contributes some 80 per cent of the river's water. In Sudan the Blue Nile joins the White Nile, which has its source in Lake Victoria in Uganda and carries much lesswater.

Water concerns have taken center stage in Egyptian politics, with President Mohammed Morsi stating he does not wish to "lose a single dropof Nile water," and adding ominously that "all options remain open." Ethiopia dismissed his remarks as "unconstructive propaganda" and "empty and violent rhetoric". Cairo's provocative comments constituted anattack on both Ethiopia's national interests and the attempts of its inhabitants to escape poverty, the Foreign Ministry said. Egypt's Foreign Minister Mohammed Kamel Amr travelled to Addis Ababa for a two-day visit in attempt to ease the situation.

Egypt's attitude to "its" Nile has long caused irritation among other countries along the river's course, and Ethiopia has received support for its position on the dam project, from Uganda for example. But Cairo is determined to uphold an agreement dating back to 1929 and the colonial era. This document provides for Egypt and Sudan to have rights to more than 80 per cent of the water, even though the Nile flows through 11 countries in all. The two countries have right of veto on projects that couldinfluence or change the river's course. The other countries aim to change this provision.

Ethiopia's parliament has now passed the ratification of a treaty intended to replace the old Nile Water Agreement, in terms of which a joint forum will decide on how the waters are used. But Egypt has rejected this, insisting on its prior rights. In the longer term, Cairo will have to make concessions to Addis Ababa. Military experts see the Egyptian army's options as limited, with US thin tank Stratfor noting the long distance to the proposed dam. And as Egypt lacks refueling capabilities for its aircraft,it would be impossible to destroy the project from the air.

Forum says hoping to handle Egypt only via military is an old strategy' ESAT News: June 22, 2013 - Forum for Democratic Dialogue in Ethiopia (Medrek), the coalition of four opposition parties, said in a press release that Ethiopia had the natural and legal rights to use the Abay River and thus agreeing to the equal and fair share of Abay river and other rivers is the sole and sustainable solution. However, Forum warned that as there was no preparation to defend probable attacks that could come from Egypt, national consensus was necessary to proficiently and unfailingly tackle the problems. Forum says, hoping to handle all external attacks via

weapons is an old fashioned thinking and the only way that a dependable Defense and Intelligence force could only be realized is when the government, the people, the communities and political parties have a common understanding and consensus. It also called the ruling party to take national interest beyond politics and start dialogue with all communities and political organizations. In a related report, Unity for Democracy and Justice Party (UDJ) has started collecting the signatures ofEthiopians. Its goal is to collect the signatures of 1 million Ethiopians. The signatures that will be sent to Prime Minister Hailemariam Dessalgn will call for the waiving of the anti terrorism proclamation, forced eviction of people to be stopped, the finding of a solution to the high cost of living and unemployment, the business community to be allowed to do businessin a fair manner, the widening of the political space and the beginning dialogue and reconciliation.

Will Ethiopia's 'grand' new dam steal Nile waters from Egypt?

Africa's largest hydropower project, a new 6,000-megawatt dam on the Blue Nile, has sparked a row between Egypt and Ethiopia. But it could increase the overall water flow in the Nile. By William Davison, Christian Science Monitor- June 27, 2013: Egypt is newly worried about a huge Ethiopian dam now under construction on the Nile’s main tributary – a concern that reflects arid Egypt’s overwhelming reliance on the world's longest river. Egypt and the Nile are bound together: The Nile, called "God's gift to Egypt," helped the nation become one of the first agricultural civilizations, and it still supports most farming there. But Ethiopia – the source of almost 86 percent of the water flowing to Egypt –is equally adamant that it has been denied a fair share of the river by agreements between Sudan and Egypt in the 1950s that divided the river between them. Ethiopia two years ago started building what will be Africa's largest dam on the Blue Nile. It is a clear indication, despite angerfrom Egypt, that upstream Nile countries will no longer simply accept whatthey feel are inequitable water-sharing deals. Ethiopia says its Grand Ethiopian Renaissance Dam, 20 miles from the Sudanese border, will not be used for irrigation. That means that once the 6,000-megawatt hydropower station is at full generating capacity, it will not consume precious water flowing to Egypt. Yet Ethiopia’s decision on how quickly or slowly to fill a needed reservoir with Nile water flowing toward Egypt, plus potential rates of evaporation, are major potential sources of contention between the two nations. After heated rhetoric, including military threats by Egypt and an unbending response by Ethiopia, the nations' two foreign ministers met last week. They agreed to study the dam’s potential impact

− but only as construction proceeds. Ethiopia aims to fill the needed new dam reservoir quickly, in five years, to start generating power. Experts say five years is ambitious. They argue that wildly varying levels of rainfallin the Blue Nile basin requires a flexible approach. The job may take 20 years, in this view. To divert water into the new reservoir quickly, especially in low-rain years, may bring harm downstream, they say.

Long-term strategy

Yet in the long run, the Nile water can be conserved by moving storage away from inefficient dams such as the Aswan High Dam, which straddles the scorching border of Egypt and Sudan, and into cooler Ethiopia where there is lower evaporation. As for evaporation rates, no consensus or exact science exists. But more usage and storage in Sudan and Ethiopia –and a reduced volume at Aswan – could save some 4 billion cubic meters of water a year, some studies say. When it is filled, Ethiopia's new reservoir or artificial lake will be about half the size of the US state of Rhode Island. Filling may start towards the end of next year, and swallow hills, forests, roads, bridges, and villages in this far-flung corner of western Ethiopia. Last month, Italian dam builder Salini Costrutorri hosteda ceremony to mark the diversion of the Blue Nile as part of the construction process.

Flash point: the filling of the reservoir

While that step raised ire in Egypt, it is more the reservoir filling that is a "major concern" to Sudan and Egypt, said an Ethiopian government official, Debretsion Guebremichael, who wore a red cap marked Salini in the sweltering opening ceremony. The volume of water to be captured in the reservoir is 74 billion cubic meters (bcm), according to project documents. That figure is almost equivalent to the entire annual volume of the Nile that flows into Egypt's High Aswan Dam, or 84 bcm. If Ethiopiadecided unilaterally to fill the reservoir as quickly as possible, that would be disastrous for Sudan and Egypt. It would consume the entire flow of the Blue Nile, or around 54 bcm, for more than a year.

The Ethiopian ministry of water and energy says it wants to fill the reservoir over a period of five or six years. Mr. Debretsion says Ethiopia iswilling to "accommodate" other nations. To fill the dam over a six-year period would mean 14 to 18 percent less Nile water moving to Egypt eachof those years, if rainfall is average and the dam is filled evenly. That is the idea in Addis Ababa, the Ethiopian capital. Experts say that idea may not be so simple. It is unlikely that water can be impounded evenly in an area where rainfall and river volumes vary dramatically, says Simon Langan, director of Nile Basin and East African studies at the InternationalWater Management Institute (IWMI). Ethiopia's Blue Nile, for example, has run as high as 70 bcm in 1929, and as low as 30 bcm in 1972 and 1984, this from a 2008 study of sediment in the Nile by Abdalla Abdelsalam Ahmed, a UN water expert from Sudan.

"They will draw 'excess' water during the wet season," Mr. Langan says. "With some proactive management, hopefully it could be varied even more with greater amounts of water in wet years and smaller amounts in drier summers." Most of the Blue Nile's flow follows a three-month rainy season in the Ethiopian highlands that ends around September. Filling thedam only during rainy season in wet years would mean "the effects on downstream users may be quite small," says Aanund Killingtveit, professor of hydrolics and environmental engineering at the Norwegian University of Science and Technology. But that approach could take decades, argues Paul Block, an expert on from Drexel University in

Philadelphia, who has been modeling the impact of the reservoir filling inlight of climatic variability. The approach to capturing water needs to be "flexible" depending on how much rain falls in Ethiopia's Blue Nile basin, Langan says. If the first few years of filling were "drier years this could have drastic implications," agrees Mr. Block, who is a professor of civil engineering and an expert on climate risk modeling and hydrologic forecasting. Unpredictable future rainfull patterns complicate a scenario where Ethiopia wants to fill the damas quickly as possible to generate electricity for export. If Ethiopia fills the dam with 25 percent flow of the Blue Nile per year, the dam will fill in 11 years, says Block; if Ethiopia diverts only 10 percent, the time will extend past two decades, he figures. Michael Hammond, a hydrologist from Exeter University in the UK, says such figures are about right. Yet even with less water in Aswan's reservoir, which holds a huge 150 bcm, Egypt may not lose out. "My understanding is that if the impoundment is managed and operated well, Egypt could be assured a highly reliable supply of 55 bcm per year," Mr. Hammond argues. This is the figure Egyptset in a historic 1959 deal with Sudan. Evaporation rates can be managed by small-scale conservation and reduce the some-500 bcm current loss in Ethiopia's highlands, says Langan. When the Renaissance dam is at full volume, it may have a loss only a fifth of the Aswan Dam’s evaporation, or10 bcm a year, according to the numbers offered by Block, whose studies are about to be peer-reviewed.

Ethiopia boost defense spending amid tensions with Egypt over Nile damdevelopment'

AP ADDIS ABABA, Ethiopia July 3, 2013 — The Ethiopian government is set to increase defense spending by more than 15 percent, a rise that comes amid tensions with Egypt over the building of a new dam on the Nile River. Cairo says the Ethiopian dam project, set to become Africa’s largest, could diminish its share of Nile River waters, which provides almost all of the desert nation’s water needs. Ethiopia’s parliament on Wednesday debated the proposed budget, which would increase defensespending to $400 million, up from about $350 million. The parliament is scheduled to approve the budget on Thursday. Getachew Reda, a spokesman for Hailemariam, insists the defense increase has nothing to do with the recent disputes with Egypt. Getachew told AP the increase corresponds to the country’s growing economy.

Ethiopia: PM Hailemariam - No financial shortage threatening GERDconstruction'

July 4, 2013: Prime Minister Hailemariam Dessalegn confirmed that thereis no financial constraint threatening construction of the Grand Ethiopian Renaissance Dam. Speaking at the 39th regular session of the House of Peoples Representatives on Thursday, PM Hailemariam said that construction of the Dam will never stop because of shortage of finance.

The public is expected to contribute 10 to 15 percent of the required amount for construction of the Dam, the Premier said, adding, the federalgovernment and the Ethiopian Electric Power Corporation will cover the balance. PM Hailemariam said so far some 22 per cent of construction of

the Dam is completed and urged the public to strengthen support towardsthe same purpose. The Premier on the occasion responded to different questions raised by MPs among which the nation's economic growth is one. Hailemariam said the economy is expected to grow by 11 percent in the current year. The Growth and Transformation Plan's base case scenario of economic growth which is 11 percent is being achieved. This isto be welcomed as there is no country in the world is registering such economic growth at this moment, Hailemariam said. He also noted that activities are underway to make the economic growth continue. Source: ERTA (Addis Ababa)

Ex-US envoy says Egypt-Ethiopia dam dispute has peaceful solution'

July 5, 2013: The former US ambassador to Ethiopia says a peaceful solution can be found regarding the controversial dam project on the Nile River in Ethiopia, which is disputed by Egypt. “This can be resolved in a peaceful manner. To my knowledge, there has never been a war anywhere in the world that has been a result exclusively of a fight over water - not a major war. And I don’t think that this is going to become thefirst one,” David H. Shinn said in an interview with Press TV on Thursday. Shinn called on Ethiopia and Egypt to “engage in more discussion, more dialogue, more transparency of information,” with the United States providing only a council role and not fit to “mediate this dispute”. Last month, Ethiopia said it had begun diverting the flow of the Blue Nile for the construction of the Grand Ethiopian Renaissance dam - a $4.2-billion hydroelectric plant that sparked outrage in Egypt, with officials saying the dam will cause serious water shortage in the country.

Egyptian officials warned against a diminished share of the Nile River, while proposing a plan to sabotage or aid rebels against the Addis Ababa government. “I think there has been an enormous amount of misinformation particularly in the last month or so that has led to the heightened rhetoric and emotion, particularly that coming out of Egypt,” Shinn said, adding that “these are issues that can be dealt with so long asthey are hydro-power projects that allow the water eventually to flow again pretty much as it did before.” A ten-man panel of experts has foundthat the dam will not significantly affect Egypt or Sudan. Egypt faces a water crisis as its population increases. In the 1960s, the average water share per person was 2,800 cubic meters. Now, the figure has dropped to600 cubic meters, much below the poverty line, which is 1,000 cubic meters per person. The Nile, located in northeast Africa and the longest river in the world, supplies water to Egypt and Sudan. It is formed from two rivers: the Blue Nile and the White Nile. Egypt is dependent on the Blue Nile, which starts in Ethiopia. Source: GMA

July 11, 2013: VoA News/Africa - Ethiopia Continues Dam Construction’ By Marthe van der Wolf: ADDIS ABABA — Ethiopia and Egypt have been ina diplomatic dispute for weeks over the construction of what will be Africa’s largest hydro-electric dam - impacting the waters of the Nile River. But with Egypt facing political turmoil at home, attention has also been diverted from this controversial project. The massive construction of the Great Ethiopian Renaissance Dam continues despite sometimes angry

protests from Egypt. At issue is - diverting part of the Blue Nile since May.The recently ousted Egyptian government feared the diversion would impact the Nile River flow - on which it is heavily dependent. All of this willbe a reservoir with 74 billion cubic meters of Nile waters. Ethiopia said it will gradually fill the reservoir in the coming years, leaving Egypt questioning how the reservoir can be filled without affecting the water flow, especially during periods of drought.

Simegnew Bekele, one of the dam's project managers, said better water management by both Egypt and Ethiopia will be the key. "The water will flow through these culverts permanently. That culverts will be part of the dam, which will be embedded, which will have gates and during any low flow the water will pass through the culverts because it will be installed at the normal riverbed level. We cannot change the normal riverbed level," he explained. Ethiopia is proceeding with construction even as environmental experts and diplomats continue to work out Nile River resource management among affected countries.

The Great Ethiopian Renaissance Dam will make Ethiopia Africa's biggest power exporter in thenext four years - producing 6000 megawatts of hydroelectric power. The dam will be 1708 meters long, 145 meters high and will be equipped with two powerhouses. Potential buyers of the electricity include Somalia, Uganda and even possibly Egypt. The dam will be competed in 2017 at a cost of close to $5 billion

Egypt "deeply worried" by Nile water row with Ethiopia'

(Reuters) - Egypt said on Saturday it was highly concerned that Ethiopia had not responded to an invitation to discuss a dispute over a giant dam that Ethiopia plans to build on the river Nile. "Egypt is deeply worried thatEthiopia has not yet reacted to the invitation Egypt's minister of water andirrigation made to conduct a meeting in Cairo on the consequences of the dam," a statement issued by the foreign ministry said. Egypt fears the dam will reduce water flows vital for its 84 million people. Recently ousted Egyptian President Mohamed Mursi said last month that "all options" wereopen in dealing with the issue, prompting Ethiopia to say it was ready to defend its $4.7 billion dam, set to be built near its border with Sudan. Theforeign ministry statement, issued just days after an interim cabinet was sworn into office in Cairo, shows the dam issue is a major priority for the new government.

Ethiopia summoned the Egyptian ambassador last month after politicians in Cairo were shown on television suggesting military action or supporting Ethiopian rebels. Egypt also last month hosted an experts' meeting to study the impact of the dam on Egypt and Sudan, the two downstream Nile states. The foreign ministry said Cairo's proposed meeting was going to discuss that study, but gave no further details. Egypt, whose populationof 84 million uses almost all of the Nile water available to it, cites a 1929 pact which entitled Cairo to 55.5 billion cubic metres a year of the Nile's flow of around 84 billion cubic metres. Ethiopia and five other upstream Nile states, such as Kenya and Uganda, say Egypt's claims are outdated and have signed a deal effectively stripping Cairo of its veto based on

colonial-era treaties over dam projects on the river. (Reporting by AymanSamir, Writing by Yasmine Saleh; editing by Crispian Balmer)

Ethiopian dams won't cause harm - ex-EPA head'

ADDIS ABABA (Thomson Reuters Foundation) August 12, 2013 – The former head of the Ethiopian Environmental Protection Authority (EPA), now an advisor to the country's new environment minister, has told Thomson Reuters Foundation that major dam projects will not cut off water supplies downstream nor worsen living conditions for local people.The EPA was Ethiopia's main body for environmental regulation and monitoring for nearly two decades after it was established in 1994. The agency – responsible for developing environmental laws and standards –was upgraded last month to become the Ministry of Environmental Protection and Forestry, with a new minister, Belete Tesfa. E.G. Woldegebriel spoke with Dr. Tewoldebirhan Guebregzabher, the EPA's former Director-general, about its work, as well as his views on cutting emissions, deforestation and controversies surrounding the country's hydro-electric dam projects.

TRF: Ethiopia plans to have grid electricity by 2014 that will be producedwithout using fossil fuels. How will it reach that target?

TG: In 2014, when the 1,870 megawatt Gibe III hydro-electric dam startsto generate power, the electricity in the grid system will be entirely from renewable energy. That is from hydro-power primarily, but also from windpower and some geothermal power.

TRF: How would you respond to critics of the Gibe III project who say itendangers the existence of Lake Turkana and will displace thousands ofpeople in southern Ethiopia and northeastern Kenya?

TG: Gibe III is for generating electricity - after it generates electricity, thewater will flow to Lake Turkana. I don't see how it will dry up Lake Turkana. I think it's either people who mistake hydropower generation with irrigation, or some mischievous individuals who want to cause problems that have been exaggerating.

It's true that during the filling-up period of the dam, if water was completely stopped, it would prevent water flowing into Lake Turkanafrom the areas upstream of Gibe III. But that's not going to happen, because as part of the environmental impact measures, water will continue to flow down and enter into the lake. Therefore, I don't thinkthere will be any harm.

With regard to displaced people, I think the number is around 100 families. When you consider the employment opportunities it gives - including to them - and the fact that they are being given land and moneyto resettle, it's not an issue. There is no development that doesn't have a negative impact; only a country must be cautious and correct (in its response to) those negative impacts, and (in this case) those negative impacts of displacement are being taken care of.

TRF: Ethiopia contributes about 86 percent of the waters of the River Nile.What is the Ethiopian government doing with its counterparts in downstream Nile Basin countries to assess the impact of the

6000 MW

Grand Ethiopian Renaissance Dam (GERD) project, and to solve potentialmisunderstandings?
TG: The governments of Ethiopia, Sudan and Egypt established a technicalworkforce that evaluated - and again, for the reasons I described for Gibe III – that the Renaissance Dam isn't going to stop water from flowing. Thewater will generate electricity and continue to flow. The technical team who examined it have all agreed that its impact is going to be positive in both Sudan and Egypt.
The reason is that, in summer time, in the heavy rainfall, especially Khartoum (Sudan's capital) suffers from flooding and this will no longer bethe case, because the same water will continue to flow but it will be regulated by the dam. The dam makes sure that the water doesn't go in one burst, and that it will flow continually throughout the year. Sudan andEgypt will continue getting the water that they have always been getting. TRF: Do you think Ethiopia will be able to achieve its vision of becoming a carbon-neutral economy by 2025?
TG: The indications so far are that it will, and I have no reason to think wewill slip back, but of course we can only be certain when it happens. I alsoexpect Ethiopia to be the first carbon-neutral economy in Africa - howeverthis isn't a very easy thing to define in the sense that there are many countries with big forests that existed before and are not considered as valued sinks for carbon. But I think that's wrong and therefore the forested countries like Democratic Republic of Congo…I believe (are) already carbon neutral.
TRF: Ethiopia's forest cover is estimated to have fallen to below 3 percentfrom around 40 percent about a century ago. What is the trend in deforestation?
TG: (The percentage of Ethiopia's land area covered by forests) was 20 percent 100 years ago… Ethiopia has been an agricultural country for at least the last 5,000 years, and most of its closed (contiguous) forest areaswere cleared for crop cultivation….The 40 percent (figure) is only the potential area of the country that could have had (contiguous) forest.
It's true (that) in the 19th century the forest cover started coming down,and the estimate was that it went down to about 3 percent. But recent estimates show that reforestation programs have been successful and it has been rising. We are planning to make a much more precise measurement soon, but at the moment I wouldn't be very happy to put afigure on the present forest cover. However I'm absolutely certain it's more than the 3 percent it had dwindled to.
TRF: What were the main challenges for Ethiopia's EPA?
TG: The most important was that of capacity - we had more governmentsupport than I had expected, but we did not have enough trained staff tomeet the demands of the work at hand. And of course, Ethiopia is a poorcountry, and finance comes next.
TRF: What did Ethiopia take away from the 2012 U.N. climate talks inDoha?
TG: The aspiration that there will be a new legally binding internationalprotocol negotiated by 2015, which will come into force in 2020. It's so

that the whole world can unite and curb climate change - that’s thebiggest issue in my view.
TRF: How do you see the likelihood of Ethiopia being able to accessclimate finance from the fledgling U.N. Green Climate Fund?
TG: The fund has been established, the secretariat is in existence - hopefully then the rich countries will provide the funding they have promised. But we can’t as yet accuse of them of not having provided (money) since the fund has only just started.
TRF: What’s the status of carbon credit schemes that have already beenstarted in some parts of Ethiopia?
TG: The first one was in the Rift Valley region regarding a community forest…there are also others in areas like Bale in southeastern Ethiopia and Welayta in southern Ethiopia. A number of others are in the process.But really in carbon financing, Ethiopia - as the rest of Africa - is a late starter. Source: Thomson Reuters Foundation
Horn of Africa: Looming Water War’
People's Democracy Vol. XXXVII No 38 (August 18, 2013) - By YohannanChemarapally
In the first half of June, there has been heated rhetoric emanating from the capitals of north eastern African countries. The reason driving the rhetoric is the construction of a huge dam on the Blue Nile in Ethiopia. Themulti-billion Great Ethiopian Renaissance Dam when completed is going tobe among the biggest in the world, competing with the likes of China’s Three Gorges Dam in size. On June 13, Ethiopia’s parliament unanimouslyratified a treaty that would no longer give Egypt the lion’s share of the Nile’s waters. Six Nile basin countries had signed the treaty in 2011. “Mostof the upstream countries have approved the treaty through their parliaments. We delayed it as a gesture of goodwill to the people of Egypt until a formally elected government was in place”, Ethiopia’s government spokesman told the media. Eleven countries share the basin of the world’slongest river which flows through East Africa before emptying itself in the Mediterranean in northern Egypt. Ethiopia’s neighbours like Egypt and Sudan whose economy is crucially dependent on the Nile are not happy with what they perceive as Ethiopia’s unilateral moves. Egyptian civilization and culture itself owes its existence to the free flowing waters of the Nile. Egypt is of the opinion that Addis Ababa’s decision to operationalise the dam will also be an incentive for countries like Uganda and the newly independent Republic of South Sudan to plan similar dams on the Nile before its waters enter Sudan and Egypt. Three quarters of theNile’s waters to Egypt comes from Ethiopia which is the source of the BlueNile. The White Nile flows through Uganda and Sudan. The White Nile and the Blue Nile meet at Khartoum and then flows into the Sea through Cairo. Since the 19th century, Egyptian leaders have worked overtime to ensure that the waters from the Nile flow uninterrupted into the cotton and wheat fields of their country. Egypt had briefly invaded Sudan and Ethiopia in the 19th century in futile bids to get complete control over the Nile.

DISTRIBUTION GOVERNED BY TWO CONVENTIONS: The distribution of the Nile's waters was until recently governed by two conventions. The firstwas signed in 1929 between Egypt and Britain. Britain was the colonial power that controlled or had influence over all the states through which the Nile flowed. Under this agreement, Egypt was given veto powers over projects on the Nile in other countries. The second was the 1959 agreement signed with Sudan, Egypt was allotted 55.5 billion cubic metersof water from the Nile with Sudan taking 18.5 billion. Ethiopia was excluded from the agreement. Ethiopia and other upstream countries like Kenya and Tanzania were extremely unhappy with the agreement. The Aswan Dam along with the system of canals that have been built to harness the Nile water had done wonders for Egyptian economy. Unlike most of its neighbours, the country is entirely dependent on the Nile water. The country only receives scattered rains and has no forests or savannah. Egyptians feel that the supply to the dam will be adversely affected because of the Ethiopian project and will be a body blow to their already beleaguered economy. The new Aswan Dam was financed and built by the Soviet Union after the US had backed out of its commitment due to the politics of the Cold War era. The Ethiopians too wanted to build a dam on the Nile since the latter half of the last century but their countrywas ravaged by war and political instability. Besides, no country was willing to finance the construction of a huge dam in a country impoverished by cycles of drought and war. 70 per cent of Ethiopians haveno access to electricity. Now things are changing. The Chinese, who have had a history of engagement with the African continent also now, have thewherewithal to finance gargantuan projects. Chinese companies are now involved in a big way in the construction of the Dam in the Ethiopian highlands though the contract for the building of the dam is being handledby an Italian company. The Chinese government has provided a $1 billion loan for the project. The projected cost of the dam is $4.1 billion. Indian, Saudi Arabian and Qatari companies have also invested in the ambitious Ethiopian project. Once completed, the dam is projected to generate 6000megawatts, making Ethiopia the biggest producer of electricity on the continent. It will be in a position to export power to its energy starved neighbours including Egypt. The Ethiopian government has been stressing that the water in the dam will only be used to produce electricity and will not be used for irrigation purposes. In the last week of May, the Ethiopian Prime Minister, Hailemariam Desalegn told his Egyptian counterpart that the course of the Nile's was only being temporarily diverted to facilitate the construction of the dam

Weeks before the military takeover, Egyptian law makers, cutting acrossparty lines, were caught off-guard on television threatening dire consequences for the Ethiopians if the quantum of water for countries downstream is disrupted. They were heard urging the government to usethe Egyptian air force and special army units to abort the construction ofthe dam. The politicians were not aware that their meeting was being broadcast live on television. In the second week of June, the former Egyptian President, Mohammed Morsi in a nationwide address vowed to

safeguard the nation's water security at all costs. "As President of the Republic, I confirm to you that all options are open. If Egypt is the Nile's gift, then the Nile is a gift to Egypt–if it diminishes by one drop, then our blood is the alternative", he said. The Ethiopian foreign ministry spokesman was quick to retort that no threat will stop the ongoing construction of the dam and that his country would not be "intimidated bythe psychological threats" from Cairo. The Ethiopian prime minister described the Egyptian threats as "warmongering" meant to distract the Egyptian public from their political and economic problems. The former Ethiopian strongman, Meles Zenawi, had accused Egypt shortly before hisdeath, of assisting rebel groups in destabilising his country.

SCRAMBLE FOR WATER: Many commentators have for long been predicting that the 21st century will soon witness "water wars" as nations scramble to make optimum use of the diminishing commodity to feed theirgrowing populations and keep the economy ticking. However, nobody is predicting a military conflict in the Horn of Africa or other parts of Africa over the issue anytime in the near future, despite the overheated rhetoric.Most observers believe that Egypt is in no position to match its words withdeeds. Despite its size and military strength, Egypt has been steadily losing its influence in the region. Ethiopia which also has a big population and a strong army has emerged as the West's strongest partner in the region. Egypt's relations with Sudan have been frosty since the overthrow of the civilian government in the late eighties and the coming to power of a military government in Khartoum that was strongly influenced by Islamist ideology. Relations with Khartoum have considerably improved since the ouster of Hosni Mubarak and the coming to power of a government led by the Muslim Brothers. But the newly established Republic of South Sudan has no love lost for Cairo. Egypt, like many otherAfrican countries, was against the break up of Sudan and the creation of anew country. South Sudan is supporting Ethiopia on the Nile waters issue and has also announced that it is also planning to construct dams on the White Nile that flows through its territory. South Sudan has stopped worked on the Jonglei Canal financed by Egypt where 77 per cent of the work has already been completed. The canal if completed would have saved nine billion square meters of Nile water from being wasted. The construction work on the Great Renaissance Dam started two months after the overthrow of Hosni Mubarak. Wikileaks cables have revealed thatin 2010, Egyptian officials were dissuaded by the US and Sudanese officials from making plans to bomb the infrastructure being readied for the construction of the dam. Sudan had warned that such a move would be counterproductive and Washington would anyway not have tolerated an attack on its most trusted ally in the Horn of Africa. Geo-political equations have changed along with the realisation that the Nile is no longer exclusive for Egypt and it is an African River whose bountiful resources have to be shared.

The former Egyptian President, Mohammed Morsi, had said that he "understood" the Ethiopia's need to harness its water resources. He hadcalled for a "political solution" to the issue while describing Ethiopia as a

“friendly state”. The new people in power in Cairo may take a different view. Figures in the Egyptian security set up and the opposition had criticised Morsi for being too soft on the Ethiopian government. The government in Addis Ababa continues to claim that “no appreciable harm”will accrue to downstream states as a result of the dam project. The Egyptian government has concluded that this is not the case and that the construction of the dam will have “negative consequences”. Egyptian experts have calculated that the country will lose around 20 per cent of itsNile water supply for the next three to five years. Cairo is awaiting the report by a Tripartite Nile Basin Committee comprising of Ethiopia, Sudan and Egypt, to determine its next course of action.

Water Wars: Ethiopia/Egypt - Egyptians Condemn Ethiopia's GERD Project’"Ethiopia is killing us," taxi driver Ahmed Hossam said, as he picked his way through Cairo's notoriously traffic-clogged streets. "If they build this dam, there will be no Nile. If there's no Nile, then there's no Egypt." National Geographic Analysis CAIRO (September 28, 2013) - Projects on the scale of the $4.7 billion, 1.1-mile-long (1.7-kilometer-long) Grand Ethiopian Renaissance Dam often encounter impassioned resistance, but few inspire the kind of dread and fury with which most Egyptians regard plans to dam the Blue Nile River. Egypt insists Ethiopia's hydroelectric scheme amounts to a violation of its historic rights, a breach of the 1959 colonial-era agreement that allocated almost three-fourths of the Nile waters to Egypt, and an existential threat to a country largely devoid of alternative freshwater sources. But what Egyptians regard as a nefarious plot by its historic adversary to control its water supply, Ethiopians see as an intense source of national pride and a symbol of their country's renewalafter the debilitating famines of the 1980s and '90s. "People are enthusiastic. They're excited, because no leader has tried such a project inEthiopia's history," said Bitania Tadesse, a recent university graduate fromthe capital, Addis Ababa. "It's a big deal that is going to be beneficial to future generations."

Intense Water Politics: Ethiopia maintains that Egypt and Sudan downstream have no reason to be fearful. The government says it's merely redressing the inequalities of previous water-sharing arrangements, which had left the nine upstream countries largely bereft ofaccess to the Nile. But the changing regional dynamic is a tough pill for Egypt to swallow. For decades it has used its regional clout to stymie the dam-building plans of its impoverished upstream neighbors. International organizations, such as the World Bank, which has financed hydroelectric ventures in the past, shied away from involvement in such a controversial proposal, handing Egypt a de facto veto. But weakened by several years of economic and political unrest in the aftermath of the Arab Spring, Egyptnow finds itself ill-placed to counter a resurgent Ethiopia. A total of "98 percent of Egypt's freshwater comes from outside its borders, and it has exceptionally little leverage," said Angus Blair, an economic and political analyst at Cairo's Signet Institute. "The answer lies with working with its neighbors." Thus far, however, Egypt has taken a largely belligerent stance.

State and private media have whipped up a current of fierce anti- Ethiopian sentiment, with the several-thousand-strong Oromo communityin Egypt bearing the brunt of public suspicion and rage. Many Oromo Ethiopian refugees have been the victims of physical assaults, according to the UN, while a number of online bulletins solicited apartments for Ethiopians after many were evicted from their homes and deprived of medical care in hospitals. Egypt's politicians were no less inflammatory intheir rhetoric. "Building a dam is tantamount to a declaration of war," a senior Nour Party official said back in June, as he proposed Egyptian support for various separatist movements within Ethiopia if the dam's construction continued.

President Mohamed Morsi also weighed in with a veiled threat shortly before his ouster in a popularly supported military coup in early July, saying that "all options are available to us." Some Egyptians blame Morsi and his Islamist Muslim Brotherhood group for the dam's fast progress. "They wanted an Islamic caliphate. They didn't care about Egypt as a country, so they did nothing to stop this dam," said shopkeeper Karim Abdallah. But Egypt's position has, if anything, weakened since Morsi's overthrow. Egypt's southern neighbor, Sudan, has switched sides and chosen to support the dam, not least because Sudan had agreed to an Egyptian request to build an airbase near the Ethiopian border, according to Wikileaks. "Sudan understands that the dam is in its interests," said Harry Verhoeven, who teaches African politics at the University of Oxford."It will be able to import the cheap energy it desperately needs. "Egypt [also] needs to bite the bullet," he added. "Instead of fearing the dam, Egypt should see it as an opportunity to move closer to a region it has traditionally spurned." Former Egyptian president Hosni Mubarak is often accused of having neglected his African neighbors, and some feel Egypt isnow paying the penalty for its preoccupation with its place in the Arab world. "Egypt cannot continue to hurt black Africa and the countries of thetropics of Africa," said Ugandan president Yoweri Museveni this past summer.

Need for Water: Still, Egypt's concerns are far from groundless. Its population is forecast to almost double to 150 million by 2050, so as demand for water surges, its supply will be restricted by the dam. Ethiopia says it's an "unrealistic conception" that the dam will damage Egypt, but for a few years at least (the time it will take for the dam's reservoir to fill),Egypt and Sudan will have to contend with reduced water flow. Egypt fears that storing water behind the Ethiopian dam will reduce the capacity of its own Lake Nasser (thereby reducing the power-generating capacity ofEgypt's giant hydroelectric plant at Aswan). Ethiopian officials have soughtto allay fears by pointing out that storing water in the cooler climes of the Ethiopian lowlands will ensure much less water is lost to evaporation, but Egyptians are unconvinced. "The production of electricity at the Aswan High Dam is likely to drop by almost 40 percent should the Ethiopian dam be built," concluded Nader Noureddin, a professor of agriculture at Cairo University. Such unease has spawned a bevy of wild theories as to how Ethiopia, poorer and more populous than Egypt, can afford its extensive

dam-building program (20 dams in total). "Israel and the U.S. are behind it," insist a number of Egyptian Islamist politicians. "The Chinese are funding this to get back at us for supporting the Americans," a friend in Cairo recently suggested. The Chinese are certainly involved, but there's nothing conspiratorial about it. Chinese state-owned Sinohydro is the world's largest dam builder and accounts for over 50 percent of recently constructed dams. "China simply sees this as terrific business," Verhoevensaid.

The Ethiopian government insists it's capable of raising the necessary funds itself, and the country's sizeable diaspora is helping out. Tadle Haile,a retired school counselor from Northern Virginia, has given money, and said that "everybody I've talked to [in the Ethiopian community] says theyhave as well." The Ethiopian Embassy in Washington even offers advice onhow to buy bonds to finance the dam. But how much longer the country will be able to self-finance its ambitious projects is a contentious issue.

State employees have already been "invited" to surrender a month's salary, and "there is a collectivist pressure to accept," lawyer Daniel Berhane said. "Few Ethiopians would dare complain about anything to dowith the Nile, as it's a symbol of patriotism." The dam is now 20 percent built, and on schedule to be completed by 2017, according to Ethiopian officials. The Grand Renaissance Dam, it seems, is going to get built. Butwhat happens next depends on how Egypt adjusts to its changed circumstances. "Egypt needs to wake up to the new world," Verhoeven said. "This doesn't need to be a problem."

October 10, 2013: Ethiopia Seeks Egypt and Sudan Support in Key DamProject’

Nile basin Hydro-politics: Ethiopia has called on Sudan and Egypt tosupport GERD’

ST (ADDIS ABABA) — Ethiopia has called on Sudan and Egypt to support its building of Africa's largest Hydro power dam project along the Nile River saying the ongoing construction of the Grand Renaissance dam will benefit the three countries. According to a statement released on Thursday from the office of the Ethiopia prime minister, downstream countries particularly Egypt should support construction of the dam and drop its long-standing objection against the project. Egypt has been protesting against the dam arguing that the construction will diminish its water share. The Nile water is a source to 95 % of Egypt's water demand.Ethiopia's massive dam project has been a major economic and water security concern to the North African Nation. When Ethiopia diverted the flow of the Nile water in May as part of the engineering work, tension between Addis Ababa and Cairo escalated. Sudan has officially backed theproject and offered support after a tripartite international experts group which had been tasked to assess the potential impacts announced that theproject will not have any significant impact on downstream countries.

Egypt however refused to accept the final findings saying the report was inadequate and sought another study on the likely impact of the dam of its share of the water. At a news conference this week, Ethiopian prime minister, Hailemariam Desalegn called on Cairo and Khartoum to actively

and practically begin to engage in cooperating and providing support for Ethiopia to finish the "regional project" The premier reiterated that his country will continue to push forward the construction of the dam despite discomfort from downstream countries. He said the benefits from the hydro dam facility will be shared between the three countries and Sudan and Egypt need to contribute to the construction of the 4.6 billion dollar project which Ethiopia is currently financing it from it own coffers. Ethiopiasays the dam project won't harm Sudan or Egypt but will benefit them by providing cheap and clean energy, by controlling over flooding, reducing siltation as well as contributing to regional economic integration.

International Experts' Assessment on the Nile Project Warns of StructuralWeakness'

Bloomberg News (October 4, 2013) : - Ethiopia's plan to build Africa's biggest hydropower dam on the main tributary of the Nile River must address concerns that there may be flaws in the design of its foundations,a group of international experts said. They also called for further studies on what impact the 6,000-megawatt, $4.7 billion project may have on thedownstream nations of Sudan and Egypt, the International Panel of Experts said in a report e-mailed to Bloomberg News and verified by Ethiopia's Foreign Ministry. Egypt, which relies on the Nile for almost all ofits water, expressed alarm about the dam when Ethiopia in May diverted the Blue Nile as part of the construction process. "Structural measures might be needed to stabilize the foundation to achieve the required safetyagainst sliding" of the main dam, according to the report. There are also "weak zones" in the rock that will support an auxiliary dam that need to be studied, it said. Construction of the Grand Ethiopian Renaissance Dam is part of a government plan to spend 569 billion birr ($30 billion) on infrastructure in the five years through mid-2015. The country, Africa's second-most populous nation, targets becoming an industrialized middle-income nation by 2025. Ethiopia is the source of 86 percent of the water that flows into the Nile, the world's longest river that runs 4,160 miles through 11 countries from Burundi in the south to Egypt, where it emptiesinto the Mediterranean Sea. Ethiopia has said it will take five to six years to fill the 74 billion cubic-meter (2.6 trillion cubic-feet) reservoir created by the dam.

Regional Specialists: The panel, which held its first meeting in May last year, was formed at the suggestion of Ethiopia's government. It comprised two specialists each from Ethiopia, Egypt and Sudan and four from other nations. The report, which hasn't been made public, was submitted to the three governments in June. Ethiopia said the report found the project to be of international standard and won't cause "significant harm" to downstream countries, while Egypt said it was inconclusive. Ethiopia delivered a hydrological study to the panel that analyzed the downstream impact of the reservoir-filling period given low, average or high rainfall. The project document concluded that Egypt facesa 6 percent reduction in the High Aswan Dam's electricity-generating capacity and no water loss if the reservoir was filled during years of average or high rainfall. If the reservoir was filled in a dry year it would

“significantly impact on water supply to Egypt and cause the loss of powergeneration at High Aswan Dam for extended periods,” according to the document. A “comprehensive” additional study of the dam’s impact on water resources should be conducted, the panel said after reviewing the document. “The analysis presented is very basic, and not yet at a level of detail, sophistication and reliability that would befit a development of this magnitude, importance and with such regional impact.” Ethiopia is working with Sudan and Egypt to enact the panel’s recommendations, Dina Mufti, a spokesman for the Foreign Ministry, said in an interview today in the capital, Addis Ababa.

NILE: Sudan Shifts Alliance From Egypt To Ethiopia Over Nile Dispute’

Al Monitor: (October 7, 2013) Since 1959, Sudanese politicians have sidedwith Egypt when negotiating with other African countries about Nile water rights. Similarly, Sudanese politicians based in Khartoum have looked north and east to their Arab neighbors for political, cultural, military and financial support. How then do we explain the statements in June and July2013 by Sudanese President Omar al-Bashir and Irrigation and AgricultureMinister Abdul Halim al-Mutafi that Sudan supports the construction of the Ethiopian Grand Renaissance Dam over the objections of the country’s Egyptian allies? To understand the strengthening of Sudan’s alliance with Ethiopia and its increased distance from Egypt, it is necessary to look bothat the events of the past few months and at the partition in 2011. The recent protests and riots, which began in Wad Medani on Sept. 23 and have subsequently spread to cities throughout Sudan, calling for a continuation of government fuel subsidies and now the fall of the regime, are the direct result of the failure of the National Congress Party’s (NCP) political and economic strategy in the run-up to and in the wake of the partition of Sudan in July 2011. While the riots are more severe than theyhave been in the past, contentious protests in the face of rising prices have occurred with increased frequency over the last few years. For instance, major demonstrations in Khartoum against rising prices erupted in June 2012. These protests have spawned several semi-permanent movements calling for Sudan to have its own "Arab Spring," the most famous of which is the youth movement Girifna. However, officials within the NCP always knew the postsecession transition would be difficult. They were surrendering 75% of Sudan’s proven oil reserves, the very wealth that had supported the rapid growth and consolidation of the regime during the 2000s.

In the short term, Bashir’s government was prepared to fiercely confront the remaining separatist movements in the Blue Nile state, South Kordofan, Darfur and the eastern regions of the country. They also believed they could suppress political dissent in Khartoum, preventing thedisparate factions from joining together or aligning with peripheral movements to threaten the survival of the regime. In the years before partition, strategists within the NCP began to imagine an alternative to anoil-based Sudanese economy. These thinkers returned to the 1970s idea of Sudan becoming an "Arab breadbasket." This transformation was premised on an agricultural revolution supported by an ambitious series of

dam-building projects along the Nile, north of Khartoum, the most famousof which was the Merowe High Dam completed in 2009. New irrigation andhydropower projects were expected to reinvigorate a somnolent agricultural sector, while bringing prosperity to the long-neglected traditional heartland of the political elite. Many in Khartoum even began toclaim that a smaller Sudan was a virtue. They argued that without the burden of funding constant counterinsurgency warfare in the periphery, the nation would finally have the funds necessary to develop a culturally and economically united country. By ensuring a peaceful secession, the leadership in Khartoum sought to create the political stability necessary toattract foreign investment and win the lifting of the US sanctions placed on the country in 2005. Even as some strategists in Khartoum questioned whether the US government would acquiesce to the removal of sanctions, most businessmen and politicians in Khartoum believed that the country could count on significant investment from the Gulf countries into the real estate, construction and agricultural sectors. These officials believed that this investment would make the transition to an agricultural economy possible. However, as of early 2008, questions began to emerge about thefeasibility of bringing significant amounts of new agricultural land under cultivation and the government's dam-building program.

As strategists in Khartoum were planning what they readily acknowledgedwould be a difficult transition to a post-oil economy, they were caught off guard by the fall of Presidents Zine El Abidine Ben Ali (Tunisia), Hosni Mubarak (Egypt) and Moammar Gadhafi (Libya) in spring 2011, the ongoing civil war in Syria and the continuation of sectarian tensions in Bahrain. Initially enthusiastic to participate in the overthrow of regional rivals such as Gadhafi, the uprisings sweeping the Arab world became difficult for those in Khartoum to navigate. Egypt's effectiveness as an allysupporting Khartoum in its negotiations with South Sudan or dialogue about the division of the Nile waters decreased, first as a result of Egypt's leadership transitions, then as a result of the public airings of Egyptian politicians' condescending statements about interfering in the internal politics of other African countries and finally as a result of Egypt's expulsion from the African Union in July. Similarly, turmoil in the Middle East has not only created competition for Arab financial and political resources, the increasingly sectarian tenor of these conflicts have alienated Saudi Arabia and the United Arab Emirates (UAE) from the Sudanese leadership, as a result of the regime's reliance on Iran as a military supplier and ally. The nadir in the Saudi-Sudanese relationship was recently marked by Riyadh's decision in August to prevent Bashir from flying through its airspace to Tehran. Despite receiving much less aidand investment than officials in Khartoum had initially expected, Saudi Arabia and the UAE have become the country's largest trading partners.

Asian allies, China, Malaysia and India —which created Sudan's petroleumindustry —had signaled to the regime that they were unwilling to invest inthe country without political stability with Sudan's African neighbors, with whom they enjoy sizable commercial relationships.

At the same time, Khartoum has been confronted by an ascendant Ethiopia. Ethiopia's power was signaled in 2012 by the calm manner in which the country dealt with the transition from Meles Zenawi to the reignof Hailemariam Desalegn Boshe. Similarly, while the Arab League remainsdivided, African regional and multilateral organizations such as the AfricanUnion, the Intergovernmental Authority on Development and the Nile Basin Initiative have become increasingly effective in setting the regional agenda. Consequentially, as Egypt has turned inward, Ethiopia has emerged as Khartoum's key regional ally, willing to mediate conflicts withSouth Sudan, provide peacekeepers in Abyei and answer to some of Khartoum's economic problems. While Sudan has become an increasingly unattractive site for foreign investment, Ethiopia has become more attractive. Ethiopia's increased prosperity and perceived political stability have allowed it to make significant progress on large infrastructure projects such as the Renaissance Dam, despite Egyptian objections. For Sudanese officials, the realization that Ethiopia was bearing the expense of this construction itself, and that it would increase the amount of land inSudan under cultivation, the number of crop rotations and supply an energy hungry Khartoum with cheap power, are all reasons to support Addis Ababa on the dam issue. At the same time, the African Union has begun to question the legitimacy of the International Criminal Court. And despite several years of hostility between Juba and Khartoum, recent divisions within the ruling parties of each country have made them willingto de-escalate their support for separatist movements in each other's country and engage in security cooperation. While at partition, NCP strategists expected to rely on their Arab neighbors to support them economically and politically —especially in a potential confrontation with South Sudan —at present, it has turned out that it is Khartoum's African neighbors that have been providing it with the crucial support the countryneeds to maintain its own stability. Alden Young: is a Mellon postdoctoral teaching fellow in the Department of Africana Studies at the University of Pennsylvania.

Ethiopia and Egypt face off over billion-dollar Nile dam project'

(The National) (October 17, 2013): Ethiopia, Egypt and Sudan will hold discussions next week over the effect of a new billion-dollar hydro plant along the river Nile, which Egypt fears will hurt water supply to its 84 million people. The meeting will be the first since experts submitted their recommendations on the $4.3bn (Dh15.79bn) Grand Ethiopian Renaissance Dam project more than three months ago. "The meeting is scheduled to take place ... on Oct. 22, 2013 between officials of the three countries," the Ethiopian foreign ministry said. Egypt fears the 6,000 Megawatt plant is likely to hurt its water supply when it comes on-stream around 2017. The majority of the Egyptian population is centred near the Nile valley and the desert nation depends on the river for around 95 per cent of its water. In June, former Egyptian President Mohamned Morsi saidthat Egypt would "defend each drop of the Nile with our blood". Egypt is fiercely opposed to the dam but years of political turmoil have weakened the nation's influence in the region. The experts' report is yet to be made

public but according to Fekahmed Negash, the director of boundary and trans-boundary rivers at Ethiopia's Water, Irrigation and Energy ministry, the experts recommend further studies to analyse the effect of the dam on Egypt's water supply. Ethiopia plans to take up to six years to fill the dam's 74 billion cubic-metre reservoir but insists this will not adversely affect the river's downstream flow. Addis Ababa, which is fully funding theproject, has pledged to sell excess power to Egypt. Early this year, Ethiopia ratified the Nile River Co-operative Framework deal, challenging the colonial-era treaty that guarantees Egypt "natural and historic rights" over the Nile waters. Lower basin nations including Ethiopia, Kenya, SouthSudan and Uganda are all opposed to the treaty. In June, Uganda's President Yoweri Museveni said that Egypt should not continue to "hurt countries" in the Nile River basin by restricting power projects along the river. Uganda is developing several hydro power projects along the Nile.

Egypt may join Ethiopia in Nile Dam project'

Al Monitor (October 23, 2013) Analysis by Ayah Aman: Cairo and Addis Ababa may soon reach a truce to calm their dispute over the constructionof the Renaissance Dam on the Blue Nile in Ethiopia. Both countries haverecently shown good faith and agreed to negotiate about the project.

Egypt has even agreed to take part in building the dam, though without declaring its conditions for doing so. At a news conference Oct. 7, Ethiopian Prime Minister Hailemariam Desalegn announced that his country welcomes the participation of Egypt and Sudan in the constructionof the dam and stressed that his government considers the dam to be jointly owned by Sudan, Ethiopia and Egypt. Cairo viewed his statement as a positive step toward reaching a consensus on the project, despite its earlier sharp criticism of it. In a telephone conversation Oct. 17, Egyptian Minister of Water Resources and Irrigation Mohamed Abdul Muttalib told Al-Monitor: "Egypt doesn't mind joining the Ethiopian government in building the dam for the service and development of the Ethiopian people.But we must agree on a number of items in a clear way to prevent any damage to Egypt as a result of the dam construction. The Egyptian government always opts for cooperation and participation. … During the coming negotiations with Ethiopia over the dam, we will clarify our position regarding the policy and method of operating the dam, the size ofthe storage lake attached to it, and how to fill it with water in times of flood and drought." He stressed, "Egypt will definitely not participate in the construction unless these policies are agreed upon and agreements regarding them are signed."

On Oct. 8, Ethiopian Minister of Water Alemayehu Tegenu had tweeted, "Great Ethiopian Renaissance Dam never be slowed down for a second. We can pay any cost for it ..." Egypt gets 55.5 billion cubic meters of Nilewater annually in accordance with the 1959 agreement signed between Egypt and Sudan. About 85% of that share comes from the Ethiopian plateau, in particular from the Blue Nile tributary, on which Ethiopia intends to build the Renaissance Dam to store 63 billion cubic meters of water in and generate 6,000 megawatts of electricity. The Ethiopian, Sudanese and Egyptian water ministers are

expected to meet Oct. 20-23

in Khartoum to discuss the May report of the Tripartite Commission on therepercussions of the dam and how to implement the report's recommendations for avoiding harm to any of the Nile states. On Oct. 8, Egyptian Prime Minister Hazem el-Biblawi met with the Supreme Committee for the Nile Water to agree on negotiating mechanisms for dealing with Ethiopia. The gathering ended with approval for Egypt taking part in the dam's construction. An official Egyptian source following the Nile issue who asked to remain anonymous, told Al-Monitor on Oct. 16, "The government has prepared a new paper to negotiate with Ethiopia regarding the Renaissance Dam. Technical and legal teams have been tasked with studying the Egyptian [negotiating] items, which are expectedto be presented to the Ethiopian side at the next meeting. … The Egyptianoffer includes full participation in the construction, management and operation of the dam, by dispatching Egyptian engineers who specialize inthe field of dam construction; the signing of an agreement with the Ethiopian side on sending [to Ethiopia] a permanent Egyptian water mission [that will be stationed] at the dam; and [Egypt's] participation in the funding and working as an intermediary to obtain aid and internationalloans and grants to finance dam construction."

The final report of the Tripartite Commission contained several technical remarks regarding how the dam might harm Egypt. Some experts therefore have reservations about the Egyptian government's sudden decision to participate in the project, especially if it is without considering the full consequences of such a decision. Al-Monitor obtained a copy of thereport prepared by the Egyptian government on the Tripartite Commission's final report. The Egyptian document states that building andoperating the Renaissance Dam according to the current specifications is not in the interest of downstream countries — Egypt and Sudan — and willenable Ethiopia to fully control the flow of the Blue Nile. Moreover, the time required to initially fill the dam reservoir, three years, will negatively affect Egypt. The report pointed out that the study of existing designs showed a defect in the safety features concerning the secondary Saddle Dam. This, in turn, has the potential to affect the safety of the High Dam in Egypt. Most studies submitted by Ethiopia are preliminary and not meant for implementation purposes. In addition, no environmental and social impact assessments on downstream countries have been conducted.

A diplomatic source involved in the negotiations among Cairo, Khartoum, and Addis Ababa told Al-Monitor, "The sudden announcement of Egypt's participation in the dam construction is linked to a number of factors that govern its relationship with Ethiopia. Egypt's decision doesn't mean compromising its water rights, but Egypt needs special capabilities in the next phase to negotiate and to hold on to its cards for pressure to not accept the dam if it harms [Egypt]. The political administration in Egypt is aware of the serious [threat] the dam poses to Egypt's water security. So first, we must agree on the construction and operation policies before signing any agreement to participate in the dam. [We must also] completethe technical and environmental studies to make sure that there is no

harm to Egypt or Sudan. … The situation Cairo is now faced with is very complex, and the negotiating options are limited. Our position is the weakest because we are the most in need of water and because of our weak position on the African Horn after the freezing of Egyptian activity inthe African Union. We have no choice but to accept the establishment of the dam." On the other side of the equation, the Ethiopian government announced in September that it had completed 30% of the engineering and technical preparations at the dam site and is ready to start building the main body of the dam. Sudan expressed its satisfaction with the project and asserted that the dam would protect Sudan from the floods it faces every year. Egypt is still trying to make the best of the situation andto secure its share of annual water from the Nile as it awaits the negotiations with Ethiopia and Sudan. Egypt fears that its demands will not be met at a time when the country is experiencing internal unrest, ongoing since the July ouster of President Mohammed Morsi and affecting Egypt’s relations with neighboring African countries. East Africa: Nile Basin Countries Call for All-Inclusive Cooperation'

ST Kigali — (November 1, 2013) A dialogue of Nile Basin Initiative (NBI) countries and its primary donors has advocated for renewed commitment to invest in an all-inclusive Nile cooperation and sustain the gains so far made. The two-day dialogue, held in the Rwandan capital, Kigali was chaired by Jemma Nunu Kumba, South Sudan's minister for electricity, water and irrigation. "While the NBI has achieved a lot in the last 14 years, a lot still needs to be done to realize the shared vision," said Kumba, who is currently the chairperson of the Nile council of ministers. During the gathering, member states reportedly re-affirmed their commitment to and ownership of the Nile cooperative process and the sustainability of the NBI institutions. "They [NBI countries] called on development partners to continue their unwavering support towards achieving the member states' development agenda", partly reads a statement to Sudan Tribune. Development partners pledged to work with NBI to enhance the institutional and financial mechanisms necessary to deepen the Nile cooperative process, it further stressed.During the dialogue, which was attended by members of the Nile Technical Advisory Committee (Nile-TAC) representing the 10 NBI member states and representatives of NBI's development partners, attendees reportedly underscored the importance of realizing benefits of Nile cooperation, including investment projects. A transitional, 10-member intergovernmental partnership institution launched in February 1999, NBI provides the only all-inclusive regional platform for multi stakeholder dialogue, for sharing information, joint planning and management of water and related resources in the Nile Basin. Member states of NBI include Burundi, Democratic Republic of Congo (DRC), Egypt, Ethiopia, Kenya, Rwanda, South Sudan, Uganda, Sudan and Tanzania, while Eritrearemains an observer.

Egypt to coordinate with Ethiopia on Renaissance Dam’

Egyptian Minister of Irrigation and Water Resources amplifies Egypt andSudan could benefit from GERD Daily News Egypt: (November 5, 2013) Egypt, Ethiopia and Sudan, are allcommitted to coordinating and cooperating in dealing with Ethiopia's Grand Renaissance Dam, said Egypt's Ministry of Irrigation and Water Resources on Monday. Egyptian Minister of Irrigation and Water ResourcesMohammed Abdel Moteleb said that it was "time to consider a new strategy for the available investment opportunity," adding that any matterdealing with the dam must be agreed upon by the governments of the three countries. The countries' water ministers began meetings in the Sudanese capital of Khartoum on Monday in order to review recommendations put forth by a report formed by a tripartite committee investigating the impacts of the dam on Ethiopia's neighbours in the north. Abdel Moteleb added that trilateral support for the dam could set a "good example for cooperation in the region," adding that he hoped that the outcome of the process would be the "beginning of a new era of cooperation between the three countries." "I would like to recall the initiative put forth by the Prime Minister of Ethiopia, a proposal considering the Renaissance Dam a joint regional project from which the three countries could benefit," said Moteleb in his Monday address to the representatives from the three countries. Last week Egyptian Minister of Foreign Affairs Nabil Fahmy stressed the importance of joint action and cooperation between countries when dealing with Ethiopia's dam, saying that the water issue must not be dealt with as a "zero-sum game." Spokesman of the foreign ministry Badr Abdelatty said that the Prime Minister of Ethiopia Hailemariam Desalegn would come to Cairo "soon." "We will continue dialogue with Ethiopia and our Sudanese brothers," added Abdelatty.

EGYPT/ETHIOPIA - Countries deadlocked on $4.2bn Nile dam'

Nile politics: (November 6, 2013) A regional meeting between Egypt, Ethiopia and Sudan to discuss the impact of a $4.2bn dam being built on aNile river tributary in Ethiopia after experts said earlier studies were inconclusive, has reached a deadlock. Irrigation ministers from the three countries met in Sudan on Tuesday (November 4) to discuss Ethiopia's planned a 6,000-megawatt hydro-electric Grand Renaissance dam, set to be Africa's largest when completed in 2017. Its construction has raised concern in Cairo that it will reduce the flow of the Nile, which provides almost all of Egypt's water. In a June report, a group of international experts said Ethiopia's analysis of the dam's impact was "very basic, and not yet at a level of detail, sophistication and reliability that would befit a development of this magnitude, importance and with such regional impact." Mohammed Abdel-Motleb, Egypt's minister of irrigation and waterresources, said Tuesday that the meeting, which took place in Sudan's capital Khartoum, discussed the recommendations by a committee of experts charged with looking into the effects of the dam on downstream countries. "The Egyptian delegation presented a clear vision on how to implement the recommendations of the international committee of experts," Abdel-Motleb told reporters. "We also suggested proposals to

ensure the required studies are completed as soon as possible," he added.However, Ethiopia's water minister blamed Egyptian objections for the delay, saying that the Egyptian delegation objected to the formation of a committee to implement expert recommendations on the project. "We didn't agree about the composition of this committee," Alemayehu Tegenutold AFP on Tuesday. "We have differences with Egypt." Egypt argues its rights to the Nile water are guaranteed by two colonial-era treaties from 1929 and 1959 which allow it the lion's share of the water flow and give itveto power over upstream projects. Other Nile Basin countries, including Ethiopia, have signed a new 2010 agreement which allows them to work on projects without Cairo's prior agreement. Neither Sudan nor Egypt is a signatory to the new agreement. Another trilateral meeting is planned for 8 December.

Ethiopia: Egypt objections delaying dam panel'

KHARTOUM (AFP) (November 6, 2013) – Egyptian objections are delaying formation of a committee to implement expert recommendations on an Ethiopian dam project, Ethiopia's water minister says. Egypt fears the 6,000 MW Grand Renaissance Dam, which will be Africa's largest when completed in 2017, could diminish its water supply, At a one-day meeting in Khartoum, the water ministers of Egypt, Sudan and Ethiopia agreed to form the panel, Alemayehu Tegenu said on Tuesday. "But we didn't agree about the composition of this committee," he said. "We have differences with Egypt." Tegenu declined to elaborate on why there was disagreementover the committee's membership but said the three sides would meet again in Khartoum on December 8. Ethiopia began diverting the Blue Nile in May to build the dam. An international panel has issued a report outlining the dam's impact on water levels. The report has not been madepublic, but Ethiopia has said it confirms that the impact on water levels is minimal. Egypt, which is almost entirely dependent on the Nile, had sought more studies about the dam's impact on its water supply. Egypt believes its "historic rights" to the Nile are guaranteed by two treaties from 1929 and 1959 which allow it 87 percent of the Nile's flow and give itveto power over upstream projects. But a new deal signed in 2010 by other Nile Basin countries, including Ethiopia, allows them to work on river projects without Cairo's prior agreement. Sudan, along with Egypt, has not signed the new Nile Basin deal.

Talks between Egypt, Sudan, Ethiopia to tackle seven main issues:Sources'

Al-Masry Al-Youm: (November 7, 2013) Sudanese sources said on Saturday seven main issues will be tackled in the eastern Nile countries' technical experts meetings that will start on Sunday in Khartoum. An agreement will be signed to guarantee approach between points of view on the Ethiopian Renaissance Dam project. Parties will consider mechanisms of the dam's administration and operation as well as economic, social and environmental impacts. The meeting will discuss agreement on financing the dam and timeline to implement recommendations of the international committee which evaluates the dam, the sources added. The Sudanese government is trying to overcome

the current impasse of conflicts between Egypt and Ethiopia. Parties will also consider resuming studies on the dam's safety, according to sources,which added that the Sudanese government is trying to reassure citizens in al-Qadarif state, located on the Ethiopian-Sudanese border, after the Ethiopian side offered practical vows over these studies. Sudanese President Omar al-Bashir instructed ministries taking part in meetings of the technical experts or the ministries to work on success of the negotiations, especially that Khartoum is the sponsor to approach points of view between Cairo and Addis Ababa, the sources added. On Monday, a meeting will be held among the three countries' water ministers to agree on future of cooperation between them and mechanisms of implementing the recommendations. Meanwhile, the sources accused unnamed foreign parties of creating division between Egypt and Sudan. They considered that the meeting between the three countries' water ministers will push relations forward during the coming period and encourage both Egyptian and Sudanese governments to open the common land road to increase rates of trade between Cairo and Khartoum. However, Sudanese experts and observers assured that Khartoum seeks resumption of talks following disputes that took place in the earlier meeting on 4 November. Agreement between the three countries' ministers to resume the meeting in Khartoum confirms that Sudan is keen on success of the negotiations to find a solution for the impasse and achieve comprehensive compromise between the Nile Basin countries that guarantees full administration of the Nile water resources. This also expresses interest in carrying out joint projects to link electricitybetween the basin countries and then export electricity to European Unioncountries via Egypt.

NILE: Ethiopia dam strikes fear in Egypt farmers'

Ezbet Rabie – (November 11, 2013) With an economy already in tatters, Egypt's farmers fear the building of an upstream Nile dam in Ethiopia could lead to water shortages and crop failures with catastrophic effects on their livelihood. "We don't want this dam," says Saeed al-Simari, standing on his modest land in Egypt's fertile Nile Delta region. "We want to plant our land, we need water. It's hard enough with the water we have, imagine when we don't have anymore," said Simari. "We are very worried about our crops," he told AFP. Ethiopia is pressing ahead with construction of a $4.2bn Grand Renaissance Dam, set to become Africa's biggest hydroelectric dam when completed. The announcement of the project caused a national outcry in Egypt, with politicians, media and farmers warning that the dam could pose a national security threat. Waterexperts in Egypt say there is already a water deficit in the country due to the exploding population. "The average person uses 620 to 640 cubic metres per year. With the water poverty level defined at 1 000 cubic metres, we are already below the water poverty level," says Alaa al- Zawahry, a dam expert and member of a government commission tasked with studying the downstream impact of Ethiopia's dam.

Historic rights: Egypt, which fears the project may diminish its water supply, says its "historic rights" to the Nile are guaranteed by two treaties

from 1929 and 1959 that allow it 87% of the Nile's flow and give it veto power over upstream projects. But a new deal was signed in 2010 by other Nile Basin countries, including Ethiopia, allowing them to work on river projects without Cairo's prior agreement. In May, Ethiopia began diverting the Blue Nile a short distance from its natural course for the construction of the dam, but has assured its neighbours downstream that water levels would not be affected. But Egyptians fear a doomsday scenario in which water shortages would lead to crop failures and electricity cuts. A study by international experts on the dam's impact on the river has been submitted to Egypt and Sudan, which also relies on Nileresources and supports Ethiopia's hydro-electric project. Egypt has dismissed the study's findings, which minimise the dam's impact, and has called for further assessments. The first phase of the Grand Renaissance Dam is expected to be complete in 2016 and will generate 700 megawattsof electricity. When the entire project is complete it will have a capacity of6 000 megawatts. The filling of the dam is expected to take around five years and this according to experts will be the most taxing phase for Egypt. Egypt's Aswan Dam - which controls annual floods and provides water for irrigation - has a strategic reserve of 70 billion cubic metres, which will drop by 15 billion each year of the filling phase of the Renaissance Dam, says Zawahry. After five years, "there will be an electricity shortage and the strategic reserve will be used up," he told AFP. Farmers less optimistic: Ethiopia, for whom the dam promises a much- needed source of energy, has pledged to maintain dialogue with Egypt to resolve any problem. Zawahry says constant co-ordination between both countries is crucial. "There will always be a conflict between Ethiopia wanting to produce more electricity and Egypt receiving the water it needs," he said. But it is difficult to accurately predict the exact impact of the Renaissance Dam. "It's all a question of probability," said Zawahry, with many variables playing a part. "On the Nile, from Ethiopia to Aswan, there are several dams but they are small and their effects are small. But if there will now be a 74 billion cubic metre dam, the management of both dams has to be very well co-ordinated," he said. The water ministers of Egypt, Sudan and Ethiopia are to hold talks soon to discuss the progress of the dam, Egyptian officials have said. "We have heard many encouraging statements from the Ethiopian side saying that the dam will not affect Egypt. The mood is positive," said Khaled Wassef, spokespersonfor the ministry of water resources and irrigation in Egypt. "We need the full information on issues like how long exactly will it take to fill the dam, the way it will be managed," Wassef told AFP. But on the fields, the farmers are less optimistic. They say water shortages will force them to use underground wells rather than Nile water, which is richer in nutrients thanks to the silt deposits.

Ethiopia: Watery Confusion'

Addis Fortune, Addis Ababa (November 17, 2013) Egypt's sense of nationhood is tied up in control of the Nile. So too is energy self sufficiency for Ethiopia. The clash between these two realities could havedeadly consequences. America will be tempted to intervene - on the

wrong side. The issue is a major dam under construction by Ethiopia on the Blue Nile River - the source of over 80pc of the water that eventually enters the Nile River system. The Blue Nile starts in Lake Tana in Ethiopia and flows through tall, narrow chasms to the Sudan border. Within Sudan,the Blue Nile meets the White Nile, in Khartoum, and from there flows intoEgypt. For many years, all the Nile's water has been divided between Sudan and Egypt; any other country that dared to touch the Nile was met with stern threats from Egypt and its protectors: first England, then America. When Ethiopia sought World Bank (WB) financing for this dam more than 20 years ago, the US leaned on the Bank to say no. Egypt was at peace with Israel at America's request, and they demanded America's help with the Nile question (and two billion dollars a year) in return. The calculus was clear: Ethiopia brought us nothing, Egypt, under Hosni Mubarak, brought peace with Israel. So we did Egypt's bidding with the World Bank. The last several years, however, have brought Ethiopia into apartnership with the US in attacking Al-Qaeda and similar groups in Somalia. Meantime, Egypt deposed of a longtime US ally and Americans were not enthusiastic about his replacement, Mohamed Morsi. Trying to stir up nationalist sentiment, Morsi focused on Ethiopia's announcement that it would start to divert the Blue Nile, in order for dam construction to begin. He said - "We will defend each drop of Nile water with our blood if necessary", and summoned leaders of the Islamic parties to discuss Egypt's likely response. Infamously, a leader of one of those parties, not knowing the meeting was being broadcast, said on live television that the "real enemies" were America and Israel. Talk included a military strike.

Morsi is gone. The US Secretary of State John Kerry has embraced the new military government. The danger is that the US, in its effort to prop up the Egyptian military successors to Morsi, will try to give them a victoryover the dam issue. When has the US ever managed to play the internal politics of another country with any success? It is so much more likely that, if we go down this route, we will alienate all of our allies in the fight against extremism in Somalia, and do nothing to appease the widely held belief in Egypt, voiced at that televised meeting, that somehow all wrongs are due to America. We will choose the wrong side-one again.

Why do we need to take sides at all? We cannot stop Ethiopia by cutting off its financing: Ethiopia has come up with the funding for this project from the sale of bonds and loans from China. The dam, once finished, will produce tremendous amounts of electricity that can be sold to neighboringcountries to retire the bonds. And, if the new Egyptian regime wants to show it is at least as nationalistic as the deposed Morsi government and threatens to bomb the dam, will we be proud to be associated with that?

If we do take sides, the dam is the right thing to do for environmental andhumanitarian reasons. Ethiopia will become a net energy exporter in a part of the world chronically lacking in electricity. The stored water can alleviate the drought that occurs every seven years, filling world newspapers with horrifying pictures of starvation in Sudan and Ethiopia.

Once the reservoir is filled, the flow of the Nile would not be diminished. The time to fill the reservoir can

be during the wet seasons and spread out

over many years. There are many ways for America to signal its support of the new regime in Egypt. Shutting down Ethiopia's dam, or looking theother way while Egypt does so, is not one of them. The writer is dean of the School of Law at Chapman University and a former US Congressman,serving on the Africa Subcommittee of the House International Relations Committee. This commentary first appeared on Orange County Register Sudan's Bashir 'ignored' impact of Ethiopia's dam on Egypt: Egyptian official' Sudan's support for the Grand Renaissance Dam in Ethiopia promptsEgyptian response

Ahram Online: (December 6, 2013) An Egyptian official has criticised Sudanese President Omar Al-Bashir for his recent expression of support for the construction of a massive new dam on a Nile tributary in Ethiopia. Al-Bashir said on Wednesday that Sudan supported the Grand RenaissanceDam project, which is currently under construction, because itwould "benefit all Nile Basin states." Egypt has expressed strong reservations about the dam and its possible effect on the volume of water that reaches Sudan and Egypt, both downstream from Ethiopia. “We are not against the pros [of the dam] and we didn’t ignore it, but Al-Bashir didnot explain how we could deal with the cons,” an official at the Egyptian Ministry of Agriculture told London-based Al-Sharq Al-Awsat newspaper.

The ministerial official, who asked not to be named, further said that thatthe Sudanese leader has ignored the impact of the dam on Egypt’s shareof the Nile water and the fate of water-sharing agreements.

Tensions escalated between Egypt and Ethiopia in May, when Ethiopia began diverting the Blue Nile as part of the construction process. At one point, Egyptian politicians were caught on camera at a meeting with then- president Mohamed Morsi, suggesting that the dam be sabotaged.

Construction of the $4.2 billion (3.2 billion euro) Grand Renaissance Dam has nevertheless gone ahead. When complete, it is set to be Africa's largest hydroelectric dam. For decades, Egypt held veto rights over all upstream projects, following powers granted by a 1929 colonial-era treatywith Britain. Egypt's subsequent 1959 deal with Sudan gave the two downstream countries more than 90 percent of the Nile's water. The negotiations – involving Egypt, Sudan and Ethiopia – regarding the construction of a giant dam in Ethiopia are expected to resume in Khartoum starting Sunday. A similar meeting had been held on 4 November involving technical representatives from the three countries, but no tangible results were reached.

Next on Egypt's to-do: Ethiopia and the Nile'

Ajazeera Opinion By Barry Malone (Decemer 8, 2013) - Water ministersmeet in Sudan for latest round of talks on how to share Africa's fabled river. Aljazera Play a game of word association almost anywhere in the world, and if you try the word "Nile", the answer will be "Egypt".

Herodotus famously said the country was a gift of the fabled river, and it'sno exaggeration - given that Egypt is almost totally dependent on the Nilefor water and agriculture.

But upstream of Cairo, there's a country where the answer to the word association wouldn't be Egypt - where the people don't even call the it theNile, and where more than 85 percent of the river's water originates. That place is Ethiopia, and it has enraged Egypt by starting to build a huge damon the river. The dam itself, which will be used to generate hydropower, isa beast. It will produce 6,000 megawatts of electricity and stand 170 metres high and 1,800 metres wide, making it the biggest in Africa and the 13th biggest in the world. Ethiopia calls it the Grand Ethiopian Renaissance Dam, and its government and people see it as just that - a reassertion of historic Ethiopian wealth and influence.

Upriver from the construction site in northwestern Ethiopia sits the small hamlet of Gish Abay. There you can find the three small trickles of water, hidden behind a few tufts of grass, that are believed to be the source of the Blue Nile, the tributary from which the vast majority of Nile water flows. Al Jazeera visited those trickles shortly after Ethiopia announced plans for the dam in 2011 and saw lines of priests and locals snake up anddown a field leading to the springs, clutching jerrycans and bottles filled with water they believe to be holy - even magic. Here, they called the river "Tis Abbay", fully understood its strategic importance and said they proudly backed the government's plan to harness its power.

New government, new meetings: Construction has been underway for about two years, and though Egypt, Ethiopia and the other nine countries that share the Nile have been bickering about its waters for much longer, things became particularly heated when Ethiopia began diverting a stretchof the river last May. And, though the situation has since calmed down, the dispute has not gone away and construction is still forging ahead. Thewater ministers of Egypt, Ethiopia and Sudan are to meet again in Khartoum on Monday, this time to argue over the composition of a committee of experts who have been looking into the potential impact of the project on Egypt and Sudan, which have long taken an overwhelming share of the Nile's water. Though the panel, which is made up of experts from all three nations, has already compiled a report, Egypt was not happy and wants international consultants to be brought onboard.

Sudan, which has traditionally supported Egypt on Nile issues, now says itbacks the mega-project, leaving Cairo out on its own with its sometimes sabre-rattling rhetoric. Sudan's President Omar al-Bashir and Ethiopian Prime Minister Hailemariam Desalegn met this week, underlined that support and, crucially, inaugurated a cross-border electricity link so Ethiopia can sell more power to Sudan - those power exports a key element in Addis Ababa's attempts to convince its neighbours the dam could be good for all of their economies. With Egyptian officials not long intheir jobs since former president Mohamed Morsi was toppled and the newmilitary-backed authorities installed, to a certain extent, all three governments are feeling each other out again in these new meetings and a more constructive tone has been adopted of late. But there is also muchinstitutional memory of animosity, both long-running and recent.

In May, in one of his last acts in power, Morsi claimed that "all options"were on the table to protect his country's water supply. "We are not

calling for war, but we will never permit our water security ... to be threatened," he said, adding that "our blood is the alternative" to losing one drop of water. Ethiopia, growing in diplomatic and economic clout, was unfazed. Aware of the famous Herodotus quote, they've always shotback: "If Egypt is a gift of the Nile, then the Nile is a gift of Ethiopia." Responding to Morsi, Addis Ababa officials said the dam's existence was non-negotiable. The Egyptians won't consider war "unless they go mad",Hailemariam said at the time.

War unlikely: If Ethiopian officials have allowed themselves a smirk at Egypt's woes since and thought that, with Morsi gone, they had been gifted time to work on the dam unhindered, they were wrong. Even as pitched battles were fought in Cairo and the administration struggled to restore order, it managed to sound dark warnings to Ethiopia. With the political situation steadier now, the Egyptian government can pay more attention to its foreign policy. And, relations with its closest allies aside, the Nile is the priority.

The bellicose exchanges between the two nations are nothing new. In 1979, then Egyptian president Anwar Sadat said, "Theonly matter that could take Egypt to war again is water." More recently, Meles Zenawi, the late Ethiopian Prime Minister who made the Renaissance Dam something of a personal project, said in a 2011 interview that Egypt had been trying to destabilise Ethiopia for decades by supporting its rebels and enemies. He was derisive about Egypt's chances of success if it stood in Ethiopia's way. "I am not worried that the Egyptians will suddenly invade Ethiopia," Meles said. "Nobody who has tried that has lived to tell the story."

Some journalists and analysts have become so excited by the dispute thatthey predict the world will finally see its first proper, large-scale water war. Other analysts caution that co-operation, not conflict, is the only thing that can work for both countries. And war does, for the forseeable future, look unlikely.

Ethiopia timed the announcement that it was buildingthe dam very cleverly - two months after the toppling of Egyptian strongman Hosni Mubarak, who had always been hawkish about the possibility of Ethiopia damming the Nile. "We knew he was uncomfortable with us even bathing in it," an Ethiopian official told Al Jazeera. According to emails from the US-based intelligence analysis firm Stratfor, which were obtained by Wikileaks, Mubarak had plans to launch airstrikes from Sudan on any dam Ethiopia might build. Stratfor has recently pointed out,though, that Egypt would likely struggle if it tried to militarily thwart the project. Ethiopia is too far away, Stratfor says. Egypt would be reliant on Sudanese support, which it now appears not to have, and even sending in special forces would be difficult. Ethiopia has one of the biggest and most battle-hardened armies in Africa.

'No Nile, no Egypt': The dispute hinges on what looks, based on the numbers, like a glaringly unfair portion of water consumed by Egypt and Sudan - as well as on the fact that both countries' claim to the water derives from colonial-era treaties brokered by the British and not signed by anyone upstream of Khartoum. As Meles put it back in 2010, "The Egyptians have yet to make up their minds as to whether they want to live

in the 21st or the 19th century ... So the process appears to be stuck." The Nile has two main tributaries - the Blue Nile and the White Nile. The Blue Nile, which originates in Ethiopia's Lake Tana, contributes the vast majority of the water and fertile soil. The White Nile, which is longer, meets it at Sudan's capital Khartoum, where they form the greater Nile and flow to Egypt. More recently, Meles Zenawi, the late Ethiopian Prime Minister who made the Renaissance Dam something of a personal project,said in a 2011 interview that Egypt had been trying to destabilise Ethiopiafor decades by supporting its rebels and enemies. He was derisive about Egypt's chances of success if it stood in Ethiopia's way. "I am not worried that the Egyptians will suddenly invade Ethiopia," Meles said. "Nobody who has tried that has lived to tell the story." Some journalists and analysts have become so excited by the dispute that they predict the world will finally see its first proper, large-scale water war. Other analystscaution that co-operation, not conflict, is the only thing that can work for both countries. And war does, for the forseeable future, look unlikely.

December 9, 2013: Ethiopia: Nile Talks Highlight Ethiopian, Egyptian Split'VoA (Washington, DC) Cairo — Water ministers from Egypt, Ethiopia and Sudan are meeting in Khartoum to try to resolve differences over Ethiopia's Renaissance Dam. Egyptian officials remain worried the Nile project threatens the nation's security. Egyptian, Ethiopian and Sudanese officials hope to reach an agreement on the Renaissance Dam, which has

angered Egyptian officials and brought forth repeated objections to the project. This second round of tripartite talks follows a shift in allegiances among the three countries. Sudan has historically sided with Egypt in claiming the lion's share of the river's water and veto rights over upstreamdevelopments. But last week, Khartoum lent its support to Ethiopia's driveto complete construction. Ethiopian officials have tried to bring Sudan and others on board by offering access to future electricity generated by the dam. They argue the project should be seen as a pan-African effort. Yet Egypt remains worried. Ethiopia began diverting water earlier this year to fill the massive reservoir behind the dam, a multi-year effort that will lower water levels reaching Egypt. African Studies and Water Issues analyst Ayman Abd El Wahab of al Ahram Center for Strategic Studies in Cairo said Egypt needs compensation. He argued that Ethiopia has crossedthe line from usurping Egypt's historic rights to the Nile to threatening national security. He pointed out that Egypt is alone among the Nile Basin countries to rely almost exclusively on the Nile for its water supply. The issue has flared for decades, and has raised talk of "water wars." Yet el Wahab agrees with many experts that there is enough water to go around, if the resource is properly handled and the nations along the
Nile's banks can work together. Some Egyptian officials had sought a six-month delay in dam construction so the three countries can implement recommendations by an international group of water experts. Ethiopia is eager to move ahead on what is set to be Africa's largest hydroelectric dam, insisting the project will be a benefit to all.
December 11, 2013: Egypt: Renaissance Dam's Controversial PointsApproved - Irrigation Minister'
Egypt State Information Service (Cairo) - Minister of Water Resources andIrrigation Mohamed Abd el-Motaleb said that meetings of the Irrigation Ministers of Egypt, Sudan and Ethiopia have witnessed a breakthrough in negotiations. The minister asserted that three controversial points have been approved. Abdel-Motaleb added that they agreed to convene their third meeting on January 4, in Khartoum in order to resolve the remainingsuspended points regarding the implementation of the recommendations of the international panel entrusted with studying the Renaissance Dam's effects on Egypt and Sudan. At the end of meetings, Abd el-Motaleb pointed out that the Ethiopian stance was positive and surprising December 11, 2013: Egypt: Sudan, Egypt, and Ethiopia Fail to Agree On Dam Construction'
ST Khartoum — Water ministers of Sudan, Ethiopia and Egypt failed to reach an agreement on the disputed Ethiopian Renaissance Dam project and decided to refer the sticking points to a third meeting. The second ministerial meeting which was held in Khartoum on Monday sought to reach an agreement on forming a joint mechanism for implementing the recommendations of the International Panel of Experts (IPoE) regarding the dam. The IPoE is composed of six representatives each drawn from Ethiopia, Egypt and Sudan, and another four international experts and was established to assess the impact of the dam project on downstream countries. The report which was submitted by IPoE to the three countries

last June is believed to show that the $4.7 billion dam will not have any major effect on lower riparian countries of Egypt and Sudan. However Egypt assert that the deficiencies mentioned by the report need to be addressed before carrying on with the dam project. The Sudanese waterminister, Muattaz Musa Abdallah Salim, told reporters following the meeting that they have addressed a significant part of the issues on thefollow-up of the implementation of the IPoE recommendations.

He added that they concluded the second meeting successfully, pointing that remaining issues would be addressed in Khartoum during talks whichwill be held from January 4 to 5.The Egyptian water minister, Mohamed Abdel-Mutalab, for his part told reporters that they reached an agreementon some items but others are still pending. Sources close to the meeting said that Egypt and Ethiopia presented two papers on the points of contention, while Sudan's paper attempted to reconcile the two positions. The same sources said that Egypt wanted international representatives onthe committee but Ethiopia preferred national delegates. The Sudanese daily newspaper Al-Ray Alaam quoted sources on Tuesday as saying the Egyptian delegation suggested that Ethiopia should only complete the firstphase of the dam to store 14.5 billion cubic meters to produce 1200 MW of hydroelectric power to meet its energy needs. The member of the Egyptian delegation, Alaa Al-Zawahri, earlier said that Egypt would suggest during the meeting that Ethiopia build a smaller dam and suspends the ongoing construction for six months until the completion of the studies.

He described in an interview with the Egyptian CBC TV the Sudanese stance with regard to the dam as "puzzling", pointing that Sudan turned from a strategic partner of Egypt into a biased mediator. He added that they concluded the second meeting successfully, pointing that remaining issues would be addressed in Khartoum during talks which will be held from January 4 to 5. The Egyptian water minister, Mohamed Abdel- Mutalab, for his part told reporters that they reached an agreement on some items but others are still pending. Sources close to the meeting saidthat Egypt and Ethiopia presented two papers on the points of contention,while Sudan's paper attempted to reconcile the two positions. The same sources said that Egypt wanted international representatives on the committee but Ethiopia preferred national delegates. The Sudanese daily newspaper Al-Ray Alaam quoted sources on Tuesday as saying the Egyptian delegation suggested that Ethiopia should only complete the firstphase of the dam to store 14.5 billion cubic meters to produce 1200 MW of hydroelectric power to meet its energy needs.The member of the Egyptian delegation, Alaa Al-Zawahri, earlier said that Egypt would suggest during the meeting that Ethiopia build a smaller dam and suspends the ongoing construction for six months until the completion of the studies. December 18, 2013: Water wars’ continue to rage over EthiopiaRenaissance Dam project'

Elizabeth Arrott for VoA – WNN EarthWATCH (WNN/VOA) Khartoum, REPUBLIC OF SUDAN, NORTHERN AFRICA: Water ministers from Egypt, Ethiopia and Sudan are meeting in Khartoum to try to resolve differencesover Ethiopia's Renaissance Dam. Egyptian officials remain worried the Nile project threatens the nation's security. Egyptian, Ethiopian and Sudanese officials hope to reach an agreement on the Renaissance Dam,which has angered Egyptian officials and brought forth repeated objections to the project.

This second round of tripartite talks follows a shift in allegiances among the three countries. Sudan has historically sided with Egypt in claiming thelion's share of the river's water and veto rights over upstream developments. But last week, Khartoum lent its support to Ethiopia's driveto complete construction. Ethiopian officials have tried to bring Sudan andothers on board by offering access to future electricity generated by the dam. They argue the project should be seen as a pan-African effort. Yet Egypt remains worried. Ethiopia began diverting water earlier this year to fill the massive reservoir behind the dam, a multi-year effort that will lower water levels reaching Egypt.

African Studies and Water Issues analyst Ayman Abd El Wahab of al Ahram Center for Strategic Studies in Cairo said Egypt needs compensation. He argued that Ethiopia has crossed the line from usurping Egypt's historic rights to the Nile to threatening national security. He pointed out that Egypt is alone among the Nile Basin countries to rely almost exclusively on the Nile for its water supply. The issue has flared fordecades, and has raised talk of "water wars." Yet el Wahab agrees with many experts that there is enough water to go around, if the resource is properly handled and the nations along the Nile's banks can work together. Some Egyptian officials had sought a six-month delay in dam construction so the three countries can implement recommendations by an international group of water experts. Ethiopia is eager to move ahead on what is set to be Africa's largest hydroelectric dam, insisting the project will be a benefit to all.

Ethiopia Rejects Egyptian Proposal on Nile as Dam Talks Falter' Bloomberg By Will Davison, (January 8, 2014) - Ethiopia rejected a proposal that would guarantee Egypt the rights to most of the Nile River's water, as disagreements cast doubt over future talks about Africa's biggest hydropower project. The 6,000-megawatt Grand Ethiopian Renaissance Dam on Ethiopia's Blue Nile River, set to be completed in 2017, has raised concern in Cairo that it will reduce the flow of the Nile, which provides almost all of Egypt's water. The Blue Nile is the main tributary of the Nile. The $4.2 billion dam 30 kilometers (19 miles) from Sudan's border will benefit agricultural and power interests in the region and not cause water losses downstream, Ethiopia says. Sudan supports the hydropower project designed to produce electricity for much of East Africa that began in April 2011.

Egyptian officials at a Jan. 4-Jan. 5 meeting that also included representatives from Sudan, introduced a "principles of confidence- building" document asking Ethiopia to "respect" Sudan and Egypt's water

security, said Fekahmed Negash, the head of the Ethiopian Water and Energy Ministry's Boundary and Transboundary Rivers Affairs Directorate.Discussing the issue would contravene an agreement signed by six Nile countries, he said in a phone interview on Jan. 6. "We will not negotiate on this issue with any country," Fekahmed said from Ethiopia's capital, Addis Ababa. "That is why we say take it to the right platform" that includes other members of the Nile Basin, he said.

The 1959 Nile Water Sharing Accord: Egypt argues its 1959 agreement with Sudan that gave Egypt the rights to 55.5 billion cubic meters out of atotal of 84 billion cubic meters is the governing document on the Nile's water. The rest of the river's flow was for Sudan or lost to evaporation.

Ethiopia and other upstream nations reject the accord they were not signatories to and say Egypt's domination of the Nile has unfairly deprivedthem of a vital resource. Ethiopia also rejected an Egyptian suggestion to immediately form a panel of neutral experts to adjudicate any disputes arising from planned studies of the dam's hydrological and environmental impact, Ethiopian Water and Energy Minister Alemayehu Tegenu said.

Experts can be hired if they're needed, he said in an interview Jan. 5 in Khartoum. The Egyptian delegation didn't want to set a date for a next meeting, Fekahmed said. "We have exhausted all opportunities to negotiate with Ethiopia because of the intransigence of Addis Ababa," Egyptian daily Al-Masry Al-Youm quoted Egyptian Irrigation Minister Mohamed Abdel-Moteleb as saying on Jan. 6. "We will not go to Ethiopiaunless Addis Ababa shows desire to return to negotiations to resolve thepoints of disputes," he said.

Talks Continuing Discussions will "continue," Alemayehu said yesterday onhis official Twitter account. Egypt, Ethiopia and Sudan decided on Dec. 9 to form a committee comprising four members from each country to oversee the studies. The initiative was recommended by a panel of international experts who concluded in May that insufficient work had been done on the dam's downstream impact. Ethiopia's position to only bring in mediating experts as required will be a "waste of time," Abdel- Motaleb said in an interview in Khartoum Jan 5. Ethiopia has repeatedly refused Egyptian requests to pause construction of a key national project."There is nothing that will stop it," Gideon Asfaw, head of Ethiopia's technical team in Khartoum, said about the dam.

A Cooperative Framework Agreement has been signed by Ethiopia and fiveother Nile nations that adopts principles of "equitable and reasonable" useof waters that do not cause "significant harm" to other states. Once ratified by six legislatures, the accord paves the way for the creation of a Nile River Basin Commission that will manage water rights and development projects on the Nile. Egypt considers preserving its claimed rights to the Nile a matter of national security and says it needs more than its 1959 share because of its growing population. "We need 80 billioncubic meters," Abdel-Moteleb said. "We will not let go of one drop of water."

Ethiopia's claims about dam construction 'media show': Egypt official

By Ahram Online (January 10, 2014) - The Egyptian government has "alternative routes" in dealing with a major hydroelectric dam being constructed in Ethiopia, a spokesman for the Egyptian irrigation ministry said on Wednesday following a recent meeting between Egypt, Ethiopia and Sudan that was deemed a deadlock. Spokesman Khaled Waseef said,in a press statement reported by MENA, that the Ethiopian Grand Renaissance Dam faces financial as well as technical problems, and that the Ethiopian government's statements that the project has been 30 percent completed are a "media show" for its own political gains.

Waseef added that the construction levels of the dam are "extremely low"and that the project's generator has "not even one brick [in place]." He stated that the negotiations with Ethiopia will not resume until Ethiopia changes its position and "applies international standards" while constructing the dam. He said there are imminent dangers for Egypt if thedam continued to be built as planned, which is something "Egypt would never accept." The Egyptian National Defence Council, which comprises several ministers including the defence minister, the interior minister, theforeign affairs minister, the minister of militiary production, the finance minister and senior army commanders, met on Wednesday to discuss thepotential impacts of the dam. President Adly Mansour and Minister of Irrigation Mohamed Abdel-Moteleb attended the meeting.

The planned Grand Renaissance Dam is a $4.2 billion hydro-electric damon the Blue Nile, one of the main tributaries of the Nile. The project has been a source of concern for the Egyptian government since May last year, when images of the dam's construction stirred public anxiety aboutpossible effects on Egypt's share of the Nile water, the country's main source of potable water. Egypt, Ethiopia and Sudan formed a tripartite technical committee to study the possible effects of the dam and try to generate consensus. Ethiopia maintains that Egypt's water share will notbe negatively affected by the successful completion of the project.

In recent meetings in Khartoum, the tripartite committee was scheduled to formulate a document that entails "confidence building measures" between the countries, and also to form a special international conflict- resolution committee. Both plans failed as Egypt and Ethiopia refused to see eye-to-eye. According to a statement released by Egyptian authoritieson Sunday, Ethiopia insisted on special conditions to an international conflict resolution committee that Egypt believes "would deplete it from its original purpose of being an impartial moderator between the three countries." In June, Ethiopia's parliament ratified an international treaty, which Egypt opposes, allowing upstream countries to implement irrigationand hydropower projects without first seeking Egypt's approval. The deal replaces colonial-era agreements that grant Egypt and Sudan the majorityof Nile.

Some focal point on Ethio/Egypt Relations based on the Nile’

Egypt and Ethiopia have otherwise been locked in a low-intensity contestover which nation would dominate the region. The heart of the rivalry hinges on how to share the precious waters of the Nile River.

More than 80 percent of the Nile’s water comes from rain that falls on the Ethiopian

highlands and is then carried north by the fast-flowing Blue Nile. Ethiopia is nicknamed “Africa’s water tower.” Yet management of the Nile is formally governed by a 1929 treaty between Egypt and the colonial powerGreat Britain, and a 1959 treaty between Egypt and Sudan that awarded most water rights to Egypt, some to Sudan and none explicitly to Ethiopiaor the other states upstream. This arrangement is widely considered unfair, especially to Ethiopia, which was never colonized, and on whose behalf Britain could not even claim to have spoken. This legal framework also limits the right of upper riparian states to build dams or irrigation systems even though they were sidelined from helping shape it.

Egypt has a history of blocking Ethiopia’s requests for international aid tobuild dams, at times even threatening military action if it attempted to goahead. Following the 1978 Camp David accords with Israel, President Anwar Sadat declared, “The only matter that could take Egypt to war again is the Nile water.” To this day, Egyptian engineers are stationed as far as Lake Victoria, in Uganda, monitoring activities along the river.

Ethiopia has continued to reject Egypt’s approach, not least because it is one of the poorest countries in the world and considers economic development to be essential to its survival. In 1999 Ethiopia, along with eight other states, set up the Nile Basin Initiative to develop a cooperativeand equitable partnership to manage the river’s resources. (Egypt and Sudan are nominal members but inactive; South Sudan joined the NBI in 2012.)

Egypt-Ethiopia Nile dam talks hit dead end’

Hydro-politics (January 17, 2014) - Technical negotiations among water ministers from Egypt, Sudan and Ethiopia have reached a dead end after all parties refused the proposals set forth to solve the crisis that revolves around the repercussions Ethiopia’s Renaissance Dam have on Egypt’s water security. These repercussions were discussed during three rounds ofnegotiations in the Sudanese capital Khartoum.

The third round of negotiations held in Khartoum on Jan. 4 — and attended by technical delegations represented by water ministers from Egypt, Sudan and Ethiopia — did not yield any clear results. Egypt withdrew from the meeting, describing the Ethiopian stance as “intransigent,” as Ethiopia refused the Egyptian proposal that ensures Egyptian water security, as noted in a statement issued by the Egyptian Ministry of Water Resources and Irrigation.

Al-Monitor secured a copy of the statement, which stated: “The dispute between Egypt and Ethiopia during the negotiations is related to two points. First, Ethiopia refused the participation of international experts inthe new mechanism put in place to follow up on Ethiopian studies about the consequences of the Renaissance Dam. These studies will be conducted in accordance with the report of the international committee. Second, Ethiopia refused to discuss the document on 'principles of confidence-building' between the countries of the eastern Nile basin — namely Egypt, Sudan and Ethiopia. Egypt proposed this document to provide guarantees for the downstream countries against any negative effects that may be generated from the construction of the dam.”

In a phone interview with Al-Monitor, Egypt's Water Minister Mohammed Abdel Moteleb said: "We tried to set forth more than one initiative to buildthe trust Ethiopia always talks about when promising not to cause Egypt any harm. However, we will not attend or participate in any technical negotiations concerning the Renaissance Dam until we make sure Ethiopiais proposing genuine initiatives that are in line with the Egyptian view, so that these meetings will be meaningful.

"Egypt has concerns and reservations over the Renaissance Dam. It is notlogical to build a dam that big without completing the technical and environmental studies required by the international committee. Ethiopia agreed to these studies and signed [the committee's] final report."

He went on: "Egypt agreed on attending the three rounds of negotiations,so that it could not be accused of rejecting cooperation. We are always striving [to hold] a dialogue that is based on the principles of not causing harm and creating benefits for all parties. Currently, we do not have the luxury of giving up any drop of water from Egypt's share of Nile water." An informed Egyptian security source concerned with the issue of the Nile basin told Al-Monitor: "Egypt will follow new courses to solve its crisis withEthiopia in regard to the Renaissance Dam. It will adopt measures to pushthe issue forward on the international level. Egypt will not accept for its historical share of the Nile water, which is preserved by agreements and provisions of international law, to be diminished."

"We do not rule out [the possibility of adopting] any technical, political or security measures to solve this crisis. We are waiting for the referendum on the constitution to be over. After that, we will launch a series of officialand nonofficial movements," the source affirmed. He pointed out the "possibility of referring to international courts and filing a claim with international institutions, such as the UN, to preserve Egypt's rights."

A diplomatic source, closely tied to the Egyptian Cabinet, told Al-Monitor, "Egypt has already launched diplomatic movements to convince donor countries to stop the financial aids serving the construction of the dam until it is assured that it will not harm Egypt." The source affirmed, "This campaign will be put in focus after the completion of parliamentary and presidential elections, and once relative stability has been achieved." Interim President Adly Mansour held a closed meeting with the National Defense Council on Jan. 8. The meeting was attended by Defense MinisterAbdel Fattah al-Sisi and Prime Minister Hazem el-Biblawi, who discussed the crisis of the Renaissance Dam and the deadlock surrounding the technical negotiations. The council reiterated the importance of "not wasting the water rights of Egypt and not accepting any violation against Egyptian national security."

Former Water Minister and Nile Basin Studies Unit head Mohammad Nasreddin Allam, told Al-Monitor, "We are currently drafting an international claim comprising five parts, which will be filed to donor countries, international institutions and organizations entitled to settle thisdispute. Such a dispute can threaten peace and security in the East African region."

“The memorandum will comprise a legal part documenting the historicalrights of Egypt to the Nile water, and another part stating the Ethiopian violations of the law and international agreements, after it constructed alarge dam without taking into consideration the safety of downstream countries. It will also include a call to form a fact-finding committee to prove the dangerous impact of the dam on Egyptian water security, as stipulated by the regional dispute settlement mechanisms, the UN pact and the African Union Peace and Security Council,” Allam added.

Allam also affirmed, “The memorandum will call for the immediate halt of all construction works at the site until the fact-finding committee fulfills itstask.” Despite the warning messages Egypt is conveying to affirm it will not give up on protecting its share of Nile water, the Egyptian prime minister was optimistic about the possibility of negotiating again and resolving the crisis. He said during a press conference on Jan. 9, attendedby Al-Monitor, “Negotiations do not end in one session. Things will continue to progress, and the issue of the dam remains until now open fordiscussion.”

A technical source who attended the latest negotiations commented on the prime minister’s statement, telling Al-Monitor, “Negotiations reached adeadlock. The Ethiopian water minister publicly refused during an official meeting the request of Egypt to host negotiations in Cairo, claiming that the security situation in Egypt was the reason for his refusal.”

“Egypt is now wasting its chance. Calling for more negotiations is time- consuming because Ethiopia is proceeding with the constructions as a defacto situation,” the source warned. For his part, Ethiopian Water and Energy Minister Alemayehu Tegenu said in a statement on Jan. 13: “Theconstruction of the Renaissance Dam is taking place without any hasslesor difficulties. The project will be finalized according to the decided time frame,” reiterating that “the project is not facing technical or funding problems.”

The escalation and crisis involving trust continues to prevail among Egyptian and Ethiopian officials. Every party is trying to show a strong stance. This time, however, the balance is tipping in favor of Ethiopia since it is completing the project while Egypt is preoccupied with its internal problems, despite Egyptian officials talking about adopting all security and political measures to preserve the rights of Egypt to the Nilewater.

Hydro-politics: Egypt may take Nile dam dispute with Ethiopia to UN’ After all attempts to solve the Egyptian-Ethiopian crisis over the Renaissance Dam at the negotiating table ended in failure after a third round of negotiations on Jan. 4, with Egypt withdrawing from the discussions and conferences being held in Khartoum, there is now talk at the governmental level about internationalizing the issue. At the same time, Egypt is witnessing rising popular demands to resort to the UN Security Council to establish Egypt’s right to veto the establishment of theRenaissance Dam, given the potential danger it represents to Egyptian water security.

Khalid Wasif, the official spokesman for the minister of irrigation and water resources, revealed to Al-Monitor that Egypt has “begun to exploreinternational channels for setting up alternative diplomatic and political tracks to ward off the dangers that might afflict the country if the Renaissance Dam is built, in light of the announced specifications of the dam.” He emphasized, “Egypt will not allow the dam to be built and will move to rally international pressure to prevent it from being funded.

Moreover, Cairo will work [to secure] a public declaration by the international community rejecting the dam’s completion, in the absence of[Ethiopian] guarantees that Egypt and Egyptians will not suffer any loss inwater security, nor will the other states of the Nile Basin. Egypt has rightsguaranteed by international law and agreements, which the Ethiopian sideis not respecting.”

Wasif added, “According to existing agreements governing the river — which require upriver states to notify Egypt in advance and obtain its consent prior to embarking on any projects that would affect the Nile sources — Egypt’s is the stronger legal position. Yet, Egypt has nevertheless insisted upon resolving the issue in a friendly manner, through reciprocal dialogue with the Ethiopian side, devoid of any escalation. But the government in Addis Ababa has shown no appreciationfor this fact. Thus, Egypt has refused to continue the latest Khartoum meetings, given Ethiopia’s insistence on not providing the necessary guarantees that Egypt’s share of the water supply will remain secure.” Rida al-Dimak, the director of the Center for Water Projects at Cairo University's Engineering College, told Al-Monitor, “The development of alternative supplies of water must be accelerated, to replace the water that will be lost as a result of the construction of the Renaissance Dam.

Foremost among these alternative sources is the exchange of wellspring[water] with the [Democratic Republic of the] Congo, transferring waterfrom the Congo River to the Nile, so as to guarantee that the amount ofwater available to Egypt remains constant.”

Dimak warned against the completion of the Renaissance Dam according to its current specifications, stating that it would constitute a violation of human rights. The social and environmental effects, he explained, must betaken into consideration whenever a new water project is built, in accordance with inviolable international conventions. Some international reports have confirmed that the Ethiopian dam will result in a shortage of drinking water and destruction of a great deal of Egyptian agricultural land. This, he states, provides the foundation for Egypt’s right to object to the dam in international forums.

For his part, former Minister of Irrigation and Water Resources MuhammadNasr al-Din Allam said in an interview with Al-Monitor that the Egyptian government no longer has any alternative but to move quickly to take steps toward international escalation. The first of these, he states, should be to lodge an official protest against the government in Addis Ababa, formally declaring Egypt’s rejection of the project.

“This right is guaranteed to us by old agreements signed and recognizedinternationally, and which were conditioned upon notifying Egypt in

advance before any Nile-related project was established. This protest ought to be followed by the lodging of an official complaint with the UN toestablish Egypt's position and [remonstrate against] Ethiopian intransigence, as well as to formally demand the formation of an international fact-finding committee to study the points of disagreement between Egypt and Ethiopia. These points include the dam's capacity, theperiod of time needed to fill it, [details concerning its] operation, the project's unsound and unsafe construction and the lack of rigorous Ethiopian studies demonstrating that the dam is not vulnerable to collapse, something that would have disastrous consequences for both Egypt and Sudan," Allam noted. Allam stressed the need for Egypt to demand that construction on the Ethiopian dam be halted at once, until the fact-finding committee completes its work. According to Allam, this would require "a period of, at most, three to six months." Moreover, he added, "A copy of the committee's report should be brought before the UN, to demonstrate the damage that the dam would wreak upon Egypt, which should then head tothe Security Council."

In an interview with the daily El Fagr on Jan. 9, Ayman Salama, an Egyptian expert in international law, stressed that the Egyptian government would be justified in taking its case to the UN Security Council, even though "one cannot adopt international arbitration to settlethe crisis, since that would require the assent of both parties to the conflict to adopt this formulation of crisis resolution. The Ethiopian government has indicated that it will be highly intransigent on this issue. International arbitration has therefore become extremely unlikely. But Egypt might be able to turn to the Security Council. This, however, wouldrequire the preparation of a file containing documented facts of legal andmaterial evidence of the harm that this dam would incur, both to Egypt and to its vital interests. The issue must be shown to threaten the peace and security of the two countries. [If successful], a number of measures could then be taken by the Security Council to compel Ethiopia to meet Egyptian demands."

Egypt's National Defense Council has already held an emergency session on Jan. 8, headed by President Adly Mansour and dedicated to reviewing internal developments and the domestic Egyptian security situation. With the irrigation and water resources minister in attendance, the council also examined the latest developments concerning Ethiopia's Renaissance Damand the steps being taken on that front to preserve Egyptian water security. It also noted the steps devoted to reducing or eliminating any negative effects that the soon-to-be-built dam might have on Egypt or theother states of the Nile Basin. The council also stressed that Egypt's waterrights must not be squandered, and that it would not accept any undermining of Egyptian national security. These steps, and Egyptian moves toward international escalation and the internationalization of the Renaissance Dam crisis, follow years of Egyptian insistence upon solving the crisis through mutual dialogue at the negotiating table.

Egypt and Ethiopia spar over the Nile'

(AFP) By William Lloyd-George (February 6, 2014) On Jan. 8,
Ethiopia turned down Egypt's demand that it suspend construction of its mega-dam on the Nile, further escalating tensions between the two states. Fearing that Ethiopia's $4.2 billion project would reduce the river'sflow, Egypt calls for a halt in construction until the dam's downstream impact is determined. Otherwise, it has vowed to protect its "historical rights" to the Nile at "any cost."
While scoffing at Egyptian threats, Ethiopia has called for Cairo's collaboration in negotiations and claims that the dam will have no adverseeffect on Egypt. It would, in fact, decrease evaporation and improve waterflow. Ethiopia hopes that the ambitious hydroelectric project, slated to be completed in 2017, would catapult the country out of poverty. Frustrated by what it described as Ethiopia's stubborn stance, Cairo is threatening to take the issue to the United Nations Security Council.
Is this just standard diplomatic brinkmanship before an inevitable compromise, or a harbinger of a looming water war? Regardless, the lack of progress on the diplomatic front bodes ill for a quick end to a stalematethat has long gripped the region. Home to 600 million people, more than half of Africa's total population, the Nile Basin is already traumatized by endless internal political strife and mounting pressures to feed a population growing at Malthusian proportions.
However, as ominous as it sounds, the collapse of the talks does not necessarily mean Egypt and Ethiopia will soon be locking horns. Despitesuggestions to the contrary, this is simply the waning phase of a protracted diplomatic dance before an inevitable conciliation.
ETHIOPIA - A dam for development: Although known as northeast Africa'swater tower, Ethiopia until recently had not bothered to utilize its many rivers. The inability to make use of the Nile has been Ethiopia's age-old national lament. That changed in 2011, when the country announced plans for the construction of its so-called Great Ethiopian Renaissance Dam (GERD), designed to generate a staggering 6,000 megawatts of electricity. By situating the project only 19 miles from the Sudanese border on the vast Blue Nile gorge, where the land is unsuitable for agriculture, Ethiopia sought to reassure Egypt but ended up stoking its fears.
The design and impacts of the GERD are shrouded in secrecy. Observers cast doubts on its timely completion. In a flawed bidding process, Ethiopiagranted the project to a Milan-based engineering company, Salini Costruttori, circumventing its own contract procedures and international standards on procurement. The construction is reportedly lagging behind schedule and faces several unresolved technical problems, one of which ishow long it takes to fill the dam. Ethiopia claims the project is on course and dismisses facing any technical hurdles.
One of Africa's fastest-growing non-oil economies, Ethiopia has embarkedon a state-led development fashioned after the economic miracles in South Korea and the rest of the so-called Asian tigers. Ignoring warnings from the International Monetary Fund and the World Bank that such a massive publicly funded infrastructure project would starve private

investments, Ethiopia is forging ahead. To wit, when Egypt used itsinfluence with international financiers to choke off funding, Ethiopiadeclared it would finance the project with domestic resources.

EGYPT - Gift of the Nile: The founding myths of many ancient civilizations center on famous rivers — the Euphrates and the Tigris (Babylon), the Yangtze (China) and the Ganges (India), to name a few. However, not many are as inextricably dependent on a single river for their livelihood asEgypt is on the Nile. Egypt's history is defined as much by the flooding and drying beds of the Nile as by the pyramids. For a country described byHerodotus as "the gift of the Nile," control over the majestic river has been an existential Egyptian preoccupation since antiquity.

The world's longest river is made up of a maze of tributaries. Nineteenth-century explorers went on a wild goose chase to locate the mysterious river's murky origin before tracing it to Lake Tana in Ethiopia and the Great Lakes in Central Africa. Two of the river's main tributaries are the Blue Nile and the White Nile. The Blue Nile, accounting for upwards of 80percent of the Nile waters, originates in northern Ethiopia. It makes a steep descent from Ethiopian highlands — carrying brown silt — before itjoins the White Nile in Khartoum, Sudan's capital, augmented by several large rivers from southwestern Ethiopia. The White Nile originates in Burundi and flows northward from the Great Lakes region, crossing Tanzania, Uganda, and South Sudan.

Who owns the Nile: The Nile's origin being outside its borders did not prevent Egypt from getting the lion's share of its waters. The claim for exclusive ownership of the Nile waters is premised on a 1929 treaty between Egypt and Britain's East African colonies, Burundi, Kenya, Rwanda, Tanzania and Uganda. These colonies gained independence from Britain in the 1960s. The treaty awarded 57 percent of the waters to Egypt while also requiring other nations to clear with Cairo before launching any major water project on the river. Another treaty, signed in 1959 between Egypt and Sudan, raised Egypt's share to 66 percent. The two signatories, divvying up virtually all of the Nile waters, did not even consult Ethiopia, the main source of the river. After the 1959 accord, bothEgypt and Sudan built mega-dams to exploit the water for irrigation. For years, upstream Nile Basin countries — Burundi, Ethiopia, Kenya, Rwanda,Tanzania and Uganda — nursed misgivings about the colonial-era accord, in which they had no say. However, they grudgingly acquiesced mainly because, unlike Egypt and Sudan, whose arid lands are watered by the lone river, they are not wholly reliant on the Nile. But, finding the challenge of feeding their growing populations on rain-fed subsistence farming unbearable, upstream countries initiated negotiations in 1999 to find an equitable and reasonable way to share the Nile waters. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream countries, was rejected outright by both Egyptand Sudan. Touted as "an African solution for an African problem," the agreement calls for the creation of a commission to oversee development projects on the Nile. It needed ratification by the legislatures of each of

the signatory countries. But its implementation is in limbo until another Nile Basin country — for example, the Democratic Republic of the Congo,which is now sitting on the fence signs it.
Ethiopia's diplomatic coup: In a further blow to Egypt, its alliance with Sudan faltered in 2012 when Sudan, which gets 35 percent of the Nile water according to the 1959 treaty, rescinded its initial opposition to Ethiopia's renaissance dam. Khartoum's change of heart is attributed to astill-secret report by a panel of international experts that concluded the dam would neither significantly affect downstream countries nor fundamentally alter the flow of the river. But Sudan's internal vulnerabilities presumably played a crucial role.
In 2011, Sudan saw a huge chunk of its land mass secede to form Africa'snewest state, South Sudan. Ethiopia's support for the former rebels of South Sudan (currently embroiled in a power struggle of their own) was instrumental in forcing Sudan — Egypt's loyal ally — to accept the divorce.An international warrant for Sudanese President Omar al-Bashir in connection with the conflict in Darfur has made the country an international pariah. Sudan could not afford to alienate its increasingly assertive neighbor to the south and eventually threw its weight behind Ethiopia's colossal undertaking. Although it has yet to sign the Entebbe Agreement, which loosens Egyptian and Sudanese dominion over use of the Nile waters, Sudan's new stance hands Ethiopia a diplomatic coup.
Egypt's ill designs: The most recent Egyptian president to threaten war toprotect Egypt's "inviolable" rights over the Nile was the Muslim Brotherhood's Mohamed Morsi. Last June, in a secret all-party discussion chaired by then-President Morsi, which was "mistakenly" broadcast live onstate TV, Egyptian lawmakers suggested arming Ethiopia's political opponents to obstruct the construction. The tension subsided with the military takeover in Cairo. However, after a brief interlude in which it appeared that diplomacy was to replace the menace of war, the military regime is now raising the ante. The high brass knows full well that a food shortage resulting from a significant reduction in water volumes means riots in Egyptian cities.
The last time Egypt staked its claim militarily over the Nile and the Red Sea was in 1876, when it invaded Ethiopia. The two armies met at Gura, now an Eritrean territory. Egypt's army was nearly wiped out by an ill- equipped and ragtag Ethiopian side that would, two decades later, go on to hand Italy a humiliating defeat at the battle of Adwa. Although it neverruled out direct military confrontation with Ethiopia, Egypt has since reverted to proxy wars.
For centuries, Muslim Egypt supplied the head of Ethiopia's Orthodox Church, a state religion until the 1974 revolution. The imperial regime ofHaile Selassie found itself under political pressure to leave the centuries-old arrangement intact following the 1959 Nile accord that excluded Ethiopia. Despite this historical relationship, Ethiopia's official historiography is replete with Egypt's ill designs over it. In the 1970s, Ethiopia blamed Egypt for fanning the Republic of Somalia's irredentist

claims over the Somali-inhabited Ogaden region of Ethiopia. The twocountries went to war twice over the Ogaden.

Egypt is also faulted for its role, with Sudan as its accomplice, in precipitating Ethiopia's loss of access to the Red Sea with Eritrea's independence. Eritrea broke away from Ethiopia in 1993 after 30 years ofcivil war.

Internal fragility: Official rhetoric notwithstanding, both Egypt and Ethiopia are represented by shaky regimes presiding over brittle states and divided societies. Given their internal vulnerabilities, neither country can afford to go to war — a war whose outcome is uncertain. While Ethiopia saw its economic fortunes rise over the last decade, its internal cohesion has not kept pace. Ethnic and religious cleavages as well as a border dispute with Eritrea (over which the two states fought a bloody warfrom 1998 to 2000) are constant reminders of its enduring fragility. EthnicTigreans, estimated at 6 percent of the population, have been in power since 1991. They dominate the country's politics, military, security and economy. This is resented by both the Oromo, Ethiopia's majority population, and the Amhara, its traditional rulers. Over the last two years,the country's otherwise docile Muslim population, long marginalized despite accounting for a sizable portion of the population, has

been increasingly restive. Ethiopia's single-party leadership has not fully recovered from the death in 2012 of its strongman of two decades, PrimeMinister Meles Zenawi. The new prime minister, Hailemariam Desalegn, aProtestant and from another minority group, does not hold as much cloutas his predecessor and is seen as a temporary figure.

Egypt, Ethiopia clash over mega-dam - UPI'

UPI (February 8, 2014) - Egypt and Ethiopia remain at loggerheads overAddis Ababa's plan to build a $4.2 billion, 6,000-megawatt dam on a major tributary of the Nile River that Cairo says will greatly reduce the flow of water that is Egypt's lifeline.

Tension between the two African states rose sharply in January after Ethiopia rejected Egypt's demand it suspend construction of the GrandEthiopian Renaissance Dam on the Blue Nile, the main tributary of the 4,130-mile river, the world's longest.

Egypt has vowed to protect its "historical rights" to the Nile "at any cost"and says it could lose 20 percent of its water if the giant dam in northwestern Ethiopia, one of several hydroelectric projects planned by Addis Ababa, is completed.

Despite Cairo's tough declarations, and Addis Ababa's insistence on pressing ahead with the massive dam — which it denies will damage Egypt to any critical extent — there's little likelihood of the two states going to war, if only because the vast distance that separates them. But the dispute is swelling into a major diplomatic wrangle in Africa thatcould have consequences on other continents as the planet faces water shortages in the decades ahead.

Ethiopia's Chinese-backed dam program will, if completed, produce abundant supplies of electricity that

could transform the economies of theregional states long mired in poverty.

Egypt’s position has been seriously weakened by the December defectionof Sudan, its southern neighbor and longtime ally, in the Nile dispute withEthiopia and other upstream African states.

That has left Egypt isolated in a long-running dispute with those states,which all want a greater share of the Nile water than they are accordedunder British colonial era agreements that gave Egypt, and Sudan to a lesser extent, the lion’s share of the river’s flow.

Despite political turmoil in both Egypt and China-backed Ethiopia in recentmonths — the July 2013 military coup in Cairo that ousted Egypt’s first democratically elected president, and the 2012 death of longtime Ethiopian strongman Prime Minister Meles Zenawi — both sides have dug in their heels over the Nile crisis.

Egypt, with 82 million people, is the most populous and the most militarized state of the 11 riverine states along the Nile, which rises in thehighlands of Ethiopia.

But with Sudan now “so squarely in Ethiopia’s camp, Egypt could not stage a ground attack on the dam,” observed Hassen Hussein, a leader ofEthiopia’s largest ethnic group, the Oromo, in an analysis on al-Jazeera Thursday.

An airstrike on the dam, 20 miles from Sudan’s southern border in thevast Blue Nile gorge, “is still possible, but fraught with risks.

“To Egypt, water security equals national security,” Hussein noted. “ToEthiopia, the dam has become a matter of national pride.

“An airstrike could turn the clock back on the dam. Although Ethiopia lacksthe means to respond to such an attack in kind, Egypt risks earning the international community’s wrath and seeing its relationships with sub- Saharan Africa strained.”

But these relations are already strained over Egypt’s claim that it has rights to 87 percent of the Nile’s waters that were guaranteed under British-inspired treaties in 1929 and 1959 that also gave Cairo veto powerover dam-building by upstream states.

Egypt was allocated 55.5 billion cubic meters a year of the Nile’s flow rateof 84 billion cubic meters. Sudan, then Egypt’s ally, got 18.5 billion cubic feet.

The Blue Nile joined the White Nile at Khartoum, capital of Sudan, to flownorthward to the Mediterranean.

In 2010, Ethiopia, Rwanda, Tanzania, Uganda and Kenya signed an accord, the Cooperative Framework Agreement, to negotiate a more equitable water-sharing arrangement. They were later joined by Burundi , the Democratic Republic of Congo, Eritrea and South Sudan.

These upstream African nations, former colonies of the 19th century European powers, all say they need greater access to the Nile’s flow to meet swelling demographic and industrial demands from a waterway thathas sustained civilizations for millennia.

Much depends on how the current dispute plays out. Right now, an estimated 238 million people depend

on the Nile to some extent. (Textends)

NILE - Ethiopia dam talks to resume Monday’

Joel Gulhane (February 9, 2014) Egyptian Minister of Water Resources andIrrigation Mohamed Abdul Muttalib will head a delegation to Addis Ababa on Monday to continue talks regarding the construction of the Grand Ethiopian Renaissance Dam (GERD).

Sudan, which is also an interested party in these talks, will not be represented at the meeting in the Ethiopian capital. Spokesman for the Ministry of Water Resources and Irrigation Khaled Wassif told Daily News Egypt that this "is usual" because there are issues for Ethiopia and Egypt to discuss bilaterally. He stressed the importance of "direct contact" at thistime.

Water Minister Mohamed Abdul Muttalib listens during tripartite talks about Ethiopia's Great Renaissance Dam on January 4, 2014 in the Sudanese capital, Khartoum. The talks are being attended by the irrigation ministers of Ethiopia, Egypt and Sudan and are set to last for three days. Egyptian Water Minister Mohamed Abdul Muttalib listens during tripartite talks about Ethiopia's Great Renaissance Dam on January4, 2014 in the Sudanese capital, Khartoum.

Muttalib accepted an invitation from his Ethiopian counterpart AlemayehuTegunu to discuss the "sticking points" regarding the construction of the GERD, which Egypt fears could have a detrimental impact upon its water supply.

Wassif said that one of the "sticking points" that remains is the differenceof opinion regarding the formation of a committee to oversee the implementation of recommendations of a report detailing confidence- building measures concerning the dam and its affect on downstream nations.

"We insist on including international experts in the committee, but they [Ethiopia] only wants to include representatives from the three countries[Egypt, Ethiopia and Sudan]," said Wassif. The three countries agreed inDecember to form the committee, however the last trilateral meeting at the start of January ended with no agreement reached.

Muttalib will be joined in Ethiopia with other representatives from his ministry as well as representatives of the Ministry of Foreign Affairs. The minister has said previously that "Egypt's firm position on the issue of theGERD… does not conflict at all with the Ethiopian government's desire to increase development and achieve the aspirations of the Ethiopian peoplein raising the standard of living." He added that these are "legitimate aspirations" that can be achieved without harming Egypt's water share.

Ethiopia began diverting water form one of the River Nile's tributaries in May 2013, prompting concern in Egypt and Sudan over the affect the electricity generating dam could have on the water supply to downstreamcountries.

Last week Muttalib suggested that Ethiopia build two smaller dams to ensure there is as little impact as possible on the flow of water. The Minister of State for Antiquities Affairs Moahemd Ibrahim also expressed concern least week over the potential impact the dam could have on Egypt's antiquities due to the potential lowering of water levels that couldcontribute to the cracking of some monuments.

Egypt has historically claimed the lion’s share of the Nile waters as peragreements signed in 1929 and 1959 guaranteeing Egypt 55.5bn cubicmetres of water annually of the estimated total of 84bn cubic metres. (Text ends)

NILE PPOLITICS: Dialogue is the only way, Ethiopia tells Egypt'By Anadolu Agency (February 11, 2014)

ADDIS ABABA - Ethiopian Prime Minister Hailemariam Dessalegn said Monday that dialogue was the only way to bridge outstanding differencesbetween Ethiopia and Egypt about a multi-billion dollar hydroelectric damon the Nile River.

"I know dialogue will continue. I don't see there will be a military solutionand [talk of] war is absurd. It doesn't work," Dessalegn told a press conference in Addis Ababa.

"This kind of problem is solved through dialogue," he said. "From theEthiopian side, we are ready to see a cooperative way to find solutionthrough dialogue."

Plans by Ethiopia to build a massive hydroelectric dam, dubbed the "GrandRenaissance Dam Project," on the Blue Nile – the primary source of Egypt's water supply –sent shockwaves down Egypt's Nile Valley.

Water distribution among the states of the Nile basin have long dependedon a colonial-era treaty giving Egypt and Sudan the lion's share of Nile water.

Citing its own development needs, however, Ethiopia insists that it must build a series of dams to generate electricity – both for local consumptionand export.

Addis Ababa maintains that the new dam will benefit Egypt and Sudan,both of which will be invited to purchase electricity thus generated.

The Ethiopian premier said that his country wants to see a stable anddemocratic Egypt.

"If General [Abdel-Fattah] al-Sisi is elected, I am ready to work with him,"he said.

Calls have grown for al-Sisi, who led the army move to unseat electedpresident Mohamed Morsi, to run in Egypt's upcoming presidential election, expected within three months.

Turning to the conflict in South Sudan, the Ethiopian premier said that theInter-government Authority for Development (IGAD) has authorized the Ugandan army to protect the government in Juba.

"We denounce unconstitutional power seizure and this is the position of allIGAD states," he said. "IGAD has a clear position in this regard. Uganda has to protect the government."

He, however, said that forces from Uganda and other countries must leaveSouth Sudan phase by phase.

South Sudan has been shaken by violence since mid-August after President Salva Kiir accused sacked vice president Riek Machar of staginga coup.

The two warring parties have been engaging in IGAD-mediated peacetalks in Addis Ababa to solve the conflict.

Speaking about his country's policy on Eritrea, Dessalegn said Ethiopia isdetermined to normalize relations with Eritrea without precondition.

He, however, said that his government is not optimistic that Eritrea willpositively respond.

"I do not think that (negotiations) will open soon," he said, warningEritrea against any move to destabilize Ethiopia and the region.

If Eritrea continues in its destructive acts, Ethiopia will respond withproportional measures, he warned.

Ethiopia and Eritrea fought a three-year war in 1998 over disputed borderareas.

Regarding Somalia, Dessalegn said that African peacekeepers are gainingfoothold against the militant Al-Shabaab group in Somalia.

"Al-Shabaab is now on the run and this is a sign of its defeat. We willcontinue the offensive," he said.

Somalia has remained in the grip of political violence since the outbreak ofcivil war in 1991.

However, the country's political situation appears to have stabilized recently with the establishment of a new government and intervention byAfrican Union troops tasked with countering an insurgency waged by the Al-Qaeda-linked Al-Shabaab. (Text ends)

NILE POLITICS: Blue Nile Sub-basin Legal Regime in Historical Context:Colonial Treaties'

ETHIOMEDIA By Yosef Yacob, AB, JD, LLM, PHD (February 19, 2014) (Part I) Generally, formal agreements and legal regimes provide a legal point of departure to contribute the general principles and rules that govern co-basin states' legal relations in the utilization of international rivers. This chapter begins the examination of reciprocal rights and obligations of the sub-basin's riparians by reviewing the treaties, which form the legal regime of the Blue Nile Sub-basin. The chapter describes the evolution of the legal regime by reviewing the colonial as well as thepostcolonial treaties and other significant negotiations concerning the utilization of the basin's waters.

1. Colonial Treaties

The early treaties regarding the Nile basin were largely the products of British colonial intervention in the region. The British were anxious to preserve their position of control over the Suez Canal. A major part of keeping Egypt satisfied was ensuring the permanent availability of Nile waters for Egyptian uses. While the British had many colonial interests inthe Nile basin, they usually chose treaty arrangements that favored Egyptian claims to the Nile, for the above mentioned reason.

The British at this time introduced the notion that Egypt's rights to the Nile were so long established that they should take precedence over all other schemes for use of the Nile. The early colonial period treaties regarding the Nile basin show the British single mindedness on this issue.These older agreements emphasized certain tenets and attitudes regarding rights to the Nile that have persisted through the developmentof the current legal and institutional system operating in the Nile basin.

They have given weight to Egypt's claims to be the state with the greatesthistoric legal recognition of rights to the Nile waters.

This early colonial period was also the first in which Egypt was to admit that other states could potentially affect its claims to the Nile. Without thewater that the Blue Nile brought down from the Ethiopian Highlands and that the White Nile carried away from the central African lakes, Egypt would be a desolate land.

1.1 Italy United Kingdom Protocol – 1891

Until the explorations of Baker, Speke, and Stanley in the latter half of thenineteenth century, no one knew where the source of the Nile was located, but all believed that interference with its water was possible. UntilBritain acquired interests in Egypt, however, speculation on such a diversion was left largely to scholars and travelers. As long as no European power moved into the Sudan or established a position astride the Nile, the British believed that Egypt would have water and British domination of Egypt would remain secure.

In 1889, British complacency was shaken. The first threat to the Nile by aEuropean power loomed in the heights of the Ethiopian plateau. The Italians had long wished to establish a protectorate in Ethiopia, and after 1885, the British had even encouraged Italian moves into the highlands. At first the British calculated that Italian penetration would not only keep the Ethiopians out of the Sudan but would also act as a counterweight to the French, who were strengthening their position at Djibouti.

In 1889, the Italians seized the first real opportunity to enlarge their prospective sphere of influence. On March 9, the forces of the Mahdist of Sudan stopped the Ethiopian expansion into Sudan at the Battle of A1- Qallabat, killing King Yohannes IV. In order to consolidate his internal position among the traditionally warring feudal factions, the new Emperor,Menelik, welcomed Italian offer of support and signed the Treaty of Uccialiin May.

The Italians translated the treaty into action and laid claim to Kassala situated below the escarpment in the Nile Basin, which commanded theAtbara tributary of the Nile. With this town as a base, the Italians could proceed towards Khartoum at the confluence of the White and the BlueNile.

The British were concerned that the Italians may attempt “to tap the upper Nile” and proceed to occupy Sudan.” In August 1889, the British announced against letting foreign Powers into the Nile Valley and authorized “... such measures as may be necessary for the purpose of protecting [the] Nile Valley against the dominion of any outside Power.” Accordingly, the British warned Italy to stay away from the Nile. In March1891, Italy officially consented to remain out of the Nile Valley in return for British recognition of an Italian sphere of influence in the Ethiopian Highlands.

The Anglo Italian Treaty was signed in Rome, Italy on April 15, 1891. Theprotocol protected Egyptian interests in waters of the Atbara River, a tributary of the Nile. The British concluded this treaty before the major

source of the Nile was identified as the Blue Nile, which originates in thehighlands of Ethiopia.
Article III stipulated:
“The Government of Italy undertakes not to construct on the Atbara any irrigation or other works which might sensibly modify its flow into the Nile.” This was followed by an exchange of notes between Italy and Britainsigned in Rome on November 22, 1901 marking the frontier between the Anglo-Egyptian Sudan and Eritrea. The next article, Part 2, will discuss theFrontier Treaty Between Anglo Egyptian Sudan, Ethiopia and Eritrea – 1902. (Text ends)
ENVIRONMENT: Land and Water Grabs Devastate Communities inEthiopia'
ER (February 19, 2014) Satellite Images Show Devastating Toll on500,000 Pastoralists'
“Ethiopia can develop its land and resources but it shouldn’t run roughshod over the rights of its indigenous communities. The people whorely on the land for their livelihoods have the right to compensation and the right to reject plans that will completely transform their lives.”
-Leslie Lefkow, deputy Africa director, Human Rights Watch
HRW (Nairobi) – New satellite imagery shows extensive clearance of land used by indigenous groups to make way for state-run sugar plantations in Ethiopia’s Lower Omo Valley, Human Rights Watch and International Rivers said today. Virtually all of the traditional lands of the 7,000- member Bodi indigenous group have been cleared in the last 15 months, without adequate consultation or compensation. Human Rights Watch has also documented the forced resettlement of some indigenous people in thearea. The land clearing is part of a broader Ethiopian government development scheme in the Omo Valley, a United National Educational, Scientific and Cultural Organization (UNESCO) World Heritage Site, including dam construction, sugar plantations, and commercial agriculture. The project will consume the vast majority of the water in the Omo River basin, potentially devastating the livelihoods of the 500,000 indigenous people inEthiopia and neighboring Kenya who directly or indirectly rely on the Omo’s waters for their livelihoods.
“Ethiopia can develop its land and resources but it shouldn’t run roughshod over the rights of its indigenous communities,” said Leslie Lefkow, deputy Africa director at Human Rights Watch. “The people whorely on the land for their livelihoods have the right to compensation andthe right to reject plans that will completely transform their lives.”
A prerequisite to the government’s development plans for the Lower OmoValley is the relocation of 150,000 indigenous people who live in the vicinity of the sugar plantations into permanent sedentary villages under the government’s deeply unpopular “villagization” program. Under this program, people are to be moved into sedentary villages and provided with schools, clinics, and other infrastructure. As has been seen in other parts of Ethiopia, these movements are not all voluntary.

Satellite images analyzed by Human Rights Watch show devastating changes to the Lower Omo Valley between November 2010 and January 2013, with large areas originally used for grazing cleared of all vegetationand new roads and irrigation canals crisscrossing the valley. Lands criticalfor the livelihoods of the agro-pastoralist Bodi and Mursi peoples have been cleared for the sugar plantations. These changes are happening without their consent or compensation, local people told Human Rights Watch. Governments have a duty to consult and cooperate with indigenous people to obtain their free and informed consent prior to the approval of any project affecting their lands or territories and other resources.

The imagery also shows the impact of a rudimentary dam built in July 2012 that diverted the waters of the Omo River into the sugar plantations.Water rapidly built up behind the shoddily built mud structure before breaking it twice. The reservoir created behind the dam forced approximately 200 Bodi families to flee to high ground, leaving behind their crops and their homes.

In a 2012 report Human Rights Watchwarned of the risk to livelihoods andpotential for increased conflict and food insecurity if the government continued to clear the land. The report also documented how government security forces used violence and intimidation to make communities in theLower Omo Valley relocate from their traditional lands, threatening their entire way of life with no compensation or choice of alternative livelihoods.The development in the Lower Omo Valley depends on the construction upstream of a much larger hydropower dam – the Gibe III, which will regulate river flows to support year-round commercial agriculture.

A new film produced by International Rivers, “A Cascade of Developmenton the Omo River,” reveals how and why the Gibe III will cause hydrological havoc on both sides of the Kenya-Ethiopia border. Most significantly, the changes in river flow caused by the dam and associatedirrigated plantations could cause a huge drop in the water levels of Lake Turkana, the world’s largest desert lake and another UNESCO World Heritage site.

Lake Turkana receives 90 percent of its water from the Omo River and is projected to drop by about two meters during the initial filling of the dam, which is estimated to begin around May 2014. If current plans to create new plantations continue to move forward, the lake could drop as much as16 to 22 meters. The average depth of the lake is just 31 meters.

The river flow past the Gibe III will be almost completely blocked beginning in 2014. According to government documents, it will take up tothree years to fill the reservoir, during which the Omo River’s annual flowcould drop by as much as 70 percent. After this initial shock, regular damoperations will further devastate ecosystems and local livelihoods.

Changes to the river’s flooding regime will harm agricultural yields, prevent the replenishment of important grazing areas, and reduce fishpopulations, all critical resources for livelihoods of certain indigenous groups.

The government of Ethiopia should halt development of the sugar plantations and the water offtakes until affected indigenous communitieshave been properly consulted and give their free, prior, and informed consent to the developments, Human Rights Watch and International Rivers said. The impact of all planned developments in the Omo/Turkanabasin on indigenous people's livelihoods should be assessed through a transparent, independent impact assessment process.

"If Ethiopia continues to bulldoze ahead with these developments, it will devastate the livelihoods of half a million people who depend on the OmoRiver," said Lori Pottinger, head of International Rivers' Ethiopia program."It doesn't have to be this way – Ethiopia has options for managing this river more sustainably, and pursuing developments that won't harm the people who call this watershed home."

Background

Ethiopia's Lower Omo Valley is one of the most isolated and underdeveloped areas in East Africa. At least eight different groups call the Omo River Valley home and the livelihood of each of these groups is intimately tied to the Omo River and the surrounding lands. Many of theindigenous people that inhabit the valley are agro-pastoralist, growing crops along the Omo River and grazing cattle.

In 2010, Ethiopia announced plans for the construction of Africa's tallest dam, the 1,870 megawatt Gibe III dam on the Omo River. Controversy has dogged the Gibe III dam ever since. Of all the major funders who considered the dam, only China's Industrial and Commercial Bank of China(ICBC) provided financing (the World Bank, African Development Bank, and European Investment Bank all declined to fund it, though the World Bank and African Development Bank have financed related power lines).

The Ethiopian government announced even more ambitious plans for the region in 2011, including the development of at least 245,000 hectares ofirrigated state-run sugar plantations. Downstream, the water-intensive sugar plantations, will depend on irrigation canals. Although there have been some independent assessments of the Gibe dam project and its impact on river flow and Lake Turkana, to date the Ethiopian governmenthas not published any environmental or social impact assessments for thesugar plantations and other commercial agricultural developments in the Omo valley.

According to the regional government plan for villagization in Lower Omo,the World Bank-supported Pastoral Community Development Project (PCDP) is funding some of the infrastructure in the new villages. Despite concerns over human rights abuses associated with the villagization program that were communicated to Bank management, in December 2013 the World Bank Board approved funding of the third phase of the PCDP III. PCDP III ostensibly provides much-needed services to pastoral communities throughout Ethiopia, but according to government documents PCDP also pays for infrastructure being used in the sedentary villages that pastoralists are being moved to.

The United States Congress in January included language in the 2014 Appropriations Act that puts conditions on US development assistance in

the Lower Omo Valley requiring that there should be consultation with local communities; that the assistance “supports initiatives of local communities to improve their livelihoods”; and that no activities should besupported that directly or indirectly involve forced evictions.

However other donors have not publicly raised concerns about Ethiopia’s Lower Omo development plans. Justine Greening, the British Secretary ofState for International Development, in 2012 stated that her Departmentfor International Development (DFID) was not able to “substantiate the human rights concerns” in the Lower Omo Valley despite DFID officials hearing these concerns directly from impacted communities in January 2012. (Text ends)

NILE POLITICS: Egypt in Full Swing Campaign Against GERD -WaterMinister visited Italy and will tour more European countries'

Al-Monitor’ (February 19, 2014) - CAIRO — Egypt has begun a diplomaticcampaign on two tracks, one explicit and one undeclared, with European countries and donor parties. This came after the Egyptian government escalated its campaign against the Ethiopian Renaissance Dam under its current specifications to protect Egypt’s historic interests in Nile water, following failed technical negotiation. “The campaign initiated by Egypt ison two tracks, one that is explicit and involves meetings by Egypt’s ministers of water and foreign relations with their counterparts in countries with influence in the Nile Basin, and one that is undeclared andinvolves meetings by Egypt’s ambassadors in these countries. The two tracks aim to persuade the international community to reject the dam’s construction because it may lead to further conflict and instability in the region of the Nile Basin,” a diplomatic source in contact with the Egyptian government told Al-Monitor.

The source, who preferred to remain anonymous because of the sensitivityof the issue with the Egyptian government, said, “More negotiations with Ethiopia only waste time and directly threaten Egypt’s water security. We realized that Ethiopia doesn’t want genuine solutions to end the crisis, but is only trying to portray Egypt as approving of the dam’s construction to facilitate access to funding. But [Ethiopia] didn’t provide genuine guarantees that the dam will not affect Egypt and has shown no intention to amend the technical specifications to minimize the potential risks according to the report by the international experts’ committee, which recommended reconsidering the dam’s safety studies.” On Feb. 6, Egypt’s minister of water resources and irrigation visited Italy, where he explainedthe critical water situation in Egypt, the water problems that recur every year and Egyptian fears of the dam’s impact on the country’s water security. Afterward, Egypt’s Ministry of Water said in a statement, of which Al-Monitorhas obtained a copy, that “the visit has achieved its goal. Italy has understood Egyptian concerns.” The Italian Salini Construction company is building the Renaissance Dam after it signed a contract with the Ethiopian government in December 2010 worth 3.377 billion euros ($4.64 billion), with the dam due to be completed in six years.

Al-Monitor spoke to a government source familiar with the file of the NileBasin. “Egypt’s open move, for

the first time, and the visit by Italy’s

irrigation minister has had an impact on Ethiopia, which invited us for dialogue again on Feb. 11 in Addis Ababa. However, Ethiopia again stuck to its point of view and rejected all confidence initiatives put forward by Egypt," the source noted. "Egypt will continue its international escalation and all options are open to us to protect our share of the Nile waters. And this decision was made after exhausting all attempts at dialogue with Ethiopia. Now visits are being planned to Norway, Sweden, the Netherlands and France. … We have also contacted all international donorssuch as the World Bank and the African Development Bank to demand they not give any technical support for the construction of the dam without making sure it will not cause damage to Egypt," the source said. "A copy of the report by the international experts' committee that was signed by Ethiopia was sent. [The report] proves the existence of a potential risk to building the dam. But Ethiopia has not committed to finding solutions to reduce these risks," the source stressed. During a news conference on Feb. 13 after the Egyptian delegation returned from Addis Ababa, Ethiopian Prime Minister Hailemariam Desalegn said that his country will not back down from building the Renaissance Dam. He noted that if Egypt wants to internationalize the issue and send it to the United Nations, this will not help because there is no court specializing in arbitrating water disputes, and Egypt has no choice but to negotiate and engage in dialogue to reach a solution acceptable to everyone. The water ministers of Egypt, Sudan and Ethiopia met in Khartoum in three rounds of negotiations last year on how to implement the recommendations of the experts' report. But they did not reach a clear agreement. Egypt insisted on sending foreign experts to follow up on how to implement the report's recommendations. Egypt also put forward an initiative to build confidence whereby Ethiopia would provide guarantees to implement any new recommendations, but Ethiopia and Sudan rejected that. Egypt rejected participating in the ministerial meeting of the Eastern Nile Technical Regional Office (ENTRO), which is affiliated with the Nile Basin Initiative held in Addis Ababa on Feb. 4. The Egyptian Ministry of Irrigationsaid in an official statement, "We will not participate in the meeting in line with the Egyptian position taken in 2010 to freeze our activities in the NileBasin Initiative after the unilateral signing of the Entebbe Convention by the Nile headwaters countries without reaching an agreement on the contentious items and without recognizing the legitimacy of any decisions that may be issued by ENTRO."

For his part, Ambassador Gamal Bayoumi, the secretary-general of the Egyptian-European partnership at the Ministry of International Cooperation, said in an interview with Al-Monitor, "The issue of the Renaissance Dam has become very complex, and we have a state that is violating international customs and traditions. Egypt's moves now target all countries that provide technical assistance for designing and building the Renaissance Dam through private contractors and also the states likely to fund the construction of the dam. … Discussing this crisis during the visits of Marshal [Abdel Fattah al-] Sisi and of the Russian foreign minister [Sergey Lavrov] has had a good effect because Russia's relations

with Ethiopia are still good, and can be leveraged for the benefit of Egypt."Bayoumi asserted, "We are still at the stage of dialogue. And we are trying, as much as possible, to attract Ethiopia to talk and negotiate. But [Ethiopia] is being stubborn and the impact of the dialogue session broadcast during [former President Mohammed] Morsi's era has clearly caused the collapse of trust between Egypt, Sudan and Ethiopia." Aside from the language of political escalation, there has been an increased state of anxiety within the institutions concerned with studying the effects of the Renaissance Dam after Al Jazeera broadcast a report from the dam's site showing initial construction, showing that Ethiopia is serious about building the dam.

The expert in the national committee to assess the effects of the Renaissance Dam, Alaa al-Zawahiri, told Al-Monitor, "Despite the lack of detailed and specific information that can be analyzed, the recording airedby Al Jazeera shows that concrete has started to be poured, which is the second phase after laying soil for the base. According to the dam's stated specifications, laying the soil should be done over an area of 100 meters [328 feet], but there is no doubt that Ethiopia has completed all the initialwork first and has put part of the concrete on the surface to gain time andimpose a fait accompli on Egypt." "If this construction continues at that pace, there will be a fait accompli, and it will be difficult to persuade the Ethiopian side to amend the dam's specifications or height after that," saidZawahiri. Egypt's moves are still constrained by its difficult internal transitional phase. It's important for Egypt to resolve its internal problemsso that the water issue and the Renaissance Dam can return as a political priority for the next president. (Text ends)

NILE POLITICS: Ethiopia's Renaissance dam 30% complete: official' Ahram Online, (Sunday February 23, 2014) Thirty percent of Ethiopia's Renaissance dam is complete, project leader Semegnew Bekele has said.Construction is progressing according to schedule, he added in commentsreported by Aswat Masryia. The project has been a source of concern for the Egyptian government since May last year, when images of the dam's construction stirred public anxiety about its possible effects on Egypt's share of the Nile's water.

However, Bekele insisted the dam would serve Egypt, Sudan and Ethiopia.Minister of Irrigation Mohamed Abdel-Motteleb told Al-Ahram daily newspaper that Egypt may send an official statement demanding construction of the dam be halted until a mutually agreeable solution is found.

Egypt, Ethiopia and Sudan formed a tripartite technical committee to study the possible effects of the dam. But the committee's discussions were thwarted last December when Sudanese President Omar Al-Bashir announced his support for the dam during a meeting with Ethiopian PrimeMinister Hailemariam Desalegn. Egypt has demanded that Ethiopia submitthe dam's construction plans for assessment by international experts.

Ethiopian Irrigation Minister Alamayehu Tegenu said his country was already committed to the recommendations of an international committeeof experts. According to Walta information, an Ethiopian

website, there

are 7,500 workers and 500 experts from 25 countries working on theproject.

NILE POLITICS: Ethiopia, Sudan seek dialogue with Egypt over Nile dam' AFP (February 26, 2014)

Ethiopian Government said on Tuesday that it was collaborating with the Republic of Sudan to dialogue with Egypt on the ongoing $4.7 billion Great Ethiopian Renaissance Dam project. The project currently at about 34 per cent, was halted due to objection raised by Egypt, who is a member of the Nile's downstream countries. Egypt hadexpressed fear that the Nile Dam project would affect the Egyptians, whose 80 per cent source of domestic water supply comes from the river. The Ethiopian Water and Irrigation Minister, Alemayehu Tegenu had, however, told newsmen that the country was "collaborating with Republic of Sudan to re-engage Egypt into dialogue to support the project." He saidthe Dam would benefit the three Nile countries, as it would cause no harmon downstream countries as the experts' report suggested.

"Ethiopia and Sudan have been working together to bring Egypt back to the dialogue table to resolve the issues and make progress on the project for goods," he said. The News Agency of Nigeria reports that the Ethiopiandam claimed to be one of the largest hydro projects in the world on the River Nile near the Sudan border, is expected to flood 1,680 square kilometres of forest in northwest Ethiopia. It would however displace some20,000 Ethiopians living around the dam area to create a reservoir that will hold around 70 billion cubic metres of water equivalent to the entire annual flow of the Blue Nile at the Sudan border.

The project according to available data would generate electricity capacityof 6,000 MW, when completed in 2017. The project had however, caused some ripples between Ethiopia and Egypt, where the ousted Egyptian leader Muhammad Morsi threatened war with Ethiopia if the dam project was continued. Morsi had said that its interest in the Nile was threatened,claiming that Egypt sources over 80 per cent of its domestic water supplyfrom the Nile River and threatened to attack Ethiopia.

NILE POLITICS: Egypt internationalizes dam dispute with Ethiopia'

Al Monitor Cairo, Egypt - The Egyptian government has begun to take serious, overt measures toward internationalizing the Renaissance Dam. Itis doing so through protracted negotiations taking place behind closed doors among the Supreme Committee for the Nile Waters, which

includes representatives from all parties affected by issues of concern to the Nile River Basin. It is composed of staff from the Foreign Ministry as well as the Ministries of Water Resources and Irrigation, International Assistance, Defense and Electricity, and the Egyptian intelligence services.On Jan. 20, Al-Monitor became the first to publish a report concerning thisstep, revealing Egypt's intention to internationalize its case against Ethiopia concerning the Renaissance Dam. At the time, Egyptian Minister of Water Resources and Irrigation Mohamed Abdul Muttalib released a statement denying Al-Monitor's reporting. This comes at a time when, according to polls, the proportion of Egyptian public opinion that favors escalating the issue has risen to 87%. This is the percentage of people who answered "yes" when asked, "Do you support internationalizing the

issue of the Renaissance Dam, following Ethiopia's rejection of initiativesto solve the crisis?" The poll was carried out by one of the most
widely read news websites in Egypt.
These Egyptian moves toward international escalation are proceeding on two levels, in keeping with an agreement concluded by the Supreme Committee for the Nile Waters, according to a government source who spoke to Al-Monitor. The source stressed that, in fact, first-level steps began with the visit of Muttalib, along with Minister of Foreign Affairs NabilFahmy, to Italy, which is believed to be Ethiopia's principal technical supporter in building the dam. The Italian contracting company Salini Corporation has already conducted several studies and begun constructionat the dam site.
The source noted that the next stage will witness other visits by
Muttalib to a number of countries. It was agreed that the next visit would be to Norway, one of the countries that is funding the establishment of theRenaissance Dam. All of these visits seek to clarify the harm that Egypt will incur if the dam is completed according to its current specifications, aiming to win support from these countries for Egypt's position as well as bringing pressure to bear on the Ethiopian side. Egyptian officials seek to slow construction of the dam until an agreement can be reached with Cairo concerning the mechanisms for mitigating the expected damages to the Egyptian people and the beginning of an era of thirst in Egypt.
The same government source added in remarks to Al-Monitor that thesecond level of Egypt's plan to escalate the issue internally, which wasagreed upon by the Supreme Committee for the Nile Waters, encompasses special steps to present international complaints againstEthiopia over its intransigence and insistence upon inflicting damages
to Egyptian water security. This aspect of the plan has been postponed atpresent until after the completion of the Egyptian government's campaignto educate other governments concerning the harm that the Renaissance Dam will inflict on Egypt. He noted that the committee had put in place a number of options, including raising complaints to the United Nations andother international organizations such as the African Union. Bringing the matter before the UN Security Council has been ruled out for the time being, since it was decided to leave it to the next president-elect to determine whether or not to pursue that route.
Muttalib stressed that his visit to Italy had achieved its goals and would berepeated in many other countries and places. The mission of this and subsequent trips is to provide greater clarity on Egypt's water position, the challenges that Egypt is confronting with regard to the scarcity of water resources and the efforts that the Ministry of Water Resources
and Irrigation is making in this area. Muttalib noted that, during the visit,he had explained the water resources situation and the reality of water scarcity in Egypt to Italian experts and officials. Those present expresseda keen interest in information concerning water resources and stressed that they were hearing it for the first time.

Muttalib stated there are a number of scenarios that the Egyptian government has agreed to implement in order to deal with the Ethiopian

Renaissance Dam crisis. Among them is an effort to raise awareness in theworld regarding the truth of Egypt's position toward development of the Nile River Basin, which he insists is not opposed to development in the countries of the basin, contrary to the version of events Ethiopia propounds. He stressed that the position of the political administration
and the Egyptian government is fixed concerning the waters of the Nile:namely, refusal to compromise or give in on any point concerning Egypt's share, which has averaged historically at 55.5 billion cubic meters of water per year.
For its part, the Ethiopian side believes that the Egyptian bid to internationalize the issue of the Renaissance Dam will not bring about anyresult so long as there is a serious intention to submit the matter to the International Criminal Court. The Ethiopian Foreign Ministry's website reported that the prime minister remarked, "There is no international court responsible for investigation or arbitrating in issues of water … and that is why the Egyptian move to internationalize won't have any effect." The Egyptian government, acting out of the belief that the Renaissance Dam threatens to leave many Egyptians without water, has already begunto internationalize the issue through a campaign to define the dangers of the Ethiopian dam in the international community, and to work to halt its foreign financing. Will the coming days witness the beginning of the next step, one of internationalization through formalized, international complaints? (Text ends)
Blue Nile Sub-basin Legal Regime in Historical Context: Colonial TreatiesResearch Article By Yosef Yacob, AB, JD, LLM, PHD (Part I) Updated content February 22, 2014
Part I: Generally, formal agreements and legal regimes provide a legalpoint of departure to contribute the general principles and rules that govern co-basin states' legal relations in the utilization of international rivers.
This chapter begins the examination of reciprocal rights and obligations ofthe sub-basin's riparians by reviewing the treaties, which form the legal regime of the Blue Nile Sub-basin. The chapter describes the evolution of the legal regime by reviewing the colonial as well as the postcolonial treaties and other significant negotiations concerning the utilization of thebasin's waters.
1. Colonial Treaties
The early treaties regarding the Nile basin were largely the products of British colonial intervention in the region. The British were anxious to preserve their position of control over the Suez Canal. A major part of keeping Egypt satisfied was ensuring the permanent availability of Nile waters for Egyptian uses. While the British had many colonial interests inthe Nile basin, they usually chose treaty arrangements that favored Egyptian claims to the Nile, for the above mentioned reason.
The British at this time introduced the notion that Egypt's rights to the Nile were so long established that they should take precedence over all other schemes for use of the Nile. The early colonial period treaties regarding the Nile basin show the British single mindedness on this issue.

These older agreements emphasized certain tenets and attitudes regarding rights to the Nile that have persisted through the development of the current legal and institutional system operating in the Nile basin. They have given weight to Egypt's claims to be the state with the greatesthistoric legal recognition of rights to the Nile waters.

This early colonial period was also the first in which Egypt was to admit that other states could potentially affect its claims to the Nile. Without thewater that the Blue Nile brought down from the Ethiopian Highlands and that the White Nile carried away from the central African lakes, Egypt would be a desolate land.

1.1 Italy United Kingdom Protocol – 1891

Until the explorations of Baker, Speke, and Stanley in the latter half of thenineteenth century, no one knew where the source of the Nile was located, but all believed that interference with its water was possible. UntilBritain acquired interests in Egypt, however, speculation on such a diversion was left largely to scholars and travelers. As long as no European power moved into the Sudan or established a position astride the Nile, the British believed that Egypt would have water and British domination of Egypt would remain secure.

In 1889, British complacency was shaken. The first threat to the Nile by aEuropean power loomed in the heights of the Ethiopian plateau. The Italians had long wished to establish a protectorate in Ethiopia, and after 1885, the British had even encouraged Italian moves into the highlands. At first the British calculated that Italian penetration would not only keep the Ethiopians out of the Sudan but would also act as a counterweight to the French, who were strengthening their position at Djibouti.

In 1889, the Italians seized the first real opportunity to enlarge their prospective sphere of influence. On March 9, the forces of the Mahdist of Sudan stopped the Ethiopian expansion into Sudan at the Battle of A1- Qallabat, killing King Yohannes IV. In order to consolidate his internal position among the traditionally warring feudal factions, the new Emperor,Menelik, welcomed Italian offer of support and signed the Treaty of Uccialiin May.

The Italians translated the treaty into action and laid claim to Kassala situated below the escarpment in the Nile Basin, which commanded theAtbara tributary of the Nile. With this town as a base, the Italians could proceed towards Khartoum at the confluence of the White and the BlueNile.

The British were concerned that the Italians may attempt “to tap the upper Nile” and proceed to occupy Sudan.” In August 1889, the British announced against letting foreign Powers into the Nile Valley and authorized “... such measures as may be necessary for the purpose of protecting [the] Nile Valley against the dominion of any outside Power.” Accordingly, the British warned Italy to stay away from the Nile. In March1891, Italy officially consented to remain out of the Nile Valley in return for British recognition of an Italian sphere of influence in the Ethiopian Highlands.

The Anglo Italian Treaty was signed in Rome, Italy on April 15, 1891. Theprotocol protected Egyptian interests in waters of the Atbara River, a tributary of the Nile. The British concluded this treaty before the major source of the Nile was identified as the Blue Nile, which originates in the highlands of Ethiopia. Article III stipulated:

“The Government of Italy undertakes not to construct on the Atbara any irrigation or other works which might sensibly modify its flow into the Nile.” This was followed by an exchange of notes between Italy and Britainsigned in Rome on November 22, 1901 marking the frontier between the Anglo-Egyptian Sudan and Eritrea.

Treaty Between Anglo Egyptian Sudan, Ethiopia and Eritrea – 1902 The Treaty of Ucciali for Everlasting Peace and Friendship between Ethiopia and Italy was concluded on 2 May 1889. By this treaty, Italy recognized Menelik as Emperor of Ethiopia in exchange for a number ofstrategic and commercial privileges.

The most important clause of the treaty was article 17, in which the Emperor declared that, if needed, he would make use of Italy's diplomaticservices. That at least was what the Amharic text stated, however the Italian text, read that he had to make use of these services. Menelik let itbe known that he did not accept the Italian text.

In September 1895, Menelik declared war on Italy. The Italians went onthe attack on 1 March 1896. The result would enter the history books asthe Battle of Adwa. The Ethiopian army scored an overwhelming victory.Five days later Italy sued for peace and negotiations led to the Treaty ofAddis Ababa, signed on 26 October 1896.

The Treaty of Ucciali was revoked, and Italy recognized the sovereignty and independence of Ethiopia. The Ethiopian victory demonstrated expansion into Ethiopia was not going to be an easy option for Europeans.The clear message of the Battle of Adwa was that Ethiopia would not become a victim of European Imperialism but rather a worthy partner withsimilar expansionist aspirations into the Sudan.

Meanwhile the news of the Battle of Adwa had other consequences as well. The immediate consequence was not only the elimination of the Italian threat to Ethiopia but Italy's appeal to Britain for military assistance at Dunqula to relieve the beleaguered Italian garrison at Kassala. The Italian appeal for support provided Britain with the perfectexcuse for seizing a large slice of the Nile Valley in view of the powerful Ethiopian Emperor’s expansionist aspirations.

On March 13, 1896, the British, under Kitchener advance on the pretext ofhelping the Italians but in reality to acquire a permanent gain on the middle Nile. While Britain was formulating plans to move on the Nile from the north and the east, the French were not idle. The French had been holding back a colonial expeditionary plan for the occupation of Fashoda atthe Upper Nile. On June 5, Captain Marchand left for Africa. Marchand wasto be assisted by two French expeditions moving toward the Nile through Ethiopia.

To gain support for the expedition, the French offered Menelik all the territory between the Ethiopian escarpment and the White Nile. Menelik agreed to support the French expedition. He received weapons and Frenchrecognition of his claims to the eastern half of the Sudan (east bank of theNile from the Nilotic Plains from Khartoum to Lake Albert). In June 1898, acombined French Ethiopian force reached the junction of the Sobat and the White Nile and planted a French flag on an island in the Nile and an Ethiopian flag on the east bank of the Nile. The expedition then turned back to Ethiopia. Three weeks after the combined expeditionary force departed, Marchand arrived at Fashoda.

On September 25 the news of the arrival of Kitchener's force in Fashoda and his meeting with Marchand reached Europe. Marchand was told to withdraw or Britain would declare war on France. France capitulated and on November 3 ordered the withdrawal of the Marchand expedition. The Fashoda crisis was over. Once having obtained Marchand's evacuation, anAnglo-French treaty was signed in March 1899 delimiting the British and French spheres in the Sudan to exclude France from the Nile basin.

During the same period, in March of 1899, Lieutenant-Colonel Harringtonthe new British Consul in Abyssinia (name of the Predecessor State of present-day Ethiopia) arrived with instructions to discuss the Sudan frontiers with Emperor Menelik restricting the Ethiopians to their highlands. Menelik was unwilling to “open the question” and to abandon his claim to the Sudan, until April of 1899, a month following the Anglo- French Treaty.

The British had proven military superiority and strength in the Sudan, andin view of the French capitulation at Fashoda and the subsequent Anglo- French Treaty, Menelik decided to settle with the British. In May of 1899, a preliminary agreement was arrived at subject to settlement of details concerning the frontiers. Menelik agreed to give facilities to two British survey parties to explore the country south of the Blue Nile and near LakeRudolph.

Following completion of the survey, the British realized for the first time the significance of Lake Tsana and the Blue Nile River to Egypt and Sudanand accordingly instructed Harrington in a confidential dispatch that in thefrontier agreement he should:

…also endeavor to arrange with the Emperor Menelik that there is to be nointerference with the waters of the of the Blue Nile and Lake Tsana, except in agreement with Her Majesty’s Government and the Government of the Sudan; that navigation on the Blue Nile and the Sobat River, with their tributaries, where navigable, is to be free;… these arrangements are to be included in the Agreement for the delimitation of the frontier, or form a separate agreement.

The Egyptian Government sanctioned a grant of £10,000 a year to the Emperor in return for the Emperor’s undertaking that there would be nointerference with the waters of Lake Tsana and the Blue Nile tributaries.Harrington was authorized to promise payment of this subsidy from 1 January 1904, provided the Emperor signed a satisfactory declaration.

The payment was intended as an incentive to gain the approval of Menelikwho needed resources and weapons to achieve his expansionist aspirations to the south and west of Abyssinia. The terms of the treaty were finally agreed upon in April of 1901.

Therefore, in March 1902, Harrington exchanged notes with Menelik by which the latter gave an assurance that he would not “arrest” the watersof the Blue Nile and Lake Tsana except in consultation with His Majesty’sGovernment and the Government of the Sudan.

In reporting this Exchange of notes, Harrington expressed confidence thatBritain had no desire to demand from the Emperor that he should deprivehimself of a valuable asset without equivalent compensation. At the time the notes were negotiated, Harrington wrote:

I am absolutely convinced that if I separate the other questions such as Tsana etc., and sign a frontier treaty simply, I may whistle till I am blue inthe face before I get any further agreements signed.

Following further negotiations, a treaty was finally signed on May 15, 1902 settling the frontiers between the Sudan, Abyssinia, and Eritrea. Menelik abandoned all claims to any territory bordering on the Nile belowthe Ethiopian escarpments. The Nile Val¬ley appeared at last to be securely British. The British had succeeded in excluding the Italians, the French, and now the Ethiopians from the Upper Nile.

Although, the primary purpose and object of the 1902 agreement was todelineate the frontiers of Ethiopia and the Sudan, the third article of the agreement provided that:

His Majesty the Emperor Menelik II, King of Kings of Ethiopia, engages himself towards the Government of His Britannic Majesty not to constructor allow to be constructed, any works across the Blue Nile, Lake Tsana orthe Sobat [river], which would arrest the flow of their waters into the Nileexcept in agreement with His Britannic Majesty's Government and the Government of the Sudan.

To this ancillary provision the additional “…. or allow to be constructed” was included because for some years previous to 1902 proposals had been made by a Mr. Aitken, a British investor, for utilizing Lake Tsana as areservoir to store water for irrigation requirements of British cotton interests in the Sudan. The British were strongly opposed to a proposal, which involved the transfer to a private company of rights over the lake.

To carry out suggestions for giving Menelik “equivalent compensation,” in January 1904 Lord Cromer, the British Commissioner in Egypt, sent to theForeign Office the text of an arrangement which he had authorized Harrington to make with Menelik. The text was as follows:

In consideration of Menelik having agreed by article 3 of the treaty between Great Britain and Ethiopia of the 15th May, 1902, not to construct …any work across the Blue Nile, Lake Tsana or the Sobat which would arrest the flow of their waters into the Nile, except in agreement with His Britannic Majesty’s Government and the Government of the Sudan…the Anglo-Sudanese Government undertake to pay to the Emperoror his successors the sum of £10,000 sterling annually so long as the friendly relations between the two Governments continue.

British Foreign Office archives do not show the course of subsequent negotiations with Menelik between 1902 and 1907, nor could this writerfind the exchange of notes containing the terms of the stipulation. According to the British, although the arrangement was in principle accepted by Menelik, it was never formally signed, as Menelik “madedifficulties” about the form of the British note. The promised annual subsidy was, therefore, never paid.

The British had accomplished one further step towards their goal of securing the Nile Valley by protecting the headwaters of the Blue Nile River. The British soon embarked on a strategy to wrest control of the Blue Nile, from the unsuspecting Ethiopians, through a series of colonialpower agreements during the “scramble for Africa” in the early years ofthe twentieth 20th century.

This was the only Nile treaty to which Ethiopia was a party.

Note 1 Agreement and Declaration Between Great Britain, France andItaly Respecting Abyssinia, (1907) B.T.S. No. 1; Cmd, 3298.

Agreement Between Great Britain, France, and Italy Respecting Abyssinia

- 1906

Following the treaty in 1902, the desirability of some definite understanding between the three European powers chiefly interested inAbyssinia (England, France, and Italy) arose about the question of succession to the throne of Menelik.

The British reasoned that on the death of the powerful Emperor, the country might return to the old state of civil war until one of the rival candidates to the throne made himself supreme. A hostile ruler towards the Europeans may not be inclined to honor European treaty obligations.The British therefore felt that if foreign intervention became necessary, some understanding between England, France, and Italy, providing for common action would be desirable.

In 1903, the Italian Government made a proposal for reciprocal guarantees in view of any changes in Ethiopia, and especially in case of adisputed succession to the throne. By 1904, it became clear that Menelik was suffering visibly from a disease that was progressively debilitating. InMay of 1906, information was received by the British Foreign Office that Menelik was in a precarious state of health suffering from “arterial sclerosis” and might die or become paralyzed at any moment.

Negotiations were quickly completed in 1906 between Italy, Britain, France, and the three states agreed to secure Menelik's consent to the agreement. The text of the treaty was presented to Menelik on October 16, 1906. The Emperor did not fully comprehend why the treaty was presented to him for his consideration. The Emperor was assured that thetreaty in no way prejudiced his sovereign rights. The agreement was thensigned as the “Tripartite Agreement” of 1906 in London on December 13. From the correspondence among the three European powers, it appears that their reason for presenting the Treaty to Menelik was to assure the emperor of the “good intentions.” Sir Edward Grey in reply to a question put to him in the British parliamentary session of November 1, 1906, said,

The validity of the accord (that of July 6, 1906) among the three powers(England France and Italy) does not depend upon the Emperor Menelik. The accord was communicated to him for the purpose, to make clear to him that the agreements among the three Powers did not contain any prejudices to his interests”
The main object of the agreement was the delimitation of the spheres of influence of the three contracting parties. The three parties agreed that their intention was to preserve the integrity of Ethiopia and the status quoof the frontiers between Ethiopia and their respective colonial interests and spheres of influence in Ethiopia as established in the agreements of 1891 and 1894.
In the event the status quo should be disturbed, they agreed to make aneffort to preserve the integrity of Ethiopia, but if that could not be done they in any case would concert together to safeguard their respective interests. The British interests being in the Nile valley and the water supply for the Blue Nile, More especially, with regard to the control of the waters of this river andits tributaries (the consideration due to them being given to local interests).
In 1907, the emperor suffered a disabling stroke followed by a massivestroke in 1908, which crippled his reasoning. The concern that Ethiopia might collapse and disintegrate into anarchy did not materialize as the ailing Emperor had arranged for an orderly succession before his death.Exchange of Notes Between Great Britain and Italy – 1925
The secret agreement of London in 1915 promised Italy certain territorial gains, of colonial character, in the form of adjustment in Italy’s favor of the boundaries of neighboring territories in Africa belonging to France andGreat Britain. In 1919 at the time of the Peace Conference, following World War I, the Italian Government proposed to the British Government that each country should support the other, for certain concessions from the Ethiopian Government.
Great Britain sought the concession for a water storage barrage on Lake Tsana and a road linking Lake Tsana to the Sudan and Italy in turn soughta concession for a railway connecting Eritrea and Italian Somaliland with Addis Ababa. Initially, Britain strongly objected to the idea of allowing an outside power to establish dominion over the headwaters of the Blue Nile River.
However, when all efforts on the part of the British Government to reachan agreement with Ethiopia concerning the construction a water storagedam on Lake Tsana failed, Britain favorably reconsidered the Italian proposal.
On 14 December 1925, the British offered that in exchange for Italian support to build a dam on Lake Tsana, Britain would recognize Italy's rightto construct a railway from Somalia to Eritrea, acknowledge Rome's “exclusive economic influence in the west of Ethiopia,” and recommend that all Ethiopian government concessions in the area be given to Italians.The British promise of support to Italy for economic concessions in Ethiopia was

… subject to the proviso that the Italian Government on their side, recognizing the prior hydraulic rights of Egypt and the Sudan, will engage not to construct on the head waters of the Blue or White Niles or their tributaries or affluents any work which might sensibly modify their flow into the main river. It is understood that the above proviso would not preclude a reasonable use of the waters in question by the inhabitants of the region, even to the extent of constructing dams for hydro-electric power or small reservoirs in minor affluents to store water for domestic purposes, as well as for the cultivation of the food crops necessary to theirown subsistence.

The British note also referred to "…the vital importance to Egypt and the Sudan of maintaining and, if possible, increasing the volume of water for irrigation purposes available in those countries from the Blue and White Niles and their tributary streams." The Italians were assured that the damon Lake Tsana would not raise the level of water in the lake beyond the maximum reached during the rainy season.

The Italian note accepted the British conditions and concluded:

I note that His Britannic Majesty's Government have every intention of respecting the existing water rights of the populations of the neighboringterritories which enter into the sphere of exclusive Italian economic influence. It is understood that, in so far as is possible and is compatible with the paramount interests of Egypt and the Sudan, the scheme in contemplation should be so framed and executed as to afford appropriatesatisfaction to the economic need of these populations.

The discussions leading to the exchange of letters demonstrated that bothcountries had been influenced by the conventional opinion that there was no government in Ethiopia; that the central government could not control the provinces; and that the country would soon dissolve into anarchy. By virtue of this agreement, the British Government renewed negotiations with Ethiopia to acquire a concession to build a barrage on Lake Tsana anda road from Sudan to Lake Tsana.

When notified of the Anglo-Italian initiative, Ethiopia reserved its right asa sovereign state to reply on receipt of the full text. Upon receiving the text, the Ethiopian Government protested, publicly expressed outrage, and undertook a campaign against Italy, which became a target of suspicion, resentment, and hatred.

The Italians tried to explain away the growing crisis. Italy explained theAnglo-Italian stipulations as "exclusively economic," respectful of the sovereign rights of the Ethiopian Government, and new proof of the friendly intentions of Italy and England toward the Ethiopian Empire.

On 15 June Ethiopia rejected the agreement by formally advising Italy andBritain that Ethiopia regarded the Anglo-Italian accords as an infringementof sovereignty, a matter for the League of Nations. Ethiopia protested to the League of Nations and charged that the Anglo-Italian initiative derogated the sovereign equality of a League member, whereas the Charter presumed that the independence of all members would be respected. Before the situation deteriorated further, Italy agreed with British suggestions for moderating the language of the agreement.

The Ethiopian government considered the mildness of the statements as awithdrawal of the original intention of the two Governments. Ethiopia subsequently advised the League that the British and the Italians had admitted Ethiopia's full and complete freedom to decide any requests, which may be made to it, and its sovereign right to judge what is in the best interest of Abyssinia. Its suspicions aroused, the Ethiopian Government withheld the barrage concession on Lake Tsana from the British and opened negotiations with an American firm of engineers.

Part II – Part 2 of the article will discuss Egyptian and British complicity inthe invasion of Ethiopia by fascist Italy'

In April 1931 Sudan confirmed their financial difficulty resulting from the collapse in the price of cotton and the serious drop in the yield and qualityof the Gezira scheme cotton. Furthermore, Sudan objected to the proposalthat Ethiopia should take any part in the operational control of the works. Sudan also objected to the Emperor's redraft of paragraph 7 of the Emperor's draft proposal, arguing that there were no potentially irrigable areas in Ethiopia so situated that they could benefit from waters controlledby the dam. Sudan also did not see an immediate use for Lake Tsana water, and considered the financial investment speculative in view of its economiccondition. Sudan, however, wished to retain interest in the project, but the utmost they could afford would be a small contribution towards thecost of an option if this were found the only means of preserving their rights.

On July 28 1931, Barton in a conversation with the Emperor outlined thetechnical objections of Sudan and proposed that representatives of the parties concerned suspend discussions pending completion of the study and consideration of the survey data. The Emperor agreed and it was decided to hold the conference early in 1932.

In January 1932, Sudan, in spite of the promise of a good cotton crop, considered that financial considerations would preclude for many years any extensions of the area under irrigation in the Gezira, but they favoreddelaying matters and suggested additional studies to be financed by Egypt. Egypt agreed subject to its full participation at the next conference.Egypt also agreed to allow Sudan to participate in the benefits of the dam and advanced proposals for the allocation of water in proportion to the respective contributions to the project. These proposals formed the subject of detailed discussion between the irrigation experts of Egypt and Sudan, and Egypt was prepared to proceed actively with the prosecution of the project, or to secure an option and to provide the necessary funds. In view of these developments, Ethiopia was requested to postpone the conference until January 1933, and to invite an Egyptian delegate to be present. Ethiopia agreed to both requests and invitations were issued accordingly.

The attitude of Egypt had by January 1933 undergone a change due the criticism by the opposition in Egypt accusing the Government of being the"cat's-paw" of the British. The British were informed that it was out of thequestion for Egypt to think of proceeding with the construction of the dam

for many years to come. Egypt, however, agreed to a limited proposal forfurther surveys, for which Egypt would be prepared to pay.

The additional survey provided an opportunity for Egypt to gain further knowledge regarding the Blue Nile and Lake Tsana basins. Egypt, in addition, attached the greatest importance to the construction of a roadfrom the lake to the Nile valley, and wished this to be pressed upon theEthiopian Government at the conference. In this writer’s opinion, the purpose of the road was to provide access to Egypt, through the impenetrable Ethiopian escarpments, should it be necessary to protect Egyptian interests in Lake Tsana.

Early in February 1933, the representatives of the various parties assembled at Addis Ababa for the conference convened by Ethiopia. Ethiopia, on receipt of the limited proposals of Egypt, which Sudan endorsed, was disappointed. The joint meeting was cancelled, but the Ethiopian Government accepted the Egyptian and Sudanese proposals, with the understanding that they were not committed as to their future action in the matter. Egypt sent the sum of £E 50,000 to provide for thecost of the additional surveys by White's engineers. The survey was completed in April of 1934. The survey team did not find considerable saving when compared to 1931 estimates, and that construction of a motor road proposed by Egypt from the lake to the Sudan frontier wouldnecessitate expensive blasting operations.

In December 1934, White informed Mr. Butcher (the Director-General, Southern Nile) the Egyptian Government expert, that the 1933 report would shortly be ready for dispatch to the Emperor proposing three alternative schemes: Plan A, which would be the cheapest, but which would raise the lake level and involve damage to certain ancient EthiopianCoptic churches, which would be contrary to the wishes of the Ethiopian Government; Plan B, an intermediate scheme, not fully worked out, whichwould be less costly than the original scheme and which would do less damage than Plan A; Plan C, involving no raising of the lake levels - the original scheme as proposed by Ethiopia.

White advocated a meeting at Addis Ababa to discuss the report as soon as it was presented, to reach final settlement, fearing intervention in the project by certain foreign (Russian) engineers. On January 26, White wasinformed that Egypt would favor Plan A, despite the damage, which it would entail.

Early in 1935, Ethiopia sent invitations to Egypt and Sudan to nominate representatives to a conference at Addis Ababa on April 23. At that time,the report of White on their survey of the lake had not yet been formallyreceived either by Egypt, the Sudan or by Britain. The general view of allthree was that no conference in Addis Ababa could reach a final decisionuntil all parties had fully digested the report. They, therefore, favored further delay.

On the other hand, the Emperor was anxious to make rapid progress witha scheme in which both British and Egyptian as well as American interestswere involved. Upon receipt of the Emperor's invitation, Egypt, on April 6,informed Britain that, while April 23 seemed too early for a conference,

they were anxious to arrive, in the near future, at a final agreement with the Sudan on the Lake Tsana question. Egypt accordingly proposed that apreliminary conference should be held in Cairo for this purpose.

Egypt proposed the following terms of reference: Agreement between Egypt and the Sudan (i) To consider and agree on the general scope of the project and on the leading features of the design of the proposed works. (ii) To consider and agree on the technical and financial arrangements necessary for the execution and operation of the project inthe joint interests of Egypt and the Sudan. (iii) To embody those arrangements in an agreement to be ratified by the Egyptian Governmentand the Government of the Sudan.

Agreement Between Egypt and the Sudan jointly and Abyssinia.(iv) To consider and propose the terms to be offered to the Abyssinian Government in return for the concession to carry out and operate the works necessary to enable Lake Tsana to be used as a reservoir. (v) To embody these proposals in the form of instructions to the delegates who will negotiate with Abyssinia. These terms were submitted to Sudan, whoapproved them.

Lake Tana Reservoir Project Agreement Between Egypt and Sudan –1935:

The Egypt and Sudan considered the report of White at a preliminary conference at Cairo on May 11 1935. At that Conference agreement was reached upon (1) the general scope of the project and the leading features of the design of the proposed works; and (2) the technical and financial arrangements necessary for its execution and operation in the joint interests of Egypt and the Sudan. Accordingly, on May 20 1935, Egypt and the Sudan signified their intention of constructing and operatingsuitable control works at joint cost and for their joint benefit, if the territorial Power (Ethiopia) gave its consent thereto. The designs of the White Corporation for the work, as contained in their report of 1935, were accepted as generally satisfactory. The main purposeof the agreement was to set out the terms of the understanding between Egypt and Sudan for construction and operation of a storage reservoir at Lake Tsana in Ethiopia and sharing of the benefits. The agreement was subject to the “permission of the Ethiopian Government.” Cost of construction and operation and benefits were to be shared jointly by Egypt and Sudan. Sudan’s initial contribution was to be ten percent or at Sudan’s option a reduced percentage but no less than £200,000 towards construction and £4,000 per year for operation. Sudan was also given the option to participate in a greater amount on giving Egypt two years notice before completion of the dam. The Sudan also had the optionto increase the share up to a maximum of fifty percent of the net benefitsin incremental percentages of five percent each year commencing five years following completion of the dam after an initial maximum of twenty five percent upon completion of the dam.

The other provisions relate to payment schedules for Sudan’s share of theconstruction costs, coordination of the Tsana reservoir with the Sennar Dam and Egypt’s rights to propose modifications to maximize benefits to

Egypt so long as Sudan's interests were not adversely affected. The Tsanareservoir was a further step in realizing Egypt's Century Scheme and Egypt's prominent role in the Blue Nile Sub-basin. Sudan was willing to allow Egypt to make the initial investment subject to the right to equally share in the benefits when its financial circumstances improved.

The Emperor was anxious to come to an agreement with Britain, Egypt and the Sudan concerning the construction of the reservoir, feeling thatsuch an agreement would strengthen his hands against Italy who was massing troops on the Ethiopian borders. At the end of May, Mr. Collier,Governor of the Bank of Ethiopia, was sent to London with a message from the Emperor to press the British for a conference. However, Britainfelt that a conference held in Addis Ababa while Italo-Ethiopian tension was high carried the risk of provoking Italy. According to the British, theItalians had been deeply suspicious of general British policy in Ethiopia, and a conference might tempt them to decide on war.

Therefore, in reply to the Ethiopian invitation, Egypt and Sudan replied that they would be unable to complete the necessary preliminaries in timefor June 1. The next step would have been a conference with the EthiopianGovernment but owing to the Italo-Ethiopian dispute and British political considerations, the Addis Ababa conference was never held.

Anglo-Egyptian-Italian Exchange of Notes – 1938:

The February 1933 Lake Tsana Reservoir negotiations at Addis Ababa ledto a revival of interest and suspicions in the question on the part of the Italian Government. The Italian Government felt in view of the Tripartite Agreement of 1906 and of the Anglo-Italian agreement of 1925, they expected to be informed of developments. Italy felt it "should not be leftout or be prevented from contributing in the examination of schemes connected with the building of the dam at Lake Tsana or with any other work whose undertaking should be considered in the [Italian sphere of influence]."

In 1934, the Italian Government expressed further suspicion that the British Government had motives other than economic ones in their treatment of the Tsana reservoir question and protested that the question should not be settled without regard for Italian interests. On July 4 1935, upon learning that the Cairo conference had taken place, Italy again protested that respect for Italy's rights under the Tripartite Treaty of 1906and the Anglo-Italian Exchange of Notes of 1925 could only be ensured byItaly's participation. Italy had interests to protect "not less important thanthose of the Sudan and Egyptian Governments."

On October 22, 1935, Britain expressed that Italian interest in the Tsanaproject were inconsistent with understandings of December 20, 1925, bywhich the Italian Government "recognize the prior hydraulic rights of Egypt and the Sudan," which the British Government were bound to protect. On February 20, 1936, the Italian Government reasserted the right to participate in the examination of the White Corporation's report. Italy claimed it had "ample and clear proof that Great Britain had recognized the economic and territorial rights of Italy on the Eritrean andSomali hinterland and on the western Ethiopian territories."

During this same period, Italy commenced hostilities against Ethiopia while concurrently assuring the British Government that Italy harbored nodesigns against British interests in Ethiopia. On August 28, the Italian Government issued a statement, which, as reproduced in the press, included an assurance, that Britain had nothing to fear from the policy, which Italy would adopt in regard to Ethiopia. Italian policy would not threaten British Imperial interests either directly or indirectly. A month later, on September 28 (the eve of formal hostilities against Ethiopia), theItalian Cabinet issued a statement of policy, which included a declaration that Italian policy had no aim, either immediate or remote, which might injure British interests.

As the spring of 1936 approached, the Italian forces in Ethiopia drew nearer to Lake Tsana prompting the British Government to send a “sharp note to Italy.” The Italian Government, on April 3 renewed assurance thatthe Italians were more than ever conscious of their obligations towards the British Government and had no intention of overlooking or repudiatingthem. At about this time Egypt evinced nervousness with regard to the Italian advance upon Lake Tsana and sought British assurances for safeguarding this source of the Nile, in which Egypt and the Sudan were “vitally interested.”

The Egyptian Prime Minister even suggested that British troops might besent to occupy the Lake Tsana area. The British assured the Egyptian Prime Minister of the linkage of Egypt with British rights in Lake Tsana under the Tripartite Treaty of 1906 and the Anglo-Italian exchange of notes of 1925. At the same time, the Italian Government assured Egyptthat the rights of Egypt in Lake Tsana would be fully respected, and on April 8 issued to the Egyptian Government the following written statement:

During a visit that he paid to His Excellency the President of the Council,the Minister of Italy has informed His Excellency that the Italian Government desires to continue in the future its policy of peace and cordial collaboration and sincere friendship with Egypt and to respect theEgyptian interests; and intends to adhere to the same line of conduct concerning the question of the waters of Lake Tsana and the Blue Nile River.

On May 6, the British were advised that Italy would respect, inter alia, British rights in the Lake Tsana region, but that (the capital city Addis Ababa had then just been occupied by the Italian forces) Ethiopia was tobe regarded as Italian Territory.

In November 1936, the Italian Government informed the British Ambassador in Rome that Italy would give the British every possible assurance regarding the safeguarding of British interests in the lake. The general position of the British Government was that they would not bargain about Ethiopia. However, it would be useful if the Italian Government could find occasion to renew the assurances confirming British rights and interests in Ethiopia as specified in the treaty of 1906 and the exchange of notes of 1925.

The British Government decided not to press the Italian Government for an assurance specifically referring to those two instruments; they would be glad, however, if the assurance given on April 3, 1936 could be renewed. Italy confirmed the assurances given on April 3 to the British. The British also reminded Italy that there were interests in Ethiopia, such as Lake Tsana, which Egypt and Sudan shared with the British; and that those two Governments would have to be associated with British interests.By April of 1938, the British Government abandoned the argument that Italy had violated the Treaty obligations not to occupy Ethiopia and recognized the Italian annexation to protect British interests in Lake Tsana. On April 1, 1937, Sir Anthony Eden, the then British Foreign Secretary reasoned:

The rights of the United Kingdom in this matter rest upon the Anglo- Ethiopian Treaty of the 15th May, 1902, articles 1 and 4 of the TripartiteTreaty of the 13th December, 1906, and the Anglo-Italian Exchange of Notes of the 14th/20th December, 1925. Everything, however, which is material in the first two has been incorporated and expanded in the thirdof these instruments …

The rights referred to … are as follows: (a) Italy must not allow any work to be constructed on the headwaters of the Blue or White Niles or their tributaries or affluents which might sensibly modify their flow into the main river, but, subject to that proviso, a reasonable use of the waters in question by the inhabitants of the region may be permitted, even to the extent of the construction of dams for hydro-electric power or of small reservoirs in minor affluents with a view to the storage of water for domestic purposes or the cultivation of food crops necessary for the subsistence of the local inhabitants. (b) His Majesty's Government have the right to obtain the construction of a barrage at Lake Tsana and a motor road for the passage of stores, &c., from the barrage to the Sudan frontier, subject only (i) to an obligation to employ, so far as possible, locally recruited labor in the construction and operation of the barrage, and (ii) to the proviso that the barrage must not raise the level of the waters in the lake beyond the maximum hitherto attained during the rainyseason. His Majesty's Government are entitled to obtain a concession for the construction of this barrage and its operation by themselves or by persons appointed by them …

In this event it may be desirable that the Egyptian Government should beassociated with His Majesty’s Government in their action, or at any rate that Italian assurances on the subject should be given to the Egyptian Government as well as to His Majesty's Government.

By a declaration of April 16 1938, which they agreed should apply equallyto the Egyptian Government; the Italian Government reaffirmed previousassurances:

The Italian Government confirm to the Government of the United Kingdomthe assurances given by them to the Government of the United Kingdom on the 3rd April, 1936, and reiterated by the Italian Minister for Foreign Affairs to His Majesty’s Ambassador at Rome on the 31st December, 1936,to the effect that the Italian Government were fully conscious of their

obligations towards the Government of the United Kingdom in the matterof Lake Tsana and had no intention of whatever of overlooking or repudiating them.

Further … the assurances given … in the above Declaration concerningLake Tsana shall apply equally to the Egyptian Government.

The British and the Egyptian Governments signed the agreements giving recognition that "[t]he territories and peoples which belonged to the Empire of Ethiopia are placed under the full and entire sovereignty of theKingdom of Italy as announced in the Italian Decree." In so doing, Egypt,Sudan, and Britain acknowledged the Decree abolishing the Empire of Ethiopia and establishing the new territory of Italian East Africa (consisting of Eritrea, Somaliland, and Ethiopia).

The Lake Tsana reservoir project was postponed due to British preoccupation in World War II and Italy's inability to effectively governEthiopia, and the Lake Tsana region in particular, as a result of the Ethiopian insurgency.

Following the restoration of the Ethiopian Government in 1941, the Emperor, in view of experience, was no longer receptive to renewed British efforts and scheming for a Tsana Reservoir Project. (Text ends)

NILE - Egypt's Obsession and British Scheming to Seize Control of theBlue Nile'

Flouting Ethiopia's Sovereignty, Impeding Development, and the ItalianInvasion in 1938

Research Article: By Yosef Yacob (PhD) (February 28, 2014)

Lake Tana Reservoir Project Negotiations: Following the death of Emperor Menelik in 1913, British interest in the waters of Lake Tsana remained in abeyance. In May 1914, Kitchener reported that there was a possibility that the Abyssinian Government, owing to financial difficulties, would be willing to negotiate a definite treaty for the control of the waters of Lake Tana and the Blue Nile. Kitchener sent with his dispatch a draft showing the form such a treaty might take. The treaty proposed an option similar to that proposed by Lord Cromer to Menelik in consideration for article 3 of the 1902 treaty, together with a further provision increasing to £20,000of the annuity to be paid to Ethiopia as soon as the works were actually started. Colonel Doughty Wylie, who was then in charge of the British Legation in Ethiopia, was informed of Kitchener's views and attempted to negotiate a treaty with Lij Yasu, Emperor Menelik's successor, along the lines proposed by Kitchener.

However, because of the First World War and internal political struggles inEthiopia the matter remained in abeyance again from 1915 until March 1920. In 1920, at the request of the Sudan Colonial Government, Major Dodds, Wylie's successor, obtained Ethiopian permission for Sudan to send two officials to reside at Lake Tsana in order to make surveys.

In spite of his success in obtaining permits for these officials (Black and Grabham) and for other staff who subsequently joined them, Major Doddsdid not believe that it would be worth attempting negotiations with Ras Taffari, the Regent, of Ethiopia. Dodds believed Taffari's position would not be strong enough to enable him to overcome the objections by the

Empress Zawditu, who succeeded Lij Yasu, and the local chiefs. Dodds was, however, instructed to open negotiations at the earliest moment hethought feasible.

Accordingly, in November 1922, Major Dodds commenced negotiations because the British Empire Cotton Growing Corporation was pressing the British Government to conclude an agreement based on two installment payments. The first payment up to a limit of £50,000 on the signature of the lease, and the second up to a limit of £150,000 on the completion of the reservoir and of an annual rent up to a limit of £30,000, to date fromthe completion of the reservoir. In May 1923, the British Minister in AddisAbaba formally communicated a draft treaty, to the Ethiopian Government.

In November Ethiopia announced, that it would conduct an independent investigation into the Tsana scheme before it took any decision. The British broke off the negotiations, "which can be resumed later with betterchances of success," and informed the Abyssinian Government that Britain"would regulate their future conduct towards the Abyssinian Government in the light of the attitude which the latter have seen fit to adopt." Nothingfurther transpired until Taffari's visit to England during the summer of 1924 when the British Prime Minister (Mr. Ramsay MacDonald), explained Britain's reasons for wishing to secure the concession.

On July 26th 1924 Ras Taffari, who was by then on his way back to Ethiopia, replied in a letter to the British Prime Minister as follows: The Ethiopian Government in its own interest and for all other purposes is willing to build a dam in order to retain the waters of Lake Tsana … It is also willing to rent to the Sudan Government the surplus waters … For thiswork it will engage the services of a capable engineer … The Abyssinian Government will then compute the benefit that the Sudan Government willderive from the renting of the water … and fix the amount which shall be paid annually to it by the Sudan Government … After the engineer has finished the work … the Ethiopian Government and the Sudan Governmentwill discuss the amount of money that will annually be paid to the Ethiopian Government for the waters … and any other question in connection therewith. After this an agreement will be signed and the workwill begin …

On August 14, the British Prime Minister replied: the course you suggest appears to offer a chance of an arrangement being reached which would be beneficial both to the Abyssinian Government and to the Sudan. In March 1925 the whole question was reconsidered by the British, and it was decided, in the interests of the Lancashire cotton industry and of the economic future of the Sudan, that renewed efforts should be made in order to persuade Ethiopia to meet British wishes. It was decided as a firststep to secure the support of the Italian Government based on proposals made by Italy in November 1919.

Britain also decided that an attempt should be made, in case of an Anglo-Italian Agreement being reached to secure the support, or at least the acquiescence of the French Government. The views of the Sudan ColonialGovernment were also obtained and found agreement with those of the

British Government. On June 9, the British commenced the discussions, which resulted in the exchange of notes between Great Britain and Italy in1925.

Following settlement of the crisis surrounding the December 25 exchangeof notes, between Britain and Italy, the British Government renewed efforts to secure the acquiescence of the French. The British believed thatFrench support for the British project would have to “be purchased.” On August 4 1926, the French announced that the Italian Government had been informed that instructions had been sent to the French Minister in Ethiopia to maintain friendly and sympathetic neutrality about Anglo- Italian desires in Abyssinia. France considered the British aspiration perfectly fair and unlikely in anyway to injure Abyssinia; in fact, they would probably be of direct benefit.

Accordingly, the British Government decided to renew the negotiations with the Ethiopian Government, taking as a starting-point the proposals ofTaffari in 1924. It was felt that, until preliminary negotiations had taken place, it was premature to decide whether the concession should be askedfor in the name of the British Government or the Sudan Government, or ofa commercial concern with an Anglo-Abyssinian board of directors and capital.

Isolating Egypt: On August 28th 1926, Mr. Henderson, the British Acting High Commissioner at Cairo, called attention to the possible advantages ofsecuring the goodwill, and even the active cooperation, of the Egyptian Government, pointing out that, as had been publicly stated, the dam would benefit Egypt as well as the Sudan. Mr. Henderson suggested that such cooperation would eliminate possible Egyptian encouragement to Ethiopia to oppose the scheme, might tend to lessen Ethiopian suspicions,and might result in Egyptian financial support being more readily forthcoming.

On the other hand, he pointed out that the Egyptian Government mightpossibly seize the opportunity to advance excessive demands as regardthe disposal of the additional volume of water made available. Another possible objection was that the Egyptian Government might insist on participating in the negotiations.

The British decided that it was unwise to bring Egypt into the negotiationsuntil success seemed assured. Further, it would be impossible to offer to Egypt a definite percentage of the water to be made available at first.

Egypt might perhaps take a large percentage, but eventually the Sudan would require, and would expect to receive, the whole, or almost the whole, on the hypothesis that by then Egypt's needs would be met by the dams at Gebel-Aulia and Lake Albert, plus the Sudd channel.

Mr. Henderson was also informed, however, that the British Government should have nothing to conceal. The text of the Anglo-Italian agreement had already been communicated to Egypt, who, if they raised the question, could be informed that negotiations were to be resumed with Ethiopia. Should Egypt touch upon the allocation of the water, they wouldbe informed that a discussion on this point would be premature and would

have to be decided in the light of the division of the Nile waters as awhole.

Mr. Bentinck on May 3 delivered a memorandum to Taffari, suggesting that the British Government should be granted the necessary permission to construct the dam and that such rights would not imply any encroachment upon Ethiopian sovereignty. At the same time, Mr. Bentinckhanded to Taffari the draft of a treaty. On September 22, Taffari addressed a reply expressing surprise at the terms of the British proposalsin view of the intentions of the Ethiopian Government as expressed in Taffari's letter of July 26, 1924, to Mr. Ramsay MacDonald. Taffari reiterated that Ethiopians proposed to build the dam themselves.

On November 4, 1927, the United States press prematurely announced that Ethiopia had concluded a contract with J. G. White Engineering Company of New York [White] for the construction of the dam. But on thefollowing day, the US State Department informed the British Government that, so far as the State Department was aware, no contract had been signed, or could be signed, as payment was to be effected by the issue ofbonds, the principal security for which would be the rent paid for the water by the Sudan Government, whose agreement would first have to beobtained.

Under the proposal, waters of the lake were to be leased for thirty years to a corporation of bondholders and stockholders to be formed in New York with power to build a dam and sell the water. At the end of this period, the dam and the revenues would revert to Ethiopia. A clause was included providing for the generation of hydroelectric power. There was tobe a road from Addis Ababa to the dam.

White, as the result of their study of the Grabham and Black Report and oftheir discussions with the Ethiopian Government, envisaged a US $20 million proposition. This sum was to be financed partly by a public bond issue and partly by stock held by their own finance corporation and other associated firms such as J. P. Morgan. The bonds were to carry eight percent interest; and an essential feature would be a guarantee by the British Government. The figures envisioned a rental in the neighborhood of £750,000 a year.

The publication in November 1927 of the announcement that Ethiopia wasin negotiation for the construction of the dam caused a panic in the Egyptian press; which concluded that Egypt was threatened with imminentdanger by what was “another diabolical move” on the part of Britain.

According to the British, Egyptian interest in the question would not beignored.

One of the main factors in the scheme was that the Tsana waters would be used by Egypt until such time as they were required by the Sudan, andit was hoped that for this reason the Egyptian Government would contribute substantially to the cost of the dam. The Egyptians felt reassured and withdrew their objections, and in February 1928 the BritishHigh Commissioner in Cairo authorized Mr. MacGregor, Irrigation Advisor to the Sudan, to place himself in touch with the Egyptian Minister of PublicWorks for unofficial discussion as to Egypt’s eventual cooperation.

On March 12 1928, Ras Taffari explained that contacting an American firmwas in concert with the wishes of the Ethiopian people who were afraid that the grant of the concession to a British company would eventually result in annexation of the country by Britain. Such fears had been increased by the Anglo-Italian agreement of 1925. On March 24, the British expressed the desire to negotiate on the basis of the Ethiopian Government arranging for the construction of the dam, provided that the British were satisfied as to the competence of the engineers.

Subordinating Ethiopian Interest: On May 16 1928, Ethiopia formally announced that they were negotiating with White and after concluding a suitable agreement, would show that agreement to the British Government. The British decided that before replying to the Ethiopian note it would be as well to try to reach some definite agreement with White. If the British could really satisfy themselves that White could be relied on to act loyally towards the British, the final negotiations might beleft to the conduct of White's representative in Ethiopia, particularly, as the British Minister would always be available to offer White’s representative advice.

Officially, as between the British Government and the Ethiopian Government negotiations could proceed between White and the EthiopianGovernment to enter an agreement for operating the dam, providing Britain was satisfied, when the negotiations were concluded, that the agreement was a reasonable one. The British discussed their plan with White, and it was also suggested that MacGregor pay a “private” short visit to America, without the prior knowledge of the Ethiopian Government, to discuss the whole question of the dam. White agreed andthe meeting was arranged.

Following his visit Mr. MacGregor reported: [Dunn] regarded the Abyssinian Government as his clients for the time being, and therefore hecould not very well show me the document. … I went over the technical ground with him. In particular, we discussed the scope of the work at thelake, and the handling of the outfall problem. After this, I left Mr. Dunn and his associates to assimilate their fresh knowledge and to readjust their views on the whole undertaking.

Their primary reaction to the new facts was to scale down their conceptionof the cost to a figure of 6 million dollars to 8 million dollars. This, in the opinion of the financially interested parties, appeared to change the wholenature of the proposition. They thought that it was too small to be the subject of a satisfactory bond issue. Apart from this they had begun to realize some of the difficulties, e.g., the fact that the rental would necessarily be small in the early years of the under-taking, and would be payable by Egypt, not by the Sudan. They also realized that neither the British nor the Egyptian Governments could reasonably be expected to pay the high rate of interest demanded by American investors when they could finance the work out of their own resources, or borrow at say 5 per cent.

It was clear, also, that it was not sound finance to attempt to amortize thecost of a permanent asset like a dam in the early years after completion

and before the works become fully productive. They became conscious,too, without my stressing the point that a body of foreign bondholders would fit uneasily, if at all, into the scheme of things on the Nile.

In the result the whole idea of a corporation of New York investors acquiring a lease of the lake with a view to sub-letting the water to the Sudan appeared to die a natural death as the situation was elucidated.

Arising out of this development, I asked Mr. Dunn whether, so far as he was concerned, the bondholder scheme was an essential feature, or wouldhe be prepared to carry out the work for us in the general way of his business. He said that he would be very willing to do so, but he understood quite definitely … that Ras Taffari attached the greatest importance to the principle of American capital, and was determined that the undertaking should be entirely non-British. I said that we had not got that impression, and that, unless my memory was at fault, Ras Taffari hadhimself once suggested a mixed company containing both British and American capital. In any case, I said, Ras Taffari was not in a position to squeeze us into an unsatisfactory arrangement.

As regards tactics, Mr. Dunn proposed to continue to press … to secure Ras Taffari's agreement to the draft concession. This was the natural course for him to take as he had been offered an attractive piece of business, and as he was not supposed to have any communication with usthere was no reason for him to depart from the basis of his negotiations with Taffari. It could not commit us in any way. When he had secured the concession he must naturally approach us to discuss terms.

It would at once become apparent that we could not possibly pay a rentalsufficient to meet their scheme of finance and it would be necessary to seek means, of reducing the engineering and other costs. I said that this seemed to me a perfectly sound view of the position. I added that Ras Taffari, having committed himself to a scheme, which turned out to be unworkable, would find it difficult to oppose the recasting of the scheme on workable lines.

I had suggested to Mr. Dunn that he should arrange to send out an engineer to reconnoitre the ground so as to get a closer approximation ofthe cost of the works. Mr. Dunn, however, thought it would be better to postpone that until he had clinched his deal with Ras Taffari. After furtherconsideration I came to the conclusion that Mr. Dunn's line was the sounder one, and that the adjustment to realities should take place after the Ras had granted the Dunn concession. The terms of this on the financial side are so wildly impossible that no one would be committed except Ras Taffari. It was understood that Mr. Dunn would continue to tryto get his concession through.

At my last interview with Mr. Dunn he said that he was very keen to get the job of building the dam. He repeated his assurances of good faith andhis anxiety to help us in every way and to give us "a square deal." He went so far as to say that he was not selfish in the matter, and that if at any stage of the proceedings we would prefer him to fade out of the picture he would be prepared to do so. He thought, however, that having

regard to Ras Taffari’s attitude, we ourselves would gain by employing anAmerican agency.
I said that I had the fullest confidence in his good intentions and in the ability of his firm to carry out the job if it came into their hands. I thought that his views as to the value of American support was sound. We had never objected in principle to the employment of a foreign agency; we hadonly insisted that the agency should be such as to command our confidence. I mentioned the case of M. Zorg, the Swiss engineer, who, webelieved, had made some report to the Ras regarding the dam, though nothing further had resulted, and we had never been able to get a copy ofthe report. I thought the Ras was perhaps inclined to use this question of a foreign agency as a means of procrastination.
On receipt of MacGregor's report of his discussions in America, the BritishGovernment decided to raise no objection to direct negotiations proceeding between Ethiopia and White. This decision was conveyed to Taffari (now King Regent of Ethiopia) in a note of December 19 1928.
White sent a representative to discuss matters with the Ethiopian Government, and was successful in obtaining an undertaking from Taffarithat they would be given the contract. Taffari also proposed a conferencebetween representatives of the British, Ethiopia, and White to reach an agreement on water requirements, after which negotiations could be commenced to settle the terms of the construction contract.
Subsequently, Taffari informed the British that, before he could proceed further, information was required as to how much water Sudan would require and how much they would pay. It was arranged that a conferenceshould be held at Addis Ababa, which would be attended by British experts. As preliminary to this, meetings were to be held in London in theautumn of 1929 between representatives of the British, Sudan and Whitein order to discuss the financial and technical aspects of the project.
Anglo-Egyptian Exchange of Notes of 1929: Towards the end of 1928 the British realized that collaboration with Egypt might be necessary to secureEgyptian financial backing. However, the British decided to delay the collaboration to leverage the acceptance of the 1925 Nile Commission's report by Egypt (then under discussion). When the negotiations were concluded by an exchange of notes signed in May 1929, the British immediately informed the Egyptian Government of the status of the Tsana negotiations. The Egyptian Prime Minister immediately questioned why a conference was taking placing regarding the Nile at which the Sudan but not Egypt was represented.
At the end of December, notes were exchanged between Egypt and Sudanallowing the British Government to represent the interests of Egypt and Sudan during the preliminary phase of the negotiations to secure the Ethiopian Government’s consent to the principle of the construction of thereservoir. The British agreed to keep Egypt fully informed and gave the assurance that no agreements would be entered in regard to the plans, storage, allocation, cost or the rent which might eventually be necessary to pay to Ethiopia, without prior consultation with the Egyptian Government.

The conference at Addis Ababa between the Ethiopian Government, Britishexperts, and White opened in January 1930. As was “agreed” in the secretmeeting in New York between White and MacGregor, the initial proposal made to the Ethiopian Government by White was demonstrated to be financially prohibitive. The British therefore proposed that White further ascertain the exact cost of construction and operation of the dam and the cost of construction of a road linking Addis Ababa to the lake, the latter having been put forward by Ethiopia as an essential condition of the agreement.

The purpose of the meeting was to scale down the project as agreed, inthe meeting in New York, between White and MacGregor. It was also agreed that Sudan should meet the cost of these additional surveys by paying the sum of £E 16,000, to the White Company. This arrangementwas confirmed in an Exchange of Notes of March 4, 1930.

In February 1930, in accordance with the Anglo-Egyptian Exchange of Notes of December 1929, Egypt was informed of the position reached atAddis Ababa. In April Egypt was also informed of the arrangement that had been reached with Ethiopia for further surveys at the expense of theSudan.

The Emperor finally presented Sir S. Barton, the new British Minister in Addis Ababa, a copy of a draft containing an outline of what the Emperorhad in mind in reference to an accord on Lake Tsana waters. Subsequently, in recognition of the joint benefits to be derived, the Emperor proposed an amendment to Article 7 of his draft be replaced bythe following:

Seeing that the dam at Lake Tsana will constitute a system of irrigation for the two countries, the engineers of the two Governments will regulatethe flow of waters to the needs of the countries.

By 1931, Ethiopia was in financial difficulties and Sudan was reconsideringits attitude towards the project because of unfavorable developments in the world cotton market. On the other hand, the British believed that it was necessary to come to a decision when the engineers sent out by White submitted their report and estimates to achieve the result sought for the last thirty years.

The British suggested that, if Sudan, for financial or other reason, was unable to reach an agreement with the Ethiopian Government, Egypt might be willing, in partnership with Sudan, to finance an option or the possible construction of the reservoir. In such a partnership, Egypt would assume a larger part of the financial burden, under which the Sudan mightretain the right to increase her share at any time in the future up to fifty percent. NILE: Egypt’s Obsession and British Scheming to Seize Control of the BlueNile’

Flouting Ethiopia’s Sovereignty, Impeding Development, and the ItalianInvasion in 1938

Research Article By Yacob Yosef (PhD), March 3, 2014

Part II - In April 1931 Sudan confirmed their financial difficulty resultingfrom the collapse in the price of cotton and the serious drop in the yield

and quality of the Gezira scheme cotton. Furthermore, Sudan objected to the proposal that Ethiopia should take any part in the operational control of the works. Sudan also objected to the Emperor's redraft of paragraph 7of the Emperor’s draft proposal, arguing that there were no potentially irrigable areas in Ethiopia so situated that they could benefit from waters controlled by the dam.

Sudan also did not see an immediate use for Lake Tsana water, and considered the financial investment speculative in view of its economiccondition. Sudan, however, wished to retain interest in the project, but the utmost they could afford would be a small contribution towards thecost of an option if this were found the only means of preserving their rights.

On July 28 1931, Barton in a conversation with the Emperor outlined thetechnical objections of Sudan and proposed that representatives of the parties concerned suspend discussions pending completion of the study and consideration of the survey data. The Emperor agreed and it was decided to hold the conference early in 1932.

In January 1932, Sudan, in spite of the promise of a good cotton crop, considered that financial considerations would preclude for many years any extensions of the area under irrigation in the Gezira, but they favoreddelaying matters and suggested additional studies to be financed by Egypt. Egypt agreed subject to its full participation at the next conference.Egypt also agreed to allow Sudan to participate in the benefits of the dam and advanced proposals for the allocation of water in proportion to the respective contributions to the project. These proposals formed the subject of detailed discussion between the irrigation experts of Egypt and Sudan, and Egypt was prepared to proceed actively with the prosecution of the project, or to secure an option and to provide the necessary funds. In view of these developments, Ethiopia was requested to postpone the conference until January 1933, and to invite an Egyptian delegate to be present. Ethiopia agreed to both requests and invitations were issued accordingly.

The attitude of Egypt had by January 1933 undergone a change due the criticism by the opposition in Egypt accusing the Government of being the“cat's-paw” of the British. The British were informed that it was out of thequestion for Egypt to think of proceeding with the construction of the damfor many years to come. Egypt, however, agreed to a limited proposal forfurther surveys, for which Egypt would be prepared to pay.

The additional survey provided an opportunity for Egypt to gain further knowledge regarding the Blue Nile and Lake Tsana basins. Egypt, in addition, attached the greatest importance to the construction of a roadfrom the lake to the Nile valley, and wished this to be pressed upon theEthiopian Government at the conference. In this writer’s opinion, the purpose of the road was to provide access to Egypt, through the impenetrable Ethiopian escarpments, should it be necessary to protect Egyptian interests in Lake Tsana.

Early in February 1933, the representatives of the various parties assembled at Addis Ababa for the conference convened by Ethiopia.

Ethiopia, on receipt of the limited proposals of Egypt, which Sudan endorsed, was disappointed. The joint meeting was cancelled, but the Ethiopian Government accepted the Egyptian and Sudanese proposals, with the understanding that they were not committed as to their future action in the matter. Egypt sent the sum of £E 50,000 to provide for thecost of the additional surveys by White's engineers. The survey was completed in April of 1934. The survey team did not find considerable saving when compared to 1931 estimates, and that construction of a motor road proposed by Egypt from the lake to the Sudan frontier wouldnecessitate expensive blasting operations.

In December 1934, White informed Mr. Butcher (the Director-General, Southern Nile) the Egyptian Government expert, that the 1933 report would shortly be ready for dispatch to the Emperor proposing three alternative schemes: Plan A, which would be the cheapest, but which would raise the lake level and involve damage to certain ancient EthiopianCoptic churches, which would be contrary to the wishes of the Ethiopian Government; Plan B, an intermediate scheme, not fully worked out, whichwould be less costly than the original scheme and which would do less damage than Plan A; Plan C, involving no raising of the lake levels - the original scheme as proposed by Ethiopia.

White advocated a meeting at Addis Ababa to discuss the report as soon as it was presented, to reach final settlement, fearing intervention in the project by certain foreign (Russian) engineers. On January 26, White wasinformed that Egypt would favor Plan A, despite the damage, which it would entail.

Early in 1935, Ethiopia sent invitations to Egypt and Sudan to nominate representatives to a conference at Addis Ababa on April 23. At that time,the report of White on their survey of the lake had not yet been formallyreceived either by Egypt, the Sudan or by Britain. The general view of allthree was that no conference in Addis Ababa could reach a final decisionuntil all parties had fully digested the report. They, therefore, favored further delay.

On the other hand, the Emperor was anxious to make rapid progress witha scheme in which both British and Egyptian as well as American interestswere involved. Upon receipt of the Emperor's invitation, Egypt, on April 6,informed Britain that, while April 23 seemed too early for a conference, they were anxious to arrive, in the near future, at a final agreement with the Sudan on the Lake Tsana question. Egypt accordingly proposed that apreliminary conference should be held in Cairo for this purpose.

Egypt proposed the following terms of reference: Agreement between Egypt and the Sudan (i) To consider and agree on the general scope of the project and on the leading features of the design of the proposed works. (ii) To consider and agree on the technical and financial arrangements necessary for the execution and operation of the project inthe joint interests of Egypt and the Sudan. (iii) To embody those arrangements in an agreement to be ratified by the Egyptian Governmentand the Government of the Sudan.

Agreement Between Egypt and the Sudan jointly and Abyssinia.(iv) To consider and propose the terms to be offered to the Abyssinian Government in return for the concession to carry out and operate the works necessary to enable Lake Tsana to be used as a reservoir. (v) To embody these proposals in the form of instructions to the delegates who will negotiate with Abyssinia. These terms were submitted to Sudan, whoapproved them.

Lake Tsana Reservoir Project Agreement Between Egypt and Sudan –1935

The Egypt and Sudan considered the report of White at a preliminary conference at Cairo on May 11 1935. At that Conference agreement was reached upon (1) the general scope of the project and the leading features of the design of the proposed works; and (2) the technical and financial arrangements necessary for its execution and operation in the joint interests of Egypt and the Sudan. Accordingly, on May 20 1935, Egypt and the Sudan signified their intention of constructing and operatingsuitable control works at joint cost and for their joint benefit, if the territorial Power (Ethiopia) gave its consent thereto. The designs of the White Corporation for the work, as contained in their report of 1935, were accepted as generally satisfactory. The main purposeof the agreement was to set out the terms of the understanding between Egypt and Sudan for construction and operation of a storage reservoir at Lake Tsana in Ethiopia and sharing of the benefits. The agreement was subject to the "permission of the Ethiopian Government." Cost of construction and operation and benefits were to be shared jointly by Egypt and Sudan. Sudan's initial contribution was to be ten percent or at Sudan's option a reduced percentage but no less than £200,000 towards construction and £4,000 per year for operation. Sudan was also given the option to participate in a greater amount on giving Egypt two years notice before completion of the dam. The Sudan also had the optionto increase the share up to a maximum of fifty percent of the net benefitsin incremental percentages of five percent each year commencing five years following completion of the dam after an initial maximum of twenty five percent upon completion of the dam.

The other provisions relate to payment schedules for Sudan's share of theconstruction costs, coordination of the Tsana reservoir with the Sennar Dam and Egypt's rights to propose modifications to maximize benefits to Egypt so long as Sudan's interests were not adversely affected. The Tsanareservoir was a further step in realizing Egypt's Century Scheme and Egypt's prominent role in the Blue Nile Sub-basin. Sudan was willing to allow Egypt to make the initial investment subject to the right to equally share in the benefits when its financial circumstances improved.

The Emperor was anxious to come to an agreement with Britain, Egypt and the Sudan concerning the construction of the reservoir, feeling thatsuch an agreement would strengthen his hands against Italy who was massing troops on the Ethiopian borders. At the end of May, Mr. Collier,Governor of the Bank of Ethiopia, was sent to London with a message from the Emperor to press the British for a conference. However, Britain

felt that a conference held in Addis Ababa while Italo-Ethiopian tension was high carried the risk of provoking Italy. According to the British, theItalians had been deeply suspicious of general British policy in Ethiopia, and a conference might tempt them to decide on war.

Therefore, in reply to the Ethiopian invitation, Egypt and Sudan replied that they would be unable to complete the necessary preliminaries in timefor June 1. The next step would have been a conference with the EthiopianGovernment but owing to the Italo-Ethiopian dispute and British political considerations, the Addis Ababa conference was never held.

Anglo-Egyptian-Italian Exchange of Notes – 1938

The February 1933 Lake Tsana Reservoir negotiations at Addis Ababa ledto a revival of interest and suspicions in the question on the part of the Italian Government. The Italian Government felt in view of the Tripartite Agreement of 1906 and of the Anglo-Italian agreement of 1925, they expected to be informed of developments. Italy felt it "should not be leftout or be prevented from contributing in the examination of schemes connected with the building of the dam at Lake Tsana or with any other work whose undertaking should be considered in the [Italian sphere of influence]."

In 1934, the Italian Government expressed further suspicion that the British Government had motives other than economic ones in their treatment of the Tsana reservoir question and protested that the question should not be settled without regard for Italian interests. On July 4 1935, upon learning that the Cairo conference had taken place, Italy again protested that respect for Italy's rights under the Tripartite Treaty of 1906and the Anglo-Italian Exchange of Notes of 1925 could only be ensured byItaly's participation. Italy had interests to protect "not less important thanthose of the Sudan and Egyptian Governments."

On October 22, 1935, Britain expressed that Italian interest in the Tsanaproject were inconsistent with understandings of December 20, 1925, bywhich the Italian Government "recognize the prior hydraulic rights of Egypt and the Sudan," which the British Government were bound to protect. On February 20, 1936, the Italian Government reasserted the right to participate in the examination of the White Corporation's report. Italy claimed it had "ample and clear proof that Great Britain had recognized the economic and territorial rights of Italy on the Eritrean andSomali hinterland and on the western Ethiopian territories."

During this same period, Italy commenced hostilities against Ethiopia while concurrently assuring the British Government that Italy harbored nodesigns against British interests in Ethiopia. On August 28, the Italian Government issued a statement, which, as reproduced in the press, included an assurance, that Britain had nothing to fear from the policy, which Italy would adopt in regard to Ethiopia. Italian policy would not threaten British Imperial interests either directly or indirectly. A month later, on September 28 (the eve of formal hostilities against Ethiopia), theItalian Cabinet issued a statement of policy, which included a declaration that Italian policy had no aim, either immediate or remote, which might injure British interests.

As the spring of 1936 approached, the Italian forces in Ethiopia drew nearer to Lake Tsana prompting the British Government to send a “sharp note to Italy.” The Italian Government, on April 3 renewed assurance thatthe Italians were more than ever conscious of their obligations towards the British Government and had no intention of overlooking or repudiatingthem. At about this time Egypt evinced nervousness with regard to the Italian advance upon Lake Tsana and sought British assurances for safeguarding this source of the Nile, in which Egypt and the Sudan were “vitally interested.”

The Egyptian Prime Minister even suggested that British troops might besent to occupy the Lake Tsana area. The British assured the Egyptian Prime Minister of the linkage of Egypt with British rights in Lake Tsana under the Tripartite Treaty of 1906 and the Anglo-Italian exchange of notes of 1925. At the same time, the Italian Government assured Egyptthat the rights of Egypt in Lake Tsana would be fully respected, and on April 8 issued to the Egyptian Government the following written statement:

During a visit that he paid to His Excellency the President of the Council,the Minister of Italy has informed His Excellency that the Italian Government desires to continue in the future its policy of peace and cordial collaboration and sincere friendship with Egypt and to respect theEgyptian interests; and intends to adhere to the same line of conduct concerning the question of the waters of Lake Tsana and the Blue Nile River.

On May 6, the British were advised that Italy would respect, inter alia, British rights in the Lake Tsana region, but that (the capital city Addis Ababa had then just been occupied by the Italian forces) Ethiopia was tobe regarded as Italian Territory.

In November 1936, the Italian Government informed the British Ambassador in Rome that Italy would give the British every possible assurance regarding the safeguarding of British interests in the lake. The general position of the British Government was that they would not bargain about Ethiopia. However, it would be useful if the Italian Government could find occasion to renew the assurances confirming British rights and interests in Ethiopia as specified in the treaty of 1906 and the exchange of notes of 1925.

The British Government decided not to press the Italian Government for an assurance specifically referring to those two instruments; they would be glad, however, if the assurance given on April 3, 1936 could be renewed. Italy confirmed the assurances given on April 3 to the British. The British also reminded Italy that there were interests in Ethiopia, such as Lake Tsana, which Egypt and Sudan shared with the British; and that those two Governments would have to be associated with British interests.By April of 1938, the British Government abandoned the argument that Italy had violated the Treaty obligations not to occupy Ethiopia and recognized the Italian annexation to protect British interests in Lake Tsana. On April 1, 1937, Sir Anthony Eden, the then British Foreign Secretary reasoned:

The rights of the United Kingdom in this matter rest upon the Anglo- Ethiopian Treaty of the 15th May, 1902, articles 1 and 4 of the TripartiteTreaty of the 13th December, 1906, and the Anglo-Italian Exchange of Notes of the 14th/20th December, 1925. Everything, however, which is material in the first two has been incorporated and expanded in the thirdof these instruments …

The rights referred to … are as follows: (a) Italy must not allow any work to be constructed on the headwaters of the Blue or White Niles or their tributaries or affluents which might sensibly modify their flow into the main river, but, subject to that proviso, a reasonable use of the waters in question by the inhabitants of the region may be permitted, even to the extent of the construction of dams for hydro-electric power or of small reservoirs in minor affluents with a view to the storage of water for domestic purposes or the cultivation of food crops necessary for the subsistence of the local inhabitants. (b) His Majesty's Government have the right to obtain the construction of a barrage at Lake Tsana and a motor road for the passage of stores, &c., from the barrage to the Sudan frontier, subject only (i) to an obligation to employ, so far as possible, locally recruited labor in the construction and operation of the barrage, and (ii) to the proviso that the barrage must not raise the level of the waters in the lake beyond the maximum hitherto attained during the rainyseason. His Majesty's Government are entitled to obtain a concession for the construction of this barrage and its operation by themselves or by persons appointed by them …

In this event it may be desirable that the Egyptian Government should beassociated with His Majesty’s Government in their action, or at any rate that Italian assurances on the subject should be given to the Egyptian Government as well as to His Majesty's Government.

By a declaration of April 16 1938, which they agreed should apply equallyto the Egyptian Government; the Italian Government reaffirmed previousassurances:

The Italian Government confirm to the Government of the United Kingdomthe assurances given by them to the Government of the United Kingdom on the 3rd April, 1936, and reiterated by the Italian Minister for Foreign Affairs to His Majesty’s Ambassador at Rome on the 31st December, 1936,to the effect that the Italian Government were fully conscious of their obligations towards the Government of the United Kingdom in the matter of Lake Tsana and had no intention of whatever of overlooking or repudiating them.

Further … the assurances given … in the above Declaration concerningLake Tsana shall apply equally to the Egyptian Government.

The British and the Egyptian Governments signed the agreements giving recognition that “[t]he territories and peoples which belonged to the Empire of Ethiopia are placed under the full and entire sovereignty of theKingdom of Italy as announced in the Italian Decree.” In so doing, Egypt,Sudan, and Britain acknowledged the Decree abolishing the Empire of Ethiopia and establishing the new territory of Italian East Africa (consisting of Eritrea, Somaliland, and Ethiopia).

The Lake Tsana reservoir project was postponed due to British preoccupation in World War II and Italy's inability to effectively governEthiopia, and the Lake Tsana region in particular, as a result of the Ethiopian insurgency.

Following the restoration of the Ethiopian Government in 1941, the Emperor, in view of experience, was no longer receptive to renewed British efforts and scheming for a Tsana Reservoir Project. (Text ends)

NILE: Blue Nile Sub-basin Legal Regime in Historical Context: ColonialTreaties'

Research Article By Yosef Yacob, AB, JD, LLM, PHD(Part IV) Updated

Nile Waters Agreement between Egypt United Kingdom – 1929

After the defeat of the Mahdi by Kitchener at Omdurman in 1898 and there-establishment of order in the Sudan, a demand arose in the Sudan forthe erection of pumps for irrigation on a small scale. With the approval ofthe Egyptian Government, certain areas of land were given pumping rights. The area under permit was increased from time to time, some pumps being installed to test the possibilities of cotton growing, and others for the purpose of producing food grains at a time of scarcity during the war.

1. Colonial Treaties

The area under irrigation in this way was inconsiderable, amounting to less than 40,000 feddans (41,520 acres) of which rather more than half was licensed for perennial irrigation, the remainder being restricted to theflood season. An area of some 80,000 feddans in the Northern Sudan hadbeen formed into basins, but, owing to the high levels of the land, they were only partly filled, even in years of high flood.

The only considerable area suitable for canal irrigation was the triangulartract between the Blue and White Niles with its apex at Khartoum and extending as far south as the Sennar-Kosti Railway. In 1913 a scheme was prepared for the irrigation of 100,000 feddans for the production of cotton, to provide the raw materials for the British textile mills in Lancashire. Irrigation was to be by means of a canal fed from the naturalflow of the Blue Nile, the required levels of the river to be raised by a diversion barrage at Makwar. It was then believed that such a scheme would permit irrigation of the cotton crop without detriment to Egyptian interests. However, further consideration of agricultural conditions and the exceptionally low river of1913-14, demonstrated that the scheme should comprise a storage reservoir (Sennar Dam) rather than a diversion barrage.

With the addition of a storage reservoir, the water saved from the natural flow during the flood season could increase irrigation to 300,000 feddans without the need for taking water from the river at low stage. It was felt that such an increase in area was necessary to offset the extra cost of thedam. Simultaneously, the Egyptian Government was considering the construction of a dam on the White Nile at Gebel-Aulia, near Khartoum, for the dual purpose of controlling high floods, which threatened damage to Egypt, and of storing water for use during the summer season in Egypt.

The British proposal to expand irrigation in Sudan and the entry of an upper riparian, the Sudan (a British Colony therefore Britain), as a majoruser of the Nile waters greatly alarmed the Egyptian authorities who commissioned the Egyptian Nile Control Department to conduct a surveyof the effects of this proposed expansion on Egypt.

The survey concluded that the water requirements of both Egypt and theSudan could be satisfied and was embodied in a Report by Sir Murdoch McDonald, a British engineer. The Egyptian Government appointed a Commission (The 1914 Commission) to study the proposed schemes andto examine the results of the McDonald survey.

The Commission confirmed the survey findings and recommended the construction of the Sennar Dam on the Blue Nile and the Gebel-Aulia on the White Nile, both on Sudanese territory. However, the development plans for the Sennar Dam to begin perennial irrigation in the Gezira Scheme in the Sudan stirred sharp criticism in Egypt. Sir McDonald, the author of the survey and Sennar project for Sudan was accused of forgingrecords of Nile River measurements to further British interests in the Sudan.

To quiet the uproar a new commission, The Foreign Office Commission of1919, was constituted to study the dispute and subsequently reported that there was no justification for the statement that the Sennar project put forward by the British Government would injure Egypt. The report of the 1919 Commission also noted that the origin of water from particular control works is not the significant issue but rather the total amount of water available to Egypt.

The Commission further noted that Egypt's established irrigation rights should not be permitted to hinder future development of Sudan so long asthe amount of water available to Egypt was not reduced. Because of Egypt's unwillingness to accept the recommendations, another commission, the Nile Commission of 1920, was established by a decision of the Egyptian cabinet and charged to conduct a further study.

The 1920 Commission also endorsed the proposals to build the Sennar Dam and to expand the Gezira scheme. The Commission concluded that Egypt had a right to "a supply of water sufficient to irrigate an area equal to the largest area which has been irrigated in any single year since the Aswan Dam in its present form was completed. Further, Egypt had an established claim to receive this water at the particular seasons when it isrequired." The Commission added that the largest area, which Egypt couldthus claim, would be 5 million feddans, which was the area under cultivation in 1916-1917.

The conclusions of the Commission met with great resistance in Egypt andthe Egyptian Government therefore shelved the report. This did not pleasethe British. In the wake of the Egyptian-Sudanese crisis precipitated by the assassination of the British Governor of the Sudan in Cairo in May 1924, the British High Commissioner in Egypt revived old fears.

The British High Commissioner threatened to go ahead with the plans to expand the areas of cotton cultivation in the Gezira scheme in the Sudan"to an unlimited figure as need may arise." Alternatively, he demanded

the Egyptian Government agree to the appointment of an impartial international commission to look into the matter of the apportionment ofthe waters of the Nile.

In this general atmosphere of alarm and anxiety, the Nile Commission of 1925 was constituted by an exchange of notes between Britain and Egypt on January 26, 1925 for the purpose of examining and proposing the basison which irrigation (in the Sudan) can be carried out with full consideration of the interests of Egypt and without detriment to her natural and historic rights."

The Commission acknowledged the right of the Sudan to agricultural expansion but stipulated that any increase in the use of the Nile waters in the Sudan should not "infringe Egypt's natural and historical rights in the waters of the Nile." It apportioned the waters so that Egypt and the Sudanwould receive enough water to irrigate the lands under cultivation at the time of the Agreement; this was estimated to be 48 billion m^3 for Egypt and 4 billion m^3 for the Sudan. The Nile Waters Commission of 1925 recommended a set of proposals and principles that, after much negotiation, political maneuvering and even violence, became the basis forthe 1929 Nile Waters Agreement between Egypt and Britain.

The 1929 agreement preserved Egypt's traditional uses and introduced the notion that Egypt was the primary Nile riparian. It granted Egypt "a virtual right of veto on developments in the Sudan and in other upper basin territories." The most often cited clause of the agreement reads: Save with the previous agreement of the Egyptian Government no irrigation or power works or measures are to be constructed or taken on the River Nile or its branches, or on the lakes from which it flows so far asall these are in the Sudan or in countries under British administration, which would, in such a manner as to entail prejudice to the interests of Egypt, either reduce the quantities of water arriving in Egypt, or modify the date of its arrival, or lower its level.

Egypt had the right to 48 billion m^3 of water annually and Sudan's yearly rights were increased from 1.5 billion m^3 to 4 billion m^3. The disparity wasapparent, yet the agreement temporarily satisfied both parties and put an end to years of political discord and negotiation on the matter.

Despite the imbalance in entitlements for the parties, the agreement did not completely deny upper basin states the right to develop their portionsof the Nile. The agreement specifically allowed such a future right for Sudan. It specifically noted that, in order to develop, Sudan would requiremore water than it was currently using.

Egypt's policy was to encourage such development, as long as the increase did "not infringe Egypt's natural and historic rights in the waters of the Nile...." With the sealing of these agreements the cotton plantationsof Sudan, which supplied the British textile industry in Lancashire were assured of their water supply.

The Gebel-Aulia Compensation Agreement of 1932: The construction of the Gebel-Aulia Dam in the Sudan for the storage of Nile Waters for Egyptwas the subject of the earlier agreement of 1929 between Egypt and the Sudan. This agreement was therefore a supplemental agreement to

provide details of implementation of the dam. Egypt was obliged to negotiate with the Sudan on measures for safeguarding the “local interests” before undertaking the construction of the Gebel-Aulia Dam inthe Sudan.

Under the terms of the agreement, Egypt was to provide compensation fordamages to local interests, which would be adversely affected by the construction. The dam would submerge an estimated 17,000 to 107,000 feddans of cultivated and/or cultivable lands increase the menace of malaria and other waterborne disease and displace the local inhabitants and submerge their homes, property and their farms. The Egyptian Government therefore agreed to pay compensation and provide for alternative schemes for the displaced population.

Egypt also agreed to allow the local inhabitants to draw Nile waters with pump schemes to irrigate 23,000 feddans during the low flood seasons. Toallow local inhabitants to adjust to the new way of life the reservoir was tocome into full operation over a six-year period. The agreement further provided for the level to which the White Nile could be raised behind the dam with additional provisions to allow the Egyptian Government to raise the level to increase the reservoir, subject to an agreement with Britain and measures to safeguard local interests. Part 5 of the article will discussthe Lake Tsana Reservoir Project Negotiations and Egyptian and British sabotage of Ethiopia’s efforts to build the first dam in the country as well as facilitating Ethiopia’s invasion by fascist Italy)

NILE POLITICS: Egypt minister denounces Ethiopia's 'obstinacy' on dam’ MENA AHRAM ONLINE: (March 3, 2014) The Renaissance Dam has been asource of concern for the Egyptian government, with anxiety high that it would negatively affect Egypt's share of Nile water Egypt's Irrigation Minister Mahmoud Abdel-Muttalib denounced on Monday what he described as Ethiopia's obstinacy towards building its Grand Renaissance Dam, MENA reported.

Ethiopia's project is a $4.2 billion hydroelectric dam on the Blue Nile, one of the main tributaries of the Nile. It is a source of concern to Egypt, sinceit is still undetermined how it will affect Egypt's Nile water share, the country's main source of potable water. In talks last January between Egypt, Ethiopia and Sudan, negotiations hit a dead-end, with MENA reporting that Ethiopia refused to discuss the terms of "confidence- building measures," which Egyptian officials say must be changed in orderto avoid reduction of Egypt's Nile river water share.

Abdel-Muttalib, who retained his position in Egypt's new interim cabinetsaid Egypt's Nile water share is a "red line" that Egypt won't allow to becrossed. He reiterated that the country encourages development in Ethiopia, without harming Egypt's water rights.

On Saturday, a spokesman of the government-owned Ethiopian Electric Power Corporation reportedly said some 32 percent of construction of theEthiopian Grand Renaissance Dam has been completed, with efforts intensifying to complete the rest. Spokesman Misekir Negash said construction of the dam has been ongoing "day and night," adding that the dam has so far employed 7,000 people.

Ethiopian dam's ecological and human fallout could echo Aral Sea disaster
–study’

(March 5, 2014) Study suggests irrigation projects linked to Gibe III dam could devastate Lake Turkana's fisheries and affect livelihoods Africa's fourth-largest lake could drop by 20 metres, causing an ecological and human disaster to rival the shrinking of the Aral Sea in central Asia, if Ethiopia goes ahead with massive irrigation projects linked to a giant dam,according to a university paper.

Lake Turkana, located almost entirely in Kenya but fed by the river Omo, which rises in Ethiopia, will be severely impacted by the 243 metre-high Gibe III dam, which is due to be completed this year, says the study, published by the University of Oxford's African Studies Centre. It suggestswater levels could drop by half, devastating the lake's fisheries and affecting the livelihoods of 170,000 agro-pastoralists.

"Ultimately, the 6,400 sq km lake could reduce to two small lakes. The picture that emerges from these predictions bears a striking resemblanceto the recent disastrous history of the Aral Sea, which was once the world's fourth-largest inland water body," said Sean Avery, a Nairobi- based hydrologist who studied the impact of the dam project for the African Development Bank.

NILE POLITICS: Israel offers to mediate Ethiopia-Egypt on Nile dam row' DIARIES (March 07, 2014) – Israeli Agriculture Minister Yair Shamir has voiced Israel`s readiness to assist Egypt and Ethiopia reach agreement over the latter`s construction of a multibillion-dollar hydroelectric dam onthe Nile River.

According to Ethiopia`s state-run news agency, Shamir made the remarks at a Thursday meeting in Addis Ababa with Ethiopian Prime Minister Hailemariam Dessalegn. The agency did not specify how Israel intends to assist both countries in ironing out their differences overthe dam.

Relations between Ethiopia and Egypt soured last year over construction of Ethiopia`s Grand Renaissance Dam on the upper reaches of the Nile – Egypt`s main source of water. The controversial project raised alarm bellsin Egypt, the Arab world`s most populous country, which fears a reductionof its traditional share of Nile water.

Water distribution among Nile Basin states has long been based on a colonial-era agreement granting Egypt and Sudan the lion`s share of theriver`s water. Addis Ababa insists the new dam will benefit downstream states Sudan and Egypt, both of which will be invited to purchase electricity thus generated.

Ethiopia`s Foreign Ministry, for one, welcomed Israel`s offer. “Any country like Israel may raise such idea and Ethiopia appreciates this,” Jemal Beker, director of Middle East affairs at the ministry, told Anadolu Agency. He said Ethiopia was ready to negotiate a “win-win solution” withEgypt based on the framework of a tripartite dialogue initiative that also includes Sudan and an international panel of experts.

“There`s a technicalnegotiation underway,” Beker said. “It has no political nature.”

“Egypt withdrew from the tripartite negotiation,” said the diplomat. “ButEthiopia believes Egypt will be back and negotiations will continue.” The

state news agency quoted the dam`s chief engineer, Simegnew Bekele, assaying that a full one third of the project had been completed. Bekele added that the project`s total workforce would be raised from 7500 to 13,000 in the months ahead. (Text ends)

NILE POLITICS- Ethiopia: Is Egypt Securing Diplomatic Success OverEthiopia?

The Reporter Commentary By Neamin Ashenafi, March 8, 2014

The Blue Nile accounts for 85 percent of the Nile's water flow. It joins the White Nile, whose headwaters lie in the East African highlands of Burundi. Ethiopians consider the Grand Ethiopian Renaissance Dam (GERD) and theother dams the government of Ethiopia plans to build a symbol of nationalpride as they will produce electricity that will transform the economic prospects not only for their country but for much of seriously under- developed East Africa.

In talks last January between Egypt, Ethiopia and Sudan, negotiations hita dead-end, with MENA reporting that Ethiopia refused to discuss the terms of "confidence-building measures," which Egyptian officials say must be changed in order to avoid reduction of Egypt's Nile river water share.

Egypt, with its 84 million people totally dependent on the Nile for water, cites British colonial agreements in 1929 and 1959 that guarantee it the lion's share of the water and a veto over upstream dam construction. ButEthiopia, along with Tanzania, Rwanda, Kenya and five other African states with growing populations and mounting demands on agriculture dismiss these accords as colonial relics.

Egypt, Ethiopia and Sudan formed a tripartite technical committee to study the possible effects of the dam and try to generate consensus. Ethiopia maintains that Egypt's water share will not be negatively affected by the successful completion of the project.

Ethiopia has called for Cairo's collaboration in negotiations and claims thatthe dam will have no adverse effect on Egypt. It would, in fact, decrease evaporation and improve water flow. Ethiopia hopes that the ambitious hydroelectric project, scheduled to be completed in 2017, will throw the country out of poverty. Eighty five percent of the Nile's source is in Ethiopia and the country feels it also has the right to use the water for its economic needs. Facing water shortages amid a growing population, Egypthas actually been asking to increase its share of the Nile waters to 95 percent.

Ethiopia went ahead and put the Entebbe Agreement into effect unilaterally by commencing the construction of a series of dams on the Blue Nile. Unfortunately, Egypt did not raise any objections at the time, which gave Ethiopia tacit encouragement to proceed with the constructionof the mega dam on the Blue Nile. It is noteworthy that Ethiopia laid the cornerstone for this project, which has a reservoir capacity of 11 billion cubic meters a year, on April 2nd, 2011, which is to say around two months after Egypt's January 25th Revolution. After the inauguration of the project, the government of Egypt has strived to halt the project or at least to decrease its size and the amount it carries. In this effect, Egypt

has started a new diplomatic campaign across the globe and is trying tohinder the project.
Apart from this attempt and international diplomatic campaign, the seniorofficials of Egypt recently are claiming that they are securing diplomatic success over Ethiopia in relation to the dam, by conducting discussions with leaders of various African and European countries. In that regard they proclaim that they are recording victory over Ethiopia in the area of diplomacy concerning the dam.
Eventually, many started to question what diplomatic success is. How it can be measured, whether it is successful or not, what the government ofEthiopia has done so far to avert the Egyptian claim of diplomatic successover the dam and so on. Is Egypt Securing Diplomatic Success over Ethiopia?
The Egyptian government is campaigning to educate other governments concerning the harm that the Grand Ethiopian Renaissance Dam will inflicton Egypt. Egypt may be in the middle of a political turmoil but the government has begun a diplomatic offensive aimed at stopping Ethiopia from building a huge hydroelectric dam on the Nile River that Cairo says will be a disaster for the nation.
Egypt's Irrigation Minister Mahmoud Abdel-Muttalib denounced what he described as Ethiopia's inflexibility towards building its dam, MENA reported. Abdel-Muttalib said Egypt's Nile water share is a "red line" thatEgypt won't allow to be crossed.
The Egyptian government has begun to take serious, overt measures toward internationalizing the Renaissance Dam. It is doing so through protracted negotiations taking place behind closed doors among the Supreme Committee for the Nile Waters, which includes representatives from all parties affected by issues of concern to the Nile River Basin. It iscomposed of staff from the Foreign Ministry as well as the Ministries of Water Resources and Irrigation, International Assistance, Defense and Electricity, and the Egyptian intelligence services.
The military-backed administration began its efforts to internationalize thethorny issue in hopes of gathering support for its case against Ethiopia, where the Blue Nile rises in the northwestern highlands, after bilateral negotiations deadlocked in January.
"The campaign initiated by Egypt aims to persuade the international community to reject the dam's construction because it may lead to furtherconflict and instability in the region of the Nile Basin," an Egyptian diplomatic source in Cairo told the Middle East's al-Monitor website on February19.
"More negotiations with Ethiopia only waste time and directly threatenEgypt's water security," said the source who declined to be named because of the sensitivity of the issue.
"We realized that Ethiopia doesn't want genuine solutions to end the crisisbut is only trying to portray Egypt as approving of the dam's construction to facilitate access to the funding.
Gamal Bayouni, Secretary-General of the Egyptian-European partnership at the Ministry of International Cooperation in Cairo, said Egypt now seeks

to "target all countries that provide technical assistance for designing andbuilding the dam through private contractors and also the states likely to fund to construction of the dam." These Egyptian moves toward international escalation are proceeding on two levels, in keeping with an agreement concluded by the Supreme Committee for the Nile Waters, according to a government source who spoke to Al-Monitor. The source stressed that, in fact, first-level steps began with the visit of Muttalib, along with Minister of Foreign Affairs Nabil Fahmy, to Italy, whichis believed to be Ethiopia's principal technical supporter in building the dam. The Italian contracting company Salini Costruttori has already conducted several studies and begun construction at the dam site. All of these visits seek to clarify the harm that Egypt will incur if the dam is completed according to its current specifications, aiming to win support from these countries for Egypt's position as well as bringing pressure to bear on the Ethiopian side. The Egyptian government has already begun to internationalize the issue through a campaign to define the dangers of the Ethiopian dam in the international community, and to work to halt its foreign financing. Italy
On February. 6, Egypt's minister of water resources and irrigation, Mohamed Abdul Muttalib, visited Italy, considered to be Ethiopia's maintechnical supporter in building the dam.
Italy's Salini is building the 6,000-megawatt facility on the Blue Nile, the main tributary of the Nile that flows northward through nine African statesto the Mediterranean. Muttalib, who was accompanied by Egyptian ForeignMinister Nabil Fahmy, said after a series of meetings that "the visit has achieved its goal. Italy has understood Egyptian concerns."
However the outgoing Italian ambassador to Ethiopia told The Reporter that the recent visit of Egyptian senior delegation is not only about the Nile, he said it covers many bilateral issues he also pointed out that theEgyptian minister's concerns concerning the dam as they are doing not only in Italy, but also in other countries perhaps in the European Union.Muttalib stressed that his visit to Italy had achieved its goals and will berepeated in many other countries and places.
The mission of this and subsequent trips is to provide greater clarity on Egypt's water position, the challenges that Egypt is confronting with regard to the scarcity of water resources and the efforts that the Ministry of Water Resources and Irrigation is making in this area. Muttalib noted that during the visit, he had explained the water resources situation and the reality of water scarcity in Egypt to Italian experts and officials. Thosepresent expressed a keen interest in information concerning water resources and stressed that they were hearing it for the first time. ThoughMuttalib heralded about diplomatic successes over the dam Lapo Pistelli, Italian deputy minister of foreign affairs in an interview with The Reporter before a month ago said "We hope that hydro-power energy should be thefuture source of shared benefits in this region".
Tanzania: It was reported in different Cairo-based media outlets that Tanzanian President Jakaya Kikwete said the Nile Basin countries shouldconsult and decide on a mutual agreeable arrangement prior to the

construction of any dams that impact several countries, stated EgyptianForeign Minister Nabil Fahmy. Fahmy met Kikwete to address several impo rtant issues; among them was the crisis over the Great Ethiopian Renaissance Dam that Ethiopia isbuilding.Interim President Adly Mansour sent a written message with Fahmy to the Tanzanian president focused on strengthening bilateral tiesbetween Egypt and Tanzania in different fields.

According to Tadesse Kassa (Ph.D.) Dean of College of Law and Governance Studies of Addis Ababa University, the statement that the Egyptian media and the minister made are only presented on Egyptian media and there was no other proof that Kikwete said there should be prior notification. However, Tadesse said though the issue of prior notification is one of the principles of international law its practicality isnot clear, and has so many loopholes like why, how and so on.

Foreign ministry spokesperson Badr Abdel Ati told Ahram online that the reaction of the Tanzanian president on the issue of the Renaissance Dam was "positive." Though the Egyptian media and officials claimed the diplomatic success over Ethiopia over the issue of the dam, according to Dereje Zeleke (Ph.D.) a lecturer at Addis Ababa University, diplomatic success is not measured by tour and table discussion. Such a claim mightcome from not understanding the ABCs of diplomatic relations.

What is Ethiopia Doing? In relation to the issue of Egypt's new diplomatic activity, Ambassador Dina Mufti spokesperson of the Ministry of Foreign Affairs told The Reporter that "the Ethiopian government is doing its job, our embassies all over the world are working in explaining that the dam did not cause any harm over lower riparian states, but it is not appropriateto do things as the Egyptian are doing."

According to the ambassador, Ethiopia pursues according to her own principles and beliefs not measured by the Egypt's activity he also said that the Egyptian government's statement is a day dream that doesn't hold a water. Ethiopian Prime Minister Hailemariam Desalegn said on Feb.13 that Addis Ababa would not back down on the USD 4.8 billion GERD, which will be the largest in Africa.

On January 8, Ethiopia turned down Egypt's demand to suspend construction of its mega-dam on the Nile, further escalating tensions between the two states. According to Dina, the Ethiopian side believes that the Egyptian bid to internationalize the issue of the GERD will not bring about any result so long as there is no serious intention to submit the matter to the International Criminal Court. The Ethiopian Foreign Ministry's website reported that the prime minister remarked, "There is nointernational court responsible for investigation or arbitrating in issues of water... and that is why the Egyptian move to internationalize won't have any effect." Generally, Ethiopia claims the project is on course and dismisses facing any technical hurdles.

What should be Ethiopia's next step? According to Tadesse, to overcome Egypt's claim of diplomatic successes, the government should do two major things, aggressively take a counter measure for Egypt's propagandaand equal diplomatic campaign to counter their propaganda.

He also stressed that the Ethiopian way of diplomacy is different in practical terms, factual acts on the ground, particularly the issue of development should be given priority over oral diplomatic campaign. Amidall these ups and downs it is not clear at this stage whether Egypt's diplomatic offensive will be able to secure enough international support toinfluence Ethiopia.

Ethiopia is bolstered by the 2010 Entebbe Agreement and the "majority" of six countries that signed it. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream countries, was rejected outright by both Egypt and Sudan. Touted as "an African solution for an African problem," the agreement calls for the creation of acommission to oversee development projects on the Nile. It needed ratification by the legislatures of each of the signatory countries. But its implementation is in limbo until another Nile Basin countries for example,the Democratic Republic of the Congo, which is now sitting on the fence, join. Ethiopia summoned the sufficient determination to shed all these tiresomehistorical obligations. Ethiopia was spearheading the Nile Basin countries initiative and lobbying other countries to back a new legal framework thatwould put paid to the principles of all previous Nile water agreements. Theproduct was the Entebbe Agreement, which was signed by most upper riparian countries in 2010, but which Egypt strenuously opposed. Many scholars of the area believe the major thing that Ethiopia should do is strengthen its internal solidarity because according to Yacob Arsano (Ph.D.) it is good to be prudent about the issue and there should also be strengthening if there is a frail place. According to Tadesse, to counter theEgyptians' activity the national political system should be more accommodating, all embracing development and a national consensus should also be there. (Text ends)

NILE: ETHIOPIA/EGYPT- Our Response on Nile will be Decisive – EgyptianFM'

EGYPT INDEPENDENT – Foreign Minister Nabil Fahmy gave Ethiopia the harshest Egyptian warning to Ethiopia in relation to the dispute over Adis Ababa’s dam on the Nile River. In an interview with Tahrir satellite channel late Friday, Fahmy waved “a decisive response” concerning its Renaissance Dam, which Cairo fears would affect its shares of river waters. Fahmy stressed on Egypt’s right to “defend its national security.” Fahmy said that he spoke with his US and Russian counterparts during a conference on Libya in Rome two days earlier, and told them that “Adis Ababa should respect international laws which ensure the Egyptian peoplethe right to defend their national security against any dangers.”

Egypt will proceed through the negotiation track, the minister added. He wared, however, that if negotiations fail to bring about a solution that guarantees Egypt’s water security, “Adis Ababa should bear the consequences of that crisis,” adding that “the response will be decisive and at the time determined by the Egyptian people.” Ethiopia’s state newsagency had quoted an unnamed state diplomat as saying that Israel,

which enjoys diplomatic relations with both nations, is keen on hashing out a solution for the crisis, a desire expressed during a recent meeting byIsrael's irrigation minister Yair Shamir with Ethiopian PM Hailemariam Desalegn

NILE Troubled Waters: Is Water wars on the Nile on the table?

Egypt and Ethiopia are at loggerheads over a plan to dam the Nile River FP (March 9, 2014) Cairo worries that the megaproject, which began construction in 2011 and is scheduled to be finished by 2017, could chokethe downstream flow of the Nile River right at a time when it expects its needs for fresh water to increase. Brandishing a pair of colonial-era treaties, Egypt argues that the Nile's waters largely belong to it and that ithas veto power over dams and other upstream projects.

Ethiopia, for its part, sees a chance to finally take advantage of the world's longest river, and says that the 6,000 megawatts of electricity thedam will produce will be a key spur to maintaining Africa's highest economic growth rate and for growth in energy-starved neighbors. The hydroelectric plant will provide triple the amount of electricity generating capacity in all of Ethiopia today. But the spat threatens to poison relationsbetween two of Africa's biggest countries.

"The construction of [the dam] could propel a new era of regional cooperation, but past history suggests it will more likely result in continued sniping between Egypt and Ethiopia," David Shinn, a former U.S. ambassador to Ethiopia, told Foreign Policy.

The dispute has heated up again, after a fresh effort to iron out the differences at the negotiating table collapsed. Egypt has sought to get theUnited Nations to intervene, and reportedly asked Ethiopia to halt construction on the dam until the two sides can work out an agreement, which Ethiopian officials rebuffed.

"The upper riparian states have the right to use the Nile for their development as far as it doesn't cause any significant harm on the lower riparian countries, and that is why Ethiopia is building the Grand EthiopianRenaissance Dam," Ethiopian Foreign Ministry spokesperson Dina Mufti told reporters in late February.

A former Egyptian irrigation minister said March 5th that Egypt is doing too little to forestall the dam, and highlighted the risks to the country's water supply. Italy's ambassador to Egypt has reportedly offered Italian help in mediating the showdown; an Italian firm is constructing the dam.The dam has been a glimmer in Ethiopia's eye since U.S. scientists surveyed the site in the 1950s. A lack of cash and Egypt's strength forestalled any development — but that appears to have changed in the wake of the Arab Spring and Egypt's three years of domestic political upheaval.

For most of the twentieth century, Egypt and Sudan divvied up the Nile'swater between them. A 1929 treaty with British African colonial possessions gave Egypt the right to more than half the river's flow; a 1959 treaty upped Egypt's share to about 66%. The rest was allocated toSudan – while Ethiopia, whose highlands are the fount of most of the Nile's waters, was excluded from discussions.

“It is only Egypt and the Republic of Sudan that consider the 1929 and 1959 agreements as legally binding on all the Nile River riparian states,” John Mbaku of the Brookings Institute Africa Growth Initiative, told FP. “The Ethiopians may have undertaken what appears to be unilateral actionbecause of Cairo’s unwillingness to join other riparian states in renegotiating” those accords, he said.

Ethiopia began pushing back seriously after concluding its own waterrights deal with other upstream nations, such as Kenya, Uganda,

and Tanzania, in 2010. The protests in Egypt, the collapse of the Mubarak regime, and Egypt’s three years of domestic turmoil provided a key opening for Ethiopia. It laid the first stone on the construction project in the spring of 2011 and says the dam is now about one-third complete. “With all of the chaos in Egypt, Ethiopia caught a break. It has clearly benefited from the distractions of the government in Cairo,” Shinn said. In2012, Sudan threw its weight behind the project, driving a wedge betweenthe two downstream users of the river and complicating Cairo’s hopes to block construction.

The dispute over the Blue Nile dam is hardly the only case of water-driventensions. Chinese control over the headwaters of major rivers in Asia, andambitious plans for hydroelectric development, has sparked concern among a dozen downstream neighboring countries. Brazil and Paraguay locked horns for years over the massive Itaipu dam. Even Western U.S. states are squabbling over water rights to the dwindling Colorado River, especially important now that the region suffers a prolonged drought.

But Egypt sees the Ethiopian project as an existential threat.

A government study concluded, “Water security is the gravest threat facing post-revolution Egypt.” Former Egyptian president Mohammed Morsi vowed last summer that Egypt would not lose ”one drop” of Nile water to the Ethiopian dam, proclaiming, “Our blood is the alternative.” Egyptian politicians were caught on camera last June urging Morsi to backarmed rebels to sabotage the dam’s construction. Abdel Fattah al-Sisi, Egypt’s putative next president, warned Ethiopia last summer the countrymight resort to military action to stop the dam, and earlier this month he discussed the dam’s threats in a visit with Russian president Vladimir Putin.

Egypt’s fears stem from the dam’s possible impacts on the Nile as it flowsdownstream through Sudan and eventually to the Mediterranean. The Nileprovides both water for Egyptian agriculture, and also electricity through Egypt’s own Aswan dam.

The big problem: There has been no public discussion of the downstreamimpacts of the Ethiopian project. An international panel of experts, including representatives from Egypt, Sudan, and Ethiopia, presented a report last summer to the three governments, but it has not been made public.

Leaks of the report suggested that Egyptian power generation

could indeed suffer — but the lack of clarity muddies the issue even for water experts, because it is unclear just how quickly Ethiopia might moveto fill the dam’s reservoir after construction is finished. Filling it sooner

would definitely choke water flows downstream, but would enable power generation more quickly; filling it gradually would push back the potentialbenefits of the dam for decades. Ethiopia has spoken publicly of filling thedam's reservoir in five or six years.

"There's a suggestion (in the panel report) that the electricity generation at the Aswan Dam could be affected quite significantly," Michael Hammond, a water engineer at the University of Exeter, told FP. "However, it's inherently uncertain because we don't know whether we'll have ten wet years or ten dry years during the filling process," he said. Jennifer Veilleux, a PhD candidate at Orgeon State University who has done extensive field work on the impacts of the Blue Nile dam, notes thatEgyptian fretting about the dam's impact on agriculture tend to focus on poor farmers. But Egypt has used the abundant Nile waters to become a major exporter of water-thirsty crops, such as cotton, which in turn has given Egypt the highest level of economic development among all Nile Basin countries. "Why does Egypt have the right to use the Nile for economic development, yet the Ethiopians don't?" she asks. (Text ends) Ethiopia: Debate Over the Nile'

The Reporter (March 15, 2014) The third-year anniversary of the inauguration of the Grand Ethiopian Renaissance Dam (GERD) will be colorfully celebrated throughout the nation. Starting from its inception, the project has been drawing the attention of millions of Ethiopians locallyand across the globe.

In relation to this massive hydroelectric project, much has been said and published, many of the published articles, books and other materials lay more emphasis on the historical narration, which revolves around the colonial treaties that Egypt uses to apply for monopoly of the water, the historical agreements of 1929 and 1959 signed between Sudan, Egypt andGreat Britain.

Other areas that are mainly covered in the publication related to the issueof the Nile also focus on the political aspect of relations between the countries that use the Nile water, an equitable share of water and so on. It is in this regard that a book written by Hailu Woldegiorgis entitled "Leabay Weha Muget" was published by the Addis Ababa University Press a few years ago. The writer of the book is a former Ethiopian ambassadorto France. He was also working in several international organizations, as apolitical science and law graduate from the Political Science Institute of France. He was also working as deputy minister for the Ministry of ForeignAffairs in Ethiopia.

Based on his extensive knowledge of international law, he conducted intensive research over the issue and the book is beautifully written and explains the historical and legal confrontations over the issue of the riverNile. The book has three main sections that explore the legal litigation revolving around the river Nile. Along with these three sections, the bookalso contains numerous chapters and a very solid general conclusion thatelucidates how to overcome if Trans Boundary Rivers are becoming the source of tensions between and among the riparian countries.

Each section of the book is written on the basis of academic researchmethods. The writer tries to present the issue free from any kind of personal bias, and presents the issue in an appealing way.

Though the book focuses more on the legal issues related to trans- boundary rivers generally and the issue of river Nile particularly, it also covers the historical relations between Ethiopia and Egypt as a common user of the water and Egypt's claim of domination over the Nile. The bookhas many interesting facts and figures, which clearly depict the long- standing legal debates and confrontations both within the two countries, other riparian countries and in the face of the international community.

This book is valuable for anyone who is concerned about knowing and understanding what the colonial era agreement signed between Sudan, Egypt and the former colony of the two countries, Great Britain in all about. The book in its introductory part gives a detailed explanation aboutthe river Nile and narrates the source of the Nile, Ethiopia's contribution tothe Nile and other riparian countries, the weather and climate condition ofthe area.

The first section of the book covers international law and the issues of trans-boundary rivers in an international perspective. In this section of thebook, the concept and evolution of the Trans boundary issue are covered. The salient feature of international law concerning the trans-boundary rivers is also explained well, in line with many demonstrations as an example and the governing theories of the issues.

The second section of the book is all about the legal issues of the river Nile, and it covers the treaties and agreements that have been concluded over the river Nile. In this section a reader can acquire a full and well- detailed explanation about the colonial era agreements over the Nile and many more legal issues concerning the Nile, such as the technical agreements and so on. The third section of the book covers issues relatedto rights and responsibilities of the riparian countries and application of the basic principles related to international law concerning trans boundaryrivers. This section of the book narrates the questions that the Egyptians raise to defend the customary application of the already existing colonial era agreements and the value of the agreements before the law.

This section also covers the importance of a new legal regime for the Nile,the efforts made to maintain an equitable use of the water, and lessons drawn from the rest of the world. The entire book is valuable to understand and assess the overall legal, political and diplomatic activities in relation to the equitable use of the river Nile, unlike other books concerning the issue of the river Nile. Since the book is written in Amharic, it has a significance to the general reader, which also makes thebook more valuable beside its content and detailed explanations. (Text ends)

NILE POLITICS: Egypt to Position Troops in South Sudan’

The Reporter, Addis Ababa (March 15, 2014) - Egypt, who is currently suspended from the continental block of the African Union (AU,) has promised to send troops to the world's newest nation, South Sudan, NewsAgency of South Sudan (NASS) reported. This came after the regional

block Intergovernmental Authority on Development IGAD decided to deploy troops to monitor the situation in South Sudan on Thursday, March13.

Though IGAD expects the contribution of troops from member states, the president of the Arab Republic of Egypt, Adly al Mansour said his country is preparing to send troops to South Sudan in order to help protect the country from the chaos that resulted after the failed coup attempts stagedby the former vice president Riek Machar Teny. President Mansour made the announcement after the meeting with South Sudan's Foreign Affairs Minister Dr, Barnaba Marial Benjamin who is in Egypt to attend the 141st Arab League Conference. East African states say they will start deploying troops in South Sudan by mid-April, heads of states met in Addis Ababa todiscuss the size and mandate of a stabilization and protection force in the three-month old conflict.

A request to deploy the protection and stabilization force by mid-April hasbeen sent to the African Union and the United Nations Security Council.

The deployment, if approved, will be paid for by the international community. Kenya, Ethiopia, Rwanda and Burundi will send troops, andpossibly Djibouti.

The African Union's (AU) Peace and Security Council suspended Egypt from all union activities last July. Mansour further appealed to the SouthSudan government to bring about dialogue between Egypt and the otherNile basin countries "so that the benefits of the Nile water can equally satisfy the member countries."

NILE POLITICS: Ethiopia Sees Output at Africa’s Biggest Power Plant by2015’

By William Davison, Bloomberg (March 21, 2014)

Ethiopia will begin generating electricity within 18 months from what willbe Africa’s largest power plant, the government said. The sale of 7.1 billion birr ($367 million) of bonds over the past three years to domesticinvestors, has contributed to the 27 billion birr spent so far on the 75.5 billion birr Grand Ethiopian Renaissance Dam hydropower project, said Zadig Abraha, deputy general director of the GERD national coordinationoffice. The central bank in April 2011 ordered banks to buy government bonds equivalent to 27 percent of their loans to help fund infrastructure projects. Ethiopia’s funding of the 6,000-megawatt plant represents “thegolden age of our history as far as economic development and public participation is concerned,” Zadig said by phone on March 18 from the capital, Addis Ababa. “If we’re to meet the power demand we have to construct these mega projects.”

Africa’s second-most populous country after Nigeria is boosting electricityoutput to cater for increased demand as economic growth surges. The economy expanded at an average 9.3 percent over the past four years and the government is targeting growth of more than 10 percent, which may lead to annual increases in electricity demand of as much as 35 percent, Zadig said. An increase in Ethiopia’s current generating capacity of 2,000 megawatts will also allow the country to reduce a trade deficit of

$8.5 billion last year by selling excess electricity. Power Exports

The government already exports power to Sudan and Djibouti. It's also building a transmission line to Kenya and is in discussions with Yemen andwar-torn South Sudan, Zadig said. Once GERD is finished, and other hydropower projects including the 1,870-megawatt Gibe III are on line, Ethiopia may earn $2 billion a year from the exports, he said. The construction of GERD is opposed by Egypt, which says it will reduce the flow of the Nile, the world's longest river that provides almost all its water.Egypt's opposition to the project blocked Ethiopia's access to foreign credit, he said.

"The only option on the table was to construct the dam by our own capacity," Zadig said, adding that the state-owned Ethiopian Electric Power Corp. and public contributions would fund the rest of the project. Sudan, the other affected nation, supports the project that's scheduled forcompletion in 2018, partly because it will allow the country to import cheaper Ethiopian electricity. The dam is being built 18 miles (30 kilometers) from the Sudanese border on the Blue Nile River, the main tributary of the Nile.

Production Start Two turbines at the plant will start producing 750 megawatts of power during the Ethiopian calendar year that begins Sept. 11, depending on rainfall patterns, Zadig said.

In 2012, Ethiopia invited an international panel of experts to study the project, which the government says will help curb flooding and improve water storage. The panel concluded in June that further assessments needto be made on GERD's regional impact. It also advised modifications to the design to strengthen it structurally. Efforts by Ethiopia, Egypt and Sudan to form a committee to oversee the probes on the downstream effects have reached an impasse over the role of foreign experts.

Egypt wants construction paused while the studies are done on an issue that is a matter of "national security," Badr Abdelatty, a spokesman for Egypt's Foreign Ministry, said in a phone interview on March 15. 'Serious'Talks "We ask upon the other side to be serious and to move forward to accept having international experts imported to assess the impact," he said. "Also for Ethiopians to provide more studies, more statistics." Ethiopia should also respect colonial-era agreements and a 1959 accord between Sudan and Egypt that allocates all of the river's flow excluding evaporation to those two nations, Abdelatty said. By 2020, Egypt will require all of its assigned 55 billion cubic meters a year for vital use suchas drinking, washing and sanitation, he said. Nile riparian nations including Ethiopia, Kenya, Tanzania and Rwanda are in the process of ratifying a new agreement to create a joint commission to manage use ofthe river.

NILE POLITICS: Will Ethiopia's Grand Renaissance Dam dry the Nile inEgypt?

(Updated on March 22, 2014) BBC correspondents in both countries reportfrom both sides of an increasingly bitter water dispute.

Emmanuel Igunza reports from Ethiopia on the controversial project: Avast section of northern Ethiopia has been turned into a giant building site. Construction of the Grand Ethiopian Renaissance Dam (known as GERD) is now about 30% complete. The whole project spans an area of1,800 sq km (695 sq miles). Once completed, in three years, it will be Africa's largest hydropower dam, standing some 170m (558ft) tall.

At a cost of $4.7bn (£2.9bn) it will also be hugely expensive - mostlyfunded by Ethiopian bonds and taxpayers. The dam is located in the Benishangul region, a vast, arid land on the border with Sudan, some 900km north-west of the capital Addis Ababa,

Temperatures here can get as high as 48C (118F). Most of the vegetationthat existed on the dam site has been cleared to make way for the construction, and the area is now extremely dusty. In May last year, the

builders achieved their first milestone when they diverted the course ofthe Blue Nile.
What used to be the river bed is now being lined with layers and layers ofconcrete that will form part of the main dam. Some 8,500 people workingat the site, where construction carries on 24 hours a day. Part of the actual dam structure is already taking shape. The workers are busy at work on what looks like a huge floor of concrete.
Downstream, Egypt - which relies almost totally on the waters of the Nile,says their supply will be under threat. Egypt and Sudan currently get the lion's share of the Nile's waters under colonial-era treaties.
While Sudan backs Ethiopia's plans, Egypt has remained opposed.
Talks to ease tensions between the two countries have collapsed.Despite this, Ethiopian foreign ministry spokesman Amb Dina Mufti describes the dam as a "win-win" project. "Sudan has already seen the benefits and hascome on board, we hope Egypt will see that too," he says.
Aswan reports from Egypt, by Sally Nabil,
The concern in Egypt is about the potential threat to its dominance over the Nile. Egypt fears Ethiopia's dam will restrict the flow of this strategic waterway - the main source of water in a country where rainfall is scarce.The row started in 2011, and Egypt has been worried ever since that its annual quota of the Nile water might be reduced. This conflict comes at atime when different parts of Egypt are already suffering from a shortage of water. In the northern Nile Delta, the agricultural heart of Egypt, a lot of farmers are waiting with a heavy heart to see if they will be able to cultivate their land next summer.
"With even less water, we will die. We can't survive," says Hafiza, one of the farmers. Ethiopia says its hydro-electric dam will not harm either of itsdownstream countries, Egypt or Sudan. However, Egypt is highly sceptical. "It is a matter of life or death, a national security issue that can never be compromised on," says foreign ministry spokesman Badr Abdelatty. Egypt is aware that some 30% of the Ethiopian dam is completed. It is still unclear what Egypt's next step will be.
Nile River Dam Threatens War Between Egypt and Ethiopia -IPS’By Cam McGrath (March 23, 2014)
Ethiopia is building one of the largest dams in the world, the GrandMillennium Dam (GERD), on the River Nile near the Sudan border. (InternationalRivers.org)
CAIRO - When Egypt’s then-president Mohamed Morsi said in June 2013 that “all options” including military intervention, were on the table if Ethiopia continued to develop dams on the Nile River, many dismissed it as posturing. But experts claim Cairo is deadly serious about defending itshistoric water allotment, and if Ethiopia proceeds with construction of what is set to become Africa’s largest hydroelectric dam, a military strike is not out of the question.
Relations between Egypt and Ethiopia have soured since Ethiopia beganconstruction on the 4.2 billion dollar Grand Renaissance Dam in 2011.
Egypt fears the new dam, slated to begin operation in 2017, will reducethe downstream flow of the Nile, which 85 million Egyptians rely on for

almost all of their water needs. Officials in the Ministry of Irrigation claimEgypt will lose 20 to 30 percent of its share of Nile water and nearly a third of the electricity generated by its Aswan High Dam.
Ethiopia insists the Grand Renaissance Dam and its 74 billion cubic meter reservoir at the headwaters of the Blue Nile will have no adverse effect onEgypt's water share. It hopes the 6,000 megawatt hydroelectric project will lead to energy self-sufficiency and catapult the country out of grindingpoverty.
"Egypt sees its Nile water share as a matter of national security," strategicanalyst Ahmed Abdel Halim tells IPS. "To Ethiopia, the new dam is a source of national pride, and essential to its economic future."
The dispute has heated up since Ethiopia began diverting a stretch of the Nile last May, with some Egyptian parliamentarians calling for sending commandos or arming local insurgents to sabotage the dam project unlessEthiopia halts construction.
Ethiopia's state-run television responded last month with a report on a visit to the site by army commanders, who voiced their readiness to "paythe price" to defend the partially-built hydro project.
Citing a pair of colonial-era treaties, Egypt argues that it is entitled to noless than two-thirds of the Nile's water and has veto power over any upstream water projects such as dams or irrigation networks.
Accords drawn up by the British in 1929 and amended in 1959 divvied upthe Nile's waters between Egypt and Sudan without ever consulting the upstream states that were the source of those waters.
The 1959 agreement awarded Egypt 55.5 billion cubic meters of the Nile's84 billion cubic meter average annual flow, while Sudan received 18.5 billion cubic meters. Another 10 billion cubic meters is lost to evaporation in Lake Nasser, which was created by Egypt's Aswan High Dam in the 1970s, leaving barely a drop for the nine other states that share the Nile'swaters.
While the treaty's water allocations appear gravely unfair to upstream Nilestates, analysts point out that unlike the mountainous equatorial nations, which have alternative sources of water, the desert countries of Egypt andSudan rely almost entirely on the Nile for their water needs.
"One reason for the high level of anxiety is that nobody really knows howthis dam is going to affect Egypt's water share," Richard Tutwiler, a specialist in water resource management at the American University in Cairo (AUC), tells IPS. "Egypt is totally dependent on the Nile. Without it,there is no Egypt."
Egypt's concerns appear warranted as its per capita water share is just 660 cubic meters, among the world's lowest. The country's population isforecast to double in the next 50 years, putting even further strain on scarce water resources.
But upstream African nations have their own growing populations to feed,and the thought of tapping the Nile for their agriculture or drinking water needs is all too tempting.
The desire for a more equitable distribution of Nile water rights resulted inthe 2010 Entebbe Agreement, which replaces water quotas with a clause

that permits all activities provided they do not “significantly” impact thewater security of other Nile Basin states. Five upstream countries – Ethiopia, Kenya, Uganda, Tanzania and Rwanda – signed the accord. Burundi signed a year later.

Egypt rejected the new treaty outright. But after decades of wielding its political clout to quash the water projects of its impoverished upstream neighbors, Cairo now finds itself in the uncomfortable position of watchingits mastery over the Nile’s waters slip through its fingers.

“Ethiopia’s move was unprecedented. Never before has an upstream stateunilaterally built a dam without downstream approval,” Ayman Shabaana of the Cairo-based Institute for Africa Studies had told IPS last June. “If other upstream countries follow suit, Egypt will have a serious water emergency on its hands.”

Ethiopia has sought to assure its downstream neighbors that the Grand Renaissance Dam is a hydroelectric project, not an irrigation scheme. Butthe dam is part of a broader scheme that would see at least three more dams on the Nile.

Cairo has dubbed the proposal “provocative”.

Egypt has appealed to international bodies to force Ethiopia to halt construction of the dam until its downstream impact can be determined. And while officials here hope for a diplomatic solution to diffuse the crisis, security sources say Egypt’s military leadership is prepared to use force toprotect its stake in the river.

Former president Hosni Mubarak floated plans for an air strike on any damthat Ethiopia built on the Nile, and in 2010 established an airbase in southeastern Sudan as a staging point for just such an operation, according to leaked emails from the global intelligence company Stratfor posted on Wikileaks.

Egypt’s position was weakened in 2012 when Sudan, its traditional ally onNile water issues, rescinded its opposition to the Grand Renaissance Dam and instead threw its weight behind the project. Analysts attribute Khartoum’s change of heart to the country’s revised domestic priorities following the secession of South Sudan a year earlier.

According to AUC’s Tutwiler, once Sudan felt assured that the dam wouldhave minimal impact on its water allotment, the mega-project’s other benefits became clear. The dam is expected to improve flood control, expand downstream irrigation capacity and, crucially, allow Ethiopia to export surplus electricity to power-hungry Sudan via a cross-border link.Some studies indicate that properly managed hydroelectric dams in Ethiopia could mitigate damaging floods and increase Egypt’s overall water share. Storing water in the cooler climes of Ethiopia would ensure far less water is lost to evaporation than in the desert behind the Aswan High Dam.

Egypt, however, is particularly concerned about the loss of water share during the five to ten years it will take to fill the dam’s reservoir. Tutwilersays it is unlikely that Ethiopia will severely choke or stop the flow of water. Some 85 million Egyptians depend on the Nile for water.

Nile Dam Agreement: Full text of the signed doc by Egypt, Sudan andEthiopia'

(The oversigned doc on March 23, 2014)

Ahram Online published a translated version of the "Declaration of Principles" signed by Egypt, Sudan and Ethiopia on Nile water sharing arrangements among Nile Basin countries. Ten principles are outlined inthe document signed by the three countries.

Introduction Valuing the increasing need of the Arab Republic of Egypt, the Federal Democratic Republic of Ethiopia and the Republic of the Sudanfor their over-border water sources, and realizing the importance of the Nile River as a source of life and a vital source for the development of the people of Egypt, Ethiopia and Sudan, the three countries have committed themselves to the following principles concerning the Grand Ethiopian Renaissance Dam:

1. Principle of cooperation:

- Cooperation based on mutual understanding, common interest, goodintentions, benefits for all, and the principles of international law.
- Cooperation in understanding the water needs of upstream anddownstream countries across all their lands.

2. Principle of development, regional integration and sustainability:

- The purpose of the Renaissance Dam is to generate power, contribute toeconomic development, promote cooperation beyond borders, and regional integration throughgenerating clean sustainable energy that can be relied on.

3. Principle of not causing significant damage:

- The three countries will take all the necessary procedures to avoidcausing significant damage while using the Blue Nile (the Nile's main river).
- In spite of that, in case significant damage is caused to one of thesecountries, the country causing the damage [...], in the absence of an agreement over that [damaging]action, [is to take] all the necessary procedures to alleviate this damage, and discuss compensationwhenever convenient.

4. Principle of fair and appropriate use:

- The three countries will use their common water sources in theirprovinces in a fair and appropriate manner.
- To ensure fair and appropriate use, the three countries will take intoconsideration all guiding elements mentioned below:

a. The geographic, the geographic aquatic, the aquatic, the climatical,environmental elements, and the rest of all natural elements.

b. Social and economic needs for the concerned Nile Basin countries.

c. The residents who depend on water sources in each of the Nile Basincountries.

d. The effects of using or the uses of water sources in one of the NileBasin countries on another Nile Basin country.

e. The current and possible uses of water sources.

f. Elements of preserving, protecting, [and] developing [water sources]and the economics of water sources, and the cost of the procedures taken in this regard.

g. The extent of the availability of alternatives with a comparable value fora planned or a specific use.

h. The extent of contribution from each of the Nile Basin countries in theNile River system.

i. The extent of the percentage of the Nile Basin's space within theterritories of each Nile Basin country.

4. The principle of the dam's storage reservoir first filling, and damoperation policies:

- To apply the recommendations of the international technical expertscommittee and the results of the final report of the Tripartite National Technical Committee duringdifferent stages of the dam project.
- The three countries should cooperate to use the final findings in thestudies recommended by the Tripartite National Technical Committee and international technicalexperts in order to reach:

a. An agreement on the guidelines for different scenarios of the first fillingof the Grand Ethiopian Renaissance Dam reservoir in parallel with the construction of the dam.

b. An agreement on the guidelines and annual operation policies of theRenaissance Dam, which the owners can adjust from time to time.

c. To inform downstream countries, Egypt and Sudan, on any urgentcircumstances that would call for a change in the operations of the dam, in order to ensure coordinationwith downstream countries' water reservoirs.

- Accordingly the three countries are to establish a proper mechanismthrough their ministries o water and irrigation.
- The timeframe for such points mentioned above is 15 months from thestart of preparing two studies about the dam by the international technical committee.

6. The principle of building trust:

- Downstream countries will be given priority to purchase energygenerated by the Grand Ethiopian

Renaissance Dam.

7. The principle of exchange of information and data:

- Egypt, Ethiopia and Sudan will provide the information and data requiredto conduct the studies of the national experts committees from the three countries in the propertime.

8. The principle of dam security:

- The three countries appreciate all efforts made by Ethiopia up until nowto implement the recommendations of the international experts committee regarding thesafety of the dam.
- Ethiopia will continue in good will to implement all recommendationsrelated to the dam's security in the reports of the international technical experts.

9. The principle of the sovereignty, unity and territorial integrity of theState:

The three countries cooperate on the basis of equal sovereignty, unity andterritorial integrity of the state, mutual benefit and good will, in order to reach the better use and protection of the River Nile.

10. The principle of the peaceful settlement of disputes:

The three countries commit to settle any dispute resulting from the interpretation or application of the declaration of principles through talks or negotiations based on the good will principle. If the parties involved donot succeed in solving the dispute through talks or negotiations, they canask for mediation or refer the matter to their heads of states or prime ministers. (Text ends)

Egypt wants to Diverting the Congo River to the Nile river course'

World News Politics (March 25, 2014) During the ongoing crisis between Egypt and Ethiopia over the construction of the Grand Renaissance Dam,which threatens catastrophe for Egypt as we have discussed in previous articles in Al-Ahram Weekly, some have aired the idea of connecting the Congo River with the Nile. This, they say, will feed our river with 110 billion cubic metres of water a year through a canal and/or tunnel linkingone or more branches of the Congo with the White Nile or with one of itstributaries in South Sudan. From there, of course, these billions of cubic metres of water would head northward, join up with the waters coming from the Atbara and Blue Nile and continue northwards into Egypt.

As its advocates summarise the idea, it would require the construction of dams or sluices on the Congo at a location some 600 kilometres from the White Nile. There the water level would have to be raised, by means of pumps, by a huge 250-300 metres in order to counter the opposing territorial incline. Then the water would be propelled towards South Sudanand the White Nile. Then, at some point in South Sudan, the water level would be raised again so as to channel it into a "new Nile", some 2,500 kilometres long, to conduct the water through Sudan and on into Egypt's Western or Eastern desert. Clearly a project of such a scale and complexity needs to be studied very closely by the relevant experts who

will need to be extremely precise in their calculations and to take intoconsideration a range of other technical and non-technical factors.

In fact, the idea of an artificial Nile is not new. Colonel Muammar Al- Gaddafi had once proposed it beneath the banner of African development and the redistribution of the continent's water resources among African Union members in the vicinity. He charged a team of experts with the taskof undertaking the necessary studies, but the idea was soon dismissed because of its infeasibility due to the technical, political and environmentalcomplications involved.

The group that is currently advocating the same idea also does so in the name of African development that, according to them, begins with a project to divert the Congo into the Nile. Such a project, they argue, will free Egypt forever from the spectre of water deficit, which has come to loom more perilously than ever in view of the Ethiopian hydraulic projects,particularly the Renaissance Dam. It is worth noting, here, that the head of this group is a businessman with projects in the Democratic Republic ofthe Congo (DRC) and a former irrigation engineer and geologist in the Egyptian Mineral Resources Authority.

More significantly, it is important to bear in mind that no written technical,scientific or feasibility studies for such a mega-project currently exist. Theonly material that is available and that has been submitted to some government authorities was compiled from photos taken off the Internet and that have no geotechnical or architectural value. When authorities at the Egyptian Mineral Resources Authority were asked whether they had studies for such a project, they responded that they did not, contrary to the claims of the advocating group. The same applied to the Faculty of Engineering at Cairo University. The faculty's irrigation and drainage department said that they had never undertaken a scientific study for that project. Moreover, they also said that the group advocating the Congo River diversion project had asked them only for a design for a model village and for a design road parallel to the "new Nile" should the project be carried out. The latter request was curious since, as any engineer will tell you, roads cannot be designed on the basis of satellite imagery. Field surveys and measurements have to be conducted on the ground.

Apparently the group also asked for a study on the amount of energy thatwould be required to raise the water level to the necessary height.

According to the calculations of an advisory organisation, more than sevengigawatts would be needed, which is to say the equivalent to the amount of power that would be generated by the Renaissance Dam.

As for the concept of a 2,500 kilometre long new Nile stretching through Sudan and into Egypt, it is obvious that its proponents had little interest inthe topographical and geotechnical properties of the ground through whichsuch an artificial river course would pass, let alone the environmental impact.

So, before indulging in this pipe dream further, let us consider thefollowing hard facts:

- Due to the relatively steep geological incline of the DRC, the flow of theCongo is very rapid. At a rate of

up to 40,000 cubic metres a second, it is one of the fastest and mostturbulent rivers in the world, making it very difficult to control. Moreover, this does not even begin totake into consideration other geotechnical considerations such as the nature of the bedrock, rifts andfissures, and the like.

- Some 400,000 square kilometres of dense jungle surrounds the CongoRiver, adding yet another obstacle, on top of the geographical incline, to the choice of the site forconstructing a dam or series of sluices near the borders of South Sudan.
- The area identified for the proposed canal leading from the Congo to theWhite Nile consists of a range of steep mountains. With peaks up to 2,750 and 5,170 metres, thesemountains are formed of hard granite rock.
- The envisioned dam (or dams) will be larger than the Renaissance Dam(with a 74 billion cubic metre reservoir capacity) and even more technologically complicated to build.
- According to the group's figures, the reservoir behind the dam wouldhold 110 billion cubic metres of water. It remains a mystery how they came up with this figure, asalluring as it is, given that it is exactly twice as much as Egypt's current water quota from the Nile and morethan 1.5 times the amount of water to be retained behind in the Renaissance Dam.
- Designing the open canal or tunnels or pipelines, or whatever means areconceived to transport such enormous quantities of water, is in itself a herculean task.
- Southern Sudan, where the water from the Congo would be initiallydestined, is primarily marshland. What precautions, if any, have been envisioned to prevent that area frombeing submerged beneath the water that would be flooding in from the Congo?
- The branch of the White Nile, with which the Congo is meant to beconnected, does not have a large capacity. It cannot hold more than 12 billion cubic metres a year. The artificial river that would stretch 2,000 kilometres through South

Sudan and Sudan and then another 500 kilometres in Egypt would have tobe a multinational endeavour and as it would pass through rugged terrain and both inhabited and uninhabited areas the obstacles facing it would be virtually insurmountable. If we have not yet been able to resume work on the comparatively modest Jonglei canal project, imagine the fate of a mega-project such as the "new Nile" meant to carry twice the amount of water as the old Nile.

Proponents of that project have billed it being able to transport 110 billioncubic metres a year, generate 18 gigawatts of electricity and to reclaim 80million acres of land all at the cost of LE8 billion. They say, moreover, that

it could be completed in the space of 24 months or, if we add theadditional six mentioned by a senior official, 30 months. Such “projections” only underscore how unscientific the proposal is.

The huge media fanfare surrounding this project is unwarranted and incomprehensible. But what is more suspicious are the claims voiced by members of the group promoting this project, that it has already obtainedthe approval of government authorities in spite of all the objections on thepart of specialists in geology and hydraulic engineering, experts in feasibility and technical studies, legal experts, especially those informed on matters regarding international river courses, and political analysts who are aware of the nature of the relations between the countries of the Congo and Nile River basins and of the fact that the DRC already is engaged in hydraulic projects with South Africa that will generate 40 gigawatts of power. All these people agree that geologically, architecturally, politically, mechanically and economically the project is totally unrealistic. If it were at all feasible, why would we object so strongly to the Renaissance Dam?

Analyst Says Ethiopia’s Dam Won’t Hurt Egypt’

Editor Business, Mining & Construction, Strategies & Solutions VENTURES AFRICA (March 28, 2014) – A water expert from the AUC

University in Cairo has confirmed that Ethiopia’s hydroelectric dam will nothurt Egypt’s share of the Nile waters. According to the Egypt-based water resource management specialist Richard Tutwiler, the Ethiopian dam will never stop the flow of water downstream to Egypt.

“It is unlikely that Ethiopia will severely choke or stop the flow of water. Ethiopia needs the electricity…and hydroelectric dams don’t work unless you let the water through” said Mr. Tutwiler. The Sudanese government has also supported the Ethiopian dam because “the dam would have minimal impact on its (sudan’s) water allotment…and the mega-project’sother benefits became clear. ”

Water experts have confirmed that the dam is expected to improve floodcontrol, expand downstream irrigation capacity and, crucially, allow Ethiopia to export surplus electricity to power-hungry Sudan via a cross-border link. Some studies indicate that properly managed hydroelectric dams in Ethiopia could mitigate damaging floods and increase Egypt’s overall water share. Storing water in the cooler climes of Ethiopia would ensure far less water is lost to evaporation than in the desert behind theAswan High Dam in Egypt.

Despite these assurances from the international community and water experts, some Egyptian warmongers and politicians have unnecessarily threatened Ethiopia and other upstream African countries. Some Egyptian generals have been seen undercover in southern Somalia and the Ogaden,arming rebels and agitating more anti-Ethiopia sentiment among the public. Analysts say that Egyptian military leaders want to distract the

pro-democracy movement in Egypt from domestic problems by divertingtheir attention to a nonexistent external threat.

Some Egyptian politicians also claimed that Egypt deserves to eternallykeep over 90 percent of the Nile even though it contributes less than 1

percent to the Nile. They cite outdated colonial agreements from 1959 signed between Egypt and Britain, which excluded eight out of ten Nile African countries. The Mubarek Cairo regime also took advantage of the civil war in Ethiopia to sign vague agreements in 1993. However, for thefirst time in history, the majority of Nile basin African countries signed in2010 the binding international treaty, the Cooperative Framework Agreement (CFA), for the fair and equitable utilization of the Nile River among all countries. Egypt ignored the 11 years of negotiations that led toward the CFA treaty,which was adopted by all other Nile African countries. Despite threats from Egypt, Ethiopian government has continued the dam construction.

Analysts say that Ethiopia's growing population need to utilize the Nile river since it can not depend on erratic rains to produce energy or to feedits people who have already suffered numerous famines over the last fewdecades.

NILE: GERD an issue of no compromise – Egypt Foreign Ministry' News Release by State Information Service of Egypt (March 29, 2014)The issue of the Ethiopian Grand Renaissance Dam is linked to Egypt'swater security which is an integral part of Egypt's national security,

Foreign Ministry Spokesman Badr Abdel Atti said in a press conference on Thursday. He asserted that the Ethiopian dam is an issue that cannot be compromised, waived or ignored at all. All Egyptian institutions are working at both regional and international levels to explain the truth aboutthe issue and warn against the drastic effects that will result from the establishment of the project, Abdel Atti added.

Turning to US and Western countries' condemnation to a death sentence for 529 members of the Muslim Brotherhood in Minya, Abdel Atti said it isnot acceptable from any internal or external entity to comment or interfere in decisions by Egypt's judiciary. In the meantime, Abdel Atti underlined the importance of implementing the Arab Summit's decisions especially the one on activating an Arab agreement on combating terrorism.

He said that the ministry would work on convening a joint meeting of Arabforeign and justice ministers as soon as possible to expedite the implementation of the Arab anti-terror agreement. Turning to the crisis with Qatar, Abdel Atti said that Egypt's Foreign Minister Nabil Fahmy was honest when he asserted that there is a deep wound and that Qatar's problem is not only with Egypt but with most of the Arab countries. As forthe Egyptian-Sudanese relations regarding the Ethiopian dam, the spokesman said that there is a common agreement that the dam should not harm the interests of any party, highlighting the 1959 agreement between Egypt and Sudan in this regard.

March 31, 2014: Ethiopian GERD National Panel of Experts (NPoE) SternlyReplies to IRN'

In a statement entitled, "A Proxy Campaign against Ethiopia?", the "GERDnational panel of experts" ("GERD experts") decries against the International Rivers Network (IRN). Apparently based on a "leaked" International Panel of Experts (IPoE) report, full of lies and distortions,

entitled “GERD Panel of Experts Report: Big Questions Remain.” Here is anextensive quote from that piece: according to GERD National Panel of Experts (NPoE) “The mega dam is being built on the Blue Nile in Ethiopia, near the Sudan border, and has created conflict with Egypt over its downstream impacts; the experts' study confirms Egypt’s concerns that the project’s impacts could be significant and are not well understood.

Egypt has called for mediation if further studies are not allowed; at this writing, Ethiopia had refused, and was continuing with dam construction. It is also clear that there is precious little oversight on Africa’s largest damproject to date. While the international panel has brought a type of oversight, it may be too little, too late – and with too little teeth; it seemsthe panel does not have a continuing role in ensuring best practices as construction proceeds. The panel’s report is almost a year old at this writing, yet its members have been mostly silent since their report was completed (as far as we know, none of the panelists have made public statements about the project). The Egyptian and Ethiopian governments continue the war of words, while at the same time construction on the mega dam proceeds, and questions raised by the panel remain unanswered. Going forward, International Rivers recommends construction on the project be halted until all necessary studies recommended by the panel are completed, and a process is in place for ensuring public accountability on the project. Given the panel's findings, Egypt’s call for mediation in the process is reasonable, and donor governments and international bodies should support such a process”

Editor’s note: International Rivers Network (IRN), is an organization that has been leading the global struggle to protect rivers and the rights of indigenous communities that depend on them for nearly three decades.

International Rivers, headquartered in Berkeley, CA., is committed to promoting sustainable use of waters and rivers throughout the world. The organization has done extraordinary work in Africa, Asia and Latin Americato “prevent destructive dam development, promote effective flood management practices, reform the policies and practices of international financial institutions, and advocate water and energy solutions that are sensitive to human rights and environmental sustainability.”

Ethiopia calls on Egypt to refrain from campaigning against GERD’ (WIC) Addis Ababa, (April 1, 2014) Updates - The Ministry of ForeignAffairs of Ethiopia has called on Egypt to refrain from its ongoing campaign against the Grand Ethiopian Renaissance Dam (GERD). Ministry Spokesperson Ambassador Dina Mufti told local journalists here today thatEgyptian officials should abandon the campaign against such a helpful dam not only for Ethiopia but also for the whole region. The dam will regulate the flow of the water and ensure a steady flow throughout the year, preventing the occurrence of floods downstream in Sudan or Egypt. However, Egyptian authorities are engaged in an extensive campaign against the construction of the dam. “Egypt’s campaign against the dam has no ground and it is an unhelpful approach,” he said. “Egypt has no other option except dialogue and negotiation to provide a win-win solutionover the dam,” Ambassador Dina told journalists. The Grand Ethiopian

Renaissance Dam is under-construction in the Benishangul-Gumuz Regional State on the Blue Nile River in Ethiopia about 40 km east of theborder with Sudan.

Work on the dam was proceeding on schedule and it is now 32 percent complete. At 6,000 MW, the dam will be the largest hydroelectric power plant in Africa when completed. The 3rd year anniversary of the commencement of the dam's construction will be celebrated tomorrow in the presence of government officials. "The anniversary is a sign of Ethiopia's success in the diplomatic sector," Ambassador Dina said. The dam is the symbol of freedom and self-confidence for Ethiopians, he said.Ethiopians at home and abroad have been contributing their share to realize the dam, according to Ambassador Dina.

Ethiopia ready for Nile dam talks with Egypt: Minister'

Anadolu Press ADDIS ABABA (April 2, 2014) - Alemayehu Tegenu, Ethiopian minister of water, irrigation and energy, has stated his country'sreadiness to open talks with Egypt over Ethiopia's multibillion-dollar hydroelectric dam project, which Cairo fears will threaten its traditional share of Nile water.

Alemayehu Tegenu, Ethiopian minister of water, irrigation and energy, hasstated his country's readiness to open talks with Egypt over Ethiopia's multibillion-dollar hydroelectric dam project, which Cairo fears will threaten its traditional share of Nile water. Speaking at a ceremony held to mark the passage of three years since construction on the mega-dam began, Tegenu said his government had "exerted utmost efforts to build trust among all riparian countries." "But Egypt has continued to engage innegative campaigning against the Grand Ethiopian Renaissance Dam," Tegenu said.

He also criticized Egyptian demands to include additional international representatives on a panel of experts tasked with studying the dam's potential impact on downstream states. The committee currently containstwo members each from Ethiopia, Sudan and Egypt, along with four others representing the international community. Egypt, Tegenu said, was"determined to delay the tripartite engagement by withdrawing from the Ethiopia, Sudan and Egypt forum." He added: "We urge Egypt to re-join the engagement and work for the benefits of our countries."

Deputy Prime Minister Demeke Mekonnen, also speaking at the ceremony,said the expert panel's findings had confirmed that the dam's constructionmet international standards of efficiency and safety. Mekonnen added thatSudan had publicly declared its support for the dam, going on to describe the project as a "correction" of previous unjust water-sharing agreements."The rule of the game of unjust utilization of the waters of the Nile is over," he said. The dam, Mekonnen said, "symbolizes Ethiopia's determination and ability to get back to its ancient civilization and glory." The ceremony, held at the construction site 980km northwest of Addis Ababa and carried live on local television and radio, was attended by officials, diplomats, religious leaders and public figures.

Ethiopia is building the $6.4-billion dam on the Blue Nile, which representsEgypt's primary source of water. When finalized in 2017, it will have a

6000-megawatt production capacity, according to government sources.Over 30 percent of construction work on the dam has already been completed, officials say. The project has raised alarm bells in Egypt, the Arab world's most populous country, which fears a reduction of its historical share of Nile water.
Water distribution among Nile basin states has long been regulated by a colonial-era treaty giving Egypt and Sudan the lion's share of river water. Citing its need for development, Ethiopia says it must build a series of dams to generate electricity, both for local consumption and export. AddisAbaba insists the new dam will benefit downstream states Sudan and Egypt, both of which will be invited to purchase the electricity thus generated.
Egypt’s Potential Presidential Candidate Threatens to Use Force AgainstEthiopia’s Dam’
SUDAN TRIBUNE (April 9, 2014) An Egyptian potential presidential candidate hopeful announced today that he will order the use of military force against Ethiopia if the latter does not suspend the construction of the Grand Renaissance dam. In announcing his presidential bid at a press conference on Sunday, lawyer Mortada Mansour said that “water for Egyptis Egypt’s life”. “There are signed international conventions… .There are two agreements, one in 1929 and the other in 1959 to regulate water usage between Egypt and Sudan,” Mansour added.
The controversial figure, who was elected last week as head of Cairo’s Zamalek Club, accused Israel of standing behind the Ethiopian dam project and dismissed popular initiatives to resolve the dispute with AddisAbaba. “There are international organizations that failed [to mediate] andEthiopia stuck to its position. Just like they threatened to use their army, Egypt has an army. If Israel which is inciting Ethiopia learned a lesson from the Egyptian army in 1973 [war], you are threatening my life. I will not allow you to build your dam and block water from me and in the end famine occurs among the Egyptian people and we kill each other for a drop of water,” Mansour said.
“Just like they showed off and brought their generals around the dam and said if Egypt can come. No we also have generals and planes O’ Ethiopia that can reclaim Egypt’s rights because we will not allow a drop of water to be cut, to have drought in the country, in agriculture, people can’t find a drop of water. This is vital for us. I thought that for subsequent Egyptianadministrations that the issue of water is a life or death issue. This is not up for discussion” he added. Egypt fears that the $4.6 billion hydropower plant will diminish its share of the river’s water flows, arguing its historic water rights must be maintained. Ethiopia is the source of about 85% of the Nile’s water, mainly through rainfall in its highlands, with over 90% of Egyptians relying on water fromthe Nile’s flows. In June 2012, a panel of international experts tasked withstudying the impacts of the Ethiopian dam on lower riparian countries, including Sudan and Egypt, found that the dam project will not cause significant harm to either country. Cairo remains unconvinced and has sought further studies and consultation with Khartoum and Addis Ababa.

If Mansour's candidacy is endorsed by the presidential commission he willface the former Egyptian defense minister Field Marshal Abdel-Fatah El- Sisi who is widely seen as almost certain to win. The leftist political figure Hamdeen Sabahi has also pledged to compete in the elections. Mansour has made a failed bid to run for president in the 2012 elections but was disqualified by the elections committee. According to a profile by the DailyNews Egypt, Mansour said in 2011 that he did not "have the right to run" for president because he is "ill-tempered".

In April 2011, Mansour was accused of being involved in Tahrir clashes commonly dubbed "the Battle of the Camel" on 2 February, which left 11 demonstrators dead and hundreds injured. He was later acquitted of all charges however. He ran in four parliamentary elections in 1990, 1995, 2000 and 2012, but only won in the 2000 elections. In 2012, he lost to anopponent from the Muslim Brotherhood. He is well known for his hot temper and was taken off air in TV phone interviews a number of times forusing obscene language. Mansour is also seen as someone who is obsessed with filing numerous police complaints and lawsuits against figures he has disputes with. Meantime, recently an Egyptian ex-Military general offers Ethiopia, solve the GERD dispute. The retired ex-Egyptian Military general offers Ethiopia three solutions to solve the Nile Dam dispute with Egypt based on his personal views. According to Egyptian Media News, the retired ex-Egyptian military officer talks with the current Egyptian coup d'état language: totally non sense.

European expert accuse Egypt of Hiding Report on Ethiopia Dam'

SIWI (April 17, 2014) - An Europe-based water institute official blamed Egypt for keeping an international report on Ethiopia's mega dam classified. Dr. Ana Cascao of the Stockholm International Water Institute (SIWI) said Cairo might have kept the final report of the Tripartite International Panel of Experts on Ethiopia's $4 billion dam a secret in order to "divert attention from political revolutions" in Egypt and to portray a national security crisis. The Tripartite International Panel of Experts included four Egyptian and Sudanese experts as well as four international experts. The committee addressed various concerns from allsides, and organized meetings and visits to the dam site before it submitted one final report with full consensus, signed by all members of the Panel.

The final report concluded that the Grand Ethiopian Renaissance Dam (GERD) satisfied all international design criteria and safety standards. Thereport also said the dam has no impact on water flow downstream towardEgypt. According to Dr. Cascao, various studies show that the GERD has benefits particularly for Sudan, as well as Egypt. She added that the Ethiopian dam "makes more water available for farm & irrigation in sudan,it reduces the problem of evaporation in Egyptian dams and it solves sediment and flood issues" that have reportedly cost millions for Sudan and Egypt.

Dr. Cascao is an author and the top independent expert on Nile Hydropolitics and Transboundary water resource management, on which subjects she did her PhD and researched on for half a decade. Dr. Cascao

claimed she was not surprised that Sudan is supporting Ethiopia, but “Egypt has to start reviewing its historical position.” The London-based Guardian newspaper also said “the greatest long-term concern for Egypt”might be Sudan’s intentions of increasing irrigation projects after the Ethiopian dam becomes operational. Dr. Cascao added that considering the dam’s numerous benefits for Sudan and Egypt, the two countries should actually “pay Ethiopia for the construction and maintenance of thedam.”

However, Egyptian government and its state media are propagating the message “we are under threat” and keeping positive facts about the Dam“a secret from the people of Egypt.” According to her, both Ethiopian andEgyptian governments are using the mega Dam as a diversion tool from domestic political issues and as a tactic to unify their divided people against perceived external threat.

NILE - Egypt to ‘escalate’ Ethiopian dam dispute’

Aljazeera (April 21, 2014) In the three years since construction began on the 1.8km Grand Ethiopian Renaissance Dam across the Blue Nile River, Egypt and Ethiopia have been engaged in a war of words over its potentialimpacts. Ethiopia believes the massive dam will herald an era of prosperity, spurring growth and attracting foreign currency with the export of power to neighbouring countries. But Egypt has raised concerns about the downstream effects, as the Blue Nile supplies the Nile with about 85 percent of its water.

Both sides say they seek a negotiated solution, but they remain at loggerheads, with negotiations stalled. Ethiopia insists the dispute must beresolved through negotiations between the two parties, with Mahamoud Dirir, the ambassador to Egypt, noting in a statement last month that "there are only two… countries in the entire world which are well-placed tomediate between Egypt and Ethiopia." Egypt, meanwhile, is quietly lobbying the international community for support against what it says is a violation of international law, diplomatic sources confirmed to Al Jazeera. "Egypt plans to take actions to escalate the situation against Ethiopia," said a western diplomat in Cairo, who spoke on condition of anonymity. "But the exact implications of these actions [are] still unclear." Egypt's main concern is water security, as the country faces a future of increasingscarcity. Nearly all of Egypt's water comes from the Nile, and its population of 83 million is growing at nearly two percent annually.

Already, water shortages cause problems. The most common response isthe reuse of wastewater in agriculture, often untreated. The 2005 UNDP Human Development Report for Egypt stated that "poor water quality affects both health and land productivity with damage costs estimated tohave reached LE 5.35 billion [$7.7m] or 1.8 percent of GDP."

Doaa Ezzat Zaki al-Agha, a water management specialist conducting research in the Nile delta, said five members of her family died from liver disease, which she believes resulted from poor drinking water. "They haveno other choices, only the Nile water," she said. Mohamed Abdel Wahab, afarmer from a small village of 300 families near the delta city of Alexandria, an area that regularly experiences water shortages, believes

the government should be "more strict with Egypt's sovereign right to water" – and his view reflects that of many Egyptians. Any threat to the country's water supply is treated as an existential threat.
Accordingly, Egypt has long opposed upstream development projects on the Nile. In the past this prevented Ethiopia from receiving money from internationalorganisations like the World Bank, which has a "no objection" rule for projects it funds. Now, Ethiopia is funding the $4.8bn project itself.
Tensions peaked in May 2013 when Ethiopia began diverting the Blue Nile.Former Egyptian President Mohamed Morsi told a national conference: "We will defend each drop of Nile water with our blood if necessary." Today, statements from the Egyptian Foreign Ministry are more conciliatory, with spokesperson Badr Abdelatty saying he hoped the situation could be resolved through "cooperation". A recent statement by Abdelatty on the State Information Service website, however, adds: "The Ethiopian dam is an issue that can bear no compromises."
The last negotiations in Addis Ababa in February stalled over whether international experts should be included in a technical committee being formed to implement the recommendations of a May 2013 report on the dam. Written by an international panel of experts (IPOE), the report proposed more extensive assessment of the dam's potential transboundary environmental and social impacts. "We must have an international member on the committee and the Ethiopians refused this," said Khaled Wasif, a spokesperson for the Egyptian Ministry of Irrigation and Water Resources. As construction of the dam progresses – it is already 30 percent complete – Ethiopia has less incentive to negotiate andEgypt has less leverage. With negotiations at an impasse, Egypt is petitioning other countries for support, sources say.
By referring to supposed breaches of international law, Egypt hopes to pressure donor communities who have investments in or influence on Ethiopia, according to the western diplomat in Cairo.
Foreign Minister Nabil Fahmy has toured Africa and Europe in recent months and Nile water has been on the agenda. During a trip to Italy at the start of February, Fahmy asked the Italian company contracted to build the dam to halt construction. A Foreign Ministry letter to the Salini Construttori company, obtained by Al Jazeera, states: "The government ofEgypt calls upon the EU Commission, and the esteemed European governments, to give due consideration to the accountability of business enterprise of European nationality for their conduct in supporting Ethiopia's projects affecting the Nile river downstream states."
It continues: "Egypt also calls upon the government of Italy, to invite Salini construttori to suspend construction works at the GERDP [Grand EthiopianRenaissance Dam Project] until the recommendations of the IPOE Report are implemented."
The Egyptian Foreign Ministry, the EU delegation in Cairo and the Italianembassy in Cairo declined to comment on the note. A spokesman for theItalian embassy said: "On this aspect we don't feel like replying on their behalf [of the Egyptian foreign ministry]. If they don't want to talk aboutit, it is fine for us as well." According to the diplomat in Cairo, Egypt has

also lobbied the US, China, Saudi Arabia, the UAE and Japan, as well as international organisations such as the World Bank. Spokespeople for allof these governments and organisations declined to comment, with the exception of the Japanese embassy in Cairo, which denied being approached by Egypt on the issue.

Until recently, Egypt has relied on a "historic right" and colonial-era treaties to defend its water share. "This position is absolutely untenable," said Owen McIntyre, a professor of international water law at University College Cork, noting the colonial-era agreements "completely ignore upperriparian states".

Today, Egypt's position has evolved, with the governmentquoting "widely respected" principles of international law. "International watercourses are governed by a set of agreed legal rules and principles," Abdelatty said. "Among these widely respected rules and principles is that of the equitable and reasonable utilisation of the river, the ‘no harm' rule, and the prior notification rule."

However, Egypt's interpretation differs from that of its neighbour and much of the international community, McIntyre said, noting the principle isgenerally formulated in terms of "significant harm". The May 2013 IPOE report concluded that despite more studies being needed, long-term effects of the dam were unlikely to harm Egypt. In the short term, however, less water will reach Egypt as the reservoir fills. While Ethiopia says it is open to negotiating the period over which it fills the reservoir, Egypt insists it will be harmed regardless. A country's dependence on water is the primary factor by which harm is evaluated, McIntyre said, andEgypt insists it is a water-scarce country. "The problem is that when you look at Egypt's use of Nile water, it is actually rather wasteful," McIntyre said. The harm principle is just one factor to be considered alongside the obligation on states to cooperate in the reasonable and equitable utilisation of transboundary watercourses, he added. Egypt's history of cooperation is not strong. The Nile Basin Initiative, a partnership of Nile riparian states formed in 1999 and supported by the World Bank, aimed tocreate a cooperative framework agreement for the management of Nile water. But Egypt refused to sign any agreement that did not guarantee itscurrent share of Nile water.

In addition, Egypt previously objected to the very principles it now advocates. It did not support the UN Watercourses Convention 1997, which codified the principles of transboundary water management. "Egyptcannot get help through international water law as Egypt herself did not acknowledge these principles historically," said Muhammad Mizanur Rahaman, a professor of international water law at Asia Pacific University in Bangladesh. By acting unilaterally, "Ethiopia is now, ironically, followingthe same path as Egypt did before" when it constructed the Aswan High Dam in the 1960s, Rahaman noted. "Egypt, Ethiopia and Sudan should allagree on the principles which they agree on before trying to take refuge or shelter from the principles of international water law."

NILE POLITICS: The Sudanese Position on Grand Ethiopian RenaissanceDam, Stop and Check’

For sure, the "Ethio-Sudanese relations" is a model for African and the third world countries but sometimes we need to stop and check; we need to look here and there to make sure that all odds have been brushed aside. One of the odd and weird statements that I have read in Sudanese media was said by Dr. Ahmed Almofti in an interview with Al-Intibaha Arabic daily, in which he said: Addis Ababa has some hidden purpose for setting up Renaissance Dam. In the interview, he also criticized the Ethiopian Ambassador Ato. Abadi Zemo in a way which is completely not representing Sudan and Sudanese people, it was really embarrassing for me to hear such false accusations against a person who is highly respected in Sudan not because he holds the title of Ambassador but because he is one of the best friends and brothers of Sudan and Sudanesepeople. Moreover, Abadi Zemo is one of the historical heroes of the liberation battles against Derg bloody regime in Ethiopia; Abadi is an icon of one of the greatest African revolutions.

According to Al-Intibaha, Ahmed Al-Mufti claimed that "The Ethiopian Ambassador also exercises strategic deception because he has no evidence to prove what he says. The Ethiopian Ambassador also fabricateslies About the Renaissance Dam". Really, I think that Dr. Al-Mufti must apologize and must make correction to his position. The Sudanese positionon the Grand Ethiopian Renaissance Dam - GERD is very clear, actually it is based on scientific studies and the orientation of African regional cooperation.I have the honor to participate in "AU Zero Hunger Summit" in Addis Ababa in July 2013, and I made an interview with the Sudanese Agriculture and Irrigation Minister at that time, Dr. Abdelhalim Almutaafie. He said that Sudan supports the construction of the GERD; he also said that it is better to build dams in Ethiopia than in the Sudan or Egypt because of topographical reasons. “The level of evaporation in Sudan is higher than in Ethiopia for dam water reservoirs in Sudan and Egypt wouldbe exposed to higher temperature from the environment and the sun as they would be in flat lands while in Ethiopia reservoirs are built in deep gorges”.

Most of Sudanese experts and academicians publicized their opinions which were typical for the official position. I can remember the first big gathering on this issue in a symposium titled “Impact of GERD on Sudan sand Egypt that was organized by the International University of Africa incollaboration with the Ethiopian Embassy in Khartoum. The Sudanese experts called for a tripartite supervision of the construction of the Dam and sharing the costs by the three states. From that time the tripartite dam technical committee established by Sudan, Ethiopia and Egypt started its work in a very positive atmosphere but now the disputes started to appear again. What we need, is to involve in more negotiations between the three neighbors and to stop exchanging accusations becausefalse accusations will damage the atmosphere of the negotiations. (Text ends)

ANALYSIS: A misplaced opposition to the GERD’

Professors Minga Negash, Seid Hassan and Mammo Muchie (April 29,2014)

The 1929 Nile water allocation agreement that was signed by Egypt and the United Kingdom (which excluded Ethiopia and nearly all other upper basin countries) allocated 48 billion (65%) cubic meters of water per year to Egypt and 4 billion to the Sudan. The 1959 agreement between Egypt and the Sudan raised the share to 55.5 (75%) billion and 18.5 billion cubic meters to Egypt and the Sudan, respectively. This agreement also excluded all the other upper Nile riparian nations. Egypt wants to keep thecolonial-era agreements and the 1959 accord. This unfairallocation of the Nile water enabled Egypt to construct the Aswan Dam and the two countries never cared to consult the upper riparian nations. As argued by Badr Abdelatty, a spokesman for Egypt's Foreign Ministry, Egypt wants to keep the status quo because it needs all the "assigned 55 billion cubic meters a year for vital use such as drinking, washing and sanitation needs" by 2020. This clearly indicates Egypt's desire to secure its own Nilewater-related benefits intact while at the same time denying other (Sub- Saharan) Nile riparian countries from using their own waters for alleviating poverty and enhancing sustainable development. Contrary to the Nile Basin Initiative (NBI) that was formalized in 1999.

That Egypt was a party to, it is now saying that any change to the colonialera agreement would be tantamount to affecting its strategic interests andrepeatedly threatens to use all means available if Ethiopia continues to build the Great Ethiopian Renaissance Dam (GERD). Egypt continues to escalate the confrontation despite Ethiopia's claim that the dam would have no appreciable negative impact on Egypt. Ethiopia, along with the other upper Nile riparian countries object the privileges that Egypt gave itself and consider Egyptian monopoly over the Nile waters as a violation of their sovereignty. In accordance to the 2010 Entebbe Agreement by theupstream countries, which included Ethiopia, Kenya, Uganda, Rwanda andTanzania, and now effectively Sudan and South Sudan), Ethiopia, therefore, insists on adhering to its plan and is forging ahead on constructing the dam. In what follows, we use an amalgam of economics, history, law, security and environment factors to examine the Egyptian opposition to the construction of the Grand Ethiopian Renaissance Dam (GERD). We try to triangulate these factors hoping to contribute to the debate and gain insight into the current tension between Egypt and Ethiopia. We attempt to make a dispassionate analysis of the water sharing problem between upstream and downstream countries. Consistentwith theory and real life cases, we surmise that water has been and continues to be the cause for conflict in a number of regions in the world. And, unfortunately, water wars tend to be irrational, unsustainable and economically and socially destructive. Trans-boundary water sharing and pollution (environmental-ecological) problems are never resolved through hegemonies, militarism and ultra-nationalism. Dissenting voices against mega projects such as GERD are not new.

The criticisms ranging from cost and scheduling overruns (as a recent study by Ansar, Flyvbjerg, Budzier and Lunn of Oxford University shows ,to their impacts on population dislocation, corruption, transparency in awarding of contracts, the manner in which such projects are financed,

social and environmental impacts in upstream and downstream countries and water security concerns. Hence, Ethiopians may legitimately ask questions and raise concerns about the manner in which the Government of Ethiopia is handling the project. In this article, however, we focus on transboundary environmental problems, the fair use of the Nile water andaddress Egyptian concerns. This is important because the construction of GERD has reignited the long standing explosive issue of the equitable useof Nile waters. We also believe the recent (counterproductive) Egyptian threats of war and various forms of diplomatic offensives require the attentions of scholars of substance and policy makers. Egyptian worries and aspirations over the Nile River system however is historical and goes back to the days before the formation of the Egyptian nation/state even though the issue began to dominate the country's political landscape withthe generation of militarism and ultra-nationalism (from Gamal Abdel Nasser to the late President Sadat's 1979 threat of war and to the currentleaders of Egypt vowing not to lose a "drop of water)." The recent politicalinstability in Egypt must have made the trans-boundary water sharing problem a point of political opportunism. Reports indicate that Egypt may indeed be laying the ground work to "destroy the dam before Ethiopia starts filling it with water or risk flooding Sudan's flat eastern territories upon its destruction."

A WikiLeaks report is also known to have revealed that Egypt, in collaboration with Sudan, had plans "to build an airstrip for bombing a dam in the Blue Nile River Gorge in Ethiopia." In its June 2013 analysis of Egypt's military options, Straighter, a global intelligence organization indicated that the country does have military options against Ethiopia's dam, but noted that distance will heavily constrain Egypt's ability to demolish the work. The options, however, may include air attack from bases in the Sudan, Djibouti and Eritrea. And/or sponsoring present day local "militants" to frustrate the construction of the dam.

Obviously, Ethiopia is aware of the Egyptian options and its age-old aspiration to control the sources of the Nile River system. For example, on April 17, 2014, amid reports that Egypt was trying to woo South Sudan towards itsdispute over Nile waters

The Voice of America reported that the President of South Sudan assured the Ethiopian authorities that the recently signed military and economic cooperation between Egypt and South Sudan would not allow Egypt to attack Ethiopia or allow subversive activities. Egypt's policy towards upstream countries is primarily driven by its interest on the water which aims at thriving at the misery of downstream countries, apparently without any form of substantive reciprocity. In contrast to the present dayrelationship between Egypt and Ethiopia, their ancestors, despite their limited knowledge of geography and hydrology, had a better understanding of the economics of water sharing. As the renowned historian Richard Pankhurst documented, the Turkish Sultan who ruled Egypt before the British, had "paid the ruler of Ethiopia an annual tax of 50,000 gold coins" lest the latter diverts the Nile.

Nowadays, and not surprisingly, even the Egyptian Minister of Antiquities is against the GERD. In fact, institutional memories and abundant documents of the last sixty years indicate not only just the inconsistency, but also an immense level of damage that Egyptian foreign policy has done to Ethiopia and the Sudan. Egyptian interference in the two countries' internal affairs has been largely driven by the Ethiopian and theSudanese Use of the Nile waters. For instance, Egypt objected the independence movement in South Sudan but promoted the separation of Eritrea and the creation of one of the most densely populated landlocked countries in the world. The international community is not unaware of these facts but Egypt's strategic location and its pivotal role in the politics of the Middle East did not allow the powers to be to call a spade a spade. As of late, intergovernmental organizations like the African Union which were once mute about the behaviors of successive military rulers of Egypt,who often controlled political and economic power under the cover of phony elections and revolutions, have started to recognize the problems of the Nile River system. Ethiopia's and the other upstream riparian countries' rights to equitably share the waters of Nile is now an African agenda though key members of the Arab League continue to support the position taken by Egypt.

Ethiopia's right to use the water that originates within itself would have included (and, in our view, should include), in addition to power- generating purposes, irrigation, water recreation and navigational services, flood control as well as water storage and supply. It is obvious, therefore, that dams provide valuable economic benefits. Just like any mega project, dams also involve several side-effects, which could be summarized as environmental and ecological, social (forced relocation of locals), economic and even political. Other concerns may include evaluating and managing the risks associated with dam construction as well as asking questions whether the product (GERD in our case) would provide the desired and needed benefits to stakeholders such as access toelectricity. A reasonable framework of concern about dam construction, therefore, would include a thorough benefit-cost analysis, not just one- sided focus on the costs. This is our major concern in regards to environmentalists and some of their Ethiopian supporters who campaign against the 6000 MW dam. The environmentalists refer to the GERD as a "white elephant,"

Despite the fact that the project's leaked document, alleged to be prepared by International Panel of Experts (IPE) showing favorable financial and social benefits to Ethiopia and the Sudan. Environmentalistssuch as the International Rivers Network (IRN) need to, therefore, quantify the magnitude of the side effects of the project and should not rely on "covert" and "secondary" data. More importantly, rather than being the butterflies of potential conflict in the Eastern Nile region, they need to: (i)acknowledge. Ethiopia's sovereign rights to use its own resources in accordance with the international law and without hurting downstream countries; (ii) identify mitigation strategies so that genuine concerns are addressed before the construction is finalized; and (iii)

propose how the mitigation strategies are going to be financed. In April 2014, the California based environmental pressure group which is againstany form of large dam that is proposed to be built in Africa and Asia leaked the 48 pages long confidential document that was prepared by International Panel of Experts (IPoE) on Ethiopian Grand Renaissance Dam. Now that the confidential report is in the public domain, it allows everyone to put to test the concerns of both the friends and foes of the GERD.

II

The key features of the IPoE's report could be summarized as follows:- (i)unlike the options of smaller dams which would have included potential irrigation projects, GERD is an energy production project and any fear of large and permanent reduction in theflow of freshwater to downstream countries is unfounded; (ii) the filling up of the dam is planned, to be done in stages by taking into account rainfall patterns and the catchment area; (iii) both the financial and social cost-benefit preliminary analysis of the project on upstream and downstream countriesare favorable and the expected damages on downstream countries are notinsurmountable; (iv) the preliminary findings about the project's side effects on Egypt is not sufficient and hence there is an information (hydrological) void, and much of the current allegations and threats are based on unfounded Egyptian fears; (v) work has progressed to the extent that, at the time of writing this article, the project has reached a degree of completion rate of 31% and the water diversion has been successfully carried out; (vi) the expected loss of water due to evaporation for the new project is not worse than what Egypt is currentlylosing from its environmentally unfriendly projects and poor water management; 18 (vii) recent geological and hydrological studies have documented an abundant level of ground water in the Nile basin countries19 and hence downstream countries will not be thirsty if upstream countries build dams that generate electricity. It is clear, therefore, that Egypt's no dam policy or stance against large energy producing dams in upstream countries is a misplaced opposition and therefore calls for a new thinking in Cairo.

As Professor Aaron Wolf of Oregon State University observes, there are about 261 transboundary rivers across the world and unless carefully handled a significant proportion of these rivers could be causes of conflict.Wolf documented that water has been the cause of political tensions between a number of countries, including but not limited to Arabs and Israelis; Indians and Bangladeshis; Americans and Mexicans, the Chinese and other downstream countries, Brazilians and Paraguayans and all the ten riparian states of the Nile River system. He observes that "war over water seems neither strategically rational, nor hydrographically effective nor economically viable." 20 In other words, there is little reason for a "water war" between Egypt and Ethiopia. The two countries can also learnfrom inter-basin development projects that are successful, such as the

Colorado River Basin allocation between the US riparian states and Mexico, the Columbia River Agreement between the US and Canada and the numerous European collaborative projects and integrated river basin managements of the River Rhine. In particular, Egypt and Ethiopia could learn a lot from South Africa paying21 Lesotho to quench its increasing thirst from the Lesotho Highlands Waters Project. The framework for exploiting the Niger River Basin, the Zambezi River basin and the Nile Basin Initiative22 itself could serve as useful points of departure for cooperation. Notwithstanding the above, Egyptian politicians often argue about "historical rights" and connect the water issue with the civilizations of the antiquities on the Nile delta and forget about the history of the formation of nations and states. Evidently this stance is self-serving in that it ignores historical tensions between black people in the region (present day Sudan, South Sudan, Niger, Eritrea and Ethiopia, among others) and the race controversy in the African origin of humanity and the history of the Nile Valley (see for example Martin Bernal's Black Antenna, 1987; Anta Diop23, among others). The politics of the Nile River system thus has an Africa-Arab dimension and hence sensitive to Pan Africanist and Pan Arabism agendas. Hence, if a conflict between Egypt and Ethiopiaerupts, it is more than likely to have spillover effects on the rest of Africa. Like most of the post colony states of Africa, modern and independent Egypt was created out of the ashes of colonialism (see for example AchilleMbembe and Samir Amin, among others). Britain's colonial interest on theNile dam at Lake Tana (main source of Abay/Blue Nile) is the foundation of Egypt's historical and legal claims to the water. Britain's interest however was primarily driven by its desire to irrigate its large cotton plantations in the Anglo Egyptian colony of the Sudan and supply its factories which were located in the United Kingdom. Modern day cotton plantations in Egypt are entirely dependent on the soil that gets exported by the river primarily from Ethiopian highlands. In a series of short articles, Dr. Yosef Yacob24 documented the history of colonialism in the region and indicated how Emperor Menelik (1844-1913) and Emperor Haile Selassie (1892-1975) managed to escape Britain's colonial ambitionsover the Ethiopian highlands. He also revealed how Emperor Haile Selassiewas visionary in that he successfully resisted Britain's encroachments on Lake Tana by hiring an American engineering company to construct the dam and trying to finance the project through the issuance of debt securities in the United States. In other words, had the Emperor's wishes were realized, the GERD would have been built a long time ago.

We have yet to see any reasonable criticism of Dr. Yosef Yacob's treatise by those who oppose the construction of the dam. The next leg of the Egyptian opposition is international law. Here too the argument collapses before it faces the scrutiny of legal scholars. Egyptian officials often refer to the 1929 colonial era agreement and the 1959 agreement signed between Egypt and the Sudan (both former British colonies) that Ethiopiawas not party to and had never consented to. First, it is important to notethat colonial treaties have no direct relevance for resolving Africa's contemporary problems. The Nile basin countries have already rejected it.

Thus, the dominant view is that trans-boundary assets belong to the post-colonial states and the new states have to agree how to share their jointlyowned assets. Second, Ethiopia was and is an independent state and it was not a party to the 1929 and 1959 agreements. Historical records also indicate that Britain, Egypt and the Sudan conspired and excluded Ethiopiafrom the negotiation. In this respect, Wuhibegezer Ferede and Sheferawu Abebe, writing on the Efficacy of Water Treaties in the Eastern Nile Basin, Africa Spectrum, 49, 1, 55-67 (2014) outline two approaches that evolve from the principles of international law.25 The authors show the fundamental differences between upstream and downstream countries in that upstream countries (Ethiopia, Uganda, Tanzania, Rwanda, Burundi, Kenya, Democratic Republic of Congo, Eritrea and South Sudan) appear tofavor clean slate policy while downstream countries (Sudan and Egypt) favor colonial treaties.26 Notwithstanding the preference of one or another form of legal principle, Egypt's insistence on colonial treaties collapses simply because Ethiopia was not a colony of Britain or indeed any other European power.

III

Now that we have seen Egypt's historical and legal arguments falling apart, the next step is to examine the third foundation of the Egyptian stance - the environmental aspects of the dam. Previous literature indicated that carbon emissions and contaminations of rivers that cross national boundaries are examples of trans-boundary environmental problems. Hence, policy formation requires enforceable global treaties, sound national policy and the examination of advances in a number of disciplines.27 Furthermore, investments in big national projects such as stadiums, mineral extraction, oil and gas, canals, big dams, highways, andbig architectural projects add behavioral and political dimensions to the science, technology and the economics of such undertakings. Most of the finest buildings and stadiums that host world cup games were and are being constructed in that national pride. And behavioral and emotional factors dominate financial arguments. In other words, national projects bytheir nature have behavioral dimensions and may not be captured by the paradigms of rationality and net present values. Time will tell whether the Ethiopian dam is different.

The mainstream literature on environmental economics focuses on welfaremeasurement, sustainability, technological change, externality and green accounting. Theworld commission onenvironment and development (aka the Bruntland Commission, 1987), for example, states that "sustainable development is meeting the needs of the present generation without compromising the ability of future generations to meet their own needs". Consistent with thisunderstanding, the Nile River system has both trans-boundary and non- trans-boundary features for the riparian states and hence Egypt, in theory, may have a cause for concern. This concern can nonetheless be resolved through international instruments and institutions and bilateral relations that are based on mutual respect and trust. The international convention on the protection and use of trans-boundary and international

lakes which was signed by nearly 40 countries does not provide the base for resolving disputes, and worse, no country from Africa (including Egypt)has actually ratified it. It nonetheless can be another point of departure.

The United Nations Environmental program could also be a facilitator. Furthermore, as noted earlier, Africa has frameworks for inter-basin development. The Nile Basin Initiative (NBI) has been a major institutionaldevelopment which enables all riparian states to collaborate and act as equal members. Egypt's effort to undermine28 this agreement is a mistake.

Other features of the leaked report of the International Panel of Expertscovers the main factors of the project. Among other things, it confirms that: (i) GERD iseconomically feasible; (ii) the design meets international standards, subject to minor"corrections"; (iii) the contractor is reliable and has extensive international expertise and reputation inbuilding large dams; (iv) the environmental impact study within Ethiopia is adequate and the trans- boundary effect on the Sudan is favorable and controls flood; and (v) the section on trans-boundary effect on Egypt requires additional study using complex models and actual data rather than reliance on desk work. In short, the authors of the 48 pages-long confidential report did not say thatthey expect a catastrophe and the vanishing of the Egyptian nation if the project gets completed. In short, Egypt is not in any imminent danger.

This conclusion has ramifications for the multilateral institutions that refused to finance the project. In summary, Egypt's opposition to GERD isindeed misplaced. Its return to the negotiation table and the African Unionand the ratification of the Nile River Basin Cooperative Framework and Convention on the Protection and Use of Trans-boundary Watercourses and International Lakes are avenues for resolving the sticky problems of water sharing.

NILE: Egyptian satellite to monitor construction of Ethiopia's disputeddam'

By Ahram Online (April 30, 2014) - A new Egyptian satellite will track the construction of an Ethiopian hydroelectric dam over which officials in Cairoand Addis Ababa have been locked in a standoff over fears that the project will hinder Egypt's access to the Nile's water.

Launched almost two weeks ago, Egysat will monitor Ethiopia's Grand Renaissance Dam by capturing high quality photos of the construction site

along with other sources of the Nile, said Alaa El-din El-Nahry, vice president of Egypt's National Authority for Remote Sensing and SpaceSciences.

The LE300 million satellite – which will come into operation in mid-June after a two-month test period – will track the dam's height, storage capacity and water discharge. It will also monitor the Kongo River basin toassess the effectiveness of a proposed project to link the Kongo and Nile rivers.

Egypt's government believes the satellite's findings will bolster its negotiations with Ethiopia and provide legal ground in case it must resort to international arbitration over any violations in the dam's stated purposeof electricity generation, El-Nahry said during a seminar in Cairo, according to Al-Ahram's daily Arabic newspaper.

Egypt has been particularly concerned that the dam, now more than 30 percent finished, will hugely impact its share of the Nile, the country's main source of potable water. Situated near the Sudanese border on theBlue Nile, a Nile tributary, the hydroelectric dam will be the biggest in Africa, capable of producing 6,000 megawatts of energy.

Last week, Ethiopian Prime Minister Hailemariam Desalegn urged Egypt toreturn to the tripartite discussions with Ethiopia and Sudan in an effort to settle the dispute. The three countries have been engaged in a series of dialogues since the launch of the project three years ago.

Last year, Ethiopia and five other Nile-basin countries – Rwanda, Tanzania, Uganda, Kenya and Burundi – endorsed an accord, the Co- operative Framework Agreement, which replaces a 1929 treaty granting Egypt veto power over any project on the Nile in upstream countries.

Sudan, Egypt's immediate downstream country, has backed Ethiopia'splans to build the dam.

NILE: Ethiopia ignores 'repeated' calls for dam negotiations: Egypt FM By Ahram Online (May 14, 2014)

Egypt has repeatedly called for negotiations with Ethiopia over the Grand Renaissance Dam but has not received a real response, Egyptian Foreign Minister Nabil Fahmy said.

Fahmy, in an interview with Al-Ahram newspaper published on Wednesday, said that Egypt would not forget the issue. The under- construction dam is situated near the Sudanese border on the Blue Nile, aNile tributary. It is set to be the biggest hydroelectric dam in Africa, producing as much as 6,000 megawatts of energy.

Egypt has repeatedly expressed its concern that the dam will affect its share of Nile water. Ethiopia insists this will not happen. We believe thatEgypt, Ethiopia and Sudan will benefits from reaching solutions through negotiations, Fahmy added. From this standpoint, Fahmy added, he hadmet with the Ethiopian foreign minister a month ago, where Fahmy presented some initial ideas, but is yet to receive a response from Ethiopia. Fahmy’s comment contradicts Ethiopian statements that have previously called for dialogue after tripartite talks between the two countries and Sudan reached a stalemate.

In late April, Ethiopian Prime Minister Hailemariam Desalegn invited Egyptand Sudan for another round of tripartite talks, while in March the

Ethiopian foreign minister said his country was adamant about holding talks with Egypt. Fahmy also said that previous negotiations were held inthree stages but “unfortunately didn’t show an indication for positive development.”

Last year, Ethiopia and five other Nile Basin countries – Rwanda, Tanzania, Uganda, Kenya and Burundi – endorsed an accord, the Co- operative Framework Agreement, which replaces a 1929 treaty granting Egypt veto power over any project on the Nile in upstream countries.

Sudan, Egypt's immediate downstream country, has backed Ethiopia'splans to build the dam.

Nile Basin countries to negotiate Entebbe Agreement’

Foreign ministers of Nile Basin countries to discuss possibility ofamendments in Entebbe agreement.

Daily News Egypt (May 28, 2014) - Tanzanian Minister of Foreign Affairs and International Cooperation Bernard Member plans to meet with foreignministers of the Nile Basin countries in July to discuss amendments to theEntebbe Agreement over the allocation of Nile water, the minister announced in a Wednesday statement. He added that discussions would take into account the importance of the Nile water in meeting the economic needs of Egypt.

Egyptian foreign ministry spokesman Badr Abdelatty said in a press release that Egypt considers Tanzania’s proposal an important step to protect the interests of all Nile Basin countries and enable them to achievethe maximum benefit of the Nile River. According to Abdelatty, the issue of the dam currently being built in Ethiopia will not be discussed “directly”,but rather within the framework of the Entebbe Agreement. Abdelatty added that the Tanzanian initiative reflects the understanding of the Nile Basin countries.

NILE: Uganda, South Sudan oppose Tanzania’s proposal to review the2010 Nile Deal’

Tanzanian Foreign Minister Bernard Kamillius Membe has called for areview of the agreement to consider Egypt’s water needs.

World Bulletin/NewsDesk - Uganda and South Sudan have both expressedtheir opposition to a Tanzanian proposal to review a 2010 ComprehensiveFramework Agreement (CFA) signed by upstream Nile Basin countries, known as the Entebbe agreement, in order to consider Egypt’s water needs. “Tanzania was the one pushing for the agreement; it would be a surprise to see them backtracking now,” Callist Tindimugaya, Uganda’s representative to the Nile Basin Initiative (NBI)’s technical advisory committee, told Anadolou Agency.

“International water law recognizes that once you have signed an agreement you cannot backtrack,” Tindimugaya said. “What you can do iskeep quiet; you may not say ‘I signed because I was under threat’.” Tanzanian Foreign Minister Bernard Kamillius Membe has called for a review of the CFA to consider Egypt’s water needs. “Tanzania feels that the chapter providing equal and fair share of the natural resources of the Nile to all states ought to be reviewed in favor of Egypt, considering that it

is a desert country whose lifeline is the Nile," Membe told parliament lastweek.

In 2010, upstream states Ethiopia, Kenya, Uganda, Rwanda and Tanzaniasigned the Entebbe Agreement in an effort to increase their traditional allotments of Nile water. The following year, Burundi signed on to the agreement. The deal aims to replace a colonial-era treaty that gives Egyptand Sudan the lion's share of river water.

Both Egypt and Sudan, for their part, rejected the treaty, fearing it wouldaffect their historical share of water. Tindimugaya criticized plans by Tanzania to call for a meeting of all Nile Basin states to discuss the agreement. "Tanzania cannot invite us; they are not the current chair of the NBI," he said. "Tanzania is a sovereign state and they can do as theyplease, but they do not have the capacity to do that."

The NBI was launched in 1999 by the ten riparian states of the Nile as a temporary institution until CFA negotiations were concluded and a permanent institution created. According to its website, the NBI provides"the only all-inclusive regional platform for multi stakeholder dialogue, information sharing, as well as joint planning and management of water and related resources in the Nile Basin."

Intact: South Sudan's Foreign Ministry said the Entebbe agreement had tobe maintained, since it took into consideration the right of all riparian states to Nile water. "The agreement speaks of freedom to use the Nile water. Any country along the Nile has the freedom to use the water for their good," ministry spokesperson Mawien Makol Arik told AA. He went onto criticize calls to review the water treaty. "South Sudan cannot accept this because – as a developing country – we rely a lot on the Nile," said Arik. "We know it is a critical issue to Egypt, since they feel the initiative will reduce the water volume reaching them – but we also need to use thewater."

"The Entebbe initiative came as a result of the domination of Egypt on theNile water based on an old colonial agreement. It [the new agreement] isto help the countries use the water and share it based on each country's economic development," he added. "We have to sit down as countries along the Nile and support each other on using the Nile. That is why we supported the Ethiopian [hydroelectric] dam initiative," the ministry spokesperson said.

Relations between Ethiopia and Egypt have been strained due to a multibillion hydroelectric dam now being built by Addis Ababa on the Nile'supper reaches. Egypt is worried that the Ethiopian dam project will reduceits historical share of Nile water. Addis Ababa insists the new dam will benefit downstream states Sudan and Egypt, both of which will be invited to purchase the electricity thus generated.

Ambassador Arik, meanwhile, urged Egypt to forget the colonial-era agreement and work with other Nile basin countries to everyone's benefit. "The agreement by the colonial powers cannot hold now and Egypt cannot hold on to it. They have to let go and sit down to discuss how the Nile can benefit everybody," he said. (Text ends)

Egypt: El-Sissi wins election by landslide'

By HAMZA HENDAWI and MAGGIE MICHAEL (May 29, 2014)

CAIRO (AP) — With nearly all ballots counted, Egypt's former military chiefhas won a crushing victory over his sole opponent in the country's presidential election, his campaign said Thursday. But the results were stained by questions about turnout despite a robust government effort to get out the vote. Retired field marshal Abdel-Fattah el-Sissi won more than 92 percent of the votes, compared with 2.9 percent percent for his sole opponent and 4 percent of invalid votes, according to a tally released by his campaign. His victory was never in doubt, but the career infantry officer had pushed for an overwhelming turnout as well to bestow legitimacy on his ouster last July of Egypt's first freely elected president, the Islamist Mohammed Morsi. Turnout was more than 46 percent after officials extended voting toa third day, according to interim President Adly Mansour. That figure was lower than the 52 percent turnout in the 2012 presidential election that vaulted Morsi to power. It also was lower than the bar el-Sissi himself set in his last campaign interview, when he said he wanted three-quarters of the country's 54 million registered voters to cast ballots so he could "showthe world" his support. Still, el-Sissi can genuinely claim he comes into office with an impressive vote tally of 23.38 million votes — significantly more than the 13 million won by Morsi two years ago. His sole opponent, leftist politician Hamdeen Sabahi, received 736,000 votes.

It was telling that Sabahi, who came in third in the previous election, garnered less than the 1.03 million spoiled ballots cast. Official election commission figures will likely be released next week but are not expected to change much due to the wide gap in results. Addressing a news conference on Thursday, Sabahi accepted defeat. But he said the turnout figure was not credible, adding, "It is an insult to the intelligence of Egyptians." Earlier, when voting was extended to a third day, he protestedthat it aimed to "distort" the people's will.

He said serious violations marred the balloting itself — though not enoughto significantly change the outcome. His campaign pulled its representatives from polling stations Wednesday to protest what it called intimidation and arrests of its staffers, one of whom was referred to a military tribunal. "I respect the choice of the people and acknowledge my defeat in this election," he said. "We have lost an election but we won ourself-respect ... I hope that we won credibility with the aware and intelligent masses."

Mario David, the head of the European Union observers' mission, said the election that ended Wednesday was carried out within the boundaries of the law, with only minor violations like campaigning near polling centers.

However, senior member of the EU mission, Robert Goebbels, pointed out that the relatively high turnout should not be taken as evidence of democracy. Boycott, he said, is a form of freedom of expression and no one should speak for the "silent" voters. "High turnout is not necessarily proof of democratic elections," he said, adding that turnout in totalitarian states like North Korea in which there is only a single candidate has run as

high as 99.9 percent. The unusual measures taken by the government to get voters to the polls also raised skepticism over the extent of support. Widespread reports of empty polling stations in the first two days of voting also prompted the state to abruptly add a third day after declaring the second day to be public holiday to free voters to cast ballots had madelittle difference. Government officials also offered to bus-in voters to polling centers and threatened to invoke a rarely enforced law that would allow them to fine boycotters. Bus and trains were free to allow people to return to home districts and cast ballots. "Citizen enthusiasm was dampened by the widespread perception that this election was not meaningful and that its results were predetermined," the U.S.-based Democracy International said Thursday. The group largely ended its observer mission as scheduled after two days, though European Union monitors continued. Mansour insisted that legitimacy had been achieved. Turnout, he said, showed "a broad consensus" for the political roadmap transition set by the military after Morsi's ouster.

Islamists, once the country's most powerful political machine, had called aboycott of the vote, as had many secular "revolutionary" youth groups.

After polls closed, several thousand el-Sissi supporters celebrated in Cairo's Tahrir Square, birthplace of the 2011 uprising that toppled longtime autocrat Hosni Mubarak. They waved Egyptian flags, el-Sissi posters and danced. Similar celebrations took place in the Mediterranean city of Alexandria and a string of other cities north of the capital and in theoasis province of Fayoum to the southwest.

Critics said the lack of enthusiasm at the polls was in part due to apathy among even el-Sissi supporters, knowing that his victory was a foregone conclusion. Others said it showed discontent with el-Sissi, not just among his Islamist foes but also among a broader section of the public that believes he has no concrete plans for Egypt's woes and fears he will returnEgypt to the autocratic ways of Mubarak. The measures to increase voter numbers were also startling because el-Sissi was not expected to need any help. The government and media had been whipping up adulation for el-Sissi over the past 10 months, depicting him as a warrior against terrorism and the only person able to tackle Egypt's economic problems, high unemployment, inflation and instability. Egypt officials withdrew 4 million USD to bribe African presidents on to sway thier position against Ethiopia’s dam’ Earlier today we shared an article about “Egyptian government spent $4 million in bribes to three African presidents to sway positions on Renaissance Dam.” Here is another article form the Cairo post about how the money was withdrawn. Here details. Details surrounding investigations into an old corruption casethat dates back to March 2012 were revealed by Youm7 on Thursday, which regards a case that was labeled as “classified information/national security”. The case revolves around the illegal seizure of $4 million from public funds to be given to African leaders from Nile basin countries duringthe region’s water crisis. The corruption case involves former presidentHosni Mubarak and his chief of staff Zakareya Azmy, Youm7 reported Thursday. According to Azmy’s statements during the

investigations, he was an intermediary between Mubarak and former Central Bank president Farouk Okda. Back in November 2009, Azmy wasordered to deliver $4 million to the president. The money was cashed onseparate occasions without any release documents, official or unofficial. Thus, the case was handled by the Public Funds Crimes Investigations department at the Ministry of

NILE: Egypt should cooperate with Ethiopia as sign of apology for ignoredrelations during Mubarak's era' (Translated from Arabic to English using Google Translator)

ST (June 14, 2014) - Well known former member of Egypt Parliament AbulEzz Hariri leader of party People's Alliance says the expected visit of President-elect Abdel Fattah al-Sisi to Addis Ababa in two weeks to resolvethe crisis Dam Renaissance is a good idea to restore the role

of Egypt Regional area of the Nile Basin countries, especially Ethiopia. Hariri said in a statement to "veto," that this visit would put solutions to the crisis of the dam, by initiating projects aimed at economic integrationbetween the two parties.

The former former parliamentarian demanded that during the trip to Ethiopia Sisi should be accompanied by a number of experts and consultants. He also suggested specialists offer a number of cooperative projects between the two sides which are mutually beneficial for

both Egypt and Ethiopia. This gestures are equivalent (tantamount) to anapology from Egypt to Ethiopia for what has happened during the era of former President Mubarak such as ignored in relations and cooperation.

Prime Minister Ibrahim Mahlab, should quickly learn projects submitted tothem by some specialists on the crisis and try to solve the crisis. Among these projects one of them is made by Dr Ahmed Shenawi, an expert

on water. Ethiopia can generate electricity from the Renaissance Dam andat the same time maintain its share of the waters of Egypt, and reduce the risk of construction of the dam in addition to the cost of its operation does not exceed 20% of the cost of construction of the dam.(Text ends)

Ethiopia sees Egyptian change of heart over Nile dam'

Sudan Tribune (June 15, 2014) - ADDIS ABABA – Ethiopia on Thursday commended Egypt's unprecedented and an official decision to peacefully resolve a long-standing dispute with Addis Ababa over a controversial power plant project known as the Grand Ethiopian Renaissance Dam (GERD).

"Ethiopia strongly welcomes Egypt's interest to re-launch talk over the GERD and solve the problem through dialogue," spokesperson forEthiopia Ministry of Foreign Affairs, Ambassador Dina Mufti told journalists.

"Egypt has no other option except dialogue and win-win negotiation to find a solution that is acceptable by both sides," he added. Egypt's newly elected president, Abdel Fattah al-Sisi, has recently pledged to resolve thewater dispute with Ethiopia through dialogue. Ethiopian officials said that al-Sisi is expected to pay an official visit to Ethiopia soon probably makingit his first trip to a foreign nation since he assumed

office in June 8.
Ethiopian foreign minister Tedros Adhanom, who attended the new president's inaugural ceremony in Cairo, has held meeting with al-Sisi andother high ranking officials over the multi-billion dollar power plant project.
During their discussion Adhanom has reaffirmed Ethiopia's commitment for cooperation with Egypt based on mutual trust and confidence. Al-Sisiand Adhanom have also agreed to reactivate the tripartite technical dialogue between Sudan, Egypt and Ethiopia and harmonise existing differences by high-level political consultations. Addis Ababa insists the $
4.6 billion dam project won't adversely affect Egypt and Sudan instead thedownstream countries will be benefited from the cheap and renewable hydro power processed electricity it generates. Egypt considers the massive dam project, as a threat to its water security arguing it will eventually diminish its water share.
SUDAN REAFFIRMS SUPPORT : Meanwhile, Sudanese vice-president Bakri Hassan Saleh has reaffirmed his country's commitment to the dam projectwhich Ethiopia is building in Nile river near the Sudanese border. Saleh who was in Addis Ababa earlier this week to attend a regional summit of the Inter-Governmental Authority on Development (IGAD) made the remarks while holding talks Ethiopian Prime Minister Hailemariam Desalegn. "Sudan will derive multiple benefits from the Grand Ethiopian Renaissance Dam project," Saleh said according to the state-run EthiopianRadio and Television Agency (ERTA).
SOUTH SUDAN CRISIS : Saleh and Desalegn have also consulted on the six-month-long conflict in South Sudan. While commending Ethiopia's roleto peacefully end the conflict in neighbouring South Sudan, Saleh called on Addis Ababa to continue exerting maximum efforts to bring lasting solution. Desalegn has also assured his country would remain committed to end the political crises in the youngest nation. "Ethiopia will continue toput pressure on the South Sudanese rivals through all channels available,"the Ethiopian premier said.
On Tuesday, rival leaders of the two SPLM rival factions, president Salva Kiir and rebel leader Riek Machar agreed to end fighting and form a unitygovernment within two months. At a news conference on Friday, spokesperson for the Ethiopian foreign ministry Dina Mufti said IGAD- member countries have been frustrated by the failure of previous deals. He however went on to saying that the regional bloc mediating the two warring factions won't hesitate to take action if the two sides once again violate the latest agreements. He added that a peacekeeping force drawnfrom Ethiopia, Uganda and Kenya will be deployed to end the conflict which has killed thousands since violence erupted in mid-December last year. (Text ends)
NILE POLITICS: Egypt to participate in NBI meeting, despite announcing ithas frozen membership' Egypt Independent (June 19, 2014) - A delegation headed by Ahmed Bahaa Eddin, left Cairo heading to

Khartoum, Wednesday, to participate in the 22nd meeting of the Council of Ministers of the Nile Basin countries, held under the framework of the Basin Countries Initiative. Egypt has dispatched the delegation despite announcing it has frozen its initiative membership.

A delegation member said before departure that although Egypt has frozen its membership in the Nile Basin Initiative due to differences with Basin countries over Entebbe agreement, Egypt is keen to participate in the meeting. Egypt believes that the Entebbe agreement is incomplete asother Nile headwaters countries have signed the agreement individually, the official added.

Ministers of water resources of Sudan, South Sudan, Ethiopia, Uganda, Rwanda, Burundi, the Democratic Republic of Congo, Kenya and Tanzaniawill take part in the meeting which aims to discuss means of coordinationand cooperation between the Nile Basin countries through development projects.

NILE POLITICS: Egypt and Ethiopia agree that tripartite dam committeewill resume its work'

Ahram Online (June 27, 2014) - Egypt President Abdel Fattah al-Sisi talks to Ethiopian Prime Minister Hailemariam Desalegn as they arrive to attendthe 23rd African Union Summit (AUS) in Malabo June 26, 2014. The Egyptian foreign minister along with his Ethiopian counterpart stressed that Ethiopia will understand the importance of the Nile River to Egypt andthat Egypt will understand the Ethiopian need for development. Egypt andEthiopia will form a joint committee in the upcoming three months to enhance bilateral relations between the two countries, the foreign ministers of both countries announced in a joint statement on Friday. The statement came after Egypt`s new president, Abdel-Fattah El-Sisi, met with the Ethiopian Prime Minister, Hailemariam Desalegn, after the AfricanUnion summit in Equatorial Guinea's capital Malabo.

According to the statement, the Ethiopian government is committed to avoid any potential damage that could result from the Grand Renaissance dam currently being built on the Blue Nile in Ethiopia. Sameh Shoukry, theEgyptian foreign minister, along with his Ethiopian counterpart Tedros Adhanom, stressed in the statement that Ethiopia will understand the importance of the Nile to Egypt; and that Egypt will understand the Ethiopian plans and need for development. The two ministers cited seven main points that El-Sisi and Desalegn discussed during the meeting, including respecting the dialogue and cooperation between the two countries, and the establishment of regional projects for the development of financial resources to meet the growing demand for water and to deal with water shortages. The Egyptian government is committed to constructive communication with Ethiopia.

The Ethiopian dam has been a source of concern for the Egyptian government since May last year, when images of the dam's construction stirred public anxiety about its possible effects on Egypt's share of the Nile's water. However, Ethiopian officials insisted the dam would not harmEgypt. Egypt, Ethiopia and Sudan formed a tripartite technical

committee to study the possible effects of the dam. But the committee's discussions were halted last December when Sudanese President Omar Al-Bashir announced his support for the dam during a meeting with EthiopianPrime Minister Hailemariam Desalegn. Resuming the work of the tripartite technical committee and respecting international legal principles were also

among the points on which both sides had reached common ground. Egypt has demanded that Ethiopia submit the dam's construction plans forassessment by international experts. Ethiopian Irrigation Minister AlamayoTegno said his country was already committed to the recommendations ofan international committee of experts.

NILE - Ethiopia's Nile dam project signals its intention to become anAfrican power'

Guardian Weekly (July 14, 2014) Grand Ethiopian Renaissance dam will provide energy for growing economy but add to Egypt's fears over water security. The 4×4 roars off, kicking up a cloud of dust. With one hand on the wheel, the other stifling a yawn, Semegnew Bekele could do this trip with his eyes shut. A construction engineer, he has driven down this track at every hour of the day or night over the past three years. "Ordinary people are building an extraordinary project," he says. He is referring to the Grand Ethiopian Renaissance dam (Gerd), in the north-west corner of the country close to the border with Sudan. Four hours away from the town of Assosa more than 8,500 workers and engineers are labouring on a massive project to harness the waters of the Blue Nile.

The site is closely guarded. Only officially authorised vehicles are allowed through the three checkpoints. As the kilometres flicker by, the din of the diggers becomes more audible. Then the gigantic site itself appears, with thousands of tonnes of aggregate piled up and smooth expanses of concrete lining the bottom of the Guba valley, ringed by arid hills. The hundreds of families belonging to the Gumuz indigenous people, who livedoff fishing, have been moved to a location several tens of kilometres away, making room for a hydroelectric power station that will be the largest in Africa when it comes online in 2017. At present only a third of ithas been built.

Bekele, who works for the Ethiopian Electric Power corporation, has already worked on two dam construction jobs, both on the river Omo in the south-west. He answers our questions with a flood of figures: the damwill be 1,780 metres long and 145 high, with a reservoir covering 1,874 sqkm expected to contain 70bn cubic metres of water. Output from the 16 turbines will total 6,000MW. It will be sufficient to meet growing demand in Ethiopia, now Africa's second most populous country, where gross domestic product is estimated to have grown by 10.5% annually over the past five years.

The countdown has already started for Bekele: he has three years left to complete this concrete colossus. "I don't feel like a special person," he says, "just an engineer leading the project." True enough, the driving force behind the dam is former prime minister Meles Zenawi, who ran thecountry for more than two decades. He was obsessed with the country's rebirth. The structure will be built, whatever the cost, he asserted, upon laying the first stone in April 2011. He died the following year.

International bodies such as Amnesty International and Human Rights Watch were extremely critical of his record on human rights, but he knewhow to rouse national fervour and mobilise the country for the five-year growth and transformation plan launched in 2010, which included Gerd.

The scheme is expected to cost $4.1bn. As the country has not received any international funding, the government has appealed to the population to buy treasury bonds. For civil servants it is mandatory. Companies have urged their personnel to give up a month's wages to support Gerd. In a country where information is under strict control, it is hard to say whetherthey have much choice. "We agreed, we want to contribute to development," bank clerk Birhanu Libsework, 25, tells us in a cafe in AddisAbaba.
"We're prepared to make sacrifices for better living standards and more energy," says Genet Getachew, an Amharic teacher. A single mother, she helps her daughter with her homework by candle light during the frequent outages in the capital. "The government mustn't try to do a thousand things at once, but this one is necessary," says Yeshi Negash (name changed at her request), a sociology graduate.
The government has already raised more than $350m, a third of whichhas been contributed by Ethiopians abroad.
Ethiopia hopes to become an African lion. "We have finished with thesyndrome of dependence," says Zadig Abraha, deputy-head of Gerd coordination. "We want to recover our past glory," he adds.
Some neighbouring countries are less upbeat about the project. Citing twotreaties, dating from 1929 and 1959, Egypt claims a historic right over theNile. It fears that the dam will restrict the flow of water. The treaties, signed with the UK and Sudan, allocate two-thirds of the Nile's water resources to Egypt, with the right to veto any project affecting the world'slongest river.
"These treaties are now obsolete. We are entitled to build the dam," saysAlemayehu Tegenu, Ethiopia's minister of water, energy and irrigation. "For a long time we derived no benefit from our river."
Mohamed Ghoneim, the Egyptian representative to the African Union, disagrees. "It's impossible to undertake a project on this scale without environmental impact studies to assess the consequences for downstreamcountries," he counters, speculating on a range of potential disasters: saltmay accumulate in the soil; land downstream could turn to desert or the flow be interrupted; the dam might even break. "The Nile is a vital resource for 80 million Egyptians," he adds.
In 2012, a year after work started, Addis Ababa tasked an international panel of experts (from Ethiopia, Egypt and Sudan among others) with a study of the project's human and economic impact. In May 2013 they reported that further studies were needed. The Ethiopians have refused,saying enough time has already been wasted. Egypt is demanding a second international panel. Negotiations between Ethiopia and Egypt aredeadlocked.
Night falls on the site. In the temporary lodgings, several thousand workers are falling asleep, while the next shift are playing football, soon toresume work. In a few years the Guba valley will be flooded. "The whole area will become a tourist attraction," Bekele suggests hopefully. But whatwill happen to the Gumuz community, we inquire. The engineer tells us to turn off the recorder. "We're all making sacrifices for our country," he says. "It seems only natural." (Text ends)

August 18, 2014 : Egypt says it has new 'vision' for Ethiopia's dam’

(By Ahram Online) August 18, 2014 Egypt's Irrigation Minister Hossam El-Moghazi told privately owned Mehwar channel that Egypt has a new "vision" regarding Ethiopia's planned Grand Renaissance Dam ahead of another round of talks in the Sudanese capital. In a phone interview, El- Moghazi said the Egyptian delegation will head to Khartoum on 24 Augustfor two days of discussions.

"Egypt has a new vision, that will not affect Egypt's water share, and weare expecting that the other party responds to it," said El-Moghazi.

Meanwhile, the minister said that Egyptian satellite images have revealedthat construction has not yet begun on the part of the dam which will reserve the Nile's water.

The project has been a source of concern for the Egyptian governmentsince May 2013, when images of the dam's construction stirred public anxiety about the possible effect on Egypt's potable water supply. Ethiopia maintains that Egypt's water share will not be negatively affectedby the successful completion of the project, set to be Africa's largest hydroelectric dam.

The upcoming tripartite talks between Egypt, Ethiopia and Sudan were initially planned to take place in Cairo but were later moved to Khartoum.The talks are expected to develop seven main points that Egypt's President Abdel-Fattah El-Sisi and Ethiopian Prime Minister Hailemariam Desalegn previously discussed during a meeting in late June – among them fostering dialogue and cooperation between the two countries as well as regional projects to meet the growing demand for water. (Text ends)

Ethiopia, Egypt and Sudan agree on a new impact studies on Renaissancedam’

MENA, Ahram Online (August 26, 2014)

Egypt, Ethiopia, and Sudan’s irrigation ministers signed an agreement to conduct two studies to gauge the effects of Ethiopia’s Grand Renaissance Dam on its neighbouring countries, state-run news agency MENA reportedon Tuesday. Egypt, Ethiopia, Sudan agree on impact studies on Nile dam Studies will be carried out within the next six months to assess the impactof Ethiopia’s hydroelectric dam on neighbouring countries The dam has been a source of concern for the Egyptian government since May 2013, when images of its construction stirred public anxiety about the possible impact on Egypt’s potable water supply. A joint statement by the ministers after a two-day meeting in Khartoum revealed that the studies were suggested by the committee of international experts tasked to revisethe dam’s impact. An international consulting company will conduct the two studies. A “national expert committee” will be formed to agree on the framework of conducting the studies. The committee, comprised of four experts from each of the three countries, has been given a six-month deadline starting from 1 September to formulate a timeframe to carry outthe reports. Ethiopia’s irrigation minister also invited his Egyptian and Ethiopian counterparts to visit the construction site of the dam in the nearfuture. Egypt’s Irrigation Minister Hossam El-Moghazi said that Ethiopia

agreed to be bound by the findings of the consultancy company. When asked about the declarations of his Ethiopian counterpart that the dam'sconstruction will go ahead as planned, El-Moghazi told reporters that Ethiopia will finish the first phase as scheduled by September 2015 and will then take into consideration the findings of the consultancy agency.

El-Moghazi also revealed that the meeting didn't touch on technical detailssuch as the dimensions or length of the dam needed to fill its reservoir as these items will be the responsibility of the committee.

HYDRO POLITICS: Persistent mistrust b/n Ethiopia & Egypt 'ANALYSIS By Robele Ababya (November 17, 2014)

Ethiopia and Egypt have indispensable role to play in stabilizing the current perilous political turmoil in the Horn of Africa and the Middle East because of their strategic location in the proximity of the latter, ancient civilization, and relatively large population. In that context healthy relationship between the two countries is essential. But unfortunately, thecenturies old deep-rooted and persistent mistrust between the two countries does not seem to die any time soon and this is bad for regional peace and stability.

It is reported on various media outlets including Tigrai on line that "The fifth Egyptian and Ethiopian Joint Ministerial Commission" meeting was concluded on 04 November 2014. This is a welcome development assuming that the outcome of the meeting was arrived at in good faith forsincere implementation by both sides.

It is interesting to note that Mr. Sameh Shoukry, Egyptian Foreign Minister, "led a huge delegation from many ministries to participate in the meetings." In my opinion, this should probably be the largest delegation for its size and variety experts from various ministries of Egypt unprecedented in the history of relations between Ethiopia and Egypt incessantly marred by mistrust and animosity for centuries owing to repeated aggression, intrigues, sabotage, and deceptions instigated by thelatter. It is well recorded in the annals of history that Egyptian aggressors suffered humiliating defeat at the hands of the militia fighters under the leadership of the epic patriot and true son of Ethiopia Alula Abanega who was known for his ingenuity in the art of war.

Ethiopia has invariably been a victim and Egypt the victimizer in matters relating to all vital national interests of the former including harboring dissidents bent on secession. This evil deed alone stands tallest among innumerable offences against Ethiopia perpetrated by Egypt during the long history of the two ancient countries. So one questions whether the huge delegation came to Addis Ababa to negotiate in good faith and arriveat a 'win-win' outcome reportedly involving education, trade, diplomatic, training and women's affairs.

Several pleasantries were exchanged after the signing ceremony of several agreements by the leaders of both delegations in the presence ofEPRDF media. Some members of the Egyptian delegation were superfluous in the praise of the success of the meeting; I watched on theETV one of the delegates quoting the Prime Minister Hailemariam Dessalegn for his 'wise words to treat their two countries as one country'.

The importance of the Blue Nile River to Egypt took the center-stage during the press conference. The late tyrant Meles Zenawi was crowned with the accolade 'Great Leader', which accolade is offensive to democraticopposition entities and the overwhelming majority of the Ethiopian people.One would ask what Egypt is up to!

I have since the reign of the Imperial regime always and consistently advocated for the emergence of good multilateral relations among the three states – Ethiopia, Egypt and Sudan for they are naturally bound by the Blue Nile River supplying 85% of the waters crossing Ethiopia's boundary to Sudan and then to Egypt.

I was one of those Ethiopians that were excited by the downfall of the former President Hosni Mubarak by popular uprising dubbed "Arab Spring". I even wrote an article in which I congratulated the victors believing that the time has come for democratic Egypt and democratic Ethiopia shall put the past relations of belligerence between them and work together for peace, democracy, and prosperity under the AU umbrella. This unfortunately did not happen. The setback for democracy under the deposed President Morsi in Egypt has considerably curbed my earlier hope that "Democratic Egypt and Ethiopia will play key roles in stabilizing the region and promoting development thus becoming formidable political forces to contend with; will be partners in the development of the Nile Basin – a key factor of regional policy to avoid war. My disappointment with the ruinous performance led me to write my article dated 09 November 2012 titled "Likely war with Egypt? I said:- Quote The writing of this piece is prompted by the setback in democracy in Egypt and the intransigence of the TPLF controlled EPRDF government so weakened by internal wrangles rendering it unable to defend vital national interests in the face of simmering traditional claims of Egypt to control Blue Nile water. For example: in 1970, Egyptian President Anwar Sadat threatened war with Ethiopia over the proposed construction of a dam on LakeTana on the Blue Nile (El-Khodary, 1995: 1); Boutros-Ghali isreported also to have talked of war over the Nile waters (Butts, 1997: 1); in October 1991, the Defense Minister of Egypt "remarked in al Ahram that his country would not hesitate to use force to defend its control of theNile River, and predicted that future Middle East wars could result from water scarcity issues (Postel, 1992: 4) adding "I do not actually expect animpending control of the Nile River by a foreign country, but we consider ita possibility and are planning our military strategy accordingly" (Postel, 1992: 5) Unquote.

Therefore at all times and at this time of uncertainty in regional politics in particular, I reiterate my stand that robust defense force and internal harmony are essential to preserve and protect national values; however the repressive EPRDF government in power must change its ethnic-based policy and open the political space for very serious consultations with all political opposition parties, civic organizations, and above all the Ethiopianpeople as the ultimate and supreme source of power and owners of the country's resources. I would like to underline that it would be foolhardy toconstruct the so-called Millennium Dam at a location within artillery range

from Sudan – a situation that will require missile defense against in- coming Egyptian Air Force bombers. My hunch is however that Egypt willsend a commando force at some critical stage to destroy the Dam, whichaction would engender political turmoil at home and hefty loss of capital expenditure incurred – a highly probable grave scenario indeed.

It would be irresponsible to weaken internal harmony and strength by pursuing the familiar irresponsible politics of divide-and-rule along religious and ethnic lines thereby playing into the hands of hawkish Egyptian leaders behind the scenes like the former Defense Minister FieldMarshal Tantawi seeking to exploit any weak point in our midst to destabilize us. The TPLF Foreign Minister (and probably Prime Minister in waiting) lacks diplomatic experience and the basic knowledge required tounderstand the intricacies of foreign policy, less so in the murky political environment of dangerous conflicts destabilizing the Middle East and the Horn of Africa where, in the latter case, Ethiopia is strategically located and ruled by a puppet regime serving foreign powers.

Ideally, enlightened leaders of Ethiopia and Egypt – operating in a democratic setting simultaneously prevailing in their respective countries

− have enormous potential for becoming a formidable force that will significantly contribute to the security and stability of the abovementionedregions and beyond on the African continent. So the peoples of Ethiopia and Egypt must work hard to engender democracy and prosperity in their respective countries through enhancing synergy, symbiotic cooperation, and collaboration in terms of human development economic growth, socialjustice in a secure region bound by the Blue Nile River.

The road ahead for democracy to take root in both countries is not easy. As the old adage goes, birds of the same feather flock together. Both the EPRDF and the Egyptian government have their plates full of tough and urgent issues to contend with. EPRDF should have relinquished power yesterday for having failed to play inclusive politics. It seems that Field Marshal El-Sissi will have time to usher in democracy backed by the powerful army, which has a tradition of 212 years and experience on taking side with the people in the January uprising that toppled the Mubarak regime. The TPLF regime with a vanishing air force, non-existentnavy, and demoralized ground forces in a divided country along ethnic lines is no match to Egypt.

So I repeat my mantra that we Ethiopians have only God and ourselves tosave Ethiopia from disaster. As always to eternity, God does His part leaving to us what we can do. Unleashing action in unison to regain our freedom and independence from the exclusive EPRDF regime is what we can do!

Finally, I wish in closing to reiterate my consistent conviction that there isnothing more serious than asserting Ethiopia's right to control the source of the Blue Nile, but this requires the unity of her citizens. This is not to say that riparian states are not entitled to their fair share of the waters ofthe Nile as stipulated in international law. The EPRDF government should release all political prisoners, stop its virulent attack the Ethiopian Orthodox Tewahedo Church, and acquiesce to all constitutional demands

of the Ethiopian Muslims so that Ethiopians can be united and strong todeter any external attack. (Text ends)

Ethiopia-Egypt talks on Nile dam collapse'World Bulletin (December 15, 2014)

Consultations among experts of Ethiopia, Sudan and Egypt aimed at determining the impact of Ethiopia's $4.8 billion dam project on the Nile'supper reaches halted amid differences between Egypt and Ethiopia, an official said Sunday.

The Tripartite National Committee (TNC) – a 12-member experts' panel responsible of facilitating implementation of recommendations of the International Panel of Experts concerning Ethiopia's hydroelectric dam project – had so far held two working sessions in Addis Ababa and Cairo."The third session was supposed to be held in Khartoum on December 4-6, but could not be held due to disagreements," Bizuneh Tolcha, a seniorofficial with the Ethiopian Ministry of Water, Energy and Irrigation, told The Anadolu Agency.

The experts' panel recommended that two studies get conducted – one onthe hydrological simulation model and another on a trans-boundary environmental, economic and social impact assessment, which led to the creation of the TNC by the three countries to get those studies done.

During the last two meetings, the three countries, according to Tolcha, were able to produce a list of seven firms, out of which only one would beselected to conduct the studies.

"Each country was supposed to come up with its proposals that comprise technical evaluation of the firms, but during a preparatory conference in Cairo on November 4, a disagreement occurred as to the points to be included in the studies," Tolcha said, declining to give further details. "Thematter has since been referred to the relevant ministers of the three countries so that they resolve the matter," he said. "Though minor, that disagreement has come as a stumbling block against the progress of the tripartite talks."

Ethiopian says the dam project is meant to generate badly-need energy.But the project has strained Ethiopia's relations with downstream Egypt,which fears the project will reduce its water share.

Addis Ababa, for its part, insists the new dam will benefit downstreamstates Egypt and Sudan, both of which will be invited to purchase the electricity generated by the dam.

The two countries agreed to resume tripartite talks – which also included downstream country Sudan – after Ethiopian Prime Minister Hailemariam Desalegn and Egypt's President Abdel-Fattah al-Sisi met in Equatorial Guinea in June. According to the original schedule, the TNC should meet inAddis Ababa on December 16 to select the firm to conduct the two studies. (Text ends)

HYDRO POLITICS: Egypt, Ethiopia to settle dispute over Nile dam'

The study aims to assess social, economic and environmental impact ofthe $4.8 bn project

By MEE & Agencies (December 31, 2014)

An Ethiopian Water and Energy Ministry official revealed on Monday thathis country had resolved its differences with Egypt over a study commissioned to assess the likely impact of a multibillion-dollar hydroelectric dam now being built by Ethiopia on the Nile River.

Accordingly, a three-party committee on the dam – made up of Ethiopia, Egypt and Sudan – will soon resume discussions, Bizuneh Tolcha, head ofpublic relations at the ministry, told The Anadolu Agency.

The project, dubbed the "Grand Renaissance Dam," has strained relations between Ethiopia and Egypt for several months.

Water-poor Egypt says the project - that is now 30 percent complete - willnegatively affect its share of water from the Nile – its only source of water

− while Ethiopia says the project is indispensible to its own national development and the economic welfare of its growing population. Tolcha said that, now that the dispute between Ethiopia and Egypt over the project study had been resolved, Egypt, Ethiopia and Sudan would select aconsultancy firm to conduct the survey.

The study will aim to assess the social, economic and environmental impact of the $4.8-bn project, a sizeable portion of which has alreadybeen completed. The committee, known as the Tripartite National Committee, consists of four experts from each of the three countries.

It should have convened for the third time in Sudanese capital Khartoumbetween 4 and 6 December, but the meeting was called off due to differences between Ethiopia and Egypt over the schedule of the studies.

Egypt says the studies should not take more than five or six months, butEthiopia – which is actively working on the project – says the studies could take as long as 18 months to complete. Tolcha declined to provide further details about the nature of the agreement reached between Egyptand Ethiopia on the timeframe of the dam studies.

The tripartite committee held a series of meetings in the Ethiopian capital between August and September. A meeting was also held in Cairo, duringwhich the three states agreed on a shortlist of seven international firms toconduct the studies.

Egypt and Ethiopia reportedly signed a deal in June regarding the controversial dam as part of an African Union summit in Malabo, capital ofEquatorial Guinea. The agreement saw both sides agree to “abide by the principles of international law”, according to the text published in al- Dostor al-Asly. (Text ends)

NILE POLITICS: Abadula Gemeda’s interview with Egyptian NILE TV PERSPECTIVE: Excerpted from Sokore Waqo's tip (January 5, 2015) Allow me to allude to a side issue to explain my last point by taking one recent example – the Interview. I am not talking about the film by Sony Pictures allegedly hacked by North Koreans. I am referring to the interview an Egyptian television station (Nile TV International) recently conducted with the Ethiopian Speaker of the Parliament. It is not my intention to go through all the content of the interview. My intention is toonly raise two points that were striking to me

and illustrative of the ineptness of TPLF government functionaries. One has to do with Speaker

Aba Dula's choice of words to describe the relationship between Egypt andEthiopia since ancient times. He said, "the Fer'on pyramid was Aksumite kingdom". This assertion is "nonsense upon stilts" to borrow a famous phrase used by Jeremy Bentham (leading British philosopher and jurist of the early 19th century) in his critique of natural rights. If the Speaker meant the Egyptian pyramids were built by the Aksumite kingdom, this is not going to sink well with the Egyptians who are very proud of their ancient civilization. This is not going to be a "public diplomacy" envisaged by TPLF either, but an insult to the intelligence of the Egyptian people.

The second has to do with the apology issued by the Speaker to the Egyptian media for the coincidence of the Egyptian revolution and the initiation of the Grand Renaissance Dam on the Nile. If you claim the caseto be a happenstance by coincidence, there is no logic necessitating apology. But if the apology is one for starting the very construction of thedam, then the Speaker is explaining the latest position of the Ethiopian government (as a high ranking official) on the controversy over the construction of the dam. Otherwise, the Ethiopian government must take further measures showing the Speaker's comments do not represent the position of the government on the matter. Hence, one of the measures could be impeaching the Speaker for incompetence.

Inept officials are inimical to developmental state policy Imagine now howinept officials like the Speaker (I suspect the Speaker is not alone in the wilderness of inertness in TPLF's government) could be antithetical to the creeds of a developmental state – efficiency, effectiveness, technocracy, competitiveness, prudence and decisiveness. Filling the government with such inert people turns the claimed "developmental state" into anti- developmental primitive political entity. I believe TPLF is deliberately doing this for political reasons (to maintain its supremacy in the EPRDF) although assignment of officials based on loyalty rather than competence could hurt its professed economic policies of a "developmental state". Onemay ask whether this is a good trade off. This being as it may, Aba Dula's recent interview with an Egyptian media gave us an opportunity to see thecontradiction between wanting loyalty in the political sphere and desiring competence in the economic sphere. Now let's contrast the leadership qualities of Ras Gobena and Aba Dula vis-à-vis both of whom critique is often hurled for lack of agency, political vision, and by extension, incompetence.

Ras Gobena Dacci versus Aba Dula Gemeda:

Without denying the controversial legacy of Ras Gobena, it is fair to saythat he relatively excels Speaker Aba Dula in many aspects including courage, diplomatic skills and characters of a competent statesman. Nonetheless, it is not uncommon to hear a charge pressed against Ras Gobena for his decisions and actions during the early expansion and consolidation of the modern Ethiopian state: that he had no wisdom to have his own political ambition – of founding the modern Ethiopian state as a co-equal with Menelik – but a mere vassal of the latter. Despite suchcriticism marshalled against Gobena by some ethno-liberationists and their disciples, some historical records reveal that Gobena was the most

capable war general of his generation. For instance, Gobena was able to subdue the resistance in Gurage region after Menelik lost at a battlefield with Chaha tribe of the Gurage in October 1876 (see Bahru Zewde, The Aymallal Gurage in the Nineteenth Century: A Political History in SOCIETY& STATE IN ETHIOPIAN HISTORY: SELECTED ESSAYS, (2012) p.67).

According to Bahru, Menelik "was defeated and a large number of Amharacaptives were sold to Wallayta by the victors. Only one-third of Menilek's men returned safely. Among those killed in the battle was Alaqa Zanab, author of the first chronicle of Emperor Tewodros"

In contrast, Gobena led a successful expedition against Qabena and Walane tribes of the Gurage region in July 1880 and quelled their rebellion. A noteworthy point here is that Menelik was advised by Gobena to pull back his forces after he had crossed the Awash River to confront the said Gurage tribes because Gobena didn't want his partner to lose another battle in the region and anticipated what another loss would meanfor their bigger political project at hand. Again, in the same Gurage region, Gobena defeated Hassan Enjamo, who was able to mobilize Gurages and other Muslims against the Shewan forces, in 1889 killing more than 3,000 of their men while losing his son (Merid) and 29 fighters.It can be safely said that Gobena's capacity at organizing and leading war campaigns as well as his diplomatic skills in negotiating peaceful settlement with regional powers to bring their territories under the suzerainty of the emerging modern Ethiopian state at the time was unparalleled. Hence, Gobena's hand in bringing the western territories from Wollega to Jimma and Beni Shangul to Gambella is reminiscent of a competent statesmanship.

However, the new Gobena of TPLF, the honorable Speaker of the EthiopianParliament, (if the criticism against Ras Gobena for vassalage holds) has shown no wherewithal of a statesman in his interview with the Egyptian media. He can only function as a statesman under the tutelage of TPLF in TPLF's political empire. Well, Aba Dula's pedigree also includes that of a war general like Ras Gobena, but TPLF has not been generous enough so far in publicizing his battlefield achievements. Until the shenanigan empireof TPLF discloses the former general's military achievements, we are entitled to believe that Gobena excels as a warrior based on available historical records. Surprisingly enough, as one can glean from his online biography, the educational credentials he earned from China, the United States and the United Kingdom were not adequate to lift his veil of ignorance. In my view, the two Gobenas are incomparable: the earlier Gobena – a true statesman who cofounded modern Ethiopia with Menelik; the new Gobena – a remarkably inept messenger of TPLF. It is my contention that TPLF might have encouraged the Speaker to do the interview in English, a language, they know, he doesn't have good command of, to expose his ineptness and to send a chilling message to hisOPDO colleagues that the top position in Arat Kilo is beyond their reach because one of their own failed to effectively represent the government in external relations when given the opportunity. Now, we can connect the dots and surmise why Juneidi Saddo, another TPLF protégé, was

discharged dishonorably from the government in November 2012. At least, he could have given a decent interview in English to an internationalmedia or effectively represent the government on international platforms thereby raising the hopes of rank and file OPDO members to start thinkingone of their own could possibly take the chief executive position in the government or wreak havoc till their aspiration in this regard is given a serious consideration. Thus, it seems to me that TPLF got rid of him to nipin the bud any potent internal power struggle.

Having said all that about the ineptness of TPLF government officials and having discussed the reasons for which reliance on coercion or building a developmental state may no longer be effective power strategies for TPLF,I would like to wind my opinion of part I of this write-up by posing the following questions to be examined in detail in part II. What should be prioritized in our thoughts in the new year of 2015 to unshackle ourselvesfrom the yoke of TPLF's tyranny? Unless we are clear headed about what we want, what our priorities should be, how to bring together various groups with differing political interests to deal with the grave political and economic problems brought upon the Ethiopian people by the authoritarian rule of TPLF, the prospect of bringing real democracy and meaningful economic progress for all Ethiopians would be a daunting and far-fetched project. (Text ends)

NILE: Ethiopian, Egyptian patriarchs share "God's gift to all"By Michel Adel, Al-Ahram (January 21, 2015)

On a visit to Cairo, the head of the Ethiopian Orthodox Church urgedcloser relations between the Egyptian and Ethiopian Churches, writesMichel Adel

It was his first visit to Cairo since he became head of the Ethiopian Orthodox Church in February 2013, and Ethiopian Patriarch Mathias I made sure that his week-long stay in Egypt included matters of both spiritual and diplomatic importance. He talked to his peers in the EgyptianCoptic Church about closer ties, conferred with the Egyptian prime minister and stressed that Egypt and Ethiopia must always remember howmuch they have in common.

The Ethiopian Church has been trying to ease tensions between Cairo andAddis Ababa over the Renaissance Dam, currently under construction on the Nile in Ethiopia. The church was an archdiocese of the Egyptian Church before it became independent in 1959. Patriarch Mathias was received by Coptic Pope Tawadros II at the Abbasiyya Cathedral in Cairo. The meeting was attended by Bishop Pimen, in charge of Egyptian- Ethiopian relations in the Egyptian Church, and senior clergymen.

In remarks to the Weekly, Mathias said that Church leaders should helpfind solutions to world problems, a role which they could assume due totheir frequent discussions with governments and politicians all over the world. Speaking about the bonds between the Egyptian and Ethiopian Churches, Mathias said, "We all have to confirm this relationship so thatfuture generations may not forget its importance."

He continued, "The River Nile links us, and the Renaissance Dam in Ethiopia is allowing us once more to discuss its benefits." According to the

Ethiopian patriarch, “Experts have made it clear that the dam will not harm Egypt or Sudan.” He proposed meetings between all the OrthodoxChurches in an institutional fashion to reinforce ties, and advised Christians to “accept modernity and progress in a way that doesn’t compromise their faith.”

Welcoming the visiting patriarch, Tawadros II noted “the depth of the historical relations between the two Churches.” At a sumptuous reception for Mathias at the Cathedral, the Coptic pope said, “The historical relationsbetween the two Churches go back to the time of Pope Athanasius when he ordained Bishop Salama of Ethiopia.” Tawadros pointed out that “the two Churches have a geographical bond, being linked by the River Nile.” Mathias toured the Hanging Church in Coptic Cairo, one of the country’s oldest, before meeting Prime Minister Ibrahim Mehleb and the ministers oftrade, industry and health. Mehleb asked the patriarch to tell the Ethiopianpeople that Cairo is looking forward to closer bilateral ties. Egypt supportsdevelopment efforts in Ethiopia as long as these do not interfere with its quota of the Nile water, the prime minister said.

Ethiopia has the right to generate electricity and Egypt has the right to maintain its quota of Nile water, Mehleb said. The Ethiopian patriarch met President Abdel-Fattah Al-Sisi and thanked him for attending the Christmas celebrations at the Coptic Cathedral in Cairo, a gesture that hadpleased many within the Ethiopian Church, he said. Mathias added that hehad been pleased to see Egypt regaining its security and stability.

“There was a time when our two Churches grew apart because of Communist rule in Ethiopia after 1974, but those times are gone forever,”the Ethiopian patriarch said. He urged the Orthodox Churches to meet regularly and “link our institutions to carry out our duties and promote ourmessage.” The Ethiopian patriarch also led mass at the Our Lady of Zeitoun Church in Cairo, which was well attended by members of the Ethiopian community in Egypt. Bishop Piman said the Church is not engaged in politics, but is eager to help smooth out differences over the Renaissance Dam and reassure the two nations that the Nile is “God’s gift to all.” (Text ends)

On Nile River and the Grand Ethiopian Renaissance Dam’By Tecola Hagos (March 7, 2015)

“Ethiopia will never ask the consent of any country to undertake development projects. Ethiopia is an independent country and will never request the consent of any country. Ethiopia will undertake its development projects in a way that does not cause any significant harm toany country. Moreover, Ethiopia undertakes its development projects based on principles. It takes into consideration the benefits of the countries from the development projects as well as friendship and healthy relations with the countries.”-Alemayehu Tegenu, Minister of Water, Energy and Irrigation, interview, 'Newstime Africa', March 2, 2015.

Introdution

We all have read the great news that Ethiopia, Egypt, and Sudan have agreed on certain principles to guide them as their basic understanding onsharing the bounty of the Blue Nile. We have no access to the

fine prints,

and we know the Devil is in the details. I never give up on anyone not even on the Devil. Do I give up on principled mission any less? It is alwaysmy hope that Egypt will see the light from its unreasonable claim to use almost 90% of the water of the Tkur Abaye (Blue Nile) based on “historic use” and two treaties, wherein the originating country, Ethiopia, of nearly 90% of the water is not a member or signatory to such a treaty or arrangement between Britain as a colonial power signing for both its protectorate, Egypt (1929) and Sudan (1959).

It is always a great occasion when nations decide to resolve their problems through peaceful means of magnanimity, honesty, fairness, justice, and mutual benefits. Such great agreements are born out of strong principled presentations of each sovereign nation pursuing its national self-interest. Because of unpolarized interactions, national leaderswill start to recognize the legitimacy of all well founded claims and concerns of each other as riparian States. When national leaders reach such critical mass they know how to compromise and work to accommodate the interest of each.

Going to war is the easiest thing to do, and it is the least preferred by anyof the States involved in this triad dance of diplomacy, occasionally punctuated by Egypt convulsing and throwing tantrum threatening militaryaction against Ethiopia. Ethiopia will never lose any battle to any Arab country in the region. Let us leave no room for such fear. However, the absence of war does not automatically translate into economic development. For some unbeknown reason, of all the officials of the Ethiopian Government, I trust Alemayehu Tegenu, when Ethiopia’s interest is in jeopardy, he will not betray Ethiopia. I have never met the man; I only saw how he handles himself on TV and read his statements in reports.

Use Correct Lexicon

To begin with it is a total error to think of the waters of Tikur Abaye (BlueNile) as the water of the Nile. The very name designation of “the Nile” water polarizes the basic facts on the ground. The Blue Nile of Ethiopia provides over 85% of the water that empties from the highlands of Ethiopia into the lowlands of Sudan and ultimately traversing Egypt’s parched desert land. Without the run-off water from Ethiopia’s mountainous basin source of all major rivers, such as the Atbara and the Blue Nile, less than fifteen percent of the Nile water comes out of further South from the Lake Victoria region and the surrounding basin. In other words, the Blue Nile water is the water that both Egypt and Sudan are benefiting from. So let us drop the crap and pretentious claim of “Nile” water and call it by its proper designation—the water of Abaye (the Blue Nile).

I was checking the reports of several media outlets of all of the riparian states of the Nile, and only one has as its headline the correct lexicon: “Sudan, Egypt and Ethiopia ministers strike deal on basis of sharing Blue Nile water,” DAILY NATION, March 6, 2015 (Kenyan media). The headline is correct because it stats a factual matter that it is not the Nile water thatis the subject of the controversy but that of the Tikur Abaye (Blue Nile).

There seems to be very little coverage in Ethiopia both in the official andprivate media about the March 6, 2015 news of agreement on principle about the use of the Water of the Blue Nile and the Grand Ethiopian Renaissance Dam (GERD).

Secretive Negotiations; the Ills of Untrustworthy Leaders

Negotiating an international treaty deciding which principle would prevail either the "historic use" that Egypt stands by or the "equitable and reasonable utilization" that Ethiopia supports, along with the promoters of the Cooperative Framework Agreement (CFA), is not an easy matter. We all know that almost 90% of the waters of the Blue Nile and other rivers ofthe Ethiopian highlands drain into the Sudan and Egypt. The course of thefuture history of both Egypt and Ethiopia must not be handled in secret since that history is going to be written with Blue Nile water as ink. One cannot hide what is inevitable.

I do not understand why the Ethiopian government leaders do not learn from past mistakes. They had all the chances to educate and prepare the People of Ethiopia about the problems facing Ethiopia from Egypt and the Arab League concerted historic destructive stance. No foreign policy can be successfully pursued by Ethiopia if the Citizens of Ethiopia are not fully supporting such policy. One constitutionally required way of insuring such support is to follow the Constitution provisions that require the approval ofthe House of Representatives. The House is not to be used as rubberstamping institution but as a functioning body to debate and examine any such Agreement, Convention, and Treaty, even Policy duringthe negotiation, the ratification and signing stages. All international treaties, agreements, covenants et cetera must be published and must be distributed to the public. For mass production, the Government must allowprivate publishers to republish and distribute such legal documents for their own profits.

The GERD book of account, the names and true identity of sub- contractors, the names all material suppliers et cetera should be disclosedand bid awards should be treated as any public/government bids with stringent rules and procedures. In order to build trust between the Ethiopian people and the Ethiopian Government, there must be proper disclosure of the activities of the Government dealing with foreign governments. There should not be any secret deals where Ethiopian territory is ceded to foreign states. The Ethiopian Government must disclose all deals that Meles Zenawi might have made with Sudan in regard to border land.

Basic Rights and Principles

The Cooperative Framework Agreement (CFA) (2010) has introduced some creative principles taking advantage of the trend set by United Nations international conventions and treaty agreements of the modern era on international rivers. One important principle that overrides the old"historic use" principle is "the principle of equitable and reasonable utilization" (art 4, CFA) of the resources of the Nile and the Nile Basin.

Actually, I am of the mind that principle is too intrusive and covers vastarea. Egypt and Sudan by not signing are not serving their interest, for

the other riparian States might amend the CFA and leave narrowwatershed areas for cooperation.
I have outlined hereunder some basic principles and governmental positions that all Ethiopian leaders and the Ethiopian Government as awhole should heed:
No agreement should be signed that impedes, or creates limitations on the Sovereignty of Ethiopia. Such limitation might come hidden in provisions of bilateral or multilateral agreements creating the rights of consultation, a seat in Ethiopian national Committees, Creation of a bodyof Experts with a seat to foreign nationals et cetera.
Creation of Rights in rem (rights in things) must be avoided on any construction on Ethiopian territory, such as Dams, Power-stations, Distribution Centers, Grids, Power-lines. All rights in personam (obligatoryrights) must be of the corporate type of holding shares in corporations fully established in accordance with the laws of Ethiopia. Share holdings must be through a corporate structure, and no Sovereign direct ownershipof any share in an Ethiopian Corporation should be allowed.
Licensing must never create any rights in any corps of asset in Ethiopia.Ethiopia could license distributors of its power in different states throughformal bids and business based examinations of the principals.
Never guarantee a certain amount of water to Egypt and/or Sudan, for you have no control on the rate of the rainfall. Growing up in Dessie a lifetime ago, I remember that the heavy clouds always sail by from West to East, later I learned it is the Atlantic Ocean that feeds the water bearing cloud that finally dumps al that fresh water on Ethiopia. If that is not God’s blessing,
Never agree to a provision that requires Ethiopia to appoint foreign arbitration, such as the corrupt and disastrous Border Commission that was established pursuant to the Algiers Agreement, a disgustingly anti- Ethiopian interest agreement that resurrected long dead colonial period treaties to deny Ethiopia’s historic right and territorial sovereignty on theAfar coastal territories all the way to the Islands and beyond. Never eversign any agreement that affects our national security and economic development.
All Consultants, Arbitration Members, Ad hoc Committee of Experts, et cetera hired from foreign countries can be corrupted by wealthy Arabs in promoting Egyptian interest. Or could be biased on their own against our interest and in favor of Egypt hoping to get great deals later from the Arabcountries. We do not have the resources to top such rewards. Our only equalizing force is to use violence against individuals who breached such professional code of conduct and hurt our economic and political interest. Thus, relay on Ethiopian Experts at all levels.
Never ever walk into a meeting fearing possible armed conflict even all-out war. Do not ever forget we are the people who stood free and sovereign in our destiny for thousands of years. We are in our Territory and anyone coming to attack us would necessarily lose.
Make sure that Ethiopia receives some form of compensation for the waterthat is preserved for use for both Egypt and Sudan.

The cost of maximizing the availability of water for the basin through prevention of soil erosion by planting hundreds of millions of trees andshrubbery must be sustained through some form of compensation by Egypt and Sudan.

Always remind Egyptians that 90% of the water they use is from the Blue Nile that Egypt does not contribute a single drop of water to the Nile water. Both Sudan and Egypt must work to dissuade fully all Arab League States from all political and economic campaign against Ethiopia. And to treat Ethiopian migrant workers in such countries with respect and justice.Conclusion

I hear often people feeling sorry for Egypt for being very dependent on one river. The fact is that Egypt is floating on a huge underground water reservoir. Egypt can utilize such abundance of water for its population rather than picking fights with Ethiopia stifling the legitimate aspiration ofEthiopia for feeding its population. If you visit Cairo and the many resort areas you will find countless swimming pools. Look at this ridicules situation: Egyptians luxuriating in swing pools with our Blue Nile water object to our using our own Blue Nile water to feed and provide potable water for our own needs?

'Huge' water resource exists under Africa, By Matt McGrath Sciencereporter, BBC World Service

There is much Ethiopia can offer to the region not only precious fresh water, but also tremendous talent and determined people who know howto maintain a nation for thousands of years. Already much has been carried out in Ethiopia. There is tremendous need for reform in order to expand individual rights. Corruption is rampant and illegal syphoning of hard currency from Ethiopia has reached an alarming stage. This hemorrhage must be dammed up. The Leadership in the Parties do needsome rest from years of hard work. They should retire and younger individuals need be inducted into the system. Election to me is an educational process and the outcome of any election, including the one coming up in May, is just an exercise—for the result is already predetermined in the staging of this drama. (Text ends)

Latest Nile agreement is another TPLF giveaway: SMNE

Secretive Agreement on the Nile — Is the TPLF giving away thestore? Press Release NA Post (March 25th, 2015)

(March 26, 2015 Geneva, Switzerland) -- On March 23, 2015, a TripartiteSummit on the Nile was held in Khartoum, Sudan, hosted by Sudanese President Omar al-Bashir, and attended by Egyptian President Abdul Fattah Sisi, and Ethiopian Prime Minister Hailemariam Desalegn. As an outcome of that meeting, these three leaders will sign an agreement of Declaration of Principles on the Ethiopian Renaissance Dam, which will later be presented to the Ethiopian Parliament for final approval. This agreement will include an impact study on the effects of the Ethiopian Renaissance Dam—an electrical project located on the Blue Nile in Ethiopia—on countries downstream. The results of this study will further shape the outcome. Ethiopians have reason to worry, as the details argue

and open to interpretation. What will be signed away before really knowing the impact? What will be the potential affect on generations to come, not only of Ethiopians, but also South Sudanese, Sudanese, and Egyptians? Other people in riparian countries upstream from the north- owing river could also end up being involved in some of the impacts. sist thiopia's am st be used solely for electric power generation and never for irrigation Negotiate so that the price of electricity sold to Egypt and Sudanwould be at cost thereby nullifying the value added from the project and negating the market itself.

Insist that filling the waters of the Dam's reservoir should be staggeredover 6 years to reduce disruption to Egypt's supply and Insist that the operation of the hydro plant should be coordinated with Egypt," thereby undermining Ethiopia's sovereignty and diminishing its power.
Side Note: The UN Convention on the Law of the Non-navigational Uses ofInternational Watercourses, UN General Assembly resolution 49/52 of December 1994 binding to, "Watercourse States shall in their respective territories utilize an international watercourse in an equitable and reasonable manner. In particular, an international watercourse shall be used and developed by watercourse States with a view to attaining optimal and sustainable utilization thereof and benefits there from, takinginto account the interests of the watercourse States concerned, consistentwith adequate protection of the watercourse."

The Blue Nile River is dearly to many millions of Ethiopians'
This historic document was arrived at after a series of consultations at thehighest levels of government and State on the Egyptian side; and signed on March 23, 2015 by Prime Minister Hailemariam Dessalegn of Ethiopia, former Field Marshall turned President Abdel Fattah Al-Sisi of Egypt and President Omar Hassan Ahmed al-Bashir of Sudan.
Group of the Nile Basin (GNB) "composed of Professors from Engineering,Irrigation and Hydraulics" who took matters to the next level. Their ultimate objective was to "support the effort of the Egyptian Governmentand decision-makers" through scientific research, scenarios and policy options. Their studies showed that Ethiopia's four large dam projects including the Renaissance Dam posed threats to Egypt's security. They accused the Ethiopian government of failure "to conduct "sufficient structural and hydrologic studies and environmental assessments." Theseexperts agreed that the Egyptian government should try to adhere to Agreements of 1929 and 1959 in any negotiation. They concluded, "Reduction in the water share of Egypt will result in abandoning huge areas of agricultural lands and scattering millions of families. It would result in in increasing the pollution of the water streams and creating problems in the supply of water for drinking and industry." They offered the following recommendations to the Egyptian government thereby undermining Ethiopia's national interests in advance of the Agreement. "Request stopping the construction of the Dam until completion of negotiations

Insist that the maximum size of the Ethiopian Dam must not exceed 14 billion cubic meter compared to the 74 billion cubic meter" designed andunder construction by Ethiopia
Insist that Ethiopia commit officially not to use the water behind the GreatEthiopian Renaissance Dam (GERD) for irrigated agriculture
Insist that Ethiopia commit to give advance notice of future projects it hasin mind
Insist that the design and modification of the GERD be reviewed byEgyptian and international experts
Insist that filling the waters of the Dam's reservoir should be staggeredover 6 years to reduce disruption to Egypt's supply and Insist that the operation of the hydro plant should be coordinated with Egypt," thereby undermining Ethiopia's sovereignty and diminishing its power.
Insist that Ethiopia's Dam must be used solely for electric powergeneration and never for irrigation
Negotiate so that the price of electricity sold to Egypt and Sudan would beat cost thereby nullifying the value added from the project and negating the market itself
Insist that filling the waters of the Dam's reservoir should be staggered over 6 years to reduce disruption to Egypt's supply and Insist that the operation of the hydro plant should be coordinated with Egypt," thereby undermining Ethiopia's sovereignty and diminishing its power. (Text ends)Ethiopia, Egypt and Sudan pick two firms for Nile dam study'
By Reuters (April 10, 2015)
ADDIS ABABA (Reuters) - Ethiopia, Egypt and Sudan have picked twofirms to carry out studies on the potential impact of Ethiopia's Grand Renaissance Dam on the flow of the Nile, an Egyptian official said.
The leaders of the three countries signed a co-operation deal in Khartoumin March that paved the way for a joint approach to regional water supplies.
Cairo and Addis Ababa had previously been locked in a bitter war of wordsover Ethiopia's $4 billion project.
Egypt, which relies almost exclusively on the Nile for farming, industryand domestic water use, has sought assurances the dam will not significantly cut its flow to its rapidly growing population.
Ethiopia, the source of the Blue Nile which joins the White Nile in Khartoum and runs on to Egypt, says the dam will not disrupt flow. Ithopes the project will transform it into a power hub for the electricity-hungry region.
"We have reached a good conclusion in selecting two international firms,"Egyptian Irrigation Minister Hossam al-Moghazi told Reuters late on Thursday.
Another Egyptian diplomat attending the talks said French firm Artelia wasone of the consultants and a Dutch firm the other.
Al-Moghazi declined to name the firms, saying the three countries had agreed to announce them once they get a response from both companiesby May 4, but told Reuters they were French and Dutch.

One of the firms will be the main consultant and the other a sub- consultant to carry out water and environmental studies, he said. They will compile the study over an 11-month period before publishing their recommendations, he said.

The 6,000-MW Grand Renaissance Dam being built by Italy's biggest construction firm Salini Impregilo is the centrepiece of Ethiopia's bid tobecome Africa's biggest power exporter.

Officials say 50 percent of its construction has so far been completed. Addis Ababa plans to spend some $12 billion on harnessing its rivers forhydropower production in the next two decades.

Regarding the Grand Ethiopian Renaissance Dam'

Perspectives on the Declaration of Principles By Professors, Minga Negash,Seid Hassan, Mammo Muchie and Abu Girma (Updated April 11, 2015) (Analysis on GERD) On March 23, 2015, Egypt, Ethiopia and the Sudan signed a declaration of principles on the Grand Ethiopian Renaissance Dam [2] (GERD). Since then, an intense debate has been going on regarding the modalities and core principles which were spelled out in the Declaration. Unfortunately, the principles contained in the Declaration have invited unhealthy rhetoric, particularly within Egypt, Ethiopia and among the Ethiopian diaspora. There are two fundamental reasons for thenegative discourses. The first one involves the non-cooperative, zero-sum game strategic behavior that is inherent within the actions of the parties. Game theorists, political scientists and economists very well know that shared watercourses invite unilateral and self-interest maximizing actions-the well-known zero-sum positions being the dominant solution. Added to this is the emotive nature of the Nile River that was instigated and imposed upon the peoples of the region by colonialism. The second has to

do with Egypt's long-held historical ambitions to control the sources of Nileand colonial era position that is still reflected in the Declaration. On closer examination, we find that several of the current stipulations of the Declaration include many of the key elements of the 1929 and 1959 "Nile Water Agreements" that Ethiopia was not a part to. Consequently, the Declaration is framed not in a positive-sum game- "win-win" manner.

Cognizant of the fact that the construction of the Grand Renaissance Damhas become a game changer, with its strong potential to lead for cooperation, we attempted to show that Egypt's policy towards Ethiopia has been unsustainable. We did so in our April 30, 2014 commentary.

Even though we did not have the full and official Declaration in hand at the time of writing, we also attempted to raise awareness as well as ourconcerns using a short commentary that we disseminated on March 23, 2015. In particular, we called for (i) the translation of the actual Agreement into various Ethiopian languages; (ii) the revision of certain clauses; and (iii) as Egypt's President was heading to address the Ethiopian Parliament and request for ratification, we called upon the Government of Ethiopia to defer this process to allow time and space forreflection. After the release of that commentary, Aiigaforum.com[3], a website that is close to the Government of Ethiopia, posted a document which

purports to be the final and authentic version of the Agreement.

Except for the location of the signing, and singular-plural uses of certain terms, see for example "resources" versus "resource" in the preamble andthe sequence of the numbering of Principles III and IV of the Agreement, when compared to other versions available in the internet, the document appears to be authentic. [4] Though speculations are rife that the final agreement is still a secret, because of the importance of the matter, for this commentary we have used the version that was made available by Aigaforum.com.

Many have opined and welcomed the recent Egyptian diplomatic overture towards Africa, and its acceptance of the construction of the GERD, in particular. Even though the current tripartite Agreement seemed to have temporarily eased the recent tension among the parties, and despite someof the positive aspects of the Egyptian diplomatic overtures and its intent to cooperate as spelled out in the Declaration, we observe that the Agreement is unsustainable in its current form. In fact, our examination ofthe Declaration of principles leads to the conclusion that the clauses are designed to re-assert the 1929 and 1959 water sharing agreements and the much criticized Framework for General Co-operation Between the ArabRepublic of Egypt and Ethiopia, July 1993, Cairo, Egypt [5] that was signed by the then Presidents of Egypt and Ethiopia. In this follow up commentary on GERD, we independently examine, in a non-technical manner, the elements of the tripartite Agreement which was signed in Khartoum on March 23, 2015. We do so by identifying omissions, sticky points and mistakes that need attention. Consistent with our April 30, 2014 commentary on this topic, we attempt to decouple political posturingwithin Ethiopia from the trans-boundary water issues that are facing the country. In doing so, we focus on the substantive issues so that the country avoids the repeat of the mistakes in the Algiers Agreement of 2000 between Eritrea and Ethiopia and the series of diplomatic maneuvering that created a landlocked country in 1993.[6] We decided toincorporate the clauses that are contained in the Declaration for the reader's convenience.

Analysis of the Agreement

There are ten principles stated in the current Agreement. Below we provide comments for each element in the Agreement. For convenience,we juxtapose the Agreement (as published in www.aigaforum.com) in italics and our comments follow the article. Concluding remarks are provided in section III.

Principle of cooperation

To cooperate based on common understanding, mutual benefit, goodfaith, win-win, and principles of international law;

To cooperate in understanding upstream and downstream water needs inits various aspects.

Our Brief Assessments:

This article is not very different in spirit from the framework for cooperation that was signed between Egypt and Ethiopia in 1993. The intent of this principle appears to invoke clauses in the UN's Convention on the Law of the Non-Navigational Uses of International Watercourses

that was adopted on 21, May, 1997[7] and the Declaration on Principles ofInternational Law Concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations, G.A. res.
2625, Annex, 25 UN GAOR, Supp. (No. 28), U.N. Doc. A/5217 at 121
(1970). It is however important to note that 17 years after its adoption,other than the United Kingdom no major power has signed the non- navigational use of international waters Convention. By the end of 2014, only 38 countries (out of about 194 Member States) have
signed/accepted and ratified it[8]. It is also interesting to note that 11 ofthe 38 countries are located in the African continent. None of the three countries (Egypt, Ethiopia and Sudan) have signed, accepted or ratified this Convention.
The most controversial element of the 1997 UN Convention is Article 7 which deals with "not to cause significant harm" by upstream countries ondownstream countries. Concerned by the ramifications of this clause, many upstream countries that have important trans-boundary rivers are either shying away from ratifying the Convention or are openly objecting itas the Convention: (i) does not provide for compensation to upstream countries for lost opportunities, and (ii) exposes them to indeterminate and an uninsurable risk. As we shall see below, Article 7 features in both the recently signed tripartite Agreement (without recognition of opportunity costs and damage limitation clause) and in Article 5 of the 1993 agreement between Egypt and Ethiopia.
The Phrase "principles of international law" neither implicitly nor explicitly recognizes the existence of Nile Basin Cooperative Framework Agreement.Hence it fails to guide a comprehensive agreement pertinent to the region.[9]
The phrase "in its various aspects" suggests that downstream countries need additional waters or if they decide to develop new habitations, the upstream countries may have to give up their development opportunities.Research shows that downstream countries are usually densely populatedand industrialized, have flatter topographies and hence their water needsare higher than upstream countries. Furthermore, even though the Agreement is about the GERD (see the heading and the preamble of the Agreement), the Article is sweeping and covers the entire river system aswe shall see below.
Principle of Development, Regional Integration and Sustainability;
The purpose of GERD is for power generation, to contribute to economicdevelopment, promotion of trans-boundary cooperation and regional integration through generation of sustainable and reliable clean energy supply.
Our Brief Assessments:
The text states that the purpose of the project is to generate "sustainable and reliable clean energy supply". There are no auxiliary purposes and canbe interpreted to exclude, for example, the use of the waters for fishing, recreation, education and small scale industrial and irrigation projects around the dam. We do

think that there are costs (risks) agreeing to this clause by the upstream country. There are no provisions for planting trees

(timber, coffee, etc.), for example, to mitigate the erosion and evaporation, capture the carbon and/or put the soil into better use. Thisclause is, therefore, devoid of shared benefits and responsibilities.

Principle Equitable and Reasonable Utilization

The three countries shall utilize their shared water resources in theirrespective territories in an equitable and reasonable manner

In ensuring their equitable and reasonable utilization, the three countrieswill take into account all the relevant guiding factors listed below, but notlimited to the following outlined:

Geographic, hydrographic, hydrological, climatic, ecological and otherfactors of a natural character

The social and economic needs of the Basin States concerned

The population dependent on the water resources in each Basin State; The effects of the use or uses of the water resources in one Basin State onother Basin States;

Existing and potential uses of the water resources;

Conservation, protection, development and economy of use of the waterresources and the costs of measures taken to that effect;

The availability of alternatives, of comparable value, to a particularplanned or existing use;

Our Brief Assessments:

Even though this principle appears to be normal, it obligates Ethiopia tocontinue honoring Article 5 of the 1993 cooperation framework betweenEgypt and Ethiopia.

Sub article III (e), which deals with the existing and potential uses of thewater resources is a sticky point. It shall continue to be a source of tension as it is the focal point of the relationship between upstream and downstream countries. It needs to be examined in the light of the principles that are enshrined in the Nile basin framework.

Sub article III(f) does not sufficiently obligate downstream countries toinvest in water conservation and rationalization. The laxity in this sub article legitimizes the increased demand for water by downstream countries.

The scope of the Agreement does not include ground water resourcesavailable in downstream countries.

Principle of Not to Cause Significant Harm

The Three Countries shall take all appropriate measures to prevent thecausing of significant harm in utilizing the Blue/Main Nile.

Where significant harm nevertheless is caused to one of the countries, thestate whose use causes such harm shall, in the absence of agreement to such use, take all appropriate measures in consultations with the affectedstate to eliminate or mitigate such harm and, where appropriate, to discuss the question of compensation.

Our Brief Assessments:

As indicated above, this clause is taken from Article 7 of the 1997 UN Convention on the Law of the

Non-navigational Uses of International Watercourses 1997- (effective as of April, 2014). The “obligation not tocause significant harm” is related to the age-old economic theory of

externality which features in European trans-boundary waters and environmental agreements, in the form of the “polluter pays principle”.The UN Convention states that:-

“(a) Watercourse States shall, in utilizing an international watercourse intheir territories, take all appropriate measures to prevent the causing of significant harm to other watercourse States.

(b) Where significant harm nevertheless is caused to another watercourseState, the States whose use causes such harm shall, in the absence of agreement to such use, take all appropriate measures, having due regardfor the provisions of articles 5 and 6, in consultation with the affected State, to eliminate or mitigate such harm and, where appropriate, to discuss the question of compensation.”

Article #2 of the 1997 Convention defines the term “watercourse” asfollows:-

““Watercourse” means a system of surface waters and ground waters constituting by virtue of their physical relationship a unitary whole andnormally flowing into a common terminus”

It is interesting to note that the tripartite Agreement avoids the use of theterm “watercourse” and hence excludes the ground water resources in Egypt and Sudan that recent geoscience studies are indicating.[10] Furthermore, it is important to note that the “internationallaw” is selectively used here to strengthen the position of the initiator- originator of the current text.

The opening paragraph of the tripartite Agreement starts with a rather misleading sentence. It states that “the three countries shall take all appropriate measures….” The article specifically deals with damages and not “causing significant harm in utilizing the Blue/Main Nile”. The Blue/Main Nile originates from the highlands of Ethiopia and contributes approximately about 85% of the water to the Nile River system, and hence this clause is about Ethiopia. Downstream countries are not affectedby this clause as Ethiopia is. The clause is unambiguous in giving downstream countries right to “take appropriate measures to prevent significant damage” by the upstream country. The obvious issue that emerges here is sovereignty over the waters of the Blue/Main Nile, and the issue is more than likely to be a sticky point in that neither sovereign equality nor territorial integrity clauses (see Principle # IX below) are sufficient to protect Ethiopia. In fact there is concern that it can be construed as a voluntary ceding of sovereignty by Ethiopia. The phrase “significant harm is not defined” and there are no thresholds about water sharing, physical damages arising from faulty construction/management of the dam and Act of God. Hence it is subjectto various interpretations.

The clause refers to the Blue Nile/Main River. The Blue Nile/Main River hastributaries. In the absence of an exclusion clause for the tributaries, the clause maybe used to restrict Ethiopia from developing irrigation projects on any of the tributaries of Blue Nile.

Principle to Cooperate on the First Filling and Operation of the Dam

a) Agree on guidelines and rules on the first filling of GERD which shallcover all different scenarios, in parallel with the construction of GERD.
b) Agree on guidelines and rules for the annual operation of GERD, whichthe owner of the dam may adjust from time to time.
c) Inform the downstream countries of any unforeseen or urgentcircumstances requiring adjustments in the operation of GERD.
d) To sustain cooperation and coordination on the annual operation of GERD with downstream reservoirs, the three countries, through the lineministries responsible for water, shall set up an appropriate coordinationmechanism among them.
e) The time line for conducting the above mentioned process shall be 15months from the inception of the two studies recommended by the IPoE.To implement the recommendations of the International Panel of Experts(IPOE), respect the final outcomes of the Technical National Committee (TNC) Final Report on the joint studies recommended in the IPOE Final Report throughout the different phases of the project. The three countries, in the spirit of cooperation, will utilize the final outcomes of the joint studies, to be conducted as per the recommendations of the IPoE Report and agreed upon by the TNC, to:-Our Brief Assessments:
Implicit in Article V is that the project is going ahead. Only the filling of the reservoir and operational/functional matters of the dam are to be negotiated. The presumption is that the pace of the filling should be slowenough to supply water to downstream countries but fast enough to satisfy Ethiopia's needs as the NPR's reporter has put it.
This article however crucially depends on a report that is yet to beproduced.

The leaked IPoE report vindicates Ethiopia on many fronts and as we indicated in our April 30 2014 commentary the deficiencies are not insurmountable. It remains to be seen whether the TNC report will be different from the one produced by IPoE. Notwithstanding this, the environmental aspect of the TNC report is expected to echo Egyptian concerns. It is important that the environmental impact assessment of theproject be comprehensive and linked to (i) current and potential ground water resources in downstream countries and (ii) the rather wasteful use of the resource in downstream countries and pollution around the delta.
Sub article V(b) refers to the "owner" of the dam, in the singular, and resolves the speculation about joint ownership, at least for the moment. As a result of the sensitivity of the project, we encourage the Governmentof Ethiopia not to allow either equity or linked participation at this time.

[11] IV. Principle of Confidence Building
Priority will be given to downstream countries to purchase powergenerated from GERD.

Our Brief Assessments:

Clean energy production and sale reduces the downstream countries' dependency on fossil fuel generated energy. Hence, this is not just a "confidence building" issue. It has direct and measurable economic consequences, and hence needs to be imputed in the pricing of electricityfor the proposed sale.

In many economies electricity falls within rate regulated industries. Hence,pricing for domestic use will be different from pricing for export.
International pricing will be a more complicated issue and may not be easily decoupled from the type of intergovernmental relationships thatemerge in the region.

The word "will" is equivocal since it has several meanings in the legallexicon as in thesaurus, and hence may serve as a point of future contention.

VII. Principle of Exchange of Information and Data Egypt, Ethiopia, andSudan shall provide data and information needed for the conduct of theTNC joint studies in good faith and in a timely manner.

Our Brief Assessments:
As indicated earlier, the IPoE had already stated that the social and environmental aspects of the project in downstream countries need anadditional study. The availability of such information should enable Ethiopia to complete the study. As indicated above, the study howeverneeds to be comprehensive, and does not have to be confined to the project.

Data accuracy, completeness and integrity can be sticky problems. Certain technical (engineering design, formulae, etc.) information mightbe proprietary and therefore confidential. The parties need to determine the minimum level of disclosure.

VIII. Principle of Dam Safety
The three countries appreciate the efforts undertaken thus far by Ethiopiain implementing the IPoE recommendations pertinent to the GERD safety.Ethiopia shall in good faith continue the full implementation of the Dam safety recommendations as per the IPoE report.
Our Brief Assessments:

Dam safety is as important for Ethiopia as it is for downstream countries.Notwithstanding this it is important to ensure that "best practice" is followed so that habitations and civilizations in downstream countries arenot threatened by faulty construction and substandard operations.
Downstream countries are formally acknowledging Ethiopia's complianceeffort, and it is good.

Principle of Sovereignty and Territorial Integrity

The three countries shall cooperate on the basis of sovereign equality,territorial integrity, mutual benefit and good faith in order to attain optimal utilization and adequate protection of the River.

Our Brief Assessments:

The concept of "sovereign equality" features in many international agreements, conventions and constitutive acts (example the AfricanUnion), and is defined in the UN 1990's Declaration on Principles.

[12] It states that "sovereign equality" includes the following elements:

(a) States are judicially equal; (b) Each State enjoys the rights inherent infull sovereignty; (c) Each State has the duty to respect the personality of other States; (d) The territorial integrity and political independence of theState are inviolable; (e) Each State has the right freely to choose and develop its political, social, economic and cultural systems; (f) Each State has the duty to comply fully and in good faith with its international obligations and to live in peace with other States.

[13] This article is fairly standard and also features in the 1993 framework. However, it is unlikely to override the articles the dealt withdamages and rights that appear to have been voluntarily ceded to downstream countries in connection with the Blue/Main Nile and its tributaries.

Principle of Peaceful Settlement of Disputes

The Three countries will settle disputes, arising out of the interpretation orimplementation of this agreement, amicably through consultation or negotiation in accordance with the principle of good faith. If the Parties are unable to resolve the dispute through consultation or negotiation, theymay jointly request for conciliation, mediation or refer the matter for the consideration of the Heads of State.

Our Brief Assessments:

This article is also fairly standard. It evolves from the UN 1990 Conventionand that of the UN Charter. When this article is read together with Principle 1 of this tripartite Agreement, it brings back the 1997 Conventionand the mediation, arbitration and determination role of the International Court of Justice. Ethiopia's experience with arbitration has not been good and the Algiers Agreement and the ruling made by the Eritrea-Ethiopia Boundary Commission [14] are too fresh to be forgotten. Despite this fact,with lopsided clauses stacked against Ethiopia and in the absence of soundrules and principles governing the Nile water allocation and management, a "third party", particularly in context of the Nile Basin Cooperation Framework Agreement may lead to a better outcome.

In summary, when the recent tripartite Agreement on the GERD is compared with the 1993 bilateral agreement, though in many respects the

spirits of the two agreements appear similar, there are also importantdifferences.

III. Concluding Concluding Remarks

The current Agreement reaffirms Article 5 of the 1993 agreement which favored Egypt, includes terms about compensation for damages, restricts the scope of the dam project, recognizes “rights” to take action on the Blue/Main Nile, is sloppy on water utilization in downstream countries, andthe non-exclusion of the tributaries from the Agreement cumulatively put Ethiopia at a disadvantage.

The obvious and fundamental question that arises in the minds of many observers is whether a reasonable government representative of an independent upstream country, irrespective of his/her political credo, would sign without duress, the tripartite Agreement in its present form. Inlight of the above analysis and consistent with our initial reaction of March24, 2015, we reiterate our statement that no free nation should be subjected to be a party to such a lopsided and risky Agreement.

We also think the shared Nile waters represent opportunities for all riparian counties. However, the good fortunes emanating from the Nile could only be leveraged if all riparian countries are able to overcome the seemingly self-interest maximizing but counter-productive zero-sum gameactions. The Nile Basin can facilitate the much needed African regional integration if all parties know how to share both the cost and benefit from this rich resource. Hence, the central point of departure for making bilateral, tripartite, quadripartite (as the case may be) agreements shouldbe the Nile Basin Cooperative Framework Agreement, which includes all the riparian states and centers around the equitable sharing of the trans-boundary watercourses. Egypt must not be allowed to divide and maintainits supremacy by undermining the regional cooperation framework that is already in motion.

Hence, in the interest of equitable, fair, sustainable, comprehensivesolution that guarantees shared benefits and responsibilities, we, therefore, call upon:

Policymakers and stakeholders of all riparian counties to understand thattrans- boundary water flows, by their nature, are susceptible to the tragedy of the commons- that attempts by individual nations acting independently or in a dominant manner could only damage the common resource, and recognize that only shared responsibilities could guaranteeshared benefits;

The parties to the current Declaration rectify the unfair, unequitable and unsustainable clauses that are damaging any party, Ethiopia, in particular;All political parties in the riparian states refrain from using the shared waters of the Nile for their self-preserving interests; The Declaration and future negotiations should evolve from the laudable

Nile Basin Cooperative Agreement;
Any signed treaties and declaration of principles be immediately translatedinto major Ethiopian and other riparian states languages so that the general public is aware of what is going on;

Hydrologists, economists, lawyers, ecologists, geoscientists, sociologists,water engineers and diplomats etc., in the region to make professional contributions so that the water sharing problem is resolved for the benefits of all in the region.

Respectively Professor of Accounting at MSU Denver (U.S.A) and the University of the Witwatersrand (South Africa), Professor of Economics atMurray State University (U.S.A), Professor of African Innovations at Tshwane University of Technology (South Africa), Visiting Professor, Shanghai University (China); TMDC, Oxford University (U.K) and AdjunctProfessor at Adama Science and Technology University (Ethiopia), and Associate Professor of Economics at the University of Tsukuba (Japan).

NILE DIPLOMACY: Egyptian-Ethiopian disputes stall Renaissance Dam'(News24 onlines March 31, 2015) Construction workers are seen in a section of Ethiopia's Grand Renaissance Dam, as it undergoes construction, during a media tour along the river Nile in Benishangul Gumuz Region, in Guba Woreda. According to a government official, the dam has hit the 41 percent completion mark. due six months ago, but the parties involved have yet toagree on how consultants should even approach the studies. Persisting differences among Egypt, Ethiopia and Sudan keep delaying the studies, which Egypt hopes will prove that the dam's construction will cause extensive problems for Egypt and Sudan. The differences revolve around details in the fine print of the offers submitted by the two consultant offices chosen to conduct the studies: the French BRL and the Dutch Deltares. The seventh round of negotiations ended July 22 in Khartoum without any signed contracts, however.
Alaa Yassin, spokesman for an Egyptian delegation of experts on the Renaissance Dam, said in an interview with Al-Monitor, "Our official position is that this dam is harmful to Egypt, and its storage capacity hasno technical or economic justification. The differences remain unresolved,and a great deal of time has been consumed. We were supposed to finishthe studies in no more than six months, but around a year has passed without signing the contract related to the consultants that will conduct the studies."
The Egyptian delegation, along with representatives of Sudan and Ethiopia, make up the international commission of experts on the dam. From September 2014 until March 2015, the three countries managed only to select the two consultant offices, but never signed any official contract with them. Members of the experts committee cannot agree on the proposals submitted. The resulting delay prompted political leaders inthe three countries — Egyptian President Abdel Fattah al-Sisi, Sudanese

President Omar Bashir and Ethiopian Prime Minister Hailemariam Desalegn
— to sign an agreement in March 2015 in which principles were defined inthe hope of resolving their differences.
The disagreements also revolve around the office's country of origin, as there was a Sudanese-Egyptian desire to exclude any consultancy from the United States. While Ethiopia proposed to select BRL, Egypt was leaning toward Deltares. Even after agreeing to hire both French and Dutch consultants, disputes over the division of tasks between the two intensified. While Ethiopia insisted that the French company be the main contractor and the Dutch the subcontractor, Egypt did not agree and insisted that the Dutch office take part in the process, with specific tasks. In light of these ongoing disputes that threaten the completion of joint studies, the Egyptian government announced it had conducted and submitted to both Ethiopia and Sudan at a July 22 Khartoum meeting two studies on the effects of the dam. One of the two studies underlines the effect of the dam on Egypt with respect to its water share as well as its production of hydroelectric power generated by the High Dam. The secondstudy addresses the flow of the lower water gates, which secure the waterneeds of downstream countries (Egypt and Sudan), especially when the Renaissance Dam's turbines stop.
Yassin told Al-Monitor, "Egypt handed over the two studies based on the Khartoum agreement to exchange national studies that would serve as areference to the consultant office, but the main reference [for the Renaissance Dam project] would be the studies that will be conducted bythe international consultant offices."
He continued, "There are interests that prompt each party to cling to [its]position, but the Egyptian negotiator did not and will not pass any resolution that would harm Egyptians' water rights, as the country is already suffering from water shortage."
However, Sudanese Minister of Water Resources and Electricity Motaz Moussa pointed out in a press statement on the sidelines of the Khartoummeetings that the Egyptian studies are non-binding.
Moussa said that "the consultant office will submit the studies carried outby the three countries in this regard, but these studies would not be binding. What would be binding, though, is the outcome of the joint studies by the three countries."
Egypt is concerned about the preliminary storage capacity of the Renaissance Dam, which Ethiopia decided to increase from 14 billion cubicmeters to 74 billion cubic meters. The beginning of the water storage process could potentially lead to a decrease in Egypt's share of water at a rate ranging from 9 billion to 12 billion cubic meters per year. Egypt wouldlose about 3 million acres of agricultural land and 5 million to 6 million farmers would be displaced. Added to that is concern about the deficit in the energy production from the High Dam and the decrease in the Nasser Lake level to about 15 meters.
What is more, the project could lead to periods of drought, deteriorationof the water quality and a possible dam collapse as a result of its construction on a downhill area that sees the strong flow of the Blue Nile

waters at more than a half-billion cubic meters of water per day. These waters come from highlands that reach up to 2,000 meters, and this couldcause severe flooding that could wipe out some of villages and cities, particularly in Sudan.

Egyptian Minister of Water Resources and Irrigation Hossam Moghazi saidat a July 29 news conference attended by Al-Monitor in Cairo that differences concerning the scope of the work of the French and Dutch consultants have been resolved: The French firm will take care of 70% ofthe tasks, while the Dutch company will take care of 30%.

Moghazi added that “the offer submitted by the BRL will be reviewed onceamended at a meeting of the tripartite committee experts set to take place Aug. 12 in Addis Ababa. If the commission’s experts approve it, it will be presented to the water ministers of the three countries for signing at a meeting to be held in Ethiopia Aug. 20.”

However, if the committee’s experts find that substantial amendments were made and need to be further studied by the three countries, then thesigning will be postponed until a meeting to be held in Cairo in September.Egyptians are waiting for the Aug. 20 meeting, which will determine if the Egyptian-Ethiopian disputes might end, and whether contracts will be signed or negotiations will return to square one. EU diplomats reveal devastating impact of World Bank-funded Ethiopiadam project on remote tribes'

Lives of semi-nomadic tribespeople being irreversibly changed byrelocation into poorly planned settlements to make way for sugarplantation, says released report

A controversial World Bank-funded scheme to dam a major Ethiopian riverand import up to 500,000 people to work in what is planned to be one of the world’s largest sugar plantations has led to tens of thousands of Africa’s most remote and vulnerable people being insensitively resettled.

According to reports, released this week, by two teams of British, American and EU diplomats who visited the resettlement areas in the Lower Omo Valley in southern Ethiopia last year, the lives of 20,000 Mursi, Bodi and other semi-nomadic tribespeople are being “fundamentallyand irreversibly” changed by the mega-project.

The $5bn (£3.3bn) Gibe III dam, which towers 243 metres high and will generate 1,870 megawatts (MW) of electricity when completed later this year, will irrigate up to 175,000 hectares of land previously used by herders and small farmers. Constructed with money from the World Bankit has already been linked by human rights groups and anthropologists toconflict and widespread abuses by the Ethiopian government.

But the UK government, which is Ethiopia’s largest donor, twice rejected freedom of information requests to release the findings of the diplomats’ field visits to the resettlement areas on the grounds that publication couldjeopardise relations between the countries.

“Releasing the information requested could significantly damage the UK’sability to deliver government policy and to protect and promote UK interests,” it argued.

However, two documents from the Donor Advisory Group released to Survival International by the European commission this week suggest thatthe Ethiopian government insisted that indigenous communities living downstream of the dam had no choice but to quit their ancestral lands to make way for the plantations.

In over 30 pages of reports of meetings held with communities and individuals last year, the diplomats say that the Ethiopian government didnot obtain the full prior consent of the tribes as recommended under international law. Many of the tribes had no idea that the dam would effect them, they said.

People from one un-named village were said to have been: “placed in a muddy and isolated site, in inferior huts. Their situation was deplorable; the absence of sanitation means [they] are suffering diseases such as bloody diarrhea and malaria. Services are unavailable, it takes a two-hourwalk to the nearest canal for bad quality drinking water while the nearest health post is eight hours on foot. Residents say the government does notallow this group to move out.”

The diplomats reported that the remote Omo Valley has been totally transformed since the river Omo was blocked and irrigation canals built.They said they expected the influx of 500,000 workers, mainly from theEthiopian Highlands, would lead to ethnic conflict and widespread socialdestabilisation.

A second group of British, EU and other diplomats who visited groups ofresettled Suri people heard evidence of corruption, financial mismanagement, land grabbing, inter-tribal raiding, and poorly planned settlements.

The diplomats, who were accompanied at all times by government officials, said they found no evidence of forced migration but stated thatthe government was not offering the semi-nomadic communities any alternative to permanent settlement and had not fully consulted groups before evicting them.

They also found that the giant sugar plantations would deny the tribespeople access to grazing and farming lands on which they dependfor survival. Around 200,000 people in the Omo Valley are likely to be affected by the dam in some way.

“It seems clear that local government and plantation have decided thatresettlement is necessary. Government is not offering communities anyalternative but to settle permanently,” said one report.

While some communities and individuals said they welcomed a more sedentary life with better access to health and education in the new villages, many others fiercely rejected the government scheme and have sought to remain independent.

The diplomats said they were not confident that they were getting a clearpicture from communities whose testimonies were translated by government officials who appeared “anxious and distracted”. It was only when interviews were conducted without interpreters that they felt confident they were receiving an accurate impression of the situation.

“Security is a major concern linked to an increase in the proportion ofarmed men and the use of alcohol. Traditional systems of conflict resolution are declining ... these cultural trends tend to increase the number of killings,” one report said.

Britain’s Department for International Development (Dfid) has denied anyresponsibility for resettling people in the Lower Omo Valley but said it hadcontributed money for education, health, road projects and basic servicesacross Ethiopia, potentially including the valley.

The reports are embarrassing for the UK government because Britain was the largest of 21 international donors to a $4.9bn World Bank-organised funding program called Promoting Basic Services (PBS). This was designedto pay for health, road and water provision for people in resettlement areas across Ethiopia. Earlier this year it pulled out of the scheme having contributed an estimated £750m.

In a statement, Dfid said: “The UK has never funded Ethiopia’s resettlement programmes. Ethiopia remains one of the poorest countries in the world. UK aid to Ethiopia is improving the lives of millions of peopleby supporting health, water and education programmes, promoting job creation and improving people’s nutrition.

“Our previous support to the Promoting Basic Services programme paidfor health, education, water, roads and agricultural services provided bylocal governments. It did not support Ethiopia’s resettlement programmes.”

The two teams of diplomats made 37 recommendations to the Ethiopiangovernment. These ranged from ensuring that all resettlement programnmes are voluntary, to guaranteeing water and latrines in villages, consulting people before moving them, and offering people alternatives to becoming sedentary.

The diplomats’ missions to the Omo Valley followed a damning report by Human Rights Watch and the World Bank’s inspection panel. Although theWorld Bank rejected its panel’s findings, World Bank president Jim Yong Kim admitted to serious flaws with its resettlement programmes.

Survival International accused Britain of trying to cover up abuses by theEthiopian government. “It took Dfid almost two years to investigate allegations of serious human rights violations. The two reports which it tried to prevent the public from reading show just how far it will go to cover up abuses by a regime which receives hundreds of millions of pounds of UK tax payers’ money,” said spokeswoman Elizabeth Hunter.

The Ethiopian government said in a statement: “Last year’s Donor Advisory Group (DAG) report was generally positive, but where recommendations were made, or when the government itself noted that there was obviously a need for improvement, it has taken remedial actionand improvements have been made, and continue to be made on an on- going basis.”

The downstream impact of the dam is also hotly contested. Some hydrologists have predicted that Ethiopia’s expansion of water-intensivesugar and cotton plantations on the Omo river, which the Gibe III dam allows, could reduce flow to Lake Turkana by up to 70%. This would kill

ecosystems and greatly reduce the water level of the lake, on which tensof thousands of herders and vulnerable communities depend.

This, says International Rivers, could make the difference between marginal livelihoods and famine for the tens of thousands of alreadyvulnerable people who depend on the lake for their livelihoods.

Exposed: Forced evictions in Ethiopia - what the UK government tried tocover up? By Survival International (September 3, 2015)

The UK government has tried to suppress evidence of gross human rightsviolations in Ethiopia's Lower Omo Valley, such as the forced resettlementof the Bodi and other tribes ©Nicola Bailey/ Survival, 2015

The U.K. government tried to suppress evidence of gross human rights abuses in Ethiopia to appease the government there, a new investigationby Survival International, the global movement for tribal peoples' rights,has revealed.

The key aid donors to Ethiopia, including the U.K.'s DFID,USAID and the European Union, sent two missions to theLower Omo Valley in the south ofthe country in August 2014, to investigate whether tribes there were being forced off their land to make way for commercial plantations.

The U.K. authorities refused to release the missions' reports under theFreedom of Information Act, saying their disclosure would significantlyprejudice international relations. But Survival then appealed to the European Commission, which has released them.

The reports reveal:

- That the Ethiopian government has not obtained the consent of tribes ofthe Lower Omo to their resettlement;
- It has pressured and threatened them into leaving their lands – in somecases in fear for their lives;
- One tribal group told the donors, "before you come back next year, thegovernment will come to kill and finish us"; The reports of two donors missions to the Lower Omo Valley reveal that land grabs deny the tribes

access to the river banks they need for cultivation

- That land grabs associated with large scale plantations deny the tribes access to ancestral grazing and farming lands on which they depend forsurvival, and to the river banks they need for cultivation;
- On the conditions in one resettlement site the report states, "Their situation during our visit was deplorable; the absence of sanitation means the villagers are suffering from diseases such as bloody diarrhoea, malaria and unspecified headaches … Despite the dire circumstances in [name redacted], residents say the Government doesnot allow this impoverished and vulnerable group to move out";
- Donor guidelines designed to ensure that resettlement complies withinternational law have been routinely ignored.

Survival International has been urging the international donors to freezefurther aid to the Lower Omo Valley until the human rights abuses are stopped, but virtually no action has been taken. The U.K.'s 2014-

15 aid budget to Ethiopia exceeds £360 million.
Survival's Africa campaigner Elizabeth Hunter said today, "It
took DFID almost two years to investigate allegations of serious human rights violations in the Lower Omo. The reports it desperately tried to prevent the British public from reading show just how far it will go to cover up gross human rights abuses carried out by a regime which receives hundreds of millions of pounds of UK taxpayers' money. While entire tribes are subjected to violence, the destruction of their homes andlivelihoods, and the theft of their land on a staggering scale, the UK government turns a blind eye in the name of political and economic expediency."
Background:
Around 200,000 tribal people live in the Lower Omo. Many have sufferedfrom brutal repression, forced relocation, and prejudice from a government that views them as "backward" and in need of "modernization."
One expert has warned that the loss of their land and resources will leadto a "humanitarian catastrophe," and one of the mission reports warns that the influx of more than 500,000 workers into the area is "likely to significantly increase the risk of conflict."
Survival has received reports that the Kwegu are starving following theconstruction of the Gibe III dam.
The central findings of the donor missions were covered up in a letter to the Ethiopian government, published in February 2015. The letter sanitised the reports' conclusions to the extent that the Ethiopian press was able to claim that the donor missions had "found no evidence of people being forced to move for either resettlement for agricultural development projects in the areas they visited," and that it "found none ofthe problems claimed by Survival International or Human Rights Watch and others …"
In March 2015, Survival received disturbing reports that many of the small Kwegu tribe are starving as a result of the destruction of their forestand the death of their river following the construction of the Gibe III dam and associated irrigation schemes.

NILE DIPLOMACY: How to Share Water Along the Nile
By JOHN H. LIENHARD V and KENNETH M. STRZEPEKSEPT
CAMBRIDGE, Massachusets September 29, 2015
On the Blue Nile in Ethiopia, construction is underway on a public works project of gigantic physical proportions and exquisite political delicacy. TheGrand Ethiopian Renaissance Dam, now about halfway finished, amounts to a test: With water becoming precious enough to be the stuff of war, cannations find ways to share it?
So far, so good. The project is moving toward completion, and a recent joint declaration of principles by the leaders of Egypt, Ethiopia and Sudanpledges cooperation and no "significant" downstream harm. That is critical, given that the dam will control nearly two-thirds of the water on which Egypt depends. But for

the cooperation to be meaningful, these three countries will need serious technical analysis. Poor assessment of such matters as the variability of annual rainfall or minimum flows

required to maintain downstream water quality could undermine a decentagreement, leading to conflict of unpredictable intensity.

That's because the flow of the Nile is climatic roulette. It experiences periods of plentiful water and periods of extended drought, and it always has: Remember the story (in both the Bible and the Quran) of seven yearsof plenty, and then seven lean years? But now the stakes are much higher: Egypt's population is 90 million, and growing. That country's Aswan High Dam, downstream from the Ethiopian dam, helps to moderatethese fluctuations, but a second large dam and its reservoir higher upriverare going to complicate things.

Egypt now receives virtually all its water from the Nile — about 60 billioncubic meters a year, slightly above the amount provided for in its treaty agreement with Sudan. That amounts to the withdrawal of 700 cubic meters per capita per year. Compare that with California, which annuallywithdraws about 1,400 cubic meters per capita from multiple sources, including 30 percent of the Colorado River's annual flow, and you understand just how scarce and precious the Nile's water is to Egypt's welfare.

California depends heavily on Lake Powell and Lake Mead, the reservoirs behind dams on the Colorado River, which together store slightly more than three years' worth of that river's total flow. The new dam in Ethiopiawill have an even larger storage capacity than that of Powell and Mead combined, but still amounts to just 1.5 years of the flow of the Blue Nile alone. Adding in the very large reservoir behind Egypt's Aswan High Damgives a storage of about 1.75 years of the total flow of the Nile. It's not awide margin of safety for a long drought — as Californians will attest.

The monsoon rains in Ethiopia that will feed the new dam come mainly during just three months, so by storing that water, the new dam will moderate and smooth out the flow of the Blue Nile, the 900-mile-long headstream of the Nile itself. It will also generate huge amounts of electricity, the sale of which could finance much-needed development in Ethiopia — except that transmission lines to export the power are not yetbeing built.

Just as California has used stored water to become an agricultural powerhouse, Sudan will benefit by using the more stable flow of water from the new dam to raise its agricultural productivity. This will allow Sudan, which sits between Ethiopia and Egypt, to finally employ its full treaty allotment of river water, which in turn will reduce what is availableto Egypt.

It's clear that a cooperative agreement among Ethiopia, Sudan and Egyptis needed to avoid conflict and downstream harm. This includes agreement on what amounts to "significant" harm, given that, in the past, Egypt has been willing to go to war to protect its water.

All three countries stand to benefit if they work together. The dam's hugestorage capacity could help both Sudan and Egypt during drought years. And if Egypt were to agree to buy the power that the new dam will generate (and to build the transmission lines to connect to it, perhaps

with international help), then Ethiopia will benefit economically fromstored water that has to flow downstream eventually.

Here is where the technical issues will be critical. Last November, the Abdul Latif Jameel World Water and Food Security Lab at M.I.T. convened experts on Nile Basin water resources. They pointed out that managementof a river system with multiple dams required sophisticated joint management with a shared knowledge base and scientific modeling framework. The hard negotiations ahead to achieve detailed agreements on such things as reservoir operation policy, power trading, dam safety and irrigation practices will require that foreign policy and water experts from each of the three countries have a shared understanding of the technical issues and a willingness to compromise.

In May 2015, the three countries engaged technical consultants to assistwith these problems, but that arrangement has since collapsed over disagreements about project management. It behooves the internationalcommunity to help, through support of regional efforts like the Nile BasinInitiative, to build scientific and engineering coordination and knowledge among the three countries, provide impartial expertise, set up a management system and perhaps offer a process to resolve disputes.

The world needs to get good at sharing water, and right away. The alternative is frequent regional conflicts of unknowable proportions. John H. Lienhard V is a professor at M.I.T. and director of the Abdul LatifJameel World Water and Food Security Lab. Kenneth M. Strzepek is a research scientist at the M.I.T. Joint Program on the Science and Policy ofGlobal Change. The article originally appeared on 'The New York Times', September 28, 2015)

THE REGIONAL NILE DIPLOMACY:Tension, disagreement persists in GrandEthiopia Renaissance Dam negotiations Menafn Daily Egypt

News December 21, 2015

More tension and disagreement has emerged from the recent meetings inKhartoum between the ministers of water resources and foreign affairs ofEgypt, Sudan, and Ethiopia concerning the Grand Renaissance Ethiopian Dam project.

Sudan's Foreign Minister Ibrahim Ghandour described the tripartite meeting's results as having laid down a positive infrastructure that couldsoon be articulated in the form of an agreement that satisfies all sides during the meeting scheduled to be held in Khartoum later this month.

Ghandour blamed the media for failing to report on positive advancementsin the negotiations.

In an interview with Egypt's Middle East News Agency (MENA), Ghandourreasserted his commitment to the Declaration of Principles signed by thethree presidents last March in Khartoum that stated that no party shouldbe negatively ffected by the dam.

However, former minister of irrigation and water resources, Mohamed Nasr El-Din Allam told Daily News Egypt: "The negotiations of the previoustripartite meeting weren't positive or successful." Allam

stated that the negotiations continue to be marked by relative intransigence with little agreement, dismissing Ghandour's characterisation of media bias as the principal issue, while also accusing the Sudanese government of intentionally prolonging the negotiations so as to commence construction on the dam before the conclusion of a technical study to be published on 1June 2016. Allam added if the talks failed in the next meeting, Egypt should organisea presidential meeting to address its grievances internally before makingrecourse to the African Union's organisations and subsequently to the United Nations Security Council. NILE REGIONAL DIPLOMACY:

The Dam-Nation of Ethiopia by the T-TPLF (COMMENTARIES By Almariam On January 3, 2016)

Last week, before the ink had dried on the "new agreement" on the so- called Grand Ethiopian Renaissance Dam, Egyptian President General Abdel-Fattah El-Sisi told Egyptians during the inauguration of a national farmland project, "I totally understand the concern of Egyptians as wateris a matter of life or death. We already agree with our brothers [the Ethiopians] that they want to live as we want to live. I have not led you astray before and I will not lead you astray now."

Is that military-speak for something?

"Water is a matter of life and death?" "They want to live as we want tolive?" "I will not lead you astray now?"

When generals (even in civilian suits) speak about "life and death" and "living" and not "leading astray", I get really concerned. I may be biasedbut I think generals say they will not lead their people astray because they only know one path, the warpath. This kind of talk coming from generals really freaks me out. Am I being oversensitive?

Generals often speak with forked-tongue. They will not come out and say,"We are going to bomb this or that." They will talk about an "air campaignon targets". Generals won't talk about "torture". They will talk about "coercive interrogations". They talk about "collateral damage" or "friendlyfire" but never about how "we killed our own soldiers or people by mistakeor negligence." Generals don't talk about a "blitzkrieg" (lightening war) but "shock and awe".

El-Sisi does not seem to be mincing words here. To me he is sayingsomething very profound. But what exactly is he saying?

To be precise, what exactly is El-Sisi telling (assuring) the Egyptianpeople?

What exactly is he messaging the Thugtatorship of the Tigrean People'sLiberation Front (T-TPLF) when he says for Egyptians the Nile water is a"matter of life and death"?

What is El-Sisi telling his "Ethiopian brothers" when he says "they want tolive as we want to live". If we don't live, they don't live?!

What is he telling the regional neighbors? What is he telling the Americanand European powers that be?

Is El-Sisi saying that he knows what he is doing now and in the future andthat the Egyptian people should

not worry?

El-Sisi's comments have prompted me to probe into his strategic intentions and capabilities and examine what appears to me to be brinksmanship military-speak. I hear El-Sisi saying the so-called Grand Ethiopian Renaissance Dam will be built when the Nile freezes and the devil goes ice skating.

In the interest of full disclosure, I need to make certain clarifications. First, I do not agree with President El-Sisi on a wide variety of human rights issues. I agree with Human Rights Watch's assessment that underEl-Sisi Egypt "has overseen a reversal of the human rights gains that followed the 2011 uprising."

On the other hand, El-Sisi has been "Ethiopia's Friend in Need". I mustgive credit when it is deserved.

When El-Sisi first heard of the beheading of 30 young Ethiopian migrants in Libya in April 2015 by the ruthless self-styled terrorist thugs known as "Islamic State of Iraq and the Levant" (ISIL) (also known as "Islamic State of Iraq and (Syria) al-Sham (ISIS)" because they were Christian, hecame out immediately and expressed his condolences on behalf of the Egyptian people who were "pained by the gruesome beheading of innocentEthiopians in Libya."

El-Sisi was the man who sent Egyptian troops to Libya to rescue the remaining Ethiopians from certain beheadings and bring them back toEgypt safely on a chartered plane.

When the T-TPLF leaders heard of the Libya beheadings, they did not evenwant to acknowledge the occurrence of the inhuman acts.

Redwan Hussein, a T-TPLF spokesman said, "It's being widely reported that ISIS purportedly shot, killed and beheaded Ethiopians. The Ethiopiangovernment is doing its level best to confirm whether the victims were Ethiopians."

El-Sisi rose to the occasion as the T-TPLF sat on its duff on the sidelineslooking all bewildered, powerless and helpless, twiddling its thumbs andscratching its head.

El-Sisi stood at the head of a red carpet reception line at the Cairo Airportand greeted the rescued Ethiopians one by one, giving them encouraging words. Not one T-TPLF representative showed up at the receiving line.

Some may suggest that El-Sisi took advantage of a public relationsopportunity and maxed it out.

My answer is simple: "A man who is drowning does not care who tosseshim a rope!" A man facing certain beheading does not care who rescueshim or the reasons his life is saved!

The simple fact is that President El-Sisi ordered the rescue of the young Ethiopians because he wanted to; because he could; because he believedit is the right thing to do; because he believed in the brotherhood and sisterhood of the people of Egypt and Ethiopia; because he cared about Ethiopians Christians as Christians and as human beings who deserve to be treated with justice and dignity.

President El-Sisi, by acting courageously and swiftly to rescue the kidnapped Ethiopians in Libya, cemented the millennia old friendship andsisterhood between two of the world's oldest civilizations.

I say the foregoing to say the following:

I do not believe El-Sisi wishes harm to the Ethiopian people. I do not believe he wants war with Ethiopia.

I believe El-Sisi will do his level best to find diplomatic and technical solutions to the myriad problems anticipated in the construction of the so-called Grand Renaissance Dam. Ibelieve El-Sisi will try to reason with the T-TPLF leaders to come up with afair resolution to the problems.

I also believe El-Sisi's diplomatic efforts with the T-TPLF will fail totally and completely, not for lack of trying or good faith on El-Sisi's part, butbecause of the ignorant arrogance of the T-TPLF leaders.

I believe that if push comes to shove and there is any depletion in Nile water flow to Egypt, El-Sisi will have no option but to resort to military means to ensure the so-called Grand Ethiopian Renaissance Dam will notharm or threaten to harm existing Egyptian farmlands, hydroelectric power production and reclamation of land for future farming purposes tofeed the rising Egyptian population.

My view is that what El-Sisi said after the "new agreement" must be examined in historical context and scrutinized for strategic intentions andcapabilities. Simply stated, going forward, I believe there are only two questions that need to be answered with clarity and certainty:

1) Has El-Sisi ruled out war or other military action to protect the 97 percent of all water Egypt gets from the Blue Nile and rely exclusively ondiplomatic means to resolve all outstanding issues?

2) Does El-Sisi now, or will he in the intermediate future have the militarycapability to make sure the status quo on water flow to Egypt continues? In my analysis, there is no question that El-Sisi and his military chiefs have come to the irreversible conclusion that the so-called Grand Ethiopian Renaissance Dam is a total and complete existential threat to Egypt and that the only solution to deal with the threat is a military one. This position is not something El-Sisi developed in a vacuum. The militaryoption has always been the core strategic option of successive Egyptian regimes who have regarded any dam construction on the Nile is an imminent existential threat to Egypt which must and will be resisted by any and all means necessary.

I believe all of the diplomatic dance and do-see-do that we see todayamounts to nothing more than delaying The Inevitable.

Since the onset of the Arab Spring in early 2011, the T-TPLF has sought tocapitalize on Egypt's political instability, fragility and regime change. The T-TPLF leaders thought they could take advantage of Egypt's internal problems to forge ahead with their construction and diversion of water from the Nile without much Egyptian pushback.

El-Sisi and his generals understood their own political vulnerabilities andplayed along with the diplomatic game for the last three years.

El-Sisi and his generals were biding their time with diplomacy. As Will Rogers said, "Diplomacy is the art of saying 'Nice doggie' until you canfind a rock."

My analysis of the situation is that El-Sisi is in a much stronger position than he was two years ago. The

instability and turmoil that gripped Egypt between January 2011 and June 2013 is no longer a factor. There are no mass protests threatening to overthrow El-Sisi's government. El-Sisi has consolidated power and his military regime is internally unified. The crackdown on the Muslim Brotherhood, I suspect, has wide support amongthe elites, the military, the bureaucracy and other civil institutions. There even appears to be broad consensus among the elites that El-Sisi is likely their man to prevent Egypt's descent into civil strife and religious conflict. El-Sisi today is confident enough to tell Egyptians not to worry about the Dam. He will not lead them astray. He knows exactly the path he will be taking when push comes to shove. He is not going to let them down. The "Ethiopian brothers" are not dumb enough to present Egypt with an existential threat by damming the Nile because "they want to live as Egyptians want to live".

In other words, El-Sisi today has found his Rogerian rock. He does nothave to say 'Nice doggie' to the T-TPLF anymore. The only question iswhen El-Sisi will roll with his rock!

My analysis is that El-Sisi and his military planners have set on a multi-phasic and stepwise progression to the Inevitable.

I believe the strategic intention of the Egyptians is to go to war over the so-called Grand Renaissance Dam only as a last resort. They believe they have the military capability now or could easily obtain it in the future to neutralize any threat from the Dam. They see no need to take preemptiveuse of military force now.

I believe the Egyptian strategy will proceed along the following linesthough not in this order.

First, there is substantial evidence to show that the Egyptians have lobbied the international loaners and donors not to give money to the T-
TPLF for the construction of the Dam. Egypt has launched such
a campaign along two tracks: 1) by having "Egypt's ministers of water andforeign relations meet with their counterparts in countries with influence inthe Nile Basin" and 2) by having Egypt's ambassadors lobby against funding in these countries. This strategy has been successful as the T- TPLF has not been able to get loans or other financial support for the construction of the Dam.

Second, I believe El-Sisi will undertake efforts to delay construction of theDam by requiring the completion of an endless series of technical studies and analysis. The "agreement" last week to have further technical studieson the Dam's impact to start in February 2016 and take up to 15 months is just the latest example of such tactics. Undoubtedly, more studies will be requested in the future. I also believe findings from the technical studies will reveal evidence and conclusions (as various studies to date have shown) that the Dam will adversely impact Egypt in a variety of ways. I believe in the end El-Sisi and his generals will use these technicaland engineering studies as casus belli (cause justifying military action).

Third, through delays and other means, El-Sisi will aim to incur massivecost overruns in the construction of the Dam, eventually making it financially impractical to build and maintain.

Cost overruns in the construction of large dams are common in theordinary course of events. In the largest and most
comprehensive scientific study on the economic viability of large dams ever done, Oxford University researchers Atif Ansar, Bent Flyvbjerg, Alexander Budzier and Daniel Lunn analyzed all large dams which were built between 1934 and 2007 for which reliable costs and schedule figuresare available. That study concluded large dams suffered average cost overruns of 96% in constant local currency terms. Project implementationsuffered an average delay of 44%.
Cost overruns in dam construction in Ethiopia are commonplace. For instance, the Tekeze hydroelectric dam on the Tekeze River, a Nile tributary, in northern Ethiopia was initially estimated to cost USD$224 million, but when it was completed seven years later in 2008, its cost skyrocketed to USD$360 million. Structural problems caused by poor engineering and substandard materials in dam construction are also commonplace. Gilgel Gibe II Dam on the Omo River in February 2010 experienced "tunnel collapse[which] closed the largest hydropower plantoperating in Ethiopia, only 10 days after its inauguration."
Fourth, I believe El-Sisi will insist on the longest possible time to fill the reservoir if the Dam is ever completed and thereby delaying power production while increasing the operating cost for the T-TPLF. According toa Norwegian engineering study, it will take seven years to fill the reservoirwith 67 billion cubic meters of water assuming all goes according to plan. Few things go according to plan. The super-secretive T-TPLF has not published its plans for the initial reservoir filling to meet its power production targets. Regardless, initial reservoir filling and evaporation after the reservoir is said to result in significant reduction of water flow to Egypt.
I am informed by experts that the reservoir filling process is a critical phase which must be handled with extreme care. Reservoir filling is affected by a whole host of factors including determination of filling rate,seasonal changes in water volume, means of controlling the rate of reservoir rise, remediation of problems that might develop during initial filling, placement of elaborate surveillance technology to detect problemsduring filling, planning for dam inspection and variable impact
on downstream areas prior to and during filling, and so on. The reservoirfilling period is likely to be a high-magnitude flash point between Ethiopiaand Egypt.
Fifth, if the Dam is ever completed, El-Sisi will undertake efforts to limit its financial viability by denying it a market. According to the T-TPLF, thepower from the "Grand Renaissance Dam" is to be sold to the Sudan, Egypt and the Arabian peninsula once construction is complete.
According to an October 2015 report, Azeb Asnake, "CEO" of "Ethiopian Electric Power" said "Ethiopian Electric Power spends nine US cents to generate one kwh of energy but sells it at a price of six US cents." "Ethiopian Electric Power" is currently selling power at a 33 percent loss.At that rate, the so-called Grand Renaissance Dam will be profitable only

on Planet T-TPLF where they practice the voodoo economics of their latemaster Meles Zenawi.
Various studies have shown that electricity costs in Africa could be reduced substantially if there is regional integration and cross-regional collaboration in power production. The problem has been that such collaboration has been undermined by the absence of trust among Africancountries not only in cost sharing but also in the control and managementof dams for mutual long-term benefits.
The tragic irony is that in the current dispute between the T-TPLF and Egypt over the Dam, there is absolutely no trust. There is no evidence to support the view that the three neighboring countries will ever collaborateas development partners to build a reliable power sector. That is just a fact!
Sixth, if the Dam should be completed and become operational, it is highlylikely El-Sisi will take tactical short-term action to disable power grids, transmission and distribution lines, substations and the like. Such actions could result not only in prolonged and severe power outages and disruptions but also in the degradation of the Dam's infrastructure and performance capacity.
Seventh, I believe El-Sisi will exhaust every diplomatic and legal approachincluding mediation, arbitration, judicial proceedings and U.N. interventionto protect what he considers to be an existential threat to Egypt before resorting to military action.
Eighth, if the Dam should be completed and become operational, I do notbelieve El-Sisi will wait for any adverse economic effect to occur in Egypt before taking action. I believe he will go after the Dam with everything hehas got within days of the completion of the project in a lightning strike. Ihave no doubts about that!
Ninth, there is one undeniable fact all must accept: There is no question whatsoever that the so-called Grand Renaissance Dam will have a significant and adverse impact on the water flow to Egypt. Egypt today isfacing water shortages amid a growing population. It needs more water, not less. The Dam will result in significant loss of water flow to Egypt.
According to the United Nations, "Egypt is already below the United Nations' water poverty threshold, and by 2025 the UN predicts it will be approaching a state of "absolute water crisis". Simply stated, Egypt couldrun out of water by 2025! Any reduction in Nile water flow will be catastrophic on Egypt.
A Stratfor Global Intelligence report last week concluded that the "removalof volume from [Nile River] into the reservoir — which could take up to sixyears — could greatly reduce water supplies into Egypt. Eventually, the static water in the reservoir will also lead to a reduction in volume because of evaporation, which could deteriorate water quality."
According to a 2012 Norwegian study, during the seven year period it will take to fill the reservoir with 67 billion cubic meters of water, the Nile flowinto Egypt could be cut by 25%. Such a reduction in water flow will be catastrophic for Egypt. Once the reservoir is filled, there could be up to a 50 percent reduction in the flow of water to Egypt.

A 2014 report by the Massachusetts Institute of Technology concludedthat it was a pipedream for the parties to find a solution to the variousproblems created by the Dam:

Egypt, Ethiopia, and Sudan are currently hoping that a team of international consultants can quickly find technical solutions to these challenging problems to which they can agree. From our perspective, thisis likely wishful thinking. The hard negotiations ahead will require that foreign policy and water experts from each of the three countries have a shared understanding of the technical issues and a willingness to compromise while hammering out detailed agreements on reservoir operation policy, power trade agreements, dam safety, and salinization control.

I believe the die is cast.

Today's rumors of war on the Nile will prove to be water wars on the Niletomorrow. I believe that is foreordained and inevitable so long as the T- TPLF is determined to deprive Egypt significant water flow from the Nile despite protestations to the contrary.

The Egyptians have long said water is a matter of life and death for them.By 2025, it will literally be a matter of life and death for them!

In 1979, Egyptian president Anwar Sadat said, "The only matter thatcould take Egypt to war again is water." Reduce Egypt's water by 25percent and there will be war.

In 2010, President Hosni Mubarak presumably made a deal with the Sudanese leader Omar al-Bashir for the construction of a small air base tobe used as a staging point for a military assault on hydroelectric facilities.Reduce Egypt's water by 25 percent and there will be a major airbase on Egypt's southern border.

In June 2013, then-President Mohammad Morsi said, "Egypt's water security cannot be violated in any way. As head of state, I confirm to youthat all options are open. We are not calling for war, but we will never permit our water security … to be threatened. If it loses one drop, our blood is the alternative." Reduce Egypt's water by 25 percent (or "one drop") and there will be war.

In June 2014, Egyptian Major General Talaat Mosallam said, "Now the options are very few. Diplomacy is the first, but Egypt's leverage is 'at rock bottom,' and if talks fail, Egyptian military commanders may decide that 'it is better to die in battle than to die in thirst.'" Reduce Egypt's water by 25 percent and Egyptian military commanders will decide that 'itis better to die in battle than to die in thirst.

Some leading Egyptian political leaders have suggested various methodsof destroying the Dam, including support for anti-T-TPLF elements.

According to "credible" intelligence sources, Egypt has military plans todeal with any dam built on the Nile "after all diplomacy options fail":

If it comes to a crisis, we will send a jet to bomb the dam and come backin one day, simple as that. Or we can send our special forces in to block/sabotage the dam. But we aren't going for the military option now. This is just contingency planning. Look back to an operation Egypt did in the mid-late 1970s, I think

1976, when Ethiopia was trying to build a

large dam. We blew up the equipment while it was traveling by sea toEthiopia. A useful case study. Reduce Egypt's water by 25 percent and El –Sisi will send his jets to "bomb the dam" or "send his special forces in to block/sabotage the dam."Tenth, in my view, the construction of the Dam for the Egyptians is, underno circumstances, a matter of negotiation, dialogue, mediation, arbitration, etc. for Egypt. Think about it. How can Egypt negotiate on a "matter of life and death"?

The late head honcho of the T-TPLF, Meles Zenawi said, "I am not worriedthat the Egyptians will suddenly invade Ethiopia. Nobody who has tried that has lived to tell the story." (I believe this was one of the very few times Meles actually used the word "Ethiopia". He almost always referred to Ethiopia as the "country". I feel he was ashamed to say the word, "Ethiopia". I have never heard Meles describe himself as an "Ethiopian".

NEVER! I would like to stand corrected if anyone can produce adocumented instance in which Meles said in public that he is an"Ethiopian".)

I am glad Meles takes great pride in Ethiopian military prowess. Of course,Meles is accurate in his historical observation. Ethiopia has maintained its independence and sovereignty for over three thousand years repelling all forms of invaders.

Emperor Menelik II vanquished the invading Italian Army at the Battle of Adwa in 1896, barely two years after the Conference of Berlin where Europeans carved up Africa to establish colonies. It is rather ironic that Meles should take pride in Menelik, the one Ethiopian leader he hated more than anyone. After Italy invaded Ethiopia in 1935, Italy was once again vanquished by Ethiopian patriotic resistance leaders from all parts ofthe country. That is why I believe ETHIOPIANS UNITED CAN NEVER BE DEFEATED BY A FOREIGN OR DOMESTIC ENEMY.

I am not sure Egypt, as Meles must have anticipated, has a land invasionplan for Ethiopia if the Dam is completed. I would venture to guess that El-Sisi would opt for surgical air strikes and covert commando operations.There are some analysts who suggest that an Egyptian military operationagainst the Dam could be difficult as Egypt may not have the military capability (e.g. in-flight refueling capability for its jets) to strike over a long distance. It would appear Egyptian military planners would factor forsuch contingencies.

It is definitely worth noting that in September 2015, El Sisi ordered the purchase of two French aircraft carriers and 24 "omnirole" Dassault Rafalefighters with a range of 1,850 km and a service ceiling of 50 thousand feet.

It worth considering how El-Sisi could exploit regional dynamics to hisadvantage in any strategic or tactical moves he may wish to make.

I have stated clearly my personal views on the Dam in my commentary,"The Dam Dammed by Cash Flow?".

I am not against the construction of dams in principle. But I proudly wear the tag "Tree Hugger." I

wholeheartedly believe in environmental protection and conservation anywhere in the world. I believe smaller dams

are better than large ones. My view is supported by a substantial body ofscientific research.

I have a different view on the whole question of “power” in Africa, thepolitical and electrical one.

I believe it is important to first empower the people of Africa through improved governance and accountability before powering their homes andbusinesses. Dam construction in Africa, and particularly in Ethiopia, wheredams are built on non-competitive bid contracts, the only thing that is produced in the dams is corruption, corruption and more corruption.

I recently had opportunity to visit one of the most impressive dams on theColorado River. It was a great learning experience for me. I believe constructing and operating a large hydroelectric dam is an extraordinarily demanding task which carries substantial risks. I am not sure that those who are incapable of running Gilgel Gibe III could manage a dam that is going to be the largest in Africa.

As I stated in my April 2014 commentary, “Dam! White Elephants in Ethiopia?”, the “Grand Ethiopian Renaissance Dam” is a white elephant that does not make economic sense. Development Today, the independentjournal on aid, specializing in political, business and environmental issues related to Nordic and multilateral development assistance, called the Dam a “highly politicized prestige project of the late Prime Minister”.

The “Grand Ethiopian Renaissance Dam”, formerly the “Millennium Dam”, was the brain child of Meles Zenawi who, like all of his predecessor African dictators, suffered from delusions of grandeur. The Aswan High Dam in Egypt stood as a monument to Gamal Abdel Nasser. Meles wantedto have a concrete memorial that could immortalize and glorify him as thelittle “Big Man” of Africa.

I believe the Dam will be a flashpoint for water wars between Ethiopia andEgypt.

Every time I write a commentary about the so-called Grand Renaissance Dam, the nattering lackeys and toadies of the T-TPLF kick into gear and call me “unpatriotic”, “hateful to the T-TPLF”, etc. They will say I will never miss an opportunity to talk negatively about the T-TPLF, its “accomplishments”, and what it wants to do for the country’s development. I don’t believe the T-TPLF lackeys and toadies can read andunderstand the analyses I offer in my Monday Commentaries. If they did,they would challenge me on the facts and my reasoning. But they never do!

To invoke the famous line, “Frankly, my dear, I don’t give a damn” whatthe nattering T-TPLF lackeys and toadies say. I tell the truth as I see it,as I think it, as I understand it and as I feel it.

But here is a challenge to anyone who wants to take it. Present an analysis of a scenario(s) in the construction of the “Grand Ethiopian Renaissance Dam” which will not provoke Egypt into resorting to militaryaction as an ultimate act in defense of what Egyptians believe is a “matter of life and death” to them!

I have made my case. Now, make yours!

Let’s debate the issues. Let’s examine the facts. Let the people be informed. Let them be forewarned of what could be the consequences ofthe Dam. Let the people know the truth about the Dam!

I would like to be proven wrong in my analysis here because I do not wishto see water wars or any other conflict in the region. Nothing would give me greater pleasure than seeing regional integration and cross-regional collaboration in power production between Ethiopia, the Sudan and Egypt.Such collaboration is likely to be found in the world of fantasy, not in Northeastern Africa.

Those who disagree with my analysis should consult the report issued byStratfor Global Intelligence last week:

… As long as the region remains divided on the dam, actual construction could be disrupted at any time. The dam is reported to be about 50 percent complete right now, and water is being diverted around the construction site. Still, even though construction is far along, Ethiopia has been unable to secure foreign investment for the project, and less than 30percent of the total $4.8 billion price tag to complete the dam has been secured. Unless Ethiopia manages to secure the required funding, completion of the dam could easily be delayed by several years. This is precisely why negotiations are so important: The better negotiations go, the better Ethiopia’s chances for obtaining funding.

What happens to the Dam is not in El-Sisi’s hands. It is in T-TPLF hands tomake the Blue Nile red. Damn! After all, it may all be much ado about nothing!No dam money, no damned dam!

NILE REGIONAL DIPLOMACY Updates:

Egypt and Ethiopia spar over the NileFebruary 6, 2014 by Hassen Hussein

On January 8, Ethiopia turned down Egypt's demand that it suspend construction of its mega-dam on the Nile, further escalating tensions between the two states. Fearing that Ethiopia's $4.2 billion project would reduce the river's flow, Egypt calls for a halt in construction until the dam's downstream impact is determined. Otherwise, it has vowed to protect its "historical rights" to the Nile at "any cost." While scoffing at Egyptian threats, Ethiopia has called for Cairo's collaboration in negotiations and claims that the dam will have no adverse effect on Egypt.It would, in fact, decrease evaporation and improve water flow. Ethiopia hopes that the ambitious hydroelectric project, slated to be completed in 2017, would catapult the country out of poverty. Frustrated by what it described as Ethiopia's stubborn stance, Cairo is threatening to take the issue to the United Nations Security Council. Is this just standard diplomatic brinkmanship before an inevitable compromise, or a harbinger of a looming water war? Regardless, the lack of progress on the diplomaticfront bodes ill for a quick end to a stalemate that has long gripped the region. Home to 600 million people, more than half of Africa's total population, the Nile Basin is already traumatized by endless internal political strife and mounting pressures to feed a population growing at Malthusian proportions. However, as ominous as it sounds, the collapse of the talks does not necessarily mean Egypt and Ethiopia will soon be locking horns. Despite suggestions to the contrary, this is simply the waning phase of a protracted diplomatic dance before an inevitable conciliation.

A dam for development

Although known as northeast Africa's water tower, Ethiopia until recently had not bothered to utilize its many rivers. The inability to make use of the Nile has been Ethiopia's age-old national lament. That changed in 2011, when the country announced plans for the construction of its so- called Great Ethiopian Renaissance Dam (GERD), designed to generate a staggering 6,000 megawatts of electricity. By situating the project only 19miles from the Sudanese border on the vast Blue Nile gorge, where the land is unsuitable for agriculture, Ethiopia sought to reassure Egypt but ended up stoking its fears. The design and impacts of the GERD are shrouded in secrecy. Observers cast doubts on its timely completion. In aflawed bidding process, Ethiopia granted the project to a Milan-based engineering company, Salini Costruttori, circumventing its own contract procedures and international standards on procurement. The construction

is reportedly lagging behind schedule and faces several unresolved technical problems, one of which is how long it takes to fill the dam. Ethiopia claims the project is on course and dismisses facing any technicalhurdles. One of Africa's fastest-growing non-oil economies, Ethiopia has embarked on a state-led development fashioned after the economic miracles in South Korea and the rest of the so-called Asian tigers.

Ignoring warnings from the International Monetary Fund and the World Bank that such a massive publicly funded infrastructure project would starve private investments, Ethiopia is forging ahead. To wit, when Egyptused its influence with international financiers to choke off funding, Ethiopia declared it would finance the project with domestic resources.

Gift of the Nile

The founding myths of many ancient civilizations center on famous rivers

— the Euphrates and the Tigris (Babylon), the Yangtze (China) and the Ganges (India), to name a few. However, not many are as inextricably dependent on a single river for their livelihood as Egypt is on the Nile. Egypt's history is defined as much by the flooding and drying beds of the Nile as by the pyramids. For a country described by Herodotus as "the giftof the Nile," control over the majestic river has been an existential Egyptian preoccupation since antiquity. The world's longest river is made up of a maze of tributaries. Nineteenth-century explorers went on a wild goose chase to locate the mysterious river's murky origin before tracing itto Lake Tana in Ethiopia and the Great Lakes in Central Africa. Two of the river's main tributaries are the Blue Nile and the White Nile. The Blue Nile,accounting for upwards of 80 percent of the Nile waters, originates in northern Ethiopia. It makes a steep descent from Ethiopian highlands — carrying brown silt — before it joins the White Nile in Khartoum, Sudan's capital, augmented by several large rivers from southwestern Ethiopia. The White Nile originates in Burundi and flows northward from the Great Lakes region, crossing Tanzania, Uganda, and South Sudan.

Who owns the Nile?

The Nile's origin being outside its borders did not prevent Egypt from getting the lion's share of its waters. The claim for exclusive ownership ofthe Nile waters is premised on a 1929 treaty between Egypt and Britain'sEast African colonies, Burundi, Kenya, Rwanda, Tanzania and Uganda.

These colonies gained independence from Britain in the 1960s. The treaty awarded 57 percent of the waters to Egypt while also requiring other nations to clear with Cairo before launching any major water project on the river. Another treaty, signed in 1959 between Egypt and Sudan, raisedEgypt's share to 66 percent. The two signatories, divvying up virtually all of the Nile waters, did not even consult Ethiopia, the main source of the river. After the 1959 accord, both Egypt and Sudan built mega-dams to exploit the water for irrigation.

For years, upstream Nile Basin countries — Burundi, Ethiopia, Kenya, Rwanda, Tanzania and Uganda — nursed misgivings about the colonial-eraaccord, in which they had no say. However, they grudgingly

acquiesced mainly because, unlike Egypt and Sudan, whose arid lands are watered bythe lone river, they are not wholly reliant on the Nile. But, finding the

challenge of feeding their growing populations on rain-fed subsistence farming unbearable, upstream countries initiated negotiations in 1999 to find an equitable and reasonable way to share the Nile waters. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream countries, was rejected outright by both Egyptand Sudan. Touted as “an African solution for an African problem,” the agreement calls for the creation of a commission to oversee development projects on the Nile. It needed ratification by the legislatures of each of the signatory countries. But its implementation is in limbo until another Nile Basin country — for example, the Democratic Republic of the Congo, which is now sitting on the fence — signs it.

Ethiopia’s diplomatic coup

In a further blow to Egypt, its alliance with Sudan faltered in 2012 whenSudan, which gets 35 percent of the Nile water according to the 1959 treaty, rescinded its initial opposition to Ethiopia’s renaissance dam. Khartoum’s change of heart is attributed to a still-secret report by a panelof international experts that concluded the dam would neither significantlyaffect downstream countries nor fundamentally alter the flow of the river. But Sudan’s internal vulnerabilities presumably played a crucial role. In 2011, Sudan saw a huge chunk of its land mass secede to form Africa’s newest state, South Sudan. Ethiopia’s support for the former rebels of South Sudan (currently embroiled in a power struggle of their own) was instrumental in forcing Sudan — Egypt’s loyal ally — to accept the divorce.An international warrant for Sudanese President Omar al-Bashir in connection with the conflict in Darfur has made the country an international pariah. Sudan could not afford to alienate its increasingly assertive neighbor to the south and eventually threw its weight behind Ethiopia’s colossal undertaking. Although it has yet to sign the Entebbe Agreement, which loosens Egyptian and Sudanese dominion over use of the Nile waters, Sudan’s new stance hands Ethiopia a diplomatic coup. ‘Egypt’s ill designs’

The most recent Egyptian president to threaten war to protect Egypt’s “inviolable” rights over the Nile was the Muslim Brotherhood’s Mohamed Morsi. Last June, in a secret all-party discussion chaired by then-PresidentMorsi, which was “mistakenly” broadcast live on state TV, Egyptian lawmakers suggested arming Ethiopia’s political opponents to obstruct theconstruction. The tension subsided with the military takeover in Cairo.

However, after a brief interlude in which it appeared that diplomacy was to replace the menace of war, the military regime is now raising the ante. The high brass knows full well that a food shortage resulting from a significant reduction in water volumes means riots in Egyptian cities. The last time Egypt staked its claim militarily over the Nile and the Red Sea was in 1876, when it invaded Ethiopia. The two armies met at Gura, now an Eritrean territory. Egypt’s army was nearly wiped out by an ill-equippedand ragtag Ethiopian side that would, two decades later, go on to hand Italy a humiliating defeat at the battle of Adwa. Although it never ruled out direct military confrontation with Ethiopia, Egypt has since reverted to

proxy wars. For centuries, Muslim Egypt supplied the head of Ethiopia's Orthodox Church, a state religion until the 1974 revolution. The imperial regime of Haile Selassie found itself under political pressure to leave the centuries-old arrangement intact following the 1959 Nile accord that excluded Ethiopia. Despite this historical relationship, Ethiopia's official historiography is replete with Egypt's ill designs over it. In the 1970s, Ethiopia blamed Egypt for fanning the Republic of Somalia's irredentist claims over the Somali-inhabited Ogaden region of Ethiopia. The two countries went to war twice over the Ogaden. Egypt is also faulted for its role, with Sudan as its accomplice, in precipitating Ethiopia's loss of accessto the Red Sea with Eritrea's independence. Eritrea broke away from Ethiopia in 1993 after 30 years of civil war.

Internal fragility

Official rhetoric notwithstanding, both Egypt and Ethiopia are represented by shaky regimes presiding over brittle states and divided societies. Giventheir internal vulnerabilities, neither country can afford to go to war — a war whose outcome is uncertain. While Ethiopia saw its economic fortunesrise over the last decade, its internal cohesion has not kept pace. Ethnic and religious cleavages as well as a border dispute with Eritrea (over which the two states fought a bloody war from 1998 to 2000) are constant reminders of its enduring fragility. Ethnic Tigreans, estimated at 6 percentof the population, have been in power since 1991. They dominate the country's politics, military, security and economy. This is resented by boththe Oromo, Ethiopia's majority population, and the Amhara, its traditional rulers. Over the last two years, the country's otherwise docile Muslim population, long marginalized despite accounting for a sizable portion of the population, has been increasingly restive. Ethiopia's single-party leadership has not fully recovered from the death in 2012 of its strongmanof two decades, Prime Minister Meles Zenawi. The new prime minister, Hailemariam Desalegn, a Protestant and from another minority group, does not hold as much clout as his predecessor and is seen as a temporary figure.

Khartoum's woes did not end with the secession of South Sudan, either.Its army is struggling to contain rebels in the Nuba Mountains. Muffled though they appear, Sudan's troubles in Darfur are far from over. Alienated by former allies, his capital rocked by Arab Spring–inspired unrest over the last two years, Bashir's three-decade hold on power is tenuous. He also has to dodge the arrest warrant from the InternationalCriminal Court in The Hague.

Egypt is facing far more serious calamities. It fired the imagination of the world's youth with its peaceful 2011 revolution. With the military wrestingthe reins of power back from its nemesis, the Muslim Brotherhood, and clamping down on dissent, the country has clearly slid backward. Pursuantto the overthrow of Morsi, its first democratically elected president, Muslim-Christian relations have soured. The elevation of a trigger-happy general to the presidency would heighten Egyptian vulnerabilities. In short, with Sudan now squarely in Ethiopia's camp, Egypt could not stage

a ground attack on the dam. War by proxy has run its course. An airstrikeis still possible but fraught with risks.

The dam's long-term effect on the ecosystem upon which hundreds of millions depend for their livelihood is the greatest unknown. The tensions over the Nile, however, are not simply an old-fashioned competition for a scarce resource. They are rather symptomatic of deeper underlying schisms. The Nile marks the divide between black sub-Saharan Africa and the Arab Maghreb, and forms the fault line between Christian, Muslim, andindigenous Africa.

Moreover, the rhetoric of water wars over the Nile misses the crucial voiceof marginalized indigenous populations — whose lives are altered by thesestate-sponsored megaprojects. While the construction of the Aswan Dam in Egypt and a smaller one in Sudan have enabled the two countries to develop thriving agro-industries, they caused wanton destruction to the Nubian people's ancient way of life. As a result of the secrecy surroundingthe Nile discussions and the lack of tolerance for political dissent in all three countries, there is little discussion of the dam's impact on indigenous communities and the horrendous environmental consequences.The dam's long-term effect on the ecosystem upon which hundreds of millions depend for their livelihood is the greatest unknown. There is a widespread charge that studies of the dam's environmental impact are as faulty as they are insufficient. It is unclear whether the justifications for such megaprojects are even grounded in economic rationality, let alone environmental sensitivity. And why not multiple smaller dams with sound economic, technical and environmental rationales rather than one humongous project? Ethiopia has not yet answered.

The way forward

While the specter of a global water shortage is real, talk of the Nile Basin becoming the first battlefield in the coming water wars is a bit of a distraction. This does not mean that war over the Nile is to be ruled out. In fact, despite rampant vulnerability, indeed because of it, the countries may find it impossible to compromise on their maximum demands. To Egypt, water security equals national security. To Ethiopia, the dam has become a matter of national pride. As much as the Aswan High Dam stoodas a monument to Gamal Abdel Nasser's quest for grandeur, the GERD symbolizes Zenawi's shot for a place in the history books as well as a ployto spruce up the ruling party's patriotic credentials. By casting the project as Ethiopia's renaissance, Ethiopia risked that Egypt would see the projectas its relapse. Facing water shortages amid a growing population, Egypt has actually been asking to increase its share of the Nile waters to 95 percent. With positions so widely apart, the risk of conflagration is not entirely rhetorical.

However, one thing is clear: The greatest sources of danger staring down at each of Africa's oldest states — Egypt, Ethiopia and Sudan — are internal rather than external. While realizing that the oldstatus quo that left it with a veto over the Nile's bounties is untenable, Egypt's future lies not in saber rattling but in returning to the aborted revolution's democratic path. Owing to the increasing volatility of the rains, Ethiopia would inevitably need to use its rivers to feed 94 million

hungry souls. Devoid of democratization, Ethiopia's regime needs to realize that economic development alone won't resolve the country's woes. At the same time, antagonizing as important a player as Egypt is not in Ethiopia's long-term interest. An Egyptian airstrike can turn the clock back on the dam. Although Ethiopia lacks the means to respond to such an attack in kind, Egypt risks earning the international community'swrath and seeing its relationships with sub-Saharan Africa strained.
Compromise offers the only way out for both. Yet it is likely to be years before a durable peace built on a win-win formula replaces rancor over theNile. While the latest collapse of talks is a diplomatic circus, it should be noted that dueling regimes, lacking democratic mandates, may indeed overreact to external threats, real or imagined, to win domestic legitimacy. Since a conflagration in the Nile Basin bears global repercussions, the international community must not be oblivious to the inherent dangers. NILE REGIONAL DIPLOMACY:
Egypt Has a Water Problem
By Marwan Ezz Al Arab for Global Risk Insights

Since his inauguration just over a year ago, Egyptian President Abdel Fattah al-Sisi has attempted to reconcile and rebuild relations between Egypt and Ethiopia, focusing on reaching agreements with both Sudan andEthiopia concerning the effects of the Grand Ethiopian Renaissance Dam on the flow of the Nile River upstream.

However, recent negotiations have stalled due to disputes over the division of labor contracted to foreign consultants who will assist in providing a comprehensive study on the effects of the Dam on the flow of the Nile River.

Since work began on the Grand Renaissance Dam in April 2011, Egypt andSudan have continued to vehemently oppose its construction. As such, as the Ethiopians proceed in their pursuit to complete the Dam, preliminary agreements have yet to be reached by the three nations, who have been locked in diplomatic disputes since 2011.

Conflict of interest

Agreements signed in 1929 and 1959 granted Egypt approximately 55.5billion cubic meters annually, and Sudan 18.5 billion cubic meters, from an estimated total of 84 billion cubic meters. However, the question

of water sharing between the Nile Basin states emerged again in 1999 withthe signing of the Nile Basin Initiative (NBI).

The Initiative, which was signed by all the Nile River riparian states excluding Eritrea, called for increased dialogue and information sharing aswell as joint planning and management of water and related resources in the Nile Basin. Over the next eleven years, Nile Basin states worked on a Cooperative Framework Agreement (CFA) intended to ratify an agreementconcerning the cooperative management of the Nile resources.

In 2010, the agreement was officially signed by Ethiopia, Rwanda, Tanzania, and Uganda, but Egypt and Sudan rejected it, claiming that it infringed on their current uses and rights of water resources from the NileRiver.

Several studies focusing on the effects of the Renaissance Dam already conducted by the Egyptian National Panel of Experts claims that the construction of the Dam will have catastrophic effects on Egypt, which could stand to lose up to 60% of its agricultural land. Indeed, Egypt's share of the water supply could decrease from anywhere between 9 billionto 12 billion cubic meters per year.

With Egypt's population currently at 84 million people, and with an annualpopulation growth rate of 2.6%, the Egyptian Government will have to tackle the issue of Nile water resources as quickly as possible in order to address a population that could increase by an additional 30 to 40 million people within the next 15 years.

At the same time, Ethiopia's current population of 96 million people is in dire need of additional sources of energy, and also saw a population growth rate of 2.5% in 2014. This huge growth in population will mean that the Ethiopian government will be looking towards the Grand Renaissance Dam (which is set to become the largest hydroelectric powerplant in Africa) as a crucial source of water supplies, employment, and energy for its people.

Contingency plans

While Egypt should be exerting as much effort as possible in resolving thedispute, the Egyptian authorities should also simultaneously develop a contingency plan for a dramatic decrease in Egypt's water supplies. One option that is available to the Egyptian government is to begin fully utilizing the Nubian Sandstone Aquifer Systems (NSAS), found in its western desert and along its border with Sudan.

According to the International Atomic Energy Agency (IAEA), the NSAS is one of the largest aquifer systems in the world. It extends over 2,000,000km2 and contains about 540,000 km3 of water. This

underground goldmine of non-renewable water resources could be the vital lifeline that helps sustain parts of Egypt’s agriculture, and could also assist in

developing new habitable areas for Egyptians in the once uninhabitablewestern desert.

Another option for the Egyptian authorities is to pursue further development of water desalination plants. Egypt's current desalination plants operate on a small scale, and primarily service the tourism and industrial sectors. Due to its high costs, however, development of largeradditional desalination plants to cater to agricultural and human settlement needs has not yet been exploited.

These two opportunities provide Egypt with strong alternatives to the water crisis that the upstream Nile Basin states face in the long-term. Nevertheless, Egyptian authorities should prioritize reaching a fair and justagreement with relevant African countries.

What is clear is that both Egypt and Ethiopia are in need of resolving thiswater conflict sooner rather than later; any continued delays in negotiations will only lead to further degradation of relations between allthe Nile Basin states. Regardless of any bilateral trade agreements and increased cooperation, all the states involved in this dispute should makeit a priority to resolve the conflict before regional or international actors become involved and further complicate the process.

With all three nations set to meet again on the 20th of August, PresidentSisi and his government should make reaching a preliminary agreement with Sudan and Ethiopia a top priority. (Text ends)

NILE REGIONAL DIPLOMACY:

Egypt declares 3 alternative options if Renaissance Damnegotiations fail

Al-Masry Al-Youm

For the 10th time, the six-party meeting of the Renaissance Dam negotiations, which was attended by foreign and water ministers in Khartoum on Saturday, failed to find solutions to outstanding problems between Egypt and Ethiopia, especially with regards to the French and Dutch consulting firms tasked with the project's technical studies.

Observers are still counting on the next round of negotiations, slated for December 27, to reach an understanding after nearly two years of negotiations. Others, howver, believe Ethiopia is stalling until the completion of the dam, of which 50 percent has already been constructed.But Egypt has the following three alternatives if the negotiations fail completely:

1- To cancel the Declaration of Principles that was signed on March 23 by Egyptian President Abdel Fattah al-Sisi, Sudanese President Omar al- Bashir and Ethiopian Prime Minister Hailemariam Desalegn. The documentcontains 10 basic principles that preserve the Egyptian rights to the Nile water and that are

consistent with the general rules of international law
that regulate the use of common rivers. The principles include cooperation, development and economic integration, a pledge not to causesignificant harm to any country, the fair and equitable use of water, cooperation in the first filling of the reservoir and the annual operation of the dam, confidence-building, exchange of information, safety, respect of sovereignty and territorial integrity and peaceful resolutions of disputes.

The document also includes mechanisms for the settlement of disputes between Egypt and Ethiopia, including consultation, negotiation and mediation in accordance with international law and agrees not to prejudicethe historical conventions of the Nile water.

However, it does not address water shares or uses, mentioning instead the filling and operation of the dam. The agreement is to be followed by other agreements of principles. Nader Noureddine, professor of water resources at Cairo University's Faculty of Agriculture, says Ethiopia is misusing the Declaration of Principles and is stalling to gain time to complete the construction of the dam. He adds that Egypt has jumped thegun by signing this agreement, which explicitly states that Ethiopia has absolute sovereignty over all water resources and recognizes the legitimacy of the dam without reservation, while it does not tackle any guarantees for Egypt's historical share of the Nile water. "Parliament should cancel the Declaration of Principles. In this case, Egypt can withdraw its recognition of the dam in accordance with international law and the Egyptian Constitution," says he.

2- To stop negotiations and resort to the United Nations and the Security Council. Noureddine says the basic rules of international law and the Nile Basin countries regarding the use of water do not allow any country to exploit its rights without the approval of the other countries. He says Ethiopia has committed numerous violations by building a high dam, as international law and United Nations agreements stipulate that upstream countries should build low dams so as not to harm downstream countries."Egypt should make it an international issue and demand the countries that finance the dam to stop funding it because it threatens its national security," he says.

3- To file a lawsuit with the International Court of Justice Noureddine alsosuggests that Egypt should file a lawsuit with the International Court of Justice in The Hague so as to pressure Ethiopia to sign an agreement thatensures Egypt's share of Nile water. "Egypt should consider this a hostile act on the part of Ethiopia because it did not notify it in advance of the construction of the dam," he says. Edited translation from Al-Masry Al- Youm

NILE REGIONAL DIPLOMACY: GERD IN CRISIS:

Agreement Reached Between Egypt, Ethiopia and the Sudan Egyptian Streets December 29, 2015

Egypt, Ethiopia and Sudan have signed an agreement aimed at curbing Egypt's alarm at the speed of which the Grand Ethiopian Renaissance Dam('the dam') is being constructed. The agreement is based on a preliminaryagreement that had been reached in March 2015 between the leaders of the three countries in Khartoum, Sudan.

According to Egyptian state media, it was agreed that a French consultingfirm would conduct research for a period between eight months and a year. Ethiopia has also agreed to not fill the dam with any water from theNile River until some sort of consensus has been reached between the three countries. The agreement also states that regular meetings will be held to solve other disagreements between the three countries and to respond to all Egyptian concerns regarding the filling of the dam with water.

The agreement, which was signed after talks between foreign ministers ofthe three countries in Khartoum, is obligatory and shows that the three countries hope to solve the issue diplomatically in a way that results in stronger bilateral ties, said an Egyptian Foreign Ministry source to Egyptian Streets.

History of the Ethiopian Dam Crisis

During the ninth meeting of the three countries in Cairo on 8 and 9 November, Egypt denounced the speed of the construction of the dam andthe delay of studies into the impacts of the dam.

Egypt's main concern since the start of construction of the dam in 2011 is its high storage capacity, which reaches 74 billion cubic meters, over fearsof affecting its national water security. As per agreements signed in 1929 and 1959, downstream countries Egypt and Sudan together receive the majority of Nile Water. Egypt annually receives 55.5 billion cubic metres ofthe estimated total 84 billion cubic meters of Nile water produced each year, while Sudan receives 18.5 billion cubic meters.

Egypt initially condemned the dam's construction, stating that Ethiopia decided to build the dam without informing other countries that may be impacted. Currently, approximately 55 percent of the dam has been constructed despite no studies into the dam's impact. Egypt is not only concerned that the dam will impact Egypt's water supply, but would also have impacts on the environment and security (for example, in the case ofan earthquake or a terror attack). Moreover, Egypt has also expressed worry that the dam would impact the generation of electricity by the Aswan High Dam. How far Egypt would go to protect its rights in the Nile River remains unclear. However, analysts say international arbitration is far more likely than a military incursion in the case where all diplomatic paths have failed.

Side note: Pro-government Fana Broadcasting left out the most importantpart of the agreement: "Ethiopia cannot use any water from the Nile to fillthe dam until some sort of a consensus is reached". I think they

are ashamed to mention the surrender of the Ethiopian authorities to Egyptiandemands. I have a feeling this is the beginning of a long drawn out disagreement between Egypt and Ethiopia. Egypt in the meantime can muster both its diplomatic influence which is much more than Ethiopia to influence any decis...ion Ethiopia may make. It is a very disgraceful bowing that the Ethiopian authorities just did. Since filling the dam with water may take several years, agreeing to delay, which could further be delayed for lack of consensus, could make Ethiopia loose opportunity coststhat could come from the use of the dam in time. It appears that Egypt has gotten its way. But interestingly the TPLF media FBC, "forgot" to report the central and most important point in the agreement. Amazing piece of journalism. (Text ends)

What does the coup de'tat in Sudan mean for the Ethiopian Dam project? Is it possible that Egypt is behind it?

Eyob Fitwi Abraham Updated April 24, 2019
Works at Afrolingo

I'm not sure if I'm qualified to answer but regardless I'll give my 2 cents.
Regarding the coup, the first thing that it brings to mind is our own Derg. Similarities are hard to miss. We had Haile Selassie, was deposed by revolution, and in the vacuum the military took over. We all know what happened next. That's what I fear for the people of Sudan. It doesn't mean that they'll have the same outcome but the similarity hits too close to home and caution is a must.

As for the dam, I don't think Sudan accepted it for any political gain, though it certainly was a plus. According to the controversial treaty prepared by Britain during colonial rule, Egypt had 75% of the water, and the remaining was for Sudan. So as you can see Egypt was far more sensitive to changing the technical and political structure of the river flow. Sudan had an arguably decent share but was apparently open to other ideas. The dam helped regulate the floods in Sudan, which the latter liked very much and were quite supportive of the dam. The cordial relations between the governments of the two countries helped as well. Sudan didn't want to antagonize Egypt diplomatically but when push came to shove it publicly declared its support for the dam (and it did support it covertly for far longer before its public support). That was I believe an unnoticed but considerable shift in Nile hydropolitics. Sudan played with Egypt to ensure it's share of the Nile, albeit much more passively. Now, apparently something bigger came. I think we can see that its interest in the dam was deeper than mere common political endeavor of two friendly countries. The geographic and economic effects are the kind that can or will likely transcend regime changes.

Did Egypt had a hand in the coup? This is my guess, but I don't think so. It may have an interest in the outcome of the recent uprising in Sudan, but to go farther than that I think things are a little more complicated for Egypt. First, Egypt's influence on blocking attempts to get the dam built have been

significantly undermined and has seemed to settled for dealing with or managing the construction as it comes. Everybody seems to have tacitly accepted that the dam will be built, the major question being how it will be built. One major point of contention between Ethiopia and Egypt was for how much time to the dam to collect water. Egypt wanted 20 years, Ethiopia insisted on 5 (I'm not sure how that is going on nowadays). Interesting how it isn't about 'the dam shouldn't be built' any longer. If politicians don't stick their heads up their asses the best solution is to seek an optimal way to construct the dam. Blocking or hindering it is a dead deal. Besides, Sudan has more compelling reasons to support the dam, so even if Egypt had the ability I think it'll be stupid of it to cause the coup and expect a change in Sudanese policy towards the dam. Rather, I think both Ethiopia and Egypt will be sensitive in their diplomacy towards Sudan and hope or assist if possible for the best outcome.

Why is the Tigray Region of Ethiopia rebelling against the Ethiopian Federal Government?

The salt monopoly of the Dunakil depression near Mekele was developed by Christianity during the Mediterranean salt famine at the advent of the Millenium Christian Era. It took Islam 700 years to conquer and compete with their Silk Road salt monopoly

Ethiopia withdraws Addis Standard licence, outlet ceased publication

Nairobi, July 15, 2021 – In response to Ethiopian authorities' withdrawal today of the news website *Addis Standard*'s license, prompting the outlet to suspend operations, the Committee to Protect Journalists issued the following statement:

"For years, *Addis Standard* has been an important source of critical reporting and commentary on Ethiopia. Today's move to withdraw its license is the latest demonstration of the government's hostility towards independent journalism," said Muthoki Mumo, CPJ's sub-Saharan Africa representative. "Authorities should immediately restore *Addis Standard*'s license, ensure that it can operate independently, and cease all efforts to harass and censor journalists and media outlets."

The *Addis Standard* tweeted a statement today saying that it had ceased operations after the Ethiopia Media Authority, the country's statutory regulator, had withdrawn the license of the outlet's publisher, JAKENN Publishing P.L.C. The regulator did not provide any reason for the decision, that statement said.

Addis Standard was established as a magazine in 2011, and became an online-only outlet in 2016 amid government restrictions that led printers to refuse to publish it, according to news reports and the outlet's website.

Last year, authorities detained *Addis Standard* editor Medihane Ekubamichael for several weeks without charge, according to CPJ reporting from the time and a report by Addis Standard.

Yonatan Tesfaye, deputy director-general of the media authority, told CPJ in a phone call that the regulator had suspended *Addis Standard*'s license pending investigation, following complaints that the outlet was undermining Ethiopia's national security by publishing content that was illegal and "legitimizes terrorist

groups." He declined to elaborate on what specific content was cited in those complaints, or the specific laws that the outlet allegedly contravened, saying that the authority would provide details later.

Yonatan said, contrary to *Addis Standard*'s statement, that the outlet had been informed about the reason for the license withdrawal.

How do Ethiopians view Kenyans?

Salam nah! or Salam nesh!

I'm a Kenyan and have visited and spent some time in Addis Ababa, Ethiopia.

To start with, the Ethiopian driver who picked me at the Bole International Airport was very friendly. Sadly a language barrier existed as I do not understand Amharic (his language), and he too didn't grasp English, which I am fluent in. To say the least, he was the best. We tried to have a chat, travelling through traffic, a few English words here and there, and finally we got to the hotel.

The hotel was very welcoming and the people manning it gave the best welcome and I felt great away from home, the language barrier notwithstanding.

In a few days I had managed to learn a few basic Amharic words. I'm glad that lots of friendly people would help teach.

The waiters at restaurants in Addis were patient as I took forever to understand the dishes before settling on what to order.

The people in the streets would definitely notice a foreigner especially since there is a bit of a difference on the skin. While walking in the streets, a stranger would randomly ask,

Stranger to me; 'Nigerian?'

Me; No, Kenya- Nairobi

Stranger; **Oh, Mambasa** (Mombasa) , **Jomo Kenyatta** ..

Me; **Yes**

..and everyone would just smile back as we went our ways.

On the train, no incidents. Sandwiched between the locals especially during rush hour. It felt good.

Went shopping at some area called **Shiro Meda market** and some traders there excitedly talked of Mombasa (Kenyan coastal city). That was awesome.

A public service vehicle driver was very kind in getting me where I wanted to be in the city, despite the huge language barrier.

I could write a lot more, but that’s it for now. I haven’t traveled much, but all the Ethiopians I have had the chance to interact with, were good people towards me, a kenyan.

Back to the history of the two nations, there was a super cordial relation between Ethiopia’s Haile Selassie and Kenya’s first president Jomo Kenyatta.

Jomo Kenyatta (Left), and Emperor Haile Selassie (Right)

The first ever foreign ruler to visit Independent Kenya was Ethiopia’s Haile Selassie. Jomo Kenyatta only visited two foreign countries in his 15 year rule. One was Ethiopia and the other was Britain. This says a lot.

This is Haile Selassie Avenue in Nairobi Kenya, in honor of the Ethiopian Emperor;

I'd love to be back in Ethiopia and visit Shashamane someday and see a lot more of the lovely people outside the capital. And by the way, Ethiopian ladies are super beautiful!

If Egypt attacks Ethiopia because of the GERD, would Israel get involved? No.

Kamal Raphael Lives in Egypt

Israel will *not* get involved. Why?

Because of this

The Camp David Accords

Egypt & Israel signed a peace treaty has proved to be long-lasting and effective. In return, Egypt gained Sinai, and Israel gained a stable southern border in which it does not fear an invasion force.

If Ethiopia and Egypt go to war, why would Israel throw all of that away? Take a look at Israel's neighbours:

Syria is in a civil war and is ran by a staunchly anti-Israeli government. Lebanon’s south is controlled by Hezbollah which constantly flaunts Israel’s destruction.

Israel already has enemies on its border, why would it create another one?

Lastly, what message would that send to Jordan? Jordan also signed a peace treaty with Israel, but if Israel is willing to throw away its treaty with Egypt on a whim, then why would the Jordanians have any incentive to keep theirs in place as well?

Israel would have nothing to gain but everything to lose in such action. It would send Israel-Arab relations back 60 years to the 1960s, a state in which Israel has worked very hard to get out of.

Did Africa have a written language before colonization?

Aman Estifanos
Co-Founder and Chief Operations Officer at OrangeAsmara
Original Question :Did Africa have a written language before colonization?

Huh….Where do you think writing started?

Let me just tell you of our own **Ge'ez. Eritrea and Ethiopia still use it.**

Ge'ez

The image part with relationship ID rId12 was not found in the file.

The image part with relationship ID rId13 was not found in the file.

(/ˈgiːɛz/;ግዕዝ, *Gəʿəz* IPA: [ˈgɨʕɨz] (listen); also transliterated **Gi‘iz**) is an ancient South Semitic language and a member of the Ethiopian Semitic group. The language originated in southern regions of Eritrea and the northern region of Ethiopia in the Horn of Africa. It later became the official language of the Kingdom of Aksum and Ethiopian imperial court.

Today, Ge'ez remains only as the main language used in the liturgy of the Ethiopian Orthodox Tewahedo Church, the Eritrean Orthodox Tewahedo Church, the Ethiopian Catholic Church, the Eritrean Catholic Church, and the Beta Israel Jewish community. However, in Ethiopia, Amharic (the main *lingua franca* of modern Ethiopia) or other local languages, and in Eritrea and Tigray Region in Ethiopia, Tigrinya may be used for sermons. Amharic, Tigrinya, and Tigre are closely related to Ge'ez. Read more at Ge'ez – Wikipedia

Abram Petrovich Gannibal: Russia's African imperial

Aniekpeno Ekong
Works at Government of Nigeria Oct 17

Few stories are as improbable as Abram Petrovich Gannibal (also known as Hannibal), the African boy who made it through the Ottoman slave markets in Constantinople to the court of Peter the Great, emperor of Russia. Originally thought to be from Ethiopia – likely because of the association with the legendary Abyssinian Guards gifted to the Russian court by their fellow Orthodox Christian emperor – he was actually probably from the area that is modern-day Cameroon. Brought to Moscow in the early 1700s by his Serbian noble master, Peter the Great took a liking to him, freed him and made him his godson. He served as Peter's valet and studied engineering and math in France, where he became a captain in the army.

He returned to Russia in 1723 and was sent by court enemies to the far east, where he was ordered to use his engineering skills to complete a series of tasks, including purportedly measuring the Great Wall of China. Luckily, upon the ascension of Peter's daughter, Elizabeth, to the imperial throne, Gannibal was welcomed back to court, elevated to the nobility, promoted to the rank of general and even made the military governor of Revel (modern-day Tallinn, Estonia). For his service, he was given an estate on which to live with his wife, a Scandinavian noblewoman, and their 10 children. Gannibal's legacy lives on, not just through his remarkable life, but through Alexander Pushkin, one of Russia's most legendary poets and Gannibal's great-grandson.

What should I know?

Ethiopia is a great place to visit, I always felt very safe and liked the food much more than in other African countries. Two things to know (comparing Ethiopia to other African countries): Because Ethiopia was never really colonised, the knowledge of any European language in the general population is very low. So when you are traveling overland in your rented car, you might often stop in (non-tourist) places where Amharic or the local language are the only means of communication. The other warning: Don't get in conflict with

authorities. Again, comparing to other African countries, Ethiopians tend (fearfully?) to follow the rules and you should too. While in Ghana the police officer will tell you the amount of the bribe you have to pay to get out of a situation and you can haggle about the amount, this will (in my experience) not happen in Ethiopia and just because you are a special case (as a foreigner) and no one wants to be responsible for maybe doing something wrong in a high profile situation, any bureaucratic complication can take much longer and be more complicated than you would ever expect.
And, a third thing: If you need anything (e.g. medication) on a regular basis that is produced outside of Ethiopia, bring the full amount you need with you. Don't trust in being able to buy it, even in Addis and even if you had all the money in the world, because trade limitations can lead to unpredicted shortfalls in everything.
Not wanting to scare you... Have a great trip

Could there be peace in Ethiopia if the federal government took away the right of the tribes to form Militias?

Active in Russian-American Relations Oct 2

I don’t think that would be possible. The Ethiopian Army is divided regionally into Four regional commands. Each of these different regional commands roughly coincides with a given ethnic group. For instance, Northern Command is composed primarily of ethnic Tigrayans. Central Command is composed primarily of ethnic Oromos and Amaharas. As such, the current Ethiopian Army is effectively divided along ethnic lines.

This makes Ethiopia more prone to civil wars, since if any ethnic group wants to go off the ranch they have their own armed forces at their disposal already. However, there really isn’t a better way to organize the Ethiopian Army. As a result, Ethiopia faces a perpetually elevated risk of civil war that comes with being a multi-ethnic society.

Which African country proved to be the most difficult for the European powers to colonize? However, I don’t mean ones that were never colonized, or the last one to be colonized. I mean one that was colonized eventually.

Kevin Richardson

PhD in History, The University of Texas at Austin September 18

First of all, what do you mean by colonized? Do you mean brought under the political control of a European power? Do you mean settled by White European immigrants? Do you mean conquered by a European military effort? I don't mean to seem facetious, but there are inherent difficulties that come with talking about colonization in Africa.

Fundamentally, each European power expanded its imperial rule in different ways, utilizing various methods and with varying levels of success. The Portuguese in Mozambique and Angola, for example, despite having a presence in those territories since the early sixteenth century, had effective control over less than 1% of Mozambique and 10% of Angola in the 1890s. I've written before on the Portuguese style of colonization, so I won't go into detail here, but it provides an exhilarating example of colonial efforts in Africa. The Germans in German West Africa, for example, also had a minimal European presence of about 500 in 1914 versus a native population of around a million, leaving the running of the 8 *Bezirke* or districts to the existing forms of local rule. Josue Dennis Chance recently wrote about colonization issues in this answer here, so again, feel free to give that a read too.

So with those semantics out of the way, let's look at your actual question. If we take colonization to mean simply to take political control of (which is a definition I think would be disagreed with by most historians as being way too simple but provides one interesting, single theme approach), then Ethiopia would be the obvious option. The issue of Ethiopia's successful resistance to the attempts of European powers to colonize it is a question that has been raised many times, and answered with some really good answers already. The simple truth though is that the Italians managed to last in Ethiopia only from 1936 to 1941, although the Second World War did play a part in that.

Benito Mussolini, King Victor Emmanuel III, and high officials of the Italian military photographed in Ethiopia in 1936. Alinari via Getty Images

If, however, we take colonization to mean total socio-political-economic control of a territory, then I would personally argue it is impossible to identify one area or region that proved more *difficult* to colonize than others. South Africa, which was arguably one of the most *heavily colonized* regions by the start of the twentieth century, saw numerous violent conflicts during its history, and socio-economic divisions that fundamentally shaped the modern nation we see today. The British in Central Southern Africa, the French in the North and West, the Germans in the South-West and East, and the Portuguese all faced similar difficulties in implementing socio-political-economic control. The French and British in West Africa (e.g. French West Africa and Sierra Leone) were faced with the problem of the ‘domestic institution’ of slavery, which ran contrary to their abolitionist beliefs and policies, but which was seen as an integral part of the socio-political and socio-economic structures in place and upon which the colonial authority relied. Pursuing abolitionist policies too severely would have severed the ability of the Metropoles to draw upon traditional forms of power, and risked the descent of the colony into an uncontrollable situation (as happened in 1905 in the Banamba Slave Exodus in Western Sudan). The Germans in East Africa faced an uprising and insurrection in 1888 and 1889 as a result of their attempts to implement taxes and duties on the African population and shifting the economic development of the region towards ‘model farms’ with cash crops grown for export, which led to a second rebellion in 1905 — the MajiMaji, where 150,000 Africans

were killed. In Southern Rhodesia, the BSAC and the White settlers faced violent rebellions twice within the first seven years of colonial rule.

TL/DR— Colonization was not easy anywhere, and it depends entirely on how you define colonization and how you measure resistance or difficulties that you can identify one place as being more troublesome than any other. Personally, I can't, but others may disagree.

Wednsday 23 June, 2021: The Council of Ministers today endorsed the renaming of the 'Meles Zenawi Leadership Academy' to the 'African Leadership Excellence Academy'.

ELECTORAL POLITICS:

Ethiopia elections 2021: Journalist safety kit.

Ethiopia is scheduled to hold general elections later this year amid heightened tensions across the country. Military conflict broke out in the Tigray region in November 2020, and is ongoing; over the past year, several other regions have witnessed significant levels of violence and fatalities as a result of protests and inter-ethnic clashes, according to media reports.

At least seven journalists were behind bars in Ethiopia as of December 1, 2020, according to CPJ research, and authorities are clamping down on critical media outlets, as documented by CPJ and media reports. The statutory regulator, the Ethiopia Media Authority, withdrew the credentials of *New York Times* correspondent Simon Marks in March and later expelled him from the country, alleging unbalanced coverage. The regulator has sent warnings to media outlets and agencies, including The Associated Press, for their reporting on the Tigray conflict, according to media reports.

Journalists and media workers covering the elections anywhere in Ethiopia should be aware of a number of risks, including–but not limited to–communication blackouts; getting caught up in violent protests, inter-ethnic clashes, and/or military operations; physical harassment and intimidation; online trolling and bullying; and government restrictions on movement, including curfews.

CPJ Emergencies has compiled this safety kit for journalists covering the elections. The kit contains information for editors, reporters, and photojournalists on how to prepare for the general election cycle, and how to mitigate physical and digital risk.

Official title of the State.
የ ኢትዮጵያ ፌዴራላዊ ዲሞክራሲያዊ ሪፐብሊክ (in national Amharic: abbreviated as ኢ.ፌ.ዲ.ሪ)
Federal Democratic Republic of Ethiopia (in english: abbreviated as FDRE)

Ethiopia, officially the Federal Democratic Republic of Ethiopia, is a country in the Horn of Africa, and is the most populous landlocked country in the world.[15] It shares borders with Eritrea and Djibouti to the north, Somaliland to the northeast, Somalia to the east, Kenya to the south, South Sudan to the west and Sudan to the northwest. Ethiopia has a total area of 1,100,000 square kilometres (420,000 sq mi) and over 112 million inhabitants and is the 12th-most populous country in the world and the 2nd-most populous in Africa. The national capital and largest city, Addis Ababa, lies several kilometres west of the East African Rift that splits the country into the African and Somali tectonic plates.

Flag description:
What does This Flag (*sendek Alama* -in Amharic) means for Ethiopians?

Ethiopians are aware of the fact that the Ethiopian flag can not be associated withany government in the past as government before TPLF had their own respectiveemblems which they embed in Ethiopian flag.

There is no probably no other flag in the world that evokes so much passion and so much pride. There is no other flag that gives so much hopeand courage in the face of adversity. There is no other flag that is so sacred and so revered. There is no other flag in Africa that is as old.

According to the renowned writer Blaten Geta Hiruy, This Flag was designed by Menelik the first, between 982-958 BC, which makes it the oldest national flag in the world. This Flag has been carried in every battlewon and lost. This Flag is the flag of Africa and the flag of the Ras Tafarians as the symbol of emancipation from slavery and colonialism.

This Flag has been the symbol of freedom, hope, unity, territorial integrityand honor. It is a symbol that unites every race creed or religion in Ethiopia. When you raise the flag, you raise your hope. When you fight the enemy, the flag is the engine that drives you. When you sing the anthem you celebrate the memories of all who have fallen for the cause.
When you march together with all the others, you feel the sense of irreversible unity of our people. When

you look at the beauty of the colors,it radiates hopes and brings memories of the glories of our forefathers. When you hold the flag you carry it with awe and responsibility.

As example when someone claims ‘be bandira! don’t move away! You do not have to run or move away. If the person was about to run away froma scene and you shout ‘bebandira!!; wedka betenesatchew!, don’t move away! That’s impossible to imagine a situation where the person does notstop. He will. And the crowd around will freeze and watch the reaction of the person. Such was the respect that our flag commanded.

This Flag; the Green, Yellow and Red; untarnished, unchanged for decades; it has carried our people this far. When the flag started beingdesecrated and called names, disfigured and abused, then our unity started being fractured but not broken.

When you honor This Flag you honor the ideals that it has stood for hundreds of years and the respect of those who have sacrificed their lives in defense of this great country. Changing the color, the emblem, the shape and design of the flag in whatever form, is considered blasphemy and desecration. When the rebel TPLF put the flag on the back of a donkeyand marched in public, it brought out all the anger and fury that no time can heal. It was an insult to the millions who died and suffered for the cause that this flag stands for.

In the highlands of former Eritrea under Ethiopian administration until thetime of separation from Ethiopia every funeral service was decorated withThis Flag. Every household had a flag hoisted outside its house on holidays. No where in Ethiopia has our flag been so honored and revered like in former Eritrea province as istance. It became the irony of life that Eritrea seceded from its mother country, from the very flag that it honored for generations, from the flag that Mahber Fikri-Hager (Hager Fikre Mahber) english meaning for “Love for the Motherland” proudly waived in every march and demonstration demanding reunion with their motherland.

Most of wars were fought in the North, in Tigray and Eritrea, against foreign invaders coming through the Red Sea, and it was there that ThisFlag was most honored. Another irony is that Tigray, where so many losttheir lives carrying This Flag, became the one to desecrate this flag.

The late Ethiopian Prime Minister Meles Zenawi quoted as saying that itwas only a piece of cloth? It was difficult to believe that any Ethiopian with a sane mind would utter these words. That was the ultimate act ofshame and treason, which in our time would have warranted execution.

This Flag had full respect and eternal life among Ethiopian’s daily life inthe past. Because of the spirit of courage, peace, valor and unity that itradiates.

The Tri-color Flag description:

i) The tricolor flag was originally anticipated in 1897, but had then the redstripe at the top and imperial weapon in the middle of the flag. The current design stems from April, 1941, and the version with the new coat of arms was officially estimated.

ii) The Imperial era (Moa-Anbassa) Flag: The flag has three equally wide horizontal stripes of green, yellow and red and the coat of arms (Lion of Judah) in the middle. In the Ethiopian imperial times symbolized the red color of power and faith, the yellow church, peace and nature's wealth andlove, the

green land and hope. The colors were also seen in connection with the Trinity and the country's three provinces.

iii) The PMAC (Duerg) & PDRE era Flag: In the Duerg military regime's time had flagged Provisional Military Administrative Council (PMAC) Coat of Arms in the middle. The current interpretation is that the flag symbolizes the Ethiopian nation's glory and beauty: The red represents the lives that have been sacrificed to defend the national independence, the yellow of religious freedom in the country and the green the country’sfertility. The Ethiopian flag colors were the basis for the Pan-African colorsand used by Ras-Taffari movement.

v) FDRE era Flag: Three equal horizontal bands of green (top), yellow, andred, with a yellow pentagram and single yellow rays emanating from the angles between the points on a light blue disk centered on the three bands; green represents hope and the fertility of the land, yellow symbolizes justice and harmony, while red stands for sacrifice and heroism in the defense of the land; the blue of the disk symbolizes peace and the pentagram represents the unity and equality of the nationalities and peoples of Ethiopia.

Ethiopia is the oldest independent country in Africa, and the three main colors of her flag (adopted ca. 1895) were so often adopted by other African countries upon independence that they became known as the Pan-African colors; the emblem in the center of the current flag was added in 1996.

Founder of The Nation

King Menelik II, The Victor of the battle of Adwa, unifier and modernizer.

Local divisions

Officially Ethiopia is a ‘Federal Parliamentary State’, each region is strictly divided based on their language and ethnic lines. The ruling-EPRDFs project of Ethnic Federalism which devolved power from the centre to all the ethnic nationalities of Ethiopia under one federal constitution guaranteeing freedom and equality for all, and the right to secede from the federated unit. But, nearly after three decades, such system of government failed to work effectively.

11 non-geographically based National Regional States (Federal States) locally known as “Biherawi Kililoch”.

Addis Ababa: The Federal capital is one of the two chartered cities in Ethiopia.The other being the eastern city of Dire Dawa which is divided administratively into two districts, the city proper and the non-urban woreda of Gurgura. Dire Dawa city established as an administrative city council (Mestedadir Mikre-bet).

Government type

Federal Republic - with unitary based Federal parliamentary Assembly.

Legislation chamber Bicameral Parliament

House of Peoples Representatives (HoPR),House of Federation Council (HoFC).

Form of State

Ethiopia is technically a multiparty parliamentary democracy, like Britain,but it is effectively run like a one-party state, with 99.8 percent of parliamentary seats controlled by one ruling party, the Ethiopian People'sRevolutionary Democratic Front, or shortly EPRDF.

Ethnic-based Federal Parliamentary Assembly with two legislative houses.The entire Killil regionalization concept of governance is neither new nor federal. It goes backdate to the Italian fascist occupation of Ethiopia b/n 1936-41. This unpopular process of ethnicization of the country was specifically designed by Benito Mussolini for the conquest and occupation of Ethiopia.

House of the Federation (FC), the lower house, 112 seats, members represented by nations & nationalities (National regional States) to serve for five-year terms.

House of People's Representatives (HPR), the upper house, 547 seats,members are elected by popular vote to serve for five-year terms.
President elected by the House of People's Representatives for a six-yearterm. President is eligible for a second term. The premier has all the formal executive powers

Executive branch
President is the Chief of State.
Prime Minister is the Head of Government. Separated by Chief of Stateand Head of Government, with executive power in the central government, and legislative power in both the government and parliament.

The Head of State is designated to serve as ceremonial president elected by the HPR as a non-ruling party member, for six-year terms, eligible for asecond term. Head of government is to be designated by the party in- power, following national legislative elections. A political power left onto the head of Government, according to the 1995 constitution.

Former rulers of the modern and unified Ethiopia1855 - 1868 Emperor Theowdros II.
1868 - 1872 Emperor Tekle-Giorgis II.
1872 - 1889 Emperor Yohannes VI.
1889 - 1913 Emperor Menelik II
1913 - 1916 Eyassu V (born to be Lij Kifle Yaqub)
1916 - 1930 Empress Zawditu Menelik who rules through a regent. 1930 - 1936 Emperor Haile Selassie I (HRH Ras Taffari Makonnen as
regent)
1936 - 1941 King of Italy; Vittorio Emanuele III (in title only)1941 – 1974 Emperor Haile Selassie I.

THE UN POLITICAL ARRANGEMENT: “Eritrea Federation with Ethiopia”. September, 1962 to May, 1991: When Eritrea entered into a federation with Ethiopia, previously landlocked Ethiopia briefly

enjoyed the use of Massawa as the headquarters of the now defunct Ethiopian Navy ultimately, and Ethiopia dismantled the federation and forcibly annexed and occupied Eritrea. This led to the Eritrean War of Independence (1961–1991).

In February 1990, units of the Eritrean People's Liberation Front captured Massawa in a surprise attack from both land and sea. Known as OperationFenkil, the attack utilized both infiltrated commandos and speed boats.
The success of this attack cut the major supply line to the Second Ethiopian Army in Asmara, which then had to be supplied by air. In response, the then leader of Ethiopia Mengistu Haile Mariam ordered Massawa bombed from the air, resulting in considerable damage. As of2005 the Eritrean government is rebuilding and repairing this damage.

Ato Tedla Bairu (later Dejazmach) - Chief Executive of the Federation Council, “Eritrea Federation with Ethiopia.”
From 15th September, 1952 to 29th July, 1955 (in de-facto) - From 8thAugust, 1955 to December, 1959 (in de-jure)

Dejazmatch (later Betwadad) Asfaha Wolde Michael.
Chief Executive - From December, 1959 to 20th May, 1960 (in de-jure).

Imperial Ethiopian Administration in Eritrea.
HRH Tenagnework Haile Selassie - Ras Andargatchew Messai - Vice Roy &Vice Rein of Eritrea.

Sept. 15, 1962 to Sept. 12, 1974 - Brigadier-General Abiye Abebe –Crown Representative - 14th November, 1962 to July, 1964

Leul Ras Asrate-Medhin Kassa - Governor-General- July, 1964 toDecember, 1970
Lt. General Debebe Haile-Mariam – Military Emergency Governor – Dec.1970 to Aug. 1974

Eritrea Federation with Ethiopia
Eritrea Federation with Ethiopia or commonly called the Ethiopian–EritreanFederation: was a federation of the Ethiopian Empire and Eritrea. It was created by the approval of the Federal Act in Ethiopia and the Eritrean Constitution on 15 September 1952. Prior to the annexation of Eritrea, theChief Justice of Eritrea was removed and the official Eritrean languages were eliminated in favor of Ethiopia's national language Amharic. During the Federation, the encroachment of the Ethiopian Crown was felt on the Chief

Executive of Eritrea. This was in direct contravention of the UN Resolution 390-A (V) which had established the Federation. The federal structure, or some semblance of it, existed between 15 September 1952 and 15 November 1962. On 15 November 1962, following pressure from the Imperial Government of Ethiopia on the Eritrean Assembly, the Federation was officially dissolved and Eritrea was annexed to Ethiopia.

The Task and Duties of Chief Executive of Eritrea Federation with Ethiopia

The Task of Chief Executive of Eritrea & the Federation of Ethiopia and Eritrea as mentioned in the federal constitution, the Chief Executive of Eritrea Federation with Ethiopia was the premier position of the Federationbetween Eritrea and Ethiopia. It was first held by Ato Tedla Bairu while its last occupant was Lij Abiye Abebe (later Lt. General in the Imperial Army).

On the 20th May 1960 the post was dissolved and replaced by the Governor-General of Eritrea, which was appointed directly by the Emperor of Ethiopia. This in effect dissolved the independent Federal structure andwas a prelude to the official, possibly illegal, annexation of Eritrea as 14thprovince of Ethiopia on 14 November 1962 sparked rebellion.

List of Chief Executives of Federation of Ethiopia and Eritrea (1952–1960)

Tedla Bairu---------- September 15, 1952 to July 29, 1955

Asfaha Wolde Mikael ----------August 8, 1955 to December 1959

Abiye Abebe ---------- December 1959 to May 20, 1960

Abiye Abebe ----------May 20, 1960 to November 14, 1962

Eritrea under Imperial Ethiopian Government

November 14, 1962 to 1964 ---------- Lij Abiye Abebe Governor-General

July 1964 to December 1970 ---------- Leul Ras Asrate Medhin Kassa

Governor-General

December 1970 to August 1974 ---------- Lt. General Debebe Haile Mariam (Emergency Governor)

Ethiopian province of Eritrea: September 1974 to May, 1991;

August 1974 to 29 May 1976 ---------- Ammanuel Amde Mikael, Chief Administrator

Brigadier General Getachew Nadew ---------- Military Administrator Aug.19, 1976 to Aug.19, 1976

Ammanuel Amde-Michael - Chief Administrator----------From August, 1974 to 29th May, 1976, and again from May 29, 1976 to 19th August, 1976.
Ato Fikrou Wolde-Tinsae - Chief Administrator from August, 1981 to 29th May,1983

Majour-General Merid Negussie – Military Commander & Administrator. Majour Dawit Wolde-Giorgis – Chief Administrator/Provincial Party secretary
August, 1983 to August, 1987: And again from 19th August, 1987 to 18th May,1989:

Brigadier-General Affeworki Wolde-Mikael (younger brother of unionistAsfaha Wolde Mikael) - Chief civilian administrator from 19th August, 1989 to 28th May, 1991;

Lt. General Tesfaye Guebre-Kidan: Emergency Administrator & MilitaryCommander of the ground forces in Eritrea.

List of heads of government in Ethiopia
Fitawrari Habte Giorgis Dinagde - Chief Minister 1909 to 1927 Ras Taffari Makonnen Chief Minister - 1927 to May 1, 1936 Bitwadad Wolde-Tsadik, Chief Minister - May 1, 1936 to 1942
Bitwadad Makonnen Endalkatchew - 1942 to November 1, 1957
Ras Abebe Aregai Bechire - November 27, 1957 to December 15, 1960
Leul Ras Imru Haile Selassie Abayneh - December 11, 1960 to December15, 1960 (briefly)
December 15, 1960 to April 17, 1961 – vacant post until April 1961
Aklilu Habtewold Habtneh - April 17, 1961 to 1962.
Tsahafi Taezaz Aklilu Habtewold Habtneh - 1963 to March 1, 1974 againLij Endelkachew Makonnen Endalkachew - 1 March 1974 to 22 July 1974
Lij Mikael Imru Haile Selassie - August 3, 1974 to September 12, 1974
Post of premiership abolished – September 12, 1974 to September 10,1987
Cap. Fikre Selassie Wogderess - 10 September 1987 to 8 November 1989
Colonel Hailu Yimenu - Acting - November 8, 1989 to April 26, 1991
Ato Tesfaye Dinqa - Acting - April 26, 1991 to May 27, 1991
Ato Meles Zenawi Asresu – Transitional head of state May, 1991 to August23, 1995
Ato Tamirat Laine - Transitional head of government May, 1991 to August23, 1995
Ato Meles Zenawi Asresu – Head of government of FDRE August, 23, 1995to August 20, 2012

Ato Haile Mariam Desalegn Boshe - Acting PM - August 21, 2012 toSeptember 21, 2012
Ato Haile Mariam Desalegn Boshe - PM September 21, 2012 to Present

Post- Imperial Government of Ethiopia Era:
Lt. General Aman Mikael Andom (September 12, 1974 – November 17,1974)
Majour Mengistu Haile Mariam (November 17, 1974 – November 28,1974) (1st term acting)
Brigadier General Taffari Benti (November 28, 1974 – February 3, 1977)
Majour Mengistu Haile Mariam (February 3, 1977 until February 11, 1977) (2nd term, acting)
Mengistu Haile Mariam (September 10, 1987 until May 21, 1991) (civilian turned PDRE president)
Lt. General Tesfay Guebrekidan – May 21, 1998 until May 28, 1991(civilian turned acting PDRE president)

Post-PMAC (Duerg) Era:
Transitional Government of Ethiopia (TGE) – Federal Democratic Republicof Ethiopia (FDRE)
Meles Zenawi Asresu, transitional head of state of the TGE - May 28, 1991to August, 1995
Dr. Negasso Gidada Solon, chief of state of the FDRE - August, 1995 toSeptember, 2001
Lt. Girma Wolde-Giorgis, Chief of State of the FDRE - September, 2001 to 2011
Dr. Mulatu Teshome, Chief of State of the FDRE - September, 2011 –2019
Mme Sahlework Zawde, Chief of State of the FDRE September 2019 - Current

Judicial chamber
Federal Supreme Court; Federal Court of Appeals; President and vice president of the Federal court appointed by the executive with the HoPRapproval.

Capital city.
Addis Ababa Altitude 2451 mtrs/8039 ft.

Geographic coordinates 9.02N, 38.42E.
New Flower: is the literal English translation for the Amharic word "AddisAbaba", located in the center of the country. The present site of Addis Ababa was chosen as a village by Empress Taitu Betul Menelik, the city was officially founded in November, 1886 by her husband, Emperor Menelik II. Addis Ababa replaced Intoto as capital of Abyssinya two yearslater.

Addis Ababa is home to nearly all the ethnic groups of Ethiopia; considered the melting pot of the nation's diverse culture; it is also the political capital of Africa, over 120 African and non-African governmentshave diplomatic representation in Addis Ababa; it has a population of around five million; Addis has an average temperature of 22-26 degree Celsius. These are objective facts that are not hidden from an average person.

Currently Addis Ababa city has the status of city region. Addis Ababa lies at an altitude of 2, 451 mtrs as what geographers termed as "the roof-topof Africa". The Federal capital 'City Region of Addis Ababa', is the chartered seat of the African Union Commission (AUC), and the United Nation's Economic Commission for Africa (UNECA) often called, "Capital ofAfrica".

The city of Addis Ababa which was founded during Emperor Mengele's reign has transformed into a major city in the past decades. Addis Ababa founded at the bottom of the 3,200-metre (10,500-ft) high Mt. Entoto It has grown steadily in terms of buildings, roads and also the size of its inhabitants. Currently, there are lots of buildings and road constructions everywhere and part of the plan is gradually to replace all the wattle and daub houses by concrete/storey buildings at least in the city centre but public parks and children's play grounds are very minimal or non-existent in the city. Once the current constructions are completed, Addis Ababa willbe a very beautiful city. The fate of those people who are losing their properties or lands due to demolishment is unknown whether they will geta replacement or compensation according to the market value. Many havesome rather contentious views on this issue. This plan or policy might leave many people destitute. Some have been offered to move into newly built condominiums. However, these new buildings range between three toseven floors with no elevator which is very daunting task for old and disabled people. Some of these buildings are already showing signs of deterioration in less than a year of completion. The number of foreigners and Ethiopians from abroad make Addis Ababa an exciting polyglot city.
The city is full of myriads of bars, hotels and night clubs in every corner and some of the hotels are really opulent. The ubiquity various small business of Khaldis coffee shops and other outlets are everywhere in thecity. People are usually sitting at coffee shops or by the side of the road and some of them are gazing pensively at no specific things and lost in thoughts. The main streets and squares are full of people who

travel around and peddling their wares. There are a lot of beggars everywhere; some of whom squat around churches and on the side of streets in plasticshacks.

Addis Ababa: A Festival City: To a great many other people, Addis is a perfect spotwhere to experience a mosaic of cultures and religious performances.

These people would mention to you how soul touching and educative Epiphany, Mesquel, and Easter holidays are. The most colorful festivals are Epiphany (Timkhat) which rests on the 19th January, and The Holy Cross Day (Mesquel) rests on the 27th of September to be celebrated annually. Believed the Ethiopian Orthodox worshipers have accepted the holy cross (Mesquel) before 2900 years as history told, and many of EOC worshippers term the holy cross as "Holy cross is our title (Mesquel Simene)" "Holy cross is our force (Mesquel-Hailene)", "Holy cross is for our livelihood (Mesquel Medhanitne-Lenefsine)", "Holy cross is our savior (Mesquel Bezane)". Ethiopia is not known only by its Christianity, but alsothe one in the region to adapt Islam. They are also surprised by the fact that Christian and Muslim religious institutions are only a fence away fromeach other. And they are amazed by the fact that both churches and mosques conduct their respective services with tolerance, simultaneously and without any conflict. This group of people would definitely make your day and you would walk tall and proud. These are tourists, pilgrims, and human rights advocates.

Addis Ababa: The Dream City:
To the many, Addis Ababa is more of a dream city. This group of people holds a special place for the capital for various reasons. The man who fought and demolished the apartheid structure in South Africa, Nelson Mandela (Madiba), has, for instance, this kind of view of Addis Ababa. In his autobiography, Nelson Mandela explained how and why Ethiopia/Addis Ababa occupied a special place in his imagination and life. In his protracted struggle for freedom, he was inspired by his experiences of Addis. He dreamt that South Africa could be as independent, proud, and unique as Addis: "Ethiopia has always held a special place in my own imagination and the prospect of visiting Ethiopia attracted me more strongly than a trip to France, England, and America combined. I felt I would be visiting my own genesis, unearthing the roots of what made me an African. Meeting with HIM Haile Selassie I of Ethiopia, would be like shaking hands with history… We then changed flight to an Ethiopian Airways to Addis. Here I experienced a rather strange sensation. As I was boarding the plane, I saw that the pilot was black. I had never seen a black pilot before…I only hoped it was a vision ofwhat lay in the future for my own country". It is true that for many Ethiopian Diaspora, visiting Addis/Ethiopia is much more edifying and profitable (in terms of satisfaction and fulfillment) than visiting the mega cities of Europe and North America. Several take their vacations in Ethiopia. Several others try to contribute to the socio-economic

and political development of Ethiopia while residing abroad. The Ethiopia's capital, Addis Ababa, is in transformation. Addis Ababa, called sometimes the Slum capital of the World. Currently the home of approximately five million inhabitants, the city might triple its size within the next 30 years due to the increasing rural to urban migration, as well as natural growth. Already today, Addis Ababa suffers from a housing shortage of estimated 300.000 units. And, according to UN-Habitat, 80%of the existing dwellings are in 'sub-standard, slum like' conditions. Thus,in 2004, the government launched a large-scale mass housing program with the ambitious plan to erect 200.000 condominium units within 5 years. To date, 100.000 units were built during the last 7 years, out of which nearly 70,000 are handed over to end users so far. In Addis Ababa85% of the population lives in slums. They are living on less than 1 dollarper day. Migration to urban areas is usually motivated by the hope of better living conditions. Addis Ababa Sex Guide advises you where to findsex, working girls, prostitution, street hookers, brothels, red-light districts, prostitutes, erotic massage parlors, strip clubs and escorts in Addis Ababa, Ethiopia.

With a population of nearly 7 million (2013 estimate), the city is the largest in the country. In Addis Abeba, only 64% of the people have access to tap water. Only 2% of the population has a sewer connection. Many of the wealthiest people live in the southeast (Bole), southwest (old airport), CMC, Ayat and Lamberet parts of town. There are more than 120embassies and international missions in Addis Ababa, making the city a hub for international diplomacy concerning Africa. The headquarters of the African Union (AU) and the UN Economic Commission for Africa (UNECA) are both in the city. The European Union and the United States of Americaboth have two delegations in Addis Ababa, one for bilateral relations with Ethiopia and one accredited for the African Union.

Names of main towns

Dire Dawa, Gondar, Adama (Nazareth), Dessie, Harrar, Mekelle, Jimma,Bahir-Dar, Hawassa.

Date of independence

Literally Ethiopia is an independent state with the exception of five yearsof occupation (1936 to 1941) by Italian fascist armies. The only African nation never colonized, Ethiopia is also one of the world's oldest: at least2,900 years. Considered the one among the oldest nations in the world.

Religions (Major)

Ethiopian Orthodox Tewahdo Christian (EOTC) 45 %, Muslim (mainlySunni) 34%, others 17%.

EOTC and Islam are the dominant ones. Traditional Oromo religion (Waaquefeta) and evangelical Christians make up significant minorities. Itis not uncommon to hear the Islamic call to prayer emanating

from a mosque's minaret and then an hour later hear the prayers from a Christian Church on the same street. There is also a strong Judaic influence throughout the country although nearly all of the country's Jewshave emigrated to.

Main spoken languages

Amharic is the official language and their official script/alphabet is the ‘Saba Ge’ez Alphabet’. The three main spoken languages (Amharic, Tigrigna and Afan Oromo) are most likely to be considered main spokenlanguages in Ethiopia.

Ge'ez language, the ancient Ethiopic language, remains the liturgical language of the Ethiopian Orthodox Tewahdo Church (EOTC). The modernAmharic language, which is the national language of Ethiopia, believed developed out of the ancient Ethiopic language Ge'ez while the Saba Ge’ezAlphabet is still under use.

Amharic is also the commercial language of Ethiopia spoken by about half of the population in the area of the capital, Addis Ababa and the regions tonorth of it. Amharic belongs to the Semitic language group but within the Ethiopic branch of this group it is directly descended from the ancient classical Ethiopian or Ge’ez tongue.

Ge’ez Tongue: The classical literary language of Ethiopia, a Semitic language thought to have been introduced from South Arabia in the 1st Century BC. It is the ancestor of all the modern Ethiopian languages suchas Amharic, Tigrigna, Agew, and survives only in the liturgical language ofthe Orthodox religion churches in Ethiopia.

The Oromo language is an Afro-asiatic language. It is the most widely spoken tongue in the family's Cushitic branch. This language is spoken asa first language by more than 30 million Oromos and neighboring peoplesin Ethiopia and parts of northern Kenya. About 95 percent of Oromo speakers live in Ethiopia, mainly in Oromo inhabited areas. Although, numerically speaking, Afan Oromo speakers are LARGER THAN Tigrigna and Amharic speakers COMBINED; the language remains the most disfavored language since the Oromo people still remain the most disenfranchised and least organized society in Ethiopia.

Ethiopia is home to at least 80 different languages in addition to Amharic,the official language which itself has more than 200 dialects and its own alphabet. Oromiffa, Tigrigna, Somali, Guraghe, Afari are the main ones.

Ethiopia retains its own alphabet, writing and official language, Amharic. English, is a major foreign language taught in high schools, Colleges, Universities and used in commercial businesses. Few other languages thatare widely taught and spoken include French, Arabic, and Italian.
Currency unit. Ethiopian Birr (Eth.Birr) =100 cents. The Birr (Amharic: ብር) is the unit ofcurrency in Ethiopia. Before September, 1976, Eth. Dollar was the officialEnglish translation of Eth. Birr (ETB). Today, it is officially Birr in English as well.

Area in Km2 1.104.300.000.

Country area comparison in Africa10 out of 55 states.

Demographic terms;-
Urban population: 17% of the total population Average annual population growth rate 3.202 %Birth rate 43.34 births per 1,000 population Death rate 11.29 deaths per 1,000 population Male 53.28; Female 58.39 years
Average life expectancy; 55.8 years.

Side note: Ethiopia's population is predominantly young.
Youth unemployment exceeded at 60 %. This is according to the United States Central Intelligence Agency July 2013 estimate of Ethiopia's population: 0-14 years olds are 44.4% of population, while the 15-24 agegroup is 19.9% of the population. The sum of the under 24 year old demographics is 65% of Ethiopia's population, which amounts to more than 60 million people. (The 44.4% is more than 41 million, the 19.9% a little under 20 million).

Main Export Items

Coffee, Hides & skins, livestock, pulses, grains, cut-flowersEconomy is based on:

Agriculture 85 %. Ethiopia has an agriculture-based economy, with 75 percent of its exports being agricultural products such as coffee, sesame seeds and flowers. Meantime, Ethiopia's economy is largely sustained by outside money – aid, loan, and remittances – not by the surplus created internally. Many say if these three sources were to stop flowing suddenly, the government and indeed the country could go bankrupt over night. Oneof Ethiopia's greatest natural endowment are investors, other than tourist attraction,

Climate

Extremes;
Lowest point; Afar Depression in Afarland - 125 mtrs. Ethiopia's Erta AleLava Lake - The Lava Lake at Erta Ale, in High Definition: Ethiopia's spectacular lava lake in high definition' Ethiopia's Erta Ale Lava Lake is 613 meters (2,011 ft) high, with one or sometimes two active lava lakesat the summit which occasionally overflow on the south side of the volcano.

Highest point; Mt. Ras Dejen in Amharaland - 4,633 mtrs

Weather of the Capital city (Addis Ababa) ave. ann. tem. 17,5oc.Altitude 2451mtrs/8039 ft.
Hottest Month April-May 10-25oc.Coldest Month December 5-23oc.
Driest Month December 5mm average Rf. Wettest Month August 300mm average Rf.

Please note: - June to mid-September are rainy and very chilly months inAddis Ababa. In addition, Addis Ababa is the highest altitude place in Africa which is about 2, 500 meters above sea level, often called the "rooftop of Africa".

Measures
Metric system & Local measures used.

Local measures for space (land) used: eg. 1 Tiffir (timmad) =5 ha, 8 Tiffirs (Timmad) =1 Gasha =40ha.
Local measures for length (distance)used: 1 Sinzir=0.25m 2 Sinzirs=1 Kind=0.50m, 2 Kinds =1 mtr.
Local measures for weight (tonnage) used: eg. 1 qunnaa =estimated at 8 to 10 kgs. , 1 farrasula =estimated at 17 kgs. , 1 inquib=estimated at 25 kgs. , 1 dawulla=estimated at 1 quintal (90 to 100 kg) level. Qalad –

equivalent to a "Rope unit”, the system of land-measurement, or the termused for a “measured land plot”

Other local measures also used: are mixed up of various kinds of systems:the traditional and local measures, such as local Oromo measures, the British system and the American system. Let us give some examples. Coffee had been measured in traditional units called “farasullaa” (one farasulla=17 kg) and dawulla (one dawulla=5 farasulla=nearly 1quintal). But in recent years, “kilo gram” and “quintal” are more preferred to use. As local Oromo measures, grains are measured in units called “suguda” (one suguda=2.5 kg), “qunnaa” (1qunnaa= 8 kg) and “dawulla” (1 dawulla=90 to 100 kg). When grains and cereals are retailed for individuals, a unit called “xaasaa” or “xaasaa milishaa” is used (five xaasaa=1 kg). The oilseeds are usually measured by a smaller unit called“lambaa” (15 lambaa=1kg). This “lambaa” is a can in which tomato-sauce(called “salsa” by the people of Harrarghe) is packed. After the tomato- sauce used the can is taken out for measuring. Likewise, xaasaa” or “xaasaa milishia” is a can in which “shiro” (bean soup) is packed.

Time zone
3 hours ahead of GMT/UTC.

Public holidays
January 7 Ethiopian Christmas (Ghenna), January 19th (every year "Timkat" i.e. "Epiphany" has to be celebrated according to the Ethiopian Orthodox Tewahdo Church -EOTC faith), March 2 (Day of Adwa victory),April 4 (second Ethio-Italo war veterans' day), April 12 (Good Friday), April 14 (Easter), May 1 (Labor Day), May 28th (downfall of the Duerg regime), September 11 (Ethiopian New year), September 27 the Holy- cross day (Kidus Meskel: the finding of the true cross, is one of the most colorfulreligious festivals in Ethiopia. Such religious festival features the finding of the HolyCross (Kidus Meskel) since thousands of years ago.), All Muslim holidays.

Ethnic groups
Oromo (kushetic) 34 %, Amhara (Semitic) 27 %, Somali (kushetic) 6.2
%, Tigrawai (Semitic) 6.1 %, Sidama 4.0 %, Guraghe 2.9 %, Walaita 2.3
%, Hadiya 1.7 %, Affar 1.7 %, Gamo 1.5 %, Gedeo 1.3 %, others 11.3
%. Ethiopia has the second-largest country in terms of population in Africa, with more than 100 million people, divided among over 84 ethnic-groups. The country is divided among Christians, who make-up to 62% ofthe total population i.e. 43% EOTC, 19% other Christian denominations, and Muslims, who make-up to 34%, has a high population growth rate of
3.2 %, and 65 % of the population is young under 30 years of age.

Side note: Ethiopia is the second most populous country in Africa next to Nigeria, with a population of well over 90 million, more than 80 ethnic groups, speaking at least as many languages, reside in Ethiopia. The vastmajority of Ethiopians live in rural areas or small towns; Addis Ababa is the only major city which is remarkable given the population. An Amhara,a nomadic Afar, a Mursi of the southern people, or a Gambella, all are very much Ethiopian, but each ethnic group is quite distinct in appearance, language, and culture. The major ethnic groups are the Oromos, predominantly in the central and south, the Amhara and Tigrai from the central, northern, and northwestern highlands, the Somali, the Sidama, the Guraghe, and numerous smaller groups. Over 80 languages

are spoken with Amharic as the official state language. Even with this wide diversity, the Ethiopians show a degree of tolerance and acceptancetowards other cultures that much of the world would do well to emulate. Ethiopians from all walks of life are extremely hospitable and welcoming and although you may receive additional attention as a foreigner, this is almost always due to a genuine curiosity about you and your homeland.

Topographic & Environmental concern

Ethiopia, is the most populous landlocked country in the world. The Ethiopian Highlands are a rugged mass of mountains in Ethiopia. The Ethiopian Highlands form the largest continuous area of its altitude in thewhole continent, with little of its surface falling below 1500 m (4,921 ft),while the summits reach heights of up to 4550 m (14,928 ft). It is sometimes called the Roof of Africa due to its height and large area.

Ethiopia divided into five climate zones namely, highland (Degama), mid-weather (Woina-Degama), lowland (Qolama), semi-Desertic (kefil- Berahama) and Desertic (Berahama).

The chief head-stream of the Nile-waters volume rises in Tana Haiqe (Lake-Tana) in north-western Ethiopia. A high central plateau b/n 1830 mtrs/6000 ft. & 3050 mtrs/10,000 ft. high rises to higher mountains near the Blue-Nile and other rivers cross the plateau which descends to plains on both W. and SE. Indeed its fertile soil, and abundant rainfall produces atwo time crops yearly. Environment: The Lake Qoqa environmental disaster is coming the most serious concern for environmentalists. Some people were sick and dying from drinking the polluted waters of Lake- Qoqa, once a pristine lake, located some 70 km south of Addis Ababa. A world renowned scientist from the University of Durham, U.K., analyzed water samples from Lake Qoqa and found “high concentrations of the microcytic bacteria”, which said are among “some of the most toxic molecules known to man.” Ethiopia is facing an ecological catastrophe: pollution, deforestation, desertification, soil erosion, overgrazing, and water shortages in some areas from water-intensive farming and poor management, and population explosion. The Ethiopian Agricultural Research Institute says Ethiopia loses up to 200,000 hectares of forest every year. Between 1990 and 2005, Ethiopia lost 14.0% of its forest cover (2,114,000 hectares) and 3.6% of its forest and woodland habitat.

If the trend continues, it is expected that Ethiopia could lose all of itsforest resources in 11 years, by the year 2020.

Economic Overview

Written with dual (English/Amharic) characters

Landlocked Ethiopia, Africa’s second-most populous nation, produces nooil or gas and was reliant on gold, coffee and other agricultural commodities for export earnings.

Industry

Agro-processing, textiles, beverages, leather products, chemicals, metal-processing, cement, sugar, cut-flowers to west European markets.

Side note: Production of high value agricultural products such as horticulture, textile and leather garments, livestock and meat could be themain areas of cooperation in Ethiopia. A vast spectrum of untapped resources for possible investment exists in areas like agriculture, mining, energy and construction, among others.

Tourism & Wildlife

Abundance of unique and endemic wildlife: Ethiopia has about nine National Parks and six Wildlife Sanctuaries. Ethiopia's highlands are hometo at least 20 species of mammals, and 30 species of birds that are found nowhere else. Animals Found only in Ethiopia include, Black Lion, BleedingHeart Monkey (ጭላዳ), Walia Ibex, Ethiopian Wolf, Mountain Nyala, MenelikBushbucks , Swayne's Hartebeeste, Wild Ass, The Bale Mountain Vervet are the ones.

In the park include Plains Zebra, Grant's Gazelle, Dik-dik, and the GreaterKudu as well as one of the last three populations of the endangered Swayne's Hartebeest, endemic to Ethiopia. A stretch of the northwest shore of Lake Chamo is known as Crocodile Market, where hundreds of Crocodiles gather to sun themselves. The park also has populations of bushbuck, bush pig, Anubis baboon, velvet monkeys, black-backed jackaland Burchell's zebra.

Bale Mountains National Park:

Ethiopia boasting some of the most impressive historical sites in all of Africa: an abundance of unique and endemic wildlife: dramatic landscapes: and an ancient culture renowned for its hospitality: Twice thesize of France, Tis-Abay, the Blue Nile Falls, near the source of the Blue Nile. At just over 1,100,000 square kilometers (425,000 square miles,) Interms of area size, Ethiopia is twice the size of Kenya, France, or the stateof Texas and has more UNESCO World Heritage sites than any other African nation. Ethiopia should be on all travelers' "must see" lists.

Established in 1970 is situated at about 400 kilometers from Addis Ababa.

It is a magnificent high altitude (average elevation of over 4000 meters) plateau with numerous dramatic volcano plugs, tiny seasonal alpine lakesand cascading mountain streams. It stretches over an area of 2,400 square kilometers. Here are the largest Afro-alpine moorlands in the world. The dynamic of this ecosystem extends far beyond Ethiopia and is responsible for environmental changes and climatic conditions in Somalia and East Africa. As it is a place of endemism, the Bale mountains NationalPark inhabits endemic mammals such as mountain Nyala, Red fox and Menelik's Bush-buck. Moreover it is the shelter of Ethiopia's seven of 28 endemic birds. Formed by the Wabi River as it changes its course in the distant past and carved out a new channel through limestone foothills, theSof-Omar systems is an extraordinary natural phenomenon of breathtaking beauty. The cave which is now an important Islamic Shrine was named after the saintly Sheikh Sof Omar who took refuge here many centuries ago. The cave has a religious history that predates the arrival ofthe Muslims in Bale - a history calculated in thousands of years. Sofomar can be visited with Bale Mountains National Park Trip.

Awash National Park:

Lying in the lowlands at the east of Addis Ababa and striding the Awash River, the Awash National Park is one of the finest reserves in Ethiopia. The Awash River, one of the major rivers of the horn of Africa, waters important agricultural lands in the east of Ethiopia and eventually flows into the wilderness of the Danakil Depression. The dramatic Awash Falls, as the river tumbles into its gorge, is the sight not to be missed in the national park. Awash national park, surrounding the dormant volcano of Fantale, is a reserve of arid and semi-arid woodland and savannah, with riverain forests along the Awash River. Forty six species of animals have been identified here, including beisa oryx and Swayne's hartebeest. The bird life is prolific especially along the river and in the nearby Lake Besakaand there are fine endemic amongst the 392 species recorded birds. A special attraction nationwide is the beautiful clear pools of the Filwoha hot springs.

Historic & Archaeological Sites:

Axum

Axum was one of the four great powers in ancient world, along with China,Persia and Rome. It is during the 4th century that King Ezana of Axum introduced Christianity to Ethiopia as well as the first minting of coins. Theancient town offers the obelisks (the large pieces of stone erected), tombs, monuments, castles, and Mariam Tsion church which is strongly believed by the Ethiopian orthodox believers that it resides the original arcof the covenant or the Tablet of Moses. A visit to Axum can be extended to the 800 BC pre-Axumite temple at Yeha, 55 km east of Axum, and a little further, the 7th century monastery at Debre Damo.

Harrar Walled City

Harrar is a holy center for Muslims and is situated in Eastern Ethiopia. Thiswalled city is a fascinating place, filled with Islamic and Christian history.

The city's location gives wonderful views of the surrounding country - thevast Danakil desert to the north, the fertile Harrar Mountains to the west, and the cattle rich Ogaden plains to the south. With its 99 mosques, including the 16th century Grand Mosque with is beautiful twin towers andslender minaret, it is considered to be the fourth most holy city in Islam after Mecca, Medina and the Dome of the Rock in Jerusalem

The 5 walls, Rimbaud museum, the colourful and well organized Harari tribe's house and the Hyena man are the most important places of interestfor visitors. In addition, Medhane Alem church, built at the end of the 19thcentury, is in the town centre and contains excellent examples of traditional regional art. The 16th century Grand Mosque, with is beautiful twin towers and slender minaret lies on the road to the Erer Gate (Womenare not permitted inside the mosque). The Ahmar Mountains around Harrar produce some of the best coffee in Ethiopia.

LALIBELA Rock Hewn Churches:

A series of rock hewn churches built by Priest King Lalibela At the end of the 12th and beginning of the 13th centuries. There are 11 rock hewn churches found in town which are constructed by the priest king with the help of Angels and considered as one of the wonders in the world. Other interesting churches outside Lalibela which are highly recommended to bevisited are Asheton Mariam, Yemrehane Kristos and Genete Mariam churches.

Gondar Castles

Is distinguished by its castles, imperial compound and its churches, particularly Debre Brehan Selassie church whereby its walls and ceiling are completely covered by unique murals. It was the capital of the Ethiopian Empire almost 200 years and the gate to the Semien MountainsNational Park where you can see the highest peak in Ethiopia named mount Ras Dashen measuring 4543 meters above sea level.

BahirDar Sightseeing:

Situated at the shore of Lake Tana is found 564 kilometers from Addis Ababa or 55 minutes flight from Addis Ababa by airplane. The island monasteries on Lake Tana are the major sites to visit followed by the BlueNile falls. It is possible to cross the lake to Gorgora and vice-versa to visitthe nice and recently restored medieval church of DebreSina Mariam.

Curved rafts of Papyrus, called “Tankwa” off-loads people, animals and freshly cutpapyrus on-off at lake Tana, Bahir Dar.
Life in Lake Tana

The fishermen of Lake Tana have been earning a living off the waters forcenturies, crafting their handmade boats of papyrus reeds, known as “tankwa” (ታንኳ) since the Negede Weyto (ነ ገ ደ ወይጦ) people of Sudan andEgypt traveled up the Blue Nile and begin anew in Bahir Dar.
The newcomers noticed that papyrus reeds grew in abundance along the swampy shores of Lake Tana and used the reeds to construct the tankwas. A tankwa takes anywhere from a few hours to an entire day to make depending on its size and only lasts about a month or two until it becomes waterlogged and is discarded. Most tankwas are long and narrow, built to fit a fisherman and his catch, however, some tankwas areso strong that they can hold loads of firewood. The unlucky driver of thesepapyrus boats paddle at a snail’s speed for hours to bring the firewood from the nearby islands onto the mainland. What is the most fascinating about the papyrus boats is their long tradition and culture of use. Reed boats may have even been used during Biblical times.

Ron Londen, author of the article, “Papyrus and Lake Tana” says that “papyrus boats are mentioned in the Bible, first with a mother’s memorable efforts to save baby Moses by floating him down the Nile in a makeshift boat of reeds” and later by prophet Isaiah. Reed boats are among the oldest types of boats in history and papyrus paper has been used for thousands of years conveying the written word.
Note: Credit Ron LondenAddis Ababa City:
Addis Ababa is an English meaning for new flower is established in 1881 after Emperor Minelik made his permanent capital at Entoto (3000 metersabove sea level) which is rich in Eucalyptus trees line up at the right and left side of the road. However, Entoto was soon decided not to be a site for the capital due to its cold weather. Therefore, Empress Taitu was said to have led the move down to the plain of Finfine, and to have named thenew capital Addis Ababa, in Amharic the New Flower. Since then, Addis Ababa became the official capital of Ethiopia. If you have a short time in Ethiopia, we offer you to visit the historical town - Addis Ababa with its museums, nearly 200 old houses, monuments, churches and the Grand market in East Africa - Merkato.

Yeha: Ethiopia's first capital city

When visiting Yeha, Ethiopia's first capital, one can notice a head of a Lionappearing from the mountain. Yeha is located in the Tigray regional state of Ethiopia. Yeha is described as “a large Bronze Age archaeological site and the most impressive site in the Horn of Africa." There are roads leading to a building constructed as far back as the 7th century BC. Yeha was the capital of Ethiopia's Damot Empire

and predates the Axumite Empire, which emerged following the decline of its power. Ethiopia and the representation of a lion have existed since the beginning.

Tiya Stelae & Standing Stones

Tiya in southern Ethiopia is an archeological site, which is distinguished by36 standing stones or stelae. They are marking a large, pre-historic burialcomplex of an ancient culture in the region.

Birds & Mammals**:**

Nechisar National Park is considered an important habitat for bird populations particularly those migrating. It has a noted population of kingfishers, storks, pelicans, flamingos and eagles. Other birds include Falco naumanni and Circus macrourus, which are fairly common on passage, while small numbers of Phoenicopterus minor have been reported on Lakes Chamo and Abaya. Species typical of bush land habitatsinclude Phoeniculus somaliensis, Lanius dorsalis and Cisticola bodessa andthe open plains support three species that are very unknown elsewhere in Ethiopia: an isolated population of Mirafra albicauda, the endemic Caprimulgus solalaand the rare C. stellatus. The south-western corner of Lake Abaya supports one of only two Ethiopian populations of Myrmecocichla albifrons. Other species of note include Accipiter ovampensis, Aviceda cuculoides, Gypaetus barbatus, Macheiramphus alcinus, Chelictinia riocourii, Francolinus levaillantii, & Podica senegalensis.

Abijatta Shalla:

Lakes Abijatta & Shalla are located in the heart of Rift valley, near Langano is 225 kilometres south of Addis Ababa and comprises 887 square kilometres. The two lakes are separated by three kilometres of hilly land. The altitude of the park ranges from 1540 to 2075 meters, the highest Mount Fike, which is situated between the two lakes. Lake Shalla is thought to be the deepest lake in Africa (250 meters deep), north of theEquator. Despite their natural beauty, these lakes are best known for theirbird life. Different kinds of water birds such as greater and lesser flamingos along with white-necked cormorants, several species of herons, storks, spoonbills, African ducks, gulls and Sterns can be seen around the these lakes. During the northern winter thousands of Asiatic and Europeanducks and Waders migrate to the Lake Abiyatta shores. Lake Shalla is wellknown for its large colony of great white pelicans, undoubtedly the most breeding site for these species in Africa.

Simien Mountain National Park:

Simien mountains is one of the major highlands of Africa, rising to the highest point in Ethiopia, Ras Dejen (4543m), which is the fourth highestpeak in the continent. Although Simien is in Africa and not too far from the equator, snow and ice appear on the highest points and night temperatures often fall below zero. The national park has three general botanical regions. The higher lands are mountain grasslands with fescue grasses as well as heathers, splendid Red Hot Pokers and Giant Lobelia. Ethiopia's best for wildlife, and resident within its boundaries are three ofEthiopia's endemic large mammals: the gelada baboon"bleeding heart onits chest",Ethiopian wolf and Walia ibex. The baboons are the most

common of the three, and Walia Ibex is limited at camp site of Chennek.Ethiopian wolf is rare here but probable to be seen at Bale Mountain National Park. Over 50 species of birds have been reported in the SimienMountains.

Yangudi Rassa:

Located in the Afar Region, the park's 4730 square kilometres of territory include Mount Yangudi and the surrounding Rassa Plains, with altitudes from 400 to 1459 meters above sea level. This national park was proposed in 1977 in specific to protect the African Wild Ass. Other animalsendemic to the park include Beisa Oryx, Soemmering's and Dorcas gazelle, gerenuk and Grevy's zebra. The Awash - Assab highway crosses the Yangudi Rassa National Park, as does the Awash River.

NechSar National Park:

It was established in 1974, located to the east of Arba Minch, Park elevations range between 1108 and 1650 meters above sea level.The ParkProtects the Nechisar "White Grass" Plains as well as the two lakes and the mountainous 'Bridge of God' dividing the lakes. There is a rich habitat density here, from acacia scrub to open grasslands, and there are 70 mammal and around 340 bird species that can be found here. There are also 15 endemic butterflies, and 8 endemic dragonflies which can be seen on the lakeshores. The park is beautiful and unusual, largely to the two lakes.

Omo National Park:

One of the most beautiful national parks in Ethiopia, its 4068 km of wilderness bordered by the Omo River, is home to an amazing range of wildlife. 306 species of birds have been identified here, while large herdsof eland, some buffalo, elephants, giraffe, cheetah, lion, leopard, and Burchell's zebra are not uncommon.

Gambella National Park

The Gambella National Park was established primarily to protect two species of endangered wetland antelopes: the White-eared kob and the Nile Lechwe. Other wildlife reported as living here include populations ofelephant, African Buffalo, lion, roan antelope, tiang, Lelwel Hartebeest, olive baboon, and Guereza monkey. Several birds only found in this areainclude the shoebill stork, the Uelle Paradise Whydah and the Red- throated and Green Bee-eaters. In Gambela Region Aguak and Nuer ethnic groups are dominant.

Chief crops

Coffee Ethiopia's main export item. Cereals, pulses, oil-seeds, cotton, sugarcane, potatoes, qhat (mental

stimulant chewing-plant), cut-flowers.hides, sheep, goats, few fishing. Live animals: Ethiopia is now the tenth largest producer of livestock in the world.
The history of chief crop Coffee bean goes at least as far back as the thirteenth century. A region known as Kaffa, is it's birth place. And the Kaffitcho people, who are at present inhabiting in the Kaffitcho zone in theSouth were the first to discover and recognize the energizing effect of the Coffee bean plant. Coffee is embraced as mental stimulant-plant commonly served 2 to 3 times daily, as means of meeting among familiesin the community as well as a cash-crop that would provide on the way Coffee-farmers a better life.

Coffee is the part of daily life in Ethiopia, whenever there is a gathering, Coffee is there! The Coffee ceremony is performed regularly in most Ethiopian households, starting with the roasting of raw beans and an appreciation of the heady aroma before the pouring of the liquid "Bunna"from a traditional Coffee pot known locally as "Jebena" into small cups.
Grain-sorghum and Castor-bean, are two other major crops believed to have originated in Ethiopia. People who have tried green bean coffee extract say it: Improves blood circulation Lowers blood pressure: Reducesbody fat & weight promotes energetic feeling and better mood: some survive on selling chat, a local stimulant plant that mostly men chew in their sparetime . Though this plant has drugging effects, it is legally recognised and considered a lesser evil than marijuana.

Geological studies have identified a favourable geological environment hosting a wide variety of mineral resources. In addition to gold, there arelarge deposits of tantalum, platinum, nickel, potash and soda-ash. Amongconstruction and industrial minerals are marble, granite, limestone, clay, gypsum, gemstone, iron-ore, coal, copper, silica, diatomite and others.
The potential geothermal energy, natural-gas, hydro-power, arable landsand suspected deposits of Petroleum in the Ogadien and Gambella is alsogood. Gold has lately become Ethiopia's second largest export item, nextto Coffee. Though, there is substantial foreign investment in agriculture, other fields such as agro-processing, mining, textiles and leather industries. Packaging also offer a huge opportunity for investment to foreign investors.

Natural Resources – Once called Breadbasket of the Horn of Africa - cereals including wheat, barley, sorghum, maize, Teff: exports includes coffee, oil seeds, hides and skins: it has the largest livestock holding in Africa: forestry - houses all the forest and wildlife reserves of the Horn including unique species like Nyala-lbex, Colobus monkey and the red fox,and various minerals - two of three mineral belts of the region including gold, silver, platinum, uranium, marble, Nickel, and natural gas.

Population size matters - Ethiopia has a population of 99.6 million andis currently the population is increasing by about two million people a year. The population size is projected to increase to 137 million by the year 2037. Population size matters and it has already affected food security projects, employment creation (including the rural and urban areas), access to public services such as education, health and urban services. The Ethiopian population is not only large in size, but it is also growing rapidly. Has the economic capacity to increase the scale of production and employment at the rate needed to recover from backlogsand re-adjust to new additional shortages every year?

The Aviation Industry
Are Ethiopian Airlines Reliable?
Definitely:

They have very generous baggage (46kg)
They are consistent and reliable
Very respectful and nice crew

When I travel with Norwegian and Sas, I am very surprised how the crew could be rude/upfront to the customers. The food and drink service is also very dismal (very expensive). The same is true with Turkish. I am not an avid flier. But from my limited experience, Ethiopian airlines is a pleasure to be in—very modern and spacious airplanes, with great service.
Commercial Sea port:
Currently Ethiopia is an Inland state. Ethiopia the continent's biggest Coffee exporter is a country forcefully turned into a landlocked nation after Eritrea, it's former northern province, retained the entire coastline along the Red sea upon it's de-jure independence from Ethiopia on April, 1993. There’s a main route access for motorized cargo-transportation to and from the abandoned Red sea port city of Assab, as perhaps a more reliable and relevant port-facility for Ethiopia. Instead of the port of Assabthe port of Djibouti which is located on the terminus of Addis Ababa- Railway, as well as the aviation transport has played an increasingly important role in the international cargo transport services since 1997.

Landlocked Ethiopia, according to government officials, has so far managed to construct major highway that links it with five neighboring countries to boost trade relations and to get to access to the sea. Eritrea gained independence from Ethiopia in April, 1993 leaving the latter with no access to the sea.

The lack of access to the sea has left a strong impact on Ethiopia's economic, political, strategic interest and access to trade. This was made worse after Ethiopia and Eritrea fought a 1998-2000 border war that led to the closure of Ethiopia's access to Eritrean ports. Ethiopia's access to sea depends upon Eritrea, Djibouti, Sudan, Kenya, or Somalia. Currently Ethiopia depends on Djibouti port for about 98% of its international trade.To ease the high reliance on Djibouti, Ethiopia is now seeing other alternative routes to the sea. In 2005, Addis Ababa reached an agreementwith neighbouring Somaliland - a region of Somalia that is agitating for independence - to access the Berbera port. Ethiopia is also using Port Sudan after it built a highway that connects Ethiopia's northern town of Metama with Port Sudan via Gedarif in eastern Sudan. All tracks lead to Djibouti: The Addis-Djibouti corridor has always been animportant strategic route for Ethiopia. The new 781km route eastward to Djibouti.

ETHIOPIA SEARCHES FOR ALTERNATIVE SEA OUTLETS FOR IT'S FOREIGN TRADE:-Ethiopia used to rule out all ports on the western side of the Red sea until it lost its last port, the port of Assab to Eritrea in May, 1991 joining the pack of landlocked African economies. Over 90 pct of ethiopias international trade forcasted to almost double from the current 17.1 million metric tons to 30 million metric tons by 2030- has been utilizing the port of Djibouti. However, Ethiopia is currently exploiting additional ports such as Mombasa an Lamu in Kenya, Berbera and Kismayo in Somalia, Djibouti, port Sudan in Sudan, and the port of Assab, Eritrea. Following the opening of the Ethiopian Logistics sector to foreign investors, these are planned to be linked with dry ports ports and economic and logistics facilities across Ethiopia. To that end, the logistics transformation office is currently finalizing the first Ethiopian logistics master plan which invisages interconnecting the nation through infrastructure including ports, highways, railroads, aviation, pipelines, and transboundary rivers et-al.

Djibouti - offering the shortest distance from Addis Ababa to a Seaport - isexpected to haul about 11.2 million tonnes of freight in its first year of operation by 2016, rising to 24.9 million tonnes by 2025. The new line could be carrying passengers by 2016. Passenger trains are also planned to run on the line, which will wind around Ethiopia's highland plateau and vertiginous topography before dropping 2,500m to sea level.

Development prospect:

As Africa's biggest coffee producer, Ethiopia's economy remains based on agriculture, which accounts for 46 percent of gross domestic product and 85 percent of employment. But its nearly 94 million population - the second biggest in Africa - is attracting the attention of foreign investors hungry for new markets. Ethiopia has also the largest livestock populationon the African continent.

In the case Ethiopia’s GDP growth, on a slim economic base for that matter, does not explain improvement in the quality of life of citizens in terms of fair distribution of wealth, according lead economists. The previously recorded high rate of economic growth has started to slip as inflation has soared, spelling trouble ahead for the stability of the financialsystem. Ethiopia came out of the 2011 drought emergency relatively well with its early-warning systems and Poverty Reduction Strategy Programme. Indications are that 2012 will see a return to more normal weather patterns. The government hoped to see an eighth year of double-digit growth in 2011, but the IMF forecast a lower rate of 7.5 percent, falling to 5.5 percent in 2012. Growth was undermined by the surge in inflation, which soared to 40 percent in August. The government launcheda highly ambitious five-year Growth and Transformation Plan (GTP) in late2010.

It regards the first year's performance as satisfactory with agriculture- sector targets achieved. It intends to build on this over the next year andbring down inflation by reorganising the food supply chain. The government is also attempting to address private-sector development through the joint public-private partnership forum setup in 2010 and it has implemented a competition law. Outstanding issues that need attention include overall improvement in the business climate, good governance, improvement of tax administration and access to land and finance.

Although the government plans to borrow nearly EB400m ($23m) to invest in industry and infrastructure by 2015, the World Bank has expressed concern that this may lead to problems. Over the medium term, Ethiopia will need to scale up external financing and to limit import growth. A significant project in the Growth and Transformation Plan (GTP) is the Grand Renaissance Dam on the Nile, expected to generate 5,250MWwhen completed in 2017 at a cost of ETB 80bn ($4.6bn). This is being funded domestically

through the sale of bonds to individuals in Ethiopia

and the diaspora, to private companies and to banks, as well as from thedevelopment budget. The dam is seen as a national symbol of Ethiopia's renaissance, launched at the Ethiopian Millennium in September 2007, and its economic resurgence. The Chinese continue to dominate infrastructure development projects in the country. They are building thecountry's most expensive roads in various parts of the country, at over USD 500 million. The government has launched a Growth TransformationPlan (GTP) mainly aimed at infrastructural development i.e. tarring of main roads and developing Hydro energy grids over a five years period. The Chinese are set to continue to enjoy the large chunk of road construction contracts. Currently there are over 100 road projects underway in Ethiopia.

ETHIOPIA

HYDRO-POLITICS & THE NILE REGIONAL DIPLOMACY

THE ECONOMIC IMPACT of THE NILE INITIATIVE: Hydro-power plants,Power Grids, Agro-Irrigation, Environmental concerns et-al …

A nationalist & heroic chanting describes, “The Blue Nile River” locallytermed as “Tikur Abay Wonz” (ጥቁር ዓባይ ወንዝ)” as, “What did the brave person say?”

A group of young men replying,

“I will not give the Blue Nile to other people.”

Abay is the Ethiopian name for the Blue Nile River River or in the nationalAmharic term “Tikur Abay Wonz” (ጥቁር ዓባይ ወንዝ). The Blue Nile, which is actually turquoise for several thousand years continually is mainly the backbone of Egyptian economy.

Blue Nile (ጥቁር ዓባይ ወንዝ): Ge'ez ጥቁር ዓባይ Ṭiqūr ʿĀbbāy (transliterated to English: Black Abay, Blue Nile) ‘Nile River’, Arabic ‘Bafir Al-Nīl’ or ‘Nahr Al-Nīl’ river, the father of African rivers and the longest river in the world. It rises south of the Equator and flows northward through northeastern Africa to drain into the Mediterranean Sea. –Encyclopidia Britanica

THE NILE IN BIBLE PROPHECY: the drying of River-Nile course to the“Doomsday of Egypt”

The Book of Issaiah 19: 1 The burden of Egypt. Behold, the LORD ride upon a swift cloud, and shall come into Egypt: and the idols of Egypt shallbe moved at his presence, and the heart of Egypt shall melt in the midst of it. 2 And I will set the Egyptians against the Egyptians: and they shall fight every one against his brother, and every one against his neighbour: city against city, and kingdom against kingdom. 3 And the spirit of Egypt shall fail in the midst thereof: and I will destroy the counsel thereof: and they shall seek to the idols, and to the charmers, and to them that have familiar spirits, and to the wizards. 4 And the Egyptians will I give over into the hand of a cruel lord: and a fierce king shall rule over them, saith the Lord, the LORD of hosts. 5 And the waters shall fail from the sea, andthe river shall be wasted and dried up. 6 And they shall turn the rivers faraway: and the brooks of defence shall be emptied and dried up: the reedsand flags shall wither.

The Book of Issaiah 1: 1 There will be massive civil war in Egypt. 2) Theriver will be diverted and no water shall reach Egypt.

The Book of Ezekiel 30: 4 And the sword shall come upon Egypt, and great pain shall be in Ethiopia, when the slain shall fall in Egypt, and they shall take away her multitude, and her foundations shall be broken down. 5 Ethiopia, and Libya, and Lydia, and all the mingled people, and Chub, and the men of the land that is in league, shall fall with them by the sword. 12 And I will make the rivers dry, and sell the land into the hand ofthe wicked: and I will make the land waste, and all that is therein, by the hand of strangers: I the LORD have spoken it. According to ezekiel, not only will the river dry up, the survivors of the drought will be ruled by a cruel occupier from another land.

The Book of Zachariah 10: I will bring them again also out of the land of Egypt and gather them out of Assyria: and I will bring them into the land of Gilead and Lebanon: and place shall not be found for them. 11 And he shall pass through the sea with affliction, and shall smite the waves in thesea, and all the deeps of the river shall dry up: and the pride of Assyria shall be brought down, and the sceptre of Egypt shall depart away. The Egyptians will be exiled and won’t find a refuge and the Nile will dry up. (Text ends) His Majesty the Emperor of Ethiopia and members of the US Department ofReclamation looking the planned for constructing a dam on the Blue Nileriver in the forseeable future.

The Blue Nile River - Ethiopia and the Blue Nile River (Tikur Abay Wonz) The source of over 80pc of the water that eventually enters the Nile Riversystem. The Blue Nile starts in Lake Tana in Ethiopia and flows through tall, narrow chasms to the Sudan border. Within Sudan, the Blue Nile meets the White Nile, in Khartoum, and from there flows into Egypt. For many years, all the Nile's water has been divided between the Sudan and Egypt: any other country that dared to touch the Nile was met with stern threats from Egypt and its protectors: first The Great Britain. The Blue Nile where its source and 90% of the total water volume share is from Ethiopia as a result of its tributary rivers is still continuing at its controvertial agreement signed by the blue nile basine countries. .the westerns and middle East nations have a political and economical strategyinterest on Blue nile river beyond the read sea. If one has a control over on Blue nile would control Egypt by and its areab allience countries

የግብጽን የመከራከሪያ አቋም በሁለት ከፍሎ ማየት ይቻላል።

ከ5,000 ዘመናት በላይ ከኢትዮጵያምሆነ ከምስራቅ አፍሪካ ሀገሮች ተነስቶ ወደግብጽ የሚፈሰው (የጥቁር ዐባይና የነጭ ዐባይ) ውሀ ታሪካዊ ተጠቃሚነኝ። አሁንም ዋናዋ ተጠቃሚ (primary user) እኔ ነኝ፣ የውሀው ታሪካዊ ባለቤትምእኔ ነኝ ባይናት። ግብጽ ይህን ታሪካዊ ተጠቃሚነት መከራከሪያ የምታደርግበት ምክንያት፣ በተባበሩት መንግሥታት ተቀባይነት ያለው “ዓለምአቀፍ የሕግ ኮሚሽን” (International Law Commission/ILC)ካወጣቸውሕግጋት አንዱ “መጀመሪያ የውሀው ተጠቃሚየሆነ፣ የውሀውባለመብት ይሆናል። በኋላ የመጣው

የመጀመሪያውን ተጠቃሚመብት ሊገስስ አይችልም”5ስለሚል ነው። እንደዚህ ያለውን ባለመብትነት በእንግሊዝኛ acquired rights or prior appropriation እያሉ ይጠሩታል። ግብጽ ይህንን ደምብ ተንተርሳ፣ በስተላይካሉት የተፋሰስ ሀገሮች አዲስ የሚወጠን ፕሮጀክት ሁሉ ታሪካዊ ጥቅሜን ማዛባቱ አይቀርም (leads to ‘appreciable’ harm) ትላለች። በዐባይ ተፋሰስ ላይኛው ክፍል (upper catchments) የሚታቀድና

የሚወጠን የልማት ስራ ሁሉ ታሪካዊ ጥቅሜን ስለሚነካ፣ እኔ ያየሁት/ያወቅሁት፣ ያመንኩበት፣ የተስማማሁበትና ያጸደቅሁት ካልሆነ በስተቀር፣ የሚታቀደውየልማት ስራ ተፈጻሚነት ወይምተግባራዊነት አይኖረውምየሚል ነው። ስለዚህ ግብጽ የያዘቺውአቋምባጭሩ፣ በዐባይ ተፋሰስ ውስጥ ለሚታሰቡና ለሚወጠኑ ፕሮጀክቶች ሁሉ ፈቃጅና ከልካይ፣ ሰጪና ነሺ እኔ ነኝ የሚል ነው። በእንግሊዞች አማካይነት በ1929 ዓ.ም፣ በኋላ ደግሞ በ1959 ዓ.ምበግብጽና (በእንግሊዞችና በግብጽ ጣምራ ግዛት ስር /Anglo-Egyptian Condominium በነበረቺው) በሱዳን ከተፈረሙውየዐባይ ውሀ አጠቃቀምስምምነት ውጪ፣ ከዐባይ ተፋሰስ ሀገሮችጋር ሌላ ድርድር አልደራደርም፣ ሌላ ውል አልዋዋልም፣ ሌላ ፊርማምአልፈራረምም የሚል ነው።

አንዳንድ ምንጮች እንደሚጠቁሙት ይህ ውል (የቋንቋ አተረጓጐምውዝግብ በማስከተሉ) በኢትዮጵያ በኩል አልተፈረመም/አልጸደቀም (not ratified) ይላሉ። በ1929ኙና በ1959ኙ የውል ስምምነቶች ሌሎቹ የዐባይ ተፋሰስ ሀገሮችምአልተሳተፉበትም። ምክንያቱምከንጐበቤልጅየምስር ነበረች። ሌሎቹ የምስራቅ አፍሪካ ሀገሮች በሙሉነፃነት ያልነበራቸው፣ የራሷ የእንግሊዝ ቅኝ ግዛቶች ነበሩ።

የ1929ና የ1959የውል ስምምነቶች ባጭሩ

የአንባቢዎቼን ትውስታ ለመቀስቀስ ያህል፣ የዐባይ ጉዳይ በተነሳ ቁጥር የ1929 ዓ.ምእና የ1959 ዓ.ምየውል ስምምነቶች በየመድረኩ በተደጋጋሚ (በተለይ በግብጾች) የሚነሱናቸውና ባጭር ባጭሩ እንደሚከተለውላቅርብላችሁ። የ1929ኙ የዐባይ ውል ተፈራራሚዎች፣ 1) ከቅኝ ተገዢነት ነፃ የወጣች ቢሆንምበብዙ መልኩ (በተለይ በመንግሥት አስተዳደር ዘርፍ) ገና በእንግሊዞች ተጽእኖ ስር የነበረቺውግብጽ ናት። 2) በእንግሊዝና በግብጽ ጣምራ ተገዢየነበረቺውሱዳን ናት። አድራጊ ፈጣሪዋ እንግሊዝ ብትሆንምየ1929ኙ የውል ስምምነት (በተለምዶ) ግብጽና ሱዳን የተስማሙበት ውል እንደሆነ ተቆጥሮ ነው የሚወሳው። የ1929ኙ ውል ባጭሩ የሚከተለውን ይመስላል።

በዚያን ጊዜ በእንግሊዞች አማካይነት ግብጽና ሱዳን በተማሙኑበት መሠረት በያመቱ በጠቅላላ 80ቢሊዮን ሜትር ኩብ (cubic meters) ውሀ ግብጽ/አስዋን ይደርስ ነበር። ከዚህ 80 ቢሊዮን ሜትር ኩብ ውሀ ውስጥ ግብጽና ሱዳን በዚያን ጊዜ ሊጠቀሙበት ይችላሉ ተብሎ የተተመነ ውየ ውሀ መጠን (utilizable water) 52 ቢሊዮን ሜትር
ኩብ ነበር። ይህም ማለት (80 – 52 = 28) ወደ 28 ቢሊዮን ሜትር ኩብ ውሀ ከግብጽ ተርፎ ወደ ሜዲትራኒያንባሕር
እንደሚገባ ነበር የታመነበት።
ግብጽና ሱዳን ሊጠቀሙበት ይችላሉ ከተባለው 52 ቢሊዮን ሜትር ኩብ ውሀ (cubic meters) ውስጥ ሱዳን 4ቢሊዮን ሜትር ኩብ (7.7%) ውሀ እንድትጠቀም፣ ግብጽ ደግሞ 48 ቢሊዮን ሜትር ኩብ (92.3%) ውሀ እንድትጠቀም ተስማሙ።
በበጋው ወቅት (ከጥር መጨረሻ እስከ ሐምሌ አጋማሽ ድረስ /January 20 to July 15) የሚፈስሰውየዐባይ ውሀ ግን ሙሉ በሙሉ ለግብጽ ጥቅም ብቻ እንዲውል ተስማሙ።
በላይ በኩል የሚገኙትን የዐባይ ተፋሰስ ሀገሮች ለመቆጣጠር (monitor) የግብጽ መብት የተጠበቀ ስለመሆኑ ተስማሙበት።

በላይ በኩል ያሉትን የተፋሰሱን ሀገሮች ፈቃድ ሳታገኝ (without the consent of upstream riparian states) በዐባይ ላይና ከዐባይ ጋር የሚገናኝ ማንኛውንም ፕሮጀክት ለመስራት የግብጽ መብት የተጠበቀ **ሚሆኑን ተስማምቶ**ት።

እንግዲህ አንባቢዎች እነዚህን ውሎች አይታችሁ የየራሳችሁን ሚዛናዊ ፍርድ ስጡ። እነዚህ ውሎች በሁለቱ ሀገሮች መካከል ብቻ መፈረማቸውልክ ነውን?በነዚህ ውሎች የማን መብት ተጠበቀ?የማን መብት ተደፈረ?ከውሎቹ እንደምትረዱት ይህ ውል የዐባይን ተፋሰስ ሀገሮች6በሙሉ የሚመለከት ነው። ተደራዳሪዎቹና ተፈራራሚዎቹ ግን ‘ግብጽና’ ‘ሱዳን’ብቻ ናቸው። የላይኞቹ የዐባይ ተፋሰስ ሀገሮች ከዐባይ ወንዝ ውሀ የተተወላቸውድርሻ የለም። በኔ እይታ ይህ ውል በላይ በኩል ያሉትን የዐባይ ተፋሰስ ሀገሮች ሉዐላዊነት ገፍፎ፣ መብታቸውን ደፍሮ፣ አድራጊ ፈጣሪዋግብጽ ብቻ እንድትሆን ያደረገ ውል ነው።

ሕጋዊ ታዋቂነት ያላቸውና የዐባይ ተፋሰስ ሀገሮች በመባል የሚታወቁት ሀገሮች፡ግብጽ፣ ሱዳን፣ ዩጋንዳ፣ ኮንጐ፣ ሩዋንዳ፣ቡሩንዲ፣ ታንዛኒያ፣ ኬንያ፣ ኢትዮጵያና ኤርትራ ናቸው።

የ1959ኙ የዐባይ ውል ስምምነት ሱዳን ከእንግሊዞች ቅኝ ተገዢነት ነፃ ከሆነች በኋላ (ማለትም በሁለት ነፃ ሀገሮች) በግብጽና በሱዳን መካከል የተደረገ ስምምነት ነው። የስምምነቱ ዋና ዋና ነጥቦች ባጭሩ የሚከተሉት ናቸው።

አስዋን ላይ ለሃምሳ ዓመታት ያህል ተለክቶ የተገኘ ነውበማለት ጠቅላላውየዐባይ ውሀ 84ቢሊዮን ሜትር ኩብ ነውብለው ተመኑ። ከዚህ 84ቢሊዮን ሜትር ኩብ ውሀ ውስጥ 10ቢሊዮን ሜትር ኩብ በትነትና (surface evaporation)በስርገት (seepage)ሊጠፋ/ሊባክን ይችላል ተብሎተገመተ።

ቀሪውን 74ቢሊዮን ሜትር ኩብ ውሀ ግብጽና ሱዳን ላገልግሎት ያውሉታል ተብሎ ታመነበት። ይህ ተመን ከ1929ኙተመን የ22 ቢሊዮን ሜትር ኩብ ውሀ ብልጫያሳያል። በዚህ ተመን መሠረት ወደ ሜዲትራኒያን ባሕር የሚገባ የዐባይ ውሀ የለም። ይህንን 74ቢሊዮን ሜትር ኩብ ውሀ፣ ሱዳን 18.5ቢሊዮን ሜትር ኩብ (25%)ውሀ እንድትጠቀም፣ ግብጽደግሞ 55.5ቢሊዮን ሜትር ኩብ (75%)ውሀ እንድትጠቀምተከፋፈሉ።

ሱዳን ነፃ ከወጣች ከሁለት ዓመት በኋላ (በ1958ዓ.ም)የተስማሙበትን፣ የዐባይን ወንዝ ውሀ ሙሉ በሙሉ ይይዛልብለው ያመኑበትን፣ የአስዋንን ግድብ ግብጽ እንድትገነባ ስምምነታቸውን አጸደቁ።

ሱዳን የውሀ ኮታዋን እስካላለፈች ድረስ ሮሲዬርስ (Roseires Dam)የተባለውን ግድብ ጥቁር ዐባይ ላይ ገድባለኃይል ማመንጫና ለመስኖ አገልግሎት እንድትጠቀምበት ተስማሙ።

ሱዳን ከግብጽ ጋር በመስማማት የዐባይን ውሀ ፍሰት እሚያጠነክሩ (ወደ ሱድ/Sudd ረግረግ እየገባ በትነት የሚባክነውን ውሀ የሚቀንሱ)በኋላ እንደተወጠኑት እንደነ ጆንገሌይ ቦይ (Jongelei Canal)የመሳሰሉ ፕሮጀክቶች አውጥታ መስራት እንደምትችል፣ ይህ ዓይነቱ ስራ በሚያስከትለውወጪና ገቢ ግብጽ ተሳታፊ/ተካፋይእንደምትሆን ተስማሙ።

በስተላይ ከሚገኙ የተፋሰሱ ሀገሮች የሚሰነዘር አቤቱታ ቢኖር ጉዳዩን ግብጽና ሱዳን በጋራ ሊያዩትና፣ በጋራ ሊያስተናግዱት ስምምነት አደረጉ።

ከሁለቱ ሀገሮች (ከሱዳንና ከግብጽ)ውጪ የዐባይ ውሀ ይገባኛል የሚል፣ በተፋሰሱ ውስጥ የሚገኝ ሀገር ቢነሳ፣ የቀረበውጥያቄ በግብጽና በሱዳን ከታመነበት፣ አስዋን ግድብ የሚደርሰውየዐባይ ውሀ ተለክቶ በሚገኘውየውሀ መጠን መሠረት፣ ለጠያቂው ሀገር ተቀንሶ የሚሰጠውን ውሀ ግብጽና ሱዳን እኩል ሊካፈሉ ተስማሙ።

ቴክኒካዊ የሆኑ የውሀ ልማት ስራዎችንና ትብብሮችን የሚያከናውን ቋሚየጋራ የቴክኒክ ኮሚሽን (Permanent Joint Technical Commission/PJTC)እንዲቋቋም ተስማምተውአቋቋሙ።

እነዚህን ውሎች ነውግብጽ በድፍረት የዐባይ ተፋሰስ ሀገሮች የጋራ ውሎች በማስመሰል በያጋጣሚውበተደጋጋሚመከራከሪያ ነጥብ እያደረገች የምትጠቅሳቸው። በነዚህ የውል ስምምነቶች እኛ አልተሳተፍንባቸውም በማለት ሌሎቹ

የተፋሰሱ ሀገሮች (riparian states) ቢወተውቱም፣ ግብጽ በአዲስ መልክ በሚረቀቅ ሌላ የውሀ አጠቃቀም ወይምክፍፍል ላይ ለመደራደር ፈቃደኛ አለመሆኗን እስካሁን እንዳጸናችነች። በ 1995 ዓ.ም የግብጽ የውጭጉዳይ ምንስቴር ረዳት ሚኒስትር የነበሩ (ማርዋን በድር /Marwan Badr) የተባሉ ግብጻዊ “የሕዝባቸው ቁጥርና ኢኮኖሚያቸውእያደገ የመጣውየዐባይ ተፋሰስ ሀገሮች የውሀ ጥያቄ፣ ፖለቲካ ብቻ ሳይሆን እውን እየሆነ ነውና ግብጽ ከ1959ኙ የውሀ ኮታ ለየት ባለ የውሀ ድርሻ ላይ ለመደራደር መዘጋጀት አለባት” የሚል (ካንድ ግብጻዊ ባለስልጣን እማይጠበቅ) ሀሳብ በማቅረባቸው ከፍተኛ ተቃውሞ ደርሶባቸዋል። የግብጾች ግትር አቋም በ 1959 ዓ.ም ከሱዳን ጋር ተደራድረን ካገኘነው (55.5 ቢሊዮን ሜትር ኩብ ውሀ) የተለየ መደራደሪያ ሀሳብ አንቀበልም የሚል ነው።

ምዕራብ አፍሪካ፡

ሴኔጋል ወንዝ (Senegal River) እሚፈስባቸው ሀገሮች (ማሊ፣ ሞሪታኒያ፣ ጊኒና ሴኔጋል) የወንዙን አጠቃቀምና እንክብካቤ በሚመለከት ተደራድረውየጋራ ስምምነት ተፈራርመዋል። ማሊ ውስጥ የሚገኘው ማናንታሊ (Manantali Dam) የተሰኘው ግድብ በተፋሰሱ ሀገሮች ኅብረት በትብብር የተሰራነው። ግድቡ ማሊ ውስጥ ቢሆንም የተፋሰሱ ሀገሮች በሙሉ በጋራ ባለቤትነት የሚያ(ዝ)ሙበት፣ የሴኔጋል ሸለቆ ባለስልጣን (OMVS/ Office

de Mise-en-Valeur du Vallee du Senegal) ብለው ባቋቋሙት ቢሮ የሚተዳድር የጎብረት ግድብ ነው፡፡

የናይጀር ወንዝ (Niger River) ተፋሰስ ማሊን፣ ናይጀሪያን፣ ኒጀርን፣ ጊኒን፣ በርኪናፋሶን፣ ካሚሩንን፣ ቤኒንን፣ አይቮሪኮስትን፣ ቻድን ያጠቃልላል። እነዚህ የናይጀር ወንዝ ተፋሰስ ሀገሮች የውል ስምምነት ተፈራርመው የተፋሰሱን ውሀ በጋራ ይጠቀሙበታል። ባንዳንዶቹ የተፋሰሱ ሀገሮች ቅሬታ መሰንዘሩ ባይቀርም እንደ ዐባይ ጐልቶ የወጣ ችግር የለባቸውም።

መካከለኛው አፍሪካ፡

የዛምቤዚ ወንዝ (Zambezi River) ተፋሰስ ዛምቢያን፣ ዚምባቡዌን፣ ሞዛምቢክን፣ ማላዊን፣ አንጐላን፣ ናሚቢያን፣ ቦትስዋናን፣ ታንዛኒያን ያካትታል። ከነዚህ ሀገሮች መካከል ዛምቢያና ዚምባቡዌ የጋራ አጠቃቀም ስምምነት ተፈራርመዋል። እንዲያውም ካሪባ ግድብ (Kariba Dam) የሚባለውን ከአፍሪካ ታላላቅ ግድቦች አንዱ የሆነውን ግድብ በጋራ ነው የገደቡት። የዛምቤዚን ወንዝና የግድቡን አጠቃቀም የሚከታተልና የሚያስተዳድር (Zambezi River Authority የሚባል) ባለስልጣን መስሪያ ቤትም በጋራ አቋቁመዋል። ሌሎቹ የዛምቤዚ ተፋሰስ ሀገሮችበወንዙ ውሀ አጠቃቀምላይ እምብዛምስለሆኑ፣ በተፋሰሱ አጠባበቅ ግዴታ ውስጥ መግባት ስላልፈለጉ ይመስላል የስምምነቱ ተሳታፊ አልሆኑም።

ካጌራ ወንዝ (Kagera River) ሩዋንዳና ቡሩንዲ የሚነሳ ወደ ቪክቶሪያ ሀይቅ የሚገባ ትልቅ ወንዝ ነው። በዚሁ ወንዝ ሩሱሞ ፏፏቴ (Rusumo Falls) ላይ የኃይል ማመንጫግድብ ገድበው የኤሌትሪክ ኃይሉን ለታንዛኒያ ለመሸጥ ፕሮጀክት ወጥነው ነበር። የገንዘብ አቅማቸውን ለማጐልበት ከሩዋንዳና ከቡሩንዲ በተጨማሪ ታንዛኒያንና ዩጋንዳን አስተባብረው (አባል አድርገው) የካጌራ ሸለቆ የልማት ድርጅት የሚባል አቋቁመውነበር። ነገር ግን በመካከልአካባቢውበጦርነት ስለተመሰቃቀለ ፕሮጀክቱ በውጥን ቀርቷል።

አውሮፓ፡

የዳኒዩብ ወንዝ (Danube River) ተፋሰስ ሀንጋሪን፣ ዩጐዝላቪያን፣ ሮማንያን፣ ኦስትርያን፣ አልባኒያን፣ ፖላንድን፣ ጣሊያንን፣ ስዊትዘርላንድን፣ ቡልጋሪያን፣ ስሎቫኪያን፣ ጀርመንን፣ ቼኮዝለቫኪያን፣ ራሽያን (የድሮውን ሶቪዬት ኅብረት)ያካተተ ነው። እነዚህ ሀገሮች ሁሉ በተፋሰሱ አያያዝና አጠቃቀምላይ ተፈራርመው ወንዙን በጋራ ይጠቀሙበታል።

የራይን ወንዝ (Rhine River) ደግሞ ቤልጅዬም፣ ኔዘርላንድን፣ ኦስትሪያን፣ ፍራንስን፣ ስዊትዘርላንድን፣ የሚያስተሳስር ስለሆነ በዚህ ወንዝ አያያዝና አጠቃቀምላይ እነዚህ ሀገሮች የጋራ ስምምነት ተፈራርመዋል።

ሰሜን አሜሪካ፡

ኮሎራዶና ሪዮ-ግራንድ (Colorado and Rio Grande) አሜሪካንና ሜክሲኮን ስለሚያስተሳስር ሁለቱ ሀገሮች **የስምምነት ውል ተፈራርመዋል።**

ኮሎምቢያና ታላላቆቹ ሀይቆች (Columbia and the Great Lakes) ካናዳና አሜሪካ በጋራ **ስለሚከቀማቸው ስምምነት ተፈራርመዋል።**

ደቡብ አሜሪካ፡

ፕሌት ወንዝ (Plate or La Plata) የሚባለው ብራዚልን፣ አርጀንቲናን፣ ፓራጉዋይን፣ ኡራጉዋይን፣ ቦሊቪያን ያስተሳስራል። ስለሆነ ምእነዚህ ሀገሮች በዚህ ወንዝ ውሀ አጠቃቀምላይ የውል ስምምነት ተፈራርመዋል።

አማዞን ወንዝ (Amazon River) ፔሩን፣ ኢኳዶርን፣ ኮሎምቢያን እና ብራዚልን የሚያስተሳስር፣ በዓለምከታወቁት ታላላቅ ወንዞች አንዱ ነው። የአማዞን ተፋሰስ ሀገሮች (በጀግራፊያዊ አቀማመጣቸውየተነሳ) ከሚፈልጉት በላይ ከዓመት እስከ ዓመት ዝናምያገኛሉ። ስለሆነ ምየመስኖ ውሀ አያስፈልጋቸውም። የገንዘቡን አቅምካገኙት ከአማዞን ገባር ወንዞች

ለኃይል ማመንጨየ ሚሆኑ ግድቦች ሊገድቡ ይችላሉ። ስለዚህ በአማዞን ተፋሰስ ውስጥ ከላይ እስከታች ውሀ እንደልብ ስለሚገኝ የውሀ ክፍፍል ውል አልተፈራረሙም። በአማዞን ተፋሰስ ውስጥ ያለውችግር የድንግል ጫካዎች አጠባበቅና አያያዝ ጉዳይ ነው።

የላይኛው ዐባይ ተፋሰስ ሀገሮች አቅምና የትብብር ተስፋ

የላይኛው ዐባይ ተፋሰስ ሀገሮች በሙሉ አቅመቢሶች ስለሆኑ ከግብጽ ጋር (በኢኮኖሚ፣ በወታደራዊ ኃይል፣ በተማረና በሰለጠነ የሰውኃይል) በእኩልነት ሊሰለፉ የማይችሉ፣ ለግብጽ ዓይን የማይሞሉ ደካሞች ናቸው። ዩጋንዳ?ኬንያ? ታንዛኒያ?ኤርትራ?ሩዋንዳ?ቡሩንዲ?ኮንጐ?ኢትዮጵያ?ከነዚህ ሀገሮች መካከል ግብጽን የመመዘን አቅም ያለውሀገር የትኛውነው?መልሱ ግልጽ ይመስለኛል። የትኛቸውም ሚዛን የሚደፉ አይደሉም። ስልጣን ለመጨበጥ ሲሉ ለዘመናት እርስ በርሳቸው (በጐሳ፣ በዘውግ፣ በምን? -----) ሲጨፋጨፉና ሲገላባበጡ፣ በኢኮኖሚ ግምባታ፣ በወታደራዊ ድርጅትና በሰለጠነ የሰውኃይል ወደኋላ የቀሩ፣ አንዳንዶቹም ከወደቁበት ለመነሳት ያልቻሉ፣ ገና በመንፈራፈር ላይ ያሉ ናቸው። በዚሁ የስልጣን አያያዝና ተቃዋሚቡድኖችን በማስጠጋት የተነሳ እስካሁን ድረስ ሩዋንዳከኮንጐ ጋር፣ ኮንጐ ከዩጋንዳ ጋር፣ ዩጋንዳ ከሱዳንና ከሩዋንዳ ጋር ከመናቆር ያልተቆጠቡ ናቸው። ስለዚህ አንድ ጠንካራ ግምባር ፈጥረው ግብጽ ለአዲስ ድርድር እንድትሰለፍ አስገዳጅ ሁኔታ የሚፈጥሩ አይደሉም።

ከዚህ ምበተጨማሪ ዐባይን በተመለከተ የሁሉምየተፋሰሱ ሀገሮች ችግር፣ አንድ ወጥ ያልሆነና እኩል ክብደት የሌለው ስለሆነ፣ የግብጽን እብሪት ለማርገብ እስካሁን ድረስ አንድ ህብረት ወይም ግምባር አልፈጠሩም። ቢፈጥሩም

በችግሮቻቸውመለያየትና በመካከላቸውበየጊዜውበሚፈጠረውፖለቲካዊ ፍትጊያ የተነሳ የሚፈጥሩት ህብረትና ግምባርጠንካራ ይሆናል የሚል እምነት የለም። የዐባይን ውሀ አጠቃቀም በተመለከተ፣ ችግራቸውና ፍላጐታቸውየተለያየ መሆኑን ለማየት እንድንችል ባጭር ባጭሩ እንደሚከተለውአቅርቤዋለሁ።

1.ኮንጐ፡ አብዛኞቹ ወንዞቿ ወደራሷ ክልል የሚፈስሱናቸው። የገንዘብአቅሙካላቸውየፈለጉትን የኃይል ማመንጫግድብ በፈለጉት መጠን መገንባት ይችላሉ። ሞቡቱ ሴሴሴኮ “ኢንጋ”የተባለውን ትልቅ ግድብበኮንጐ ወንዝ ላይ ሲሰሩ፣ (ወንዙም ግድቡም ከኮንጐ ድምበር ውስጥ ስለሆኑ)ከየትኛውም ሀገር ጋር አላጋጨቸውም። እንዲያውምኮንጐ ብዙ ኃይል ሊያመነጭ የሚችል የውሀ ኃይል ስላላት፣ በ1989 ከግብጽ ጋር ተነጋግራ (ተሻርካ)ለምስራቅ አፍሪካ ሀገሮች፣ ለሱዳን፣ ለግብጽ፣ ለቱርክና ለደቡብአውሮፓ ሀገሮች የውሀ ኃይል ለመሸጥአስባ ነበር። ይህንንምሀሳብ ግብጽ ትደግፈውስለነበር ኮንጐና ግብጽ የቅርብ ወዳጆች እንጂ በዐባይ የተነሳ የሚፎካከሩ አይደሉም።

2.ዩጋንዳ፡ ነጭዐባይ ከሚወጣበት ከቪክቶሪያ ሀይቅ ጫፍ፣ ጂንጃ (Jinja) ከሚባለውቦታ ላይ ከሚገኘውኦውን (Owen Falls) ፏፏቴ ላይ ኦውን የሚባል (Owen Dam) ግድብ ገድባ በቂ የኤሌትሪክ ኃይል ታገኛለች። እንዲያውምከራሷ አልፋ ተርፋ የኤሌትሪክ ኃይል ለኬንያ ትሸጣለች። ዩጋንዳ ይህን ግድብ (ኦውን ግድብ) በመገደቧ ከግብጽ ተቃውሞአልተሰነዘረባትም። እንዲያውምከግብጽ ድጋፍ ታገኛለች። በ1947ዓ.ምቅኝ ገዢዎች በነበሩት እንግሊዞች አስተናባሪነት፣ ዩጋንዳዊያን የኦውንን ግድብበአንድ ጫትር ከፍ ቢያደርጉ፣ ግብጽ ለዩጋንዳ አንድ ሚሊዮን ስተርሊንግ ፓውንድ (£1,000,000)እንደምትከፍል ተስማምታለች። ክፍያውምያንዴ ብቻ ሳይሆን ቀጣይነት እንደሚኖረው ተዋውለዋል። ግብጽ ይህን ውል የተዋዋለችበት ምክንያት፣ በሱዳንና በግብጽ በረሃ በትነት የሚባክነውን ውሀ ለመቀነስ፣ ማለትም የቪክቶሪያን ሀይቅ እንደ ውሀ ማጠራቀሚያ ገንዳ አርጋ ለመጠቀም ስለፈለገች ነው። የዩጋንዳ ምድር አብዛኛውከዓመት እስከ ዓመት በቂ የዝናም መጠን የሚያገኝ ስለሆነ ዩጋንዳዎች የዐባይን ውሀ ለመስኖ ስራ አይጠቀሙበትም፣ አይፈልጉትም። ስለዚህ ከዐባይ የሚያጡት ጥቅም የለም። በዚህም ምክንያት ዩጋንዳዊያን ዐባይን በተመለከተ (ከግብጽና ከሱዳን መገላገያ ለማግኘት ያህል አንዳንዴ ከሚያንገራግሩ በስተቀር)ብዙውን ጊዜ ገለልተኞች ናቸው።

3.ኬንያ፡ ከኬንያ ምእራባዊ ከፍተኛ ቦታዎች (Western Highlands)ተነስተው ወደ ቪክቶሪያ ሀይቅ የሚገቡ አጭር ወንዞች አሉ። እነዚህ ወንዞች የረባ የኤሌትሪክ ኃይል ሊያመነጩ የሚችሉ አይደሉም። በነዚህ ወንዞች ምክንያትም ኬንያዊያን ቀረብን የሚሉት ጥቅም የለም። ይሁን እንጂ የቪክቶሪያ ሀይቅ እሩቡ (1/4th)ያህል በኬንያ ክልል/ድምበር ውስጥ ነውና፣ ከቪክቶሪያ ሀይቅ ውሀ ጠልፈን ለመስኖ መጠቀምእንፈልጋለን ብለውሱዳንንና ግብጽን፣ ዩጋንዳንም ጭምር ማስፈራራት ይችላሉ። ዩጋንዳ የምትፈራበት ምክንያት የውሀ ኃይል የምታመነጨበት ግድብ ውሀውየቪክቶሪያ ሀይቅ ስለሆነ፣ የቪክቶሪያ ሀይቅ ሲቀንስ የግድቡ ውሀ ስለሚቀንስባት ነው። ያምሆነ ይህ እስካሁን እንደታየ ውኬንያዊያን በሽምግልና ከሚሰለፉ በስተቀር የዐባይ ውሀ አጠቃቀምእምብዛምደንታ አይሰጣቸውም።

4.ሩዋንዳና ቡሩንዲ፡ ከሩዋንዳና ከቡሩንዲ ተራራማቦታዎች ተነስተውወደቪክቶሪያ ሀይቅ የሚገቡ ወንዞች አሉ። ወደቪክቶሪያ ሀይቅ ከሚገቡት ወንዞች መካከል ትልቁ ከሩዋንዳ ከፍተኛ ቦታዎች የሚነሳው ካጌራ (Kagera River) የሚባለውወንዝ ነው። ሩዋንዳና ቡሩንዲ ካመት እስካመት በቂ ዝናምየሚያገኙ ሀገሮች ስለሆኑ የካጌራንና የሌሎቹንም ወንዞች ለመስኖ የመጠቀም ፍላጐት የላቸውም። ይሁን እንጂ ኃይል ለማመንጨት የካጌራን ወንዝ ለመገደብ የተጠናጥናት አላቸው። ገንዘቡ ተገኝቶ የካጌራ ወንዝ ለኃይል ማመንጫቢገደብ ሱዳንንና ግብጽን ስጋት ላይ የሚጥል አይደለም። ምክንያቱም፣ ሀ)የኃይል ማመንጫግድብ ስለሆነ ወደቪክቶሪያ ሀይቅ የሚገባውን የውሀ መጠን አይለውጠውም፣ ለ)የኃይል ማመንጫውግድብ በዝናማማውና በደጋማውአካባቢ ስለሆነ (ወደ ሱዳንና ወደ ግብጽ ሲደርስ)በትነት መልክ

የሚባክነውን ውሀ ይቆጥባል። ሩዋንዳና ቡሩንዲም በዐባይ ውሀ ክፍፍል ላይ ከመነታረክ ይልቅ፣ የካጌራን ወንዝ ለመጠቀም ከሌሎች አጐራባች ሀገሮች ጋር በጣምራ መስራት ይሻላል በሚል ሩዋንዳ፣ ታንዛኒያ፣ ቡሩንዲና ዩጋንዳ በአባልነት የሚገኙበት የካጌራ ሸለቆ ድርጅት (Kagera Basin Organization) የተሰኘ ድርጅት አቋቁመው የድርጅቱ አባል ሀገሮች የጋራ ተጠቃሚ የሚሆኑበትን ብልሀት በማፈላለግ ላይ ናቸው። ስለዚህ የግብጽን እብሪት ለመግታት ከኢትዮጵያና ከሌሎቹ የዐባይ ተፋሰስ ሀገሮች ጋር ህብረት ለመፍጠር የሚገፋፋቸውችግር የለም።

5. ታንዛኒያ፡ አብዛኛው 2/3 ያህል) የቪክቶሪያ ሀይቅ በታንዛኒያ ክልል ውስጥ ነው። ታንዛኒያ (የጀርመን ቅኝ ግዛት በነበረችበት ጊዜ) በቅኝ ገዢዋቿ አማካይነት የቪክቶሪያን ሀይቅ ውሀ ጠልፋ በቦይ (canal) ወደ መሀል ታንዛኒያ በመውሰድ የመስኖ እርሻ ለማስፋፋት አቅዳ ነበር። ግብጽ ምያንን የድሮ ቅኝ ገዢዋች ጅምር ስለምታውቅ፣ በንቃት በዓይነቁራኛ የምትከታተለው (ከኢትዮጵያ ቀጥላ) ታንዛኒያን ነው። ያንን የቅኝ ገዢዋች ውጥን እገፋበታለሁ ካለች፣ የቪክቶሪያን ሀይቅ ውሀ፣ ብሎም ወደ ዐባይ የሚገባውን ውሀ በጣም የሚቀንስ/የሚያዛባ ስለሚሆን፣ የግብጽን ብቻ ሳይሆን የነጭዐባይን ተፋሰስ ሀገሮች ሁሉ ቀልብ የሚስብ ይሆናል። እስካሁን ግን የግብጽን ትዕቢትና ለትብብር አለመዘጋጀት እያስተዋለች ግብጽን ከምትተች በስተቀር፣ ግብጽን ስጋት ላይ የሚጥል ፕሮጀክት አልወጠነችም። የጥንቱን ውጥኗንምአልቀሰቀሰችም።

6. የቪክቶሪያ ገበቴ ሀገሮች ተሰባስበውየቪክቶሪያ ገበቴ ቡድን (Lake Victoria Basin Group) የተሰኘ ድርጅት አቋቁመዋል። የተቋቋመው ቡድን አትኩሮቱ በሀይቁ አጠቃቀምና አጠባበቅ ላይ እንጂ፣ ከሱዳንና ከግብጽ ጋር በቀጥታ የሚያነካካ አይደለም። አብዛኛውን ጊዜ ቡድኑ የሚያተኩረውበቪክቶሪያ ሀይቅ ላይ በሚንሳፈፈውቅጠል/አረም

(water hyacinth)፣ በሀይቁ ብክለት (pollution)፣ በሀይቁ ላይ ስለሚካሄደውየአሳ ማጥመድ ጉዳይናበሀይቁ የመጓጓዣ ጉዳይ ላይ ነው።

ባጭሩ ለማጠቃለል ያህል የምስራቅ አፍሪካ (የዐባይ ተፋሰስ) ሀገሮች በግብጽና በሱዳን የውሀ ድርሻ ላይ ህብረት/ግምባር የሚያስፈጥር ጥብቅ ችግር የለባቸውም ማለት ይቻላል። ፊታቸውን ወደ ሶቪየት ኅብረት ያዞሩትን የግብጹን ገማል አብደል ናስርንና የሱዳኑን ጀኔራል አቡድን ቂም ለመወጣት ብለው፣ እንግሊዞች (ከ 1959 ዓ.ም እስከ 1961 ዓ.ም ድረስ) የምስራቅ አፍሪካ የዐባይ ተፋሰስ ሀገሮች ግምባር (ኅብረት) እንዲፈጥሩ ለማስተባበር ሞክረውነበር፣ ግን አልተሳካላቸውም። ከእንግሊዞቹ ጅምር በመነሳት የዐባይ ተፋሰስ ሀገሮች ያለባቸውን ትንሽ የመቆጨት አዝማሚያ በመጠቀም ግምባር እንዲፈጥሩ በማግባባቱ፣ በመቀስቀሱና በመጐትጐቱ በኩል መታገል የነበረባት ኢትዮጵያ ነበረች። አቅም (የኢኮኖሚም ሆነ የተማረና የሰለጠነ ሰው) የላትምና፣ በአቅመቢስነቷም የተነሳ ተደማጭነት የላትምና አላደረገቺውም። ኢትዮጵያ የማስተባበር አቅምእንደሌላትምግብጾች ጠንቅቀውየሚያውቁ ይመስለኛል።

ቀደምብየ እንደጠቀስኩት እነዚህ የምስራቅ አፍሪካ/የዐባይ ተፋሰስ ሀገሮች፣ ሀ) ለግብጽ ዓይን የማይሞሉ (በኢኮኖሚ፣ በፖለቲካ፣ በጦር ኃይል) ደካሞች ናቸው። የዐባይን ችግር በሰላማዊ መልክ በድርድር ካልፈታሁ፣ ያለኔ ተሳትፎ የራሳቸውን እርምጃ ይወስዳሉ የሚባሉ አይደሉም። ለ) አብዛኞቻቸውየዐባይ ወንዝ ውሀ ቀጥተኛ በሆነ መልኩ ስለማይነካቸውአይቆረቁራቸውም። ከግብጽና ከሱዳን ጋር የሚያፋጥጥ ጉዳት አልደረሰባቸውም።

በግብጽ በኩልም ሲታይ፣ እነዚህ ሁሉ ሀገሮች ተደማምረውለግብጽ ከሚደርሰውየዐባይ ውሀ ከ 5% እስከ 14% ብቻነው አስተዋጽኦ የሚያደርጉት። ስለዚህ ግብጽ ከምስራቅ አፍሪካ (የዐባይ ተፋሰስ) ሀገሮች የምታገኘውየውሀ ድርሻ ከፍ እንዲልላት፣ ወዳጅነት እየፈጠረች (ለምሳሌ፣ የዩጋንዳዎችን ግድብ ከፍታ በመጨመር፣ የአልበርትን ሀይቅ በማስገደብ፣ ወደ ሱድረግረግ የሚሄደውን የነጭዐባይ ውሀ እንደ ጀንገሌይ ቦይ በመሳሰሉት) ከነጭዐባይ ተጨማሪ ውሀ ለማግኘት ከምትጥር በስተቀር፣ በቀንደኛ ባለጋራነት የምትሰለፍበት ጉዳይ የላትም።

ለግብጽ ያለ ናይል መኖር ዕርምነው

ናይል በተፋሰሰ አገሮቹ ብቻ ሳይሆን በአጎራባች ሰሜን አፈሪካና በመካከለኛውምስራቅ አገሮች ሕልውና ላይ ወሳኝ ደርሻ አለው። ግበጽና ሱዳን ደገሞ ሕልውናቸውየተሳሰረውከናይል ጋር ነው። በተለይ ለግብጽ ያለ ናይል መኖር አይታሰብም። ይህን በማስመልከት የብሪታናያ ጠቅላይ ሚኒስቴር የነበሩት ዊንስተን ቸርችል በአንድ ወቅት ሲናገሩ ናይል ልክ እንደ አንድግዙፍ የዘንባባ ዛፍ ነው። ግንዱ ያለውግብጽና ሱዳን ነው። ሰሮቹ ከተነቀሉ ዛፉ ይደርቃል፣ የሚል ነበር። ቸርችል ምንምእንኳን በቀጥታ ኢትዮጵያን ባይጠቅሱምየግብጽና የሱዳን ህልውና የተመሰረተውበጥቂርና በነጭአባይ መሆኑን አልደበቁም።

አንዋር ሳዳትምየግብጽ ህልውናን ከናይልና ከአፍሪካዊነት ጋር አስተሳስረውየገለጹበት ሁኔታ ነበር። ታሪክ እንደሚያስረዳውሳዳት እናታቸውጥቁር ነበሩ። እናምእራሳቸውን ከግብጻዊነት ይልቅ ከሌሎች አፍሪካዊ ሃገሮች ጋር አስተሳስረውያዩ ነበር። በአንድ ወቅት ከጋዜጠኛ ሙሳ ሳብሪ ጋር ባደረጉት ውይይት እኛ ያለናይልና ያለ አፍሪካ መኖር አነችልምበማለት ገልጸውለታል። ይህ ጽንስ ሃሳብ በመላውግብጻውያን ንቃተ ህሌና ለዘመናት ተቀምጦ ያለ ነው። ስለሆነ ም በራስጌ ሀገራት የሚካሄድ ፕሮጀክት የግብጽንና የሱዳንን ህልውና የሚያናጋ አድርገውነውየሚመለከቱት።

ለአብነት ያህል የሚከተለውን መጥቀስ ይቻላል፣ እ.ኤ.አ. 1989 ሀይድሮሎጂስቲክ ወይንምየውሃ ባለሙያዎች ወደ ኢትዮጵያ መጥተውበአባይ ላይ ግድቦች የሚገነቡባቸውን ስፍራዎች የመነሻ ሃሳብ አቀረቡ። የግብጽ ውጭጉዳይ ሚኒስቴር ባለስልጣናትም፣ በወቅቱ በግብጽ የኢትዮጵያ አምባሳደርን በማስጠራት እስከ ማስፈራራት መድረስ ብቻ ሳይሆን ወዲያው የጦር መርከብ በማንቀሳቀስ ልዩ መቺ ጦር ሃይል ወደ ኢትዮጵያ አስጠግታነበር። እንዲህ ውጥረቱ ባየለበት ጊዜ

የኢትዮጵያ መሪ የነበሩት ፕሬዘዳንት መንግስቱ ከተለያዩ ዓለማቀፍ ድርጅቶች ግድቦችን ለማስገንባት የሚያስችል ጥቂት ገንዘብና ደጋፍ አግኝተውነበር። ግብጽ ግን ሱዳንን ጭምር ተጠቅማውጊያ ለመክፈት ወታደራዊ ስልትነ ድፋ ነበር።

የግብጽ የጫካ ስልጥን ጦር

ግብጽ አርባ በመቶ የሚሆነ ውግዛቷ ምንም ጫካ የሌለውና ዲንጋያማነው። በመደበኛነት በጫካውጊያ የሰለጠነ ተዋጊ አየር ወለድ ብርጌድ ጦር ግን አላት። የሚዲል ኢሰትኒውስ ዘጋቢ አዴል ዳርዊሽ ባንድ ወቅት እንደዘገበው፣ ይህ ጦር ኢትዮጵያን ጨምሮ ጫካ ካላቸውከናይል ተፋሰስ አገሮች መልካ ምድራዊ አኗኗርና ሌሎች የተፈጥሮ ሁኔታ ጋር ተጣጥሞየሰለጠነ ነው።

በተለይ እ.ኤ.አ. አፕሪል 1994 በሩዋንዳ ተሰለፎ የዘመቻ አዞ ጭራ ወታደራዊ ተልኮ እንዲሳካ አድርጓል። አያሌ ወታደራዊ ባለሙያዎች፣ የሀገር መሪዎች፣ የውሃና የግጭት ተመራማሪዎች፣ ፖለቲከኞች፣ ጋዜጠኞች፣ ጸሃፍትና የተለያዩ ምሁራን በሚገባ መደራጀቱን የገለጹለት የግብጽ የጫካ ተዋጊ ጦር፣ የኢትዮጵያ መሪዎችንም ያሳሰበበት ሀኔታምነበርና። ፕሪዝዳንት መንግስቱ ሃይለማረያምየስፓርታ፣ ተራራ ኩማንዶና አየር ወለድ ክፍለጦራቸንን ትኩረት ሰጥተውእንዲጠናከር አድርገውት ነበር።

ከበረሀውአግራሞት በስተጀርባ

በአፍሪካ ውስጥ በከፈተኛ ሁኔታ ውሃን እየተጠቀመያለውየግብርናውክፍለ ኢኮኖሚነው። የተለያዩ ጥናቶች እንደሚያመለክቱት፣ ክፍለ ኢኮኖሚው 88በመቶ ውሃ ይጠቀማል። በዚህምመሰረት ማናቸውንምበቶን የሚገመት እህል ለማምረት አንድ ሺ ቶን ውሃ ያስፈልጋል። ከዚህ አንጻር የመካከለኛውምስራቅና የሰሜን አፍሪካ ሃገሮች በአመት የሚያስገቡትን የእህል ምርት ለማምረት የሚያስፈልገውየውሃ መጠንና የናይል አመታዊ የውሃ ፍሳሽ መጠን እኩል ሆኖ

ተገኝቷል። ይሁንና አባይን ጨምሮ ትላልቅ ወንዞችና ሌሎች የውሃ አካላት ያሏት ኢትዮጵያ በድርቅና በርሃብ እየተጠቃች፣ አባይ ግን ወደ ሲና በርሃ ልብ ውስጥ ገብቶ ፍራፍሬና አትክልት በማልማት ተወዳዳሬ አልተገኜለትም። ለአብነት ያህል ለመጥቀስ በግብጽ የሚገኘውየአፍሪካ ትልቁ እርሻ የአል.ሆዳ እርሻ ያለ አባይ ህልውና የለውም። በዚህ እርሻ የሚመረተው ምርት ከግብጽ አልፎ እንግሊዝን ጨምሮ ለበርካታ አውሮፓ ሀገሮች ሱፐር ማርኬቶች በማቅረብ ታዋቂነትንአትርፏል። ቢቢሲ በጥር 25 ቀን 97 ዓ.ም. ባሰራጨውዜና ግብጽ ቋጥኝ የበዛባትና በርሃማናት አባይን ተጠቅማማን የበርሃ ገነት ሆናለች ብሏል። በሌላ ንጽጽር የቀረበ አንድ ዘገባ ደግሞ፣ የግብጽ መንግስት በቅርቡ በ.ቶሽካ ፕሮጀክት፡ የቶሽካ ሸለቆን ተጠቅሞ የግብጽ በርሃን ለማልማት የሞት ሽረት ትግል እያደረገ ይገኛል፡ የአባይ እናት ኢትዮጵያ ግን ለምግብ ልመና ተጋልጣለች።

ግብጽ እና ሱዳን -እሳት ጫሪ የውሃ ስምምነቶች

ታሪክ እንደሚነግረን እንግሊዝ፣ ግብጽና ሱዳንን ይዛ የብሪተሽ ምስራቅ አፍሪካ አገሮች የሚሉትን ኬንያን፣ ዩጋንዳንና ታንዛኒያን ጨምራ እስከ ደቡብ አፍሪካ ሰፊ የቅኝ ግዛት ቀጠና ነበራት። እናምእንግሊዝ ቢቻላት በመሃል እንደቀጭን አጥንት ተሰንቅራ እያስጓጎጠች ፍዳዋን ያሳየቻትን ኢትዮጵያን ከእናባይ ተፋሰስ ጠቅልላ ከሰሜን አፍሪካ ግብጽ ሜዴቴራኒያን ጨፍ እስከ ደቡብ አፍሪካ ጠርዝ በባቡር ሃዲድ አገናኝታ ለመግዛት ለዘመናት ተራውጣለች በኢትዮጵያ ላይ ያሰበችውሳይሳካላት ቀረ እንጅ። ሙከራዋ ሁሉ መና ሲሆንባት እ.ኤ.አ. ሜይ 7/1929 ሱዳንን የወከለችውእንግሊዝ ኢትዮጵያን አግልላ ከግብጽ ጋር ባደረገችውሰምምነት፡ ግብጽ 48 ቢሊዮን ሜትር ኩብ ወሃ፣ ሱዳን 4ቢሊዮን ሜትር ኩብ ውሃ እንዲደርሳቸውተከፋፍለዋል። ከዚህ ተነስታ ግብጽ የናይል ተፋሰስ ሀገሮች የውሃ ፕሮጀክቶችንመገንባት እንደማይችሉ አስጠነቀቀች። ኢትዮጵያም እ.ኤ.አ. ሴፕቴምበር 23 ቀን 1957 ዓ.ም ግብጽ በሚገኘውዲፕሎማቲኳ አማካኝነት አባይን ጨምራ ባሏት የውሃ ሃብቶቿ በወቅቱም ሆነ በቀጣይ ከመጠቀም የሚያግዳት ምንም ሃይል እንደማይኖር በማስረገጥ ግብጽን አስጠነቀቀች።

እንደውም እ.ኤ.አ. በ 1927 በ 20 ሚለየን ዶላር ጣና ሀይቅ ላይ ግድብ ለመስራት ኒውዮርክ ከሚገኘውጂ.ጂ. ዋይት ኢነጂነሪንግ ጋር ስምምነት ተደርጎ ነበር። በሷላም የአሜሪካ የመሬት አስተዳደር በአባይ ተፋሰስ ላይ 51 ኪሎሜትር ኩብ ውሃ የመያዝ ሃቅም የሚኖራቸው 4 ዋና ዋና ግድቦችን ለመገንባት እ.ኤ.አ. ከ 1956 እስከ 1964 ጥናት አካሂዶነበር። ግድቦቹም ግብጽ ቅድሚያ እ.ኤ.አ. 1902 በገነባቸው ጥንታዊ አሰዋን እና እ.ኤ.አ. ከ 1964 እስከ 1971 በሶቬት ህብረት እገዛ በመቶ ሚሊዮን ዶላር ካስገነባቸውየሃይድሮ.ኤሌክትሪክ ሃይል በ 3 እጥፍ የሚበልጥ የሃይድሮ.ኤሌክትሪክ ማመንጨት የሚችል እንደነበር ጥናቱ ያመለክትነበር። እነዚህ ፕሮጀክቶች ስራላይ ውለውቢሆን ሱዳንና ግብጽ ያላቸውየሃይል አቅርቦት አቅምቢደመር እንኳን በሁለት እጥፍ እንበልጣቸውነበር።

Note readers: arre kindly advised to refer - John Waterbury (2002) “TheNile Basin: National Determinants of Collective Action: Yale University Press, London”

Nile River: is the longest river in the world and runs through Rwanda, Ethiopia, Tanzania, Uganda, South Sudan, Sudan and Egypt, but instead of the being the great uniter, the Nile has become the great divider because of a dispute that is causing serious tension between two of those countries. Since the twelveth century AD, Christian Ethiopian kings have warned Muslim Egyptian sultans of their power to divert waters of the BlueNile, often in response to religious conflicts. But these were hypothetical threats.

Ethiopia: Water Resources And Use’

Ethiopia has 12 river basins with an annual runoff volume of 122 billionm3 of water and an estimated 2.6 - 6.5 billion m3 of ground water potential. This corresponds to an average of 1,575 m3 of physically available water per-person per year, a relatively large volume.

DOWNSTREAM EGYPT - Gift of the Nile? NILE - Gift for Egypt?

The opening sentence of Egypt's recent constitution describes the countryas the river Nile's gift to Egyptians. It is a grand claim, but one that helps explain Egypt's indignation at the ongoing construction of a blockage on the Nile, thousands of miles upstream. The founding myths of many ancient civilizations center on famous rivers — the Euphrates and the Tigris (Babylon), the Yangtze (China) and the Ganges (India), to name a few. However, not many are as inextricably dependent on a single river for their livelihood as Egypt is on the Nile. Egypt’s history is defined as much by the flooding and drying beds of the Nile as by the pyramids. For a country described by Herodotus as “the gift of the Nile,” control over themajestic river has been an existential Egyptian preoccupation since antiquity.

The world’s longest river is made up of a maze of tributaries. Nineteenth-century explorers went on a wild goose chase to locate the mysterious river’s murky origin before tracing it to Lake Tana in Ethiopia and the Great Lakes in Central Africa. Two of the river’s main tributaries are the Blue Nile and the White Nile. The Blue Nile, accounting for upwards of 80percent of the Nile waters, originates in northern Ethiopia. It makes a steep descent from Ethiopian highlands — carrying brown silt — before itjoins the White Nile in Khartoum, Sudan’s capital, augmented by several large rivers from southwestern Ethiopia. The White Nile originates in Burundi and flows northward from the Great Lakes region, crossing Tanzania, Uganda, and South Sudan.

Egypt and the vitality of the Nile river flow: Literal quotation on to therelated to life issue of the Nile River:

Who he controls Ethiopia, (no power on Earth ever controlled Ethiopia)can control source of the Nile.

Who he controls the source of the Nile river, can control the whole life inEgypt.

who he controls the whole life in Egypt, can also control the Suez canalMaritime passage.

Who he controls the Suez canal passage, thus, can control the partialeconomy of the entire world.

The Nile has been essential for civilization in Egypt and Sudan. Without that water, there would have been no food, no people, no state, and no monuments. As Herodutus famously wrote in the 5th century B.C.E., “Egypt is the gift of the Nile.” For millennia peoples have travelled along the banks of the Nile and its tributaries. Scores of ethnic groups in Egypt,Ethiopia, and Sudan share architecture and engineering, ideas and traditions of religion and political organization, languages and alphabets,

food and agricultural practices. In 3000 B.C.E., when the first Egyptian dynasty unified the lower and upper parts of the Nile River, there were nostates in Eastern or Central Africa to challenge Egypt's access to Nile waters. The Nile was a mysterious god: sometimes beneficent, sometimesvengeful. Floods between June and September, the months of peak flow, could wipe out entire villages, drowning thousands of people. Floods also brought the brown silt that nourished the delta, one of the world's most productive agricultural regions, feeding not only Egypt but many of its neighbors.

Nile's central importance to life in Egypt:

As captured in A Hymn to the Nile, recorded in Papyrus Sallier II:

Hail to thee, O Nile, that issues from the earth and comes to keep Egyptalive! …

He that waters the meadows which He created …He that makes to drink the desert …

He who makes barley and brings emmer into being …He who brings grass into being for the cattle …

He who makes every beloved tree to grow …

Oh, Nile, verdant art thou, who makes man and cattle to live.

The Nile's seasonal flooding is a central theme in Egyptian history. The river flow follows regular patterns, increasing between May 17 and July 6, peaking in September, and then receding until the next year. But the rivervolume is very unpredictable, as documented by nilometers (multi-storied structures built in the river to measure water heights). Successive empiresof Pharaohs, Greeks, Romans, Christian Copts, and Muslims celebrated the rising waters of the Nile and dreaded floods or droughts. Five millenniaof Nile history show how years with high water have produced ample food,population growth, and magnificent monuments, as during the first five dynasties from 3050 B.C.E. to 2480 B.C.E. Periods with low water have brought famine and disorder. The Book of Genesis describes seven years of famine that historians associate with the drought of 1740 B.C.E. From the time of the Pharaohs until 1800 C.E., Egypt's population rose and fell between 2 to 5 million, due to food availability and epidemics. The irrigation projects of the 19th century Ottoman ruler Mohammad Ali allowed year-around cultivation, causing population growth from 4 to 10 million. Since the opening of the Aswan High Dam in 1971, Egypt's population has increased from about 30 to 83 million.

The Sources of the Nile: Despite the extraordinary importance of the Nile to people downstream, the origin of the great river was a mystery until the middle twentieth century. Herodotus speculated that the Nile arose between the peaks of Crophi and Mophi, south of the first cataract. In 140

C.E. Ptolemy suggested the source was the Mountains of the Moon, in what are now called the Ruwenzori Mountains in Uganda. The 11th century Arab geographer al-Bakri postulated West African origins, confusing the Niger River, which empties into the Atlantic Ocean, with theNile River. In 1770 the Scottish explorer James Bruce claimed his discovery of the source in Ethiopia, while in 1862 John Hanning Speke thought he found it in Lake Victoria and the equatorial lakes. The river's

limited navigability only increased its mystery. The Blue Nile River descends 4501 feet in 560 miles from Lake Tana in the Ethiopian highlands through a deep gorge with crocodiles, hippopotamuses, and bandits to the Sudan border and the savannah. Despite the efforts of scores of intrepid adventurers, the Blue Nile in Ethiopia was not successfully navigated until 1968 by a team of British and Ethiopian soldiers and civilians equipped by the Royal Military College of Science. Further south up the White Nile in the lakes and rivers of Burundi, Rwanda, Kenya, Tanzania, and Uganda, the Egyptian cultural influence is less pronounced, due to the Sudd, a gigantic and impassable swamp which absorbs waters from the equatorial lake tributaries. The Nile River historian Robert O. Collins reports that "no one passed through this primordial bog" until 1841. Not until the 20th century did it become clear that the Nile is part of a vast river system with dozens of tributaries, streams, and lakes, stretching from the Mediterranean Sea to the remote mountains of Burundi, in tropical central Africa, and to the highlands of Ethiopia, in the Horn of Africa. Spanning more than 4,200 miles, it is the longest river in the world. It has also become clear that the volume of water which flows through the Nile is relatively small—a mere two percentin volume of the Amazon's and fifteen percent of the Mississippi—and mostly (86%) from Ethiopia.

Who owns the River Nile?

Egypt and Sudan are utterly dependent on the waters of the Nile River.Over the past century both of these desert countries have built several dams and reservoirs, hoping to limit the ravages of droughts and floods which have so defined their histories.

The Nile's origin being outside its borders did not prevent Egypt from getting the lion's share of its waters. The claim for exclusive ownership ofthe Nile waters is premised on a 1929 treaty between Egypt and Britain'sEast African colonies, Burundi, Kenya, Rwanda, Tanzania and Uganda.

These colonies gained independence from Britain in the 1960s. The treaty awarded 57 percent of the waters to Egypt while also requiring other nations to clear with Cairo before launching any major water project on the river. Another treaty, signed in 1959 between Egypt and Sudan, raisedEgypt's share to 66 percent. The two signatories, divvying up virtually all of the Nile waters, did not even consult Ethiopia, the main source of the river. After the 1959 accord, both Egypt and Sudan built mega-dams to exploit the water for irrigation. For years, upstream Nile Basin countries —Burundi, Ethiopia, Kenya, Rwanda, Tanzania and Uganda — nursed misgivings about the colonial-era accord, in which they had no say. However, they grudgingly acquiesced mainly because, unlike Egypt and Sudan, whose arid lands are watered by the lone river, they are not wholly reliant on the Nile. But, finding the challenge of feeding their growing populations on rain-fed subsistence farming unbearable, upstream countries initiated negotiations in 1999 to find an equitable andreasonable way to share the Nile waters. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream

countries, was rejected outright by both Egypt and Sudan. Touted as “anAfrican solution for an African problem,” the agreement calls for the creation of a commission to oversee development projects on the Nile. Itneeded ratification by the legislatures of each of the signatory countries.But its implementation is in limbo until another Nile Basin country — for example, the Democratic Republic of the Congo, which is now sitting on the fence signs it. The Nile Basin Initiative (NBI) is composed of ten countries: Egypt, Sudan, Ethiopia, Uganda, Kenya, Tanzania, Burundi, Rwanda, Democratic Republic of Congo (DRC), as well as Eritrea at observer status.

Ethiopia, Egypt, and the Historical Struggle for the Nile’s Waters’ Ethiopia and Egypt have had a long relationship of both harmony and discord, the latter the result of religious issues and access to Nile water, among other factors. Ethiopia’s first well documented government was inAksum, a city-state that controlled a large empire from the Ethiopian highlands across the Red Sea to Yemen. From 100 until 800 C.E. Aksumites participated in Mediterranean and Indian Ocean trade. The cultural relationship between Egypt and Ethiopia was institutionalized when the Aksumite King Ezana converted to Christianity in 330 C.E. For 16 centuries (until 1959) the Egyptian bishop of the Ethiopian Orthodox

Church was appointed by the Egyptian patriarch in Alexandria, often underthe influence of the Egyptian government.

Ethiopia is one of 10- or so on to become 11, with the newly reemerged state of South Sudan “Nile Basin Riparian countries”. With over eighty fivemillion population is gifted with diversified and eye-catching cultural, historical and natural heritages. One of the natural resources is water. Thenation is home of 12 international potential rivers. The land dispenses andcotributes a lion share of water to the neighbouring countries, the countryis said to have over 128.3 billion cubic meter under surface water. Thus, Ethiopia is called "water tower of Africa". Awash, Wabe-Shebelle, Omo, Baro, Mereb, tekeze, Abbay, Ganalle some among others are potential rivers those originate from Ethiopian highlands and discharge into Djibouti, Somalia, Kenya, Sudan, and Egypt. For the peoples of Egypt, Sudan and Somalia, life would be impossible without Nile rivers. They carry millions of tons of rich soil to Egypt, the Sudan and Somalia every year. Somalia depends heavily on the Gannaallee (Juba) and Wabee (Shaballe) rivers, which come from Ethiopia. Ethiopia supplies almost 100 per-cent of the fresh water for Somalia and Djibouti. At present the Ethiopian government depends heavily on Awash in local Oromos known as "Hawas" water as a source of electric power for its industries and irrigation water to grow sugar cane, cotton and fruits. The Wonji and Matahara sugar estates are good examples. There is a great potential in all these rivers for the production of electric power and for irrigation.

Qoqaa, Fincha, Malkaa Waakkenna, Gibee-Tiqqaa, Gibe II, dams are examples of where hydro-electric power is already being produced or in the process of being harnessed. Among the lakes are Tanna, Abbaya, Langanno and Shalla. Many of these lakes possess a great variety of fishand birds on their islands and shores. The river Wabe Shebelle flows to

the Indian Ocean crossing Somalia. These rivers have been flowing to the stated destinations carrying millions tons of fertile soil and waters every year without benefiting to its own people since creation. The people of Ethiopia had been deprived of benefiting from the country's water resources. As a result, they were exposed to repeated shocking drought and famine which had claimed hundreds of thousands of lives. Ethiopian tributaries contribute about 84 % of the water that flows through Sudan and reaches the Aswan Dam in Egypt. Earlier treaties of 1929 and 1959 between Egypt and the Sudan allocated three-quarters of the water to Egypt and one-quarter of it to Sudan. A lot has been said, patriotic poemshave been composed, beutiful songs has sung in its honor, accords has have been signed, major-wars were fought and boundaries were demarcated, about the River-Abbay and the Blue-Nile as a whole. And on the other side, "Egypt is a gift of the Nile", people like to say in a country that worshiped the river as a God in ancient Egypt. "If Egypt is a gift of the Nile, then the "Nile is a gift of Ethiopia", Ethiopians back-fire sympathyregarding the "tikur-Abay", which is meaning for "Blue-Nile". Most of the water meandering down the lower reaches of the Nile, the world's longest river, comes from the Ethiopian highlands. "In 1805, by the time Mohammed Ali began to rule Egypt, many threats had been made by the Ethiopian emperors to stop the water reaching Egypt, most were just empty threats, but some were valid, everytime there was a new ruler in Egypt, they would threaten him and blackmail him so that, he paid gold asa gift to the Ethiopian emperor. Historically, the most important relationships Israel built in the African continent were with Uganda, Ethiopia and Kenya. And it's no coincidence that all of them are upstream countries where the Nile originates. They did build relationships with othercountries too. But the River-Nile was the major factor behind the formation of Israeli foreign policy and strategy", according to Egyptian historians. These fears have made Egypt suspicious about reported plans to divert the Nile to it's former enemy, possibly Israel. And they have led it into a tense stand-off with another country, possibly Ethiopia, an upstream country with the potential to dramatically affect the amount of water reaching Egypt. The battle for control of the Nile is at the heart of geo-political rivalries with Israel and Ethiopia on the Nile remains focal, asEgyptian-Israeli affairs expert.

In 1959, Egypt & Sudan met and agreed on how to share the waters of the Nile as it flowed through their largely arid lands on the way to the Mediterranean. It was a renewal of river rights they had enjoyed since theBritish signed an agreement with the two countries in 1929. Ethiopia, which provides an estimated 85 percent of the flow into Lake Nasser fromthe Abay and other watersheds to the south, was not invited. Emperor Haile Selassie wrote a letter of protest, to no avail. After the 1979 Camp David agreement returning the Sinai Peninsula to Egypt, with the announcement of late president Anwar El-Sadat the launch of the Salaam Canal which would divert Nile waters to the Peninsula by siphoning the waters beneath the Suez Canal. Lt Colonel Mengistu Haile Mariam, then ruler of Ethiopia, protested to the United Nations, to no avail. Tekezie and

the Tana-Beles projects in Amhara and Tigrai regions, the issue of Nile politics has resurfaced once again. It is obvious that Ethiopia is located in or the proximity of a region where water is becoming a scarce resource and will likely be the source of future conflicts or wars. The pressure on ordemand for this resource is increasing as a consequence of increasing population and unfavourable climatic changes in the region. Despite facingpersistent and devastating famines, the Nile issue is getting onto a vital component of the national interest of Ethiopia. A study on a river basin development made in Ethiopia in the early 1960s with the help of the Americans, speaks of no less than one hundred sites naturally suited for tapping hydro-electric power and huge irrigation potential that allow multiple harvesting or crops in a given year in the Blue-Nile basin alone.

Add the eastern river basins- the Wabe-Shebelle and Ghenalle. Of course, Ethiopia has not used or underused it's water resources including the waters of the Blue-Nile for various reasons, it is ironical to witness Ethiopia which is also called "Afica's water tower" suffering from periodic drought related famines, droughts or failing rains are not the sole causes of famine in Ethiopia, where in control of the fertile or productive lands of the country as perhaps on a land-selling spree a regime also should take it's significant share of blames. Ethiopia has many big rivers, about elevenlakes, nine saline lakes, four crater lakes, and over twelve major swampy areas. Almost all of the rivers flow from highlands of Ethiopia to the lowlands neighboring countries. Eg. about eighteen Ethiopian rivers flow to the Sudan and cross the border at six different places, three of them being big perenial rivers from southern Ethiopia while the other three are seasonal rivers of the north. Also some four rivers from the Arssi-Bale highlands flow toward Somalia in different directions, three of them merging at the Ethio-Somali border to form the Wabi-Shebelle as known as Juba-River in Somalia. The Omo-River flows from the southwest highlands of Kaffa region to Kenya and forms "Lake Turkana", the biggest desert lake in the world. The Awash-River ends up in lake Abbe at the Ethio-Djibouti border. Unlike what is traditionally claimed, major Ethiopianrivers do not originate from the semi-arid semien highlands of Abyssinya or from the desert lowlands of Afar or Ogadien. Instead, Ethiopian primarywater sources are formed from the streamsand lakes of the countrys rainforest regions. Rivers that arise from the northern semi-arid highlandsof the Amhara and Tigrai regions do flow westwards in the direction of theSudan. Those rivers arise from the west side of the rift valley in Arssi, Bale, Chercher and Gara-Mulatta mountains flow towards Somalia. Those originating from Tulama (in central region of Shoa) and from the rift valleyarea flows towards Djibouti, whereas numerous others originating from the tropical rainforest highlands of southwestern Ethiopia flow in three directions to the Blue-Nile, to the Black-Nile and to the Omo-River. The locally known, Abay-wonz a main tributary of the Blue-Nile originates fromLake-Tana, as lakes are reservoirs, and they discharge an amount of the river proportional to intakes coming from inflowing streams, rivers and precipitations.

Since decade the Nile is at the centre of geo-political rivalry within the region, under the existing accord, Egypt has veto power over developmentprojects over the Nile, but upstream countries say they should not be bound by unfair British colonial era pacts. Since the Nile is an internationalcross-border river, no country can justify sole ownership or an equitable use of it's waters and efforts aimed at having in place agreements for equitable and fair use of this resource are of crucial importance. An arrangement which is known to be based on the British colonial interests favouring especially Egypt & the Sudan is unjust and unfair and is not legally binding, the parties much related to the Nile can not be bound by it. Egypt and the Sudan can exploit Ethiopia's current weak position or absence to retain or secure the former colonial treaties of 1929 and 1959 on the use of the Nile waters, for example the first treaty on Nile-sharing was signed b/n Great Britain and Egypt in 1929 granted the Sudan 4 bln cubic metres of water while 48 bln cubic metres of water granted to Egypt alone, the second water-sharing treaty of 1959, granted the Sudan 18.5 bln cubic metres of water while 55.5 bln cubic metres of water given to Egypt alone, meaning that one-fourth for Sudan and three-fourth for Egypt excluding headwater countries. As stated above, these treaties are known to favour only Egypt and has remained contentious, for this reason,Egypt's direct and indirect hand, through other fellow Arab states to distabilise Ethiopia is known to be connected to the Nile issue. Ethiopia is not only the source of most of the waters of the Nile but almost all of the fertile and rich-soil making particularly significant contributions to Egyptian agriculture.

The Nile has played a significant role in the emergence and growth of theancient Egyptian civilization and is the lifeline of the present day Egypt.

The late president Anwar El-Sadat quoted as saying in 1980, "If Ethiopia takes any action to block our right to the Nile waters, there will be no alternative for us but to use force, tampering with the rights of a nation towater is tampering with it's life and a decision to go to war on this score isindisputable in the international community". Various expeditions were launched to find the source of the Nile, thus a lot is at stake in the Nile issue. The Egyptians use of the Nile reached at 95% while the Sudan's useof the Nile reached at 77%, believed the Blue-Nile contributes approximately 80 to 85% of the Nile river discharge and 96% of the transported sediment carried by the Nile originates in Ethiopia with 59% of the water from the Blue-Nile, the rest being from Tekeze, Atbara, Sobat, and small tributaries. The erosion and transportation of silt only occurs during the Ethiopian rainy season in the summer, when rainfall is especially high on the Ethiopian plateaus. Egypt maintains it's heavy utilization for various projects, wasting over 20% of the water, (it's more than what all up-stream countries demand to use) due to inefficient dams built in the desert. For Ethiopia, if there is a single war worth sacrificing the blood of it's children, it is the fight to break-open Egypt's century-old blockade of the Nile river. In Ethiopia, it is long held conventional wisdom that Egypt is directly or indirectly behind most domestic, regional and international crisis situation affecting Ethiopia at any given time. Ethiopian

empires and regimes have for long pointed-out gross Egyptian interference including among others that Egypt : Attempts and often has succeeded in blocking or modifying Ethiopian requests and interaction withinternational financial institutions: provides political, diplomatic and operational support to virtually any group organised against the Ethiopia: holds as a strategic objectives to do what ever it takes to keep Ethiopia poor, weak and devided: Egypt greatly resents any sign of Ethiopian influence in the region in Somalia, Djibouti, the Sudan and Yemen: At it's heart Egypt, where suspicions about former enemies and tensions with anold-age civilization reveal deepseated fears about water scarcity and losing control of the river. For such a reason, Egypt interferes in Ethiopia'srelations with the Arab world too. Year after year, lacking technical, financial, and most importantly determined leadership, Ethiopian farmers watch as the rainfall washes their fertile soil away and gives it to Egypt, thus there has always been basis for popular resentment and anger towards Egypt for it's unjust use of the Nile. The above riperian as well as the down-stream countries of the Nile need to work-out and accept a fair and just agreement for the equitable and sustainable use of the Nile waters. Egypt, which have been struggling to keep Ethiopia landlocked, it's strategic motive is expressed constantly by its politicians, has been to keep Ethiopia, which is vastly more fertile than Egypt and which controls the headwaters of the Blue-Nile, which provides Egypt and the Sudan withmost of it's waters from posing a strategic threat to Egypt by potentially, cutting-off the flow of Blue-Nile waters & it's tributaries. Destabilising and weakening successive Ethiopian governments has been Egypt's most efficiently exploited strategy to protect it's monopolistic use of the Nile water. Cognizant of the internal contradictions and historical animosities among various Ethiopian constituencies. In 1979 Egyptian President Anwar El-Sadat threatened war on violators of what he saw as his country’s rights to Nile waters. Upriver countries Ethiopia, Kenya, Uganda,Rwanda, Burundi, and Tanzania argue that they too need the water that originates on their lands. Egypt has often supported rebel groups fighting against Ethiopian rulers, this support has been bothdirect and indirect, in the past it armed the Eritrean scessionist movements, with continuous training, sanctuary in the Sudan, even until the EPLF itself making a significan challenge to the Sudanese government, and the Tigrean rebels, backed the Oromo & Somali-insurgents in Ethiopia, and also supported former President Siad Barre's invasion of Ethiopia in the summer of 1977, reportedly there was even a plan to resettle millions of Egyptians in Somalia in order to couter-balance Ethiopia's growing population. Ethiopiahas also alleged that Egypt took sides with Eritrean regime during the 1998 to 2000 border conflict. There is little doubt that Egypt has been using Eritrea to channel it's support for various Ethiopian and Somali insurgents. This pointedly, also, meant that Egypt supported a policy of "constraining the headwaterland or by weakening Ethiopia", by any meansfrom easy access to the Red Sea, which Ethiopia had once been dominated at it's lower reaches, through the ex-Ethiopian Naval Force.

And many believed, this Egyptian strategy has been fruitful given the

unfortunate fact that every Ethiopian ruler has relied heavily on violent suppression of dissent, and the implementation of policies that favours one ethnic-group over the other, thus creating favourable domestic conditions for armed insurgency. The revised agreement signed Burundi Ethiopia, Uganda, Tanzania, Kenya, and Rwanda have signed the treaty sofar, to plans allow irrigation and hydro-electric projects to go ahead without Egypt's consent, the Congo has to sign within a year period in an attempt to end Egypt's historical control over the Nile's water. Ethiopia is the biggest source of the Blue-Nile waters contributing over 85% of it although Egypt and Sudan benefit from more than 90% of the water resource as a hangover from colonial era agreement. As still there is tension among Egypt and the Nile Basin Initiative countries with the NorthAfrican state refusing to sign onto a new agreement made by the other members. It has to be recalled that the four Nile-upstream countries led by Ethiopia, signed in May, 2010 to a new treaty in Entebe, Uganda, seeking a more equitable water-sharing agreement.

Under the original Nile-water sharing-agreement, Egypt is facing water shortages by 2017, is entitled to 55.5 billion cubic meters a year from the Nile's total flow of around 84 billion cubic meters, some 86% of the watersoriginate in Ethiopia. The Ethiopian government had commissioned an independent survey that proved the new Mega-dam would benefit both Egypt and the Sudan by decreasing siltation in their irrigation projects andby reducing water wastage, some scientific overviews have been conducted by the US Department of Interior, Bureau of Reclamation, 1964, Land and water resources of the Blue-Nile Basin: Ethiopia. And recently by a committee endorsed by Egypt itself, in 2008 and 2010, according to these last surveys, Egypt and the Sudan could greatly benefitfrom the Mega-dam's energy production. Ethiopia denies Egypt an access to examine a new Mega-dam it intends to build on the Nile unless Cairo links a new deal relinquishing it's veto-powers over allocation of the river'swater, said it would not agree to an Egyptian demand to see plans for the proposed dam unless Egypt joined the new Nile-cooperative framework agreement, signed by six-upstream countries which gives this option only signatories countries namely, Burundi, the Congo, Kenya, Rwanda, Tanzania and Uganda whose have banded together to rewrite the 1959 water-sharing treaty that favours Egypt only. Egypt has been locked-up for more than a decade in a dispute with other countries through which the river passes, refusing changes to colonial-era treaties contested by Ethiopia and other upstream nations. After decades of strong population growth, it's to be recalled that Ethiopia has overtaken Egypt as Africa's second most numerous nation. The total population of the upstream countries estimated 270 million against 130 million for the down-stream duo of Egypt, 85 million and the Sudan, 45 million, whose 14 million southern Sudanese will soon be independent State and are being courted by both sides.

In recent years the Ethiopian prime minister have told lawmakers, "Ethiopia has been more willing to go it alone, announces numerous plansto errect water-dams for irrigation and electricity along the Nile", which it

has angered the Egyptians, who demand a lions share of the water since the British colonial era treaties. "Eritrea has been training and deploying the Somali Al-Qaida affiliated Al-Shaabab and others home-grown destructive forces to terrorize our country, but Egypt is the direct force behind these destructive elements in order to dissuade the nation from developing its Nile-waters, and he called on "the Egyptians to realise that Ethiopia is not their enemy, Ethiopia's plan to build a major-dam on the Nile will also benefit the down stream countries, we want the Egyptian people to realise that we do not want to hurt them" he said. Ethiopia has plans to use it's Nile waters for agricultural projects, says it would be forced to finance the mega-dam from it's own coffers and from the sale ofgovernment bonds because Egypt was pressuring donor-countries and international financiers not to fund it's dam projects. Egypt feels such projects would threaten it's water supply, and point-out that they don't benefit from rains like the upstream-countries. The Ethiopian premier has quoted as saying "Egypt will not be able to stop Ethiopia from building Dam or irrigation schemes on the Nile. That is history--and that will not bepart of the solution--Ethiopia is able and willing to use it's own resources to build dams on the Nile, and never seek any kind of permission from anyside. The way forward is to seek a win-win solution through diplomatic efforts, not for Egypt to try and stop the unstoppable". Ethiopia has a hydro-power potential of 45, 000 Megawatts (MW), the second-largest capacity in Africa after the Congo, according to the World Bank. Ethiopia says the new military government in Egypt is moving to build better relations with Ethiopia. In May, 2011, Egypt had sent a 48-members popular public-diplomacy delegation to pave a new approach and smooth it's relations with Ethiopia and other Nile-upstream countries on their long standing dispute over the Nile-waters. A week later, the new Egyptian prime minister, Essam Sharaf arrived in Ethiopia where he held talks with senior Ethiopian government officals to mark a new chapter of cooperation between the two countries. His visit was welcomed by Ethiopian authorities as a major step toward in solving their differences over the Nile-water. The two are looking to put past disagreements over the use of the Nile-waters behind them after the Ethiopian premier has recently visited Cairo to discuss the two counties future relations, water was a top subject discussed on the agenda. It was the first to Egypt by the Thiopian premier since a poular uprising toppled the former government of Mohammed Hosni Mubarak in February, 2011. During Hosni Mubarak's time in office, Ethiopia and Egypt had long disputed water-sharing along the Nile. But noted hydrologists fear "Ethiopia is offering Egypt and the Sudan to create a trilateral team of technical experts committee to manage the Nile-water crisis, and review of the dam that is being built inside Ethiopia. This will of course serve more the Egyptians, since the committee would evaluate reviving the centennial dam project and it's effect. It's a critical breakthrough on the issue. But noted hydrologists stillin a fear "a head waterland offering Egypt and the Sudan an olive-branch in their bitter dispute over sharing the waters of the Nile-River, such offer include a possible joint ownership of huge Ethiopian hydro-power projects

that Egypt has trying to block" saying that, "how a mindful premier can offer an olive-branch in ownership for countries those have been bitter enemies of the nation since time immemorial because of the Blue-Nile where this dam is going to be constructed? Others claim reservation on such focal issue, saying "be opponents or propponents of the ruling-EPRDFgovernment, now every citizen believes that there are no convincing reasons not to support such construction of a Mega-dam on the River-Nile at this juncture, which could benefit majority Ethiopians and be a symbol of national pride and patriotism. However, agricultural lands in densely populated areas of the highlands has deteriorated alarmingly and markedly over recent decades. Deforestation and Soil erosion are most problematic in the marginal areas of subsistence agriculture.

The government has made substantial investments in the Hydro-power sector including the building of a number of dams. In a push for development, Ethiopia will build one of Africa's largest hydro-power dams in the Omo River that flows into Lake Turkana and provides 90 per-cent ofits water. For instance, the Fincha Power Station is a hydroelectric power plant of the Omo River in Ethiopia. It has a power generating capacity of 100 MW enough to power over 66,900 homes. The USD 2 billion dollar dam called Gibe III is said to nearly double the East African nation's powercapacity and transform it's southern wilderness into highly productive cultivated farmlands, irrigated by the dam's regulated outflow. According to the Ethiopian government, the dam will develop the region and end a "backward lifestyle" in the area, transforming it's southern wilderness intoa highly productive cultivated farmland, irrigated by the dam's regulated outflow. It says that domestic and foreign investors will grow sugarcane and other cash crops on a large-scale in the south, an area known for its numerous indigenous tribes. Ethiopia's government has determined on a massive dam-building project, which it hopes will generate alternative sources of power and also help to turn the country's economy around. Butthe idea is not without controversy, and critics have said the endeavour will be an environmental disaster. Ethiopia became more determined to push massive development of roads, bridges and dams with the considerable assistance of Chinese loans and expertise. With a series of new hydro-electric dams coming online, Ethiopia wants to become this corner of Africa's hydro-electric power center. China's role in funding Ethiopian dam draws ire' Ethiopia says construction of a dam along the Omo River will create needed electrical power for itself and Kenya, and channel water for food production. Environmentalists worry it could drain a Kenyan desert lake central to people's livelihoods. Nairobi, Keny Kenyanenvironmental activists want the Industrial and Commercial Bank of Chinato hold off on a promise to invest $500 million in Ethiopia's $1.7 billion Gibe III Hydro-electric Dam, which they say threatens Lake Turkana – theworld's largest permanent desert lake, and a crucial source of water for half a million people. The controversial dam is being built on the Omo River in eastern Ethiopia, which supplies the lake in northwestern Kenya with 90 per of its water. Once completed, the dam will affect the livelihoods of some 200,000 in the river valley and 300,000 more near the

lake, the activists warn. Friends of Lake Turkana – a Kenyan organization representing indigenous communities in northwestern Kenya whose livelihood depend mainly on the lake – had earlier estimated that that Gibe III could shrink the lake, which straddles the Kenyan-Ethiopian border, by 10 meters (about 30 feet). This could cause an increase in salinity in the lake's water, making it undrinkable for indigenous groups who live around the lake with their animals. Recently, resource-related conflicts have ignited between the nomadic pastoralist communities, and are expected to increase if the dam is completed. "Lake Turkana is home to large number of some of the most massive Nile crocodiles, hippos, and other large animals, all which would find it hard to survive without the lake," said Dr. Richard Leakey, a renowned Kenyan conservationist and paleoanthropologist. There are also a wide variety of unique birds and other wildlife all of which would find it hard to survive without the lake or if the water nutrients were to change as drastically as studies have predicated will happen if Gibe III is successfully completed, according to the groups. The lake's survival hangs in the balance as China decides whether to fund the dam project, says Ikal Angelei, founder of Friends of Lake Turkana and the winner of the 2012 Goldman Environment Prize for Africa. "The lake is in the danger of drying unless the Kenyan governmentand international agencies step in to stop the unsustainable development both within and outside Kenya," said Ms. Angelei at a news conference in Nairobi. "While many would-be financiers have withdrawn, China still holds [to its] promise," she added. But according to opposition politicians,someone has to note well that the Ethiopian government is not democraticor democratically elected: but the election of EPRDF by 99.6% is not a sign of democracy, undoutedly a one-party rule. In 2010: Egypt discussedtaking military action in cooperation with Sudan against Ethiopia to protect their stake in Nile River, according to internal emails from the U.S. private-security firm Stratfor. Water wars in the Middle East and North Africa are not uncommon. Then-King Hussein bin Talal of the (normally docile) Jordan said in 1994 when he officially recognized Israel that "he would not go to war with Israel again except over water."

On the Grand Ethiopian Renaissance Dam (GERD)'

For many years, all the Nile's water has been divided between the Sudan and Egypt: any other country that dared to touch the Nile was met with stern threats from Egypt and its protectors: first England. then the UnitedStates of America. When Ethiopia sought World Bank (WB) financing for such dam more than 20 years ago, the US leaned on the Bank to say no. The Grand Renaissance Dam project was announced in 2011 by the Ethiopian government, in a unilateral move that is not sitting very well with its upstream neighbors. Egypt and Sudan say Ethiopia is threateningtheir greatest natural resource. About 1,287 kilometres south of this Egyptian city where the Nile river pours into Egypt, construction has begun on a massive dam being built in Ethiopia that could destabilise Egypt in a way that would make the last year of political upheaval look minuscule, analysts say. If constructed at specifications revealed last year, the Grand Ethiopian Renaissance Dam would result in cuts in

electricity, a reduction in agricultural lands and water shortages across major cities in Egypt, new studies say. "In short, it would lead to political, economic and social instability," said Mohamed Nasr El Din Allam, who was Egypt's minister of water and irrigation until early last year. He editeda book-length collection of studies on the dam published last month. "Millions of people would go hungry. There would be water shortages everywhere. It's huge." Those dire forecasts stem from Ethiopia's decisionlast year to announce an increase in the size of the dam, which is already under construction 40 kilometres from the Sudanese border. Ethiopian officials revealed the depth of the dam would be enlarged to 150 metres from 90m, alongside plans to boost electricity production and use water pooling behind the dam to irrigate more than 500,000 hectares of new agricultural lands. Ethiopia's announcement has created new tensions in water-rights negotiations among the 10 countries that form the Nile Basinand emerged as one of the biggest diplomatic challenges for a growing Egypt. More than any of the other countries along the basin, Egypt and Sudan are dependent on the water from the river because of their lack of secondary water resources and little rainfall. Egypt receives 55 billion cubic metres and Sudan receives 18.5bn cubic metres per year, under a series of agreements that date back to a 1929 treaty drawn up by Britain when it held power over much of North Africa. Those agreements have long irked upstream countries, which they describe as a colonial-era injustice because of treaties' favourable distribution of water to Egypt and Sudan, as well as giving them the right to veto projects that would be "harmful" to their national interests. The Nile Basin Initiative was established in 1999 to establish an equitable agreement among the countries. But divisions emerged from the start, hinging on Egypt's and Sudan's unwillingness to negotiate their share of the water and insistence on retaining veto rights. Ethiopia, Uganda, Tanzania, Rwanda and Kenya signed their own deal, known as the Entebbe Agreement, that said projects could be built as long as they don't "significantly" affect the waterflow. Egypt, which sees the wording as a precursor to cuts of its share, called the agreement a "national security" threat. Ethiopia in particular has struck a defiant stance, with Prime Minister Meles Zenawi saying in a television interview in 2010 that "some people in Egypt have old- fashioned ideas based on the assumption that the Nile water belongs to Egypt and only Egypt. The circumstances have changed and changed forever". Just a month after the uprising in Egypt forced Hosni Mubarak toresign and hand power over to the military, the Nile river tensions escalated to new levels when Ethiopia announced new details of the GrandEthiopian Renaissance Dam. Ethiopian officials said there would be no impact on Egypt, but analysts and officials in Egypt argue the impact would range from bad to devastating. The problems would start with the filling of the 62bn cubic metre reservoir behind the dam, which would immediately reduce the flow of water to Egypt and Sudan. How bad the impact would be depends on the rate they decide to fill it.

Ethiopia officially launched the GERD construction’

Ethiopia, Uganda, Rwanda, Tanzania and Kenya and later Burundi signed the Entebbe agreement in April 2010, to reverse colonial era treaties seeking equitable water utilization on Nile water. While Cairo denied any intention of attacking the dam, the country's Water Resources and Irrigation Minister Mohamed Bahaa el-Din said on Saturday that his country was maintaining its concerns about the construction of the Renaissance Dam in Ethiopia. He did say that officials at the Ethiopia foreign ministry "assured Egypt and Sudan that in case there was any impact on their water quota to the dam, other projects will be carried out to collect lost water and cover shortages." It is the latest in the ongoing battle for the world's largest river's water, with Egypt and Sudan continuing to remain obstinate in amending any of the colonial treaties that guarantee their countries with a lion's share of water from the Nile. The International Monetary Fund (IMF) this month called on Ethiopia to slow its construction and planning for the dam, citing economic concerns for the country. Whistleblower site WikiLeaks released documents this month that revealed Egypt and Sudan had been planning to attack an Ethiopian dam project to "protect" their rights over Nile water based on colonial era treaties. In documents revealed by Wikileaks, the Egyptian and Sudanese government appeared ready to develop a launching pad foran attack by Egypt against the dam. Wikileaks has leaked files allegedly from the Texas-based global intelligence company, Stratfor, which quote an anonymous "high-level Egyptian source," which reported that the Egyptian ambassador to Lebanon said in 2010 that Egypt "would do anything to prevent the secession of South Sudan because of the political implications it will have for Egypt's access to the Nile." Ethiopia's massive dam project has seen much concern from Cairo and Khartoum, who fear the establishment of Africa's largest dam would affect previous colonial deals on Nile water-sharing. It is to be built some 40 kilometers upstream from Sudan on the Blue Nile. But even before the official announcement ofEthiopia's prime minister's passing on August 20, Egyptian officials told Bikyamasr.com that they believed a post-Meles region could bring forth new negotiations and compromise over Nile water. An Egyptian ministry ofwater and irrigation told Bikyamasr.com last month, two weeks before Zenawi was pronounced dead, that with the combination of Egypt's new President Morsi and the potential of seeing a new leader in Ethiopia, they hoped the tension over Nile River water could be resolved.

Sudanese Launchpad for Egyptian attack on Ethiopian Grand Dam' Egyptian authorities fearful of a monopoly on Nile waters received agreement from Khartoum to build an airbase in Sudan, to launch attacks on Ethiopian damming facilities, claims the anonymous media outlet: Wikileaks. Wikileaks has leaked files allegedly from the Texas-based globalintelligence company, Stratfor, which quote an anonymous "high-level Egyptian source," claiming the Egyptian ambassador to Lebanon said in 2010 his nation would do anything to prevent the secession of South Sudan because of the political implications it will have for Egypt's access to the Nile. The Nile is vital in providing fresh water to the people and agricultural projects of Egypt. Also in the Nile Basin and reliant on its

waters are Sudan, Eritrea, Ethiopia, Uganda, the Democratic Republic of Congo, Rwanda, Kenya, Tanzania and Burundi. As Egypt is at the end of the river it is a particularly politically precarious situation. Ethiopia's planned massive hydroelectric damming project has sent shockwaves throughout the region, highlighting the faults in previously-signed treatieson Nile-sharing. The Grand Ethiopian Renaissance Dam will be Africa's largest hydroelectric facility and will be built 40km upstream from Sudan on the Blue Nile. Ethiopia has denied Egypt's requests to inspect the dam,unless it relinquishes its veto on water allocation. Although, according thesource, Ethiopia has agreed not to use the reservoir waters for irrigation, there are concerns about the extent of water loss due to evaporation fromthe dam's reservoir. According to Wikileaks, a 2010 internal email recordsSudanese president Omar al-Bashir's agreement to host an Egyptian airbase in Kursi in the west of Sudan's Darfur region. This base would be used to launch an Egyptian assault on the Ethiopian dam, if diplomatic efforts fail. The anonymous source cites the "useful case-study" of Egypt's1976 sabotage of an Ethiopia damming project. However, the viability of joint Sudanese-Egyptian military operations have been brought into question in light of their fractious relationship. According to Wikileaks, theStratfor source claimed that "if it comes to a crisis, we will send a jet to bomb the dam and come back in one day, simple as that. Or we can send our special forces in to block/ sabotage the dam." Although they agree upon the Nile Basin Treaty, the contested Halayed Triangle, in 2010, to Bashir accusing Egypt of occupying Sudanese territory. The immediacy and extent of the Ethiopian threat to Egyptian freshwater access is questionable but its domestic political usefulness for the now ousted Mubarak regime is not. The continued political application of the Ethiopian threat is, allegedly, now being exerted on the incumbent government by the Muslim Brotherhood. On 26 August Egypt denied allegations that the new government is under pressure to persuade key regional investor, China, to not back such Nile development programmes. The UN estimatesthat by 2050 the world's population will have increased by 3.5 billion, withthe majority of the growth in developing countries where water stress is already in key issue, potentially making access to freshwater more incendiary than access to fossil fuels in the coming decades. Although Egypt was a perennial economic underachiever during the Mubarak regime's years of mismanagement, it has the potential to be a powerhouse. This makes its need to secure future access to resources all the more important and potentially domineering. Source: WikiLeaks

Egypt denies deal with Sudan to strike Ethiopian dam'

An Egyptian official has emphatically denied the veracity of allegations that his country had reached an agreement with neighboring Sudan to useits territories as a launchpad for potential attacks on Ethiopian damming facilities over the dispute of Nile water-sharing. Sudan Tribune reported the allegations last month citing a 2010 internal e-mail leaked by the whistle-blowing website Wikileaks, which suggested that Sudan president Omer Al-Bashir had agreed to build an Egyptian airbase in his country's western region of Darfur to be used for assaults on The Grand Ethiopian

Renaissance Dam (GERD) should diplomatic efforts fail to resolve the dispute between Egypt and Ethiopia over Nile water-sharing. But Egypt's state minister for military production, Rida Hafiz, on Monday strongly denied the allegations saying they are "totally bare of truth" According to Egypt's state-run news agency MENA, Hafiz added that the report is "designed to disturb Egyptian-Ethiopian relations." Egypt - and Sudan to alesser extent - are involved in a drawn-out conflict with the Nile Basin's upstream countries over Nile Water rights as the latter, mainly Ethiopia, continue to contest and attempt to alter the shares dictated by colonial- era treaties giving Egypt the lion share in Africa's longest river. The North African country is concerned that Ethiopia's GERD, a massive hydroelectricdam on the Blue Nile, about 40 kilometers from the borders with Sudan, will affect its vital flow of fresh water when completed with a capacity to create a reservoir of 65 billion cubic metres. President Omer Al-Bashir reportedly told his Egyptian counterpart Mohammed Morsi this month thatSudan shares "identical position" with Egypt on the Nile water issue. The dam on Blue Nile may take over a decade to build. Sudan Tribune September 26, 2012

Egypt pushes Ethiopia to scrap Nile dam – UPI'

Egypt increasingly views Ethiopia’s plan to build a massive 6,000MW hydroelectric dam on the Nile River as a threat to its national security because it will seriously cut the Arab state’s water supplies. Egypt depends on the Nile for virtually all of its water and is mounting a major diplomatic and economic campaign to scupper the plan. “Even direct military action by Egypt cannot be ruled out,” observed the U.S. global security consultancy Stratfor. Both countries have undergone major political upheavals recently, which have added to the tension in a long- running battle for control of the world’s longest river which rises in the Ethiopian highlands. Egypt’s Muslim Brotherhood now controls the presidency and Parliament following the February 2001 downfall of longtime dictator Hosni Mubarak and is locked in a struggle for supremacywith the military. Longtime Ethiopian ruler, Prime Minister Meles Zenawi, as harsh a dictator as Mubarak and whose ethnic Tigray group has long dominated the military, died Aug. 20, leaving a leadership vacuum and internal rivalries. Meles, who came to power in 1991, had long opposed the domination of the Nile’s water flow by Egypt, and to a lesser extent Sudan, under colonial agreements that left the upstream African states —Ethiopia, Kenya, Uganda, Burundi, the Democratic republic of Congo, Rwanda and Tanzania — with almost no control of the river’s resources.

He found Cairo’s hard-line position on the Nile particularly galling because85 percent of the river’s water flows from the Ethiopian highlands.

There were years or fruitless negotiations between Cairo and the upstream states in the Nile Basin initiative, a forum set up in 1999 by allthe Nile states. But in 2010, Egypt found its domination of the river heavily challenged. Ethiopia and four African states — later joined by twomore — threw out a 1959 agreement imposed by British colonial rulers that gave Cairo control of 90 percent of the Nile’s water and veto power over dam construction upstream that would limit its water supplies. They

contend they need more water because of burgeoning populations, industrialization and agricultural projects. The fall of Mubarak, who had fiercely opposed surrendering any of Egypt's control of the Nile, left Cairo adrift. Meles, who had already built seven small dams on the Nile, took advantage of Egypt's disarray to announce his plan for the $5 billion Grand Ethiopian Renaissance Dam on the Blue Nile and start work on it. "Cairo fears that once the dam is completed in 2017, it will take two to three years, depending on rainfall, to fill up the 67 billion cubic meter reservoir, which could reduce the amount of water that flows into Egypt by 25 percent," Stratfor observed. "After the reservoir fills up, there is no guarantee that Egypt will maintain its present share of the water, and Ethiopia is already planning multiple agricultural projects on Nile tributaryrivers flowing from the Ethiopian highlands. "Speeding up the diversion ofwater would put added pressure on Cairo," Stratfor noted. So far Cairo has focused primarily on diplomatic efforts with Ethiopia and its African allies, concentrating on these countries' parliaments whose agreement ona new water-sharing arrangement will be necessary if it is to be legally binding to supersede the 1959 agreement.10/19/12 Top News, Latest headlines, World News & U.S News – Upi.com upi.com/BusinessNews/Energy-Resources/2012/10/19/…/ print 2/2 According to documents released by WiliLeaks in September, the Egyptianand Sudanese governments had planned to attack the Grand RenaissanceDam. WikiLeaks claimed the documents originated with Stratfor. The Texas-based consultancy's computer system was penetrated before the leaks and that may have been how the alleged documents were uncovered. One 2010 email quoted a "high-level Egyptian source" as saying "we are discussing military cooperation with Sudan" against Ethiopia, establishing a base there from which to fly Egyptian Special Forces to destroy the Ethiopian project. Egypt denied it had such a plan.

But Stratfor noted that if diplomacy fails, "Egypt's next most likely approach is to support proxy militant groups against Ethiopia" as it did in the 1970s and 1980s. Stratfor said direct military action "was the least likely approach and one Cairo would undertake only if the dam was completed and significantly interrupted the water flow. "Such a course willalso largely depend on Egypt's new leadership .. but whatever its political inclination, a largescale reduction in water from the Nile would be intolerable to any Egyptian government." October 19, 2012 (UPI) Cairo

A new research tries to mitigate Egyptian concern over the Nile damproject'

New research has suggested there is sufficient water in the Nile to supportall 10 countries it flows through. This emerged on Monday as Ethiopia's massive dam-building plans continued to cause disquiet in downstream Egypt. Simon Langan, the head of East Africa and Nile Basin Office of the International Water Management Institute, said: ""We would argue that physically there is enough water in the Nile for all the riparian countries." He made this statement as Ethiopia and Egypt are at each other's throats over the former's actions along the Nile River.

Top Ethiopia government officials have reportedly said they are looking atjumpstarting the massive Renaissance Dam project along the Nile River inan effort to increase water resources and energy for the East African country. Political analysts have said this could threaten regional stability. The International Monetary Fund (IMF) has also called on Addis Ababa to push the dam project to the backburner in order to focus on other economic initiatives.

While Cairo has denied any intention of attacking the dam, as reported bywhistleblower website Wikileaks, the country's Water Resources and Irrigation Minister Mohamed Bahaa el-Din has reportedly said that Egypt was maintaining its concerns about the construction of the Renaissance Dam in Ethiopia.

"What we really need to do is make sure that there is access to this water… Poverty rates are about 17 percent in Egypt but forfive of the upstream riparian countries it is more like 50 percent. So, this access to water is very important," Langan said, speaking at the Addis Ababa launch of the River Nile Basin.

Ethiopia/Egypt-War over Nile River?

OPINION: It seems that every few weeks, commentary is published sugggesting that Egypt and Ethiopia are ready for military battles over thefuture of the Nile River. Recently Robele Ababiya wrote a piece titled "Likely war over the Blue Nile River?" that highlighted the growing concernin Ethiopia over the future of Egypt's tenuous democracy that has seen massive unrest in recent days. Ababya wrote: "The matter is so serious that I gave it a rather scary title after a lot of soul-searching, but the arrogant stance of prominent Egyptian leaders begged for it as mentionedin the paragraph below – notwithstanding my long held dream that democratic Ethiopia and Egypt will one day emerge as powerful allies working together as keepers of stability and engines of economic growth in the region and beyond in the African continent." Ababiya added that with the ongoing turmoil in Egypt and the uncertainty over their ability to reach compromises, the future relations with Ethiopia, despite an optimistic tinge, are not looking positive. "But the new Egyptian regime appears to have dimmed any hope of engendering a secular democratic state given that liberal democratic political forces that have spearheaded the Egyptian revolution have withdrawn from drafting the constitution. It seems the government is bent on following in the footsteps of its predecessors," Ababya continued. That precedent does not engender a warm feeling in many Ethiopians, who have seen decades of Egyptian obstinate behavior over Nile water. Now, with the government in Cairo teetering on collapse, Ethiopia remains concerned over the future of what the government and its people believe is a right to water resources.

Ethiopia and Egypt have been butting heads for some time over water resources and who has a right to the Nile River. With the first-ever Nile Basin Initiative (NBI) report on the status of the Nile River published lastmonth, the situation between Egypt and Ethiopia and the angst betweenthe two foes finally has some statistics and analysis to deal with.

However, it is unlikely to see any changes in the current policies that have

both countries eying future water resources along the world's longestriver.
Top Ethiopian government officials have told Bikyamasr.com that they are looking at jumpstarting the massive Renaissance Dam project along the Nile River in an effort to increase water resources and energy for the East African country.The moves could threaten the regional stability after the Egyptian government said it remained "concerned" over Ethiopia's actions along the Nile River. The International Monetary Fund (IMF) has also called on Addis Ababa to push the dam project to the backburner in order to focus on other economic initiatives. While Cairo has denied any intention of attacking the dam, as reported by whistleblower website Wikileaks, the country's Water Resources and Irrigation Minister MohamedBahaa el-Din said last month that his country was maintaining its concernsabout the construction of the Renaissance Dam in Ethiopia. He did say that officials at the Ethiopia foreign ministry "assured Egypt and Sudan that in case there was any impact on their water quota to the dam, other projects will be carried out to collect lost water and cover shortages." It is the latest in the ongoing battle for the world's largest river's water, with Egypt and Sudan continuing to remain obstinate in amending any of the colonial treaties that guarantee their countries with a lion's share of water from the Nile. WikiLeaks released documents this month that revealed Egypt and Sudan had been planning to attack an Ethiopian dam project to "protect" their rights over Nile water based on colonial era treaties. In documents revealed by Wikileaks, the Egyptian and Sudanese governmentappeared ready to develop a launching pad for an attack by Egypt against the dam. WikiLeaks has leaked files allegedly from the Texas-based globalintelligence company, Stratfor, which quote an anonymous "high-level Egyptian source," which reported that the Egyptian ambassador to Lebanon said in 2010 that Egypt "would do anything to prevent the secession of South Sudan because of the political implications it will have for Egypt's access to the Nile." Ethiopia's massive dam project has seen much concern from Cairo and Khartoum, who fear the establishment of Africa's largest dam would affect previous colonial deals on Nile water- sharing. It is to be built some 40 kilometers upstream from Sudan on the Blue Nile. But even before the official announcement of Ethiopia's prime minister's passing on August 20, Egyptian officials told Bikyamasr.com that they believed a post-Meles region could bring forth new negotiations and compromise over Nile water. An Egyptian ministry of water and irrigation told Bikyamasr.com last month, two weeks before Zenawi was pronounced dead, that with the combination of Egypt's new President Morsi and the potential of seeing a new leader in Ethiopia, they hoped the tension over Nile River water could be resolved. "While this can in no way be official policy at this point, I believe that there would be more maneuvering with a new leadership in Ethiopia because there would be the ability to communicate and not be seen as antagonistic," the official said, adding that they were not authorized to speak to the media. "Let us be frank about the situation between Egypt and other Nile countries," the official continued. "We in Egypt have not been the best at compromise so

I think overall, there is so much that can be done to help bring countries together, and Ethiopia has been a leader in its criticism of Egypt so starting there would be good." With the Nile comes a new set of issues, and with Egypt holding onto a lion's share of water from the world's largest river, upstream countries such as Ethiopia have taken it on their own to begin building dams and other water related endeavors, much to the anger of Cairo. However, officials hope that solutions can be had in the new post-revolution Egypt that could see the growing tension betweencountries along the Nile reduce. "While Egypt never wants to mingle in another country's affairs, a new leadership in Ethiopia would go a long way to changing how things are run, just like it has in Egypt," the official added. BM, Mohammad Awad (November 26, 2012)

Grand Ethiopian Renaissance Dam (GERD) --Will fears turn south? Analysis: The African Research and Studies Centre at the International University of Africa held a forum last week titled "Ethiopian Renaissance Dam and Its Effects on Egypt and Sudan." The minister of electricity and irrigation, Dr. Tabitha Butrus: the Ethiopian irrigation minister: the Ethiopian ambassador to Sudan, Abadi Zemo: and many experts in agriculture, irrigation, and environment attended the forum. Ethiopia denies any intention to block water from Egypt and the Sudan. The Ethiopian irrigation minister, denied any intentions to block water saying that Ethiopia only wants to use the dam to generate electricity. He mentioned that late Ethiopian Prime Minister Meles Zinawi called on both Sudan and Egypt to take part in establishing the dam, but they have not. He promised that Ethiopia has no hidden agenda. "The dam has many positive effects on the Nile Basin countries," he claimed. He continued, "Forums like these offer the chance to exchange points of view, opinions, and more research." He explained that the dam will help maintain the water level all year round and increase fishery production. Sudan will also benefit immensely, considering that there will be an abundance of water supply, especially in River Atbara, that can be used to improve agricultureand develop areas on the border between Sudan and Ethiopia. He called for partnerships to be built among Nile Basin countries to realise mutual benefits. Again, he denied that there is any reason for Egypt and Sudan tobe wary of the dam. Former Irrigation Minister Professor Saif Aldin Hamadsaid Ethiopia has 123 billion cubic metres of water, of which 97% is not used. He added that very little land is cultivated where water is scarce.

The area surrounding the dam is not incapable of cultivation, he continued, but Sudan will benefit from the dam, considering it is dependent on the natural flow of the Nile and does not have and does nothave the means to store its waters. That is where the Ethiopian dam comes in. It will help by storing up water, from which Sudan will benefit inmore than way, such as: limited evaporation and doubled electricity production in Roseiris, Sinnar, and Meroe. The benefits from the Ethiopiandam can be fairly imaginable, given that it stores up 74 billion cubic metres of water.

Advantages of the dam: The Ethiopian minister of energy and mining,Alfakki Ahmed Najash, said Ethiopia and Sudan will benefit immensely

from this dam in irrigation and agriculture. But, he added, Nile Basin countries have different opinions on it. Engineer Abdulhalim Alturabi said there are many benefits that can be reaped from this dam, but cooperation in establishing and running it is a prerequisite. He went on to say, "Ethiopia does not have vast land that can be farmed, and Sudan does. Ethiopia, therefore, cannot afford hostile relations with Sudan. The two countries must build their relations around being totally open with each other. They must exchange benefits because, in Sudan's perspective,Ethiopia has a lot of potential and a work force that Sudan is in need of".

Importance of Consensus on the Dam: A political analyst, Professor Hassan Alsaori, said it is important for the Nile Basin countries to have a consensus on the dam, especially as Ethiopia will control 86% of the Nile'swater after the dam is completed. He said consensus is important, because without it, Ethiopia will have the upper hand and leverage in any dispute among Nile Basin countries because it will hold the "Nile water card." He said it is only fair that Egypt and Sudan take part in establishingand running the dam to be certain that their part of the Nile is safe. Fears are steered south: Many experts argue that Ethiopia does not want to make a unilateral move regarding the dam to ensure it does not threaten regional security. In that regard, it is most careful to reassure Sudan and Egypt. But the same experts were wary of South Sudan, considering that it controls the White Nile, the other source of the Great Nile. That is problematic because the West and Israel could use their influence with South Sudan to put pressure on Egypt. Sudan and Egypt have doubts thatthe newly founded and politically unstable country of South Sudan would take unilateral steps to decrease the portions of Nile water to which Sudanand Egypt are entitled. Such a step would jeopardise the regional and national security of Egypt and that of Sudan in the process. Sudan Vision, by Ibrahim Al-Jack

Grand Ethiopian Renaissance Dam (GERD) - Mega dam with potentially mega consequences'

OPINION:Without greater oversight, Ethiopia's secretive new dam could have disastrous environmental, social and political impacts. While Egypt was undergoing dramatic political changes last year, Ethiopia was secretly moving to unveil "Project X" - a huge hydropower dam it intends to build on the Blue Nile, 40 km from the Sudanese border. Political commentators, environmental experts and hydrologists have all voiced concerns about the dam's ecological impact, the strain it might place on relations between the three eastern Nile nations, and the financial burden of this mega-dam on Ethiopian citizens. Now renamed the Grand Ethiopian Renaissance Dam, the project (due forcompletion by 2015) is set to become the largest hydroelectric power plant in Africa. The scale of the project is staggering: the plant will be capable of producing almost double the electricity of Aswan High Dam in Egypt, while its 63 billion cubic metre (bcm) reservoir is double the size ofEthiopia's largest natural lake. Crucially for Ethiopia's Nile neighbours, thefilling of this huge reservoir is also likely to greatly reduce the flow of water to Egypt and Sudan for several years, and could even permanently alter the amount of water those countries are able to draw from the river.

Details trickling through: The planning and implementation of this project has all been decided behind closed doors. Its $4.8 billion contract was awarded without competitive bidding, for example, to Salini Costruttori, an Italian firm favoured by the ruling party: Salini is also building the controversial Gibe III Dam on Ethiopia's Omo River. Furthermore, the nature of the project was kept under wraps until after site preparation hadalready begun, to the great surprise of regional governments, Nile planning agencies, and Ethiopia's Western donors. It was especially shocking to Norwegian agencies who were working with the Ethiopian government on a similar project for the same stretch of the Nile, now made obsolete by the Renaissance Dam. This level of official opacity has worryingly prevailed beyond the initial announcement of the project.

Expert analysis that would normally accompany such a titanic project haseither not been undertaken or kept characteristically secret. No environmental assessment is publicly available for the project. And no steps were taken before its launch to openly discuss the dam's impacts with downstream Nile neighbours Egypt and Sudan.

Do the environmental and social plans hold water?: The consequences for Ethiopia's downstream neighbours could potentially be catastrophic. The Renaissance Dam's reservoir will hold back nearly one and a half times theaverage annual flow of the Blue Nile. Filling the reservoir - which could take 3 to 5 years - will drastically affect the downstream nations' agriculture, electricity and water supply. Evaporative losses from the dam's reservoir could be as much as 3 billion cubic metres per year. The dam will also retain silt. The Ethiopian government argues that this will bea net positive as it will increase the lifetime of other dams downstream, particularly in Sudan where, for example, the Roseires Dam has been nearly incapacitated by sedimentation. But what about the life expectancy of the Renaissance Dam itself? This is a serious issue for the dam's viability, and there are no known plans for watershed management or soil conservation to address it. In addition, the retention of silt by the dam reservoir will dramatically reduce the fertility of soils downstream.

Sediment-free water released from dams also increases erosion downstream, which can lead to riverbed deepening and a reduction ingroundwater recharge.

Some have predicted even more calamitous consequences of the dam's construction. The Grand Renaissance Dam site is in the Great African Rift Valley near the Afar Depression, an area in which tectonic turmoil is so great it could, according to some accounts, eventually tear the continent in two. The dam could be at risk from damage by earthquakes, yet no oneknows if it has even been analysed for this risk, or the largest earthquake it is being designed to withstand. The failure of such a huge structure puts the more than 100 million people living downstream at risk. On top of thatrisk is that of 'reservoir induced seismicity'. A dam with a reservoir as large as this is not just vulnerable to seismic events - it can cause them.

Scientists believe that there have been more than 100 instances on six continents of large reservoirs

inducing earthquakes. The most serious to

date was China's devastating magnitude 7.9 earthquake in 2008, whichsome experts believe was induced by Zipingpu Dam.

Holding back the tide of criticism: However, some of the most pressing concerns regarding the dam's construction are political. Although its timing coincided with Egypt's political upheaval, the sudden unveiling of the project nevertheless resulted in an outcry. Egypt's primary fears are areduction of its main water supply from the Nile, and diminished nutrients and sediment essential for agriculture. Towards the end of the late Prime Minister Meles Zenawi's rule, Ethiopia adopted a more aggressive stance over the Nile, moving swiftly to build a number of large hydropower dams.However, tension in the region regarding control of the Nile waters has not all be centred on Ethiopia. In May 2010, five upstream Nile states (Ethiopia, Kenya, Uganda, Rwanda and Tanzania) signed a Cooperative Framework Agreement (CFA) to access more water from the Nile. The move was strongly opposed by Egypt, which brandished a colonial-era treaty from 1929 asserting its exclusive rights to the Nile's water supply.

With the Renaissance Dam, these tensions seemed to be coming to a head. Following its announcement in March 2011, Egyptian authorities were quick to lobby international support and strongly hinted that a military response was not deemed disproportionate to protect such a vitalresource. Indeed, Wikileaks recently released documents detailing a planned Egyptian attack on the dam from Sudan. However, attitudes appear to have since softened, and dialogue was opened last month between Egypt, Ethiopia and Sudan. In a bid to allay Egypt's wrath, the Ethiopian government proposed an International Panel of Experts (IPoE) to review and assess the dam's impacts on downstream neighbours. The panel of ten consists of two members from each of the three countries eastern Nile countries, plus four international experts. Their names have not been released and their meetings are behind closed doors, but they are expected to announce their findings four months from now. This seems to have placated Ethiopia's neighbours for now. Egypt has toned down its opposition to the dam, while President Omar al-Bashir of Sudan has even pledged Sudanese support for the project. Yet whatever the IPoE's findings, the Ethiopian government seems adamant the dam will continue. In September 2012, the Ethiopian Ministry of Foreign Affairs declared that Ethiopia would never halt or slow the construction of the dam due to external pressure, calling into question the significance of thepanel. Needless to say, many in Sudan and Egypt still have serious concerns about the project. Whatever the outcome of political arbitration,it remains irresponsible for Ethiopia to build Africa's biggest hydropower project, on its most contentious river, with no public access to critical information about the dam's impacts - a flawed process which can hardly result in a sustainable project. If the Ethiopian government is serious about maintaining good relations with its Nile neighbours, and if it truly wishes to develop projects that will carry its people and the broader region into prosperity, it must begin by allowing some light to penetrate this secretive development scheme.

Ethiopia: Nile Dam Project - A Hydro-power hope, but regional sore point’

Analysis: Ethiopia has begun construction of a 6,000 megawatt (MW) hydroelectric dam on the Blue Nile river, a move that has been greeted enthusiastically by many Ethiopians but that is causing concern in the downstream nations of Sudan and Egypt.The project, which is scheduled to take six and a half years to complete, is being managed by the state- owned power utility company, Ethiopian Electric Power Corporation (EEPCo). The dam is being built about 900 km (560 miles) north-east of the capital, Addis Ababa, and just 40 km (25 miles) from the Sudanese border. Ethiopia's government hopes to capitalize on the energy potential of a river that is revered by the Ethiopian population but that until now has not been significantly exploited to feed the country's growing need forelectric power.Ethiopia is the source of the Blue Nile, and its territory contributes up to 86 percent of the river's water. The Blue Nile in turn is responsible for more than half of the water in the Nile, the world's longest river system. The other main source, the White Nile, originates on the Ugandan side of Lake Victoria. The new project is not the first dam to be constructed on tributaries of the Nile in Ethiopia. Three smaller projects with a combined capacity of about 760 MW have already been completed, and EEPCo is seeking financing for a 278 MW dam on another tributary, the Chemoga-Yeda River. But the planned Grand Renaissance Dam (GRD) dwarfs these projects in scale and cost. The 6,000 MW dam will be built byItalian construction company Salini Costruttori, which received the construction contract in late 2010, while electromechanical work is being done by a local company, Metal and Engineering Corporation. Ethiopia hasbeen dubbed "the water tower of east Africa" because of its numerous river and lake systems. The Nile is an emblematic part of the country, immortalized in poems and songs and even on coins and bank notes. But its potential for hydroelectric power has until now gone largely unused.Formany Ethiopians, the new planned dam is not only about lighting their houses and providing power for businesses and to export, but it also holdsa symbolic significance, a way of looking forward from memories of famineand conflict.

Worried neighbours: Despite its popularity among Ethiopia's population, the dam project has caused consternation in neighbouring Sudan as well as in Egypt, both downstream countries that rely upon the Nile for almostall their water and fear the dam will cause a reduction in water available to them.The new dam will eventually create a lake containing more than 60 billion cubic metres of water, twice as much as Lake Tana, Ethiopia's largest body of water.There are also concerns about the potential environmental impact of the dam, although the scale of opposition has been smaller than that provoked by the Gibe III dam. Gibe III has provoked opposition from groups concerned about the drying up of Kenya's Turkana Lake, the world's largest desert lake, which is fed by theGibe river, and the possible displacement of tribal people in Ethiopia and Kenya.Gossaye Mengiste, an official of the ministry of water and energy, which oversees EEPCo, said he believed the environmental impact of the project would be minimal and that because the area around the dam is sparsely inhabited, no mass relocation of people would be necessary."The

dam will lessen evaporation in downstream areas in Sudan and Egypt, as well as (providing) a reduced risk of flooding and siltation which the Aswan dam in Egypt is particularly affected by," Mengiste said.Ethiopia has periodically had tense relationships with Egypt and Sudan, countries which rely heavily upon the Nile for water and agriculture. Concerns aboutthe effects of an Ethiopian dam upon water levels in the Egyptian Nile dateback to the late 1970s, when then-president Anwar Sadat reacted angrily to Ethiopia's announcement of a plan for a dam on the Blue Nile. Recent articles in Ethiopian newspapers, referring to documents leaked to Wikileaks, have suggested that Egypt might be preparing contingency plans to sabotage the dam with air strikes if it is built. Magdy Amr, Egypt'sassistant foreign minister for Nile Basin state affairs, dismissed the reports, pointing out that the files in question date back to 2010, before construction of the new dam was even announced. Egypt has about $2 billion in business investments in Ethiopia.Abdelrahman Sirelkhatim, Sudan's ambassador to Ethiopia, firmly dismissed Ethiopian fears that his country is conspiring with its northern neighbour to damage the dam, widely known by its initials, GRD."I don't know how we can threaten the GERD when we are trying to contribute financially to build the dam, and our engineers are contributing technically," Abdelrahman said. GoE (November 23, 2012)

Gilgel Gibe III Dam: Feasibility study, Design, and Construction’ The Gilgel Gibe III Dam is an under construction 243 m high roller-
compacted concrete dam with an associated hydroelectric power plant on the Omo river in Ethiopia. Once completed it would be the largest hydroelectric plant in Africa with a power output of about 1870 Megawatt (MW), thus more than doubling total installed capacity in Ethiopia from its2007 level of 814 MW. The Gibe III dam would be part of the Gibe cascade, a series of dams including the existing Gibe I dam (184 MW) andGibe II power station (420 MW) as well as the planned Gibe IV (1472 MW)and Gibe V (560 MW) dams. The existing dams are owned and operated by the state-owned Ethiopian Electric Power Corporation (EEPCo), which isalso the client for the Gibe III Hydroelectric dam. As of February 2011, according to the project company the project was 41% completed and thecompletion of the dam was tentatively scheduled for July 2013. Full commissioning is scheduled for June 2013 after the reservoir will have filled and the hydroelectric plant will have been completed.

Design - The Gilgel Gibe III Dam will be a 610 m-long (2,000 ft) and 243 m (797 ft) high roller-compacted concrete dam. It will withhold a reservoirwith a capacity of 14 km3 (3.4 cu mi) and a surface area of 210 km2 (81 sq mi), collecting with a catchment area of 34,150 km2 (13,190 sq mi).

The reservoir's live (active or "useful") storage will be 11.75 km3 (2.82 cumi) and dead storage 2.95 km3 (0.71 cu mi). The normal operating level of the reservoir will be 892 m (2,927 ft) above sea level with a maximum of 893 m (2,930 ft) and minimum of 800 m (2,600 ft). The dam's spillwaywill be 108 m (354 ft) long and floodgate-controlled with having a maximum discharge capacity of 18,000 m3/s (640,000 cu ft/s). Water above 873 m (2,864 ft) above sea level can be discharged through its

gates. Feeding the dam's power house will be two penstocks that each branch into five separate tunnels for each individual turbine. The power house will contain ten 187 MW generators supported by Francis turbines for a total installed capacity of 1,870 MW. The initial design of the dam foresaw a rock-fill dam. However, due to difficulties with obtaining proper and sufficient insurance coverage for the rock-fill dam, the design has been changed to roller-compacted concrete. The rock-fill design has been criticized by an independent feasibility study submitted to the African Development Bank in 2009. In particular, the study questioned the structural stability of the dam, saying that the risk of a catastrophic failurewas "not insignificant".

Gilgel Gibe III dam could help Ethiopia's development, but it might also bedisastrous for the environment and threaten half a million people's livelihoods' There are concerns that more than half a million people's livelihoods along the Lower Omo Valley in Ethiopia and Kenya could be threatened by the construction of the Gibe III Dam project. The work, which has been ongoing since 2006 and is now over halfway to completion, faces overwhelming pressure from environmentalists who have raised concerns over dangers associated with the dam. Often compared to China's Three Gorges, the Gibe III Dam is to be the world's fourth largest hydropower project and will generate over 1,800 megawattsof power. The Ethiopian government expects to earn over $400 million annually from power exports Awash with environmental concerns: But Ethiopia's methods for achieving this goal have been widely condemned.

In addition to displacing local Ethiopian communities in the vicinity of the dam, the completion of the $1.7 billion project could also wreak havoc in Lake Turkana, a major source of livelihood to more than 500,000 people downstream in Kenya. Considering the Omo accounts for 90% of the lakeswater supply, opponents of the project argue that water levels in Lake Turkana could seriously suffer. Levels could drop by as much as 22 metres(the average depth being only 30 metres). Of particular concern in this scenario is the depletion of the lake's fisheries. These are the main sourceof protein for local communities, while trade in dried fish is also a major source of income. Back in 2009, the World Bank's Vice-President for Africa, Obiageli Ezekwesili, raised an alarm over the way in which the Ethiopian government was managing the project. In particular, she queried the Environmental Impact Assessment report, saying it was "not conclusive". She also questioned the manner in which the Ethiopian authorities awarded the contract to an Italian firm Salini Costruttori without competitive bidding.

This compelled the African Development Bank (AfDB) to commission a study arguing that the initial Environmental and Social Impact Assessment(ESIA) had not captured important aspects of the project. A more recent audit of the project by a group of researchers from CEE Bankwatch Network Poland revealed that the entity set up by the Ethiopian government to monitor the environmental impact of the project had limited capacity to carry out work. It further said that it had no clout to enforce compliance with environmental safeguards. "The team said the

construction of such a mega-sized dam would compromise a fragile and unique ecosystem, which is identified as a protected area", said Jakub Gogolewski, Coordinator for CEE Bankwatch Network. But the group claimed that its team of researchers could not actively pursue the extent of this impact due to concerns of government persecution. Regardless, environmental and humanitarian organisations remain acutely concerned. A paper published by International Rivers this month has warned that the dam's completion will likely "generate a region-wide crisis for indigenous livelihoods and biodiversity and thoroughly destabilize the Ethiopia- Kenyan borderlands around Lake Turkana". The reduced flow of sedimentsinto the lake will "lead to the loss of the ecologically productive floodplain used by wild species, fish, domestic stock and agriculture". Of even graverconcern is the potential for conflict as a knock-on effect of this ecological turmoil. The paper asserts that those who lose their livelihoods and homelands are "likely to seek out resources on their neighbours' lands in the Kenya-Ethiopia-Sudan borderlands. Well armed, primed by past grudges, and often divided by support from different state and local governments, these conflicts can be expected to be bloody and persistent."

Investment drying to a trickle: The European Investment Bank and the African Development Bank withdrew funding consideration from the project in 2010, citing social and environmental risks. Partially because ofdisrespect from an Ethiopian official allegedly telling the European Investment Bank it could "go to hell" over its policies regarding displacement of indigenous peoples, and partially because the terms of the uncompetitive contract with Salini violate the Bank's procurement policy. The World Bank also has no current plans to support the project. Itis China then, through the Industrial and Commercial Bank of China (ICBC) and the Dongfang Electric Corporation, which is to provide most ofthe necessary $500 million sub-contract. This has also been met with displeasure: details on the power deal between the two countries were made public after the Ethiopian government released an Environmental Impact Assessment report that was widely rejected. Ikal Ang'elei, the founder of the Friends of Lake Turkana, and winnerof the 2012 Goldman Environment Prize for Africa says campaigns to push China out of the project have been unsuccessful. And she says that lack of support from the Ethiopian and Kenyan governments have made the organisation's attempts to defend the lake's environment more difficult. Although it will not fund the dam itself, the World Bank is also under scrutiny by campaigners. In July, the Bank agreed to give a $684 million loan to Ethiopia to build a 1,000-kilometre electricity transmission line from Gibe III into Kenya. "This could be a signal that the Bank has endorsed the project despite its withdrawal of funding two years ago", says Richard Leakey, a renowned conservationist and founder of the Turkana Basin Institute. Leakey says the fight will go on until the lake is finally secured. Power prospects in a parched land: While the social and environmental impacts of the project are huge, supporters of the dam remain convinced of eventual benefits from the sacrifices. "Ethiopia's electricity generation

capacity will go up: power cuts will be reduced: and electricity will be extended to at least some of the more than 70% of the population withoutaccess", says Seleshi Bekele, a senior researcher with the Addis Ababa- based International Water Management Institute. He claims the power exports will bring important revenue into the country, helping to lift annual per capita GDP (PPP) above $1,100. Neighbouring Kenya is expected to import more than 500 megawatts to check the recurring power outages that have had a chilling effect on the manufacturing sector.The Ethiopian Electric Power Corporation says more than 200 megawatts will be exported to both Djibouti and Sudan. In addition, a study was conducted to examine the feasibility and profitability of exporting electricity to Yemen through Djibouti, Somalia, Eritrea and Egypt. As the controversy engulfing Gibe III rages on, plans are on the table regarding the construction of two more energy plants - Gibe IV and Gibe V. These are expected to cover Ethiopia, Kenya and Sudan. "We are not opposed tobuilding power plants in the region. Certainly, we need affordable and reliable power. But we cannot sacrifice our environment for such developments", says Ang'elei. But, she believes, prior and independent studies need to be carried out to ensure sustainability and conservation ofthe ecosystem as well. THINK AFRICA PRESS - Mark Kapchanga is a researcher at Kenya Association of Manufacturers in Nairobi and a publisher at Media One International.

Egypt and Ethiopia heading toward a war over water'

In the coming years, Egypt and Ethiopia may be forced to fight a “water war” because Ethiopia’s ambitions contradict Egypt’s historical and legal rights in the Nile waters. Ethiopia can only be deterred by the regional andinternational balance of powers, which in recent years has favored Ethiopia.

For any Egyptian government, Egypt’s water share and securing the Nile’s headwaters are the top national security priorities, irrespective of the Egyptian government’s ideology or domestic policies. This fact is dictated by geography. For thousands of years, Egyptian rulers have been aware how important water is for Egypt. Water is the lifeline of Egypt (97.5% of Egypt is barren desert). Egyptian rulers have always used any means to defend their country’s historic rights to the Nile waters. As Greek historianHerodotus said, "Egypt is the gift of the Nile.” Egyptian civilization, which is one of history’s greatest civilizations, depends on the Nile. To illustrate the Nile’s importance, we should remember that Egypt is the largest desert oasis in the world. Life in Egypt is concentrated on the river banks where 90 million people live. In short, any Egyptian government should have one eye on the Horn of Africa — on Ethiopia, where the source of theNile lies — and another eye on the Sinai Peninsula and the Levant, and thebalance of power there. History has shown that most of Egypt’s invaders entered through that door.

Egypt’s sentries against the country’s internal and external foes have beensleeping on the job. Their first eye failed to notice the developments at the Blue Nile’s source in Ethiopia (the Blue Nile constitutes 86% and the White Nile 14% of the Nile water volume. The two tributaries meet in

Sudan before flowing to Egypt). Their second eye had lost the ability to distinguish friend from foe. Now, with the worsening economic crisis and the political deterioration between the ruling Muslim Brotherhood and the opposition, the balance of power is more and more tilting toward Ethiopia,which may unilaterally increase its water usage. That will affect Egypt's historic rights of the Nile water and cause a serious threat. In the report below, we will try to shed light on the Nile conflict and on why Ethiopia's negotiating position toward Egypt has improved. We will end with a recommendation. The conflict over the Nile waters: The two groups fighting over the right waters are as follows: the first group are the downstream countries, it includes Egypt and Sudan. The other group are the upstream countries which includes Ethiopia, Eritrea, Uganda, Congo, Burundi, Tanzania, Southern Sudan, Rwanda and Kenya.

Egypt depends on the Nile River for 95% of its water needs for drinking, agriculture and electricity generation. The growing Egyptian population is increasingly dependent on Nile water. Egypt has historical rights to these waters under the Nile Water Agreement signed with Britain in 1929. It gave Egypt the right to veto any project in upstream countries affecting Egypt's share of water flowing to it. It is worth mentioning that the 1929 agreement is binding for the three upstream countries — Tanzania, Kenyaand Uganda — on the grounds that Britain, which colonized these countries, was their legal representative and could sign binding international agreements on their behalf. Egypt codified its legal status in an agreement with Sudan in 1959. The agreement gave Cairo 55.5 billioncubic meters of water (or 66% of the total water flow), which would go tothe Aswan Dam, and Sudan received 18.5 billion cubic meters (22%). Theremainder, 12%, is lost to evaporation.

The downstream countries argue that they were not a party to those agreements at the time, and therefore do not recognize their legitimacy. The upstream countries want to modify the water-sharing agreement andkeep more of the water by building dams, which will directly affect the water share of the downstream states, Egypt and Sudan. The problem is compounded by the projected large population increase in the Nile basin.The UN projects that the population in the 11 basin states will reach 860 million people by 2050. This is pressuring both sides to try to improve their positions in the conflict over the Nile waters.

In May 2010, Ethiopia drafted the Entebbe Agreement to modify the historical and legal basis for the sharing of water. Most upstream countriessupported the agreement but Egypt and Sudan refused it. It is true that the Entebbe Agreement is not legally binding for Egypt and Sudan, but it does show that Ethiopia is aware of the balance of power and its ambition to impose facts on the ground regarding the construction of dams, which will necessarily affect Egypt's share in the Nile waters and thus represent an existential threat to Egypt. It is true that Ethiopia cannot force Cairo tosign, but the Entebbe Agreement shows that a major crisis between Cairo and Addis Ababa is on the way. What follows is an explanation of the Ethiopian diplomatic attack on Egypt and Sudan.

Geopolitical framework strengthens Ethiopia's position'

In recent years, the geopolitical framework has clearly shifted in Ethiopia'sfavor, and it shifted the balance of power between Ethiopia and Egypt.

The geopolitical changes that favor Ethiopia can be seen in six keyindicators:

First, the disintegration of Somalia, Ethiopia's traditional rival with which itfought a tough war over the Ogaden region, removed the geopolitical balance facing Ethiopia's political ambitions in the region. Ethiopia exploited Somalia's disintegration to strengthen its regional presence in the Horn of Africa. For years, Ethiopia has been "fighting terrorism" emerging from Somalia. Ethiopia has been doing that under an American umbrella from 2006 to 2009 and then again since 2011 until now. The second indicator is represented by the partition of Sudan into two states: Sudan and South Sudan. That development has weakened Sudan (and thus Egypt) in the Horn of Africa and allowed Ethiopia to participate, since2012, in the UN peacekeeping forces in the Abyei region, which is disputed between Sudan and South Sudan.

The third indicator is the following: the weakening of Sudan has shifted the balance of power in Ethiopia's favor. The crisis in Darfur and the international isolation of the Sudanese president (an international arrestwarrant was issued against him by the International Court of Justice in The Hague in 2009) has significantly limited Khartoum's ability to maneuver in the Nile conflict.

The fourth indicator is the improved relationship between Ethiopia and theWest in general, and between Ethiopia and the US in particular, after Addis Ababa emerged as a reliable partner in the Horn of Africa. Every year, Ethiopia gets $4 billion in military, development and food assistance.But the matter is not limited to direct aid. The West has started looking atEthiopia differently in regard to development projects, such as the construction of dams in Ethiopia. The West had opposed such projects for decades because they were considered a threat to regional security.

The fifth indicator is about China. China is Ethiopia's primary trade partnerand Beijing has expressed willingness to finance a dam construction in Ethiopia and offered Chinese expertise in building large dams. China wishes to have a foothold in the region. There is oil in South Sudan and the Congo has mineral resources.

The sixth indicator is the weakening of Egypt's political weight in the Hornof Africa. Egypt has no role in Somalia and was not even a key party in the negotiations between Sudan and South Sudan. Egypt's preoccupationwith internal matters is weakening its ability to confront regional and international players, such as China. Even though Egypt is the biggest market for Chinese goods among the 11 basin countries, China has favored other considerations over Egyptian priorities and Egypt's rights inthe Nile waters. So much so that China has offered its technological expertise in constructing dams, which is a complete disregard to Egyptianrights. What will Egypt do about all that? Only God knows.

A recommendation: In the coming years, Egypt and Ethiopia may be forced to fight a "water war" because Ethiopia's ambitions contradict Egypt's historical and legal rights in river waters. Ethiopia can only be

deterred by the regional and international balance of powers, which in recent years has favored Ethiopia. The government of Hisham Qandil (an irrigation expert, not a diplomat, legal expert or strategist) seems unable to manage such a complex issue with legal, political, economic, military and international aspects. His government is unable to solve everyday problems that are less complex, such as security, traffic, and fuel and foodsupplies. This portends dire consequences for Egypt.

What is needed is a way to manage the crisis and use Egyptian soft powertoward Ethiopia, especially the Coptic Orthodox Church, which is the Ethiopian Church's mother church. It is necessary to form a fixed Egyptianteam to manage this highly sensitive issue. The team should go beyond party affiliation and include leading Egyptian Nile specialists. Ideological orreligious affiliation should not be a factor in choosing that Egyptian crisis team. What is important should be the capabilities and competencies of the team members, who will come from the "clay" of the country, not from a particular group, party or political current. Clay, to those who don'tknow, is what Egyptians call their country's soil, which is a fertile soil resulting from the mixing with the Nile water.

Will Egyptian President Mohammed Morsi realize the seriousness of the situation and deal with that issue as a major national matter and quicklyimplement the required policies and procedures, or will he hesitate, as usual, and go down in history as someone who squandered the historic rights of Egypt and its future generations? By: Mustafa al-Labbad Translated from As-Safir (Lebanon).

South Sudan rebuffs Egypt on Nile waters agreements'

WIC - Addis Ababa, March 22, 2013: South Sudan has expressed its opposition to a 1959 Nile Water agreements between Sudan and Egypt. The country said it was already on its way to join the Cooperative Framework agreement, which Ethiopia, Kenya, Uganda, Rwanda and Tanzania signed in 2010, and later Burundi in 2011. "South Sudan does not recognise - and underline does not recognise – the content of the 1959 agreement," said Water and Irrigation minister Paul Mayom Akech."Having been under Sudan at the time, we could not say anything, todaywe say, we have nothing to do with this agreement," the minister said.

Riparian countries that signed the Cooperative Framework agreement are discontent with the 1959 deal that gives Sudan and Egypt a larger share of the Nile waters. "We have joined the NBI (Nile Basin Initiative) and are already a long way to joining the Cooperative Framework agreement, being an entity within which all the Nile Basin countries come together anddiscuss how best they could utilise the water resource," Mr Mayom said.

He told a local radio station that: "Egypt, Sudan and the DR Congo have refused to ratify the agreement for reasons that it contravenes the 1959 agreement". Egypt dispatched a high profile delegation led by Prime Minister Hisham Qandil to South Sudan last week to, among others, seek support for its position against the Cooperative Framework agreement. MrQandil signed Memorandums of Understanding (MoUs) with Vice-PresidentRiek Machar on education, health, agriculture and investment. There was

none on Nile waters. Mr Mayom said Juba was planning the launch of a draft document for technical cooperation with Egypt. (African Review) Egypt continues to downplay any talk of a military confrontation with Ethiopia over Ethiopian damming sources of the Nile River' - March 24, 2013 - Well it should, because revolutionary Egypt already has enough political and economic turmoil. However, Egypt and Ethiopia do have a significant difference of opinion over a very precious resource: water. The Egyptian government has said that it seeks its equitable share of Nile River water. The Egyptian government equates equitable to traditional: upstream nations, like Ethiopia contend that the traditional division favors Egypt. Both Egypt and Ethiopia value good relations with the European Union and the U.S., if only because the EU and the U.S. provide them both with economic aid. Saber-rattling, much less warfare, would give the EU and U.S. political fits. Water war? Not likely. Hardball water diplomacy?That is already happening. (Austin Bay)

However, Ethiopia's political and geographic position makes it a tough adversary for Egypt. Ethiopia is unquestionably the dominant political actor in the Horn of Africa. Somalia remains chaotic but the situation there, compared to a decade ago increasingly favors Ethiopia. Eritrea, which would love to ally with Egypt against Ethiopia is broke. Every monththere are new rumors of coups and infighting among Eritrean factions.

Sudan, another likely Egyptian ally in a war with Ethiopia, is on the outs politically with the region and the UN. Worse yet Sudan faces numerous insurgencies, from Darfur to South Kordofan. Nile River water is absolutelyessential to Egypt's existence. This isn't news – it has been that way for atleast 7,000 years. Currently Egypt gets 95 percent of its water from the Nile. Ethiopia's dam projects are on the Blue Nile (which starts in the Ethiopian highlands), the source of 85 percent of all Nile River water. No wonder every so often Egyptians say they will go to war with Ethiopia overwater rights.

Ethiopia also objects to the 1929 Nile Water agreement (engineered by Great Britain) which gives Egypt the right to veto upstream water projects. Ethiopia did sign the agreement. However, the 1929 agreement does affect Uganda, Kenya and Tanzania. In 2010 Ethiopia authored a new regional water sharing proposal, the Entebbe Agreement. This is alsocalled the Cooperative Framework Agreement and Nile Basin Initiative.

This agreement would give Uganda, Kenya and Tanzania a diplomatic mechanism for altering the 1929 division of water rights. Rwanda and Burundi also support the Entebbe agreement. Kenya and Uganda are Ethiopian allies and have forces serving in Somalia. Egypt refused to consider the Entebbe Agreement. Sudan also rejected it. Today, South Sudan's government said that South Sudan will support the Entebbe agreement. Sudan and South Sudan are always five minutes away fromgoing to war with one another.

East Africa - Half a million Kenyans, Ethiopians face conflict, hunger due toDam – Report'

AlertNet: April 15, 2013: Half a million Kenyans and Ethiopians are likelyto be displaced, go hungry and face conflict due to a controversial dam

linked to a forcible resettlment programme 'bankrolled' by British taxpayers, the lobby group Survival International said. The Gibe III hydropower dam, due for completion in 2014, is being built on the Omo River in southern Ethiopia. It will reduce the flow of water to farmers and pastoralists living downstream, including those 600 kilometres to the south in Kenya, where the river flows into Lake Turkana, the world's largest desert lake. The British government's Department for InternationalDevelopment (DFID) is one of many international donors funding Ethiopia's Protection of Basic Services (PBS) programme, which subsidisesbasic services and local government salaries. This includes areas where people are being relocated to make way for the dam, part of a wider programme to resettle people into designated villages - known as villagisation - begun in 2010.

Survival argues that the forced resettlment of thousands of tribal people could not be carried out without the DFID-funded PBS programme. "UK money is bankrolling the destruction of some of the best-known pastoralist peoples in Africa," Stephen Corry, director of Survival said in astatement. "The UK government is renowned for only paying lip service tohuman rights obligations where tribal peoples are concerned. When it comes to human rights in Ethiopia, DFID's many commitments are worthless." It is not the first time that the PBS programme has come under fire. Last year, the London-based law firm Leigh Day began legal action against DfID on behalf of an Ethiopian man, known as Mr O, who claims he suffered severe abuse under the villagisation programme. DFIDvisited the Lower Omo, where it heard reports of rape and intimidation, but it has not been able to substantiate the claims. Survival International cites three recent reports by Oxford University, International Rivers and the Africa Resources Working Group to support its case.

The Africa Resources Working Group report warns of "an impending human rights and ecological catastrophe" and a "very real threat of mass starvation and armed conflict in the border region." The International Rivers report says that those who lose their homes and livelihoods are "likely to seek out resources on their neighbours' lands in the Kenya- Ethiopia-Sudan borderlands." "Well armed, primed by past grudges and often divided by support from different state and local governments, theseconflicts can be expected to be bloody and persistent," it said. The Ethiopian government is planning to use the water to develop large-scale irrigation schemes, create jobs and generate huge amounts of electricity to power the region.

Egypt rejects Entebbe agreement's decisions on Nile water’

April 17, 2013: Minister of Water Resources and Irrigation Mohammed Bahaa el-Din said Egypt will not agree on any decision to divide the water of the Nile, if it is taken without its participation. He added that Egypt would use the appropriate international mechanisms in the right time. Theminister pointed out that there are continuing Egyptian-Sudanese contactswith Nile Basin countries, adding that cooperation is the best way to achieve development and stability for the peoples of the region. Bahaa el- Din stressed that the ministry takes all negative impacts, which may result

from the establishment of the Ethiopian Dam, into account. The Ministersaid Ethiopia cooperates with Egypt and presents all studies and information about the dam. The final report will be submitted by the endof May 2013. The minister explained that there is a new mechanism for cooperation between the Eastern Nile Basin countries aside from the Entebbe Agreement the State of South Sudan is invited to join. Egypt State Information Service (Cairo)

Eritrea offers support to Egypt's "historic rights" over the Nile' GoE: April 18, 2013: Eritrean Foreign Minister Osman Saleh and Presidential Adviser for Political Affairs, Yemane Gebreab, handed a message from President Isaias to President Morsi of Egypt on Monday (April 13th) this week. According to Egypt's State Information Service, President Morsi, who said he looked forward to meet Eritrea's President, praised Eritrea's support for Egypt's claim to "historic rights" to the Nile water. This is the claim has led Ethiopia, Kenya, Uganda, Rwanda and Tanzania, and later Burundi to reject the colonial era Nile Water agreements between Egypt and Sudan. All these Nile Basin countries havesigned the Cooperative Framework Agreement to provide for reasonable and equitable utilization of the river. South Sudan has yet to sign but has also expressed its opposition to the 1959 Nile Water agreements between Sudan and Egypt. Government of Ethiopia (Addis Ababa)

NILE Politics - Military option was not considered - Egyptian Minister' CAIRO - April 30th, 2013: Minister Dr Mohamed Bahaa El Din, Minister of Water Resources and Irrigation, dismissed that news report that Egypt is preparing to attack Ethiopia to preserve. It is to be recalled that MiddleEast NewsLine claimed last week that: "[Egypt's] military has been preparing for the prospect that air strikes would be ordered to stop construction or simply destroy the Ethiopian dam," Minister El Din claimedthat the news is baseless and there has not been such discussion in the government. He made the remarks in an interview with a channel of Al- Jazeera on Saturday evening. Dr. El Din claimed that he, as a member of the government, would not recommend military solutions for handling theRenaissance dam issue. This is not a weakness, the Minister noted, rathercommitment to negotiation and the language of dialogue, which are certain to bring much better results. He added that talks of threats and war come back with negative results.

The Minister hopes that South Sudan will not rush to sign of the Nile BasinCooperative Framework Agreement (CFA), claiming that the signing wouldnot add anything as it is already signed by 6 countries. The Minister is apparently saying that the CFA's requirement of the signature of 6 countries is fulfilled and they can start ratification process with or without South Sudan anyways. There are non-military measures On the other- hand, former Minister of Water Resources and Irrigation, Dr. Mohamed Nasr Allam claimed there are effective measures - far from the use of violence – to pressure Ethiopia, In an interview with an Egyptian newspaper last Friday, the former Minister ruled-out the military option to prevent Ethiopia from completing Renaissance dam, explaining that there are alternatives to solve the problem, including convincing Ethiopia to

reduce the dam's reservoir capacity from 74 billion cubic meters to 14billion or to build smaller dams. Dr. Allam suggested that there are many political measures which can be applied in coordination with "the brotherly State of Sudan" to pressure Ethiopia. Refusing to buy electricity from Ethiopia could be one of such measures, he said. Dr. Allam urged Egyptian officials to work with donors to prevent the provision of "any financial support, technical, technicians, based on the Egyptian-Sudanese booklet that shows damage to the dam".He also recommended strengthening ties with countries in the region suchas Eritrea, Somalia and Djibouti. Dr. Allam suggested lobbying the Nile Basin countries by explaining Egypt's perspective, the impact of dam and that Egypt is not aganst the development of Ethiopia. In a related development, spokesperson of Egypt's President downplayed tensions withEthiopia last Wednesday. He was quoted as saying that: Ethiopia will not let its construction Renaissance Dam affect Egypt, if the dam has a negative impact, Ethiopians will "understand the situation and not allow harm to befall Egypt in the light of the historic ties between the two counties and the other Nile Basin countries"

Egypt drowns in the Nile ‘water war’

The Nile is the longest river in the world and runs through Rwanda, Ethiopia, Tanzania, Uganda, South Sudan, Sudan and Egypt, but instead of the being the great uniter, the Nile has become the great divider because of a dispute that is causing serious tension between two of thosecountries.

Analysis: By Abdel Latif el-Menawy - May 6, 2013 - Three years ago I warned of the water crisis and the Renaissance Dam via a series of articles. I traveled to Ethiopia and Eretria and met with late Ethiopian premier Meles Zenawi and Eritrean president Isaias Afewerki in an attemptto communicate and provide the public with the opportunity to know what’s going on. I have also done so out of my belief that journalism always has a role that when played properly and within the boundaries of national goals especially on foreign fronts, it can be a factor that helps achieving solutions. Back then, my concern was the crisis threatening Egypt: a war over the Nile’s water. So I went to Ethiopia, Eritrea, Sudan and South Sudan in an attempt to get a clearer picture and understand.

Our problem is that we always have a prejudgment on people and certain issues, and such an attitude sometimes leads us to the wrong conclusions.My aim was to understand what is currently going on regarding the Nile water war, to understand the reason for the Ethiopian stance and to understand where we currently stand regarding this matter. Back then, the suggested solution was that Egypt will not allow building any dams that affect its share of water. The international law actually stands on Egypt’s side regarding this point. At the same time, however, as studies were conducted to establish dams on the Nile from upstream countries, Egypt showed its willingness to contribute and cooperate in establishing them as long as no harm is done to Egyptian national security interests. I believe this is right path towards resolving this crisis: cooperating, studying and negotiating at the same time. The nine countries that share

the Nile with Egypt are considered unstable countries which are incapableof launching giant projects on the river or incapable of agricultural land reclamation. These countries also suffer from local crises. Some of them suffer from civil wars, tribal struggles and economic problems. Huge projects also require international funding which cannot be provided without feasible studies approved by all countries that benefit from the river. Egypt's entrance to deal with this crisis comes here. This point as well brings up the probability that there is no imminent danger that threatens the Nile's flow to Egypt in the foreseeable future.

Political moves: During that phase, Egypt made several political moves. The most important of them was Egypt's concern over its strong ties with the Nile countries particularly Ethiopia which is connected through the river to Egypt and Sudan. Another move was Egypt's concern that developing the resources of the water cannot be carried out without the effective participation of all three countries since most of the Nile Basin countries enjoy more than one source of water. Egypt's share of rainfall however does not exceed 20 millimeters whilst in some of the Nile Basin countries, it can reach 20,000 millimeters. This means that Egypt suffers from a water deficit that reached more than 30%. It overcomes this deficit through recycling water. On this basis, we must know that any expense, burden or effort carried out in the area of the Nile Basin countries is not a waste of resources but a form of direct colonization in the future. And therefore, cooperating and strengthening ties with these countries is an important fateful issue. We must understand that any expense, burden or effort carried out in the area of the Nile Basin countries is not a waste of resources but a form of direct colonization in the future This is why the presidential initiative back then to establish a commission for the Nile Basin countries was important regardless of signing the Nile Basin Initiative now among the Nile Basin countries. Another important move was the concern not to escalate the rhetoric when addressing this issue yet emphasize that Egypt's historical rights of the Nile water are nonnegotiable. But at the same time, some of us must not be carried away with enthusiasm or with the desire to achieve fake heroic acts and end up escalating the rhetoric to reach the extent of making threats and sounding the drums of a war when there are no drums!

The issue must be resolved through maintaining patience, resuming negotiations and emphasizing that the concept of cooperation is the basisto compensate what was lost and the basis to maintain our rights that willnot be harmed. Although it has been three years since all of this, the group ruling Egypt drowned in its failure, greed and fake renaissance anddrowned us with it. According to media reports, the Brotherhood has not yet awaken from its slumber and is still studying the experts' commission's final report on the Ethiopian Renaissance Dam. The report will be submitted before the end of May in order to be put before the presidents of Egypt, Sudan and Ethiopia. The report indicates that Ethiopian studies on the dam "are incomplete." This is the same conclusion drawn by the experts' commission's last progress report. A practical study has also confirmed that the expected results from

establishing the dam will be “disastrous” and will lead to displacing millions of Egyptian families. Amidst all this, what is really strange and what really raises a lot of questions is that the prime minister who is supposed to be aware of the repercussions of the upcoming water crisis since he served as chief of two ministers’ offices for five years and then later served minister of irrigation has in fact added salt to the wound andfurther drowned us in the Nile crisis.

"We want to live and Ethiopians want to live – Egyptian Minister ofDefense'

Ahram Online: May 12, 2013: Defence Minister Abdel-Fattah El-Sisi dismisses notion of using military force as means of resolving longstanding dispute over Egypt's share of Nile water. Minister of Defence Abdel-Fattah El-Sisi stressed his refusal to resort to military force in orderto solve an ongoing saga over Egypt's share of the Nile water. "We want to live and they [Ethiopians] want to live, so we have to find a peaceful solution for this file which was abandoned for so long [during the reign offormer President Hosni Mubarak]," El-Sisi said while at a military base in Dahshour, Giza governorate. Fears over probable shortages of potable water in Egypt rose after a technical report on the impact of a new Ethiopian mega dam had revealed possible concerns of potential negativeinfluence on Egypt’s share of the Nile Water. The report, according to a government official, is not suggesting that the 'Renaissance Dam' will drive Egypt into "water starvation but it is certainly saying that certain measures have to be followed to make sure that Ethiopia gets the water necessary for storage in the dam in line with Egypt’s consent and needs." Irrigation minister said, 'Egypt not opposed to Ethiopia's Renaissance Dam'.

Ethiopia diverts Blue Nile for controversial dam build'

Ethiopian News: Ethiopia diverted the Blue Nile to begin building its largest dam project to date, the 6,000 MW Grand Ethiopia Renaissance Dam (GERD) – a move that angered Egypt, which fears its water supply will shrink over the many years it will take to fill the huge reservoir. “Ethiopia has reportedly neglected to formally consult with downstream Sudan and Egypt on the scheme, a decision which could further strain relations between the countries” Besides the tensions this huge project iscausing politically, there is growing concern that the dam will not producenearly as much power as it has been designed to.” “While there are no known studies about the dam’s impacts on the river’s flow, filling such a huge reservoir (it will hold up to 67 billion cubic meters of water, and could take up to seven years to reach capacity) will certainly impact Egypt, which relies almost totally on the Nile for its water supply. Development Today magazine reports that the Nile flow into Egypt could be cut by 25% during the filling period. Many fear the project could set offa water war in the region, and indeed, in mid-2013, tensions flared dramatically. Climate change could increase the project’s many risks. The potential for conflict is probably the main reason international funders have shown no interest in supporting the project.”

Egypt and Sudan are concerned that the dam will affect vital water supplies Ethiopia has started diverting a stretch of the Blue Nile to makeway for a $4.7bn (£3.1bn) hydroelectric dam that has caused a dispute with countries downstream, state media say. The Great Ethiopian Renaissance Dam, which is currently under construction, is part of a
$12bn (£8bn) investment project to boost power exports. The Blue Nile isone of two major tributaries of the Nile – one of the world's longest rivers.Egypt and Sudan object to the dam. They say it violates a colonial-era agreement, which gives them rights to 90% of the Nile's water. 'Fair use' The Grand Renaissance Dam, which is being built in the Benishangul- Gumuz region bordering Sudan, will eventually have a 6,000 megawatt capacity, according to the Ethiopian government. This is the equivalent of at least six nuclear power plants. "The dam's construction… does not cause any harm on any country" said Alemayehu Tegenu Ethiopia's Energy Minister. "The dam is being built in the middle of the river so you can't carry out construction work while the river flowed," Mihret Debebe, chief executive officer of the state-run Ethiopian Electric Power Corporation (EEPCo), told the Reuters news agency. "This now enables usto carry out civil engineering work without difficulties. The aim is to divertthe river by a few metres and then allow it to flow on its natural course." Ethiopia claims to be the source of about 85% of the total water in the Nile.
The Blue Nile originates in the country's Lake Tana and flows hundreds ofmiles north into Sudan and then Egypt before eventually flowing into theMediterranean. Egypt is particularly dependant on the water supply, withgrowing populations placing it under increasing strain, although Sudan also relies on the source. Egypt's Deputy Foreign Minister for African Affairs, Ali Hifni, said that the diversion of the river was not something toworry about, according to the Egyptian state-run news agency Mena. ButMr Hifni said that the dam itself was of concern. Experts from Ethiopia, Egypt and Sudan are set to announce findings of a study into the impact of the Ethiopian dam on the Nile's flow in the coming weeks. Ethiopia's energy minister, moved to dispel fears over the dam's impact, Reuters reports. "The dam's construction benefits riparian countries, showcases fair and equitable use of the river's flow and does not cause any harm onany country," Alemayehu Tegenu said.
Egypt could use Suez Canal to retaliate against Ethiopia dam move' Ahram Online: May 30, 2013 - updates - Opposition figure Hamdeen Sabbahi says Egypt could block Suez Canal to ships from countries that help Ethiopia build controversial dam on Blue Nile. Egypt could close the Suez Canal to ships from countries that help Ethiopia build a controversialdam on the Blue Nile in the event that the dam threatens Egypt's supply of Nile water, Egyptian Popular Current leader Hamdeen Sabbahi said Wednesday. "The state is capable of holding talks with the countries financing Ethiopia's Renaissance Dam project, especially China and Italy,"Sabbahi said. He went on to assert that Egypt was capable of prohibiting ships from those countries from transiting the Suez Canal "until they stopharming Egypt's interests." He also said that Ethiopia's decision to go

ahead with the project – only days after President Mohamed Morsi's statevisit to the country – was "extremely humiliating to Egyptians."

In comments reported by Al-Ahram Arabic news website, Sabbahi also called on Egyptians to support the government in its dispute with Ethiopiaover the dam. On Tuesday, Ethiopia began diverting the course of the Blue Nile, one of the Nile River's two major tributaries, as part of its 'Renaissance Dam' project for electricity production, a move that raised concerns in Egypt and Sudan that the flow of water could be disrupted. A final report on the impact of the planned dam by a joint committee of Egyptian, Sudanese and Ethiopian representatives is expected within days. "We will not accept any pressure when it comes to our water supply," Sabbahi said. "Solutions must be presented to avoid conflict." If Ethiopia continues with projects that harm Egypt, the nation will unite to deter an attack on its interests, he added. Sabbahi said that while he fullysupports Ethiopia's right to increase its energy production, Egypt would not accept any reductions in its annual water supply.

If matters escalate, he said, a drop of water would exceed a drop of bloodin value. The best way to avoid conflict is to open new initiatives for strategic cooperation in the Nile Basin, he added. During the 21st African Union summit, President Morsi said Ethiopia's Prime Minister Hailemariamhad vowed to consider Egypt's interests regarding the dam. Egypt's ambassador in Addis Ababa, Mohamed Idris, said Ethiopia's intention to divert the Blue Nile had been known since November 2012. According to the state-run National Planning Institute, Egypt will require an additional 21 billion cubic metres of water per year by 2050 – on top of its current annual quota of 55 billion metres – to meet the needs of a projected population of some 150 million. Correction: Ahram Online had earlier quoted Sabbahi as saying that Egypt was capable of barring Ethiopian ships from crossing the Suez Canal. This is incorrect. Rather, he said thatships from those countries that financed the dam project could be prohibited from transiting the canal.

Egyptians up in arms as Ethiopia builds giant hydro dam on Nile: minister rules out war' Associated Press: June 1, 2013: Ethiopia's construction of Africa's largest hydroelectric dam on the world's longest river threatens toaffect flows of water to Nile-dependent, water-starved Egypt, where there is growing outrage, anger and fear. Egypt in the past has threatened to goto war over its "historic rights" to Nile River water but diplomats from bothcountries this week played down the potential for conflict. "A military solution for the Nile River crisis is ruled out," Egypt's irrigation and water resources minister, Mohammed Baheddin, said Thursday amid newspaper reports recalling the threats of war from Egypt's two previous leaders, Anwar Sadat and Hosni Mubarak. Ethiopia on Tuesday started diverting the flow of the Blue Nile for construction of the Grand Ethiopian Renaissance Dam. Eighty-five percent of Nile waters originate in Ethiopia yet the East African nation whose name has become synonymous with famine thus far utilizes very little of those waters. Ethiopia's decision challenges a colonial-era agreement that had given downstream Egypt and Sudan rights to the Nile water, with Egypt taking 55.5 billion cubic

meters and Sudan 18.5 billion cubic meters of 84 billion cubic meters, with 10 billion lost to evaporation. That agreement, first signed in 1929,took no account of the eight other nations along the 6,700-kilometer (4,160-mile) river and its basin, which have been agitating for a decadefor a more equitable accord.
And Ethiopia's unilateral action seems to ignore the 10-nation Nile Basin Initiative to promote cooperation. Ethiopia is leading five nations threatening to sign a new cooperation agreement without Egypt and Sudan, effectively taking control from Egypt of the Nile, which serves some 238 million people. Mohammed Abdel-Qader, governor of Egypt's Gharbiya province in the Nile Delta, warned the dam spells "disaster" and is a national security issue for the North African nation. "Taking Egypt's share of water is totally rejected The Nile means everything to Egypt," said Gov. Abdel-Qader. Baheddin said Egypt already is suffering "water poverty" with an individual's share of 640 cubic meters well below the international average of 1,000 cubic meters. Egypt protests that others along the Nile have alternative water sources, while the Nile is the sole water source in the mainly desert country. Ethiopian officials say the dam is needed to provide much-needed power for development. At a ceremonymarking the diversion of the Nile, Deputy Prime Minister Demeke Makonnen said Ethiopia could export cheap electricity from the dam to energy-short Egypt and Sudan. He insisted the dam would not affect the flow of water to Egypt. Experts say otherwise.Alaa el-Zawahri, a dams engineer at Cairo University and an expert on a national committee studying the ramifications of the Ethiopian dam, said Egypt stands to lose about 15 billion cubic meters of water — 27 percent of annual share — each of the five years that Ethiopia has said it will take to fill the dam. Thecountry's current share already is insufficient. Egypt also would lose between 30 and 40 percent of its hydropower generation, he said.
"If I was more of an optimist, I would say it will cause significant damage(to Egypt)," he told The Associated Press. "If I was being pessimistic, it isa catastrophe.""Potentially catastrophic" is the opinion of Haydar Yousif Hussein, an Italian-based Sudanese hydrologist who has worked on Nile water issues for 35 years. The dam's reservoir "will hold back nearly one and a half times the average annual flow of the Blue Nile" and "drasticallyaffect the downstream nations' agriculture, electricity and water supply," he said in an article published in the South African magazine Infrastructure News. Given the massive size of the dam, it could lose as much as 3 billion cubic meters of water to evaporation each year, Yousif added.
Makonnen said the dam construction is at 21 percent and should be complete by 2015. Ethiopia has said the massive dam, located 60 kilometers (37 miles) from Sudan's border, is being built with a storage capacity for 74 million cubic meters of water and generating power of 6,000 megawatts — 30 percent more than the electricity produced by Egypt's Aswan Dam, built on the Nile in the 1960s. But very little other information is available. "It remains irresponsible for Ethiopia to build Africa's biggest hydropower project, on its most contentious river, with nopublic access to critical information about the dam's impacts," Yousif

wrote. He urged Ethiopian officials to "allow some light to penetrate this secretive development scheme." Ethiopia has timed the dam's construction while Egypt is at its weakest. The government announced the project in March 2011, when Egypt's government was overwhelmed by theArab Spring revolution. The Nile diversion came the day after leaders of the two countries met in Addis Ababa, the Ethiopian capital, on the sidelines of an African Union summit, and days before Ethiopia, Egypt and Sudan were due to issue a technical report on the dam.

Information about the funding of the project is also unclear. The World Bank and other donors have refused involvement, reportedly because of Egyptian lobbying of countries like the United States, which considers Egypt a key ally and pivotal to security in the region. The contract for the $4.8 billion project was awarded without competitive bidding to the Italiancompany Salini Construttori, according to Yousif and other experts.

Ethiopia says it is funding the massive project on its own, urging citizens to buy bonds that earn 5 or 6 percent interest. Norway's Development Today magazine quoted Kjetil Tronvoll of Oslo's International Law and Policy Institute as saying that government employees are being pressed todonate one month's salary to the dam and, when people protested, they were arrested. A journalist who wrote an article criticizing the fund-raisingmethods, Reeyot Alemu, was arrested, tried for terrorism and sentenced to two years' jail, according to the Committee to Protect Journalists (CPJ). The issue of the dam also highlights traditional differences between Africa's northern Arabs and the blacks of the south. That perception must be corrected, Egypt's assistant for foreign affairs, Essam el-Haddad, wroteon Egypt's foreign policy blog. "Egypt's rejection of the project reinforces a negative stereotype of Egypt that is spreading among the people of Africa that this country is the reason for the absence of development and economic progress in African countries because it has acquired, unduly, the largest share of (Nile) water for its development," he wrote. "Egypt seeks to be a real partner in development in Africa."

Striking Ethiopia's Nile dam bad for Egypt - Ex-commander of Egyptianforces at Gulf war’

Egypt Independent Analysis: June 1, 2013 - General Mohamed Ali Bilal ex-commander of Egyptian forces during the Gulf war, said that it is “impossible” to strike the Ethiopian Renaissance Dam because such a decision would be issuing a challenge to the entire world. Bilal told al- Arabiya satellite channel on Wednesday that such an attack would bring Egypt into conflict with those countries, such as China and Israel, whose citizens are involved in the construction of the dam. Egypt is not in a position to stand up to all those countries, he added.

He also said that, when the US launched Desert Storm and invaded Kuwait, it did so under the auspices of the UN. Besides, he added, thereseems to be international consensus that Ethiopia has the right to build the dam. He emphasized that the US had planned its construction and that Israel is providing technical support. In Bilal’s view, the only way totackle the crisis is to persuade the US to intervene on Egypt's behalf and

convince the Ethiopians to mitigate the impact construction of the dam willhave.
Major General Ahmed Abdel Halim, a security and strategic expert, said that a diplomatic solution is the best way of handling this issue, while adding that striking the dam would not bring the aspired results. He also said that, as a last resort, Egypt could present its case to the InternationalCourt of Justice, the Security Council, and the International Criminal Court.
Ethiopia's studies on Nile dam fall short, Egypt says'
Reuters CAIRO - June 2, 2013 – Ethiopia has not thought hard enough about the impact of its ambitious dam project along the Nile, Egypt said on Sunday, underlining how countries downstream are concerned about its impact on water supplies. The Egyptian presidency was citing the findings of a report put together by a panel of experts from Egypt, Sudanand Ethiopia on the impact of the plan to build a $4.7 billion hydroelectricdam. Ethiopia triggered deep concern in Egypt last week when it began work to divert the river as part of the project. Egypt depends on the Nile for nearly all its water. Egyptian President Mohamed Mursi, who met the Egyptian members of the tripartite committee on Sunday, referred the report to his government for "urgent action" with Sudan and Ethiopia to agree on steps to safeguard the river's flow.
Citing the findings of the report, the presidency said Ethiopia's "studies were not adequate for a project of this scale, and the committee's report recommended more studies of the economic and social aspects, the security of dams and water resources, not to mention the environmental aspects". Ethiopia has laid out plans to invest more than $12 billion in harnessing the rivers that run through its rugged highlands, to become Africa's leading power exporter. Centerpiece to the plan is the Grand Renaissance Dam being built in the Benishangul-Gumuz region bordering Sudan. Now 21 percent complete, it will eventually have a 6,000 megawatt capacity, the government says, equivalent to six nuclear powerplants.
Egypt warns not 'one drop' of Nile lost to Ethiopia dam'
June 3, 2013: President Mohamed Mursi Monday warned that Egypt wouldnot allow its share of the Nile to be diminished by "one drop" after Ethiopia began diverting the Blue Nile as part of a giant dam project. "Wecannot let even one drop of Nile water be affected," Mursi said during talks with political and religious leaders broadcast live on state television. The talks revolved around a report of a tripartite Egypt-Sudan-Ethiopia commission on Ethiopia's decision to divert the Blue Nile for a massive dam project, sparking fears of a major impact on downstream states Egypt and Sudan. "It is necessary that we take steps to ensure Egyptian water security," Mursi said on his official Twitter account without elaborating. "The current situation necessitates unity among our ranks to prevent anythreat against Egypt." Egyptian officials estimate that Ethiopia's move is largely technical and will not alter the water flow that is vital for both Egypt and Sudan. But Khaled al-Kazzaz, an adviser to Mursi, said the

issue was one of “national security” for Egypt, with the cabinet last Wednesday reiterating that Cairo was opposed to all projects which couldaffect the flow of the Nile.

The Blue Nile joins the White Nile in Khartoum to form the Nile river whichflows through Sudan and Egypt before emptying into the Mediterranean.

Ethiopia has begun diverting the Blue Nile 500 meters from its natural course to construct a $4.2 billion (3.2 billion euro) hydroelectric project known as Grand Renaissance Dam. The first phase of construction is expected to be complete in three years, with a capacity of 700 megawatts. Once complete the dam will have a capacity of 6,000 megawatts. Egypt believes its “historic rights” to the Nile are guaranteed by two treaties from 1929 and 1959 which allow it 87 percent of the Nile’sflow and give it veto power over upstream projects. But a new deal was signed in 2010 by other Nile Basin countries, including Ethiopia, allowing them to work on river projects without Cairo’s prior agreement.

Opposition leader Mohammed El-Baradei calls on Morsy to apologize toEthiopia'

Al-Masry Al-Youm: June 4, 2013 - Mohamed El-Baradei, National SalvationFront Coordinator, called on President Mohamed Morsy to apologise to Ethiopia and Sudan for “the irresponsible utterances” made during the national dialogue session held on Monday to discuss the Ethiopian Renaissance Dam crisis. On his Twitter account, ElBaradei –also the President of the Dostour Party– demanded that Morsy offer similar apologies to both countries in the name of Egyptians. The live broadcast of the national dialogue on Monday sparked criticism by participants in thedialogue, including Ayman Nour –president of Ghad al-Thawra party. He called for holding responsible those who decided to broadcast on air what was supposed to be a closed dialogue session.

Pakinam al-Sharqawy, assistant presidential adviser for political affairs, extended her apologies for "any unintended embarrassment caused to anyof the political leaders who attended the national dialogue session to discuss the report submitted by the tripartite committee on the Ethiopian Renaissance Dam." On her Facebook page, Sharqawy said the decision forthe live broadcast of the dialogue session was taken just before the session, due to the significance of the Nile water dossier.

The most controversial contribution during the session was made by Ayman Nour, who suggested that Egypt disseminate rumors that it is seeking advanced aircrafts. He said this is an intelligence technique of intimidation. “It might not be realistic, but it will bring results on the diplomatic path”, he said. Nour, however, stated he believes diplomatic efforts will not yield great outcomes: “Ethiopians have taken the decision,and it is highly difficult for them to backtrack”. Chairman of the moderateIslamist Wasat Party, Abul Ela Mady, suggested sending army destroyers to the Bab al-Mandab strait and spreading rumors that Egypt is about to strike the dam.

Egyptian politicians sabotage Ethiopia's new dam'

CAIRO - By Hamza Hendawi: June 4, 2013 - Politicians meeting withEgypt's president on Monday proposed hostile acts against Ethiopia,

including backing rebels and carrying out sabotage, to stop it from building a massive dam on the Nile River upstream. Some of the politicians appeared unaware the meeting with President Mohammed Morsi was being carried live on TV. Morsi did not directly react to the suggestions, but said in concluding remarks that Egypt respects Ethiopia and its people and will not engage in any aggressive acts against the EastAfrican nation. Morsi called the meeting to review the impact of Ethiopia's
$4.2 billion hydroelectric dam, which would be Africa's largest. Egypt in the past has threatened to go to war over its "historic rights" to Nile Riverwater. Morsi's office later said he had directed his foreign and irrigation ministers to maintain contact with the Ethiopian government to obtain more information on the dam and its likely impact on Egypt's share of theNile water. His office's statement included an ominous-sounding note, saying: "Egypt will never surrender its right to Nile water and all options (to safeguard it) are being considered."
Ethiopia last week started diverting the flow of the Nile to make way for its hydroelectric plant dubbed the Grand Ethiopian Renaissance Dam. On completion, it is expected to produce 6,000 megawatts, and its reservoir is scheduled to start filling next year. An independent panel of experts hasconcluded that the dam will not significantly affect downstream Sudan andEgypt, which are highly dependent on the water of the world's longest river, said an Ethiopian official, who spoke Saturday on condition of anonymity because he was not authorized to speak publicly on the topic.
But in Cairo on Monday, Younis Makhyoun, leader of an ultraconservative Islamist party, said Egypt should back rebels in Ethiopia or, as a last resort, destroy the dam. He said Egypt made a "strategic error" when it did not object to the dam's construction. Makhyoun said Ethiopia is "fragile" because of rebel movements inside the country. "We can communicate with them and use them as a bargaining chip against the Ethiopian government," he said. "If all this fails, then there is no choice left for Egypt but to play the final card, which is using the intelligence service to destroy the dam," said Makhyoun, whose Nour party won about25 percent of parliament's seats in elections in late 2011 and early 2012. Another politician, liberal Ayman Nour, proposed spreading rumors about Egypt obtaining refueling aircraft to create the impression that it plans anairstrike to destroy the dam. "This could yield results on the diplomatic track," Nour said. Abu al-Ila Madi, leader of the pro-Morsi Islamist Wasat party, suggested that a rumor that Egypt planned to destroy the dam could scare the Ethiopians into cooperating with Egypt on the project.
Magdy Hussein, another Islamist politician, warned that talk of military action against Ethiopia is "very dangerous" and will only turn Ethiopians into enemies. He suggested soft diplomacy in dealing with the crisis, including organizing a film festival in Ethiopia and dispatching researchersand translation missions.
Ethiopia's decision to construct the dam challenges a colonial-era agreement that had given Egypt and Sudan rights to the Nile water, with Egypt taking 55.5 billion cubic meters and Sudan 18.5 billion cubic meters of 84 billion cubic meters, with 10 billion lost to evaporation. That agreement, first signed in 1929,

took no account

of the eight other nations along the 6,700-kilometer (4,160-mile) river and its basin, which have been agitating for a decade for a more equitableaccord.

Ethiopian Minister of Water and Energy Alemayehu Tegenu has said Egypt should not worry about a diminished water share. "We don't have any irrigation projects around the dam. The dam is solely intended for electricity production So there should not be any concerns about a diminished water flow," Alemayehu told The Associated Press on Saturday.Eighty-five percent of Nile waters originate in Ethiopia, yet the nation utilizes very little of them, and the country has become synonymous with famine.

Egypt, Ethiopia and the GERD'

Al-Ahram Weekly - June 5, 2013: The Ethiopian dam project could constitute a threat to Egypt, but only if Ethiopia is pushed into going it alone, instead of being coaxed onto a different path by genuine cooperative aid, writes Adel Amer. Ethiopia has begun operations to diverta portion of the Blue Nile preparatory to the construction of a major dam. Although this project had been anticipated for many years and in spite of repeated assurances from Addis Ababa that it would not affect Egypt, the Ethiopian decision to commence operations triggered anger and alarm among Egyptian public opinion, reactions reminiscent of the Iraqi and Syrian responses to the Ataturk Dam project many years ago. The crisis over the diversion of the course of the Nile dates back to May 2010, when six upper riparian countries in the Nile Basin, meeting in Entebbe, signed anew Nile Waters Treaty, giving Cairo and Khartoum a year's grace period to join. The Entebbe Treaty states that cooperation between the countries of the Nile Basin initiative is founded on the principle of fair and reasonable use on the part of the state parties. Recently, the signatory states began ratification procedures through their parliaments. Once the treaty goes into effect, it will bring an end to Egypt and Sudan's historic quotas under the 1929 and 1959 Nile Waters Agreements, in accordance with which Egypt obtained 55.5 billion cubic metres a year and Sudan 18.5 billion. The six countries that have signed the new treaty are Ethiopia, Uganda, Kenya, Tanzania, Rwanda and Burundi. The Democratic Congo joined Egypt and Sudan's refusal to sign. In March 2013, the newlyindependent South Sudan announced that it would join the treaty. Cairo and Khartoum have charged that the Entebbe Treaty "violates all international agreements" and vowed to alert donor nations to the illegality of funding any water projects on the Nile or its tributaries. They added that they would lobby against the Ethiopian dam project, in particular, which will cost an estimated $4.8 billion, according to the late Ethiopian Prime Minister Meles Zenawi. Ethiopia and the other signatory countries were unfazed by such protests and warnings, and on 1 April 2011, Ethiopia formally inaugurated the Great Millennium Dam project, or the Renaissance Dam, for the production of hydroelectric power for the Benishangul-Gumuz region, which is adjacent to the Sudanese border. Thedam, which is due to be completed in 2015, will create a reservoir of approximately 63 billion cubic metres of water.

Following the 25 January 2011 revolution, Egyptian popular leaders pressed the need to address this vital issue, stressing that it had to be handled objectively and in a spirit untainted by the "arrogance that had characterised the approach of the governments of former president HosniMubarak". On 29 April 2011, a "people's delegation", consisting of representatives of the revolutionary youth, political parties and other public figures, set off to Addis to discuss the Millennium Dam project.

Such actions inaugurated a new climate for handling dam initiatives and other issues related to the Nile waters. Perhaps because of this, Egyptianswere all the more shocked by the Ethiopian announcement of its decision to press ahead with the diversion of the Blue Nile within hours of PresidentMorsi's visit to Addis Ababa to attend the African Summit. On the sidelinesof this summit, Morsi met with Ethiopian Prime Minister Hailemariam Desalegn and raised Egyptian concerns with respect to the dam. Experts on the joint Egyptian-Ethiopian-Sudanese committee on this project foundthat "the studies that the Ethiopian side had submitted with respect to thedam were insufficient to prove that its construction would not be harmful to Egypt." In light of this, the tripartite committee will ask for additional studies, which will be undertaken by international experts on the committee. The committee is made up of six local members (two each from Egypt, Sudan and Ethiopia) and four international experts on dam engineering and hydrology, water resource management and the social, economic and environmental impact of dams.

The construction of the dam on the upper reaches of the Nile poses an enormous challenge to Egyptian agriculture. The consequent water shortage could lead to reduced domestic food production as well as to a reduction by approximately 500 kilowatts per year in the electricity generated by the High Dam and the Aswan Dam. Such a spectre induced the Sudan and Nile Basin Studies Unit of Al-Ahram Centre for Political andStrategic Studies to convene a seminar on this question. It hosted Mohamed Allam, former minister of irrigation and water resources, who had been responsible for this issue during one of the tensest periods in Egyptian-Ethiopian relations over a number of essential differences regarding the dam. Allam presented a paper to the forum discussing the various phases of this question, from the Egyptian perspective in particular. By way of background, Allam underscored a number of weaknesses on the Egyptian side: the scientific and technological lag, thespread of corruption, the deterioration in public services, and economic, social and cultural underdevelopment. He also mentioned the decline in Egypt's regional and international status and influence. At the same time,important political changes were taking place elsewhere in the Nile Basin.Ethiopia and Uganda were experiencing periods of economic growth and growing international support. In addition, Israeli influence in countries ofthe upper Nile Basin was increasing, while Egyptian influence remained minimal. Such factors contributed to augmenting the pressures on Egypt on one of its most crucial concerns, namely issues related to the Nile Basin initiative.

Water projects on the Blue Nile, whether in Ethiopian highlands or in Sudan, would have a major impact on Egypt, as the Blue Nile accounts foraround 90 per cent of the water that reaches Egypt. Egypt is heavily dependent on the Nile for its water needs. As Allam pointed out in his paper, the Nile furnishes 55.5 billion cubic metres a year of water (under the current quota), while Egypt receives only a billion cubic metres a yearin rainfall, which falls primarily on the Mediterranean and Red Sea coasts and parts of the Sinai. There are subterranean water sources, but these are non-renewable. The subterranean reserve in the Western Desert permits for the extraction of no more than three to five billion cubic metres per year over the next 50 to 100 years. Meanwhile, the costs of desalinisation are very high, and the quantities that this method supplies come to only 200 million cubic metres a year. According to Allam, Egypt'scurrent water needs amount to over 75 billion cubic metres a year, which is about 30 per cent higher than the available resources. The deficit is made up for by recycling. The per capita share of water is only 700 cubic metres a year. However, by 2050, and given current population growth figures, per capita share of water will decline to 350 cubic metres per year. Water projects on the upper Nile would further imperil the situation.Large tracts of agricultural land would be lost. Hydroelectric power production would drop sharply and compel increasing reliance on gas- powered generators. Water purification plants and a number of other industries along the Nile would be severely affected, and the quality of irrigation water would deteriorate. In addition, there would be greater seepage of sea water into the northern coastal areas and the quality of the water in the northern freshwater lakes would decline.

TOWARDS A ROADMAP: Sudan and South Sudan are Egypt's most important partners in the foreseeable future, said Allam. Both need Egyptian support, expertise and investment. They also have water resources that could increase the yield of the Nile, large tracts of land suitable for cultivation and livestock, and mineral wealth. In addition, theyoffer promising markets for emergent Egyptian industries and skilled Egyptian labour. Politically, their unification would undermine regional andinternational designs to set the two countries against each other to the detriment of them both. Clearly, they would be well advised to create a joint technical body to examine the potential effects of the Ethiopian barrages on them both and to review the results of the Egyptian- Sudanese studies that had been conducted on this matter in the interest of formulating a unified vision on the dams on the basis of the bilateral agreement of 1959 that governs the Egyptian-Sudanese relationship with respect to the Nile waters. In his paper, Allam also discussed why Ethiopiaattaches such importance to the dam project. It has long been an Ethiopian dream to control the headwaters of the Blue Nile, he said.

Ethiopia would reap huge profits from the export of hydroelectric power toneighbouring countries, generating a major source of national revenue that would stimulate a qualitative leap in economic and social development, and enhance Addis Ababa's influence in the Horn of Africa and elsewhere in the continent. The net profit from the production and

export of the electricity from the Mandaya Dam alone exceeds $7 billion ayear. The power — and hence income — generating capacity of the Renaissance Dam could be considerably greater. However, Addis also realised that these dams would not have this anticipated economic value unless they received the blessings of Egypt and Sudan, which would translate into the purchase of large quantities of the electricity they produce. Currently, Ethiopia, itself, does not have the domestic infrastructure or market capable of consuming a major portion of the amount of electricity that could be generated, while the only two other major consumers would be Egypt and Sudan. Therefore, Egypt and Sudan's refusal to participate in a network would delay Ethiopia's ability tobenefit economically from the dams, at least until it develops a sufficient infrastructure and market locally, which would take several decades.

Egypt's regional and international drives concerning the Renaissance Dam project began in earnest in the middle of last year. Egypt rejected the feasibility studies for their failure to take into consideration the detrimental effects of this project on Sudan and Egypt. It sent its comments in this regard to the secretariat of the Nile Basin Initiative, to the technical bureau of the Eastern Nile Basin Commission, to the World Bank, to the European Market, to the Canadian Advisory Bureau, and to the Norwegian Consultancy Bureau that performed the feasibility and design studies for the project. It has also sustained talks with donor agencies and with China in order to drive home the severe detrimental repercussions of the dam on both Egypt and Sudan. In the course of thesetalks, Egyptian officials stressed that they are not opposed to the development drive in Ethiopia, but that they are determined to safeguard Egypt's water rights and their country's future. The fact remains that Ethiopia suffers a major water shortage. Indeed, it has the greatest deficiency in water of all the Nile Basin countries in spite of the fact that it is the major contributor to the Nile waters. At the same time, the Ethiopian highlands are not naturally suited to the construction of large dams and water reservoirs, regardless of the technology brought to bear, and even less to the transport of reserved water across its rugged terrain.Therefore, there is little need for the excessive alarm that has been stirredby some segments of the media recently. Still, the problem is not insignificant and there is a rift in Egypt's relations with other countries of the Nile Basin. In view of these considerations, Egypt needs to sustain a policy towards those countries based on the spirit of African brotherhood and cooperation, as opposed to confrontation and political blackmail. In this spirit, it must continue to offer aid and assistance to African countries,especially those in the Nile Basin, and not just in the realm of water resource development but also in a range of other fields, from agriculture to trade and industry and education.

The key to resolving the current crisis begins with Ethiopia, which should be given priority among the Nile Basin countries, in the construction of water projects. Ethiopia has the lowest rate of electricity consumption in the world — less than 1,000 megawatts (80 per cent of Ethiopians live without electricity). Nor will it affect Egypt and Sudan's share of Nile water

if Ethiopia undertakes small water projects commensurate with its topography, such as electricity generating plants that capitalise on steep inclines or agricultural projects, whether dependent on precipitation or irrigation, which in any case would be relatively limited in view of the ruggedness of the Ethiopian terrain. However, “Ethiopia can not divert a tributary of an international river shared by nine other nations. This is not just about Egypt and Sudan. International rivers are governed by laws and conventions, in accordance with which any action that affects water quotas requires advanced notice and guarantees against possible harm,” said Allam. Experts predict that by 2050, Egypt will require 21 billion cubicmetres of water above its current quota in order meet the needs of its population, which is expected to climb to 150 million by then. The writer ishead of Al-Masryeen Centre for Strategic Studies.

Conflicting reports emerge on visit of Egypt’s spy chief to Sudan’

ST KHARTOUM: (June 5, 2013) Egyptian President Mohamed Morsi meetswith Defense Minister Abdel Fattah al-Sisi with the Head of Egypt Intelligence Mohamed Raafat Shehata and Interior Minister Mohamed Ibrahim at El-Thadiya at the presidential palace in Cairo on 23 May 23.

The Sudanese foreign ministry and the Egyptian embassy in Khartoum said today that have no knowledge of a visit by the director of the Egyptian intelligence as reported by government-owned and private media outlets in Cairo. Several Egyptian newspapers quoted security sources at Cairo airport as saying that a delegation led by spy chief Mohamed Raafat Shehata has boarded Egypt Air plane to Khartoum on Wednesday morning.

It was reported that Shehata was set to discuss Ethiopia’s Grand Renaissance Dam and its move last week to divert a stretch of the Blue Nile river to make way for the $4.7 billion hydroelectric plant. The Blue Nile joins the White Nile in Khartoum to form the Nile which flows throughSudan and Egypt before emptying into the Mediterranean. But the Egyptian consul-general in Khartoum Mutaz Mustafa Kamel denied to the independent Khartoum newspaper any truth to reports of Shehata’s visit. The Sudanese foreign ministry said that while it has no knowledge of the visit, it suggested that it could have taken place in coordination between Egyptian President Mohammad Morsi and his counterpart Omer Hassan al-Bashir. Morsi phoned Bashir yesterday to discuss the issue of the Ethiopian dam, state media reported.

Egypt, which has been involved in years of troubled diplomacy with Ethiopia and other upstream countries, said Ethiopia must now halt work on the dam and cautioned that all options are on the table to deal with this development. “It is Egypt’s right to defend its interests, and other people have a right to follow their own interests. But there must be assurances the Ethiopian dam will not affect Egypt, otherwise all options are open,” Ayman Ali, an adviser to Egyptian President Mohammad Morsi,warned on Wednesday according to Egypt’s media. Pakinam el-Sharkawy,another presidential adviser, told the official MENA news agency that Egypt would demand that Ethiopia cease the construction of the dam, AFPreported.

The presidency considers the dam as a “national security” issue for Egypt,Sharkawy added. “Demanding of Ethiopia to stop construction of the dam it intends to build on the Blue Nile will be our first step,” she said, according to MENA. Cairo has also grown concerned over what it views as Sudan’s reluctance to adopt its stance and condemn the Ethiopian project prompting criticism from some Egyptian politicians including opposition figure Ayman Nour who described Khartoum’s stance as “disgusting”. The Sudanese information minister and government spokesperson Ahmed BilalOsman called on Egyptian officials to refrain from insulting his country. “Our view would not please the Egyptians and will upset them but Sudan will benefit greatly from the [Ethiopian] dam,” Osman said in a TV interview. “The hurtful talk [against] Sudan does not serve the interests [of Egypt]” he added.

The Sudanese official further said the dam will enhance the flow of water from the huge reserves and feed the underground water while reducing dependency on rainfall. He said the benefits of the Ethiopian project will be shared by both nations. The first phase of construction is due to be finished in three years, with a capacity of 700 megawatts. Once fully complete, the dam will have a capacity of 6,000 megawatts. Egypt believes its “historic rights” to the Nile are guaranteed by two treaties from 1929 and 1959 which allow it 87 percent of the Nile’s flow and give itveto power over upstream projects. But a new deal was signed in 2010 byother Nile Basin countries, including Ethiopia, allowing them to work on river projects without Cairo’s prior agreement. Sudan has refused to join this accord in solidarity with Egypt.

Our view would not please Egyptians but Sudan will benefit from theGERD –GoS spokesman’

(KHARTOUM) – June 5, 2013: The Sudanese foreign ministry and the Egyptian embassy in Khartoum said today that have no knowledge of a visit by the director of the Egyptian intelligence as reported by government-owned and private media outlets in Cairo. Several Egyptiannewspapers quoted security sources at Cairo airport as saying that a delegation led by spy chief Mohamed Raafat Shehata has boarded EgyptAir plane to Khartoum on Wednesday morning. It was reported that Shehata was set to discuss Ethiopia’s Grand Renaissance Dam and its move last week to divert a stretch of the Blue Nile river to make way forthe $4.7 billion hydroelectric plant. The Blue Nile joins the White Nile in Khartoum to form the Nile which flows through Sudan and Egypt before emptying into the Mediterranean. But the Egyptian consul-general in Khartoum Mutaz Mustafa Kamel denied to the independent Khartoum newspaper any truth to reports of Shehata’s visit.

The Sudanese foreign ministry said that while it has no knowledge of the visit, it suggested that it could have taken place in coordination between Egyptian President Mohammad Morsi and his counterpart Omer Hassan al-Bashir.Morsi phoned Bashir yesterday to discuss the issue of the Ethiopiandam, state media reported. Hydro-politics - Why Kenya needs to heed belligerent noises from both Egypt and Ethiopia' By Charles Onyango-Obbo, Daily Nation - June 6, 2013: Kenya could soon be in for a shock. Why? Well, with a new government that is still taking shape, the country is understandably preoccupied with domestic affairs. The same is true of most of the rest of East Africa. Uganda is in the throes of a messy squabble over President Yoweri Museveni’s succession. Tanzania has its hands full of former and current US presidents visiting, and figuring out who will step into President Jakaya Kikwete’s shoes when he leaves office in 2015. Up north,however, Ethiopia and Egypt are coming dangerously close to a nasty

face-off over Addis Ababa’s move to build the giant Renaissance Dam onthe River Nile. Reports have it that at 6,000 MV, the dam will be the largest hydroelectric power plant in Africa, and 14th largest in the world.In March 2011, when Egypt was still distracted by the uprising that had

just ousted its strongman Hosni Mubarak, Ethiopia awarded the contract for the building of the $8.4 billion dam, and a month later on April 2, Prime Minister Meles Zenawi laid the foundation stone. By the time the dust settled in Cairo, the dam deal was done. On Sunday, Egypt's President Mohamed Morsi, a man who lately has had no time for the political parties in his country except his own Muslim Brotherhood, called ameeting with them to discuss Ethiopia's dam plans. Egypt in the past has threatened to go to war over its "rights" to River Nile waters, given by a discredited 1929 colonial treaty that gave it and Sudan 90 per cent of the river's water.

On Tuesday press agencies reported Egypt's minister of Water Resources and Irrigation Mohamed Bahaa-Eddin arguing that the 74 billion cubic meters of Nile water stored behind the Egyptian High Dam would be diverted to Ethiopia's intended dam. "We are living in an era of water shortage and we will not allow any reduction of Egypt's share of Nile water(which is 55.5 billion cubic meters)," he said. "Life in Egypt depends on the Nile, water is a national security matter for us, and we will never relent on this issue."

Tough words. With growing populations and economies in the Nile Basin countries, more and more of them will dam the Nile and divert water to irrigation. Add to that, Ethiopia is a stubborn country. Its population today is nearly 90 million. Egypt's is close to 83 million. Egypt is an African power in decline. Ethiopia is an Africa power onthe rise. Everyone hopes that Egypt is smart enough, and won't go to war.It would be an expensive conflict. It does not share a border with Ethiopia,so it will have to get [north] Sudan to join it or allow it to use its territory to attack Ethiopia. But generals can be mad men. In any case, if Egypt loses just 25 per cent of the water it is receiving from the Nile, it could collapse.

Such a war could see millions of Ethiopians flooding Kenya. So Kenya, andEast Africa for that matter, can take early steps to minimise the fall-out.

First, and most critically, South Sudan needs to be supported to get itshouse in order and become a strong state with a modern military.

Secondly, Ethiopia must bury the hatchet with Eritrea and bring it into its fold of allies. From South Sudan and Eritrea, Ethiopia could choke off any Egyptian-Sudan southward advance from the flanks. But even more important, Somalia needs to be helped to stabilise. That will allow Kenya to move its troops to the border with Ethiopia, but also a stable Somalia will allow Ethiopia to secure its rear. Indeed, if I were Egypt, I would fightthe war over River Nile in Somalia and support not just anti-Addis Al Shabaab militants, but also back Ogadeni nationalists intent on retaking the Ogaden Province from Ethiopia (not surprisingly, two Egyptian generals were in Somalia this week to discuss military training). Just keeping its long border with Somalia protected, and preventing the Ogaden from being pried away, would leave Ethiopia no time or resourcesfor anything else, including pushing ahead with the Renaissance Dam. It might be a good thing for journalists covering regional security to take to sleeping lightly.

Egypt ups the status quo-ante on Nile dispute with Ethiopia'

CAIRO, UPI (June 6, 2013) – Updates: Egypt's dispute with Ethiopia over the Nile River has gotten sharper with calls by political leaders for direct action to stop Addis Ababa from building a massive dam Cairo says will cut off water on which the Land of the Pharaohs depends for survival. An independent panel of experts reported Sunday Ethiopia's $4.7 billion Grand Renaissance Dam on the Blue Nile will not significantly affect Egypt and neighboring Sudan. But that does not seem to have pacified the Egyptians who under a 1929 colonial-era agreement get the lion's share ofthe Nile's flow of 85 billion cubic meters a year and refuses to surrender any of it. The Ethiopians' massive hydroelectric dam, 20 percent built, would reportedly cut that by 18 billion cubic meters annually, which Cairo says is well below the minimum it needs for its 82 million people.

Ethiopia began diverting the Blue Nile May 29 to allow the main dam wall of the planned 6,000 megawatt hydroelectric project to be built. That caused consternation and anger in Cairo about the long-term threat to irrigation and electricity supplies. At a meeting Monday of Egyptian political leaders hosted by President Mohamed Morsi, several politicians, unaware the gathering was being televised live called for hostile action against Addis Ababa, including sabotage and attacks by local insurgents. Younis Makhyoun, leader of an ultra-conservative Islamist party, urged the government to retaliate by supporting Ethiopian rebels, or as a last resort, "using the intelligence service to destroy the dam." This is just the latest chapter in a long confrontation over the Nile between Cairo, backed by neighboring Sudan, and Ethiopia and several other upstream African states over sharing the Nile's waters. Ethiopia is particularly proprietorial since the Blue Nile, a major tributary of the world's longest river, starts in the Ethiopian highlands. In the Arab world, where conspiracy theorists thrive, many see the Ethiopian action as an African plot against the Arabs.In February, Saudi Arabia's deputy defense minister, Prince Khaled bin Sultan, declared Riyadh takes a dim view of Ethiopia's ambitious dam- building on the Nile. He accused Addis Ababa of seeking to harm Arabs, and ventured: "There are fingers messing with the water resources of Egypt and Sudan which are rooted in the mind and body of Ethiopia. They do not miss an opportunity to harm Arabs." There has been no shortage ofaccusations of subterfuge and intrigue by both camps. In November 2010,the late Ethiopian dictator Meles Zenawi boasted he would swiftly vanquish any attempts by Cairo to use military force. "I'm not worried that the Egyptians will suddenly invade Ethiopia. Nobody who has tried that has lived to tell the story." In August 2012, WiliLeaks quoted an alleged 2010 internal email from the U.S. global security consultancy Stratfor in which an unidentified "high-level Egyptian security/intel source in regular direct contact with" then President Hosni Mubarak and his late intelligence chief, Gen. Omar Suleiman, spelled out Cairo's military options. "If it comes to a crisis," the source wrote, "we will send a jet to bomb the dam and come back in one day, simple as that. "Or we can send out Special Forces to block/sabotage the dam. Look back at an operation Egypt did in the mid-late 1970s, I think 1976, when Ethiopia was trying to build a large dam. "We blew up the equipment while

it was traveling by sea to Ethiopia. A useful case study." Another reportedplan by Egypt was coordinating with southern neighbor Sudan, which would also be affected by the Ethiopian dam, to build a military base in itsterritory from which to bomb the Grand Renaissance and other Ethiopian dams. The secret base, according to other sources, would be located at Kursi in the western Darfur region. The dictatorial Meles is reported to have drawn up plans to attack Egypt's Soviet-built Aswan Dam on the Nile, believing a regional version of the Cold War's threat of mutual assured destruction would prevent open warfare. In May, there were media reports the Ethiopian regime had released insurgent prisoners fromthe Benshangul People's Liberation Movement which operates out of Sudan, as part of a peace process aimed at protecting the Grand Renaissance Dam from attack. The guerrillas had earlier threatened to attack the dam, which is near the Sudanese border.

Egypt demands Ethiopia halt Nile dam, upping stakes’

CAIRO (Reuters) - Updates: June 6, 2013: Egypt will demand Ethiopia stop building a dam on one of the main tributaries of the Nile, a senior government aide said on Wednesday, ramping up a confrontation over theproject that Egypt fears will affect its main source of water. Ethiopia set off alarm bells in Cairo last week when it began diverting a stretch of the river to make way for the $4.7 billion hydroelectric plant. Countries that share the river have argued over the use of its waters for decades - and analysts have repeatedly warned that the disputes could eventually boil over into war. The high stakes involved were underlined on Monday when senior Egyptian politicians were caught on camera advising President Mohamed Mursi to take hostile action to stop the project, and one went asfar as suggesting Cairo destroy the dam. Egypt, which has been involved in years of troubled diplomacy with Ethiopia and other upstream countries,said Ethiopia must now halt work on the dam. "Demanding that Ethiopia stop construction of the dam it plans to build on the Blue Nile will be our first step," said Pakinam el-Sharkawy, the presidential aide for political affairs, in comments carried on the state news agency MENA. "The national committee that will be formed to deal with this issue will determine the steps that Egypt has to take." No one from the Ethiopian government was immediately available to comment.

CAUGHT ON CAMERA:

Senior Egyptian politicians called in to discuss the crisis with Mursi on Monday were apparently unaware their meeting was being broadcast live on television. The leader of Egypt's Ghad party, Ayman Nour, suggested spreading false reports that Egypt was building up its air power. "We can 'leak' news information claiming that Egypt plans to buy advanced aircraftto increase its aerial presence etc., to put pressure, even if not realistic, on diplomatic discourse," he said. Younis Makhyoun, leader of the Salafi Islamist al-Nour party, was filmed saying Egypt should back rebels in Ethiopia or, as a last resort, destroy the dam. The broadcast triggered widespread ridicule, particularly among Egypt's vast army of users of social networks. "Among Mursi's achievements: the first 'secret' meeting in the world to be aired live," read one joke that made the rounds.

Egypt has so far not apologised to Ethiopia for the broadcast - el- Sharkawy's main response on Twitter was to say she was sorry membersof the meeting did not know they were being broadcast. The most prominent expression of regret came from leading opposition figure Mohamed ElBaradei, who was invited to the meeting but did not attend. "Sincere apologies to the people and governments of Ethiopia and Sudan for the irresponsible utterances at the president's national dialogue," he tweeted. Ethiopia has laid out plans to invest more than $12 billion in harnessing the rivers that run through its rugged highlands to become Africa's leading power exporter. The centrepiece of the plan is the Grand Renaissance Dam being built in the Benishangul-Gumuz region bordering Sudan. Now 21 percent complete, it will eventually have a 6,000 megawatt capacity, the government says, equivalent to six nuclear powerplants. Cairo argues that Ethiopia has not properly considered the dam's impact on the river, saying that a report put together by experts from Egypt, Sudan and Ethiopia is insufficient.

Ethiopia summons Egypt's ambassador over Nile dam attack proposals' Associated Press: ADDIS ABABA, Ethiopia — June 7, 2013: Ethiopia's Ministry of Foreign Affairs said Thursday it is demanding an official explanation from Egypt after comments from politicians suggesting Egyptattack or sabotage a Nile River dam Ethiopia is building. Dina Mufti, a spokesman for the ministry, said that Egypt's ambassador to Ethiopia hasbeen summoned to explain the "hostile remarks." The spokesman said Ethiopia is awaiting a response. Ethiopia a week ago started diverting theflow of the Nile River to make way for its $4.2 billion hydroelectric plant, dubbed the Grand Ethiopian Renaissance Dam. Egypt fears the dam will mean a diminished share of the Nile River. Egyptian political leaders who met their president on Monday proposed aiding rebels against the Addis Ababa government. Sabotaging the dam itself was also mentioned by politicians who appeared not to know their meeting was being televised. Egyptian Foreign Minister Mohammed Kamel Amr, in a statement Thursday, said Egypt will seek to coordinate with Sudan and Ethiopia overthe issue of the dam going forward. Amr also said Egypt's water security cannot be ignored or hurt.

"There is a large window for dialogue and discussion between Egypt, Ethiopia and Sudan to arrive at the ideal form for the dam that ensures safeguarding Egypt's water interests, realizing the development objectivesof all three nations and avoiding any negative effects that may hurt downstream nations," he said. On Wednesday, a close aide of Islamist President Mohammed Morsi announced that work was under way to createa national commission to deal with the issue. She said demanding that Ethiopia halts work at the dam will be given priority, but added that the decision to make a formal request will rest with the proposed commission.Another Morsi aide, Ayman Ali, said there was no proof that Monday's televised remarks have hurt Egypt's position. "It may have actually servedthe Egyptian position because the views stated, while some were radical, have shown the extent of alarm felt by the Egyptians," Ali said. Dina said Ethiopia's construction plans have been "vindicated" by a 10-man panel of

experts who found after a year of study that the renaissance dam will notsignificantly affect Egypt or Sudan. The panel was composed of four international experts and two from Egypt, Sudan and Ethiopia. Dina said Ethiopia is ready to negotiate with both Egypt and Sudan for “mutual benefits.”

Why has the Nile River becomes a battleground? – IR

The Nile in Egypt: Lifeline in a desert. – NASA By Lori Pottinger (June 7, 2013) - This week, Ethiopia announced it was diverting the flow of the Blue Nile to begin building the huge Grand Ethiopian Renaissance Dam. Within days, water-stressed Egypt – a downstream Nile Basin nation – called for Ethiopia to halt its work on the giant new dam. This followed a live televised drama in which Egyptian politicians (unaware the cameras were running) brainstormed ways to stop the project, some of which involved hostilities. In a more tempered response, President Morsi’s officehas announced that Egypt would create a national commission to addressthe dam and its impacts on transboundary water sharing on the Nile.

Ethiopia has reportedly summoned Egypt’s ambassador in Addis Ababa toexplain the hostile response. Why is the Grand Ethiopian Renaissance Dam causing such strife? In addition to Egypt’s fears that it will reduce its lifeline of Nile waters, the tensions have been fanned by the project’s “SAD” planning process:

Secretive: Although it is Africa’s biggest dam project and will have lasting impacts on its longest river, it has been developed under a veil of secrecy.Autocratic: The dam will impact Ethiopians and downstream neighbors, yet its planning process has been top-down and unilateral. The public anddam affected people have not been given a meaningful opportunity to critique the project or process.

Dismissive: Ethiopian government officials have flatly stated they will notmake changes to the project, and have asserted that the project will not have impacts on downstream countries.

The Blue Nile starts in the Ethiopian highlands and flows into the Sudans and Egypt. The dam poses a number of risks to these downstream neighbors: one reason for the growing tension is that these risks have notbeen properly analyzed. Egypt has virtually no other sources of water for its people, and is already making do with less water per person than the international average. By at least one estimate, the Grand Renaissance reservoir could evaporate 3bn cubic meters of water a year – three times Egypt’s annual rainfall, and enough to meet the basic needs of up to half amillion people. The reservoir could take 3-5 years to fill, reducing Egypt’s water supply by up to 25%. A Kenyan journalist writes: “If Egypt loses just 25% of the water it is receiving from the Nile, it could collapse.” Climate change, that cruelly unpredictable specter, will only intensify the region’s water conflicts.

Like all nations, Ethiopia has the right to exploit its natural resources for its own development aspirations. And there is widespread acknowledgment that Ethiopia deserves a fairer apportionment of Nile waters – after all, a colonial-era treaty that excluded Ethiopia and grantedthe lion’s share of Nile waters to Egypt is an outdated roadmap for water

sharing in this century. However, damming off a shared river in a secretive and unilateral fashion is a provocative approach to resolving conflict in a water-stressed basin such as the Nile. Says Mohamed Allam, former minister of irrigation and water resources in Egypt: “This is not justabout Egypt and Sudan. International rivers are governed by laws and conventions, in accordance with which any action that affects water quotas requires advanced notice and guarantees against possible harm.” The Nile situation is not an isolated incident. Ethiopia is being similarly aggressive over the development of the shared Omo River, where it is building the controversial Gibe III Dam and developing large-scale plantations. These developments threaten Kenya’s Lake Turkana, which derives 90% of its water from the Omo River. Rather than consulting with communities of the Lower Omo River Valley affected by schemes to lease land to foreign agribusiness and control the flow of the river, affected communities have instead been subjected to a wide range of human rightsviolations and repression.

Shared rivers should be handled in a way that protects the livelihoods of those who depend on them, helps prepare the most vulnerable for adapting to a changing climate, and increases cooperation among neighboring states. The approach that governments take in managing shared rivers can either divide or unite. With construction beginning on GERD, Ethiopia is literally dividing the Nile with a huge wall, and letting the chips fall where they may. It’s a shortsighted approach that may playwell at home, but its unintended consequences could be far-reaching.

Egyptian saber-rattling aside, the responsibility rests with Ethiopia to takethe next steps to reduce this crisis, and resolve its failures in the planningand execution of this dam.

But what if Ethiopia refuses to engage? Some believe the International Court of Justice should be called in. – a move that Ethiopia rejects. Othershope Ethiopia’s major donors will use their diplomatic leverage to intervene. And still others hold out hope that the crisis will prove to be anopportunity to improve cooperation over the Nile.

Western donors have thus far mostly stayed out of the debate on Ethiopia’s dam building. Yet Ethiopia is one of the world’s largest recipients of foreign aid. The US has been the largest donor to the country, through a range of programs. Ethiopia has been receiving $3.5 billion on average from international donors in recent years – a critical portion of its national budget. This assistance explains how such a poor nation can afford to build costly dams and irrigation infrastructure withoutdedicated funding. Western donors such as the United States have a responsibility to step up diplomatic pressure on Ethiopia and call for moreopenness in this process, and a more collaborative approach to managingthe Nile River.

Egypt lawmakers lambast PM over Ethiopia dam'By MAGGIE MICHAEL — Associated Press

CAIRO — June 10, 2013 - Angry Egyptian lawmakers accused the country’s prime minister and government on Monday of doing nothing toprevent Ethiopia from completing a dam that threatens to leave Nile-

dependent Egypt with a dangerous water shortage. Prime Minister Hesham Kandil had just finished addressing parliament about how the government planned to work diplomatically, legally and technically to negotiate with Ethiopia over the dam when the session heated up. He called the dam's construction an "act of defiance" and stressed that Egypt will not give "a single drop of water," but then hurriedly left the chamber despite calls for clarification over how to handle the situation if Ethiopia rejects overtures.
"Egypt will turn to a graveyard" if the dam is completed,geologist and Egyptian lawmaker Khaled Ouda shouted to parliament. "The prime minister didn't provide anything." "We have to stop the construction of this dam first before entering negotiations," he said.
Egypt in the past has threatened to go to war over its "historic rights" to the waters of the Nile River. Last week, Egyptian political leaders caused uproar after proposing to aid rebels against the Ethiopian government or even sabotaging the dam itself. Ethiopia demanded an official explanation.Egypt faces the prospect of its current water shortage worsening when theso-called Grand Ethiopian Renaissance Dam is completed. Ethiopia's decision challenges a colonial-era agreement that had given downstream Egypt and Sudan rights to the Nile water, with Egypt taking 55.5 billion cubic meters and Sudan 18.5 billion cubic meters of 84 billion cubic meters, with 10 billion lost to evaporation. That agreement, first signed in1929, took no account of the eight other nations along the 6,700- kilometer (4,160-mile) river and its basin, which have been agitating for adecade for a more equitable accord. Ethiopia's unilateral action seems to ignore the 10-nation Nile Basin Initiative, a regional partnership formed in1999 that seeks to develop the river in a cooperative manner.
Ethiopia is leading a group of five nations threatening to sign a new cooperation agreement without Egypt and Sudan, effectively taking control from Egypt of the Nile, which serves some 238 million people. Experts estimate that Egypt could lose as much as 20 percent of its Nile water in the three to five years needed for Ethiopia to fill a massive planned reservoir. Abdullah Badr, who leads the ultraconservative Salafi caucus in parliament, held up a blank notebook after Kandil's speech andsaid: "I have been taking notes and the page for solutions is blank." "Where are the studies? Where are the solutions?" He added. "There is nothing more dangerous than this. This is about water security and thereare enemies outside and inside – what is the role of the government and what did it do?" he said. Ethiopian officials have downplayed he effect thedam will have on Egypt, saying it is needed to provide much-needed power for the country's development.
Egypt warns all options open for Ethiopia Nile dam'
By AYA BATRAWY and MAGGIE MICHAEL, Associated Press, June 11, 2013Updates: CAIRO (AP) — Egypt's president on Monday hardened his stanceagainst Ethiopia and its construction of a Nile dam, warning that "all options are open" in dealing with the project that threatens to leave Egyptwith a dangerous water shortage. Speaking in a live televised speech before hundreds of supporters, Mohammed Morsi said Egypt is not calling for war, but it is willing to confront any threats to its water security. "If it

loses one drop, our blood is the alternative," he said to a raucous crowd oflargely Islamist supporters that erupted into a standing ovation.

Ethiopia's $4.2 billion hydroelectric dam, which would be Africa's largest, challenges a colonial-era agreement that had given Egypt and Sudan the lion's share of rights to Nile water. Experts estimate that Egypt could lose as much as 20 percent of its Nile water in the three to five years needed for Ethiopia to fill a massive reservoir. "If Egypt is the Nile's gift, then the Nile is a gift to Egypt," Morsi said in his opening remarks. The president's speech reflected the importance of the Nile River to Egypt. It provides almost all of the fresh water to a country that is otherwise largely parcheddesert. As much as 85 percent of the Nile's water comes from Ethiopia. "We are not calling for war, but we will not allow, at all, threats against our water security," Morsi said before adding, "all options are open." Morsiappeared to be using concern about Ethiopia's mega project to whip up nationalistic fervor ahead of protests planned against him later this month.

In the conference hall where Morsi delivered his speech, some of his supporters chanted slogans against Israel and accused it of colluding with Ethiopia to harm Egypt. Blaming Israel for Egypt's problems is common here. Israel denied any connection to the construction of the dam. Morsi said he would be willing to approach opposition groups in order to unite Egyptians around a common position with regard to the dam. This came after two prominent opposition parties declined an invitation to meet Morsilast week, citing a lack of transparency in dealing with national issues anda failure to listen to them. "The great Nile is that which all our lives are connected to. The lives of the Egyptians are connected around it as one great people," Morsi told the crowd. Shifting his tone later in the speech, Morsi said that Egypt considers Ethiopia a "friend" and noted he has visited the country twice since taking office. He said his administration is in continuous dialogue with Ethiopia and Sudan to discuss water rights.

Earlier in the day, angry Egyptian lawmakers accused Morsi's premier ofdoing nothing to prevent Ethiopia from building the dam. Prime MinisterHesham Kandil had just finished addressing parliament about how the government planned to work diplomatically, legally and technically with Ethiopia over the dam when the session heated up. Kandil called the dam's construction an "act of defiance," but then hurriedly left the chamber despite calls for clarification over how to handle the situation ifEthiopia rejects overtures. "Egypt will turn to a graveyard" if the dam iscompleted, Egyptian lawmaker Khaled Ouda, a geologist, shouted to parliament. "The prime minister didn't provide anything."

Abdullah Badr, who leads the ultraconservative Islamist Salafi caucus inparliament, held up a blank notebook after Kandil's speech and said: "I have been taking notes and the page for solutions is blank." "Where arethe studies? Where are the solutions? This is about water security and there are enemies outside and inside — what is the role of the government and what did it do?" he said. The crisis plays into a wider feeling of malaise in Egypt. A diverse spectrum of the population is growing increasingly impatient with Morsi's handling of the country's

instability, including a security breakdown and a struggling economy, more than two years after an uprising toppled longtime President Hosni Mubarak. Opposition activists are hoping to harness the frustration of Egyptians into mass protests planned on the anniversary of Morsi's takingoffice June 30. Suggestions last week by some political leaders to aid rebels against the Ethiopian government or even sabotage the dam itself also heightened concerns in Egypt. Ethiopia has demanded an official explanation. Egypt faces the prospect of its current water shortage worsening when theGrand Ethiopian Renaissance Dam is completed. The crisis started last month when Ethiopia diverted the flow of the Blue Nile, one of the Nile's sources, to make way for the dam — before a 10-member panel of experts from Egypt, Sudan, Ethiopia and other countries released a study on the dam's impact. The move took the Egyptian government by surprise. Ethiopia's unilateral action appeared to ignore the 10-nation Nile Basin Initiative, a regional partnership formed in 1999 that seeks to develop the river in a cooperative manner. Egypt complained that the 10- member panel did not give concrete answers to the impact of the dam, because Ethiopia failed to provide enough updated data to the panel.

Ethiopia said the report assured that the dam will not harm Egypt. It wasnot possible to obtain a copy of the report to independently examine its conclusions.

Egypt escalates war of words over Ethiopia’s Nile Dam Project' Updates: Addis Ababa — June 11, 2013 - Tensions between Egypt andEthiopia heightened on Monday after Cairo threaten Addis Ababa in connection with its first dam project along the Blue Nile. Egypt, which has long been opposing the construction of the $4.8 billion dam, said it will nottolerate any attempt by the horn of Africa’s nation that diminishes its water share. Addressing to Egyptians on a live televised speech, Egyptian President Mohammed Morsi warned that his country is ready to confront any threat that would endanger the country’s water security. “Egypt’s water security cannot be violated at all,” said Morsi. “As president of the state, I confirm to you that all options are open.”

The Egyptian president however said that he is not calling for war but warned that he would not allow any type of threats against water security.President Morsi’s comments come after Egyptian politicians this week intensified pressure on him for doing not doing enough to stop the Grand Renaissance Ethiopian Dam (GERD). Although Ethiopia is the source of 85 percent of the Nile’s water, a colonial-era treaty grants Egypt the use of over 70 percent of it, supplying the North African nation with 55 billion cubic meters of water per year. The new dam on the Blue Nile river whereEthiopia is building Africa’s largest hydroelectric plant is considered by some Egypt politicians to be a security risk considering how much the largely desert nation relies on the Nile’s water. Experts estimate that Egypt could lose up to 27% of its share of the Nile’s water when Ethiopia fills the GERD, which, when complete will be the Africa’s biggest reservoir with a capacity of 63 billion cubic meters. Egypt has in the past threatened to go to war against any country that violates to its historic

rights over the Nile river. Egypt argues that other countries along the Nilehave alternative water sources, but the Nile is the only water source available to Egypt and its historic water rights should be respected. “If it loses one drop, our blood is the alternative,” president Morsi said. “The lives of the Egyptians are connected around it as one great people. If it diminishes by one drop then our blood is the alternative.”
REACTIONS IN ETHIOPIA: Ethiopia’s foreign ministry responded on Tuesday, saying that the construction of Nile dam will not be stopped “even for a second” despite what Egyptian politicians say. Addis Ababa’s foreign ministry spokesperson Dina Mufuti said the sabotage proposals suggested by some Egyptian politicians were unacceptable. However he welcomed the remarks by Sudan’s information minister, Ahmed Bilal Osman, in support of the dam project. Osman said the ten-member international panel, which has been studying the impacts of the dam on Sudan and Egypt in its final report last week, had dispelled all concerns raised about the dam. The Sudanese spokesperson said that his country will send experts and technicians to help in the construction of the dam. Ethiopians were caught by surprise last week when Egyptian politicians last week were aired live discussing sabotage plans to stop the Nile dam, which currently is 21% completed. Politicians suggested that President Morsi take military action or support Ethiopian rebels to destroy the Dam,outraging many Ethiopians. “We are ready for an armed confrontation to any attacks by Egypt” Mesfin Nega, a 32 year old Ethiopian told Sudan Tribune. “Words of war are not the smartest ways to deal with Ethiopia” he said. “Egypt better stop making provocative remarks. It should refer back and learn in to how Ethiopia defeated the Italian invaders.” Speakingto state television, Egyptian Foreign Minister, Mohamed Kamel Amr, said “No Nile – no Egypt.” He declined to detail possible actions Cairo would take in connection with Ethiopia dam but said “We have a plan for action, which will start soon. We will talk to Ethiopia and we’ll see what comes of it.” The Egyptian foreign minister is expected Addis Ababa within the coming few days to discuss with Ethiopian officials over the controversial massive dam project.
Ethiopia dismisses psychological warfare’
News24 Addis Ababa (June 11, 2013) – Updates: Ethiopia dismissed Egyptian talk of military action against a giant dam it is building on the Nile as "psychological warfare", and said on Tuesday it would defend itselfand carry on with the work regardless. Bellicose rhetoric between two of Africa's most populous and fastest-growing nations has raised fears of conflict over water, though both sides are also pursuing diplomatic compromise over what would be the biggest hydro electric plant on the continent. Responding to a speech on Monday by President Mohamed Mursi, in which he said Egypt did not want "war" but would keep "all options open" to avoid losing any water, Ethiopia's Foreign Ministry spokesperson said: "This sort of bragging won't divert our attention". Thespokesperson, Dina Mufti, added: "Ethiopia is not intimidated by Egypt's psychological warfare and won't halt the dam's construction, even for seconds". Egypt's previous military rulers had contingency plans to attack

Ethiopian dams that might disrupt the flow of the Nile. Some politicians were caught on camera last week talking of air strikes or backing Ethiopian rebels after the start of major new work on the project took Cairo by surprise late last month. Asked if Addis Ababa was looking at measures to defend the Ethiopian Grand Renaissance Dam, Dina said: "Nocountry operates without precautions, let alone Ethiopia, which has a trackrecord of defending its independence from all forces of evil". Mainly Christian Ethiopia and Muslim Arab Egypt share a long history of suspicionand friction, including over the Nile. Egypt's foreign minister, who has saidhe will give up "not a single drop of water", is to visit Addis Ababa. Mursi hoped for a political solution with Ethiopia, a "friendly state", whose demands for economic development he said he understood.

Impact: One bone of contention is a technical analysis of the impact of the

$4.7bn dam being built by an Italian firm on the Blue Nile near the borderwith Sudan, which supports the plan. Ethiopia says a joint report, still keptunder wraps by both governments, supports its assurances it will do "no appreciable harm" to Sudan and Egypt downstream. It has no plan to use water for irrigation and says that once the reservoir is filled, all the river's water will be free to flow through its turbines. Mursi, however, said Egypt had carried out studies that showed "negative consequences". Less water would flow while the reservoir is filling. Once full, more water may evaporate. Egypt, whose 84 million people use almost all of the Nile's supply that reaches them to meet their needs, cites colonial-era treaties guaranteeing it the lion's share of the water. Ethiopia and other upstream neighbours say those claims are outdated. "Ethiopia cannot remain poor," Foreign Minister Tedros Adhanom said in a statement. "It must utilise its resources to lift its people out of poverty." Despite its lack of means, Ethiopia insists it can fund the project itself without help from international lenders wary of the diplomatic dispute. It has been aided by a $1bn loan from China to build power transmission lines. It says the project, on which work to divert the river temporarily began in May, is 21% complete. With a target generating capacity of 6 000 megawatts, it is part of a plan to make Ethiopia the biggest electricity exporter in Africa.Ethiopia rejects Egyptian protests over Nile dam’

Construction of Grand Renaissance dam to continue despite Eygptian concerns over impact on water supply and farming - The Guardian By Patrick Kingsley in Cairo Updates: June 12, 2013 Ethiopia has refused to halt work on a controversial giant dam across the river Nile that Egypt fears will severely curb its water supply. The refusal came after the Egyptian president, Mohamed Morsi, promised to "defend each drop of Nile water with our blood" and other senior Egyptian politicians called for the dam's destruction. A spokesman for the Ethiopian prime minister saidon Tuesday that Morsi's speech was irresponsible and that the project would proceed as planned. "Nothing is going to stop the Renaissance Dam. Not a threat will stop it," Getachew Reda said via telephone. "Noneof the concerns the Egyptian politicians are making are supported by science. Some of them border on what I would characterise as fortune- telling."

Ethiopia hopes its Grand Renaissance dam – which will cost more than
$4.3bn (£2.8bn) – will form Africa's largest hydropower plant. But Egyptian authorities have contested its construction after water experts claimed it would drastically lower the level of the Nile, which supplies almost all of Egypt's water, and could reduce cultivated farmland by up to 25%. In a speech to Islamist supporters on Monday night, Morsi called theNile "God's gift to Egypt", and ambiguously veered between calls for peaceful dialogue, and veiled military threats. He said that while Egypt did"not want war … we do not accept threats to our security", and claimed that all possible responses to the dam remained open to Egypt – a line that has been interpreted as a threat of force.

Last week, other senior Egyptian politicians were filmed discussing aggressive measures against their upstream neighbours – apparently unaware that their discussion was being broadcast live. Younis Makhyoun,the leader of Egypt's second largest political grouping, the ultraconservative Nour party, suggested to Morsi in a televised meeting that as a last resort Egyptian intelligence forces could destroy the dam. Inresponse to the embarrassing gaffe, Ethiopia summoned the Egyptian ambassador in Addis Ababa to explain Egypt's stance. Morsi's own aggressive speech is aimed at a domestic audience as much as a foreign one, as he seeks to regain support ahead of anticipated large protests against his presidency on 30 June. However insincere his military threats may be, they are nevertheless rooted in very real and widely held Egyptian fears about the dam's effect.

Dr Bahaa Alkoussey, the former chairman of Egypt's National Water Research Centre, and a one-time senior official in the ministry of water resources and irrigation, claimed the Ethiopian plans copuld reduce waterflow to Egypt by more than 10bn kilolitres. "Then you might cross the Nile on the back of a camel," he said. "It's not a joke. This is a seriousmatter. The Egyptians already have a deficit in their water supply of about10bn kilolitres. If you add just 1 kilolitre to that, it will be a disaster. Now it's already a problem. If you add more reductions, then you'll have a catastrophe." Alkoussey claimed the dam would make it harder for ferries to travel up the Nile, and would cause more pollution, harming fish farms.Most seriously, Alkoussey claimed the dam would devastate the farming community. "Every 1bn kilolitre reduction in natural flow to Egypt will cause 200,000 feddans [207,600 acres] of land to go out of production, and 500,000 farmers to be out of work – which will affect 2.5 million families," he said.

Supporters of the dam have argued that Egypt could solve the crisis by using its water more efficiently. But Hani Raslan, an expert on water politics at Cairo's government-affiliated Al-Ahram Centre for Political and Strategic Studies, argued Egypt recycled much of its water. "Egypt is one of the most efficient countries with water consumption," he said. "Our supplies are 55bn cubic meters but we consume 70bn, which means we'rerecycling 15bn cubic meters." Ethiopia disputes the Egyptian experts' conclusions, claiming the dam has been largely exonerated by a recently completed, but as yet unreleased report written jointly by scientists from

Egypt, Ethiopia and Sudan. "Of course we are going to go ahead with theproject, because we believe we are justified," Reda said. "Why would a self-respecting government spend $4.5bn simply to spite Egypt? It's beyond reason and it's beyond science. None of the concerns of the Egyptians [are] really something you can remotely associate yourself with." Additional reporting by Mowaffaq Safadi

Ethiopia - EMoFA discards Egypt threats over Nile Dam’

Aljazeera June 12, 2013 - Ethiopian Ministry of Foreign Affairs says it is not intimidated by Egypt's "psychological warfare" and dam project will proceed. Ethiopia has dismissed Egyptian talk of military action against a giant dam it is building on the Nile as "psychological warfare". Dina Mufti,Ethiopia's foreign ministry spokesman, said on Tuesday that his country was "not intimidated by Egypt's psychological warfare and won't halt the dam's construction, even for seconds." Responding to a speech a day earlier by Egypt's President Mohamed Morsi, in which he said Egypt did not want "war" but would keep "all options open" to avoid losing any water, Mufti said the project would not be distracted by their neighbours. Asked if Addis Ababa was looking at measures to defend the Ethiopian Grand Renaissance Dam, Dina said: "No country operates without precautions, let alone Ethiopia, which has a track record of defending its independence from all forces of evil." Some politicians were caught on camera last week talking of air strikes or backing Ethiopian rebels after the start of major new work on the project took Cairo by surprise late lastmonth. Egypt's foreign minister, who has said he will give up "not a singledrop of water", is to visit Addis Ababa. Morsi hoped for a political solution with Ethiopia, a "friendly state", whose demands for economic development he said he understood. One bone of contention is a technical analysis of the impact of the $4.7bn dam being built by an Italian firm on the Blue Nile near the border with Sudan, which supports the plan.

Divergent views: Ethiopia says a joint report, still kept under wraps by both governments, supports its assurances it will do "no appreciable harm" to Sudan and Egypt downstream. It has no plan to use water for irrigation and says that once the reservoir is filled, all the river's water willbe free to flow through its turbines. Morsi, however, said Egypt had carried out studies that showed "negative consequences". Less water would flow while the reservoir is filling. Once full, more water may evaporate. Egypt, whose 84 million people use almost all of the Nile's supply that reaches them to meet their needs, cites colonial-era treaties guaranteeing it the lion's share of the water. Ethiopia and other upstreamneighbours say those claims are outdated. "Ethiopia cannot remain poor,"Foreign Minister Tedros Adhanom said in a statement. "It must utilise its resources to lift its people out of poverty." Despite its lack of means, Ethiopia insists it can fund the project itself without help from international lenders wary of the diplomatic dispute. It has been aided by a $1bn loan from China to build power transmission lines. It says the project, on which work to divert the river temporarily began in May, is 21 percent complete. With a target generating capacity of 6, 000 MW it is

part of a plan to make Ethiopia the biggest electricity exporter in Africa.Source: Agencies

Ethiopia - Nothing will stop Nile Dam Project’

ADDIS ABABA, Ethiopia (AP) June 12, 2013 - Ethiopia's leader has vowed that no one will stop a $4.2 billion energy project that is diverting the flowof the Nile River after Egypt's president warned that all options were beingconsidered to halt the dam. In an interview aired on state television and radio, Ethiopian Prime Minister Hailemariam Desalegn said Tuesday that he did not think Egypt would start a war over the vital river. “All options' include a war. I don't think they will take that option unless they go mad,"Hailemariam said during the interview. "I urge them to abandon such an unhelpful approach and return to dialogue and discussion.” Ethiopia started diverting the flow of the Nile River in late May to make way for its

$4.2 billion hydroelectric plant, which will be Africa's largest. The projecthas been under construction for over two years on the Blue Nile River inEthiopia's Benishangul-Gumuz region near the Sudan border. Egypt fears that the project will mean a diminished share of the Nile River.Egyptian political leaders last week told President Mohammed Morsi to consider hostile acts against Ethiopia. Apparently unaware their discussionwas being televised live, the leaders recommended spreading rumors, aiding rebels and even sabotaging the dam itself in a meeting with Morsi. During the meeting, Morsi said that Egypt will not engage in any aggressive acts against Ethiopia. However, he hardened his stance on Monday, warning that "all options are open." Hailemariam then accused Egyptian leaders of using the dam issue to divert attention away from local issues. He said it was wrong of Egyptian politicians to use the Nile dam as "a distraction to escape the strong domestic opposition they are facing."

A 10-person Egypt-Sudan-Ethiopia experts' panel has concluded that the dam will not significantly affect water flow to both Egypt and Sudan, Hailemariam explained. The finding of the experts' panel, which includes four international experts, was fully accepted by Sudan, Hailemariam said."I like to thank the government and people of Sudan for their support anddetermination to work for mutual benefit. Others should learn from this," he added. In a further escalation of the conflict, the Ethiopian foreign affairs ministry in a statement issued Tuesday condemned the "belligerentrhetoric" coming from Cairo. The ministry said Ethiopia "will not even for asecond" stop the construction of the dam due to Cairo's rhetoric. Ethiopia is currently leading a group of nine countries that signed the new Cooperative Framework Agreement for the Nile. The new agreement replaces colonial-era deals that awarded Cairo veto powers over projects on the Nile. Ethiopia, Kenya, Rwanda, Tanzania and Uganda signed the agreement in 2010, and Burundi did so a year later. Sudan and Egypt have been strongly opposed to the deal. Ethiopian parliament since April isreviewing the deal. It is expected to approve it in few days' time.

Ethiopia ratifies Nile Treaty in snub to Egypt'

ADDIS ABABA, ETHIOPIA (Reuters) June 14, 2013: Ethiopia's parliamentunanimously ratified on Thursday a treaty that strips Egypt of its right to

the lion's share of the Nile river waters, raising the political temperature ina dispute between Cairo and Addis Ababa over the construction of a dam. The parliament's move follows days of irate exchanges between two of Africa's most populous nations over Ethiopia's new hydroelectric plant, which Egypt fears will reduce a water supply that is vital for its 84 million people. Egyptian President Mohammed Morsi said Monday he did not want“war” but would keep “all options open.” That prompted Ethiopia to say it was ready to defend its $4.7-billion Great Renaissance Dam near the border with Sudan. Six Nile basin countries including Ethiopia have signeda deal effectively stripping Cairo of its veto, which is based in colonial-era treaties, over dam projects on the Nile, which is the source of nearly all Egypt's water. Ethiopia's late leader Meles Zenawi had delayed parliamentary ratificationuntil Egypt elected a new government. “Most of the upstream countries have approved it through their parliaments. We delayed it as a gesture ofgoodwill to the people of Egypt until a formal elected government was in place,” said Ethiopian government spokesman Bereket Simon. “We have aprincipled stance on the construction of dams. We are determined to see our projects brought to completion,” said Simon. Another government spokesman, Shimeles Kemal, said Ethiopia's 547-seat legislature had voted to “incorporate the treaty into domestic law.”

Diplomatic efforts

Egyptian Foreign Minister Mohamed Kamel Amr is expected to travel to Addis Ababa on Sunday for talks about the dam, though Ethiopia's foreignministry has said there can be no question of suspending construction. AnEthiopian foreign ministry spokesman has said the talks with Egypt are “inthe spirit of Ethiopian interests.” The African Union has urged both sides to hold talks to resolve the row. Under a 1929 pact, Egypt is entitled to

55.5 billion cubic meters a year of the Nile's flow of around 84 billion cubicmeters. Along with other upstream neighbors such as Kenya and Sudan, however, Ethiopia argues that this pact is outdated. Ethiopia also has dismissed the talk of military action as “psychological warfare.” Officials inAddis Ababa say technical analysis compiled by experts from Ethiopia, Sudan and Egypt provides assurances to downstream nations that the dam being built by an Italian firm will not have a negative impact on the river's water levels.

Is Mohammed Morsi serious about his stance of “water with our blood”? Analysis by Terefe Masresha: The dispute between Egypt and Ethiopia concerned with the latter’s Grand Renaissance dam has now new reachednew heights with increasing intimidation and threats aimed at maintainingEgypt’s “historical rights” to use the lion’s share of the Nile waters. Egypt is aggressively defending its interests and is expressing concern about reduced water quantity. Regrettably, there is very little statement from Ethiopia except the brief diplomatically loaded language issued by the Spokes Person of the Ministry of Foreign Affairs. So far, the Foreign Minister or the Prime Minister has said very little. Is it an acceptable diplomatic tactic in view of what is at stake? Egypt is trying to justify its cause for concern and alarm by

issuing conflicting statements veering

from diplomacy to what is beginning to seem a declaration of war. The international media is reporting from Egypt with voices of ordinary citizenswho say that their country will become a desert if the flow of water from Nile is reduced because of the construction of Ethiopia's dam. The views ofEgyptians are based on the understanding that "Egypt is the gift of the Nile'. However, most of their opinion about Ethiopia in relation to the Nile is influenced by propaganda that has been instilled in Egyptian's hearts and minds for generations. In what seems to be an act of living to the same legacy, Egypt's President Mohamed Morsi said on Monday June 11 he would be willing to approach opposition groups in order to unite Egyptians around a common position with regard to the dam. Given the high level of emotion around the issue and the rhetoric concerning the importance of the Nile to Egypt, the President will not have a difficult task.What about Ethiopia's leaders? How do they relate to the majority of Ethiopians who are disillusioned because of the government's failure to deliver on equality, justice and rule of law?

The Government of Ethiopia is managing Egypt's reaction to the construction of the dam with disturbing silence. The few statements that have been issued by the Ministry of Foreign Affairs are weak and do not match Egypt's aggressive public relations approach. Against this background, it is important to raise the following questions: a) Is Ethiopia's current communication and diplomatic approach a sign of weakness or has the government opted for quiet diplomacy? b) Is there adequate preparedness to thwart any direct and indirect aggression whichcould humiliate our country? c) What is the government doing to mobilize public opinion to ensure support in case of an outright destructive approach by Egypt? d) Is the government sure that the public is completely behind it to defend the country from an attack? e) Can it rely on the support of Sudan to prevent any threat on the dam? The answers to the above questions are found in the political malaise that currently grips Ethiopia. The Government of Ethiopia needs to take immediate action to respect human rights and release all political prisoners who are considered prisoners of conscience by Ethiopians and the international community. Furthermore, it needs to instil a spirit of unity and dignity within the public. A majority of Ethiopians are alienated because of the misguided polices the EPRDF has been following over the past 22 years.

Despite claims of continued economic growth and progress made in infrastructure development, there is widespread discontent about the lackof tangible benefits. This is exacerbated by unemployment, under employment, the high cost of living and the amassing of wealth by croniesof the EPRDF largely through corrupt practices. All of these trigger anger and frustration within the public, which is invariably forced to doubt government intentions, plans and achievements.

In my article on 'Dispelling the Curse of the Nile', I stated that Ethiopia and the spirit with which we hold our nationality is much bigger than the issues which divide us. The path of division, character assassination, blindfaith, and the 'what is in it for me' attitude will not facilitate our emergence from the quagmire that we are in. The increasing threat by

Egypt, if realized, could further deepen the crisis we are in and could evencause irreversible damage. We need to note that a call for unity isn't a callfor inaction against the undemocratic practices of the government or an attempt to reconcile irreconcilable differences. What is suggested is to unite around key national issues that could affect all Ethiopians regardlessof political persuasion. We, therefore, need to take action to get our united voice heard in various forums. The actions that are being taken by the government aren't reassuring. We have unalienable right to be involved in the affairs of our country, particularly when there is a potentialexternal aggression. This is not a responsibility we can delegate to a government we do not support because it's wrong polices and poor performance in the political, economic and social arena. We need to take action now against Egypt's propaganda campaign through objective analysis of the developing situation: the current state of our country and getting our untied voice heard loud and clear to guarantee the long-term interests of Ethiopia. If we don't act now, it might be too late when we decide to act. The view that Egypt is currently embroiled in its own crisis and isn't in any position to take drastic overt or covert military action against the dam is wishful thinking. Ethiopia should not adopt such a position. Our collective responsibility must be to think the unthinkable andto brace ourselves for any eminent danger that the curse of the Nile couldexpose the country. We must take Morsi seriously on his words, because his views aren't moribund in Egypt.

ETHIOPIA - How Egypt might Ethiopia's dam project try to stop?

Forbes Stratfor - June 15, 2013 - Ethiopia's initiation of a dam project on the Blue Nile has quickly drawn the ire of Egypt, which is critically dependent on it as a source of much of the country's freshwater needs. AsEgyptian Foreign Minister Mohamed Kamel Amr said June 9 following Ethiopia's refusal to halt construction of the dam and ahead of his trip to Addis Ababa to discuss the project, Egypt will not give up a "single drop ofwater from the Nile." "No Nile, no Egypt," he said. While Egypt has struggled to attract diplomatic intervention on its behalf to thwart Ethiopia's dam construction, tensions have reached the point where Egypthas suggested the use of force to keep the dam from potentially lowering the Nile's water levels downstream to unacceptable levels. There will be serious international pressure to keep the dispute over the dam in the realm of diplomacy, but there are also fairly significant constraints on the physical possibility of an Egyptian military solution.

It varies depending on the dimensions of the dam, but dams can be and usually are very tough targets to destroy. In World War II the British proved that it could be done despite considerable difficulties and were thefirst to seriously develop the art of dam busting. The British used delayed-action bouncing bombs from Lancaster bombers, but fortunately for the Egyptians, advancements in weapons technology would enable them to target the Ethiopian dam in a less risky way. The best way for Egypt to knock out a standing dam is to use retarded and delayed-action bombs deployed from very low altitudes, or even better, delayed-action joint direct attack munitions deployed at medium altitude. The difficulty is that

the bomb needs to be deployed at the very base of the dam, underwater,where the concussive effect and pressure wave is greatly amplified.

Preferably more than one bomb would be deployed in this manner, and the force would be sufficient to breach the dam. To avoid the hassle of hitting a standing dam and creating major flooding downstream in Sudan and even potentially Egypt, Cairo would probably prefer to hit it while it isunder construction. But it also has to be careful not to hit the dam too early, because then Ethiopia may not be fully deterred from restarting theproject.

Distance is a major obstacle for the Egyptian military option. Ethiopia is simply too far from Egypt, and since Egypt has not invested in any sort ofaerial refueling capability, it is beyond the combat radius of all Egyptian aircraft staging from Egyptian airfields. The only consolation for Egypt is that the dam is very close to the Sudanese border. Access to Sudanese airfields would place some of Egypt's air force within range. However, operating from Sudanese territory could be politically complicated and would have international repercussions for Sudan along with Egypt.

Sudan's proximity to Ethiopia would also leave it vulnerable to direct military retaliation. Another option is the insertion of special operations forces into Sudan. From there, the forces could move across the border and either harass the construction of the dam or attempt to sabotage thestructure under the guise of militants. This would allow Khartoum to realistically pledge that it had no idea there were "militants" there. The harassment tactic by special operations forces or militants would likely only delay the project, not arrest construction.

Special operations forces teams would face their own series of obstacles intrying to destroy the dam. Dams are critical infrastructure and routinely protected relatively well in most countries by dedicated military units.

Ethiopia would be no exception, especially with all the contention already surrounding the project. So Egyptian special operations forces would needluck and skill to gain access to the dam successfully. There is also the problem that a small team of ground forces, no matter how elite, would likely be physically unable to carry enough ordnance to critically damage or destroy the dam. Egypt does have military options, but distance will heavily constrain its ability to project the full force of its military. Any option Cairo chooses to exercise will be risky at best and will also come with severe international consequences.

Egypt's Nile threats weaken case to secure water: David Shinn former USambassador to Ethiopia'

By William Davison & Salma El Wardany – June 17, 2013: Egypt must drop its objection to an Ethiopian dam on the main tributary of the Nile River or it may struggle to ensure adequate supplies from the world's longest waterway, former U.S. Ambassador to Ethiopia David Shinn said. A $4.3 billion, 6,000-megawatt hydropower plant, set to be Africa's largest on completion in 2017, has raised concern in Egypt that it will cut supplies of water allocated by accords put in place more than five decadesago. President Mohamed Mursi told supporters in Cairo on June 10 his government will "defend each drop of Nile water

with our blood” if the

country's water security is threatened. The Grand Ethiopian Renaissance Dam project, funded solely by Ethiopia's government, is a "game-changer"because Egypt has historically blocked international financing for large upstream Nile projects, Shinn said on June 12. The best way for Egypt to secure its water needs is by cooperating on the project that could be "transformational" in terms of industrializing East African economies, he said. "Ethiopia is the only country in the region that has the water to make a huge contribution to increased availability of electricity," Shinn said in an e-mailed response to questions. "It could solve all of Ethiopia's power needs, sell power at a profit to neighbors, help control periodic flooding in Sudan and contribute significantly to regional economic integration."

River Diverted: Ethiopia announced the project on the Blue Nile River, thelargest of the Nile's two tributaries, a month after former Egyptian President Hosni Mubarak was deposed in February 2011. Last month, Ethiopia diverted the flow of the Blue Nile as part of the construction process. Ethiopia is the source of 86 percent of the water that flows into the Nile, a river that runs 4,160 miles through 11 countries from Burundi in the south to Egypt, where it empties into the Mediterranean Sea. A study on the dam released last month found the project wouldn't cause "appreciable" harm downstream nations, according to Ethiopia's government, which says it won't use the dam for irrigation. The joint report was inadequate because it failed to "clarify in detail the impacts of the dam," the Egyptian presidency said in a statement on June 3. The dispute over the dam resonates in Egypt, where the Nile has long been viewed as much of a symbol of the country as its primary water source.

Mursi, in a speech before an Islamist audience on June 10, said that ifEgypt is the "'gift of the Nile,' then the Nile is God's gift to Egypt."

Sugar, Wheat: Egypt relies on irrigation from the Nile to grow almost all ofits cereals, fruits and vegetables. The country is Africa's biggest wheat grower and the continent's second-largest sugar producer after South Africa, according to the Food and Agriculture Organization. In meetings between Mursi and Ethiopian Prime Minister Hailemariam Desalegn, the Egyptian leader was "only interested in constructive engagement," according to Hailemariam's spokesman, Getachew Reda. That contrasts with antagonism in the past, he said in a phone interview. "Egypt will lose the upper hand if they decide to opt out from cooperating as the upstreamcountries will go ahead with their industrial revolutions with or without Egypt," said Ana Cascao at the Stockholm International Water Institute. "The best way for Egypt to secure the water it needs in the long term is byentering into a new era of cooperation."

Power Lines: Mursi and Hailemariam met at an African Union summit last month in Ethiopia's capital, Addis Ababa, where Mursi suggested Egypt may fund a transmission line from the dam, Getachew said. Ethiopia plansto sell 2,000 megawatts of power to Egypt by 2020. "With the coming to power of President Mursi there is a changing dynamic," he said on June 9."They would rather benefit from the dam." Egypt's foreign minister arrivesin Ethiopia today to engage in more "constructive dialog," Egyptian

Ambassador to Ethiopia Mohamed Edrees said in a phone interview on June 12. “We are working to find a mutually agreed way forward.” Mursi’scomments to his supporters may be aimed at deflecting domestic criticism, said Nadia Ahidjo, a Nairobi-based analyst at advisory group africapractice. Opposition groups plan to hold mass rallies on June 30, a year after Mursi was sworn in as Egypt’s first democratically elected civilian president, in a bid to remove him from office and trigger new elections.

Domestic Constraint:The instability constrains Mursi from rallying support for his position on the dam, said Ahidjo. “When you don’t have domestic support it’s very difficult to embark on a regional agenda,” she said. The Nile discharges about 85 billion cubic meters (3 trillion cubic feet) of waterannually, according to Austin, Texas-based, Stratfor Inc., which is enough to fill almost 2.5 Hoover Dams. Under a 1959 quota agreement between Egypt and Sudan that excluded other nations in the Nile Basin, Egypt was given 55.5 billion cubic meters a year and Sudan 18.5 billion cubic meters,the Texas-based consulting firm said in a May 28 note sent by e-mail. Therest evaporates. Egypt’s requirement for an additional 21 billion cubic meters by 2050 for its growing population will mean there is “little water to spare,” Stratfor said. An equitable distribution of water based on needs and resources may give Egypt about 50 billion cubic meters, according to Cascao.

Significant Potential: The dam, 30 kilometers (18 miles) from the Sudanese border, may allow Sudan to boost its agriculture output by using the regulated outflow of the dam for irrigation, Cascao said. “It increases the irrigation potential significantly” from three months to 12 months, she said. Sudan backs Ethiopia’s dam, which will “bring many benefits and blessings for us,” Information Minister Ahmed Bilal Osman told reporters in the capital, Khartoum, on June 9. While Ethiopia is open to discussions about technical aspects of the dam with its neighbors, suchas how long it will take to fill the 74 billion cubic-meter reservoir, it’s unwilling to halt or downsize a key project, Water and Energy Minister Alemayehu Tegenu said in a June 11 phone interview. Egypt’s best optionis to sign a cooperation agreement already agreed to by Ethiopia and six riparian nations, including Uganda and Kenya, said Debay Tadesse, a regional analyst at the Institute for Security Studies in Addis Ababa. The accord, known as the Cooperative Framework Agreement, has previously been rejected by Egypt and Sudan. Once it’s ratified by legislatures in sixout of 10 nations in the Nile Basin, a commission will be created to oversee projects on the river.

Sudan Agreed: Sudan has already said it wants to sign the CFA, accordingto Cascao. Signing up to the agreement would ensure Egypt has a means to protect its water rights as growing upstream nations increasingly look to use the river, Debay said. “According to the CFA, if they exceed allocated water then Egypt can take legal action,” he said. “Without signing the document it will be virtually impossible to do that. The solutionis cooperation.”

Is Egypt's stance on the Blue Nile Dam legally justified?

Analysis by Dr Zeray Yihdego: Egypt and Ethiopia are in a war of words concerning the damming of the Blue Nile. Ethiopia intends, and has already completed twenty-one percent of the construction of the dam, to generate 6000 megawatts of electricity, which is equivalent to six nuclear power plants, in order to support and improve its sustainable developmentstanding, thereby increasing the living standards of millions of its citizens.Egypt opposes the project, fearing that the dam will reduce the flow of thewater. Interestingly, Sudan sees the dam as beneficial to all downstream and upstream Nile Basin countries. Egypt has declared that "all options are open" to stop a reduction of "even one drop of Nile water" as a result of the construction of the dam, including involving the military, arming opposition groups and sabotaging the dam, although it says that it does not want to go to war with Ethiopia. This controversy poses several criticallegal issues.

The first concerns the legal basis of both sides for using Nile waters and resources. Egypt argues on the basis of "inherent" or "historic" title, as enacted in colonial treaties, including in the 1929 and 1959 Nile Water Treaties between Egypt and Sudan. The latter treaty entitles Egypt to use eighty-seven percent of the Nile which amounts to 55 billion cubic meters of water per annum, while Sudan is entitled only to eighteen and a half percent. The rest evaporates into the air. Ethiopia and other upstream riparian counties including Kenya, Tanzania, Burundi, Uganda, Rwanda, the Democratic Republic of the Congo rely on the principle of "equitable and reasonable use and utilization" of the Nile River waters and resources.This principle has been codified in Article 5 of the 1997 Convention on the Law of Non-Navigational Uses of International Water Courses, which is considered a codification of customary principles. In the River Oder Case of 1929 [PDF], the Permanent Court of International Justice (PCIJ) explicitly proclaimed that the "community of interest of riparian States" forms the "basis of a common legal rightof all riparian States" It must be noted that Ethiopia had opposed the colonial treaties on the Nile since their inception, and all upstream countries are oppose relying on colonial treaties, considering them unfair and discriminatory. Egypt might argue, however, that colonial treaties must be honored, which includes those agreements entered into between the British colonyand most upstream countries not to use or "arrest" the Nile waters without receiving permission from Egypt and Sudan. This argument is rather weak, as Ethiopia had persistently objected to the treaties, and allupstream (and downstream) countries were under colonial rule and thus not legally bound by such treaties as newly independent countries. The "clean state" doctrine, as codified under Article 16 of the Vienna Convention on Succession of States in Respect of Treaties of 1978, submits that countries that gain independence are not obliged to succeedto colonial treaties excepting boundary issues.

The exception of "special regimes" such as Article 13 of Rome Statute of the ICC, which imposes obligations on non-party states, is less likely to apply to these colonial treaties which were created to pursue self-interestrather than common values and shared interest among the Nile Basin

states. This is why most Nile riparian countries have entered in to the NileBasin Cooperative Framework Agreement in 2010 which is based upon equality, and cooperation, rather than the status quo ante: it will also establish a joint Commission to oversee the River's management. From this, it can fairly be argued that contemporary international law does not recognize the "inherent" or "historic" use "principle" to exclusively utilize awater course without ensuring the fair share of other riparian states. For that matter the 1997 UN Convention expressly rejects the "inherent" use claim as a bar to the equitable and reasonable use of international waters.However, as a second legal issue, upstream countries must not inflict a significant harm upon downstream states in their use of an international river like the Nile as stated in Article 7 of the UN Convention 1997 and Article 12 of the Berlin Rules. For example, the "minimum individual waterrequirements" of the people in downstream countries must not be jeopardized by a dam or other projects in upstream countries. Ethiopia insists that its Blue Nile mega dam project will not affect the flow of the water, and thus not only that it will not significantly affect Egypt or Sudanese interests but also that will be beneficial to most riparian countries, including Sudan and Egypt. The electricity generated will be exported to neighboring countries and the project will increase the flow of water to both countries. Conversely, Egypt argues that Ethiopia has not done enough studies on the impact of the dam on downstream nations, especially on fishing, crops and developing new and major hydro-electric power plants in Egypt.

This problem seems to be related to the first legal controversy: Egypt is not willing to risk a reduction of "a drop of water" from the Nile as that iscontrary to its "inherent" or "historic" title to fully use and utilize the Nilewaters. However, the duty not to inflict a significant harm is founded on the principle of "equitable and reasonable use" of a trans-boundary river and thus does not rely on the prior will or permission of one concerned party. It does not allow one party to expand its projects while denying others to use the water for their sustainable development and poverty reduction endeavors. Of course, establishing "a significant harm" is a technical matter, but what seems to be clear is that Ethiopia is vindicatedby the Tripartite Commission's findings in that its project will not harm Egypt and Sudan significantly.

However, this poses a third legal issue. Egypt appears to call upon Ethiopia to halt its project, without providing a legal ground. It may well be justified to urge halting a significantly harmful project based upon evidence and reason but not based on a threat of violence and intervention. Even if the project will significantly harm Egypt, according tothe 1997 UN Convention, Ethiopia might only be required to: "take all appropriate measures, in consultation with the affected State, to eliminateor mitigate such harm and, where appropriate, to discuss the question of compensation."

Finally but most importantly, Egypt vows to use all available options including military force, intervention, sabotage, etc. As the country's economy and livelihood is dependent on the Nile, it may argue, even if

remotely, that the Blue Nile dam is a threat to its survival and thus entitled to defend itself under Article 51 of the UN Charter. In light of Article 2 of the UN Charter, however, states can only use force to defend themselves if and when they are militarily attacked. Moreover, using forceas a means of national policy including to secure water interests is totally banned under current international law.

However, whether Egypt has violated its Charter (or African Union) legal duties is not entirely clear. It may be said that Egypt threatened to use military force in violation of Article 2 of the Charter and Article 4 of the AUConstitutive Act, and thus responsible for such persistent military threats against Ethiopia, in accordance with Articles 1, 40, 41, and 42 of the International Law Commission Draft Articles on the Responsibility of States 2001

The opposing, and may be a more sound argument, is that what (some) Egyptian politicians have done, and are doing, is a sheer propaganda to intimidate and frightened Ethiopia, and thus no concrete breach is committed by Egypt of its duty owed to Ethiopia and the International Community at large. In fact, The Egyptian Nobel Peace Laureate MohamedElBaradei called upon the President to make an apology to Ethiopia and Sudan for "the irresponsible utterances" made against them. It cannot be concluded at this point therefore that Egypt has, or has not, violated international law, as this will depend on how the situation progresses.

As the African Union and the USA rightly urged, and as codified in Article 13 of the 1997 UN Convention and related rules, the way forward is to settle all problems peacefully, and to work together to maximize the benefits to all and minimize any possible harm of the dam on downstreamnations and peoples. The solution lies on Egypt accepting the rights and entitlements of riparian countries in accordance with twenty first century international law, while Ethiopia making sure that its dam does not significantly impact Egypt and Sudan: if diplomacy fails both parties mustopt for judicial or arbitral settlement.

Zeray Yihdego is a Senior Lecturer In Public International Law at the University of Aberdeen, Scotland where he teaches various postgraduate and undergraduate courses of public international law. He is the author of The Arms Trade and International Law (Hart: Oxford, 2007) and other peer-reviewed journal articles on peace and security, humanitarian law, arms control law and democratic governance and sustainable developmentissues. He serves as a member of the UN Expert Group on global firearms control and as a Consultant to the United Nations in his area of legal expertise.

Egypt-Ethiopia conflict over Nile waters flares’

By Mey Dudin and Carola Frentzen, DPA June 18, 2013 CAIRO, Egypt/ADDIS ABABA, Ethiopia - When an Egyptian officer said recently onnational television that the conflict with Ethiopia over the waters of the Nile was "not yet" a military one, his words sounded more threatening than reassuring. Colonel Ahmed Mohammed Ali may have been trying to calm tempers, but long-standing animosities between the two countries has flared up with renewed bitterness.

The Egyptians see the river as a gift from God – to them. Without the Nilethere would have been no Ancient Egypt and its great heritage, only desert. The Nile remains a vital artery. But Ethiopia, where most of the river's water originates, also wants to make use of it and has been planning a huge dam for years. On completion the Renaissance dam, costing $4.3 billion and spanning the Blue Nile at the border with Sudan, is to generate 6,000 megawatts of electricity. At the end of last month, Ethiopia began to change the course of the river, displacing it by several hundred meters, in a move that has outraged Egypt and generated near panic over future water supplies.

Egypt depends on the Nile for 98 per cent of its water - and water is in increasingly short supply. The Arab world's most populous country has seen its population soar from 53 million in 1990 to more than 80 million today. Wasteful use of water, for example in agriculture, has caused demand to rise. It is closely watching developments on the Blue Nile, which rises at Lake Tana in northern Ethiopia and which contributes some 80 per cent of the river's water. In Sudan the Blue Nile joins the White Nile, which has its source in Lake Victoria in Uganda and carries much lesswater.

Water concerns have taken center stage in Egyptian politics, with President Mohammed Morsi stating he does not wish to "lose a single dropof Nile water," and adding ominously that "all options remain open." Ethiopia dismissed his remarks as "unconstructive propaganda" and "empty and violent rhetoric". Cairo's provocative comments constituted anattack on both Ethiopia's national interests and the attempts of its inhabitants to escape poverty, the Foreign Ministry said. Egypt's Foreign Minister Mohammed Kamel Amr travelled to Addis Ababa for a two-day visit in attempt to ease the situation.

Egypt's attitude to "its" Nile has long caused irritation among other countries along the river's course, and Ethiopia has received support for its position on the dam project, from Uganda for example. But Cairo is determined to uphold an agreement dating back to 1929 and the colonial era. This document provides for Egypt and Sudan to have rights to more than 80 per cent of the water, even though the Nile flows through 11 countries in all. The two countries have right of veto on projects that couldinfluence or change the river's course. The other countries aim to change this provision.

Ethiopia's parliament has now passed the ratification of a treaty intended to replace the old Nile Water Agreement, in terms of which a joint forum will decide on how the waters are used. But Egypt has rejected this, insisting on its prior rights. In the longer term, Cairo will have to make concessions to Addis Ababa. Military experts see the Egyptian army's options as limited, with US thin tank Stratfor noting the long distance to the proposed dam. And as Egypt lacks refueling capabilities for its aircraft,it would be impossible to destroy the project from the air.

Forum says hoping to handle Egypt only via military is an old strategy' ESAT News: June 22, 2013 - Forum for Democratic Dialogue in Ethiopia(Medrek), the coalition of four opposition parties, said in a press release

that Ethiopia had the natural and legal rights to use the Abay River and thus agreeing to the equal and fair share of Abay river and other rivers is the sole and sustainable solution. However, Forum warned that as there was no preparation to defend probable attacks that could come from Egypt, national consensus was necessary to proficiently and unfailingly tackle the problems. Forum says, hoping to handle all external attacks viaweapons is an old fashioned thinking and the only way that a dependable Defense and Intelligence force could only be realized is when the government, the people, the communities and political parties have a common understanding and consensus. It also called the ruling party to take national interest beyond politics and start dialogue with all communities and political organizations. In a related report, Unity for Democracy and Justice Party (UDJ) has started collecting the signatures of Ethiopians. Its goal is to collect the signatures of 1 million Ethiopians. The signatures that will be sent to Prime Minister Hailemariam Dessalgn will call for the waiving of the anti terrorism proclamation, forced eviction of people to be stopped, the finding of a solution to the high cost of living and unemployment, the business community to be allowed to do businessin a fair manner, the widening of the political space and the beginning dialogue and reconciliation.

Will Ethiopia's 'grand' new dam steal Nile waters from Egypt?

Africa's largest hydropower project, a new 6,000-megawatt dam on the Blue Nile, has sparked a row between Egypt and Ethiopia. But it could increase the overall water flow in the Nile. By William Davison, Christian Science Monitor- June 27, 2013: Egypt is newly worried about a huge Ethiopian dam now under construction on the Nile’s main tributary – a concern that reflects arid Egypt’s overwhelming reliance on the world's longest river. Egypt and the Nile are bound together: The Nile, called "God's gift to Egypt," helped the nation become one of the first agricultural civilizations, and it still supports most farming there. But Ethiopia – the source of almost 86 percent of the water flowing to Egypt –is equally adamant that it has been denied a fair share of the river by agreements between Sudan and Egypt in the 1950s that divided the river between them. Ethiopia two years ago started building what will be Africa's largest dam on the Blue Nile. It is a clear indication, despite angerfrom Egypt, that upstream Nile countries will no longer simply accept whatthey feel are inequitable water-sharing deals. Ethiopia says its Grand Ethiopian Renaissance Dam, 20 miles from the Sudanese border, will not be used for irrigation. That means that once the 6,000-megawatt hydropower station is at full generating capacity, it will not consume precious water flowing to Egypt. Yet Ethiopia’s decision on how quickly or slowly to fill a needed reservoir with Nile water flowing toward Egypt, plus potential rates of evaporation, are major potential sources of contention between the two nations. After heated rhetoric, including military threats by Egypt and an unbending response by Ethiopia, the nations' two foreign ministers met last week. They agreed to study the dam’s potential impact

− but only as construction proceeds. Ethiopia aims to fill the needed newdam reservoir quickly, in five years, to start generating power. Experts

say five years is ambitious. They argue that wildly varying levels of rainfallin the Blue Nile basin requires a flexible approach. The job may take 20 years, in this view. To divert water into the new reservoir quickly, especially in low-rain years, may bring harm downstream, they say.

Long-term strategy

Yet in the long run, the Nile water can be conserved by moving storage away from inefficient dams such as the Aswan High Dam, which straddles the scorching border of Egypt and Sudan, and into cooler Ethiopia where there is lower evaporation. As for evaporation rates, no consensus or exact science exists. But more usage and storage in Sudan and Ethiopia –and a reduced volume at Aswan – could save some 4 billion cubic meters of water a year, some studies say. When it is filled, Ethiopia's new reservoir or artificial lake will be about half the size of the US state of Rhode Island. Filling may start towards the end of next year, and swallow hills, forests, roads, bridges, and villages in this far-flung corner of western Ethiopia. Last month, Italian dam builder Salini Costrutorri hosteda ceremony to mark the diversion of the Blue Nile as part of the construction process.

Flash point: the filling of the reservoir

While that step raised ire in Egypt, it is more the reservoir filling that is a "major concern" to Sudan and Egypt, said an Ethiopian government official, Debretsion Guebremichael, who wore a red cap marked Salini in the sweltering opening ceremony. The volume of water to be captured in the reservoir is 74 billion cubic meters (bcm), according to project documents. That figure is almost equivalent to the entire annual volume of the Nile that flows into Egypt's High Aswan Dam, or 84 bcm. If Ethiopiadecided unilaterally to fill the reservoir as quickly as possible, that would be disastrous for Sudan and Egypt. It would consume the entire flow of the Blue Nile, or around 54 bcm, for more than a year.

The Ethiopian ministry of water and energy says it wants to fill the reservoir over a period of five or six years. Mr. Debretsion says Ethiopia iswilling to "accommodate" other nations. To fill the dam over a six-year period would mean 14 to 18 percent less Nile water moving to Egypt eachof those years, if rainfall is average and the dam is filled evenly. That is the idea in Addis Ababa, the Ethiopian capital. Experts say that idea may not be so simple. It is unlikely that water can be impounded evenly in an area where rainfall and river volumes vary dramatically, says Simon Langan, director of Nile Basin and East African studies at the InternationalWater Management Institute (IWMI). Ethiopia's Blue Nile, for example, has run as high as 70 bcm in 1929, and as low as 30 bcm in 1972 and 1984, this from a 2008 study of sediment in the Nile by Abdalla Abdelsalam Ahmed, a UN water expert from Sudan.

"They will draw 'excess' water during the wet season," Mr. Langan says. "With some proactive management, hopefully it could be varied even more with greater amounts of water in wet years and smaller amounts in drier summers." Most of the Blue Nile's flow follows a three-month rainy season in the Ethiopian highlands that ends around September. Filling thedam only during rainy season in wet years would mean "the effects on

downstream users may be quite small," says Aanund Killingtveit, professor of hydrolics and environmental engineering at the Norwegian University of Science and Technology. But that approach could take decades, argues Paul Block, an expert on from Drexel University in Philadelphia, who has been modeling the impact of the reservoir filling inlight of climatic variability.

The approach to capturing water needs to be "flexible" depending on how much rain falls in Ethiopia's Blue Nile basin, Langan says. If the first few years of filling were "drier years this could have drastic implications," agrees Mr. Block, who is a professor of civil engineering and an expert on climate risk modeling and hydrologic forecasting. Unpredictable future rainfull patterns complicate a scenario where Ethiopia wants to fill the damas quickly as possible to generate electricity for export. If Ethiopia fills the dam with 25 percent flow of the Blue Nile per year, the dam will fill in 11 years, says Block: if Ethiopia diverts only 10 percent, the time will extend past two decades, he figures. Michael Hammond, a hydrologist from Exeter University in the UK, says such figures are about right. Yet even with less water in Aswan's reservoir, which holds a huge 150 bcm, Egypt may not lose out. "My understanding is that if the impoundment is managed and operated well, Egypt could be assured a highly reliable supply of 55 bcm per year," Mr. Hammond argues. This is the figure Egyptset in a historic 1959 deal with Sudan. Evaporation rates can be managed by small-scale conservation and reduce the some-500 bcm current loss in Ethiopia's highlands, says Langan. When the Renaissance dam is at full volume, it may have a loss only a fifth of the Aswan Dam’s evaporation, or10 bcm a year, according to the numbers offered by Block, whose studies are about to be peer-reviewed.

Ethiopia boost defense spending amid tensions with Egypt over Nile damdevelopment'

AP ADDIS ABABA, Ethiopia July 3, 2013 — The Ethiopian government is set to increase defense spending by more than 15 percent, a rise that comes amid tensions with Egypt over the building of a new dam on the Nile River. Cairo says the Ethiopian dam project, set to become Africa’s largest, could diminish its share of Nile River waters, which provides almost all of the desert nation’s water needs. Ethiopia’s parliament on Wednesday debated the proposed budget, which would increase defensespending to $400 million, up from about $350 million. The parliament is scheduled to approve the budget on Thursday. Getachew Reda, a spokesman for Hailemariam, insists the defense increase has nothing to do with the recent disputes with Egypt. Getachew told AP the increase corresponds to the country’s growing economy.

Ethiopia: PM Hailemariam - No financial shortage threatening GERDconstruction'

July 4, 2013: Prime Minister Hailemariam Dessalegn confirmed that thereis no financial constraint threatening construction of the Grand Ethiopian Renaissance Dam. Speaking at the 39th regular session of the House of Peoples Representatives on Thursday, PM Hailemariam said that construction of the Dam will never stop because of shortage of finance.

The public is expected to contribute 10 to 15 percent of the required amount for construction of the Dam, the Premier said, adding, the federalgovernment and the Ethiopian Electric Power Corporation will cover the balance. PM Hailemariam said so far some 22 per cent of construction of the Dam is completed and urged the public to strengthen support towardsthe same purpose. The Premier on the occasion responded to different questions raised by MPs among which the nation's economic growth is one. Hailemariam said the economy is expected to grow by 11 percent in the current year. The Growth and Transformation Plan's base case scenario of economic growth which is 11 percent is being achieved. This isto be welcomed as there is no country in the world is registering such economic growth at this moment, Hailemariam said. He also noted that activities are underway to make the economic growth continue. Source: ERTA (Addis Ababa)

Ex-US envoy says Egypt-Ethiopia dam dispute has peaceful solution'

July 5, 2013: The former US ambassador to Ethiopia says a peaceful solution can be found regarding the controversial dam project on the Nile River in Ethiopia, which is disputed by Egypt. “This can be resolved in a peaceful manner. To my knowledge, there has never been a war anywhere in the world that has been a result exclusively of a fight over water - not a major war. And I don’t think that this is going to become thefirst one,” David H. Shinn said in an interview with Press TV on Thursday. Shinn called on Ethiopia and Egypt to “engage in more discussion, more dialogue, more transparency of information,” with the United States providing only a council role and not fit to “mediate this dispute”. Last month, Ethiopia said it had begun diverting the flow of the Blue Nile for the construction of the Grand Ethiopian Renaissance dam - a $4.2-billion hydroelectric plant that sparked outrage in Egypt, with officials saying the dam will cause serious water shortage in the country.

Egyptian officials warned against a diminished share of the Nile River, while proposing a plan to sabotage or aid rebels against the Addis Ababa government. “I think there has been an enormous amount of misinformation particularly in the last month or so that has led to the heightened rhetoric and emotion, particularly that coming out of Egypt,” Shinn said, adding that “these are issues that can be dealt with so long asthey are hydro-power projects that allow the water eventually to flow again pretty much as it did before.” A ten-man panel of experts has foundthat the dam will not significantly affect Egypt or Sudan. Egypt faces a water crisis as its population increases. In the 1960s, the average water share per person was 2,800 cubic meters. Now, the figure has dropped to600 cubic meters, much below the poverty line, which is 1,000 cubic meters per person. The Nile, located in northeast Africa and the longest river in the world, supplies water to Egypt and Sudan. It is formed from two rivers: the Blue Nile and the White Nile. Egypt is dependent on the Blue Nile, which starts in Ethiopia. Source: GMA

July 11, 2013: VoA News/Africa - Ethiopia Continues Dam Construction’ By Marthe van der Wolf: ADDIS ABABA — Ethiopia and Egypt have been ina diplomatic dispute for weeks over the construction of what will be

Africa’s largest hydro-electric dam - impacting the waters of the Nile River. But with Egypt facing political turmoil at home, attention has also been diverted from this controversial project. The massive construction of the Great Ethiopian Renaissance Dam continues despite sometimes angry protests from Egypt. At issue is - diverting part of the Blue Nile since May.The recently ousted Egyptian government feared the diversion would impact the Nile River flow - on which it is heavily dependent. All of this willbe a reservoir with 74 billion cubic meters of Nile waters. Ethiopia said it will gradually fill the reservoir in the coming years, leaving Egypt questioning how the reservoir can be filled without affecting the water flow, especially during periods of drought.

Simegnew Bekele, one of the dam’s project managers, said better water management by both Egypt and Ethiopia will be the key. “The water will flow through these culverts permanently. That culverts will be part of the dam, which will be embedded, which will have gates and during any low flow the water will pass through the culverts because it will be installed atthe normal riverbed level. We cannot change the normal riverbed level,” he explained. Ethiopia is proceeding with construction even as environmental experts and diplomats continue to work out Nile River resource management among affected countries.

The Great Ethiopian Renaissance Dam will make Ethiopia Africa’s biggest power exporter in thenext four years - producing 6000 megawatts of hydroelectric power. The dam will be 1708 meters long, 145 meters high and will be equipped with two powerhouses. Potential buyers of the electricity include Somalia, Uganda and even possibly Egypt. The dam will be competed in 2017 at a cost of close to $5 billion

Egypt "deeply worried" by Nile water row with Ethiopia’

(Reuters) - Egypt said on Saturday it was highly concerned that Ethiopia had not responded to an invitation to discuss a dispute over a giant dam that Ethiopia plans to build on the river Nile. "Egypt is deeply worried thatEthiopia has not yet reacted to the invitation Egypt's minister of water andirrigation made to conduct a meeting in Cairo on the consequences of the dam," a statement issued by the foreign ministry said. Egypt fears the dam will reduce water flows vital for its 84 million people. Recently ousted Egyptian President Mohamed Mursi said last month that "all options" wereopen in dealing with the issue, prompting Ethiopia to say it was ready to defend its $4.7 billion dam, set to be built near its border with Sudan. Theforeign ministry statement, issued just days after an interim cabinet was sworn into office in Cairo, shows the dam issue is a major priority for the new government.

Ethiopia summoned the Egyptian ambassador last month after politicians in Cairo were shown on television suggesting military action or supporting Ethiopian rebels. Egypt also last month hosted an experts' meeting to study the impact of the dam on Egypt and Sudan, the two downstream Nile states. The foreign ministry said Cairo's proposed meeting was going to discuss that study, but gave no further details. Egypt, whose populationof 84 million uses almost all of the Nile water available to it, cites a 1929 pact which entitled Cairo to 55.5 billion cubic metres a year of the Nile's

flow of around 84 billion cubic metres. Ethiopia and five other upstream Nile states, such as Kenya and Uganda, say Egypt's claims are outdated and have signed a deal effectively stripping Cairo of its veto based on colonial-era treaties over dam projects on the river. (Reporting by AymanSamir, Writing by Yasmine Saleh: editing by Crispian Balmer)

Ethiopian dams won't cause harm - ex-EPA head'

ADDIS ABABA (Thomson Reuters Foundation) August 12, 2013 – The former head of the Ethiopian Environmental Protection Authority (EPA), now an advisor to the country's new environment minister, has told Thomson Reuters Foundation that major dam projects will not cut off water supplies downstream nor worsen living conditions for local people.The EPA was Ethiopia's main body for environmental regulation and monitoring for nearly two decades after it was established in 1994. The agency – responsible for developing environmental laws and standards –was upgraded last month to become the Ministry of Environmental Protection and Forestry, with a new minister, Belete Tesfa. E.G. Woldegebriel spoke with Dr. Tewoldebirhan Guebregzabher, the EPA's former Director-general, about its work, as well as his views on cutting emissions, deforestation and controversies surrounding the country's hydro-electric dam projects.

TRF: Ethiopia plans to have grid electricity by 2014 that will be producedwithout using fossil fuels. How will it reach that target?

TG: In 2014, when the 1,870 megawatt Gibe III hydro-electric dam startsto generate power, the electricity in the grid system will be entirely from renewable energy. That is from hydro-power primarily, but also from windpower and some geothermal power.

TRF: How would you respond to critics of the Gibe III project who say itendangers the existence of Lake Turkana and will displace thousands ofpeople in southern Ethiopia and northeastern Kenya?

TG: Gibe III is for generating electricity - after it generates electricity, thewater will flow to Lake Turkana. I don't see how it will dry up Lake Turkana. I think it's either people who mistake hydropower generation with irrigation, or some mischievous individuals who want to cause problems that have been exaggerating.

It's true that during the filling-up period of the dam, if water was completely stopped, it would prevent water flowing into Lake Turkanafrom the areas upstream of Gibe III. But that's not going to happen, because as part of the environmental impact measures, water will continue to flow down and enter into the lake. Therefore, I don't thinkthere will be any harm.

With regard to displaced people, I think the number is around 100 families. When you consider the employment opportunities it gives - including to them - and the fact that they are being given land and moneyto resettle, it's not an issue. There is no development that doesn't have a negative impact: only a country must be cautious and correct (in its response to) those negative impacts, and (in this case) those negative impacts of displacement are being taken care of.

TRF: Ethiopia contributes about 86 percent of the waters of the River Nile.What is the Ethiopian government doing with its counterparts in downstream Nile Basin countries to assess the impact of the 6000 MW Grand Ethiopian Renaissance Dam (GERD) project, and to solve potential misunderstandings?
TG: The governments of Ethiopia, Sudan and Egypt established a technicalworkforce that evaluated - and again, for the reasons I described for Gibe III – that the Renaissance Dam isn't going to stop water from flowing. Thewater will generate electricity and continue to flow. The technical team who examined it have all agreed that its impact is going to be positive in both Sudan and Egypt.
The reason is that, in summer time, in the heavy rainfall, especially Khartoum (Sudan's capital) suffers from flooding and this will no longer bethe case, because the same water will continue to flow but it will be regulated by the dam. The dam makes sure that the water doesn't go in one burst, and that it will flow continually throughout the year. Sudan andEgypt will continue getting the water that they have always been getting. TRF: Do you think Ethiopia will be able to achieve its vision of becoming a carbon-neutral economy by 2025?
TG: The indications so far are that it will, and I have no reason to think wewill slip back, but of course we can only be certain when it happens. I alsoexpect Ethiopia to be the first carbon-neutral economy in Africa - howeverthis isn't a very easy thing to define in the sense that there are many countries with big forests that existed before and are not considered as valued sinks for carbon. But I think that's wrong and therefore the forested countries like Democratic Republic of Congo…I believe (are) already carbon neutral.
TRF: Ethiopia's forest cover is estimated to have fallen to below 3 percentfrom around 40 percent about a century ago. What is the trend in deforestation?
TG: (The percentage of Ethiopia's land area covered by forests) was 20 percent 100 years ago… Ethiopia has been an agricultural country for at least the last 5,000 years, and most of its closed (contiguous) forest areaswere cleared for crop cultivation….The 40 percent (figure) is only the potential area of the country that could have had (contiguous) forest.
It's true (that) in the 19th century the forest cover started coming down,and the estimate was that it went down to about 3 percent. But recent estimates show that reforestation programs have been successful and it has been rising. We are planning to make a much more precise measurement soon, but at the moment I wouldn't be very happy to put afigure on the present forest cover. However I'm absolutely certain it's more than the 3 percent it had dwindled to.
TRF: What were the main challenges for Ethiopia's EPA?
TG: The most important was that of capacity - we had more governmentsupport than I had expected, but we did not have enough trained staff tomeet the demands of the work at hand. And of course, Ethiopia is a poorcountry, and finance comes next.

TRF: What did Ethiopia take away from the 2012 U.N. climate talks inDoha?
TG: The aspiration that there will be a new legally binding internationalprotocol negotiated by 2015, which will come into force in 2020. It's sothat the whole world can unite and curb climate change - that's the biggest issue in my view.
TRF: How do you see the likelihood of Ethiopia being able to accessclimate finance from the fledgling U.N. Green Climate Fund?
TG: The fund has been established, the secretariat is in existence - hopefully then the rich countries will provide the funding they have promised. But we can't as yet accuse of them of not having provided (money) since the fund has only just started.
TRF: What's the status of carbon credit schemes that have already beenstarted in some parts of Ethiopia?
TG: The first one was in the Rift Valley region regarding a community forest…there are also others in areas like Bale in southeastern Ethiopia and Welayta in southern Ethiopia. A number of others are in the process.But really in carbon financing, Ethiopia - as the rest of Africa - is a late starter. Source: Thomson Reuters Foundation
Horn of Africa: Looming Water War'
People's Democracy Vol. XXXVII No 38 (August 18, 2013) - By YohannanChemarapally
In the first half of June, there has been heated rhetoric emanating from the capitals of north eastern African countries. The reason driving the rhetoric is the construction of a huge dam on the Blue Nile in Ethiopia. Themulti-billion Great Ethiopian Renaissance Dam when completed is going tobe among the biggest in the world, competing with the likes of China's Three Gorges Dam in size. On June 13, Ethiopia's parliament unanimouslyratified a treaty that would no longer give Egypt the lion's share of the Nile's waters. Six Nile basin countries had signed the treaty in 2011. "Mostof the upstream countries have approved the treaty through their parliaments. We delayed it as a gesture of goodwill to the people of Egypt until a formally elected government was in place", Ethiopia's government spokesman told the media. Eleven countries share the basin of the world'slongest river which flows through East Africa before emptying itself in the Mediterranean in northern Egypt. Ethiopia's neighbours like Egypt and Sudan whose economy is crucially dependent on the Nile are not happy with what they perceive as Ethiopia's unilateral moves. Egyptian civilization and culture itself owes its existence to the free flowing waters of the Nile. Egypt is of the opinion that Addis Ababa's decision to operationalise the dam will also be an incentive for countries like Uganda and the newly independent Republic of South Sudan to plan similar dams on the Nile before its waters enter Sudan and Egypt. Three quarters of theNile's waters to Egypt comes from Ethiopia which is the source of the BlueNile. The White Nile flows through Uganda and Sudan. The White Nile and the Blue Nile meet at Khartoum and then flows into the Sea through Cairo. Since the 19th century, Egyptian leaders have worked overtime to ensure that the waters from the Nile flow uninterrupted into the cotton

and wheat fields of their country. Egypt had briefly invaded Sudan and Ethiopia in the 19th century in futile bids to get complete control over theNile.

DISTRIBUTION GOVERNED BY TWO CONVENTIONS: The distribution of the Nile's waters was until recently governed by two conventions. The firstwas signed in 1929 between Egypt and Britain. Britain was the colonial power that controlled or had influence over all the states through which the Nile flowed. Under this agreement, Egypt was given veto powers over projects on the Nile in other countries. The second was the 1959 agreement signed with Sudan, Egypt was allotted 55.5 billion cubic metersof water from the Nile with Sudan taking 18.5 billion. Ethiopia was excluded from the agreement. Ethiopia and other upstream countries like Kenya and Tanzania were extremely unhappy with the agreement. The Aswan Dam along with the system of canals that have been built to harness the Nile water had done wonders for Egyptian economy. Unlike most of its neighbours, the country is entirely dependent on the Nile water. The country only receives scattered rains and has no forests or savannah. Egyptians feel that the supply to the dam will be adversely affected because of the Ethiopian project and will be a body blow to their already beleaguered economy. The new Aswan Dam was financed and built by the Soviet Union after the US had backed out of its commitment due to the politics of the Cold War era. The Ethiopians too wanted to build a dam on the Nile since the latter half of the last century but their countrywas ravaged by war and political instability. Besides, no country was willing to finance the construction of a huge dam in a country impoverished by cycles of drought and war. 70 per cent of Ethiopians haveno access to electricity. Now things are changing. The Chinese, who have had a history of engagement with the African continent also now, have thewherewithal to finance gargantuan projects. Chinese companies are now involved in a big way in the construction of the Dam in the Ethiopian highlands though the contract for the building of the dam is being handledby an Italian company. The Chinese government has provided a $1 billion loan for the project. The projected cost of the dam is $4.1 billion. Indian, Saudi Arabian and Qatari companies have also invested in the ambitious Ethiopian project. Once completed, the dam is projected to generate 6000megawatts, making Ethiopia the biggest producer of electricity on the continent. It will be in a position to export power to its energy starved neighbours including Egypt. The Ethiopian government has been stressing that the water in the dam will only be used to produce electricity and will not be used for irrigation purposes. In the last week of May, the Ethiopian Prime Minister, Hailemariam Desalegn told his Egyptian counterpart that the course of the Nile's was only being temporarily diverted to facilitate the construction of the dam

Weeks before the military takeover, Egyptian law makers, cutting acrossparty lines, were caught off-guard on television threatening dire consequences for the Ethiopians if the quantum of water for countries downstream is disrupted. They were heard urging the government to usethe Egyptian air force and special army units to abort the construction of

the dam. The politicians were not aware that their meeting was being broadcast live on television. In the second week of June, the former Egyptian President, Mohammed Morsi in a nationwide address vowed to safeguard the nation's water security at all costs. "As President of the Republic, I confirm to you that all options are open. If Egypt is the Nile's gift, then the Nile is a gift to Egypt–if it diminishes by one drop, then our blood is the alternative", he said. The Ethiopian foreign ministry spokesman was quick to retort that no threat will stop the ongoing construction of the dam and that his country would not be "intimidated bythe psychological threats" from Cairo. The Ethiopian prime minister described the Egyptian threats as "warmongering" meant to distract the Egyptian public from their political and economic problems. The former Ethiopian strongman, Meles Zenawi, had accused Egypt shortly before hisdeath, of assisting rebel groups in destabilising his country.

SCRAMBLE FOR WATER: Many commentators have for long been predicting that the 21st century will soon witness "water wars" as nations scramble to make optimum use of the diminishing commodity to feed theirgrowing populations and keep the economy ticking. However, nobody is predicting a military conflict in the Horn of Africa or other parts of Africa over the issue anytime in the near future, despite the overheated rhetoric.Most observers believe that Egypt is in no position to match its words withdeeds. Despite its size and military strength, Egypt has been steadily losing its influence in the region. Ethiopia which also has a big population and a strong army has emerged as the West's strongest partner in the region. Egypt's relations with Sudan have been frosty since the overthrow of the civilian government in the late eighties and the coming to power of a military government in Khartoum that was strongly influenced by Islamist ideology. Relations with Khartoum have considerably improved since the ouster of Hosni Mubarak and the coming to power of a government led by the Muslim Brothers. But the newly established Republic of South Sudan has no love lost for Cairo. Egypt, like many otherAfrican countries, was against the break up of Sudan and the creation of anew country. South Sudan is supporting Ethiopia on the Nile waters issue and has also announced that it is also planning to construct dams on the White Nile that flows through its territory. South Sudan has stopped worked on the Jonglei Canal financed by Egypt where 77 per cent of the work has already been completed. The canal if completed would have saved nine billion square meters of Nile water from being wasted. The construction work on the Great Renaissance Dam started two months after the overthrow of Hosni Mubarak. Wikileaks cables have revealed thatin 2010, Egyptian officials were dissuaded by the US and Sudanese officials from making plans to bomb the infrastructure being readied for the construction of the dam. Sudan had warned that such a move would be counterproductive and Washington would anyway not have tolerated an attack on its most trusted ally in the Horn of Africa. Geo-political equations have changed along with the realisation that the Nile is no longer exclusive for Egypt and it is an African River whose bountiful resources have to be shared.

The former Egyptian President, Mohammed Morsi, had said that he “understood” the Ethiopia’s need to harness its water resources. He had called for a “political solution” to the issue while describing Ethiopia as a “friendly state”. The new people in power in Cairo may take a different view. Figures in the Egyptian security set up and the opposition had criticised Morsi for being too soft on the Ethiopian government. The government in Addis Ababa continues to claim that “no appreciable harm”will accrue to downstream states as a result of the dam project. The Egyptian government has concluded that this is not the case and that the construction of the dam will have “negative consequences”. Egyptian experts have calculated that the country will lose around 20 per cent of itsNile water supply for the next three to five years. Cairo is awaiting the report by a Tripartite Nile Basin Committee comprising of Ethiopia, Sudan and Egypt, to determine its next course of action.

Water Wars: Ethiopia/Egypt - Egyptians Condemn Ethiopia's GERD Project’"Ethiopia is killing us," taxi driver Ahmed Hossam said, as he picked his way through Cairo's notoriously traffic-clogged streets. "If they build this dam, there will be no Nile. If there's no Nile, then there's no Egypt." National Geographic Analysis CAIRO (September 28, 2013) - Projects on the scale of the $4.7 billion, 1.1-mile-long (1.7-kilometer-long) Grand Ethiopian Renaissance Dam often encounter impassioned resistance, but few inspire the kind of dread and fury with which most Egyptians regard plans to dam the Blue Nile River. Egypt insists Ethiopia's hydroelectric scheme amounts to a violation of its historic rights, a breach of the 1959 colonial-era agreement that allocated almost three-fourths of the Nile waters to Egypt, and an existential threat to a country largely devoid of alternative freshwater sources. But what Egyptians regard as a nefarious plot by its historic adversary to control its water supply, Ethiopians see as an intense source of national pride and a symbol of their country's renewalafter the debilitating famines of the 1980s and '90s. "People are enthusiastic. They're excited, because no leader has tried such a project inEthiopia's history," said Bitania Tadesse, a recent university graduate fromthe capital, Addis Ababa. "It's a big deal that is going to be beneficial to future generations."

Intense Water Politics: Ethiopia maintains that Egypt and Sudan downstream have no reason to be fearful. The government says it's merely redressing the inequalities of previous water-sharing arrangements, which had left the nine upstream countries largely bereft ofaccess to the Nile. But the changing regional dynamic is a tough pill for Egypt to swallow. For decades it has used its regional clout to stymie the dam-building plans of its impoverished upstream neighbors. International organizations, such as the World Bank, which has financed hydroelectric ventures in the past, shied away from involvement in such a controversial proposal, handing Egypt a de facto veto. But weakened by several years of economic and political unrest in the aftermath of the Arab Spring, Egyptnow finds itself ill-placed to counter a resurgent Ethiopia. A total of "98 percent of Egypt's freshwater comes from outside its borders, and it has exceptionally little leverage," said Angus Blair, an economic and political

analyst at Cairo's Signet Institute. "The answer lies with working with itsneighbors." Thus far, however, Egypt has taken a largely belligerent stance.

State and private media have whipped up a current of fierce anti- Ethiopian sentiment, with the several-thousand-strong Oromo communityin Egypt bearing the brunt of public suspicion and rage. Many Oromo Ethiopian refugees have been the victims of physical assaults, according to the UN, while a number of online bulletins solicited apartments for Ethiopians after many were evicted from their homes and deprived of medical care in hospitals. Egypt's politicians were no less inflammatory intheir rhetoric. "Building a dam is tantamount to a declaration of war," a senior Nour Party official said back in June, as he proposed Egyptian support for various separatist movements within Ethiopia if the dam's construction continued.

President Mohamed Morsi also weighed in with a veiled threat shortly before his ouster in a popularly supported military coup in early July, saying that "all options are available to us." Some Egyptians blame Morsi and his Islamist Muslim Brotherhood group for the dam's fast progress. "They wanted an Islamic caliphate. They didn't care about Egypt as a country, so they did nothing to stop this dam," said shopkeeper Karim Abdallah. But Egypt's position has, if anything, weakened since Morsi's overthrow. Egypt's southern neighbor, Sudan, has switched sides and chosen to support the dam, not least because Sudan had agreed to an Egyptian request to build an airbase near the Ethiopian border, according to Wikileaks. "Sudan understands that the dam is in its interests," said Harry Verhoeven, who teaches African politics at the University of Oxford."It will be able to import the cheap energy it desperately needs. "Egypt [also] needs to bite the bullet," he added. "Instead of fearing the dam, Egypt should see it as an opportunity to move closer to a region it has traditionally spurned." Former Egyptian president Hosni Mubarak is often accused of having neglected his African neighbors, and some feel Egypt isnow paying the penalty for its preoccupation with its place in the Arab world. "Egypt cannot continue to hurt black Africa and the countries of thetropics of Africa," said Ugandan president Yoweri Museveni this past summer.

Need for Water: Still, Egypt's concerns are far from groundless. Its population is forecast to almost double to 150 million by 2050, so as demand for water surges, its supply will be restricted by the dam. Ethiopia says it's an "unrealistic conception" that the dam will damage Egypt, but for a few years at least (the time it will take for the dam's reservoir to fill),Egypt and Sudan will have to contend with reduced water flow. Egypt fears that storing water behind the Ethiopian dam will reduce the capacity of its own Lake Nasser (thereby reducing the power-generating capacity ofEgypt's giant hydroelectric plant at Aswan). Ethiopian officials have soughtto allay fears by pointing out that storing water in the cooler climes of the Ethiopian lowlands will ensure much less water is lost to evaporation, but Egyptians are unconvinced. "The production of electricity at the Aswan High Dam is likely to drop by almost 40 percent should the Ethiopian dam

be built," concluded Nader Noureddin, a professor of agriculture at Cairo University. Such unease has spawned a bevy of wild theories as to how Ethiopia, poorer and more populous than Egypt, can afford its extensive dam-building program (20 dams in total). "Israel and the U.S. are behind it," insist a number of Egyptian Islamist politicians. "The Chinese are funding this to get back at us for supporting the Americans," a friend in Cairo recently suggested. The Chinese are certainly involved, but there's nothing conspiratorial about it. Chinese state-owned Sinohydro is the world's largest dam builder and accounts for over 50 percent of recently constructed dams. "China simply sees this as terrific business," Verhoeven said.

The Ethiopian government insists it's capable of raising the necessary funds itself, and the country's sizeable diaspora is helping out. Tadle Haile,a retired school counselor from Northern Virginia, has given money, and said that "everybody I've talked to [in the Ethiopian community] says theyhave as well." The Ethiopian Embassy in Washington even offers advice onhow to buy bonds to finance the dam. But how much longer the country will be able to self-finance its ambitious projects is a contentious issue.

State employees have already been "invited" to surrender a month's salary, and "there is a collectivist pressure to accept," lawyer Daniel Berhane said. "Few Ethiopians would dare complain about anything to dowith the Nile, as it's a symbol of patriotism." The dam is now 20 percent built, and on schedule to be completed by 2017, according to Ethiopian officials. The Grand Renaissance Dam, it seems, is going to get built. Butwhat happens next depends on how Egypt adjusts to its changed circumstances. "Egypt needs to wake up to the new world," Verhoeven said. "This doesn't need to be a problem."

October 10, 2013: Ethiopia Seeks Egypt and Sudan Support in Key DamProject’

Nile basin Hydro-politics: Ethiopia has called on Sudan and Egypt tosupport GERD’

ST (ADDIS ABABA) — Ethiopia has called on Sudan and Egypt to support its building of Africa's largest Hydro power dam project along the Nile River saying the ongoing construction of the Grand Renaissance dam will benefit the three countries. According to a statement released on Thursday from the office of the Ethiopia prime minister, downstream countries particularly Egypt should support construction of the dam and drop its long-standing objection against the project. Egypt has been protesting against the dam arguing that the construction will diminish its water share. The Nile water is a source to 95 % of Egypt's water demand.Ethiopia's massive dam project has been a major economic and water security concern to the North African Nation. When Ethiopia diverted the flow of the Nile water in May as part of the engineering work, tension between Addis Ababa and Cairo escalated. Sudan has officially backed theproject and offered support after a tripartite international experts group which had been tasked to assess the potential impacts announced that theproject will not have any significant impact on downstream countries.

Egypt however refused to accept the final findings saying the report was

inadequate and sought another study on the likely impact of the dam of its share of the water. At a news conference this week, Ethiopian prime minister, Hailemariam Desalegn called on Cairo and Khartoum to actively and practically begin to engage in cooperating and providing support for Ethiopia to finish the "regional project" The premier reiterated that his country will continue to push forward the construction of the dam despite discomfort from downstream countries. He said the benefits from the hydro dam facility will be shared between the three countries and Sudan and Egypt need to contribute to the construction of the 4.6 billion dollar project which Ethiopia is currently financing it from it own coffers. Ethiopiasays the dam project won't harm Sudan or Egypt but will benefit them by providing cheap and clean energy, by controlling over flooding, reducing siltation as well as contributing to regional economic integration.

International Experts' Assessment on the Nile Project Warns of StructuralWeakness'

Bloomberg News (October 4, 2013) : - Ethiopia's plan to build Africa's biggest hydropower dam on the main tributary of the Nile River must address concerns that there may be flaws in the design of its foundations,a group of international experts said. They also called for further studies on what impact the 6,000-megawatt, $4.7 billion project may have on thedownstream nations of Sudan and Egypt, the International Panel of Experts said in a report e-mailed to Bloomberg News and verified by Ethiopia's Foreign Ministry. Egypt, which relies on the Nile for almost all ofits water, expressed alarm about the dam when Ethiopia in May diverted the Blue Nile as part of the construction process. "Structural measures might be needed to stabilize the foundation to achieve the required safetyagainst sliding" of the main dam, according to the report. There are also "weak zones" in the rock that will support an auxiliary dam that need to be studied, it said. Construction of the Grand Ethiopian Renaissance Dam is part of a government plan to spend 569 billion birr ($30 billion) on infrastructure in the five years through mid-2015. The country, Africa's second-most populous nation, targets becoming an industrialized middle-income nation by 2025. Ethiopia is the source of 86 percent of the water that flows into the Nile, the world's longest river that runs 4,160 miles through 11 countries from Burundi in the south to Egypt, where it emptiesinto the Mediterranean Sea. Ethiopia has said it will take five to six years to fill the 74 billion cubic-meter (2.6 trillion cubic-feet) reservoir created by the dam.

Regional Specialists: The panel, which held its first meeting in May last year, was formed at the suggestion of Ethiopia's government. It comprised two specialists each from Ethiopia, Egypt and Sudan and four from other nations. The report, which hasn't been made public, was submitted to the three governments in June. Ethiopia said the report found the project to be of international standard and won't cause "significant harm" to downstream countries, while Egypt said it was inconclusive. Ethiopia delivered a hydrological study to the panel that analyzed the downstream impact of the reservoir-filling period given low, average or high rainfall. The project document concluded that Egypt faces

a 6 percent reduction in the High Aswan Dam's electricity-generating capacity and no water loss if the reservoir was filled during years of average or high rainfall. If the reservoir was filled in a dry year it would "significantly impact on water supply to Egypt and cause the loss of powergeneration at High Aswan Dam for extended periods," according to the document. A "comprehensive" additional study of the dam's impact on water resources should be conducted, the panel said after reviewing the document. "The analysis presented is very basic, and not yet at a level of detail, sophistication and reliability that would befit a development of this magnitude, importance and with such regional impact." Ethiopia is working with Sudan and Egypt to enact the panel's recommendations, Dina Mufti, a spokesman for the Foreign Ministry, said in an interview today in the capital, Addis Ababa.

NILE: Sudan Shifts Alliance From Egypt To Ethiopia Over Nile Dispute'

Al Monitor: (October 7, 2013) Since 1959, Sudanese politicians have sidedwith Egypt when negotiating with other African countries about Nile water rights. Similarly, Sudanese politicians based in Khartoum have looked north and east to their Arab neighbors for political, cultural, military and financial support. How then do we explain the statements in June and July2013 by Sudanese President Omar al-Bashir and Irrigation and AgricultureMinister Abdul Halim al-Mutafi that Sudan supports the construction of the Ethiopian Grand Renaissance Dam over the objections of the country's Egyptian allies? To understand the strengthening of Sudan's alliance with Ethiopia and its increased distance from Egypt, it is necessary to look bothat the events of the past few months and at the partition in 2011. The recent protests and riots, which began in Wad Medani on Sept. 23 and have subsequently spread to cities throughout Sudan, calling for a continuation of government fuel subsidies and now the fall of the regime, are the direct result of the failure of the National Congress Party's (NCP) political and economic strategy in the run-up to and in the wake of the partition of Sudan in July 2011. While the riots are more severe than theyhave been in the past, contentious protests in the face of rising prices have occurred with increased frequency over the last few years. For instance, major demonstrations in Khartoum against rising prices erupted in June 2012. These protests have spawned several semi-permanent movements calling for Sudan to have its own "Arab Spring," the most famous of which is the youth movement Girifna. However, officials within the NCP always knew the postsecession transition would be difficult. They were surrendering 75% of Sudan's proven oil reserves, the very wealth that had supported the rapid growth and consolidation of the regime during the 2000s.

In the short term, Bashir's government was prepared to fiercely confront the remaining separatist movements in the Blue Nile state, South Kordofan, Darfur and the eastern regions of the country. They also believed they could suppress political dissent in Khartoum, preventing thedisparate factions from joining together or aligning with peripheral movements to threaten the survival of the regime. In the years before partition, strategists within the NCP began to imagine an alternative to an

oil-based Sudanese economy. These thinkers returned to the 1970s idea of Sudan becoming an "Arab breadbasket." This transformation was premised on an agricultural revolution supported by an ambitious series ofdam-building projects along the Nile, north of Khartoum, the most famousof which was the Merowe High Dam completed in 2009. New irrigation andhydropower projects were expected to reinvigorate a somnolent agricultural sector, while bringing prosperity to the long-neglected traditional heartland of the political elite. Many in Khartoum even began toclaim that a smaller Sudan was a virtue. They argued that without the burden of funding constant counterinsurgency warfare in the periphery, the nation would finally have the funds necessary to develop a culturally and economically united country. By ensuring a peaceful secession, the leadership in Khartoum sought to create the political stability necessary toattract foreign investment and win the lifting of the US sanctions placed on the country in 2005. Even as some strategists in Khartoum questioned whether the US government would acquiesce to the removal of sanctions, most businessmen and politicians in Khartoum believed that the country could count on significant investment from the Gulf countries into the real estate, construction and agricultural sectors. These officials believed that this investment would make the transition to an agricultural economy possible. However, as of early 2008, questions began to emerge about thefeasibility of bringing significant amounts of new agricultural land under cultivation and the government's dam-building program.

As strategists in Khartoum were planning what they readily acknowledgedwould be a difficult transition to a post-oil economy, they were caught off guard by the fall of Presidents Zine El Abidine Ben Ali (Tunisia), Hosni Mubarak (Egypt) and Moammar Gadhafi (Libya) in spring 2011, the ongoing civil war in Syria and the continuation of sectarian tensions in Bahrain. Initially enthusiastic to participate in the overthrow of regional rivals such as Gadhafi, the uprisings sweeping the Arab world became difficult for those in Khartoum to navigate. Egypt's effectiveness as an allysupporting Khartoum in its negotiations with South Sudan or dialogue about the division of the Nile waters decreased, first as a result of Egypt's leadership transitions, then as a result of the public airings of Egyptian politicians' condescending statements about interfering in the internal politics of other African countries and finally as a result of Egypt's expulsion from the African Union in July. Similarly, turmoil in the Middle East has not only created competition for Arab financial and political resources, the increasingly sectarian tenor of these conflicts have alienated Saudi Arabia and the United Arab Emirates (UAE) from the Sudanese leadership, as a result of the regime's reliance on Iran as a military supplier and ally. The nadir in the Saudi-Sudanese relationship was recently marked by Riyadh's decision in August to prevent Bashir from flying through its airspace to Tehran. Despite receiving much less aidand investment than officials in Khartoum had initially expected, Saudi Arabia and the UAE have become the country's largest trading partners.

Asian allies, China, Malaysia and India —which created Sudan's petroleumindustry —had signaled to the regime that they were unwilling to invest in

the country without political stability with Sudan's African neighbors, withwhom they enjoy sizable commercial relationships.

At the same time, Khartoum has been confronted by an ascendant Ethiopia. Ethiopia's power was signaled in 2012 by the calm manner in which the country dealt with the transition from Meles Zenawi to the reignof Hailemariam Desalegn Boshe. Similarly, while the Arab League remainsdivided, African regional and multilateral organizations such as the AfricanUnion, the Intergovernmental Authority on Development and the Nile Basin Initiative have become increasingly effective in setting the regional agenda. Consequentially, as Egypt has turned inward, Ethiopia has emerged as Khartoum's key regional ally, willing to mediate conflicts withSouth Sudan, provide peacekeepers in Abyei and answer to some of Khartoum's economic problems. While Sudan has become an increasingly unattractive site for foreign investment, Ethiopia has become more attractive. Ethiopia's increased prosperity and perceived political stability have allowed it to make significant progress on large infrastructure projects such as the Renaissance Dam, despite Egyptian objections. For Sudanese officials, the realization that Ethiopia was bearing the expense of this construction itself, and that it would increase the amount of land inSudan under cultivation, the number of crop rotations and supply an energy hungry Khartoum with cheap power, are all reasons to support Addis Ababa on the dam issue. At the same time, the African Union has begun to question the legitimacy of the International Criminal Court. And despite several years of hostility between Juba and Khartoum, recent divisions within the ruling parties of each country have made them willingto de-escalate their support for separatist movements in each other's country and engage in security cooperation. While at partition, NCP strategists expected to rely on their Arab neighbors to support them economically and politically —especially in a potential confrontation with South Sudan —at present, it has turned out that it is Khartoum's African neighbors that have been providing it with the crucial support the countryneeds to maintain its own stability. Ethiopia and Egypt face off over billion-dollar Nile dam project'

(The National) (October 17, 2013): Ethiopia, Egypt and Sudan will hold discussions next week over the effect of a new billion-dollar hydro plant along the river Nile, which Egypt fears will hurt water supply to its 84 million people. The meeting will be the first since experts submitted their recommendations on the $4.3bn (Dh15.79bn) Grand Ethiopian Renaissance Dam project more than three months ago. "The meeting is scheduled to take place on Oct. 22, 2013 between officials of the three countries," the Ethiopian foreign ministry said. Egypt fears the 6,000 Megawatt plant is likely to hurt its water supply when it comes on-stream around 2017. The majority of the Egyptian population is centred near the Nile valley and the desert nation depends on the river for around 95 per cent of its water. In June, former Egyptian President Mohamned Morsi saidthat Egypt would "defend each drop of the Nile with our blood". Egypt is

fiercely opposed to the dam but years of political turmoil have weakened the nation's influence in the region. The experts' report is yet to be made public but according to Fekahmed Negash, the director of boundary and trans-boundary rivers at Ethiopia's Water, Irrigation and Energy ministry, the experts recommend further studies to analyse the effect of the dam on Egypt's water supply. Ethiopia plans to take up to six years to fill the dam's 74 billion cubic-metre reservoir but insists this will not adversely affect the river's downstream flow. Addis Ababa, which is fully funding theproject, has pledged to sell excess power to Egypt. Early this year, Ethiopia ratified the Nile River Co-operative Framework deal, challenging the colonial-era treaty that guarantees Egypt "natural and historic rights" over the Nile waters. Lower basin nations including Ethiopia, Kenya, SouthSudan and Uganda are all opposed to the treaty. In June, Uganda's President Yoweri Museveni said that Egypt should not continue to "hurt countries" in the Nile River basin by restricting power projects along the river. Uganda is developing several hydro power projects along the Nile.

Egypt may join Ethiopia in Nile Dam project'

Al Monitor (October 23, 2013) Analysis by Ayah Aman: Cairo and Addis Ababa may soon reach a truce to calm their dispute over the constructionof the Renaissance Dam on the Blue Nile in Ethiopia. Both countries haverecently shown good faith and agreed to negotiate about the project.

Egypt has even agreed to take part in building the dam, though without declaring its conditions for doing so. At a news conference Oct. 7, Ethiopian Prime Minister Hailemariam Desalegn announced that his country welcomes the participation of Egypt and Sudan in the constructionof the dam and stressed that his government considers the dam to be jointly owned by Sudan, Ethiopia and Egypt. Cairo viewed his statement as a positive step toward reaching a consensus on the project, despite its earlier sharp criticism of it. In a telephone conversation Oct. 17, Egyptian Minister of Water Resources and Irrigation Mohamed Abdul Muttalib told Al-Monitor: "Egypt doesn't mind joining the Ethiopian government in building the dam for the service and development of the Ethiopian people.But we must agree on a number of items in a clear way to prevent any damage to Egypt as a result of the dam construction. The Egyptian government always opts for cooperation and participation. … During the coming negotiations with Ethiopia over the dam, we will clarify our position regarding the policy and method of operating the dam, the size ofthe storage lake attached to it, and how to fill it with water in times of flood and drought." He stressed, "Egypt will definitely not participate in the construction unless these policies are agreed upon and agreements regarding them are signed."

On Oct. 8, Ethiopian Minister of Water Alemayehu Tegenu had tweeted,"Great Ethiopian Renaissance Dam never be slowed down for a second.We can pay any cost for it " Egypt gets 55.5 billion cubic meters of Nilewater annually in accordance with the 1959 agreement signed betweenEgypt and Sudan. About 85% of that share comes from the Ethiopian plateau, in particular from the Blue Nile tributary, on which Ethiopia intends to build the Renaissance Dam to store 63 billion cubic meters of

water in and generate 6,000 megawatts of electricity. The Ethiopian, Sudanese and Egyptian water ministers are expected to meet Oct. 20-23 in Khartoum to discuss the May report of the Tripartite Commission on therepercussions of the dam and how to implement the report's recommendations for avoiding harm to any of the Nile states. On Oct. 8, Egyptian Prime Minister Hazem el-Biblawi met with the Supreme Committee for the Nile Water to agree on negotiating mechanisms for dealing with Ethiopia. The gathering ended with approval for Egypt taking part in the dam's construction. An official Egyptian source following the Nile issue who asked to remain anonymous, told Al-Monitor on Oct. 16, "The government has prepared a new paper to negotiate with Ethiopia regarding the Renaissance Dam. Technical and legal teams have been tasked with studying the Egyptian [negotiating] items, which are expectedto be presented to the Ethiopian side at the next meeting. … The Egyptianoffer includes full participation in the construction, management and operation of the dam, by dispatching Egyptian engineers who specialize inthe field of dam construction: the signing of an agreement with the Ethiopian side on sending [to Ethiopia] a permanent Egyptian water mission [that will be stationed] at the dam: and [Egypt's] participation in the funding and working as an intermediary to obtain aid and internationalloans and grants to finance dam construction."

The final report of the Tripartite Commission contained several technical remarks regarding how the dam might harm Egypt. Some experts therefore have reservations about the Egyptian government's sudden decision to participate in the project, especially if it is without considering the full consequences of such a decision. Al-Monitor obtained a copy of thereport prepared by the Egyptian government on the Tripartite Commission's final report. The Egyptian document states that building andoperating the Renaissance Dam according to the current specifications is not in the interest of downstream countries — Egypt and Sudan — and willenable Ethiopia to fully control the flow of the Blue Nile. Moreover, the time required to initially fill the dam reservoir, three years, will negatively affect Egypt. The report pointed out that the study of existing designs showed a defect in the safety features concerning the secondary Saddle Dam. This, in turn, has the potential to affect the safety of the High Dam in Egypt. Most studies submitted by Ethiopia are preliminary and not meant for implementation purposes. In addition, no environmental and social impact assessments on downstream countries have been conducted.

A diplomatic source involved in the negotiations among Cairo, Khartoum, and Addis Ababa told Al-Monitor, "The sudden announcement of Egypt's participation in the dam construction is linked to a number of factors thatgovern its relationship with Ethiopia. Egypt's decision doesn't mean compromising its water rights, but Egypt needs special capabilities in the next phase to negotiate and to hold on to its cards for pressure to not accept the dam if it harms [Egypt]. The political administration in Egypt isaware of the serious [threat] the dam poses to Egypt's water security. Sofirst, we must agree on the construction and operation policies before

signing any agreement to participate in the dam. [We must also] completethe technical and environmental studies to make sure that there is no harm to Egypt or Sudan. … The situation Cairo is now faced with is very complex, and the negotiating options are limited. Our position is the weakest because we are the most in need of water and because of our weak position on the African Horn after the freezing of Egyptian activity inthe African Union. We have no choice but to accept the establishment of the dam." On the other side of the equation, the Ethiopian government announced in September that it had completed 30% of the engineering and technical preparations at the dam site and is ready to start building the main body of the dam. Sudan expressed its satisfaction with the project and asserted that the dam would protect Sudan from the floods it faces every year. Egypt is still trying to make the best of the situation andto secure its share of annual water from the Nile as it awaits the negotiations with Ethiopia and Sudan. Egypt fears that its demands will not be met at a time when the country is experiencing internal unrest, ongoing since the July ouster of President Mohammed Morsi and affecting Egypt's relations with neighboring African countries. The writer Ayah Aman is an Egyptian journalist for Al-Shorouk, specializing in Africa and the Nile Basin, Turkey and Iran and internal Egyptian social issues.

East Africa: Nile Basin Countries Call for All-Inclusive Cooperation'

ST Kigali — (November 1, 2013) A dialogue of Nile Basin Initiative (NBI) countries and its primary donors has advocated for renewed commitmentto invest in an all-inclusive Nile cooperation and sustain the gains so far made. The two-day dialogue, held in the Rwandan capital, Kigali was chaired by Jemma Nunu Kumba, South Sudan's minister for electricity, water and irrigation. "While the NBI has achieved a lot in the last 14 years, a lot still needs to be done to realize the shared vision," said Kumba, who is currently the chairperson of the Nile council of ministers. During the gathering, member states reportedly re-affirmed their commitment to and ownership of the Nile cooperative process and the sustainability of the NBI institutions. "They [NBI countries] called on development partners to continue their unwavering support towards achieving the member states' development agenda", partly reads a statement to Sudan Tribune. Development partners pledged to work withNBI to enhance the institutional and financial mechanisms necessary to deepen the Nile cooperative process, it further stressed.During the dialogue, which was attended by members of the Nile Technical Advisory Committee (Nile-TAC) representing the 10 NBI member states and representatives of NBI's development partners, attendees reportedly underscored the importance of realizing benefits of Nile cooperation, including investment projects. A transitional, 10-member intergovernmental partnership institution launched in February 1999, NBI provides the only all-inclusive regional platform for multi stakeholder dialogue, for sharing information, joint planning and management of water and related resources in the Nile Basin. Member states of NBI include Burundi, Democratic Republic of Congo (DRC), Egypt, Ethiopia,

Kenya, Rwanda, South Sudan, Uganda, Sudan and Tanzania, while Eritrearemains an observer.

Egypt to coordinate with Ethiopia on Renaissance Dam'

Egyptian Minister of Irrigation and Water Resources amplifies Egypt andSudan could benefit from GERD

Daily News Egypt: (November 5, 2013) Egypt, Ethiopia and Sudan, are allcommitted to coordinating and cooperating in dealing with Ethiopia's Grand Renaissance Dam, said Egypt's Ministry of Irrigation and Water Resources on Monday. Egyptian Minister of Irrigation and Water ResourcesMohammed Abdel Moteleb said that it was "time to consider a new strategy for the available investment opportunity," adding that any matterdealing with the dam must be agreed upon by the governments of the three countries. The countries' water ministers began meetings in the Sudanese capital of Khartoum on Monday in order to review recommendations put forth by a report formed by a tripartite committee investigating the impacts of the dam on Ethiopia's neighbours in the north. Abdel Moteleb added that trilateral support for the dam could set a "good example for cooperation in the region," adding that he hoped that the outcome of the process would be the "beginning of a new era of cooperation between the three countries." "I would like to recall the initiative put forth by the Prime Minister of Ethiopia, a proposal considering the Renaissance Dam a joint regional project from which the three countries could benefit," said Moteleb in his Monday address to the representatives from the three countries. Last week Egyptian Minister of Foreign Affairs Nabil Fahmy stressed the importance of joint action and cooperation between countries when dealing with Ethiopia's dam, saying that the water issue must not be dealt with as a "zero-sum game." Spokesman of the foreign ministry Badr Abdelatty said that the Prime Minister of Ethiopia Hailemariam Desalegn would come to Cairo "soon." "We will continue dialogue with Ethiopia and our Sudanese brothers," added Abdelatty.

EGYPT/ETHIOPIA - Countries deadlocked on $4.2bn Nile dam'

Nile politics: (November 6, 2013) A regional meeting between Egypt, Ethiopia and Sudan to discuss the impact of a $4.2bn dam being built on aNile river tributary in Ethiopia after experts said earlier studies were inconclusive, has reached a deadlock. Irrigation ministers from the three countries met in Sudan on Tuesday (November 4) to discuss Ethiopia's planned a 6,000-megawatt hydro-electric Grand Renaissance dam, set to be Africa's largest when completed in 2017. Its construction has raised concern in Cairo that it will reduce the flow of the Nile, which provides almost all of Egypt's water. In a June report, a group of international experts said Ethiopia's analysis of the dam's impact was "very basic, and not yet at a level of detail, sophistication and reliability that would befit a development of this magnitude, importance and with such regional impact." Mohammed Abdel-Motleb, Egypt's minister of irrigation and waterresources, said Tuesday that the meeting, which took place in Sudan's capital Khartoum, discussed the recommendations by a committee of experts charged with looking into the effects of the dam on downstream

countries. “The Egyptian delegation presented a clear vision on how to implement the recommendations of the international committee of experts,” Abdel-Motleb told reporters. “We also suggested proposals to ensure the required studies are completed as soon as possible,” he added.However, Ethiopia’s water minister blamed Egyptian objections for the delay, saying that the Egyptian delegation objected to the formation of a committee to implement expert recommendations on the project. “We didn’t agree about the composition of this committee,” Alemayehu Tegenutold AFP on Tuesday. “We have differences with Egypt.” Egypt argues its rights to the Nile water are guaranteed by two colonial-era treaties from 1929 and 1959 which allow it the lion’s share of the water flow and give itveto power over upstream projects. Other Nile Basin countries, including Ethiopia, have signed a new 2010 agreement which allows them to work on projects without Cairo’s prior agreement. Neither Sudan nor Egypt is a signatory to the new agreement. Another trilateral meeting is planned for 8 December.

Ethiopia: Egypt objections delaying dam panel’

KHARTOUM (AFP) (November 6, 2013) – Egyptian objections are delaying formation of a committee to implement expert recommendations on an Ethiopian dam project, Ethiopia's water minister says. Egypt fears the 6,000 MW Grand Renaissance Dam, which will be Africa's largest when completed in 2017, could diminish its water supply, At a one-day meeting in Khartoum, the water ministers of Egypt, Sudan and Ethiopia agreed to form the panel, Alemayehu Tegenu said on Tuesday. "But we didn't agree about the composition of this committee," he said. "We have differences with Egypt." Tegenu declined to elaborate on why there was disagreementover the committee's membership but said the three sides would meet again in Khartoum on December 8. Ethiopia began diverting the Blue Nile in May to build the dam. An international panel has issued a report outlining the dam's impact on water levels. The report has not been madepublic, but Ethiopia has said it confirms that the impact on water levels is minimal. Egypt, which is almost entirely dependent on the Nile, had sought more studies about the dam's impact on its water supply. Egypt believes its "historic rights" to the Nile are guaranteed by two treaties from 1929 and 1959 which allow it 87 percent of the Nile's flow and give itveto power over upstream projects. But a new deal signed in 2010 by other Nile Basin countries, including Ethiopia, allows them to work on river projects without Cairo's prior agreement. Sudan, along with Egypt, has not signed the new Nile Basin deal.

Talks between Egypt, Sudan, Ethiopia to tackle seven main issues:Sources’

Al-Masry Al-Youm: (November 7, 2013) Sudanese sources said on Saturday seven main issues will be tackled in the eastern Nile countries’technical experts meetings that will start on Sunday in Khartoum. An agreement will be signed to guarantee approach between points of viewon the Ethiopian Renaissance Dam project. Parties will consider mechanisms of the dam’s administration and operation as well as economic, social and environmental impacts. The meeting will discuss

agreement on financing the dam and timeline to implement recommendations of the international committee which evaluates the dam, the sources added. The Sudanese government is trying to overcome the current impasse of conflicts between Egypt and Ethiopia. Parties will also consider resuming studies on the dam's safety, according to sources,which added that the Sudanese government is trying to reassure citizens in al-Qadarif state, located on the Ethiopian-Sudanese border, after the Ethiopian side offered practical vows over these studies. Sudanese President Omar al-Bashir instructed ministries taking part in meetings of the technical experts or the ministries to work on success of the negotiations, especially that Khartoum is the sponsor to approach points of view between Cairo and Addis Ababa, the sources added. On Monday, a meeting will be held among the three countries' water ministers to agree on future of cooperation between them and mechanisms of implementing the recommendations. Meanwhile, the sources accused unnamed foreign parties of creating division between Egypt and Sudan. They considered that the meeting between the three countries' water ministers will push relations forward during the coming period and encourage both Egyptian and Sudanese governments to open the common land road to increase rates of trade between Cairo and Khartoum. However, Sudanese experts and observers assured that Khartoum seeks resumption of talks following disputes that took place in the earlier meeting on 4 November. Agreement between the three countries' ministers to resume the meeting in Khartoum confirms that Sudan is keen on success of the negotiations to find a solution for the impasse and achieve comprehensive compromise between the Nile Basin countries that guarantees full administration of the Nile water resources. This also expresses interest in carrying out joint projects to link electricitybetween the basin countries and then export electricity to European Unioncountries via Egypt.

NILE: Ethiopia dam strikes fear in Egypt farmers'

Ezbet Rabie – (November 11, 2013) With an economy already in tatters, Egypt's farmers fear the building of an upstream Nile dam in Ethiopia could lead to water shortages and crop failures with catastrophic effects on their livelihood. "We don't want this dam," says Saeed al-Simari, standing on his modest land in Egypt's fertile Nile Delta region. "We want to plant our land, we need water. It's hard enough with the water we have, imagine when we don't have anymore," said Simari. "We are very worried about our crops," he told AFP. Ethiopia is pressing ahead with construction of a $4.2bn Grand Renaissance Dam, set to become Africa's biggest hydroelectric dam when completed. The announcement of the project caused a national outcry in Egypt, with politicians, media and farmers warning that the dam could pose a national security threat. Waterexperts in Egypt say there is already a water deficit in the country due to the exploding population. "The average person uses 620 to 640 cubic metres per year. With the water poverty level defined at 1 000 cubic metres, we are already below the water poverty level," says Alaa al-

Zawahry, a dam expert and member of a government commission taskedwith studying the downstream impact of Ethiopia's dam.

Historic rights: Egypt, which fears the project may diminish its water supply, says its "historic rights" to the Nile are guaranteed by two treatiesfrom 1929 and 1959 that allow it 87% of the Nile's flow and give it veto power over upstream projects. But a new deal was signed in 2010 by other Nile Basin countries, including Ethiopia, allowing them to work on river projects without Cairo's prior agreement. In May, Ethiopia began diverting the Blue Nile a short distance from its natural course for the construction of the dam, but has assured its neighbours downstream that water levels would not be affected. But Egyptians fear a doomsday scenario in which water shortages would lead to crop failures and electricity cuts. A study by international experts on the dam's impact on the river has been submitted to Egypt and Sudan, which also relies on Nileresources and supports Ethiopia's hydro-electric project. Egypt has dismissed the study's findings, which minimise the dam's impact, and has called for further assessments. The first phase of the Grand Renaissance Dam is expected to be complete in 2016 and will generate 700 megawattsof electricity. When the entire project is complete it will have a capacity of6 000 megawatts. The filling of the dam is expected to take around five years and this according to experts will be the most taxing phase for Egypt. Egypt's Aswan Dam - which controls annual floods and provides water for irrigation - has a strategic reserve of 70 billion cubic metres, which will drop by 15 billion each year of the filling phase of the Renaissance Dam, says Zawahry. After five years, "there will be an electricity shortage and the strategic reserve will be used up," he told AFP.Farmers less optimistic: Ethiopia, for whom the dam promises a much- needed source of energy, has pledged to maintain dialogue with Egypt to resolve any problem. Zawahry says constant co-ordination between both countries is crucial. "There will always be a conflict between Ethiopia wanting to produce more electricity and Egypt receiving the water it needs," he said. But it is difficult to accurately predict the exact impact of the Renaissance Dam. "It's all a question of probability," said Zawahry, with many variables playing a part. "On the Nile, from Ethiopia to Aswan, there are several dams but they are small and their effects are small. But if there will now be a 74 billion cubic metre dam, the management of bothdams has to be very well co-ordinated," he said. The water ministers of Egypt, Sudan and Ethiopia are to hold talks soon to discuss the progress of the dam, Egyptian officials have said. "We have heard many encouraging statements from the Ethiopian side saying that the dam will not affect Egypt. The mood is positive," said Khaled Wassef, spokespersonfor the ministry of water resources and irrigation in Egypt. "We need the full information on issues like how long exactly will it take to fill the dam, the way it will be managed," Wassef told AFP. But on the fields, the farmers are less optimistic. They say water shortages will force them to use underground wells rather than Nile water, which is richer in nutrients thanks to the silt deposits.

Ethiopia: Watery Confusion'

Addis Fortune, Addis Ababa (November 17, 2013) Egypt's sense of nationhood is tied up in control of the Nile. So too is energy self sufficiency for Ethiopia. The clash between these two realities could have deadly consequences. America will be tempted to intervene - on the wrong side. The issue is a major dam under construction by Ethiopia on the Blue Nile River - the source of over 80pc of the water that eventually enters the Nile River system. The Blue Nile starts in Lake Tana in Ethiopia and flows through tall, narrow chasms to the Sudan border. Within Sudan,the Blue Nile meets the White Nile, in Khartoum, and from there flows intoEgypt. For many years, all the Nile's water has been divided between Sudan and Egypt: any other country that dared to touch the Nile was met with stern threats from Egypt and its protectors: first England, then America. When Ethiopia sought World Bank (WB) financing for this dam more than 20 years ago, the US leaned on the Bank to say no. Egypt was at peace with Israel at America's request, and they demanded America's help with the Nile question (and two billion dollars a year) in return. The calculus was clear: Ethiopia brought us nothing, Egypt, under Hosni Mubarak, brought peace with Israel. So we did Egypt's bidding with the World Bank. The last several years, however, have brought Ethiopia into apartnership with the US in attacking Al-Qaeda and similar groups in Somalia. Meantime, Egypt deposed of a longtime US ally and Americans were not enthusiastic about his replacement, Mohamed Morsi. Trying to stir up nationalist sentiment, Morsi focused on Ethiopia's announcement that it would start to divert the Blue Nile, in order for dam construction to begin. He said - "We will defend each drop of Nile water with our blood if necessary", and summoned leaders of the Islamic parties to discuss Egypt's likely response. Infamously, a leader of one of those parties, not knowing the meeting was being broadcast, said on live television that the "real enemies" were America and Israel. Talk included a military strike.

Morsi is gone. The US Secretary of State John Kerry has embraced the new military government. The danger is that the US, in its effort to prop up the Egyptian military successors to Morsi, will try to give them a victoryover the dam issue. When has the US ever managed to play the internal politics of another country with any success? It is so much more likely that, if we go down this route, we will alienate all of our allies in the fight against extremism in Somalia, and do nothing to appease the widely held belief in Egypt, voiced at that televised meeting, that somehow all wrongs are due to America. We will choose the wrong side-one again.

Why do we need to take sides at all? We cannot stop Ethiopia by cutting off its financing: Ethiopia has come up with the funding for this project from the sale of bonds and loans from China. The dam, once finished, will produce tremendous amounts of electricity that can be sold to neighboringcountries to retire the bonds. And, if the new Egyptian regime wants to show it is at least as nationalistic as the deposed Morsi government and threatens to bomb the dam, will we be proud to be associated with that?

If we do take sides, the dam is the right thing to do for environmental andhumanitarian reasons. Ethiopia will become a net energy exporter in a part of the world chronically lacking in electricity. The stored

water can

alleviate the drought that occurs every seven years, filling world newspapers with horrifying pictures of starvation in Sudan and Ethiopia. Once the reservoir is filled, the flow of the Nile would not be diminished. The time to fill the reservoir can be during the wet seasons and spread outover many years. There are many ways for America to signal its support of the new regime in Egypt. Shutting down Ethiopia's dam, or looking the other way while Egypt does so, is not one of them. The writer is dean of the School of Law at Chapman University and a former US Congressman, serving on the Africa Subcommittee of the House International Relations Committee. This commentary first appeared on Orange County Register Sudan's Bashir 'ignored' impact of Ethiopia's dam on Egypt: Egyptian official' Sudan's support for the Grand Renaissance Dam in Ethiopia promptsEgyptian response

Ahram Online: (December 6, 2013) An Egyptian official has criticised Sudanese President Omar Al-Bashir for his recent expression of support for the construction of a massive new dam on a Nile tributary in Ethiopia. Al-Bashir said on Wednesday that Sudan supported the Grand RenaissanceDam project, which is currently under construction, because itwould "benefit all Nile Basin states." Egypt has expressed strong reservations about the dam and its possible effect on the volume of water that reaches Sudan and Egypt, both downstream from Ethiopia. “We are not against the pros [of the dam] and we didn’t ignore it, but Al-Bashir didnot explain how we could deal with the cons,” an official at the Egyptian Ministry of Agriculture told London-based Al-Sharq Al-Awsat newspaper.

The ministerial official, who asked not to be named, further said that thatthe Sudanese leader has ignored the impact of the dam on Egypt’s shareof the Nile water and the fate of water-sharing agreements. Tensions escalated between Egypt and Ethiopia in May, when Ethiopia began diverting the Blue Nile as part of the construction process. At one point, Egyptian politicians were caught on camera at a meeting with then- president Mohamed Morsi, suggesting that the dam be sabotaged.

Construction of the $4.2 billion (3.2 billion euro) Grand Renaissance Dam has nevertheless gone ahead. When complete, it is set to be Africa's largest hydroelectric dam. For decades, Egypt held veto rights over all upstream projects, following powers granted by a 1929 colonial-era treatywith Britain. Egypt's subsequent 1959 deal with Sudan gave the two downstream countries more than 90 percent of the Nile's water. The negotiations – involving Egypt, Sudan and Ethiopia – regarding the construction of a giant dam in Ethiopia are expected to resume in Khartoum starting Sunday. A similar meeting had been held on 4 November involving technical representatives from the three countries, but no tangible results were reached.

Next on Egypt's to-do: Ethiopia and the Nile'

Ajazeera Opinion By Barry Malone (Decemer 8, 2013) - Water ministersmeet in Sudan for latest round of talks on how to share Africa's fabled river. Aljazera Play a game of word association almost anywhere in the world, and if you try the word "Nile", the answer will be "Egypt".

Herodotus famously said the country was a gift of the fabled river, and it'sno exaggeration - given that Egypt is almost totally dependent on the Nilefor water and agriculture.

But upstream of Cairo, there's a country where the answer to the word association wouldn't be Egypt - where the people don't even call the it theNile, and where more than 85 percent of the river's water originates. That place is Ethiopia, and it has enraged Egypt by starting to build a huge damon the river.

The dam itself, which will be used to generate hydropower, isa beast. It will produce 6,000 megawatts of electricity and stand 170 metres high and 1,800 metres wide, making it the biggest in Africa and the 13th biggest in the world. Ethiopia calls it the Grand Ethiopian Renaissance Dam, and its government and people see it as just that - a reassertion of historic Ethiopian wealth and influence.

Upriver from the construction site in northwestern Ethiopia sits the small hamlet of Gish Abay. There you can find the three small trickles of water, hidden behind a few tufts of grass, that are believed to be the source of the Blue Nile, the tributary from which the vast majority of Nile water flows. Al Jazeera visited those trickles shortly after Ethiopia announced plans for the dam in 2011 and saw lines of priests and locals snake up anddown a field leading to the springs, clutching jerrycans and bottles filled with water they believe to be holy - even magic. Here, they called the river "Tis Abbay", fully understood its strategic importance and said they proudly backed the government's plan to harness its power.

New government, new meetings: Construction has been underway for about two years, and though Egypt, Ethiopia and the other nine countries that share the Nile have been bickering about its waters for much longer, things became particularly heated when Ethiopia began diverting a stretchof the river last May. And, though the situation has since calmed down, the dispute has not gone away and construction is still forging ahead. Thewater ministers of Egypt, Ethiopia and Sudan are to meet again in Khartoum on Monday, this time to argue over the composition of a committee of experts who have been looking into the potential impact of the project on Egypt and Sudan, which have long taken an overwhelming share of the Nile's water. Though the panel, which is made up of experts from all three nations, has already compiled a report, Egypt was not happy and wants international consultants to be brought onboard.

Sudan, which has traditionally supported Egypt on Nile issues, now says itbacks the mega-project, leaving Cairo out on its own with its sometimes sabre-rattling rhetoric. Sudan's President Omar al-Bashir and Ethiopian Prime Minister Hailemariam Desalegn met this week, underlined that support and, crucially, inaugurated a cross-border electricity link so Ethiopia can sell more power to Sudan - those power exports a key element in Addis Ababa's attempts to convince its neighbours the dam could be good for all of their economies. With Egyptian officials not long intheir jobs since former president Mohamed Morsi was toppled and the newmilitary-backed authorities installed, to a certain extent, all three governments are feeling each other out again in these new meetings and

a more constructive tone has been adopted of late. But there is also muchinstitutional memory of animosity, both long-running and recent.

In May, in one of his last acts in power, Morsi claimed that "all options" were on the table to protect his country's water supply. "We are not calling for war, but we will never permit our water security to be threatened," he said, adding that "our blood is the alternative" to losing one drop of water. Ethiopia, growing in diplomatic and economic clout, was unfazed. Aware of the famous Herodotus quote, they've always shotback: "If Egypt is a gift of the Nile, then the Nile is a gift of Ethiopia." Responding to Morsi, Addis Ababa officials said the dam's existence was non-negotiable. The Egyptians won't consider war "unless they go mad",Hailemariam said at the time.

War unlikely: If Ethiopian officials have allowed themselves a smirk at Egypt's woes since and thought that, with Morsi gone, they had been gifted time to work on the dam unhindered, they were wrong. Even as pitched battles were fought in Cairo and the administration struggled to restore order, it managed to sound dark warnings to Ethiopia. With the political situation steadier now, the Egyptian government can pay more attention to its foreign policy. And, relations with its closest allies aside, the Nile is the priority.

The bellicose exchanges between the two nations are nothing new. In 1979, then Egyptian president Anwar Sadat said, "Theonly matter that could take Egypt to war again is water." More recently, Meles Zenawi, the late Ethiopian Prime Minister who made the Renaissance Dam something of a personal project, said in a 2011 interview that Egypt had been trying to destabilise Ethiopia for decades by supporting its rebels and enemies. He was derisive about Egypt's chances of success if it stood in Ethiopia's way. "I am not worried that the Egyptians will suddenly invade Ethiopia," Meles said. "Nobody who has tried that has lived to tell the story."

Some journalists and analysts have become so excited by the dispute thatthey predict the world will finally see its first proper, large-scale water war. Other analysts caution that co-operation, not conflict, is the only thing that can work for both countries. And war does, for the forseeable future, look unlikely.

Ethiopia timed the announcement that it was buildingthe dam very cleverly - two months after the toppling of Egyptian strongman Hosni Mubarak, who had always been hawkish about the possibility of Ethiopia damming the Nile. "We knew he was uncomfortable with us even bathing in it," an Ethiopian official told Al Jazeera. According to emails from the US-based intelligence analysis firm Stratfor, which were obtained by Wikileaks, Mubarak had plans to launch airstrikes from Sudan on any dam Ethiopia might build. Stratfor has recently pointed out,though, that Egypt would likely struggle if it tried to militarily thwart the project. Ethiopia is too far away, Stratfor says. Egypt would be reliant on Sudanese support, which it now appears not to have, and even sending in special forces would be difficult. Ethiopia has one of the biggest and most battle-hardened armies in Africa.

'No Nile, no Egypt': The dispute hinges on what looks, based on the numbers, like a glaringly unfair portion of water consumed by Egypt and

Sudan - as well as on the fact that both countries' claim to the water derives from colonial-era treaties brokered by the British and not signed by anyone upstream of Khartoum. As Meles put it back in 2010, "The Egyptians have yet to make up their minds as to whether they want to livein the 21st or the 19th century So the process appears to be stuck." The Nile has two main tributaries - the Blue Nile and the White Nile. The Blue Nile, which originates in Ethiopia's Lake Tana, contributes the vast majority of the water and fertile soil. The White Nile, which is longer, meets it at Sudan's capital Khartoum, where they form the greater Nile and flow to Egypt. More recently, Meles Zenawi, the late Ethiopian Prime Minister who made the Renaissance Dam something of a personal project, said in a 2011 interview that Egypt had been trying to destabilise Ethiopia for decades by supporting its rebels and enemies. He was derisive about Egypt's chances of success if it stood in Ethiopia's way. "I am not worried that the Egyptians will suddenly invade Ethiopia," Meles said. December 9, 2013: Ethiopia: Nile Talks Highlight Ethiopian, Egyptian Split'

VoA (Washington, DC) Cairo — Water ministers from Egypt, Ethiopia and Sudan are meeting in Khartoum to try to resolve differences over Ethiopia's Renaissance Dam. Egyptian officials remain worried the Nile project threatens the nation's security. Egyptian, Ethiopian and Sudanese officials hope to reach an agreement on the Renaissance Dam, which has angered Egyptian officials and brought forth repeated objections to the project. This second round of tripartite talks follows a shift in allegiances among the three countries. Sudan has historically sided with Egypt in claiming the lion's share of the river's water and veto rights over upstreamdevelopments. But last week, Khartoum lent its support to Ethiopia's driveto complete construction. Ethiopian officials have tried to bring Sudan and others on board by offering access to future electricity generated by the dam. They argue the project should be seen as a pan-African effort. Yet Egypt remains worried. Ethiopia began diverting water earlier this year to fill the massive reservoir behind the dam, a multi-year effort that will lower water levels reaching Egypt. African Studies and Water Issues analyst Ayman Abd El Wahab of al Ahram Center for Strategic Studies in Cairo said Egypt needs compensation. He argued that Ethiopia has crossedthe line from usurping Egypt's historic rights to the Nile to threatening national security. He pointed out that Egypt is alone among the Nile Basin countries to rely almost exclusively on the Nile for its water supply. The issue has flared for decades, and has raised talk of "water wars." Yet el Wahab agrees with many experts that there is enough water to go around, if the resource is properly handled and the nations along the Nile's banks can work together. Some Egyptian officials had sought a six- month delay in dam construction so the three countries can implement recommendations by an international group of water experts. Ethiopia is eager to move ahead on what is set to be Africa's largest hydroelectric dam, insisting the project will be a benefit to all.

December 11, 2013: Egypt: Renaissance Dam's Controversial PointsApproved - Irrigation Minister'

Egypt State Information Service (Cairo) - Minister of Water Resources andIrrigation Mohamed Abd el-Motaleb said that meetings of the Irrigation Ministers of Egypt, Sudan and Ethiopia have witnessed a breakthrough in negotiations. The minister asserted that three controversial points have been approved. Abdel-Motaleb added that they agreed to convene their third meeting on January 4, in Khartoum in order to resolve the remainingsuspended points regarding the implementation of the recommendations of the international panel entrusted with studying the Renaissance Dam's effects on Egypt and Sudan. At the end of meetings, Abd el-Motaleb pointed out that the Ethiopian stance was positive and surprising December 11, 2013: Egypt: Sudan, Egypt, and Ethiopia Fail to Agree On Dam Construction'

ST Khartoum — Water ministers of Sudan, Ethiopia and Egypt failed to reach an agreement on the disputed Ethiopian Renaissance Dam projectand decided to refer the sticking points to a third meeting. The second ministerial meeting which was held in Khartoum on Monday sought to reach an agreement on forming a joint mechanism for implementing the

recommendations of the International Panel of Experts (IPoE) regarding the dam. The IPoE is composed of six representatives each drawn from Ethiopia, Egypt and Sudan, and another four international experts and was established to assess the impact of the dam project on downstream countries. The report which was submitted by IPoE to the three countrieslast June is believed to show that the $4.7 billion dam will not have any major effect on lower riparian countries of Egypt and Sudan. However Egypt assert that the deficiencies mentioned by the report need to be addressed before carrying on with the dam project. The Sudanese water minister, Muattaz Musa Abdallah Salim, told reporters following the meeting that they have addressed a significant part of the issues on the follow-up of the implementation of the IPoE recommendations.

He added that they concluded the second meeting successfully, pointing that remaining issues would be addressed in Khartoum during talks whichwill be held from January 4 to 5.The Egyptian water minister, Mohamed Abdel-Mutalab, for his part told reporters that they reached an agreementon some items but others are still pending. Sources close to the meeting said that Egypt and Ethiopia presented two papers on the points of contention, while Sudan's paper attempted to reconcile the two positions. The same sources said that Egypt wanted international representatives onthe committee but Ethiopia preferred national delegates. The Sudanese daily newspaper Al-Ray Alaam quoted sources on Tuesday as saying the Egyptian delegation suggested that Ethiopia should only complete the firstphase of the dam to store 14.5 billion cubic meters to produce 1200 MW of hydroelectric power to meet its energy needs. The member of the Egyptian delegation, Alaa Al-Zawahri, earlier said that Egypt would suggest during the meeting that Ethiopia build a smaller dam and suspends the ongoing construction for six months until the completion of the studies.

He described in an interview with the Egyptian CBC TV the Sudanese stance with regard to the dam as "puzzling", pointing that Sudan turned from a strategic partner of Egypt into a biased mediator. He added that they concluded the second meeting successfully, pointing that remaining issues would be addressed in Khartoum during talks which will be held from January 4 to 5. The Egyptian water minister, Mohamed Abdel- Mutalab, for his part told reporters that they reached an agreement on some items but others are still pending. Sources close to the meeting saidthat Egypt and Ethiopia presented two papers on the points of contention,while Sudan's paper attempted to reconcile the two positions. the studies. He described in an interview with the Egyptian CBC TV theSudanese stance with regard to the dam as "puzzling", pointing that Sudan turned from a strategic partner of Egypt into a biased mediator.
December 18, 2013: Water wars' continue to rage over Ethiopia Renaissance Dam project'
Elizabeth Arrott for VoA – WNN EarthWATCH (WNN/VOA) Khartoum, REPUBLIC OF SUDAN, NORTHERN AFRICA: Water ministers from Egypt, Ethiopia and Sudan are meeting in Khartoum to try to resolve differencesover Ethiopia's Renaissance Dam. Egyptian officials remain worried the Nile project threatens the nation's security. Egyptian, Ethiopian and Sudanese officials hope to reach an agreement on the Renaissance Dam,which has angered Egyptian officials and brought forth repeated objections to the project.
This second round of tripartite talks follows a shift in allegiances among the three countries. Sudan has historically sided with Egypt in claiming thelion's share of the river's water and veto rights over upstream developments. But last week, Khartoum lent its support to Ethiopia's driveto complete construction. Ethiopian officials have tried to bring Sudan andothers on board by offering access to future electricity generated by the dam. They argue the project should be seen as a pan-African effort. Yet Egypt remains worried. Ethiopia began diverting water earlier this year to fill the massive reservoir behind the dam, a multi-year effort that will lower water levels reaching Egypt.
African Studies and Water Issues analyst Ayman Abd El Wahab of al Ahram Center for Strategic Studies in Cairo said Egypt needs compensation. He argued that Ethiopia has crossed the line from usurping Egypt's historic rights to the Nile to threatening national security. He pointed out that Egypt is alone among the Nile Basin countries to rely almost exclusively on the Nile for its water supply. The issue has flared fordecades, and has raised talk of "water wars." Yet el Wahab agrees with many experts that there is enough water to go around, if the resource is properly handled and the nations along the Nile's banks can work together. Some Egyptian officials had sought a six-month delay in dam construction so the three countries can implement recommendations by an international group of water experts. Ethiopia is eager to move ahead on what is set to be Africa's largest hydroelectric dam, insisting the project will be a benefit to all.
Ethiopia Rejects Egyptian Proposal on Nile as Dam Talks Falter' Bloomberg By Will Davison, (January 8, 2014) - Ethiopia rejected a proposal that would guarantee Egypt the rights to most of the Nile River's water, as disagreements cast doubt over future talks about Africa's biggest hydropower project. The 6,000-megawatt Grand Ethiopian Renaissance Dam on Ethiopia's Blue Nile River, set to be completed in 2017, has raised concern in Cairo that it will reduce the flow of the Nile, which provides almost all of Egypt's water. The Blue Nile is the main tributary of the Nile. The $4.2 billion dam 30 kilometers (19 miles) from Sudan's border will benefit agricultural and power interests in the region and not cause water losses downstream, Ethiopia says. Sudan supports

the hydropower project designed to produce electricity for much of EastAfrica that began in April 2011. Egyptian officials at a Jan. 4-Jan. 5 meeting that also included representatives from Sudan, introduced a "principles of confidence- building" document asking Ethiopia to "respect" Sudan and Egypt's water security, said Fekahmed Negash, the head of the Ethiopian Water and Energy Ministry's Boundary and Transboundary Rivers Affairs Directorate.Discussing the issue would contravene an agreement signed by six Nile countries, he said in a phone interview on Jan. 6. "We will not negotiate on this issue with any country," Fekahmed said from Ethiopia's capital, Addis Ababa. "That is why we say take it to the right platform" that includes other members of the Nile Basin, he said.

The 1959 Nile Water Sharing Accord: Egypt argues its 1959 agreement with Sudan that gave Egypt the rights to 55.5 billion cubic meters out of atotal of 84 billion cubic meters is the governing document on the Nile's water. The rest of the river's flow was for Sudan or lost to evaporation.

Ethiopia and other upstream nations reject the accord they were not signatories to and say Egypt's domination of the Nile has unfairly deprivedthem of a vital resource. Ethiopia also rejected an Egyptian suggestion to immediately form a panel of neutral experts to adjudicate any disputes arising from planned studies of the dam's hydrological and environmental impact, Ethiopian Water and Energy Minister Alemayehu Tegenu said.

Experts can be hired if they're needed, he said in an interview Jan. 5 in Khartoum. The Egyptian delegation didn't want to set a date for a next meeting, Fekahmed said. "We have exhausted all opportunities to negotiate with Ethiopia because of the intransigence of Addis Ababa," Egyptian daily Al-Masry Al-Youm quoted Egyptian Irrigation Minister Mohamed Abdel-Moteleb as saying on Jan. 6. "We will not go to Ethiopiaunless Addis Ababa shows desire to return to negotiations to resolve thepoints of disputes," he said.

Talks Continuing Discussions will "continue," Alemayehu said yesterday onhis official Twitter account. Egypt, Ethiopia and Sudan decided on Dec. 9 to form a committee comprising four members from each country to oversee the studies. The initiative was recommended by a panel of international experts who concluded in May that insufficient work had been done on the dam's downstream impact. Ethiopia's position to only bring in mediating experts as required will be a "waste of time," Abdel- Motaleb said in an interview in Khartoum Jan 5. Ethiopia has repeatedly refused Egyptian requests to pause construction of a key national project."There is nothing that will stop it," Gideon Asfaw, head of Ethiopia's technical team in Khartoum, said about the dam.

A Cooperative Framework Agreement has been signed by Ethiopia and fiveother Nile nations that adopts principles of "equitable and reasonable" useof waters that do not cause "significant harm" to other states. Once ratified by six legislatures, the accord paves the way for the creation of a Nile River Basin Commission that will manage water rights and development projects on the Nile. Egypt considers preserving its claimed rights to the Nile a matter of national security and says it needs more

than its 1959 share because of its growing population. “We need 80 billioncubic meters,” Abdel-Moteleb said. “We will not let go of one drop of water.”

Ethiopia's claims about dam construction 'media show': Egypt officialBy Ahram Online (January 10, 2014) - The Egyptian government has"alternative routes" in dealing with a major hydroelectric dam being constructed in Ethiopia, a spokesman for the Egyptian irrigation ministry said on Wednesday following a recent meeting between Egypt, Ethiopia and Sudan that was deemed a deadlock. Spokesman Khaled Waseef said,in a press statement reported by MENA, that the Ethiopian Grand Renaissance Dam faces financial as well as technical problems, and that the Ethiopian government's statements that the project has been 30 percent completed are a "media show" for its own political gains.

Waseef added that the construction levels of the dam are "extremely low"and that the project's generator has "not even one brick [in place]." He stated that the negotiations with Ethiopia will not resume until Ethiopia changes its position and "applies international standards" while constructing the dam. He said there are imminent dangers for Egypt if thedam continued to be built as planned, which is something "Egypt would never accept." The Egyptian National Defence Council, which comprises several ministers including the defence minister, the interior minister, theforeign affairs minister, the minister of militiary production, the finance minister and senior army commanders, met on Wednesday to discuss thepotential impacts of the dam. President Adly Mansour and Minister of Irrigation Mohamed Abdel-Moteleb attended the meeting.

The planned Grand Renaissance Dam is a $4.2 billion hydro-electric damon the Blue Nile, one of the main tributaries of the Nile. The project has been a source of concern for the Egyptian government since May last year, when images of the dam's construction stirred public anxiety aboutpossible effects on Egypt's share of the Nile water, the country's main source of potable water. Egypt, Ethiopia and Sudan formed a tripartite technical committee to study the possible effects of the dam and try to generate consensus. Ethiopia maintains that Egypt's water share will notbe negatively affected by the successful completion of the project.

In recent meetings in Khartoum, the tripartite committee was scheduled to formulate a document that entails "confidence building measures" between the countries, and also to form a special international conflict- resolution committee. Both plans failed as Egypt and Ethiopia refused to see eye-to-eye. According to a statement released by Egyptian authoritieson Sunday, Ethiopia insisted on special conditions to an international conflict resolution committee that Egypt believes "would deplete it from its original purpose of being an impartial moderator between the three countries." In June, Ethiopia's parliament ratified an international treaty, which Egypt opposes, allowing upstream countries to implement irrigationand hydropower projects without first seeking Egypt's approval. The deal replaces colonial-era agreements that grant Egypt and Sudan the majorityof Nile.

Some focal point on Ethio/Egypt Relations based on the Nile’

Egypt and Ethiopia have otherwise been locked in a low-intensity contest over which nation would dominate the region. The heart of the rivalry hinges on how to share the precious waters of the Nile River. More than 80 percent of the Nile's water comes from rain that falls on the Ethiopian highlands and is then carried north by the fast-flowing Blue Nile. Ethiopia is nicknamed "Africa's water tower." Yet management of the Nile is formally governed by a 1929 treaty between Egypt and the colonial power Great Britain, and a 1959 treaty between Egypt and Sudan that awarded most water rights to Egypt, some to Sudan and none explicitly to Ethiopiaor the other states upstream. This arrangement is widely considered unfair, especially to Ethiopia, which was never colonized, and on whose behalf Britain could not even claim to have spoken. This legal framework also limits the right of upper riparian states to build dams or irrigation systems even though they were sidelined from helping shape it.

Egypt has a history of blocking Ethiopia's requests for international aid tobuild dams, at times even threatening military action if it attempted to goahead. Following the 1978 Camp David accords with Israel, President Anwar Sadat declared, "The only matter that could take Egypt to war again is the Nile water." To this day, Egyptian engineers are stationed as far as Lake Victoria, in Uganda, monitoring activities along the river.

Ethiopia has continued to reject Egypt's approach, not least because it is one of the poorest countries in the world and considers economic development to be essential to its survival. In 1999 Ethiopia, along with eight other states, set up the Nile Basin Initiative to develop a cooperativeand equitable partnership to manage the river's resources. (Egypt and Sudan are nominal members but inactive: South Sudan joined the NBI in 2012.)

Egypt-Ethiopia Nile dam talks hit dead end'

Hydro-politics (January 17, 2014) - Technical negotiations among water ministers from Egypt, Sudan and Ethiopia have reached a dead end after all parties refused the proposals set forth to solve the crisis that revolves around the repercussions Ethiopia's Renaissance Dam have on Egypt's water security. These repercussions were discussed during three rounds ofnegotiations in the Sudanese capital Khartoum.

The third round of negotiations held in Khartoum on Jan. 4 — and attended by technical delegations represented by water ministers from Egypt, Sudan and Ethiopia — did not yield any clear results. Egypt withdrew from the meeting, describing the Ethiopian stance as "intransigent," as Ethiopia refused the Egyptian proposal that ensures Egyptian water security, as noted in a statement issued by the Egyptian Ministry of Water Resources and Irrigation.

Al-Monitor secured a copy of the statement, which stated: "The dispute between Egypt and Ethiopia during the negotiations is related to two points. First, Ethiopia refused the participation of international experts inthe new mechanism put in place to follow up on Ethiopian studies about the consequences of the Renaissance Dam. These studies will be conducted in accordance with the report of the international committee. Second, Ethiopia refused to discuss the document on 'principles of

confidence-building' between the countries of the eastern Nile basin —namely Egypt, Sudan and Ethiopia. Egypt proposed this document to provide guarantees for the downstream countries against any negative effects that may be generated from the construction of the dam."

In a phone interview with Al-Monitor, Egypt's Water Minister Mohammed Abdel Moteleb said: "We tried to set forth more than one initiative to buildthe trust Ethiopia always talks about when promising not to cause Egypt any harm. However, we will not attend or participate in any technical negotiations concerning the Renaissance Dam until we make sure Ethiopiais proposing genuine initiatives that are in line with the Egyptian view, so that these meetings will be meaningful.

"Egypt has concerns and reservations over the Renaissance Dam. It is notlogical to build a dam that big without completing the technical and environmental studies required by the international committee. Ethiopia agreed to these studies and signed [the committee's] final report."

He went on: "Egypt agreed on attending the three rounds of negotiations,so that it could not be accused of rejecting cooperation. We are always striving [to hold] a dialogue that is based on the principles of not causing harm and creating benefits for all parties. Currently, we do not have the luxury of giving up any drop of water from Egypt's share of Nile water." An informed Egyptian security source concerned with the issue of the Nile basin told Al-Monitor: "Egypt will follow new courses to solve its crisis withEthiopia in regard to the Renaissance Dam. It will adopt measures to pushthe issue forward on the international level. Egypt will not accept for its historical share of the Nile water, which is preserved by agreements and provisions of international law, to be diminished."

"We do not rule out [the possibility of adopting] any technical, political or security measures to solve this crisis. We are waiting for the referendum on the constitution to be over. After that, we will launch a series of officialand nonofficial movements," the source affirmed. He pointed out the "possibility of referring to international courts and filing a claim with international institutions, such as the UN, to preserve Egypt's rights."

A diplomatic source, closely tied to the Egyptian Cabinet, told Al-Monitor, "Egypt has already launched diplomatic movements to convince donor countries to stop the financial aids serving the construction of the dam until it is assured that it will not harm Egypt." The source affirmed, "This campaign will be put in focus after the completion of parliamentary and presidential elections, and once relative stability has been achieved." Interim President Adly Mansour held a closed meeting with the National Defense Council on Jan. 8. The meeting was attended by Defense MinisterAbdel Fattah al-Sisi and Prime Minister Hazem el-Biblawi, who discussed the crisis of the Renaissance Dam and the deadlock surrounding the technical negotiations. The council reiterated the importance of "not wasting the water rights of Egypt and not accepting any violation against Egyptian national security."

Former Water Minister and Nile Basin Studies Unit head MohammadNasreddin Allam, told Al-Monitor, "We are currently drafting an international claim comprising five parts, which will be filed to donor

countries, international institutions and organizations entitled to settle thisdispute. Such a dispute can threaten peace and security in the East African region."

"The memorandum will comprise a legal part documenting the historicalrights of Egypt to the Nile water, and another part stating the Ethiopian violations of the law and international agreements, after it constructed alarge dam without taking into consideration the safety of downstream countries. It will also include a call to form a fact-finding committee to prove the dangerous impact of the dam on Egyptian water security, as stipulated by the regional dispute settlement mechanisms, the UN pact and the African Union Peace and Security Council," Allam added.

Allam also affirmed, "The memorandum will call for the immediate halt of all construction works at the site until the fact-finding committee fulfills itstask." Despite the warning messages Egypt is conveying to affirm it will not give up on protecting its share of Nile water, the Egyptian prime minister was optimistic about the possibility of negotiating again and resolving the crisis. He said during a press conference on Jan. 9, attendedby Al-Monitor, "Negotiations do not end in one session. Things will continue to progress, and the issue of the dam remains until now open fordiscussion."

A technical source who attended the latest negotiations commented on the prime minister's statement, telling Al-Monitor, "Negotiations reached adeadlock. The Ethiopian water minister publicly refused during an official meeting the request of Egypt to host negotiations in Cairo, claiming that the security situation in Egypt was the reason for his refusal."

"Egypt is now wasting its chance. Calling for more negotiations is time- consuming because Ethiopia is proceeding with the constructions as a defacto situation," the source warned. For his part, Ethiopian Water and Energy Minister Alemayehu Tegenu said in a statement on Jan. 13: "Theconstruction of the Renaissance Dam is taking place without any hasslesor difficulties. The project will be finalized according to the decided time frame," reiterating that "the project is not facing technical or funding problems."

The escalation and crisis involving trust continues to prevail among Egyptian and Ethiopian officials. Every party is trying to show a strong stance. This time, however, the balance is tipping in favor of Ethiopia since it is completing the project while Egypt is preoccupied with its internal problems, despite Egyptian officials talking about adopting all security and political measures to preserve the rights of Egypt to the Nilewater.

Hydro-politics: Egypt may take Nile dam dispute with Ethiopia to UN' After all attempts to solve the Egyptian-Ethiopian crisis over the Renaissance Dam at the negotiating table ended in failure after a third round of negotiations on Jan. 4, with Egypt withdrawing from the discussions and conferences being held in Khartoum, there is now talk at the governmental level about internationalizing the issue. At the same time, Egypt is witnessing rising popular demands to resort to the UN Security Council to establish Egypt's right to veto the establishment of the

Renaissance Dam, given the potential danger it represents to Egyptianwater security.
Khalid Wasif, the official spokesman for the minister of irrigation and water resources, revealed to Al-Monitor that Egypt has “begun to exploreinternational channels for setting up alternative diplomatic and political tracks to ward off the dangers that might afflict the country if the Renaissance Dam is built, in light of the announced specifications of the dam.” He emphasized, “Egypt will not allow the dam to be built and will move to rally international pressure to prevent it from being funded.
Moreover, Cairo will work [to secure] a public declaration by the international community rejecting the dam’s completion, in the absence of[Ethiopian] guarantees that Egypt and Egyptians will not suffer any loss inwater security, nor will the other states of the Nile Basin. Egypt has rightsguaranteed by international law and agreements, which the Ethiopian sideis not respecting.”
Wasif added, “According to existing agreements governing the river — which require upriver states to notify Egypt in advance and obtain its consent prior to embarking on any projects that would affect the Nile sources — Egypt’s is the stronger legal position. Yet, Egypt has nevertheless insisted upon resolving the issue in a friendly manner, through reciprocal dialogue with the Ethiopian side, devoid of any escalation. But the government in Addis Ababa has shown no appreciationfor this fact. Thus, Egypt has refused to continue the latest Khartoum meetings, given Ethiopia’s insistence on not providing the necessary guarantees that Egypt’s share of the water supply will remain secure.” Rida al-Dimak, the director of the Center for Water Projects at Cairo University's Engineering College, told Al-Monitor, “The development of alternative supplies of water must be accelerated, to replace the water that will be lost as a result of the construction of the Renaissance Dam.
Foremost among these alternative sources is the exchange of wellspring[water] with the [Democratic Republic of the] Congo, transferring waterfrom the Congo River to the Nile, so as to guarantee that the amount ofwater available to Egypt remains constant.”
Dimak warned against the completion of the Renaissance Dam according to its current specifications, stating that it would constitute a violation of human rights. The social and environmental effects, he explained, must betaken into consideration whenever a new water project is built, in accordance with inviolable international conventions. Some international reports have confirmed that the Ethiopian dam will result in a shortage of drinking water and destruction of a great deal of Egyptian agricultural land. This, he states, provides the foundation for Egypt’s right to object to the dam in international forums.
For his part, former Minister of Irrigation and Water Resources MuhammadNasr al-Din Allam said in an interview with Al-Monitor that the Egyptian government no longer has any alternative but to move quickly to take steps toward international escalation. The first of these, he states, should be to lodge an official protest against the government in Addis Ababa, formally declaring Egypt’s rejection of the project.

“This right is guaranteed to us by old agreements signed and recognized internationally, and which were conditioned upon notifying Egypt in advance before any Nile-related project was established. This protest ought to be followed by the lodging of an official complaint with the UN toestablish Egypt’s position and [remonstrate against] Ethiopian intransigence, as well as to formally demand the formation of an international fact-finding committee to study the points of disagreement between Egypt and Ethiopia. These points include the dam’s capacity, theperiod of time needed to fill it, [details concerning its] operation, the project’s unsound and unsafe construction and the lack of rigorous Ethiopian studies demonstrating that the dam is not vulnerable to collapse, something that would have disastrous consequences for both Egypt and Sudan,” Allam noted.

Allam stressed the need for Egypt to demand that construction on the Ethiopian dam be halted at once, until the fact-finding committee completes its work. According to Allam, this would require “a period of, at most, three to six months.” Moreover, he added, “A copy of the committee’s report should be brought before the UN, to demonstrate the damage that the dam would wreak upon Egypt, which should then head tothe Security Council.”

In an interview with the daily El Fagr on Jan. 9, Ayman Salama, an Egyptian expert in international law, stressed that the Egyptian government would be justified in taking its case to the UN Security Council, even though “one cannot adopt international arbitration to settlethe crisis, since that would require the assent of both parties to the conflict to adopt this formulation of crisis resolution. The Ethiopian government has indicated that it will be highly intransigent on this issue. International arbitration has therefore become extremely unlikely. But Egypt might be able to turn to the Security Council. This, however, wouldrequire the preparation of a file containing documented facts of legal andmaterial evidence of the harm that this dam would incur, both to Egypt and to its vital interests. The issue must be shown to threaten the peace and security of the two countries. [If successful], a number of measures could then be taken by the Security Council to compel Ethiopia to meet Egyptian demands.”

Egypt’s National Defense Council has already held an emergency session on Jan. 8, headed by President Adly Mansour and dedicated to reviewing internal developments and the domestic Egyptian security situation. With the irrigation and water resources minister in attendance, the council also examined the latest developments concerning Ethiopia’s Renaissance Damand the steps being taken on that front to preserve Egyptian water security. It also noted the steps devoted to reducing or eliminating any negative effects that the soon-to-be-built dam might have on Egypt or theother states of the Nile Basin. The council also stressed that Egypt’s waterrights must not be squandered, and that it would not accept any undermining of Egyptian national security. These steps, and Egyptian moves toward international escalation and the internationalization of the

Renaissance Dam crisis, follow years of Egyptian insistence upon solvingthe crisis through mutual dialogue at the negotiating table.

Egypt and Ethiopia spar over the Nile'

(AFP) By William Lloyd-George (February 6, 2014) On Jan. 8, Ethiopia turned down Egypt's demand that it suspend construction of its mega-damon the Nile, further escalating tensions between the two states. Fearing that Ethiopia's $4.2 billion project would reduce the river's flow, Egypt calls for a halt in construction until the dam's downstream impact is determined. Otherwise, it has vowed to protect its "historical rights" to theNile at "any cost."

While scoffing at Egyptian threats, Ethiopia has called for Cairo's collaboration in negotiations and claims that the dam will have no adverseeffect on Egypt. It would, in fact, decrease evaporation and improve waterflow. Ethiopia hopes that the ambitious hydroelectric project, slated to be completed in 2017, would catapult the country out of poverty. Frustrated by what it described as Ethiopia's stubborn stance, Cairo is threatening to take the issue to the United Nations Security Council.

Is this just standard diplomatic brinkmanship before an inevitable compromise, or a harbinger of a looming water war? Regardless, the lack of progress on the diplomatic front bodes ill for a quick end to a stalematethat has long gripped the region. Home to 600 million people, more than half of Africa's total population, the Nile Basin is already traumatized by endless internal political strife and mounting pressures to feed a population growing at Malthusian proportions.

However, as ominous as it sounds, the collapse of the talks does not necessarily mean Egypt and Ethiopia will soon be locking horns. Despitesuggestions to the contrary, this is simply the waning phase of a protracted diplomatic dance before an inevitable conciliation.

ETHIOPIA - A dam for development: Although known as northeast Africa'swater tower, Ethiopia until recently had not bothered to utilize its many rivers. The inability to make use of the Nile has been Ethiopia's age-old national lament. That changed in 2011, when the country announced plans for the construction of its so-called Great Ethiopian Renaissance Dam (GERD), designed to generate a staggering 6,000 megawatts of electricity. By situating the project only 19 miles from the Sudanese border on the vast Blue Nile gorge, where the land is unsuitable for agriculture, Ethiopia sought to reassure Egypt but ended up stoking its fears.

The design and impacts of the GERD are shrouded in secrecy. Observers cast doubts on its timely completion. In a flawed bidding process, Ethiopiagranted the project to a Milan-based engineering company, Salini Costruttori, circumventing its own contract procedures and international standards on procurement. The construction is reportedly lagging behind schedule and faces several unresolved technical problems, one of which ishow long it takes to fill the dam. Ethiopia claims the project is on course and dismisses facing any technical hurdles.

One of Africa's fastest-growing non-oil economies, Ethiopia has embarkedon a state-led development

fashioned after the economic miracles in

South Korea and the rest of the so-called Asian tigers. Ignoring warningsfrom the International Monetary Fund and the World Bank that such a massive publicly funded infrastructure project would starve private investments, Ethiopia is forging ahead. To wit, when Egypt used its influence with international financiers to choke off funding, Ethiopia declared it would finance the project with domestic resources.

EGYPT - Gift of the Nile: The founding myths of many ancient civilizations center on famous rivers — the Euphrates and the Tigris (Babylon), the Yangtze (China) and the Ganges (India), to name a few. However, not many are as inextricably dependent on a single river for their livelihood asEgypt is on the Nile. Egypt's history is defined as much by the flooding and drying beds of the Nile as by the pyramids. For a country described byHerodotus as "the gift of the Nile," control over the majestic river has been an existential Egyptian preoccupation since antiquity.

The world's longest river is made up of a maze of tributaries. Nineteenth-century explorers went on a wild goose chase to locate the mysterious river's murky origin before tracing it to Lake Tana in Ethiopia and the Great Lakes in Central Africa. Two of the river's main tributaries are the Blue Nile and the White Nile. The Blue Nile, accounting for upwards of 80percent of the Nile waters, originates in northern Ethiopia. It makes a steep descent from Ethiopian highlands — carrying brown silt — before itjoins the White Nile in Khartoum, Sudan's capital, augmented by several large rivers from southwestern Ethiopia. The White Nile originates in Burundi and flows northward from the Great Lakes region, crossing Tanzania, Uganda, and South Sudan.

Who owns the Nile: The Nile's origin being outside its borders did not prevent Egypt from getting the lion's share of its waters. The claim for exclusive ownership of the Nile waters is premised on a 1929 treaty between Egypt and Britain's East African colonies, Burundi, Kenya, Rwanda, Tanzania and Uganda. These colonies gained independence from Britain in the 1960s. The treaty awarded 57 percent of the waters to Egypt while also requiring other nations to clear with Cairo before launching any major water project on the river. Another treaty, signed in 1959 between Egypt and Sudan, raised Egypt's share to 66 percent. The two signatories, divvying up virtually all of the Nile waters, did not even consult Ethiopia, the main source of the river. After the 1959 accord, bothEgypt and Sudan built mega-dams to exploit the water for irrigation. For years, upstream Nile Basin countries — Burundi, Ethiopia, Kenya, Rwanda,Tanzania and Uganda — nursed misgivings about the colonial-era accord, in which they had no say. However, they grudgingly acquiesced mainly because, unlike Egypt and Sudan, whose arid lands are watered by the lone river, they are not wholly reliant on the Nile. But, finding the challenge of feeding their growing populations on rain-fed subsistence farming unbearable, upstream countries initiated negotiations in 1999 to find an equitable and reasonable way to share the Nile waters. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream countries, was rejected outright by both Egypt

and Sudan. Touted as “an African solution for an African problem,” the agreement calls for the creation of a commission to oversee developmentprojects on the Nile. It needed ratification by the legislatures of each of the signatory countries. But its implementation is in limbo until another Nile Basin country — for example, the Democratic Republic of the Congo,which is now sitting on the fence signs it.

Ethiopia’s diplomatic coup: In a further blow to Egypt, its alliance with Sudan faltered in 2012 when Sudan, which gets 35 percent of the Nile water according to the 1959 treaty, rescinded its initial opposition to Ethiopia’s renaissance dam. Khartoum’s change of heart is attributed to astill-secret report by a panel of international experts that concluded the dam would neither significantly affect downstream countries nor fundamentally alter the flow of the river. But Sudan’s internal vulnerabilities presumably played a crucial role.

In 2011, Sudan saw a huge chunk of its land mass secede to form Africa’snewest state, South Sudan. Ethiopia’s support for the former rebels of South Sudan (currently embroiled in a power struggle of their own) was instrumental in forcing Sudan — Egypt’s loyal ally — to accept the divorce.An international warrant for Sudanese President Omar al-Bashir in connection with the conflict in Darfur has made the country an international pariah. Sudan could not afford to alienate its increasingly assertive neighbor to the south and eventually threw its weight behind Ethiopia’s colossal undertaking. Although it has yet to sign the Entebbe Agreement, which loosens Egyptian and Sudanese dominion over use of the Nile waters, Sudan’s new stance hands Ethiopia a diplomatic coup.

Egypt’s ill designs: The most recent Egyptian president to threaten war toprotect Egypt’s “inviolable” rights over the Nile was the Muslim Brotherhood’s Mohamed Morsi. Last June, in a secret all-party discussion chaired by then-President Morsi, which was “mistakenly” broadcast live onstate TV, Egyptian lawmakers suggested arming Ethiopia’s political opponents to obstruct the construction. The tension subsided with the military takeover in Cairo. However, after a brief interlude in which it appeared that diplomacy was to replace the menace of war, the military regime is now raising the ante. The high brass knows full well that a food shortage resulting from a significant reduction in water volumes means riots in Egyptian cities.

The last time Egypt staked its claim militarily over the Nile and the Red Sea was in 1876, when it invaded Ethiopia. The two armies met at Gura, now an Eritrean territory. Egypt’s army was nearly wiped out by an ill- equipped and ragtag Ethiopian side that would, two decades later, go on to hand Italy a humiliating defeat at the battle of Adwa. Although it neverruled out direct military confrontation with Ethiopia, Egypt has since reverted to proxy wars.

For centuries, Muslim Egypt supplied the head of Ethiopia’s Orthodox Church, a state religion until the 1974 revolution. The imperial regime ofHaile Selassie found itself under political pressure to leave the centuries-old arrangement intact following the 1959 Nile accord that excluded Ethiopia. Despite this historical relationship, Ethiopia’s official

historiography is replete with Egypt’s ill designs over it. In the 1970s, Ethiopia blamed Egypt for fanning the Republic of Somalia’s irredentistclaims over the Somali-inhabited Ogaden region of Ethiopia. The two countries went to war twice over the Ogaden.

Egypt is also faulted for its role, with Sudan as its accomplice, in precipitating Ethiopia’s loss of access to the Red Sea with Eritrea’s independence. Eritrea broke away from Ethiopia in 1993 after 30 years ofcivil war.

Internal fragility: Official rhetoric notwithstanding, both Egypt and Ethiopia are represented by shaky regimes presiding over brittle states and divided societies. Given their internal vulnerabilities, neither country can afford to go to war — a war whose outcome is uncertain. While Ethiopia saw its economic fortunes rise over the last decade, its internal cohesion has not kept pace. Ethnic and religious cleavages as well as a border dispute with Eritrea (over which the two states fought a bloody warfrom 1998 to 2000) are constant reminders of its enduring fragility. EthnicTigreans, estimated at 6 percent of the population, have been in power since 1991. They dominate the country’s politics, military, security and economy. This is resented by both the Oromo, Ethiopia’s majority population, and the Amhara, its traditional rulers. Over the last two years,the country’s otherwise docile Muslim population, long marginalized despite accounting for a sizable portion of the population, has been increasingly restive. Ethiopia’s single-party leadership has not fully recovered from the death in 2012 of its strongman of two decades, Prime Minister Meles Zenawi. The new prime minister, Hailemariam Desalegn, a Protestant and from another minority group, does not hold as much clout as his predecessor and is seen as a temporary figure.

Egypt, Ethiopia clash over mega-dam - UPI'

UPI (February 8, 2014) - Egypt and Ethiopia remain at loggerheads overAddis Ababa’s plan to build a $4.2 billion, 6,000-megawatt dam on a major tributary of the Nile River that Cairo says will greatly reduce the flow of water that is Egypt’s lifeline.

Tension between the two African states rose sharply in January after Ethiopia rejected Egypt’s demand it suspend construction of the GrandEthiopian Renaissance Dam on the Blue Nile, the main tributary of the 4,130-mile river, the world’s longest.

Egypt has vowed to protect its “historical rights” to the Nile “at any cost”and says it could lose 20 percent of its water if the giant dam in northwestern Ethiopia, one of several hydroelectric projects planned by Addis Ababa, is completed.

Despite Cairo’s tough declarations, and Addis Ababa’s insistence on pressing ahead with the massive dam — which it denies will damage Egypt to any critical extent — there’s little likelihood of the two states going to war, if only because the vast distance that separates them. But the dispute is swelling into a major diplomatic wrangle in Africa thatcould have consequences on other continents as the planet faces water shortages in the decades ahead.

Ethiopia’s Chinese-backed dam program will, if completed, produce abundant supplies of electricity that could transform the economies of theregional states long mired in poverty.

Egypt’s position has been seriously weakened by the December defectionof Sudan, its southern neighbor and longtime ally, in the Nile dispute withEthiopia and other upstream African states.

That has left Egypt isolated in a long-running dispute with those states,which all want a greater share of the Nile water than they are accordedunder British colonial era agreements that gave Egypt, and Sudan to a lesser extent, the lion’s share of the river’s flow.

Despite political turmoil in both Egypt and China-backed Ethiopia in recentmonths — the July 2013 military coup in Cairo that ousted Egypt’s first democratically elected president, and the 2012 death of longtime Ethiopian strongman Prime Minister Meles Zenawi — both sides have dug in their heels over the Nile crisis.

Egypt, with 82 million people, is the most populous and the most militarized state of the 11 riverine states along the Nile, which rises in thehighlands of Ethiopia.

But with Sudan now “so squarely in Ethiopia’s camp, Egypt could not stage a ground attack on the dam,” observed Hassen Hussein, a leader ofEthiopia’s largest ethnic group, the Oromo, in an analysis on al-Jazeera Thursday.

An airstrike on the dam, 20 miles from Sudan’s southern border in thevast Blue Nile gorge, “is still possible, but fraught with risks.

“To Egypt, water security equals national security,” Hussein noted. “ToEthiopia, the dam has become a matter of national pride.

“An airstrike could turn the clock back on the dam. Although Ethiopia lacksthe means to respond to such an attack in kind, Egypt risks earning the international community’s wrath and seeing its relationships with sub- Saharan Africa strained.”

But these relations are already strained over Egypt’s claim that it has rights to 87 percent of the Nile’s waters that were guaranteed under British-inspired treaties in 1929 and 1959 that also gave Cairo veto powerover dam-building by upstream states.

Egypt was allocated 55.5 billion cubic meters a year of the Nile’s flow rateof 84 billion cubic meters. Sudan, then Egypt’s ally, got 18.5 billion cubic feet.

The Blue Nile joined the White Nile at Khartoum, capital of Sudan, to flownorthward to the Mediterranean.

In 2010, Ethiopia, Rwanda, Tanzania, Uganda and Kenya signed an accord, the Cooperative Framework Agreement, to negotiate a more equitable water-sharing arrangement. They were later joined by Burundi , the Democratic Republic of Congo, Eritrea and South Sudan.

These upstream African nations, former colonies of the 19th century European powers, all say they need greater access to the Nile’s flow to meet swelling demographic and industrial demands from a waterway

thathas sustained civilizations for millennia.

Much depends on how the current dispute plays out. Right now, an estimated 238 million people depend on the Nile to some extent. (Textends)

NILE - Ethiopia dam talks to resume Monday'

Joel Gulhane (February 9, 2014) Egyptian Minister of Water Resources andIrrigation Mohamed Abdul Muttalib will head a delegation to Addis Ababa on Monday to continue talks regarding the construction of the Grand Ethiopian Renaissance Dam (GERD).

Sudan, which is also an interested party in these talks, will not be represented at the meeting in the Ethiopian capital. Spokesman for the Ministry of Water Resources and Irrigation Khaled Wassif told Daily News Egypt that this "is usual" because there are issues for Ethiopia and Egypt to discuss bilaterally. He stressed the importance of "direct contact" at thistime.

Water Minister Mohamed Abdul Muttalib listens during tripartite talks about Ethiopia's Great Renaissance Dam on January 4, 2014 in the Sudanese capital, Khartoum. The talks are being attended by the irrigation ministers of Ethiopia, Egypt and Sudan and are set to last for three days. Egyptian Water Minister Mohamed Abdul Muttalib listens during tripartite talks about Ethiopia's Great Renaissance Dam on January4, 2014 in the Sudanese capital, Khartoum.

Muttalib accepted an invitation from his Ethiopian counterpart AlemayehuTegunu to discuss the "sticking points" regarding the construction of the GERD, which Egypt fears could have a detrimental impact upon its water supply.

Wassif said that one of the "sticking points" that remains is the differenceof opinion regarding the formation of a committee to oversee the implementation of recommendations of a report detailing confidence- building measures concerning the dam and its affect on downstream nations.

"We insist on including international experts in the committee, but they [Ethiopia] only wants to include representatives from the three countries[Egypt, Ethiopia and Sudan]," said Wassif. The three countries agreed inDecember to form the committee, however the last trilateral meeting at the start of January ended with no agreement reached.

Muttalib will be joined in Ethiopia with other representatives from his ministry as well as representatives of the Ministry of Foreign Affairs. The minister has said previously that "Egypt's firm position on the issue of theGERD… does not conflict at all with the Ethiopian government's desire to increase development and achieve the aspirations of the Ethiopian peoplein raising the standard of living." He added that these are "legitimate aspirations" that can be achieved without harming Egypt's water share.

Ethiopia began diverting water form one of the River Nile's tributaries in May 2013, prompting concern in Egypt and Sudan over the affect the electricity generating dam could have on the water supply to downstreamcountries.

Last week Muttalib suggested that Ethiopia build two smaller dams toensure there is as little impact as possible on the flow of water. The

Minister of State for Antiquities Affairs Moahemd Ibrahim also expressed concern least week over the potential impact the dam could have on Egypt’s antiquities due to the potential lowering of water levels that couldcontribute to the cracking of some monuments.

Egypt has historically claimed the lion’s share of the Nile waters as peragreements signed in 1929 and 1959 guaranteeing Egypt 55.5bn cubicmetres of water annually of the estimated total of 84bn cubic metres. (Text ends)

NILE PPOLITICS: Dialogue is the only way, Ethiopia tells Egypt' ByAnadolu Agency (February 11, 2014)

ADDIS ABABA - Ethiopian Prime Minister Hailemariam Dessalegn said Monday that dialogue was the only way to bridge outstanding differencesbetween Ethiopia and Egypt about a multi-billion dollar hydroelectric damon the Nile River.

"I know dialogue will continue. I don't see there will be a military solutionand [talk of] war is absurd. It doesn't work," Dessalegn told a press conference in Addis Ababa.

"This kind of problem is solved through dialogue," he said. "From theEthiopian side, we are ready to see a cooperative way to find solutionthrough dialogue."

Plans by Ethiopia to build a massive hydroelectric dam, dubbed the "GrandRenaissance Dam Project," on the Blue Nile – the primary source of Egypt's water supply –sent shockwaves down Egypt's Nile Valley.

Water distribution among the states of the Nile basin have long dependedon a colonial-era treaty giving Egypt and Sudan the lion's share of Nile water.

Citing its own development needs, however, Ethiopia insists that it must build a series of dams to generate electricity – both for local consumptionand export.

Addis Ababa maintains that the new dam will benefit Egypt and Sudan,both of which will be invited to purchase electricity thus generated.

The Ethiopian premier said that his country wants to see a stable anddemocratic Egypt.

"If General [Abdel-Fattah] al-Sisi is elected, I am ready to work with him,"he said.

Calls have grown for al-Sisi, who led the army move to unseat electedpresident Mohamed Morsi, to run in Egypt's upcoming presidential election, expected within three months.

Turning to the conflict in South Sudan, the Ethiopian premier said that theInter-government Authority for Development (IGAD) has authorized the Ugandan army to protect the government in Juba.

"We denounce unconstitutional power seizure and this is the position of allIGAD states," he said. "IGAD has a clear position in this regard. Uganda has to protect the government."

He, however, said that forces from Uganda and other countries must leaveSouth Sudan phase by phase.

South Sudan has been shaken by violence since mid-August after President Salva Kiir accused sacked vice president Riek Machar of staginga coup.

The two warring parties have been engaging in IGAD-mediated peacetalks in Addis Ababa to solve the conflict.

Speaking about his country's policy on Eritrea, Dessalegn said Ethiopia isdetermined to normalize relations with Eritrea without precondition.

He, however, said that his government is not optimistic that Eritrea willpositively respond.

"I do not think that (negotiations) will open soon," he said, warningEritrea against any move to destabilize Ethiopia and the region.

If Eritrea continues in its destructive acts, Ethiopia will respond withproportional measures, he warned.

Ethiopia and Eritrea fought a three-year war in 1998 over disputed borderareas.

Regarding Somalia, Dessalegn said that African peacekeepers are gainingfoothold against the militant Al-Shabaab group in Somalia.

"Al-Shabaab is now on the run and this is a sign of its defeat. We willcontinue the offensive," he said.

Somalia has remained in the grip of political violence since the outbreak ofcivil war in 1991.

However, the country's political situation appears to have stabilized recently with the establishment of a new government and intervention byAfrican Union troops tasked with countering an insurgency waged by the Al-Qaeda-linked Al-Shabaab. (Text ends)

NILE POLITICS: Blue Nile Sub-basin Legal Regime in Historical Context:Colonial Treaties'

ETHIOMEDIA By Yosef Yacob, AB, JD, LLM, PHD (February 19, 2014) (Part I) Generally, formal agreements and legal regimes provide a legal point of departure to contribute the general principles and rules that govern co-basin states' legal relations in the utilization of international rivers. This chapter begins the examination of reciprocal rights and obligations of the sub-basin's riparians by reviewing the treaties, which form the legal regime of the Blue Nile Sub-basin. The chapter describes the evolution of the legal regime by reviewing the colonial as well as thepostcolonial treaties and other significant negotiations concerning the utilization of the basin's waters.

1. Colonial Treaties

The early treaties regarding the Nile basin were largely the products of British colonial intervention in the region. The British were anxious to preserve their position of control over the Suez Canal. A major part of keeping Egypt satisfied was ensuring the permanent availability of Nile waters for Egyptian uses. While the British had many colonial interests inthe Nile basin, they usually chose treaty arrangements that favored Egyptian claims to the Nile, for the above mentioned reason.

The British at this time introduced the notion that Egypt's rights to theNile were so long established that they should take precedence over all

other schemes for use of the Nile. The early colonial period treaties regarding the Nile basin show the British single mindedness on this issue.These older agreements emphasized certain tenets and attitudes regarding rights to the Nile that have persisted through the developmentof the current legal and institutional system operating in the Nile basin.

They have given weight to Egypt's claims to be the state with the greatesthistoric legal recognition of rights to the Nile waters.

This early colonial period was also the first in which Egypt was to admit that other states could potentially affect its claims to the Nile. Without thewater that the Blue Nile brought down from the Ethiopian Highlands and that the White Nile carried away from the central African lakes, Egypt would be a desolate land.

1.1 Italy United Kingdom Protocol – 1891

Until the explorations of Baker, Speke, and Stanley in the latter half of thenineteenth century, no one knew where the source of the Nile was located, but all believed that interference with its water was possible. UntilBritain acquired interests in Egypt, however, speculation on such a diversion was left largely to scholars and travelers. As long as no European power moved into the Sudan or established a position astride the Nile, the British believed that Egypt would have water and British domination of Egypt would remain secure.

In 1889, British complacency was shaken. The first threat to the Nile by aEuropean power loomed in the heights of the Ethiopian plateau. The Italians had long wished to establish a protectorate in Ethiopia, and after 1885, the British had even encouraged Italian moves into the highlands. At first the British calculated that Italian penetration would not only keep the Ethiopians out of the Sudan but would also act as a counterweight to the French, who were strengthening their position at Djibouti.

In 1889, the Italians seized the first real opportunity to enlarge their prospective sphere of influence. On March 9, the forces of the Mahdist of Sudan stopped the Ethiopian expansion into Sudan at the Battle of A1- Qallabat, killing King Yohannes IV. In order to consolidate his internal position among the traditionally warring feudal factions, the new Emperor,Menelik, welcomed Italian offer of support and signed the Treaty of Uccialiin May.

The Italians translated the treaty into action and laid claim to Kassala situated below the escarpment in the Nile Basin, which commanded theAtbara tributary of the Nile. With this town as a base, the Italians could proceed towards Khartoum at the confluence of the White and the BlueNile.

The British were concerned that the Italians may attempt “to tap the upper Nile” and proceed to occupy Sudan.” In August 1889, the British announced against letting foreign Powers into the Nile Valley and authorized “ such measures as may be necessary for the purpose of protecting [the] Nile Valley against the dominion of any outside Power.” Accordingly, the British warned Italy to stay away from the Nile. In March1891, Italy officially consented to remain out of the Nile Valley in return

for British recognition of an Italian sphere of influence in the EthiopianHighlands.
The Anglo Italian Treaty was signed in Rome, Italy on April 15, 1891. Theprotocol protected Egyptian interests in waters of the Atbara River, a tributary of the Nile. The British concluded this treaty before the major source of the Nile was identified as the Blue Nile, which originates in the highlands of Ethiopia. Article III stipulated:
“The Government of Italy undertakes not to construct on the Atbara any irrigation or other works which might sensibly modify its flow into the Nile.” This was followed by an exchange of notes between Italy and Britainsigned in Rome on November 22, 1901 marking the frontier between the Anglo-Egyptian Sudan and Eritrea. The next article, Part 2, will discuss theFrontier Treaty Between Anglo Egyptian Sudan, Ethiopia and Eritrea – 1902. (Text ends)
ENVIRONMENT: Land and Water Grabs Devastate Communities inEthiopia'
ER (February 19, 2014) Satellite Images Show Devastating Toll on500,000 Pastoralists'
“Ethiopia can develop its land and resources but it shouldn’t run roughshod over the rights of its indigenous communities. The people whorely on the land for their livelihoods have the right to compensation and the right to reject plans that will completely transform their lives.”
-Leslie Lefkow, deputy Africa director, Human Rights Watch
HRW (Nairobi) – New satellite imagery shows extensive clearance of land used by indigenous groups to make way for state-run sugar plantations in Ethiopia’s Lower Omo Valley, Human Rights Watch and International Rivers said today. Virtually all of the traditional lands of the 7,000- member Bodi indigenous group have been cleared in the last 15 months, without adequate consultation or compensation. Human Rights Watch has also documented the forced resettlement of some indigenous people in thearea. The land clearing is part of a broader Ethiopian government development scheme in the Omo Valley, a United National Educational, Scientific and Cultural Organization (UNESCO) World Heritage Site, including dam construction, sugar plantations, and commercial agriculture. The project will consume the vast majority of the water in the Omo River basin, potentially devastating the livelihoods of the 500,000 indigenous people inEthiopia and neighboring Kenya who directly or indirectly rely on the Omo’s waters for their livelihoods.
“Ethiopia can develop its land and resources but it shouldn’t run roughshod over the rights of its indigenous communities,” said Leslie Lefkow, deputy Africa director at Human Rights Watch. “The people whorely on the land for their livelihoods have the right to compensation andthe right to reject plans that will completely transform their lives.”
A prerequisite to the government’s development plans for the Lower OmoValley is the relocation of 150,000 indigenous people who live in the vicinity of the sugar plantations into permanent sedentary villages under

the government's deeply unpopular "villagization" program. Under this program, people are to be moved into sedentary villages and provided with schools, clinics, and other infrastructure. As has been seen in otherparts of Ethiopia, these movements are not all voluntary.

Satellite images analyzed by Human Rights Watch show devastating changes to the Lower Omo Valley between November 2010 and January 2013, with large areas originally used for grazing cleared of all vegetationand new roads and irrigation canals crisscrossing the valley. Lands criticalfor the livelihoods of the agro-pastoralist Bodi and Mursi peoples have been cleared for the sugar plantations. These changes are happening without their consent or compensation, local people told Human Rights Watch.

Governments have a duty to consult and cooperate with indigenous people to obtain their free and informed consent prior to the approval of any project affecting their lands or territories and other resources.

The imagery also shows the impact of a rudimentary dam built in July 2012 that diverted the waters of the Omo River into the sugar plantations.Water rapidly built up behind the shoddily built mud structure before breaking it twice. The reservoir created behind the dam forced approximately 200 Bodi families to flee to high ground, leaving behind their crops and their homes.

In a 2012 report Human Rights Watchwarned of the risk to livelihoods andpotential for increased conflict and food insecurity if the government continued to clear the land. The report also documented how government security forces used violence and intimidation to make communities in theLower Omo Valley relocate from their traditional lands, threatening their entire way of life with no compensation or choice of alternative livelihoods.The development in the Lower Omo Valley depends on the construction upstream of a much larger hydropower dam – the Gibe III, which will regulate river flows to support year-round commercial agriculture.

A new film produced by International Rivers, "A Cascade of Developmenton the Omo River," reveals how and why the Gibe III will cause hydrological havoc on both sides of the Kenya-Ethiopia border. Most significantly, the changes in river flow caused by the dam and associatedirrigated plantations could cause a huge drop in the water levels of Lake Turkana, the world's largest desert lake and another UNESCO World Heritage site.

Lake Turkana receives 90 percent of its water from the Omo River and is projected to drop by about two meters during the initial filling of the dam,which is estimated to begin around May 2014. If current plans to create new plantations continue to move forward, the lake could drop as much as16 to 22 meters. The average depth of the lake is just 31 meters.

The river flow past the Gibe III will be almost completely blocked beginning in 2014. According to government documents, it will take up tothree years to fill the reservoir, during which the Omo River's annual flowcould drop by as much as 70 percent. After this initial shock, regular damoperations will further devastate ecosystems and local livelihoods.

Changes to the river’s flooding regime will harm agricultural yields,

prevent the replenishment of important grazing areas, and reduce fishpopulations, all critical resources for livelihoods of certain indigenous groups.

The government of Ethiopia should halt development of the sugar plantations and the water offtakes until affected indigenous communitieshave been properly consulted and give their free, prior, and informed consent to the developments, Human Rights Watch and International Rivers said. The impact of all planned developments in the Omo/Turkanabasin on indigenous people's livelihoods should be assessed through a transparent, independent impact assessment process.

"If Ethiopia continues to bulldoze ahead with these developments, it will devastate the livelihoods of half a million people who depend on the OmoRiver," said Lori Pottinger, head of International Rivers' Ethiopia program."It doesn't have to be this way – Ethiopia has options for managing this river more sustainably, and pursuing developments that won't harm the people who call this watershed home."

Background

Ethiopia's Lower Omo Valley is one of the most isolated and underdeveloped areas in East Africa. At least eight different groups call the Omo River Valley home and the livelihood of each of these groups is intimately tied to the Omo River and the surrounding lands. Many of theindigenous people that inhabit the valley are agro-pastoralist, growing crops along the Omo River and grazing cattle.

In 2010, Ethiopia announced plans for the construction of Africa's tallest dam, the 1,870 megawatt Gibe III dam on the Omo River. Controversy has dogged the Gibe III dam ever since. Of all the major funders who considered the dam, only China's Industrial and Commercial Bank of China(ICBC) provided financing (the World Bank, African Development Bank, and European Investment Bank all declined to fund it, though the World Bank and African Development Bank have financed related power lines).

The Ethiopian government announced even more ambitious plans for the region in 2011, including the development of at least 245,000 hectares ofirrigated state-run sugar plantations. Downstream, the water-intensive sugar plantations, will depend on irrigation canals. Although there have been some independent assessments of the Gibe dam project and its impact on river flow and Lake Turkana, to date the Ethiopian governmenthas not published any environmental or social impact assessments for thesugar plantations and other commercial agricultural developments in the Omo valley.

According to the regional government plan for villagization in Lower Omo,the World Bank-supported Pastoral Community Development Project (PCDP) is funding some of the infrastructure in the new villages. Despite concerns over human rights abuses associated with the villagization program that were communicated to Bank management, in December 2013 the World Bank Board approved funding of the third phase of the PCDP III. PCDP III ostensibly provides much-needed services to pastoral communities throughout Ethiopia, but according to government

documents PCDP also pays for infrastructure being used in the sedentaryvillages that pastoralists are being moved to.

The United States Congress in January included language in the 2014 Appropriations Act that puts conditions on US development assistance in the Lower Omo Valley requiring that there should be consultation with local communities: that the assistance “supports initiatives of local communities to improve their livelihoods”: and that no activities should besupported that directly or indirectly involve forced evictions.

However other donors have not publicly raised concerns about Ethiopia’s Lower Omo development plans. Justine Greening, the British Secretary ofState for International Development, in 2012 stated that her Departmentfor International Development (DFID) was not able to “substantiate the human rights concerns” in the Lower Omo Valley despite DFID officials hearing these concerns directly from impacted communities in January 2012. NILE POLITICS: Egypt in Full Swing Campaign Against GERD -WaterMinister visited Italy and will tour more European countries'

Al-Monitor’ (February 19, 2014) - CAIRO — Egypt has begun a diplomaticcampaign on two tracks, one explicit and one undeclared, with European countries and donor parties. This came after the Egyptian government escalated its campaign against the Ethiopian Renaissance Dam under its current specifications to protect Egypt’s historic interests in Nile water, following failed technical negotiation. “The campaign initiated by Egypt ison two tracks, one that is explicit and involves meetings by Egypt’s ministers of water and foreign relations with their counterparts in countries with influence in the Nile Basin, and one that is undeclared andinvolves meetings by Egypt’s ambassadors in these countries. The two tracks aim to persuade the international community to reject the dam’s construction because it may lead to further conflict and instability in the region of the Nile Basin,” a diplomatic source in contact with the Egyptian government told Al-Monitor.

The source, who preferred to remain anonymous because of the sensitivityof the issue with the Egyptian government, said, “More negotiations with Ethiopia only waste time and directly threaten Egypt’s water security. We realized that Ethiopia doesn’t want genuine solutions to end the crisis, but is only trying to portray Egypt as approving of the dam’s construction to facilitate access to funding. But [Ethiopia] didn’t provide genuine guarantees that the dam will not affect Egypt and has shown no intention to amend the technical specifications to minimize the potential risks according to the report by the international experts’ committee, which recommended reconsidering the dam’s safety studies.” On Feb. 6, Egypt’s minister of water resources and irrigation visited Italy, where he explainedthe critical water situation in Egypt, the water problems that recur every year and Egyptian fears of the dam’s impact on the country’s water security. Afterward, Egypt’s Ministry of Water said in a statement, of which Al-Monitorhas obtained a copy, that “the visit has achieved its goal. Italy has understood Egyptian concerns.” The Italian Salini

Construction company is building the Renaissance Dam after it signed a contract with

the Ethiopian government in December 2010 worth 3.377 billion euros($4.64 billion), with the dam due to be completed in six years.

Al-Monitor spoke to a government source familiar with the file of the Nile Basin. “Egypt’s open move, for the first time, and the visit by Italy’s irrigation minister has had an impact on Ethiopia, which invited us for dialogue again on Feb. 11 in Addis Ababa. However, Ethiopia again stuck to its point of view and rejected all confidence initiatives put forward by Egypt,” the source noted. “Egypt will continue its international escalation and all options are open to us to protect our share of the Nile waters. And this decision was made after exhausting all attempts at dialogue with Ethiopia. Now visits are being planned to Norway, Sweden, the Netherlands and France. … We have also contacted all international donorssuch as the World Bank and the African Development Bank to demand they not give any technical support for the construction of the dam without making sure it will not cause damage to Egypt,” the source said. “A copy of the report by the international experts’ committee that was signed by Ethiopia was sent. [The report] proves the existence of a potential risk to building the dam. But Ethiopia has not committed to finding solutions to reduce these risks,” the source stressed. During a news conference on Feb. 13 after the Egyptian delegation returned from Addis Ababa, Ethiopian Prime Minister Hailemariam Desalegn said that his country will not back down from building the Renaissance Dam. He noted that if Egypt wants to internationalize the issue and send it to the United Nations, this will not help because there is no court specializing in arbitrating water disputes, and Egypt has no choice but to negotiate and engage in dialogue to reach a solution acceptable to everyone. The water ministers of Egypt, Sudan and Ethiopia met in Khartoum in three rounds of negotiations last year on how to implement the recommendations of the experts’ report. But they did not reach a clear agreement. Egypt insisted on sending foreign experts to follow up on how to implement the report’s recommendations. Egypt also put forward an initiative to build confidence whereby Ethiopia would provide guarantees to implement any new recommendations, but Ethiopia and Sudan rejected that. Egypt rejected participating in the ministerial meeting of the Eastern Nile Technical Regional Office (ENTRO), which is affiliated with the Nile Basin Initiative held in Addis Ababa on Feb. 4. The Egyptian Ministry of Irrigationsaid in an official statement, “We will not participate in the meeting in line with the Egyptian position taken in 2010 to freeze our activities in the NileBasin Initiative after the unilateral signing of the Entebbe Convention by the Nile headwaters countries without reaching an agreement on the contentious items and without recognizing the legitimacy of any decisions that may be issued by ENTRO.”

For his part, Ambassador Gamal Bayoumi, the secretary-general of the Egyptian-European partnership at the Ministry of International Cooperation, said in an interview with Al-Monitor, “The issue of the Renaissance Dam has become very complex, and we have a state that isviolating international customs and traditions. Egypt’s moves now targetall countries that provide technical assistance for designing and building

the Renaissance Dam through private contractors and also the states likely to fund the construction of the dam. … Discussing this crisis during the visits of Marshal [Abdel Fattah al-] Sisi and of the Russian foreign minister [Sergey Lavrov] has had a good effect because Russia's relations with Ethiopia are still good, and can be leveraged for the benefit of Egypt."Bayoumi asserted, "We are still at the stage of dialogue. And we are trying, as much as possible, to attract Ethiopia to talk and negotiate. But [Ethiopia] is being stubborn and the impact of the dialogue session broadcast during [former President Mohammed] Morsi's era has clearly caused the collapse of trust between Egypt, Sudan and Ethiopia." Aside from the language of political escalation, there has been an increased state of anxiety within the institutions concerned with studying the effects of the Renaissance Dam after Al Jazeera broadcast a report from the dam's site showing initial construction, showing that Ethiopia is serious about building the dam.

The expert in the national committee to assess the effects of the Renaissance Dam, Alaa al-Zawahiri, told Al-Monitor, "Despite the lack of detailed and specific information that can be analyzed, the recording airedby Al Jazeera shows that concrete has started to be poured, which is the second phase after laying soil for the base. According to the dam's stated specifications, laying the soil should be done over an area of 100 meters [328 feet], but there is no doubt that Ethiopia has completed all the initialwork first and has put part of the concrete on the surface to gain time andimpose a fait accompli on Egypt." "If this construction continues at that pace, there will be a fait accompli, and it will be difficult to persuade the Ethiopian side to amend the dam's specifications or height after that," saidZawahiri. Egypt's moves are still constrained by its difficult internal transitional phase. It's important for Egypt to resolve its internal problemsso that the water issue and the Renaissance Dam can return as a political priority for the next president. (Text ends)

NILE POLITICS: Ethiopia's Renaissance dam 30% complete: official' Ahram Online, (Sunday February 23, 2014) Thirty percent of Ethiopia's Renaissance dam is complete, project leader Semegnew Bekele has said.Construction is progressing according to schedule, he added in commentsreported by Aswat Masryia. The project has been a source of concern for the Egyptian government since May last year, when images of the dam's construction stirred public anxiety about its possible effects on Egypt's share of the Nile's water.

However, Bekele insisted the dam would serve Egypt, Sudan and Ethiopia.Minister of Irrigation Mohamed Abdel-Motteleb told Al-Ahram daily newspaper that Egypt may send an official statement demanding construction of the dam be halted until a mutually agreeable solution is found.

Egypt, Ethiopia and Sudan formed a tripartite technical committee to study the possible effects of the dam. But the committee's discussions were thwarted last December when Sudanese President Omar Al-Bashir announced his support for the dam during a meeting with Ethiopian Prime

Minister Hailemariam Desalegn. Egypt has demanded that Ethiopia submitthe dam's construction plans for assessment by international experts.

Ethiopian Irrigation Minister Alamayehu Tegenu said his country was already committed to the recommendations of an international committeeof experts. According to Walta information, an Ethiopian website, there are 7,500 workers and 500 experts from 25 countries working on the project.

NILE POLITICS: Ethiopia, Sudan seek dialogue with Egypt over Nile dam' AFP (February 26, 2014)

Ethiopian Government said on Tuesday that it was collaborating with the Republic of Sudan to dialogue with Egypt on the ongoing $4.7 billion Great Ethiopian Renaissance Dam project. The project currently at about 34 per cent, was halted due to objection raised by Egypt, who is a member of the Nile's downstream countries. Egypt hadexpressed fear that the Nile Dam project would affect the Egyptians, whose 80 per cent source of domestic water supply comes from the river. The Ethiopian Water and Irrigation Minister, Alemayehu Tegenu had, however, told newsmen that the country was "collaborating with Republic of Sudan to re-engage Egypt into dialogue to support the project." He saidthe Dam would benefit the three Nile countries, as it would cause no harmon downstream countries as the experts' report suggested.

"Ethiopia and Sudan have been working together to bring Egypt back to the dialogue table to resolve the issues and make progress on the project for goods," he said. The News Agency of Nigeria reports that the Ethiopiandam claimed to be one of the largest hydro projects in the world on the River Nile near the Sudan border, is expected to flood 1,680 square kilometres of forest in northwest Ethiopia. It would however displace some20,000 Ethiopians living around the dam area to create a reservoir that will hold around 70 billion cubic metres of water equivalent to the entire annual flow of the Blue Nile at the Sudan border.

The project according to available data would generate electricity capacityof 6,000 MW, when completed in 2017. The project had however, caused some ripples between Ethiopia and Egypt, where the ousted Egyptian leader Muhammad Morsi threatened war with Ethiopia if the dam project was continued. Morsi had said that its interest in the Nile was threatened,claiming that Egypt sources over 80 per cent of its domestic water supplyfrom the Nile River and threatened to attack Ethiopia.

NILE POLITICS: Egypt internationalizes dam dispute with Ethiopia'

Al Monitor Cairo, Egypt - The Egyptian government has begun to take serious, overt measures toward internationalizing the Renaissance Dam. Itis doing so through protracted negotiations taking place behind closed doors among the Supreme Committee for the Nile Waters, which includes representatives from all parties affected by issues of concern to the Nile River Basin. It is composed of staff from the Foreign Ministry as well as the Ministries of Water Resources and Irrigation, International Assistance, Defense and Electricity, and the Egyptian intelligence services.

On Jan. 20, Al-Monitor became the first to publish a report concerning thisstep, revealing Egypt's intention to internationalize its case against Ethiopia concerning the Renaissance Dam. At the time,

Egyptian Minister

of Water Resources and Irrigation Mohamed Abdul Muttalib released a statement denying Al-Monitor's reporting. This comes at a time when, according to polls, the proportion of Egyptian public opinion that favors escalating the issue has risen to 87%. This is the percentage of people who answered "yes" when asked, "Do you support internationalizing theissue of the Renaissance Dam, following Ethiopia's rejection of initiativesto solve the crisis?" The poll was carried out by one of the most widely read news websites in Egypt.

These Egyptian moves toward international escalation are proceeding on two levels, in keeping with an agreement concluded by the Supreme Committee for the Nile Waters, according to a government source who spoke to Al-Monitor. The source stressed that, in fact, first-level steps began with the visit of Muttalib, along with Minister of Foreign Affairs NabilFahmy, to Italy, which is believed to be Ethiopia's principal technical supporter in building the dam. The Italian contracting company Salini Corporation has already conducted several studies and begun constructionat the dam site.

The source noted that the next stage will witness other visits by Muttalib to a number of countries. It was agreed that the next visit would be to Norway, one of the countries that is funding the establishment of the Renaissance Dam. All of these visits seek to clarify the harm that Egypt will incur if the dam is completed according to its current specifications, aiming to win support from these countries for Egypt's position as well asbringing pressure to bear on the Ethiopian side. Egyptian officials seek toslow construction of the dam until an agreement can be reached with Cairo concerning the mechanisms for mitigating the expected damages tothe Egyptian people and the beginning of an era of thirst in Egypt.

The same government source added in remarks to Al-Monitor that the second level of Egypt's plan to escalate the issue internally, which was agreed upon by the Supreme Committee for the Nile Waters, encompasses special steps to present international complaints against Ethiopia over its intransigence and insistence upon inflicting damages to Egyptian water security. This aspect of the plan has been postponed at present until after the completion of the Egyptian government's campaignto educate other governments concerning the harm that the Renaissance Dam will inflict on Egypt. He noted that the committee had put in place a number of options, including raising complaints to the United Nations andother international organizations such as the African Union. Bringing the matter before the UN Security Council has been ruled out for the time being, since it was decided to leave it to the next president-elect to determine whether or not to pursue that route.

Muttalib stressed that his visit to Italy had achieved its goals and would berepeated in many other countries and places. The mission of this and subsequent trips is to provide greater clarity on Egypt's water position, the challenges that Egypt is confronting with regard to the scarcity of water resources and the efforts that the Ministry of Water Resources and Irrigation is making in this area. Muttalib noted that, during the visit, he had explained the water resources situation and the reality of water

scarcity in Egypt to Italian experts and officials. Those present expresseda keen interest in information concerning water resources and stressed that they were hearing it for the first time.

Muttalib stated there are a number of scenarios that the Egyptian government has agreed to implement in order to deal with the Ethiopian Renaissance Dam crisis. Among them is an effort to raise awareness in theworld regarding the truth of Egypt's position toward development of the Nile River Basin, which he insists is not opposed to development in the countries of the basin, contrary to the version of events Ethiopia propounds. He stressed that the position of the political administration

and the Egyptian government is fixed concerning the waters of the Nile: namely, refusal to compromise or give in on any point concerning Egypt's share, which has averaged historically at 55.5 billion cubic meters of waterper year.

For its part, the Ethiopian side believes that the Egyptian bid to internationalize the issue of the Renaissance Dam will not bring about anyresult so long as there is a serious intention to submit the matter to the International Criminal Court. The Ethiopian Foreign Ministry's website reported that the prime minister remarked, "There is no international court responsible for investigation or arbitrating in issues of water … and that is why the Egyptian move to internationalize won't have any effect." The Egyptian government, acting out of the belief that the Renaissance Dam threatens to leave many Egyptians without water, has already begunto internationalize the issue through a campaign to define the dangers of the Ethiopian dam in the international community, and to work to halt its foreign financing. Will the coming days witness the beginning of the next step, one of internationalization through formalized, international complaints? (Text ends)

Blue Nile Sub-basin Legal Regime in Historical Context: Colonial TreatiesResearch Article By Yosef Yacob, AB, JD, LLM, PHD (Part I) Updated content February 22, 2014

Part I: Generally, formal agreements and legal regimes provide a legalpoint of departure to contribute the general principles and rules that govern co-basin states' legal relations in the utilization of international rivers.

This chapter begins the examination of reciprocal rights and obligations ofthe sub-basin's riparians by reviewing the treaties, which form the legal regime of the Blue Nile Sub-basin. The chapter describes the evolution of the legal regime by reviewing the colonial as well as the postcolonial treaties and other significant negotiations concerning the utilization of thebasin's waters.

1. Colonial Treaties

The early treaties regarding the Nile basin were largely the products of British colonial intervention in the region. The British were anxious to preserve their position of control over the Suez Canal. A major part of keeping Egypt satisfied was ensuring the permanent availability of Nile waters for Egyptian uses. While the British had many colonial interests in

the Nile basin, they usually chose treaty arrangements that favoredEgyptian claims to the Nile, for the above mentioned reason.

The British at this time introduced the notion that Egypt's rights to the Nile were so long established that they should take precedence over all other schemes for use of the Nile. The early colonial period treaties regarding the Nile basin show the British single mindedness on this issue.These older agreements emphasized certain tenets and attitudes regarding rights to the Nile that have persisted through the developmentof the current legal and institutional system operating in the Nile basin.

They have given weight to Egypt's claims to be the state with the greatesthistoric legal recognition of rights to the Nile waters.

This early colonial period was also the first in which Egypt was to admit that other states could potentially affect its claims to the Nile. Without thewater that the Blue Nile brought down from the Ethiopian Highlands and that the White Nile carried away from the central African lakes, Egypt would be a desolate land.

1.1 Italy United Kingdom Protocol – 1891

Until the explorations of Baker, Speke, and Stanley in the latter half of thenineteenth century, no one knew where the source of the Nile was located, but all believed that interference with its water was possible. UntilBritain acquired interests in Egypt, however, speculation on such a diversion was left largely to scholars and travelers. As long as no European power moved into the Sudan or established a position astride the Nile, the British believed that Egypt would have water and British domination of Egypt would remain secure.

In 1889, British complacency was shaken. The first threat to the Nile by aEuropean power loomed in the heights of the Ethiopian plateau. The Italians had long wished to establish a protectorate in Ethiopia, and after 1885, the British had even encouraged Italian moves into the highlands. At first the British calculated that Italian penetration would not only keep the Ethiopians out of the Sudan but would also act as a counterweight to the French, who were strengthening their position at Djibouti.

In 1889, the Italians seized the first real opportunity to enlarge their prospective sphere of influence. On March 9, the forces of the Mahdist of Sudan stopped the Ethiopian expansion into Sudan at the Battle of A1- Qallabat, killing King Yohannes IV. In order to consolidate his internal position among the traditionally warring feudal factions, the new Emperor,Menelik, welcomed Italian offer of support and signed the Treaty of Uccialiin May.

The Italians translated the treaty into action and laid claim to Kassala situated below the escarpment in the Nile Basin, which commanded theAtbara tributary of the Nile. With this town as a base, the Italians could proceed towards Khartoum at the confluence of the White and the BlueNile.

The British were concerned that the Italians may attempt “to tap the upper Nile” and proceed to occupy Sudan.” In August 1889, the Britishannounced against letting foreign Powers into the Nile Valley and

authorized “ such measures as may be necessary for the purpose of

protecting [the] Nile Valley against the dominion of any outside Power." Accordingly, the British warned Italy to stay away from the Nile. In March1891, Italy officially consented to remain out of the Nile Valley in return for British recognition of an Italian sphere of influence in the Ethiopian Highlands.

The Anglo Italian Treaty was signed in Rome, Italy on April 15, 1891. Theprotocol protected Egyptian interests in waters of the Atbara River, a tributary of the Nile. The British concluded this treaty before the major source of the Nile was identified as the Blue Nile, which originates in the highlands of Ethiopia. Article III stipulated:

"The Government of Italy undertakes not to construct on the Atbara any irrigation or other works which might sensibly modify its flow into the Nile." This was followed by an exchange of notes between Italy and Britainsigned in Rome on November 22, 1901 marking the frontier between the Anglo-Egyptian Sudan and Eritrea.

Treaty Between Anglo Egyptian Sudan, Ethiopia and Eritrea – 1902 The Treaty of Ucciali for Everlasting Peace and Friendship between Ethiopia and Italy was concluded on 2 May 1889. By this treaty, Italy recognized Menelik as Emperor of Ethiopia in exchange for a number ofstrategic and commercial privileges.

The most important clause of the treaty was article 17, in which the Emperor declared that, if needed, he would make use of Italy's diplomaticservices. That at least was what the Amharic text stated, however the Italian text, read that he had to make use of these services. Menelik let itbe known that he did not accept the Italian text.

In September 1895, Menelik declared war on Italy. The Italians went onthe attack on 1 March 1896. The result would enter the history books asthe Battle of Adwa. The Ethiopian army scored an overwhelming victory.Five days later Italy sued for peace and negotiations led to the Treaty ofAddis Ababa, signed on 26 October 1896.

The Treaty of Ucciali was revoked, and Italy recognized the sovereignty and independence of Ethiopia. The Ethiopian victory demonstrated expansion into Ethiopia was not going to be an easy option for Europeans.The clear message of the Battle of Adwa was that Ethiopia would not become a victim of European Imperialism but rather a worthy partner withsimilar expansionist aspirations into the Sudan.

Meanwhile the news of the Battle of Adwa had other consequences as well. The immediate consequence was not only the elimination of the Italian threat to Ethiopia but Italy's appeal to Britain for military assistance at Dunqula to relieve the beleaguered Italian garrison at Kassala. The Italian appeal for support provided Britain with the perfectexcuse for seizing a large slice of the Nile Valley in view of the powerful Ethiopian Emperor's expansionist aspirations.

On March 13, 1896, the British, under Kitchener advance on the pretext ofhelping the Italians but in reality to acquire a permanent gain on the middle Nile. While Britain was formulating plans to move on the Nile from the north and the east, the French were not idle. The French had been

holding back a colonial expeditionary plan for the occupation of Fashoda atthe Upper Nile. On June 5, Captain Marchand left for Africa. Marchand wasto be assisted by two French expeditions moving toward the Nile through Ethiopia.

To gain support for the expedition, the French offered Menelik all the territory between the Ethiopian escarpment and the White Nile. Menelik agreed to support the French expedition. He received weapons and Frenchrecognition of his claims to the eastern half of the Sudan (east bank of theNile from the Nilotic Plains from Khartoum to Lake Albert). In June 1898, acombined French Ethiopian force reached the junction of the Sobat and the White Nile and planted a French flag on an island in the Nile and an Ethiopian flag on the east bank of the Nile. The expedition then turned back to Ethiopia. Three weeks after the combined expeditionary force departed, Marchand arrived at Fashoda.

On September 25 the news of the arrival of Kitchener's force in Fashoda and his meeting with Marchand reached Europe. Marchand was told to withdraw or Britain would declare war on France. France capitulated and on November 3 ordered the withdrawal of the Marchand expedition. The Fashoda crisis was over. Once having obtained Marchand's evacuation, anAnglo-French treaty was signed in March 1899 delimiting the British and French spheres in the Sudan to exclude France from the Nile basin.

During the same period, in March of 1899, Lieutenant-Colonel Harringtonthe new British Consul in Abyssinia (name of the Predecessor State of present-day Ethiopia) arrived with instructions to discuss the Sudan frontiers with Emperor Menelik restricting the Ethiopians to their highlands. Menelik was unwilling to “open the question” and to abandon his claim to the Sudan, until April of 1899, a month following the Anglo- French Treaty.

The British had proven military superiority and strength in the Sudan, andin view of the French capitulation at Fashoda and the subsequent Anglo- French Treaty, Menelik decided to settle with the British. In May of 1899, a preliminary agreement was arrived at subject to settlement of details concerning the frontiers. Menelik agreed to give facilities to two British survey parties to explore the country south of the Blue Nile and near LakeRudolph.

Following completion of the survey, the British realized for the first time the significance of Lake Tsana and the Blue Nile River to Egypt and Sudanand accordingly instructed Harrington in a confidential dispatch that in thefrontier agreement he should:

…also endeavor to arrange with the Emperor Menelik that there is to be nointerference with the waters of the of the Blue Nile and Lake Tsana, except in agreement with Her Majesty’s Government and the Government of the Sudan: that navigation on the Blue Nile and the Sobat River, with their tributaries, where navigable, is to be free:… these arrangements are to be included in the Agreement for the delimitation of the frontier, or form a separate agreement.

The Egyptian Government sanctioned a grant of £10,000 a year to the Emperor in return for the Emperor’s undertaking that there would be no

interference with the waters of Lake Tsana and the Blue Nile tributaries.Harrington was authorized to promise payment of this subsidy from 1 January 1904, provided the Emperor signed a satisfactory declaration.

The payment was intended as an incentive to gain the approval of Menelikwho needed resources and weapons to achieve his expansionist aspirations to the south and west of Abyssinia. The terms of the treaty were finally agreed upon in April of 1901.

Therefore, in March 1902, Harrington exchanged notes with Menelik by which the latter gave an assurance that he would not “arrest” the watersof the Blue Nile and Lake Tsana except in consultation with His Majesty’sGovernment and the Government of the Sudan.

In reporting this Exchange of notes, Harrington expressed confidence thatBritain had no desire to demand from the Emperor that he should deprivehimself of a valuable asset without equivalent compensation. At the time the notes were negotiated, Harrington wrote:

I am absolutely convinced that if I separate the other questions such as Tsana etc., and sign a frontier treaty simply, I may whistle till I am blue inthe face before I get any further agreements signed.

Following further negotiations, a treaty was finally signed on May 15, 1902 settling the frontiers between the Sudan, Abyssinia, and Eritrea. Menelik abandoned all claims to any territory bordering on the Nile belowthe Ethiopian escarpments. The Nile Val¬ley appeared at last to be securely British. The British had succeeded in excluding the Italians, the French, and now the Ethiopians from the Upper Nile.

Although, the primary purpose and object of the 1902 agreement was todelineate the frontiers of Ethiopia and the Sudan, the third article of the agreement provided that:

His Majesty the Emperor Menelik II, King of Kings of Ethiopia, engages himself towards the Government of His Britannic Majesty not to constructor allow to be constructed, any works across the Blue Nile, Lake Tsana orthe Sobat [river], which would arrest the flow of their waters into the Nileexcept in agreement with His Britannic Majesty's Government and the Government of the Sudan.

To this ancillary provision the additional “…. or allow to be constructed” was included because for some years previous to 1902 proposals had been made by a Mr. Aitken, a British investor, for utilizing Lake Tsana as areservoir to store water for irrigation requirements of British cotton interests in the Sudan. The British were strongly opposed to a proposal, which involved the transfer to a private company of rights over the lake.

To carry out suggestions for giving Menelik “equivalent compensation,” in January 1904 Lord Cromer, the British Commissioner in Egypt, sent to theForeign Office the text of an arrangement which he had authorized Harrington to make with Menelik. The text was as follows:

In consideration of Menelik having agreed by article 3 of the treaty between Great Britain and Ethiopia of the 15th May, 1902, not to construct …any work across the Blue Nile, Lake Tsana or the Sobat which would arrest the flow of their waters into the Nile, except in agreement with His Britannic Majesty’s

Government and the Government of the

Sudan…the Anglo-Sudanese Government undertake to pay to the Emperoror his successors the sum of £10,000 sterling annually so long as the friendly relations between the two Governments continue.
British Foreign Office archives do not show the course of subsequent negotiations with Menelik between 1902 and 1907, nor could this writerfind the exchange of notes containing the terms of the stipulation. According to the British, although the arrangement was in principle accepted by Menelik, it was never formally signed, as Menelik "madedifficulties" about the form of the British note. The promised annual subsidy was, therefore, never paid.
The British had accomplished one further step towards their goal of securing the Nile Valley by protecting the headwaters of the Blue Nile River. The British soon embarked on a strategy to wrest control of the Blue Nile, from the unsuspecting Ethiopians, through a series of colonialpower agreements during the "scramble for Africa" in the early years ofthe twentieth 20th century.
This was the only Nile treaty to which Ethiopia was a party.
Note 1 Agreement and Declaration Between Great Britain, France andItaly Respecting Abyssinia, (1907) B.T.S. No. 1: Cmd, 3298.
Agreement Between Great Britain, France, and Italy Respecting Abyssinia
- 1906
Following the treaty in 1902, the desirability of some definite understanding between the three European powers chiefly interested inAbyssinia (England, France, and Italy) arose about the question of succession to the throne of Menelik.
The British reasoned that on the death of the powerful Emperor, the country might return to the old state of civil war until one of the rival candidates to the throne made himself supreme. A hostile ruler towards the Europeans may not be inclined to honor European treaty obligations.The British therefore felt that if foreign intervention became necessary, some understanding between England, France, and Italy, providing for common action would be desirable.
In 1903, the Italian Government made a proposal for reciprocal guarantees in view of any changes in Ethiopia, and especially in case of adisputed succession to the throne. By 1904, it became clear that Menelik was suffering visibly from a disease that was progressively debilitating. InMay of 1906, information was received by the British Foreign Office that Menelik was in a precarious state of health suffering from "arterial sclerosis" and might die or become paralyzed at any moment.
Negotiations were quickly completed in 1906 between Italy, Britain, France, and the three states agreed to secure Menelik's consent to the agreement. The text of the treaty was presented to Menelik on October 16, 1906. The Emperor did not fully comprehend why the treaty was presented to him for his consideration. The Emperor was assured that thetreaty in no way prejudiced his sovereign rights. The agreement was thensigned as the "Tripartite Agreement" of 1906 in London on December 13.From the correspondence among the three European powers, it appears that their reason for presenting the Treaty to Menelik was to

assure the

emperor of the “good intentions.” Sir Edward Grey in reply to a question put to him in the British parliamentary session of November 1, 1906, said,The validity of the accord (that of July 6, 1906) among the three powers (England France and Italy) does not depend upon the Emperor Menelik.

The accord was communicated to him for the purpose, to make clear tohim that the agreements among the three Powers did not contain any prejudices to his interests”

The main object of the agreement was the delimitation of the spheres of influence of the three contracting parties. The three parties agreed that their intention was to preserve the integrity of Ethiopia and the status quoof the frontiers between Ethiopia and their respective colonial interests and spheres of influence in Ethiopia as established in the agreements of 1891 and 1894.

In the event the status quo should be disturbed, they agreed to make aneffort to preserve the integrity of Ethiopia, but if that could not be done they in any case would concert together to safeguard their respective interests. The British interests being in the Nile valley and the water supply for the Blue Nile, More especially, with regard to the control of the waters of this river andits tributaries (the consideration due to them being given to local interests).

In 1907, the emperor suffered a disabling stroke followed by a massivestroke in 1908, which crippled his reasoning. The concern that Ethiopia might collapse and disintegrate into anarchy did not materialize as the ailing Emperor had arranged for an orderly succession before his death.Exchange of Notes Between Great Britain and Italy – 1925

The secret agreement of London in 1915 promised Italy certain territorial gains, of colonial character, in the form of adjustment in Italy’s favor of the boundaries of neighboring territories in Africa belonging to France andGreat Britain. In 1919 at the time of the Peace Conference, following World War I, the Italian Government proposed to the British Government that each country should support the other, for certain concessions from the Ethiopian Government.

Great Britain sought the concession for a water storage barrage on Lake Tsana and a road linking Lake Tsana to the Sudan and Italy in turn soughta concession for a railway connecting Eritrea and Italian Somaliland with Addis Ababa. Initially, Britain strongly objected to the idea of allowing an outside power to establish dominion over the headwaters of the Blue Nile River.

However, when all efforts on the part of the British Government to reachan agreement with Ethiopia concerning the construction a water storagedam on Lake Tsana failed, Britain favorably reconsidered the Italian proposal.

On 14 December 1925, the British offered that in exchange for Italian support to build a dam on Lake Tsana, Britain would recognize Italy's rightto construct a railway from Somalia to Eritrea, acknowledge Rome's “exclusive economic influence in the west of Ethiopia,” and recommend that all Ethiopian government concessions in the area be given to Italians.

The British promise of support to Italy for economic concessions inEthiopia was

… subject to the proviso that the Italian Government on their side, recognizing the prior hydraulic rights of Egypt and the Sudan, will engage not to construct on the head waters of the Blue or White Niles or their tributaries or affluents any work which might sensibly modify their flow into the main river. It is understood that the above proviso would not preclude a reasonable use of the waters in question by the inhabitants of the region, even to the extent of constructing dams for hydro-electric power or small reservoirs in minor affluents to store water for domestic purposes, as well as for the cultivation of the food crops necessary to theirown subsistence.

The British note also referred to "…the vital importance to Egypt and the Sudan of maintaining and, if possible, increasing the volume of water for irrigation purposes available in those countries from the Blue and White Niles and their tributary streams." The Italians were assured that the damon Lake Tsana would not raise the level of water in the lake beyond the maximum reached during the rainy season.

The Italian note accepted the British conditions and concluded:

I note that His Britannic Majesty's Government have every intention of respecting the existing water rights of the populations of the neighboringterritories which enter into the sphere of exclusive Italian economic influence. It is understood that, in so far as is possible and is compatible with the paramount interests of Egypt and the Sudan, the scheme in contemplation should be so framed and executed as to afford appropriatesatisfaction to the economic need of these populations.

The discussions leading to the exchange of letters demonstrated that bothcountries had been influenced by the conventional opinion that there was no government in Ethiopia: that the central government could not control the provinces: and that the country would soon dissolve into anarchy. By virtue of this agreement, the British Government renewed negotiations with Ethiopia to acquire a concession to build a barrage on Lake Tsana anda road from Sudan to Lake Tsana.

When notified of the Anglo-Italian initiative, Ethiopia reserved its right asa sovereign state to reply on receipt of the full text. Upon receiving the text, the Ethiopian Government protested, publicly expressed outrage, and undertook a campaign against Italy, which became a target of suspicion, resentment, and hatred.

The Italians tried to explain away the growing crisis. Italy explained theAnglo-Italian stipulations as "exclusively economic," respectful of the sovereign rights of the Ethiopian Government, and new proof of the friendly intentions of Italy and England toward the Ethiopian Empire.

On 15 June Ethiopia rejected the agreement by formally advising Italy andBritain that Ethiopia regarded the Anglo-Italian accords as an infringementof sovereignty, a matter for the League of Nations. Ethiopia protested to the League of Nations and charged that the Anglo-Italian initiative derogated the sovereign equality of a League member, whereas the Charter presumed that the independence of all members would be

respected. Before the situation deteriorated further, Italy agreed withBritish suggestions for moderating the language of the agreement.

The Ethiopian government considered the mildness of the statements as awithdrawal of the original intention of the two Governments. Ethiopia subsequently advised the League that the British and the Italians had admitted Ethiopia's full and complete freedom to decide any requests, which may be made to it, and its sovereign right to judge what is in the best interest of Abyssinia. Its suspicions aroused, the Ethiopian Government withheld the barrage concession on Lake Tsana from the British and opened negotiations with an American firm of engineers.

Part II – Part 2 of the article will discuss Egyptian and British complicity inthe invasion of Ethiopia by fascist Italy’

In April 1931 Sudan confirmed their financial difficulty resulting from the collapse in the price of cotton and the serious drop in the yield and qualityof the Gezira scheme cotton. Furthermore, Sudan objected to the proposalthat Ethiopia should take any part in the operational control of the works. Sudan also objected to the Emperor's redraft of paragraph 7 of the Emperor’s draft proposal, arguing that there were no potentially irrigable areas in Ethiopia so situated that they could benefit from waters controlledby the dam. Sudan also did not see an immediate use for Lake Tsana water, and considered the financial investment speculative in view of its economiccondition. Sudan, however, wished to retain interest in the project, but the utmost they could afford would be a small contribution towards thecost of an option if this were found the only means of preserving their rights.

On July 28 1931, Barton in a conversation with the Emperor outlined thetechnical objections of Sudan and proposed that representatives of the parties concerned suspend discussions pending completion of the study and consideration of the survey data. The Emperor agreed and it was decided to hold the conference early in 1932.

In January 1932, Sudan, in spite of the promise of a good cotton crop, considered that financial considerations would preclude for many years any extensions of the area under irrigation in the Gezira, but they favoreddelaying matters and suggested additional studies to be financed by Egypt. Egypt agreed subject to its full participation at the next conference.Egypt also agreed to allow Sudan to participate in the benefits of the dam and advanced proposals for the allocation of water in proportion to the respective contributions to the project. These proposals formed the subject of detailed discussion between the irrigation experts of Egypt and Sudan, and Egypt was prepared to proceed actively with the prosecution of the project, or to secure an option and to provide the necessary funds. In view of these developments, Ethiopia was requested to postpone the conference until January 1933, and to invite an Egyptian delegate to be present. Ethiopia agreed to both requests and invitations were issued accordingly.

The attitude of Egypt had by January 1933 undergone a change due the criticism by the opposition in Egypt accusing the Government of being the

“cat's-paw” of the British. The British were informed that it was out of thequestion for Egypt to think of proceeding with the construction of the damfor many years to come. Egypt, however, agreed to a limited proposal forfurther surveys, for which Egypt would be prepared to pay.

The additional survey provided an opportunity for Egypt to gain further knowledge regarding the Blue Nile and Lake Tsana basins. Egypt, in addition, attached the greatest importance to the construction of a roadfrom the lake to the Nile valley, and wished this to be pressed upon theEthiopian Government at the conference. In this writer’s opinion, the purpose of the road was to provide access to Egypt, through the impenetrable Ethiopian escarpments, should it be necessary to protect Egyptian interests in Lake Tsana.

Early in February 1933, the representatives of the various parties assembled at Addis Ababa for the conference convened by Ethiopia. Ethiopia, on receipt of the limited proposals of Egypt, which Sudan endorsed, was disappointed. The joint meeting was cancelled, but the Ethiopian Government accepted the Egyptian and Sudanese proposals, with the understanding that they were not committed as to their future action in the matter. Egypt sent the sum of £E 50,000 to provide for thecost of the additional surveys by White's engineers. The survey was completed in April of 1934. The survey team did not find considerable saving when compared to 1931 estimates, and that construction of a motor road proposed by Egypt from the lake to the Sudan frontier wouldnecessitate expensive blasting operations.

In December 1934, White informed Mr. Butcher (the Director-General, Southern Nile) the Egyptian Government expert, that the 1933 report would shortly be ready for dispatch to the Emperor proposing three alternative schemes: Plan A, which would be the cheapest, but which would raise the lake level and involve damage to certain ancient EthiopianCoptic churches, which would be contrary to the wishes of the Ethiopian Government: Plan B, an intermediate scheme, not fully worked out, whichwould be less costly than the original scheme and which would do less damage than Plan A: Plan C, involving no raising of the lake levels - the original scheme as proposed by Ethiopia.

White advocated a meeting at Addis Ababa to discuss the report as soon as it was presented, to reach final settlement, fearing intervention in the project by certain foreign (Russian) engineers. On January 26, White wasinformed that Egypt would favor Plan A, despite the damage, which it would entail.

Early in 1935, Ethiopia sent invitations to Egypt and Sudan to nominate representatives to a conference at Addis Ababa on April 23. At that time,the report of White on their survey of the lake had not yet been formallyreceived either by Egypt, the Sudan or by Britain. The general view of allthree was that no conference in Addis Ababa could reach a final decisionuntil all parties had fully digested the report. They, therefore, favored further delay.

On the other hand, the Emperor was anxious to make rapid progress witha scheme in which both British and Egyptian as well as American interests

were involved. Upon receipt of the Emperor's invitation, Egypt, on April 6,informed Britain that, while April 23 seemed too early for a conference, they were anxious to arrive, in the near future, at a final agreement with the Sudan on the Lake Tsana question. Egypt accordingly proposed that apreliminary conference should be held in Cairo for this purpose.

Egypt proposed the following terms of reference: Agreement between Egypt and the Sudan (i) To consider and agree on the general scope of the project and on the leading features of the design of the proposed works. (ii) To consider and agree on the technical and financial arrangements necessary for the execution and operation of the project inthe joint interests of Egypt and the Sudan. (iii) To embody those arrangements in an agreement to be ratified by the Egyptian Governmentand the Government of the Sudan.

Agreement Between Egypt and the Sudan jointly and Abyssinia.(iv) To consider and propose the terms to be offered to the Abyssinian Government in return for the concession to carry out and operate the works necessary to enable Lake Tsana to be used as a reservoir. (v) To embody these proposals in the form of instructions to the delegates who will negotiate with Abyssinia. These terms were submitted to Sudan, whoapproved them.

Lake Tana Reservoir Project Agreement Between Egypt and Sudan –1935:

The Egypt and Sudan considered the report of White at a preliminary conference at Cairo on May 11 1935. At that Conference agreement was reached upon (1) the general scope of the project and the leading features of the design of the proposed works: and (2) the technical and financial arrangements necessary for its execution and operation in the joint interests of Egypt and the Sudan. Accordingly, on May 20 1935, Egypt and the Sudan signified their intention of constructing and operatingsuitable control works at joint cost and for their joint benefit, if the territorial Power (Ethiopia) gave its consent thereto. The designs of the White Corporation for the work, as contained in their report of 1935, were accepted as generally satisfactory. The main purposeof the agreement was to set out the terms of the understanding between Egypt and Sudan for construction and operation of a storage reservoir at Lake Tsana in Ethiopia and sharing of the benefits. The agreement was subject to the “permission of the Ethiopian Government.” Cost of construction and operation and benefits were to be shared jointly by Egypt and Sudan. Sudan’s initial contribution was to be ten percent or at Sudan’s option a reduced percentage but no less than £200,000 towards construction and £4,000 per year for operation. Sudan was also given the option to participate in a greater amount on giving Egypt two years notice before completion of the dam. The Sudan also had the optionto increase the share up to a maximum of fifty percent of the net benefitsin incremental percentages of five percent each year commencing five years following completion of the dam after an initial maximum of twenty five percent upon completion of the dam.

The other provisions relate to payment schedules for Sudan's share of theconstruction costs, coordination of the Tsana reservoir with the Sennar Dam and Egypt's rights to propose modifications to maximize benefits to Egypt so long as Sudan's interests were not adversely affected. The Tsanareservoir was a further step in realizing Egypt's Century Scheme and Egypt's prominent role in the Blue Nile Sub-basin. Sudan was willing to allow Egypt to make the initial investment subject to the right to equally share in the benefits when its financial circumstances improved.

The Emperor was anxious to come to an agreement with Britain, Egypt and the Sudan concerning the construction of the reservoir, feeling that such an agreement would strengthen his hands against Italy who was massing troops on the Ethiopian borders. At the end of May, Mr. Collier,Governor of the Bank of Ethiopia, was sent to London with a message from the Emperor to press the British for a conference. However, Britainfelt that a conference held in Addis Ababa while Italo-Ethiopian tension was high carried the risk of provoking Italy. According to the British, theItalians had been deeply suspicious of general British policy in Ethiopia, and a conference might tempt them to decide on war.

Therefore, in reply to the Ethiopian invitation, Egypt and Sudan replied that they would be unable to complete the necessary preliminaries in timefor June 1. The next step would have been a conference with the EthiopianGovernment but owing to the Italo-Ethiopian dispute and British political considerations, the Addis Ababa conference was never held.

Anglo-Egyptian-Italian Exchange of Notes – 1938:

The February 1933 Lake Tsana Reservoir negotiations at Addis Ababa ledto a revival of interest and suspicions in the question on the part of the Italian Government. The Italian Government felt in view of the Tripartite Agreement of 1906 and of the Anglo-Italian agreement of 1925, they expected to be informed of developments. Italy felt it "should not be leftout or be prevented from contributing in the examination of schemes connected with the building of the dam at Lake Tsana or with any other work whose undertaking should be considered in the [Italian sphere of influence]."

In 1934, the Italian Government expressed further suspicion that the British Government had motives other than economic ones in their treatment of the Tsana reservoir question and protested that the question should not be settled without regard for Italian interests. On July 4 1935, upon learning that the Cairo conference had taken place, Italy again protested that respect for Italy's rights under the Tripartite Treaty of 1906and the Anglo-Italian Exchange of Notes of 1925 could only be ensured byItaly's participation. Italy had interests to protect "not less important thanthose of the Sudan and Egyptian Governments."

On October 22, 1935, Britain expressed that Italian interest in the Tsanaproject were inconsistent with understandings of December 20, 1925, bywhich the Italian Government "recognize the prior hydraulic rights of Egypt and the Sudan," which the British Government were bound to protect. On February 20, 1936, the Italian Government reasserted the right to participate in the examination of the White Corporation's report.

Italy claimed it had “ample and clear proof that Great Britain had recognized the economic and territorial rights of Italy on the Eritrean andSomali hinterland and on the western Ethiopian territories.”

During this same period, Italy commenced hostilities against Ethiopia while concurrently assuring the British Government that Italy harbored nodesigns against British interests in Ethiopia. On August 28, the Italian Government issued a statement, which, as reproduced in the press, included an assurance, that Britain had nothing to fear from the policy, which Italy would adopt in regard to Ethiopia. Italian policy would not threaten British Imperial interests either directly or indirectly. A month later, on September 28 (the eve of formal hostilities against Ethiopia), theItalian Cabinet issued a statement of policy, which included a declaration that Italian policy had no aim, either immediate or remote, which might injure British interests.

As the spring of 1936 approached, the Italian forces in Ethiopia drew nearer to Lake Tsana prompting the British Government to send a “sharp note to Italy.” The Italian Government, on April 3 renewed assurance thatthe Italians were more than ever conscious of their obligations towards the British Government and had no intention of overlooking or repudiatingthem. At about this time Egypt evinced nervousness with regard to the Italian advance upon Lake Tsana and sought British assurances for safeguarding this source of the Nile, in which Egypt and the Sudan were “vitally interested.”

The Egyptian Prime Minister even suggested that British troops might besent to occupy the Lake Tsana area. The British assured the Egyptian Prime Minister of the linkage of Egypt with British rights in Lake Tsana under the Tripartite Treaty of 1906 and the Anglo-Italian exchange of notes of 1925. At the same time, the Italian Government assured Egyptthat the rights of Egypt in Lake Tsana would be fully respected, and on April 8 issued to the Egyptian Government the following written statement:

During a visit that he paid to His Excellency the President of the Council,the Minister of Italy has informed His Excellency that the Italian Government desires to continue in the future its policy of peace and cordial collaboration and sincere friendship with Egypt and to respect theEgyptian interests: and intends to adhere to the same line of conduct concerning the question of the waters of Lake Tsana and the Blue Nile River.

On May 6, the British were advised that Italy would respect, inter alia, British rights in the Lake Tsana region, but that (the capital city Addis Ababa had then just been occupied by the Italian forces) Ethiopia was tobe regarded as Italian Territory.

In November 1936, the Italian Government informed the British Ambassador in Rome that Italy would give the British every possible assurance regarding the safeguarding of British interests in the lake. The general position of the British Government was that they would not bargain about Ethiopia. However, it would be useful if the Italian Government could find occasion to renew the assurances confirming

British rights and interests in Ethiopia as specified in the treaty of 1906and the exchange of notes of 1925. The British Government decided not to press the Italian Government for an assurance specifically referring to those two instruments: they would be glad, however, if the assurance given on April 3, 1936 could be renewed. Italy confirmed the assurances given on April 3 to the British. The British also reminded Italy that there were interests in Ethiopia, such as Lake Tsana, which Egypt and Sudan shared with the British: and that those two Governments would have to be associated with British interests.By April of 1938, the British Government abandoned the argument that Italy had violated the Treaty obligations not to occupy Ethiopia and recognized the Italian annexation to protect British interests in Lake Tsana. On April 1, 1937, Sir Anthony Eden, the then British Foreign Secretary reasoned:

The rights of the United Kingdom in this matter rest upon the Anglo- Ethiopian Treaty of the 15th May, 1902, articles 1 and 4 of the TripartiteTreaty of the 13th December, 1906, and the Anglo-Italian Exchange of Notes of the 14th/20th December, 1925. Everything, however, which is material in the first two has been incorporated and expanded in the thirdof these instruments …

The rights referred to … are as follows: (a) Italy must not allow any work to be constructed on the headwaters of the Blue or White Niles or their tributaries or affluents which might sensibly modify their flow into the main river, but, subject to that proviso, a reasonable use of the waters in question by the inhabitants of the region may be permitted, even to the extent of the construction of dams for hydro-electric power or of small reservoirs in minor affluents with a view to the storage of water for domestic purposes or the cultivation of food crops necessary for the subsistence of the local inhabitants. (b) His Majesty's Government have the right to obtain the construction of a barrage at Lake Tsana and a motor road for the passage of stores, &c., from the barrage to the Sudan frontier, subject only (i) to an obligation to employ, so far as possible, locally recruited labor in the construction and operation of the barrage, and (ii) to the proviso that the barrage must not raise the level of the waters in the lake beyond the maximum hitherto attained during the rainyseason. His Majesty's Government are entitled to obtain a concession for the construction of this barrage and its operation by themselves or by persons appointed by them …

In this event it may be desirable that the Egyptian Government should beassociated with His Majesty’s Government in their action, or at any rate that Italian assurances on the subject should be given to the Egyptian Government as well as to His Majesty's Government.

By a declaration of April 16 1938, which they agreed should apply equallyto the Egyptian Government: the Italian Government reaffirmed previousassurances:

The Italian Government confirm to the Government of the United Kingdomthe assurances given by them to the Government of the United Kingdom on the 3rd April, 1936, and reiterated by the Italian Minister for Foreign

Affairs to His Majesty's Ambassador at Rome on the 31st December, 1936,to the effect that the Italian Government were fully conscious of their obligations towards the Government of the United Kingdom in the matter of Lake Tsana and had no intention of whatever of overlooking or repudiating them.
Further … the assurances given … in the above Declaration concerningLake Tsana shall apply equally to the Egyptian Government.
The British and the Egyptian Governments signed the agreements giving recognition that "[t]he territories and peoples which belonged to the Empire of Ethiopia are placed under the full and entire sovereignty of theKingdom of Italy as announced in the Italian Decree." In so doing, Egypt,Sudan, and Britain acknowledged the Decree abolishing the Empire of Ethiopia and establishing the new territory of Italian East Africa (consisting of Eritrea, Somaliland, and Ethiopia).
The Lake Tsana reservoir project was postponed due to British preoccupation in World War II and Italy's inability to effectively governEthiopia, and the Lake Tsana region in particular, as a result of the Ethiopian insurgency.
Following the restoration of the Ethiopian Government in 1941, the Emperor, in view of experience, was no longer receptive to renewed British efforts and scheming for a Tsana Reservoir Project. (Text ends)
NILE - Egypt's Obsession and British Scheming to Seize Control of theBlue Nile'
Flouting Ethiopia's Sovereignty, Impeding Development, and the ItalianInvasion in 1938
Research Article: By Yosef Yacob (PhD) (February 28, 2014)
Lake Tana Reservoir Project Negotiations: Following the death of Emperor Menelik in 1913, British interest in the waters of Lake Tsana remained in abeyance. In May 1914, Kitchener reported that there was a possibility that the Abyssinian Government, owing to financial difficulties, would be willing to negotiate a definite treaty for the control of the waters of Lake Tana and the Blue Nile. Kitchener sent with his dispatch a draft showing the form such a treaty might take. The treaty proposed an option similar to that proposed by Lord Cromer to Menelik in consideration for article 3 of the 1902 treaty, together with a further provision increasing to £20,000of the annuity to be paid to Ethiopia as soon as the works were actually started. Colonel Doughty Wylie, who was then in charge of the British Legation in Ethiopia, was informed of Kitchener's views and attempted to negotiate a treaty with Lij Yasu, Emperor Menelik's successor, along the lines proposed by Kitchener.
However, because of the First World War and internal political struggles inEthiopia the matter remained in abeyance again from 1915 until March 1920. In 1920, at the request of the Sudan Colonial Government, Major Dodds, Wylie's successor, obtained Ethiopian permission for Sudan to send two officials to reside at Lake Tsana in order to make surveys.
In spite of his success in obtaining permits for these officials (Black and Grabham) and for other staff who subsequently joined them, Major Doddsdid not believe that it would be worth attempting negotiations with Ras

Taffari, the Regent, of Ethiopia. Dodds believed Taffari's position would not be strong enough to enable him to overcome the objections by the Empress Zawditu, who succeeded Lij Yasu, and the local chiefs. Dodds was, however, instructed to open negotiations at the earliest moment hethought feasible. Accordingly, in November 1922, Major Dodds commenced negotiations because the British Empire Cotton Growing Corporation was pressing the British Government to conclude an agreement based on two installment payments. The first payment up to a limit of £50,000 on the signature of the lease, and the second up to a limit of £150,000 on the completion of the reservoir and of an annual rent up to a limit of £30,000, to date fromthe completion of the reservoir. In May 1923, the British Minister in AddisAbaba formally communicated a draft treaty, to the Ethiopian Government.

In November Ethiopia announced, that it would conduct an independent investigation into the Tsana scheme before it took any decision. The British broke off the negotiations, "which can be resumed later with betterchances of success," and informed the Abyssinian Government that Britain"would regulate their future conduct towards the Abyssinian Government in the light of the attitude which the latter have seen fit to adopt." Nothingfurther transpired until Taffari's visit to England during the summer of 1924 when the British Prime Minister (Mr. Ramsay MacDonald), explained Britain's reasons for wishing to secure the concession.

On July 26th 1924 Ras Taffari, who was by then on his way back to Ethiopia, replied in a letter to the British Prime Minister as follows: The Ethiopian Government in its own interest and for all other purposes is willing to build a dam in order to retain the waters of Lake Tsana … It is also willing to rent to the Sudan Government the surplus waters … For thiswork it will engage the services of a capable engineer … The Abyssinian Government will then compute the benefit that the Sudan Government willderive from the renting of the water … and fix the amount which shall be paid annually to it by the Sudan Government … After the engineer has finished the work … the Ethiopian Government and the Sudan Governmentwill discuss the amount of money that will annually be paid to the Ethiopian Government for the waters … and any other question in connection therewith. After this an agreement will be signed and the workwill begin …

On August 14, the British Prime Minister replied: the course you suggest appears to offer a chance of an arrangement being reached which would be beneficial both to the Abyssinian Government and to the Sudan. In March 1925 the whole question was reconsidered by the British, and it was decided, in the interests of the Lancashire cotton industry and of the economic future of the Sudan, that renewed efforts should be made in order to persuade Ethiopia to meet British wishes. It was decided as a firststep to secure the support of the Italian Government based on proposals made by Italy in November 1919.

Britain also decided that an attempt should be made, in case of an Anglo-Italian Agreement being reached to secure the support, or at least the

acquiescence of the French Government. The views of the Sudan Colonial Government were also obtained and found agreement with those of the British Government. On June 9, the British commenced the discussions, which resulted in the exchange of notes between Great Britain and Italy in1925. Following settlement of the crisis surrounding the December 25 exchangeof notes, between Britain and Italy, the British Government renewed efforts to secure the acquiescence of the French. The British believed thatFrench support for the British project would have to “be purchased.” On August 4 1926, the French announced that the Italian Government had been informed that instructions had been sent to the French Minister in Ethiopia to maintain friendly and sympathetic neutrality about Anglo- Italian desires in Abyssinia. France considered the British aspiration perfectly fair and unlikely in anyway to injure Abyssinia: in fact, they would probably be of direct benefit.

Accordingly, the British Government decided to renew the negotiations with the Ethiopian Government, taking as a starting-point the proposals ofTaffari in 1924. It was felt that, until preliminary negotiations had taken place, it was premature to decide whether the concession should be askedfor in the name of the British Government or the Sudan Government, or ofa commercial concern with an Anglo-Abyssinian board of directors and capital.

Isolating Egypt: On August 28th 1926, Mr. Henderson, the British Acting High Commissioner at Cairo, called attention to the possible advantages ofsecuring the goodwill, and even the active cooperation, of the Egyptian Government, pointing out that, as had been publicly stated, the dam would benefit Egypt as well as the Sudan. Mr. Henderson suggested that such cooperation would eliminate possible Egyptian encouragement to Ethiopia to oppose the scheme, might tend to lessen Ethiopian suspicions,and might result in Egyptian financial support being more readily forthcoming.

On the other hand, he pointed out that the Egyptian Government mightpossibly seize the opportunity to advance excessive demands as regardthe disposal of the additional volume of water made available. Another possible objection was that the Egyptian Government might insist on participating in the negotiations.

The British decided that it was unwise to bring Egypt into the negotiationsuntil success seemed assured. Further, it would be impossible to offer to Egypt a definite percentage of the water to be made available at first.

Egypt might perhaps take a large percentage, but eventually the Sudan would require, and would expect to receive, the whole, or almost the whole, on the hypothesis that by then Egypt's needs would be met by the dams at Gebel-Aulia and Lake Albert, plus the Sudd channel.

Mr. Henderson was also informed, however, that the British Government should have nothing to conceal. The text of the Anglo-Italian agreement had already been communicated to Egypt, who, if they raised the question, could be informed that negotiations were to be resumed with Ethiopia. Should Egypt touch upon the allocation of the water, they would

be informed that a discussion on this point would be premature and wouldhave to be decided in the light of the division of the Nile waters as a whole.

Mr. Bentinck on May 3 delivered a memorandum to Taffari, suggesting that the British Government should be granted the necessary permission to construct the dam and that such rights would not imply any encroachment upon Ethiopian sovereignty. At the same time, Mr. Bentinckhanded to Taffari the draft of a treaty. On September 22, Taffari addressed a reply expressing surprise at the terms of the British proposalsin view of the intentions of the Ethiopian Government as expressed in Taffari's letter of July 26, 1924, to Mr. Ramsay MacDonald. Taffari reiterated that Ethiopians proposed to build the dam themselves.

On November 4, 1927, the United States press prematurely announced that Ethiopia had concluded a contract with J. G. White Engineering Company of New York [White] for the construction of the dam. But on thefollowing day, the US State Department informed the British Government that, so far as the State Department was aware, no contract had been signed, or could be signed, as payment was to be effected by the issue ofbonds, the principal security for which would be the rent paid for the water by the Sudan Government, whose agreement would first have to beobtained.

Under the proposal, waters of the lake were to be leased for thirty years to a corporation of bondholders and stockholders to be formed in New York with power to build a dam and sell the water. At the end of this period, the dam and the revenues would revert to Ethiopia. A clause was included providing for the generation of hydroelectric power. There was tobe a road from Addis Ababa to the dam.

White, as the result of their study of the Grabham and Black Report and oftheir discussions with the Ethiopian Government, envisaged a US $20 million proposition. This sum was to be financed partly by a public bond issue and partly by stock held by their own finance corporation and other associated firms such as J. P. Morgan. The bonds were to carry eight percent interest: and an essential feature would be a guarantee by the British Government. The figures envisioned a rental in the neighborhood of £750,000 a year.

The publication in November 1927 of the announcement that Ethiopia wasin negotiation for the construction of the dam caused a panic in the Egyptian press: which concluded that Egypt was threatened with imminentdanger by what was “another diabolical move” on the part of Britain.

According to the British, Egyptian interest in the question would not beignored.

One of the main factors in the scheme was that the Tsana waters would be used by Egypt until such time as they were required by the Sudan, andit was hoped that for this reason the Egyptian Government would contribute substantially to the cost of the dam. The Egyptians felt reassured and withdrew their objections, and in February 1928 the BritishHigh Commissioner in Cairo authorized Mr. MacGregor, Irrigation Advisor

to the Sudan, to place himself in touch with the Egyptian Minister of PublicWorks for unofficial discussion as to Egypt's eventual cooperation.

On March 12 1928, Ras Taffari explained that contacting an American firmwas in concert with the wishes of the Ethiopian people who were afraid that the grant of the concession to a British company would eventually result in annexation of the country by Britain. Such fears had been increased by the Anglo-Italian agreement of 1925. On March 24, the British expressed the desire to negotiate on the basis of the Ethiopian Government arranging for the construction of the dam, provided that the British were satisfied as to the competence of the engineers.

Subordinating Ethiopian Interest: On May 16 1928, Ethiopia formally announced that they were negotiating with White and after concluding a suitable agreement, would show that agreement to the British Government. The British decided that before replying to the Ethiopian note it would be as well to try to reach some definite agreement with White. If the British could really satisfy themselves that White could be relied on to act loyally towards the British, the final negotiations might beleft to the conduct of White's representative in Ethiopia, particularly, as the British Minister would always be available to offer White's representative advice.

Officially, as between the British Government and the Ethiopian Government negotiations could proceed between White and the EthiopianGovernment to enter an agreement for operating the dam, providing Britain was satisfied, when the negotiations were concluded, that the agreement was a reasonable one. The British discussed their plan with White, and it was also suggested that MacGregor pay a "private" short visit to America, without the prior knowledge of the Ethiopian Government, to discuss the whole question of the dam. White agreed andthe meeting was arranged.

Following his visit Mr. MacGregor reported: [Dunn] regarded the Abyssinian Government as his clients for the time being, and therefore hecould not very well show me the document. … I went over the technical ground with him. In particular, we discussed the scope of the work at thelake, and the handling of the outfall problem. After this, I left Mr. Dunn and his associates to assimilate their fresh knowledge and to readjust their views on the whole undertaking.

Their primary reaction to the new facts was to scale down their conceptionof the cost to a figure of 6 million dollars to 8 million dollars. This, in the opinion of the financially interested parties, appeared to change the wholenature of the proposition. They thought that it was too small to be the subject of a satisfactory bond issue. Apart from this they had begun to realize some of the difficulties, e.g., the fact that the rental would necessarily be small in the early years of the under-taking, and would be payable by Egypt, not by the Sudan. They also realized that neither the British nor the Egyptian Governments could reasonably be expected to pay the high rate of interest demanded by American investors when they could finance the work out of their own resources, or borrow at say 5 per cent.

It was clear, also, that it was not sound finance to attempt to amortize thecost of a permanent asset like a dam in the early years after completion and before the works become fully productive. They became conscious, too, without my stressing the point that a body of foreign bondholders would fit uneasily, if at all, into the scheme of things on the Nile.

In the result the whole idea of a corporation of New York investors acquiring a lease of the lake with a view to sub-letting the water to the Sudan appeared to die a natural death as the situation was elucidated. Arising out of this development, I asked Mr. Dunn whether, so far as he was concerned, the bondholder scheme was an essential feature, or wouldhe be prepared to carry out the work for us in the general way of his business. He said that he would be very willing to do so, but he understood quite definitely … that Ras Taffari attached the greatest importance to the principle of American capital, and was determined that the undertaking should be entirely non-British. I said that we had not got that impression, and that, unless my memory was at fault, Ras Taffari hadhimself once suggested a mixed company containing both British and American capital. In any case, I said, Ras Taffari was not in a position to squeeze us into an unsatisfactory arrangement.

As regards tactics, Mr. Dunn proposed to continue to press … to secure Ras Taffari's agreement to the draft concession. This was the natural course for him to take as he had been offered an attractive piece of business, and as he was not supposed to have any communication with usthere was no reason for him to depart from the basis of his negotiations with Taffari. It could not commit us in any way. When he had secured the concession he must naturally approach us to discuss terms.

It would at once become apparent that we could not possibly pay a rentalsufficient to meet their scheme of finance and it would be necessary to seek means, of reducing the engineering and other costs. I said that this seemed to me a perfectly sound view of the position. I added that Ras Taffari, having committed himself to a scheme, which turned out to be unworkable, would find it difficult to oppose the recasting of the scheme on workable lines.

I had suggested to Mr. Dunn that he should arrange to send out an engineer to reconnoitre the ground so as to get a closer approximation ofthe cost of the works. Mr. Dunn, however, thought it would be better to postpone that until he had clinched his deal with Ras Taffari. After furtherconsideration I came to the conclusion that Mr. Dunn's line was the sounder one, and that the adjustment to realities should take place after the Ras had granted the Dunn concession. The terms of this on the financial side are so wildly impossible that no one would be committed except Ras Taffari. It was understood that Mr. Dunn would continue to tryto get his concession through.

At my last interview with Mr. Dunn he said that he was very keen to get the job of building the dam. He repeated his assurances of good faith andhis anxiety to help us in every way and to give us "a square deal." He went so far as to say that he was not selfish in the matter, and that if at any stage of the proceedings we would prefer him to fade out of the

picture he would be prepared to do so. He thought, however, that havingregard to Ras Taffari's attitude, we ourselves would gain by employing anAmerican agency.

I said that I had the fullest confidence in his good intentions and in the ability of his firm to carry out the job if it came into their hands. I thought that his views as to the value of American support was sound. We had never objected in principle to the employment of a foreign agency: we hadonly insisted that the agency should be such as to command our confidence. I mentioned the case of M. Zorg, the Swiss engineer, who, webelieved, had made some report to the Ras regarding the dam, though nothing further had resulted, and we had never been able to get a copy ofthe report. I thought the Ras was perhaps inclined to use this question of a foreign agency as a means of procrastination.

On receipt of MacGregor's report of his discussions in America, the BritishGovernment decided to raise no objection to direct negotiations proceeding between Ethiopia and White. This decision was conveyed to Taffari (now King Regent of Ethiopia) in a note of December 19 1928.

White sent a representative to discuss matters with the Ethiopian Government, and was successful in obtaining an undertaking from Taffarithat they would be given the contract. Taffari also proposed a conferencebetween representatives of the British, Ethiopia, and White to reach an agreement on water requirements, after which negotiations could be commenced to settle the terms of the construction contract.

Subsequently, Taffari informed the British that, before he could proceed further, information was required as to how much water Sudan would require and how much they would pay. It was arranged that a conferenceshould be held at Addis Ababa, which would be attended by British experts. As preliminary to this, meetings were to be held in London in theautumn of 1929 between representatives of the British, Sudan and Whitein order to discuss the financial and technical aspects of the project.

Anglo-Egyptian Exchange of Notes of 1929: Towards the end of 1928 the British realized that collaboration with Egypt might be necessary to secureEgyptian financial backing. However, the British decided to delay the collaboration to leverage the acceptance of the 1925 Nile Commission's report by Egypt (then under discussion). When the negotiations were concluded by an exchange of notes signed in May 1929, the British immediately informed the Egyptian Government of the status of the Tsana negotiations. The Egyptian Prime Minister immediately questioned why a conference was taking placing regarding the Nile at which the Sudan but not Egypt was represented.

At the end of December, notes were exchanged between Egypt and Sudanallowing the British Government to represent the interests of Egypt and Sudan during the preliminary phase of the negotiations to secure the Ethiopian Government's consent to the principle of the construction of thereservoir. The British agreed to keep Egypt fully informed and gave the assurance that no agreements would be entered in regard to the plans, storage, allocation, cost or the rent which might eventually be necessary

to pay to Ethiopia, without prior consultation with the EgyptianGovernment.

The conference at Addis Ababa between the Ethiopian Government, Britishexperts, and White opened in January 1930. As was “agreed” in the secretmeeting in New York between White and MacGregor, the initial proposal made to the Ethiopian Government by White was demonstrated to be financially prohibitive. The British therefore proposed that White further ascertain the exact cost of construction and operation of the dam and the cost of construction of a road linking Addis Ababa to the lake, the latter having been put forward by Ethiopia as an essential condition of the agreement.

The purpose of the meeting was to scale down the project as agreed, inthe meeting in New York, between White and MacGregor. It was also agreed that Sudan should meet the cost of these additional surveys by paying the sum of £E 16,000, to the White Company. This arrangementwas confirmed in an Exchange of Notes of March 4, 1930.

In February 1930, in accordance with the Anglo-Egyptian Exchange of Notes of December 1929, Egypt was informed of the position reached atAddis Ababa. In April Egypt was also informed of the arrangement that had been reached with Ethiopia for further surveys at the expense of theSudan.

The Emperor finally presented Sir S. Barton, the new British Minister in Addis Ababa, a copy of a draft containing an outline of what the Emperorhad in mind in reference to an accord on Lake Tsana waters. Subsequently, in recognition of the joint benefits to be derived, the Emperor proposed an amendment to Article 7 of his draft be replaced bythe following:

Seeing that the dam at Lake Tsana will constitute a system of irrigation for the two countries, the engineers of the two Governments will regulatethe flow of waters to the needs of the countries.

By 1931, Ethiopia was in financial difficulties and Sudan was reconsideringits attitude towards the project because of unfavorable developments in the world cotton market. On the other hand, the British believed that it was necessary to come to a decision when the engineers sent out by White submitted their report and estimates to achieve the result sought for the last thirty years.

The British suggested that, if Sudan, for financial or other reason, was unable to reach an agreement with the Ethiopian Government, Egypt might be willing, in partnership with Sudan, to finance an option or the possible construction of the reservoir. In such a partnership, Egypt would assume a larger part of the financial burden, under which the Sudan mightretain the right to increase her share at any time in the future up to fifty percent. NILE: Egypt’s Obsession and British Scheming to Seize Control of the BlueNile’

Flouting Ethiopia’s Sovereignty, Impeding Development, and the ItalianInvasion in 1938

Research Article By Yacob Yosef (PhD), March 3, 2014

Part II - In April 1931 Sudan confirmed their financial difficulty resulting from the collapse in the price of cotton and the serious drop in the yield and quality of the Gezira scheme cotton. Furthermore, Sudan objected to the proposal that Ethiopia should take any part in the operational control of the works. Sudan also objected to the Emperor's redraft of paragraph 7of the Emperor's draft proposal, arguing that there were no potentially irrigable areas in Ethiopia so situated that they could benefit from waters controlled by the dam.

Sudan also did not see an immediate use for Lake Tsana water, and considered the financial investment speculative in view of its economiccondition. Sudan, however, wished to retain interest in the project, but the utmost they could afford would be a small contribution towards thecost of an option if this were found the only means of preserving their rights.

On July 28 1931, Barton in a conversation with the Emperor outlined thetechnical objections of Sudan and proposed that representatives of the parties concerned suspend discussions pending completion of the study and consideration of the survey data. The Emperor agreed and it was decided to hold the conference early in 1932.

In January 1932, Sudan, in spite of the promise of a good cotton crop, considered that financial considerations would preclude for many years any extensions of the area under irrigation in the Gezira, but they favoreddelaying matters and suggested additional studies to be financed by Egypt. Egypt agreed subject to its full participation at the next conference.Egypt also agreed to allow Sudan to participate in the benefits of the dam and advanced proposals for the allocation of water in proportion to the respective contributions to the project. These proposals formed the subject of detailed discussion between the irrigation experts of Egypt and Sudan, and Egypt was prepared to proceed actively with the prosecution of the project, or to secure an option and to provide the necessary funds. In view of these developments, Ethiopia was requested to postpone the conference until January 1933, and to invite an Egyptian delegate to be present. Ethiopia agreed to both requests and invitations were issued accordingly.

The attitude of Egypt had by January 1933 undergone a change due the criticism by the opposition in Egypt accusing the Government of being the"cat's-paw" of the British. The British were informed that it was out of thequestion for Egypt to think of proceeding with the construction of the damfor many years to come. Egypt, however, agreed to a limited proposal forfurther surveys, for which Egypt would be prepared to pay.

The additional survey provided an opportunity for Egypt to gain further knowledge regarding the Blue Nile and Lake Tsana basins. Egypt, in addition, attached the greatest importance to the construction of a roadfrom the lake to the Nile valley, and wished this to be pressed upon theEthiopian Government at the conference. In this writer's opinion, the purpose of the road was to provide access to Egypt, through the impenetrable Ethiopian escarpments, should it be necessary to protect Egyptian interests in Lake Tsana.

Early in February 1933, the representatives of the various parties assembled at Addis Ababa for the conference convened by Ethiopia. Ethiopia, on receipt of the limited proposals of Egypt, which Sudan endorsed, was disappointed. The joint meeting was cancelled, but the Ethiopian Government accepted the Egyptian and Sudanese proposals, with the understanding that they were not committed as to their future action in the matter. Egypt sent the sum of £E 50,000 to provide for thecost of the additional surveys by White's engineers. The survey was completed in April of 1934. The survey team did not find considerable saving when compared to 1931 estimates, and that construction of a motor road proposed by Egypt from the lake to the Sudan frontier wouldnecessitate expensive blasting operations.

In December 1934, White informed Mr. Butcher (the Director-General, Southern Nile) the Egyptian Government expert, that the 1933 report would shortly be ready for dispatch to the Emperor proposing three alternative schemes: Plan A, which would be the cheapest, but which would raise the lake level and involve damage to certain ancient EthiopianCoptic churches, which would be contrary to the wishes of the Ethiopian Government: Plan B, an intermediate scheme, not fully worked out, whichwould be less costly than the original scheme and which would do less damage than Plan A: Plan C, involving no raising of the lake levels - the original scheme as proposed by Ethiopia.

White advocated a meeting at Addis Ababa to discuss the report as soon as it was presented, to reach final settlement, fearing intervention in the project by certain foreign (Russian) engineers. On January 26, White wasinformed that Egypt would favor Plan A, despite the damage, which it would entail.

Early in 1935, Ethiopia sent invitations to Egypt and Sudan to nominate representatives to a conference at Addis Ababa on April 23. At that time,the report of White on their survey of the lake had not yet been formallyreceived either by Egypt, the Sudan or by Britain. The general view of allthree was that no conference in Addis Ababa could reach a final decisionuntil all parties had fully digested the report. They, therefore, favored further delay.

On the other hand, the Emperor was anxious to make rapid progress witha scheme in which both British and Egyptian as well as American interestswere involved. Upon receipt of the Emperor's invitation, Egypt, on April 6,informed Britain that, while April 23 seemed too early for a conference, they were anxious to arrive, in the near future, at a final agreement with the Sudan on the Lake Tsana question. Egypt accordingly proposed that apreliminary conference should be held in Cairo for this purpose.

Egypt proposed the following terms of reference: Agreement between Egypt and the Sudan (i) To consider and agree on the general scope of the project and on the leading features of the design of the proposed works. (ii) To consider and agree on the technical and financial arrangements necessary for the execution and operation of the project inthe joint interests of Egypt and the Sudan. (iii) To embody those

arrangements in an agreement to be ratified by the Egyptian Governmentand the Government of the Sudan.

Agreement Between Egypt and the Sudan jointly and Abyssinia.(iv) To consider and propose the terms to be offered to the Abyssinian Government in return for the concession to carry out and operate the works necessary to enable Lake Tsana to be used as a reservoir. (v) To embody these proposals in the form of instructions to the delegates who will negotiate with Abyssinia. These terms were submitted to Sudan, whoapproved them.

Lake Tsana Reservoir Project Agreement Between Egypt and Sudan –1935

The Egypt and Sudan considered the report of White at a preliminary conference at Cairo on May 11 1935. At that Conference agreement was reached upon (1) the general scope of the project and the leading features of the design of the proposed works: and (2) the technical and financial arrangements necessary for its execution and operation in the joint interests of Egypt and the Sudan. Accordingly, on May 20 1935, Egypt and the Sudan signified their intention of constructing and operatingsuitable control works at joint cost and for their joint benefit, if the territorial Power (Ethiopia) gave its consent thereto. The designs of the White Corporation for the work, as contained in their report of 1935, were accepted as generally satisfactory. The main purposeof the agreement was to set out the terms of the understanding between Egypt and Sudan for construction and operation of a storage reservoir at Lake Tsana in Ethiopia and sharing of the benefits. The agreement was subject to the “permission of the Ethiopian Government.” Cost of construction and operation and benefits were to be shared jointly by Egypt and Sudan. Sudan’s initial contribution was to be ten percent or at Sudan’s option a reduced percentage but no less than £200,000 towards construction and £4,000 per year for operation. Sudan was also given the option to participate in a greater amount on giving Egypt two years notice before completion of the dam. The Sudan also had the optionto increase the share up to a maximum of fifty percent of the net benefitsin incremental percentages of five percent each year commencing five years following completion of the dam after an initial maximum of twenty five percent upon completion of the dam.

The other provisions relate to payment schedules for Sudan’s share of theconstruction costs, coordination of the Tsana reservoir with the Sennar Dam and Egypt’s rights to propose modifications to maximize benefits to Egypt so long as Sudan’s interests were not adversely affected. The Tsanareservoir was a further step in realizing Egypt’s Century Scheme and Egypt’s prominent role in the Blue Nile Sub-basin. Sudan was willing to allow Egypt to make the initial investment subject to the right to equally share in the benefits when its financial circumstances improved.

The Emperor was anxious to come to an agreement with Britain, Egypt and the Sudan concerning the construction of the reservoir, feeling thatsuch an agreement would strengthen his hands against Italy who was massing troops on the Ethiopian borders. At the end of May, Mr. Collier,

Governor of the Bank of Ethiopia, was sent to London with a message from the Emperor to press the British for a conference. However, Britainfelt that a conference held in Addis Ababa while Italo-Ethiopian tension was high carried the risk of provoking Italy. According to the British, theItalians had been deeply suspicious of general British policy in Ethiopia, and a conference might tempt them to decide on war. Therefore, in reply to the Ethiopian invitation, Egypt and Sudan replied that they would be unable to complete the necessary preliminaries in timefor June 1. The next step would have been a conference with the EthiopianGovernment but owing to the Italo-Ethiopian dispute and British political considerations, the Addis Ababa conference was never held.

Anglo-Egyptian-Italian Exchange of Notes – 1938

The February 1933 Lake Tsana Reservoir negotiations at Addis Ababa ledto a revival of interest and suspicions in the question on the part of the Italian Government. The Italian Government felt in view of the Tripartite Agreement of 1906 and of the Anglo-Italian agreement of 1925, they expected to be informed of developments. Italy felt it "should not be leftout or be prevented from contributing in the examination of schemes connected with the building of the dam at Lake Tsana or with any other work whose undertaking should be considered in the [Italian sphere of influence]."

In 1934, the Italian Government expressed further suspicion that the British Government had motives other than economic ones in their treatment of the Tsana reservoir question and protested that the question should not be settled without regard for Italian interests. On July 4 1935, upon learning that the Cairo conference had taken place, Italy again protested that respect for Italy's rights under the Tripartite Treaty of 1906and the Anglo-Italian Exchange of Notes of 1925 could only be ensured byItaly's participation. Italy had interests to protect "not less important thanthose of the Sudan and Egyptian Governments."

On October 22, 1935, Britain expressed that Italian interest in the Tsanaproject were inconsistent with understandings of December 20, 1925, bywhich the Italian Government "recognize the prior hydraulic rights of Egypt and the Sudan," which the British Government were bound to protect. On February 20, 1936, the Italian Government reasserted the right to participate in the examination of the White Corporation's report. Italy claimed it had "ample and clear proof that Great Britain had recognized the economic and territorial rights of Italy on the Eritrean andSomali hinterland and on the western Ethiopian territories."

During this same period, Italy commenced hostilities against Ethiopia while concurrently assuring the British Government that Italy harbored nodesigns against British interests in Ethiopia. On August 28, the Italian Government issued a statement, which, as reproduced in the press, included an assurance, that Britain had nothing to fear from the policy, which Italy would adopt in regard to Ethiopia. Italian policy would not threaten British Imperial interests either directly or indirectly. A month later, on September 28 (the eve of formal hostilities against Ethiopia), theItalian Cabinet issued a statement of policy, which included a declaration

that Italian policy had no aim, either immediate or remote, which mightinjure British interests.
As the spring of 1936 approached, the Italian forces in Ethiopia drew nearer to Lake Tsana prompting the British Government to send a “sharp note to Italy.” The Italian Government, on April 3 renewed assurance thatthe Italians were more than ever conscious of their obligations towards the British Government and had no intention of overlooking or repudiatingthem. At about this time Egypt evinced nervousness with regard to the Italian advance upon Lake Tsana and sought British assurances for safeguarding this source of the Nile, in which Egypt and the Sudan were “vitally interested.”
The Egyptian Prime Minister even suggested that British troops might besent to occupy the Lake Tsana area. The British assured the Egyptian Prime Minister of the linkage of Egypt with British rights in Lake Tsana under the Tripartite Treaty of 1906 and the Anglo-Italian exchange of notes of 1925. At the same time, the Italian Government assured Egyptthat the rights of Egypt in Lake Tsana would be fully respected, and on April 8 issued to the Egyptian Government the following written statement:
During a visit that he paid to His Excellency the President of the Council,the Minister of Italy has informed His Excellency that the Italian Government desires to continue in the future its policy of peace and cordial collaboration and sincere friendship with Egypt and to respect theEgyptian interests: and intends to adhere to the same line of conduct concerning the question of the waters of Lake Tsana and the Blue Nile River.
On May 6, the British were advised that Italy would respect, inter alia, British rights in the Lake Tsana region, but that (the capital city Addis Ababa had then just been occupied by the Italian forces) Ethiopia was tobe regarded as Italian Territory.
In November 1936, the Italian Government informed the British Ambassador in Rome that Italy would give the British every possible assurance regarding the safeguarding of British interests in the lake. The general position of the British Government was that they would not bargain about Ethiopia. However, it would be useful if the Italian Government could find occasion to renew the assurances confirming British rights and interests in Ethiopia as specified in the treaty of 1906 and the exchange of notes of 1925.
The British Government decided not to press the Italian Government for an assurance specifically referring to those two instruments: they would be glad, however, if the assurance given on April 3, 1936 could be renewed. Italy confirmed the assurances given on April 3 to the British. The British also reminded Italy that there were interests in Ethiopia, such as Lake Tsana, which Egypt and Sudan shared with the British: and that those two Governments would have to be associated with British interests.By April of 1938, the British Government abandoned the argument that Italy had violated the Treaty obligations not to occupy Ethiopia and recognized the Italian annexation to protect British interests in Lake

Tsana. On April 1, 1937, Sir Anthony Eden, the then British ForeignSecretary reasoned:

The rights of the United Kingdom in this matter rest upon the Anglo- Ethiopian Treaty of the 15th May, 1902, articles 1 and 4 of the TripartiteTreaty of the 13th December, 1906, and the Anglo-Italian Exchange of Notes of the 14th/20th December, 1925. Everything, however, which is material in the first two has been incorporated and expanded in the thirdof these instruments …

The rights referred to … are as follows: (a) Italy must not allow any work to be constructed on the headwaters of the Blue or White Niles or their tributaries or affluents which might sensibly modify their flow into the main river, but, subject to that proviso, a reasonable use of the waters in question by the inhabitants of the region may be permitted, even to the extent of the construction of dams for hydro-electric power or of small reservoirs in minor affluents with a view to the storage of water for domestic purposes or the cultivation of food crops necessary for the subsistence of the local inhabitants. (b) His Majesty's Government have the right to obtain the construction of a barrage at Lake Tsana and a motor road for the passage of stores, &c., from the barrage to the Sudan frontier, subject only (i) to an obligation to employ, so far as possible, locally recruited labor in the construction and operation of the barrage, and (ii) to the proviso that the barrage must not raise the level of the waters in the lake beyond the maximum hitherto attained during the rainyseason. His Majesty's Government are entitled to obtain a concession for the construction of this barrage and its operation by themselves or by persons appointed by them …

In this event it may be desirable that the Egyptian Government should beassociated with His Majesty’s Government in their action, or at any rate that Italian assurances on the subject should be given to the Egyptian Government as well as to His Majesty's Government.

By a declaration of April 16 1938, which they agreed should apply equallyto the Egyptian Government: the Italian Government reaffirmed previousassurances:

The Italian Government confirm to the Government of the United Kingdomthe assurances given by them to the Government of the United Kingdom on the 3rd April, 1936, and reiterated by the Italian Minister for Foreign Affairs to His Majesty’s Ambassador at Rome on the 31st December, 1936,to the effect that the Italian Government were fully conscious of their obligations towards the Government of the United Kingdom in the matter of Lake Tsana and had no intention of whatever of overlooking or repudiating them.

Further … the assurances given … in the above Declaration concerningLake Tsana shall apply equally to the Egyptian Government.

The British and the Egyptian Governments signed the agreements giving recognition that “[t]he territories and peoples which belonged to the Empire of Ethiopia are placed under the full and entire sovereignty of theKingdom of Italy as announced in the Italian Decree.” In so doing, Egypt,Sudan, and Britain acknowledged the Decree abolishing the Empire of

Ethiopia and establishing the new territory of Italian East Africa(consisting of Eritrea, Somaliland, and Ethiopia).

The Lake Tsana reservoir project was postponed due to British preoccupation in World War II and Italy's inability to effectively governEthiopia, and the Lake Tsana region in particular, as a result of the Ethiopian insurgency.

Following the restoration of the Ethiopian Government in 1941, the Emperor, in view of experience, was no longer receptive to renewed British efforts and scheming for a Tsana Reservoir Project. (Text ends)

NILE: Blue Nile Sub-basin Legal Regime in Historical Context: ColonialTreaties'

Research Article By Yosef Yacob, AB, JD, LLM, PHD(Part IV) Updated

Nile Waters Agreement between Egypt United Kingdom – 1929

After the defeat of the Mahdi by Kitchener at Omdurman in 1898 and there-establishment of order in the Sudan, a demand arose in the Sudan forthe erection of pumps for irrigation on a small scale. With the approval ofthe Egyptian Government, certain areas of land were given pumping rights. The area under permit was increased from time to time, some pumps being installed to test the possibilities of cotton growing, and others for the purpose of producing food grains at a time of scarcity during the war.

1. Colonial Treaties

The area under irrigation in this way was inconsiderable, amounting to less than 40,000 feddans (41,520 acres) of which rather more than half was licensed for perennial irrigation, the remainder being restricted to theflood season. An area of some 80,000 feddans in the Northern Sudan hadbeen formed into basins, but, owing to the high levels of the land, they were only partly filled, even in years of high flood.

The only considerable area suitable for canal irrigation was the triangulartract between the Blue and White Niles with its apex at Khartoum and extending as far south as the Sennar-Kosti Railway. In 1913 a scheme was prepared for the irrigation of 100,000 feddans for the production of cotton, to provide the raw materials for the British textile mills in Lancashire. Irrigation was to be by means of a canal fed from the naturalflow of the Blue Nile, the required levels of the river to be raised by a diversion barrage at Makwar. It was then believed that such a scheme would permit irrigation of the cotton crop without detriment to Egyptian interests. However, further consideration of agricultural conditions and the exceptionally low river of1913-14, demonstrated that the scheme should comprise a storage reservoir (Sennar Dam) rather than a diversion barrage.

With the addition of a storage reservoir, the water saved from the naturalflow during the flood season could increase irrigation to 300,000 feddans without the need for taking water from the river at low stage. It was felt that such an increase in area was necessary to offset the extra cost of thedam. Simultaneously, the Egyptian Government was considering the construction of a dam on the White Nile at Gebel-Aulia, near Khartoum,

for the dual purpose of controlling high floods, which threatened damage to Egypt, and of storing water for use during the summer season in Egypt.The British proposal to expand irrigation in Sudan and the entry of an upper riparian, the Sudan (a British Colony therefore Britain), as a major user of the Nile waters greatly alarmed the Egyptian authorities who commissioned the Egyptian Nile Control Department to conduct a survey of the effects of this proposed expansion on Egypt.

The survey concluded that the water requirements of both Egypt and theSudan could be satisfied and was embodied in a Report by Sir Murdoch McDonald, a British engineer. The Egyptian Government appointed a Commission (The 1914 Commission) to study the proposed schemes andto examine the results of the McDonald survey.

The Commission confirmed the survey findings and recommended the construction of the Sennar Dam on the Blue Nile and the Gebel-Aulia on the White Nile, both on Sudanese territory. However, the development plans for the Sennar Dam to begin perennial irrigation in the Gezira Scheme in the Sudan stirred sharp criticism in Egypt. Sir McDonald, the author of the survey and Sennar project for Sudan was accused of forgingrecords of Nile River measurements to further British interests in the Sudan.

To quiet the uproar a new commission, The Foreign Office Commission of1919, was constituted to study the dispute and subsequently reported that there was no justification for the statement that the Sennar project put forward by the British Government would injure Egypt. The report of the 1919 Commission also noted that the origin of water from particular control works is not the significant issue but rather the total amount of water available to Egypt.

The Commission further noted that Egypt’s established irrigation rights should not be permitted to hinder future development of Sudan so long asthe amount of water available to Egypt was not reduced. Because of Egypt’s unwillingness to accept the recommendations, another commission, the Nile Commission of 1920, was established by a decision of the Egyptian cabinet and charged to conduct a further study.

The 1920 Commission also endorsed the proposals to build the Sennar Dam and to expand the Gezira scheme. The Commission concluded that Egypt had a right to “a supply of water sufficient to irrigate an area equal to the largest area which has been irrigated in any single year since the Aswan Dam in its present form was completed. Further, Egypt had an established claim to receive this water at the particular seasons when it isrequired.” The Commission added that the largest area, which Egypt couldthus claim, would be 5 million feddans, which was the area under cultivation in 1916-1917.

The conclusions of the Commission met with great resistance in Egypt andthe Egyptian Government therefore shelved the report. This did not pleasethe British. In the wake of the Egyptian-Sudanese crisis precipitated by the assassination of the British Governor of the Sudan in Cairo in May 1924, the British High Commissioner in Egypt revived old fears.

The British High Commissioner threatened to go ahead with the plans to expand the areas of cotton cultivation in the Gezira scheme in the Sudan“to an unlimited figure as need may arise.” Alternatively, he demanded the Egyptian Government agree to the appointment of an impartial international commission to look into the matter of the apportionment ofthe waters of the Nile.

In this general atmosphere of alarm and anxiety, the Nile Commission of 1925 was constituted by an exchange of notes between Britain and Egypt on January 26, 1925 for the purpose of examining and proposing the basison which irrigation (in the Sudan) can be carried out with full consideration of the interests of Egypt and without detriment to her natural and historic rights.”

The Commission acknowledged the right of the Sudan to agricultural expansion but stipulated that any increase in the use of the Nile waters in the Sudan should not “infringe Egypt's natural and historical rights in the waters of the Nile.” It apportioned the waters so that Egypt and the Sudanwould receive enough water to irrigate the lands under cultivation at the time of the Agreement: this was estimated to be 48 billion m^3 for Egypt and 4 billion m^3 for the Sudan. The Nile Waters Commission of 1925 recommended a set of proposals and principles that, after much negotiation, political maneuvering and even violence, became the basis forthe 1929 Nile Waters Agreement between Egypt and Britain.

The 1929 agreement preserved Egypt's traditional uses and introduced the notion that Egypt was the primary Nile riparian. It granted Egypt “a virtual right of veto on developments in the Sudan and in other upper basin territories.” The most often cited clause of the agreement reads: Save with the previous agreement of the Egyptian Government no irrigation or power works or measures are to be constructed or taken on the River Nile or its branches, or on the lakes from which it flows so far asall these are in the Sudan or in countries under British administration, which would, in such a manner as to entail prejudice to the interests of Egypt, either reduce the quantities of water arriving in Egypt, or modify the date of its arrival, or lower its level.

Egypt had the right to 48 billion m^3 of water annually and Sudan's yearly rights were increased from 1.5 billion m^3 to 4 billion m^3. The disparity wasapparent, yet the agreement temporarily satisfied both parties and put an end to years of political discord and negotiation on the matter.

Despite the imbalance in entitlements for the parties, the agreement did not completely deny upper basin states the right to develop their portionsof the Nile. The agreement specifically allowed such a future right for Sudan. It specifically noted that, in order to develop, Sudan would requiremore water than it was currently using.

Egypt's policy was to encourage such development, as long as the increase did “not infringe Egypt's natural and historic rights in the watersof the Nile.” With the sealing of these agreements the cotton plantations of Sudan, which supplied the British textile industry in Lancashire were assured of their water supply.

The Gebel-Aulia Compensation Agreement of 1932: The construction of the Gebel-Aulia Dam in the Sudan for the storage of Nile Waters for Egyptwas the subject of the earlier agreement of 1929 between Egypt and the Sudan. This agreement was therefore a supplemental agreement to provide details of implementation of the dam. Egypt was obliged to negotiate with the Sudan on measures for safeguarding the “local interests” before undertaking the construction of the Gebel-Aulia Dam in the Sudan.

Under the terms of the agreement, Egypt was to provide compensation fordamages to local interests, which would be adversely affected by the construction. The dam would submerge an estimated 17,000 to 107,000 feddans of cultivated and/or cultivable lands increase the menace of malaria and other waterborne disease and displace the local inhabitants and submerge their homes, property and their farms. The Egyptian Government therefore agreed to pay compensation and provide for alternative schemes for the displaced population.

Egypt also agreed to allow the local inhabitants to draw Nile waters with pump schemes to irrigate 23,000 feddans during the low flood seasons. Toallow local inhabitants to adjust to the new way of life the reservoir was tocome into full operation over a six-year period. The agreement further provided for the level to which the White Nile could be raised behind the dam with additional provisions to allow the Egyptian Government to raise the level to increase the reservoir, subject to an agreement with Britain and measures to safeguard local interests. Part 5 of the article will discussthe Lake Tsana Reservoir Project Negotiations and Egyptian and British sabotage of Ethiopia’s efforts to build the first dam in the country as well as facilitating Ethiopia’s invasion by fascist Italy)

NILE POLITICS: Egypt minister denounces Ethiopia's 'obstinacy' on dam’ MENA AHRAM ONLINE: (March 3, 2014) The Renaissance Dam has been asource of concern for the Egyptian government, with anxiety high that it would negatively affect Egypt's share of Nile water Egypt's Irrigation Minister Mahmoud Abdel-Muttalib denounced on Monday what he described as Ethiopia's obstinacy towards building its Grand Renaissance Dam, MENA reported.

Ethiopia's project is a $4.2 billion hydroelectric dam on the Blue Nile, one of the main tributaries of the Nile. It is a source of concern to Egypt, sinceit is still undetermined how it will affect Egypt's Nile water share, the country's main source of potable water. In talks last January between Egypt, Ethiopia and Sudan, negotiations hit a dead-end, with MENA reporting that Ethiopia refused to discuss the terms of "confidence- building measures," which Egyptian officials say must be changed in orderto avoid reduction of Egypt's Nile river water share.

Abdel-Muttalib, who retained his position in Egypt's new interim cabinetsaid Egypt's Nile water share is a "red line" that Egypt won't allow to becrossed. He reiterated that the country encourages development in Ethiopia, without harming Egypt's water rights.

On Saturday, a spokesman of the government-owned Ethiopian Electric Power Corporation reportedly said some 32 percent of construction of the

Ethiopian Grand Renaissance Dam has been completed, with efforts intensifying to complete the rest. Spokesman Misekir Negash said construction of the dam has been ongoing "day and night," adding that the dam has so far employed 7,000 people.

Ethiopian dam's ecological and human fallout could echo Aral Sea disaster

–study’

(March 5, 2014) Study suggests irrigation projects linked to Gibe III dam could devastate Lake Turkana's fisheries and affect livelihoods Africa's fourth-largest lake could drop by 20 metres, causing an ecological and human disaster to rival the shrinking of the Aral Sea in central Asia, if Ethiopia goes ahead with massive irrigation projects linked to a giant dam,according to a university paper.

Lake Turkana, located almost entirely in Kenya but fed by the river Omo, which rises in Ethiopia, will be severely impacted by the 243 metre-high Gibe III dam, which is due to be completed this year, says the study, published by the University of Oxford's African Studies Centre. It suggestswater levels could drop by half, devastating the lake's fisheries and affecting the livelihoods of 170,000 agro-pastoralists.

"Ultimately, the 6,400 sq km lake could reduce to two small lakes. The picture that emerges from these predictions bears a striking resemblanceto the recent disastrous history of the Aral Sea, which was once the world's fourth-largest inland water body," said Sean Avery, a Nairobi- based hydrologist who studied the impact of the dam project for the African Development Bank.

NILE POLITICS: Israel offers to mediate Ethiopia-Egypt on Nile dam row' DIARIES (March 07, 2014) – Israeli Agriculture Minister Yair Shamir has voiced Israel`s readiness to assist Egypt and Ethiopia reach agreement over the latter`s construction of a multibillion-dollar hydroelectric dam onthe Nile River.

According to Ethiopia`s state-run news agency, Shamir made the remarks at a Thursday meeting in Addis Ababa with Ethiopian Prime Minister Hailemariam Dessalegn. The agency did not specify how Israel intends to assist both countries in ironing out their differences overthe dam.

Relations between Ethiopia and Egypt soured last year over construction of Ethiopia`s Grand Renaissance Dam on the upper reaches of the Nile – Egypt`s main source of water. The controversial project raised alarm bellsin Egypt, the Arab world`s most populous country, which fears a reductionof its traditional share of Nile water.

Water distribution among Nile Basin states has long been based on a colonial-era agreement granting Egypt and Sudan the lion`s share of theriver`s water. Addis Ababa insists the new dam will benefit downstream states Sudan and Egypt, both of which will be invited to purchase electricity thus generated.

Ethiopia`s Foreign Ministry, for one, welcomed Israel`s offer. “Any country like Israel may raise such idea and Ethiopia appreciates this,” Jemal Beker, director of Middle East affairs at the ministry, told Anadolu Agency. He said Ethiopia was ready to negotiate a “win-win solution” withEgypt based on the framework of a tripartite dialogue initiative that also

includes Sudan and an international panel of experts. “There`s a technicalnegotiation underway,” Beker said. “It has no political nature.”

“Egypt withdrew from the tripartite negotiation,” said the diplomat. “But Ethiopia believes Egypt will be back and negotiations will continue.” The state news agency quoted the dam`s chief engineer, Simegnew Bekele, assaying that a full one third of the project had been completed. Bekele added that the project`s total workforce would be raised from 7500 to 13,000 in the months ahead. (Text ends)

NILE POLITICS- Ethiopia: Is Egypt Securing Diplomatic Success OverEthiopia?

The Reporter Commentary By Neamin Ashenafi, March 8, 2014

The Blue Nile accounts for 85 percent of the Nile's water flow. It joins the White Nile, whose headwaters lie in the East African highlands of Burundi. Ethiopians consider the Grand Ethiopian Renaissance Dam (GERD) and theother dams the government of Ethiopia plans to build a symbol of nationalpride as they will produce electricity that will transform the economic prospects not only for their country but for much of seriously under- developed East Africa.

In talks last January between Egypt, Ethiopia and Sudan, negotiations hita dead-end, with MENA reporting that Ethiopia refused to discuss the terms of "confidence-building measures," which Egyptian officials say must be changed in order to avoid reduction of Egypt's Nile river water share.

Egypt, with its 84 million people totally dependent on the Nile for water, cites British colonial agreements in 1929 and 1959 that guarantee it the lion's share of the water and a veto over upstream dam construction. ButEthiopia, along with Tanzania, Rwanda, Kenya and five other African states with growing populations and mounting demands on agriculture dismiss these accords as colonial relics.

Egypt, Ethiopia and Sudan formed a tripartite technical committee to study the possible effects of the dam and try to generate consensus. Ethiopia maintains that Egypt's water share will not be negatively affected by the successful completion of the project.

Ethiopia has called for Cairo's collaboration in negotiations and claims thatthe dam will have no adverse effect on Egypt. It would, in fact, decrease evaporation and improve water flow. Ethiopia hopes that the ambitious hydroelectric project, scheduled to be completed in 2017, will throw the country out of poverty. Eighty five percent of the Nile's source is in Ethiopia and the country feels it also has the right to use the water for its economic needs. Facing water shortages amid a growing population, Egypthas actually been asking to increase its share of the Nile waters to 95 percent.

Ethiopia went ahead and put the Entebbe Agreement into effect unilaterally by commencing the construction of a series of dams on the Blue Nile. Unfortunately, Egypt did not raise any objections at the time, which gave Ethiopia tacit encouragement to proceed with the constructionof the mega dam on the Blue Nile. It is noteworthy that Ethiopia laid the cornerstone for this project, which has a reservoir capacity of 11 billion

cubic meters a year, on April 2nd, 2011, which is to say around two months after Egypt's January 25th Revolution. After the inauguration of the project, the government of Egypt has strived to halt the project or atleast to decrease its size and the amount it carries. In this effect, Egypt has started a new diplomatic campaign across the globe and is trying to hinder the project.

Apart from this attempt and international diplomatic campaign, the seniorofficials of Egypt recently are claiming that they are securing diplomatic success over Ethiopia in relation to the dam, by conducting discussions with leaders of various African and European countries. In that regard they proclaim that they are recording victory over Ethiopia in the area of diplomacy concerning the dam.

Eventually, many started to question what diplomatic success is. How it can be measured, whether it is successful or not, what the government ofEthiopia has done so far to avert the Egyptian claim of diplomatic successover the dam and so on. Is Egypt Securing Diplomatic Success over Ethiopia?

The Egyptian government is campaigning to educate other governments concerning the harm that the Grand Ethiopian Renaissance Dam will inflicton Egypt. Egypt may be in the middle of a political turmoil but the government has begun a diplomatic offensive aimed at stopping Ethiopia from building a huge hydroelectric dam on the Nile River that Cairo says will be a disaster for the nation.

Egypt's Irrigation Minister Mahmoud Abdel-Muttalib denounced what he described as Ethiopia's inflexibility towards building its dam, MENA reported. Abdel-Muttalib said Egypt's Nile water share is a "red line" thatEgypt won't allow to be crossed.

The Egyptian government has begun to take serious, overt measures toward internationalizing the Renaissance Dam. It is doing so through protracted negotiations taking place behind closed doors among the Supreme Committee for the Nile Waters, which includes representatives from all parties affected by issues of concern to the Nile River Basin. It iscomposed of staff from the Foreign Ministry as well as the Ministries of Water Resources and Irrigation, International Assistance, Defense and Electricity, and the Egyptian intelligence services.

The military-backed administration began its efforts to internationalize thethorny issue in hopes of gathering support for its case against Ethiopia, where the Blue Nile rises in the northwestern highlands, after bilateral negotiations deadlocked in January.

"The campaign initiated by Egypt aims to persuade the international community to reject the dam's construction because it may lead to furtherconflict and instability in the region of the Nile Basin," an Egyptian diplomatic source in Cairo told the Middle East's al-Monitor website on February19.

"More negotiations with Ethiopia only waste time and directly threatenEgypt's water security," said the source who declined to be named because of the sensitivity of the issue.

"We realized that Ethiopia doesn't want genuine solutions to end the crisisbut is only trying to portray Egypt as approving of the dam's constructionto facilitate access to the funding.
Gamal Bayouni, Secretary-General of the Egyptian-European partnership at the Ministry of International Cooperation in Cairo, said Egypt now seeksto "target all countries that provide technical assistance for designing and building the dam through private contractors and also the states likely to fund to construction of the dam." These Egyptian moves toward international escalation are proceeding on two levels, in keeping with an agreement concluded by the Supreme Committee for the Nile Waters, according to a government source who spoke to Al-Monitor.
The source stressed that, in fact, first-level steps began with the visit of Muttalib, along with Minister of Foreign Affairs Nabil Fahmy, to Italy, whichis believed to be Ethiopia's principal technical supporter in building the dam. The Italian contracting company Salini Costruttori has already conducted several studies and begun construction at the dam site. All of these visits seek to clarify the harm that Egypt will incur if the dam is completed according to its current specifications, aiming to win support from these countries for Egypt's position as well as bringing pressure to bear on the Ethiopian side. The Egyptian government has already begun to internationalize the issue through a campaign to define the dangers of the Ethiopian dam in the international community, and to work to halt its foreign financing. Italy
On February. 6, Egypt's minister of water resources and irrigation, Mohamed Abdul Muttalib, visited Italy, considered to be Ethiopia's maintechnical supporter in building the dam.
Italy's Salini is building the 6,000-megawatt facility on the Blue Nile, the main tributary of the Nile that flows northward through nine African statesto the Mediterranean. Muttalib, who was accompanied by Egyptian ForeignMinister Nabil Fahmy, said after a series of meetings that "the visit has achieved its goal. Italy has understood Egyptian concerns."
However the outgoing Italian ambassador to Ethiopia told The Reporter that the recent visit of Egyptian senior delegation is not only about the Nile, he said it covers many bilateral issues he also pointed out that theEgyptian minister's concerns concerning the dam as they are doing not only in Italy, but also in other countries perhaps in the European Union.Muttalib stressed that his visit to Italy had achieved its goals and will berepeated in many other countries and places.
The mission of this and subsequent trips is to provide greater clarity on Egypt's water position, the challenges that Egypt is confronting with regard to the scarcity of water resources and the efforts that the Ministry of Water Resources and Irrigation is making in this area. Muttalib noted that during the visit, he had explained the water resources situation and the reality of water scarcity in Egypt to Italian experts and officials. Thosepresent expressed a keen interest in information concerning water resources and stressed that they were hearing it for the first time. ThoughMuttalib heralded about diplomatic successes over the dam Lapo Pistelli, Italian deputy minister of foreign affairs in an interview with The Reporter

before a month ago said "We hope that hydro-power energy should be thefuture source of shared benefits in this region".

Tanzania: It was reported in different Cairo-based media outlets that Tanzanian President Jakaya Kikwete said the Nile Basin countries shouldconsult and decide on a mutual agreeable arrangement prior to the construction of any dams that impact several countries, stated EgyptianForeign Minister Nabil Fahmy. Fahmy met Kikwete to address several impo rtant issues: among them was the crisis over the Great Ethiopian Renaissance Dam that Ethiopia isbuilding.Interim President Adly Mansour sent a written message with Fahmy to the Tanzanian president focused on strengthening bilateral tiesbetween Egypt and Tanzania in different fields.

According to Tadesse Kassa (Ph.D.) Dean of College of Law and Governance Studies of Addis Ababa University, the statement that the Egyptian media and the minister made are only presented on Egyptian media and there was no other proof that Kikwete said there should be prior notification. However, Tadesse said though the issue of prior notification is one of the principles of international law its practicality isnot clear, and has so many loopholes like why, how and so on.

Foreign ministry spokesperson Badr Abdel Ati told Ahram online that the reaction of the Tanzanian president on the issue of the Renaissance Dam was "positive." Though the Egyptian media and officials claimed the diplomatic success over Ethiopia over the issue of the dam, according to Dereje Zeleke (Ph.D.) a lecturer at Addis Ababa University, diplomatic success is not measured by tour and table discussion. Such a claim mightcome from not understanding the ABCs of diplomatic relations.

What is Ethiopia Doing? In relation to the issue of Egypt's new diplomatic activity, Ambassador Dina Mufti spokesperson of the Ministry of Foreign Affairs told The Reporter that "the Ethiopian government is doing its job, our embassies all over the world are working in explaining that the dam did not cause any harm over lower riparian states, but it is not appropriateto do things as the Egyptian are doing."

According to the ambassador, Ethiopia pursues according to her own principles and beliefs not measured by the Egypt's activity he also said that the Egyptian government's statement is a day dream that doesn't hold a water. Ethiopian Prime Minister Hailemariam Desalegn said on Feb.13 that Addis Ababa would not back down on the USD 4.8 billion GERD, which will be the largest in Africa.

On January 8, Ethiopia turned down Egypt's demand to suspend construction of its mega-dam on the Nile, further escalating tensions between the two states. According to Dina, the Ethiopian side believes that the Egyptian bid to internationalize the issue of the GERD will not bring about any result so long as there is no serious intention to submit the matter to the International Criminal Court. The Ethiopian Foreign Ministry's website reported that the prime minister remarked, "There is nointernational court responsible for investigation or arbitrating in issues of water and that is why the Egyptian move to internationalize won't have

any effect." Generally, Ethiopia claims the project is on course anddismisses facing any technical hurdles. What should be Ethiopia's next step? According to Tadesse, to overcome Egypt's claim of diplomatic successes, the government should do two major things, aggressively take a counter measure for Egypt's propagandaand equal diplomatic campaign to counter their propaganda.

He also stressed that the Ethiopian way of diplomacy is different in practical terms, factual acts on the ground, particularly the issue of development should be given priority over oral diplomatic campaign. Amidall these ups and downs it is not clear at this stage whether Egypt's diplomatic offensive will be able to secure enough international support toinfluence Ethiopia.

Ethiopia is bolstered by the 2010 Entebbe Agreement and the "majority" of six countries that signed it. The decade-long negotiations resulted in the 2010 Cooperative Framework Agreement, known as the Entebbe Agreement. The landmark accord, signed by the six upstream countries, was rejected outright by both Egypt and Sudan. Touted as "an African solution for an African problem," the agreement calls for the creation of acommission to oversee development projects on the Nile. It needed ratification by the legislatures of each of the signatory countries. But its implementation is in limbo until another Nile Basin countries for example,the Democratic Republic of the Congo, which is now sitting on the fence, join. Ethiopia summoned the sufficient determination to shed all these tiresomehistorical obligations. Ethiopia was spearheading the Nile Basin countries initiative and lobbying other countries to back a new legal framework thatwould put paid to the principles of all previous Nile water agreements. Theproduct was the Entebbe Agreement, which was signed by most upper riparian countries in 2010, but which Egypt strenuously opposed. Many scholars of the area believe the major thing that Ethiopia should do is strengthen its internal solidarity because according to Yacob Arsano (Ph.D.) it is good to be prudent about the issue and there should also be strengthening if there is a frail place. According to Tadesse, to counter theEgyptians' activity the national political system should be more accommodating, all embracing development and a national consensus should also be there. (Text ends)

NILE: ETHIOPIA/EGYPT- Our Response on Nile will be Decisive – EgyptianFM'

EGYPT INDEPENDENT – Foreign Minister Nabil Fahmy gave Ethiopia the harshest Egyptian warning to Ethiopia in relation to the dispute over Adis Ababa’s dam on the Nile River. In an interview with Tahrir satellite channel late Friday, Fahmy waved “a decisive response” concerning its Renaissance Dam, which Cairo fears would affect its shares of river waters. Fahmy stressed on Egypt’s right to “defend its national security.” Fahmy said that he spoke with his US and Russian counterparts during a conference on Libya in Rome two days earlier, and told them that “Adis Ababa should respect international laws which ensure the Egyptian peoplethe right to defend their national security against any dangers.”

Egypt will proceed through the negotiation track, the minister added. He wared, however, that if negotiations fail to bring about a solution that guarantees Egypt's water security, "Adis Ababa should bear the consequences of that crisis," adding that "the response will be decisive and at the time determined by the Egyptian people." Ethiopia's state newsagency had quoted an unnamed state diplomat as saying that Israel, which enjoys diplomatic relations with both nations, is keen on hashing out a solution for the crisis, a desire expressed during a recent meeting byIsrael's irrigation minister Yair Shamir with Ethiopian PM Hailemariam Desalegn

NILE Troubled Waters: Is Water wars on the Nile on the table?

Egypt and Ethiopia are at loggerheads over a plan to dam the Nile River FP (March 9, 2014) Cairo worries that the megaproject, which began construction in 2011 and is scheduled to be finished by 2017, could chokethe downstream flow of the Nile River right at a time when it expects its needs for fresh water to increase. Brandishing a pair of colonial-era treaties, Egypt argues that the Nile's waters largely belong to it and that ithas veto power over dams and other upstream projects.

Ethiopia, for its part, sees a chance to finally take advantage of the world's longest river, and says that the 6,000 megawatts of electricity thedam will produce will be a key spur to maintaining Africa's highest economic growth rate and for growth in energy-starved neighbors. The hydroelectric plant will provide triple the amount of electricity generating capacity in all of Ethiopia today. But the spat threatens to poison relationsbetween two of Africa's biggest countries.

"The construction of [the dam] could propel a new era of regional cooperation, but past history suggests it will more likely result in continued sniping between Egypt and Ethiopia," David Shinn, a former U.S. ambassador to Ethiopia, told Foreign Policy.

The dispute has heated up again, after a fresh effort to iron out the differences at the negotiating table collapsed. Egypt has sought to get theUnited Nations to intervene, and reportedly asked Ethiopia to halt construction on the dam until the two sides can work out an agreement, which Ethiopian officials rebuffed.

"The upper riparian states have the right to use the Nile for their development as far as it doesn't cause any significant harm on the lower riparian countries, and that is why Ethiopia is building the Grand EthiopianRenaissance Dam," Ethiopian Foreign Ministry spokesperson Dina Mufti told reporters in late February.

A former Egyptian irrigation minister said March 5th that Egypt is doing too little to forestall the dam, and highlighted the risks to the country's water supply. Italy's ambassador to Egypt has reportedly offered Italian help in mediating the showdown: an Italian firm is constructing the dam.The dam has been a glimmer in Ethiopia's eye since U.S. scientists surveyed the site in the 1950s. A lack of cash and Egypt's strength forestalled any development — but that appears to have changed in the wake of the Arab Spring and Egypt's three years of domestic political upheaval.

For most of the twentieth century, Egypt and Sudan divvied up the Nile'swater between them. A 1929 treaty with British African colonial possessions gave Egypt the right to more than half the river's flow: a 1959 treaty upped Egypt's share to about 66%. The rest was allocated toSudan – while Ethiopia, whose highlands are the fount of most of the Nile's waters, was excluded from discussions.

"It is only Egypt and the Republic of Sudan that consider the 1929 and 1959 agreements as legally binding on all the Nile River riparian states," John Mbaku of the Brookings Institute Africa Growth Initiative, told FP. "The Ethiopians may have undertaken what appears to be unilateral actionbecause of Cairo's unwillingness to join other riparian states in renegotiating" those accords, he said.

Ethiopia began pushing back seriously after concluding its own water rights deal with other upstream nations, such as Kenya, Uganda, and Tanzania, in 2010. The protests in Egypt, the collapse of the Mubarak regime, and Egypt's three years of domestic turmoil provided a key opening for Ethiopia. It laid the first stone on the construction project in the spring of 2011 and says the dam is now about one-third complete. "With all of the chaos in Egypt, Ethiopia caught a break. It has clearly benefited from the distractions of the government in Cairo," Shinn said. In2012, Sudan threw its weight behind the project, driving a wedge betweenthe two downstream users of the river and complicating Cairo's hopes to block construction.

The dispute over the Blue Nile dam is hardly the only case of water-driventensions. Chinese control over the headwaters of major rivers in Asia, andambitious plans for hydroelectric development, has sparked concern among a dozen downstream neighboring countries. Brazil and Paraguay locked horns for years over the massive Itaipu dam. Even Western U.S. states are squabbling over water rights to the dwindling Colorado River, especially important now that the region suffers a prolonged drought.

But Egypt sees the Ethiopian project as an existential threat. A government study concluded, "Water security is the gravest threat facingpost-revolution Egypt." Former Egyptian president Mohammed Morsi vowed last summer that Egypt would not lose "one drop" of Nile water tothe Ethiopian dam, proclaiming, "Our blood is the alternative." Egyptian politicians were caught on camera last June urging Morsi to back armed rebels to sabotage the dam's construction. Abdel Fattah al-Sisi, Egypt's putative next president, warned Ethiopia last summer the country might resort to military action to stop the dam, and earlier this month he discussed the dam's threats in a visit with Russian president Vladimir Putin.

Egypt's fears stem from the dam's possible impacts on the Nile as it flowsdownstream through Sudan and eventually to the Mediterranean. The Nileprovides both water for Egyptian agriculture, and also electricity through Egypt's own Aswan dam.

The big problem: There has been no public discussion of the downstreamimpacts of the Ethiopian project. An international panel of experts, including representatives from Egypt, Sudan, and Ethiopia, presented a

report last summer to the three governments, but it has not been madepublic.
Leaks of the report suggested that Egyptian power generation could indeed suffer — but the lack of clarity muddies the issue even for water experts, because it is unclear just how quickly Ethiopia might move to fill the dam's reservoir after construction is finished. Filling it sooner would definitely choke water flows downstream, but would enable power generation more quickly: filling it gradually would push back the potentialbenefits of the dam for decades. Ethiopia has spoken publicly of filling thedam's reservoir in five or six years.
"There's a suggestion (in the panel report) that the electricity generation at the Aswan Dam could be affected quite significantly," Michael Hammond, a water engineer at the University of Exeter, told FP. "However, it's inherently uncertain because we don't know whether we'll have ten wet years or ten dry years during the filling process," he said. Jennifer Veilleux, a PhD candidate at Orgeon State University who has done extensive field work on the impacts of the Blue Nile dam, notes thatEgyptian fretting about the dam's impact on agriculture tend to focus on poor farmers. But Egypt has used the abundant Nile waters to become a major exporter of water-thirsty crops, such as cotton, which in turn has given Egypt the highest level of economic development among all Nile Basin countries. "Why does Egypt have the right to use the Nile for economic development, yet the Ethiopians don't?" she asks. (Text ends) Ethiopia: Debate Over the Nile'
The Reporter (March 15, 2014) The third-year anniversary of the inauguration of the Grand Ethiopian Renaissance Dam (GERD) will be colorfully celebrated throughout the nation. Starting from its inception, the project has been drawing the attention of millions of Ethiopians locallyand across the globe.
In relation to this massive hydroelectric project, much has been said and published, many of the published articles, books and other materials lay more emphasis on the historical narration, which revolves around the colonial treaties that Egypt uses to apply for monopoly of the water, the historical agreements of 1929 and 1959 signed between Sudan, Egypt andGreat Britain.
Other areas that are mainly covered in the publication related to the issueof the Nile also focus on the political aspect of relations between the countries that use the Nile water, an equitable share of water and so on. It is in this regard that a book written by Hailu Woldegiorgis entitled "Leabay Weha Muget" was published by the Addis Ababa University Press a few years ago. The writer of the book is a former Ethiopian ambassadorto France. He was also working in several international organizations, as apolitical science and law graduate from the Political Science Institute of France. He was also working as deputy minister for the Ministry of ForeignAffairs in Ethiopia.
Based on his extensive knowledge of international law, he conducted intensive research over the issue and the book is beautifully written and explains the historical and legal confrontations over the issue of the river

Nile. The book has three main sections that explore the legal litigation revolving around the river Nile. Along with these three sections, the bookalso contains numerous chapters and a very solid general conclusion thatelucidates how to overcome if Trans Boundary Rivers are becoming the source of tensions between and among the riparian countries.

Each section of the book is written on the basis of academic researchmethods. The writer tries to present the issue free from any kind of personal bias, and presents the issue in an appealing way.

Though the book focuses more on the legal issues related to trans- boundary rivers generally and the issue of river Nile particularly, it also covers the historical relations between Ethiopia and Egypt as a common user of the water and Egypt's claim of domination over the Nile. The bookhas many interesting facts and figures, which clearly depict the long- standing legal debates and confrontations both within the two countries, other riparian countries and in the face of the international community.

This book is valuable for anyone who is concerned about knowing and understanding what the colonial era agreement signed between Sudan, Egypt and the former colony of the two countries, Great Britain in all about. The book in its introductory part gives a detailed explanation aboutthe river Nile and narrates the source of the Nile, Ethiopia's contribution tothe Nile and other riparian countries, the weather and climate condition ofthe area.

The first section of the book covers international law and the issues of trans-boundary rivers in an international perspective. In this section of thebook, the concept and evolution of the Trans boundary issue are covered. The salient feature of international law concerning the trans-boundary rivers is also explained well, in line with many demonstrations as an example and the governing theories of the issues.

The second section of the book is all about the legal issues of the river Nile, and it covers the treaties and agreements that have been concluded over the river Nile. In this section a reader can acquire a full and well- detailed explanation about the colonial era agreements over the Nile and many more legal issues concerning the Nile, such as the technical agreements and so on. The third section of the book covers issues relatedto rights and responsibilities of the riparian countries and application of the basic principles related to international law concerning trans boundaryrivers. This section of the book narrates the questions that the Egyptians raise to defend the customary application of the already existing colonial era agreements and the value of the agreements before the law.

This section also covers the importance of a new legal regime for the Nile,the efforts made to maintain an equitable use of the water, and lessons drawn from the rest of the world. The entire book is valuable to understand and assess the overall legal, political and diplomatic activities in relation to the equitable use of the river Nile, unlike other books concerning the issue of the river Nile. Since the book is written in Amharic, it has a significance to the general reader, which also makes thebook more valuable beside its content and detailed explanations. (Text ends)

NILE POLITICS: Egypt to Position Troops in South Sudan’

The Reporter, Addis Ababa (March 15, 2014) - Egypt, who is currently suspended from the continental block of the African Union (AU,) has promised to send troops to the world's newest nation, South Sudan, NewsAgency of South Sudan (NASS) reported. This came after the regional block Intergovernmental Authority on Development IGAD decided to deploy troops to monitor the situation in South Sudan on Thursday, March13.

Though IGAD expects the contribution of troops from member states, the president of the Arab Republic of Egypt, Adly al Mansour said his country is preparing to send troops to South Sudan in order to help protect the country from the chaos that resulted after the failed coup attempts stagedby the former vice president Riek Machar Teny. President Mansour made the announcement after the meeting with South Sudan's Foreign Affairs Minister Dr, Barnaba Marial Benjamin who is in Egypt to attend the 141st Arab League Conference. East African states say they will start deploying troops in South Sudan by mid-April, heads of states met in Addis Ababa todiscuss the size and mandate of a stabilization and protection force in the three-month old conflict.

A request to deploy the protection and stabilization force by mid-April hasbeen sent to the African Union and the United Nations Security Council.

The deployment, if approved, will be paid for by the international community. Kenya, Ethiopia, Rwanda and Burundi will send troops, andpossibly Djibouti.

The African Union's (AU) Peace and Security Council suspended Egypt from all union activities last July. Mansour further appealed to the SouthSudan government to bring about dialogue between Egypt and the otherNile basin countries "so that the benefits of the Nile water can equally satisfy the member countries."

NILE POLITICS: Ethiopia Sees Output at Africa’s Biggest Power Plant by2015’

By William Davison, Bloomberg (March 21, 2014)

Ethiopia will begin generating electricity within 18 months from what willbe Africa’s largest power plant, the government said. The sale of 7.1 billion birr ($367 million) of bonds over the past three years to domesticinvestors, has contributed to the 27 billion birr spent so far on the 75.5 billion birr Grand Ethiopian Renaissance Dam hydropower project, said Zadig Abraha, deputy general director of the GERD national coordinationoffice. The central bank in April 2011 ordered banks to buy government bonds equivalent to 27 percent of their loans to help fund infrastructure projects. Ethiopia’s funding of the 6,000-megawatt plant represents “thegolden age of our history as far as economic development and public participation is concerned,” Zadig said by phone on March 18 from the capital, Addis Ababa. “If we’re to meet the power demand we have to construct these mega projects.”

Africa’s second-most populous country after Nigeria is boosting electricityoutput to cater for increased demand as economic growth surges. The economy expanded at an average 9.3 percent over the past four years

and the government is targeting growth of more than 10 percent, which may lead to annual increases in electricity demand of as much as 35 percent, Zadig said. An increase in Ethiopia's current generating capacity of 2,000 megawatts will also allow the country to reduce a trade deficit of
$8.5 billion last year by selling excess electricity. Power Exports
The government already exports power to Sudan and Djibouti. It's also building a transmission line to Kenya and is in discussions with Yemen andwar-torn South Sudan, Zadig said. Once GERD is finished, and other hydropower projects including the 1,870-megawatt Gibe III are on line, Ethiopia may earn $2 billion a year from the exports, he said. The construction of GERD is opposed by Egypt, which says it will reduce the flow of the Nile, the world's longest river that provides almost all its water.Egypt's opposition to the project blocked Ethiopia's access to foreign credit, he said.
"The only option on the table was to construct the dam by our own capacity," Zadig said, adding that the state-owned Ethiopian Electric Power Corp. and public contributions would fund the rest of the project. Sudan, the other affected nation, supports the project that's scheduled forcompletion in 2018, partly because it will allow the country to import cheaper Ethiopian electricity. The dam is being built 18 miles (30 kilometers) from the Sudanese border on the Blue Nile River, the main tributary of the Nile.
Production Start Two turbines at the plant will start producing 750 megawatts of power during the Ethiopian calendar year that begins Sept. 11, depending on rainfall patterns, Zadig said.
In 2012, Ethiopia invited an international panel of experts to study the project, which the government says will help curb flooding and improve water storage. The panel concluded in June that further assessments needto be made on GERD's regional impact. It also advised modifications to the design to strengthen it structurally. Efforts by Ethiopia, Egypt and Sudan to form a committee to oversee the probes on the downstream effects have reached an impasse over the role of foreign experts.
Egypt wants construction paused while the studies are done on an issue that is a matter of "national security," Badr Abdelatty, a spokesman for Egypt's Foreign Ministry, said in a phone interview on March 15. 'Serious'Talks "We ask upon the other side to be serious and to move forward to accept having international experts imported to assess the impact," he said. "Also for Ethiopians to provide more studies, more statistics." Ethiopia should also respect colonial-era agreements and a 1959 accord between Sudan and Egypt that allocates all of the river's flow excluding evaporation to those two nations, Abdelatty said. By 2020, Egypt will require all of its assigned 55 billion cubic meters a year for vital use suchas drinking, washing and sanitation, he said. Nile riparian nations including Ethiopia, Kenya, Tanzania and Rwanda are in the process of ratifying a new agreement to create a joint commission to manage use ofthe river.

NILE POLITICS: Will Ethiopia's Grand Renaissance Dam dry the Nile inEgypt?

(Updated on March 22, 2014) BBC correspondents in both countries reportfrom both sides of an increasingly bitter water dispute.

Emmanuel Igunza reports from Ethiopia on the controversial project: Avast section of northern Ethiopia has been turned into a giant building site. Construction of the Grand Ethiopian Renaissance Dam (known as GERD) is now about 30% complete. The whole project spans an area of1,800 sq km (695 sq miles). Once completed, in three years, it will be Africa's largest hydropower dam, standing some 170m (558ft) tall.

At a cost of $4.7bn (£2.9bn) it will also be hugely expensive - mostlyfunded by Ethiopian bonds and taxpayers. The dam is located in the Benishangul region, a vast, arid land on the border with Sudan, some 900km north-west of the capital Addis Ababa,

Temperatures here can get as high as 48C (118F). Most of the vegetationthat existed on the dam site has been cleared to make way for the construction, and the area is now extremely dusty. In May last year, the builders achieved their first milestone when they diverted the course of the Blue Nile.

What used to be the river bed is now being lined with layers and layers ofconcrete that will form part of the main dam. Some 8,500 people workingat the site, where construction carries on 24 hours a day. Part of the actual dam structure is already taking shape. The workers are busy at work on what looks like a huge floor of concrete.

Downstream, Egypt - which relies almost totally on the waters of the Nile,says their supply will be under threat. Egypt and Sudan currently get the lion's share of the Nile's waters under colonial-era treaties. While Sudan backs Ethiopia's plans, Egypt has remained opposed.

Talks to ease tensions between the two countries have collapsed.Despite this, Ethiopian foreign ministry spokesman Amb Dina Mufti describes the dam as a "win-win" project. "Sudan has already seen the benefits and hascome on board, we hope Egypt will see that too," he says.

Aswan reports from Egypt, by Sally Nabil,

The concern in Egypt is about the potential threat to its dominance over the Nile. Egypt fears Ethiopia's dam will restrict the flow of this strategic waterway - the main source of water in a country where rainfall is scarce.The row started in 2011, and Egypt has been worried ever since that its annual quota of the Nile water might be reduced. This conflict comes at atime when different parts of Egypt are already suffering from a shortage of water. In the northern Nile Delta, the agricultural heart of Egypt, a lot of farmers are waiting with a heavy heart to see if they will be able to cultivate their land next summer.

"With even less water, we will die. We can't survive," says Hafiza, one of the farmers. Ethiopia says its hydro-electric dam will not harm either of itsdownstream countries, Egypt or Sudan. However, Egypt is highly sceptical. "It is a matter of life or death, a national security issue that can never be compromised on," says foreign ministry spokesman Badr Abdelatty. Egypt is aware that some 30% of the Ethiopian dam is completed. It is still unclear what Egypt's next step will be.

Nile River Dam Threatens War Between Egypt and Ethiopia -IPS’By Cam McGrath (March 23, 2014)

Ethiopia is building one of the largest dams in the world, the GrandMillennium Dam (GERD), on the

River Nile near the Sudan border. (InternationalRivers.org)

CAIRO - When Egypt’s then-president Mohamed Morsi said in June 2013 that “all options” including military intervention, were on the table if Ethiopia continued to develop dams on the Nile River, many dismissed it as posturing. But experts claim Cairo is deadly serious about defending itshistoric water allotment, and if Ethiopia proceeds with construction of

what is set to become Africa's largest hydroelectric dam, a military strikeis not out of the question. Relations between Egypt and Ethiopia have soured since Ethiopia beganconstruction on the 4.2 billion dollar Grand Renaissance Dam in 2011.

Egypt fears the new dam, slated to begin operation in 2017, will reduce the downstream flow of the Nile, which 85 million Egyptians rely on for almost all of their water needs. Officials in the Ministry of Irrigation claimEgypt will lose 20 to 30 percent of its share of Nile water and nearly a third of the electricity generated by its Aswan High Dam.

Ethiopia insists the Grand Renaissance Dam and its 74 billion cubic meter reservoir at the headwaters of the Blue Nile will have no adverse effect onEgypt's water share. It hopes the 6,000 megawatt hydroelectric project will lead to energy self-sufficiency and catapult the country out of grindingpoverty.

"Egypt sees its Nile water share as a matter of national security," strategicanalyst Ahmed Abdel Halim tells IPS. "To Ethiopia, the new dam is a source of national pride, and essential to its economic future."

The dispute has heated up since Ethiopia began diverting a stretch of the Nile last May, with some Egyptian parliamentarians calling for sending commandos or arming local insurgents to sabotage the dam project unlessEthiopia halts construction.

Ethiopia's state-run television responded last month with a report on a visit to the site by army commanders, who voiced their readiness to "paythe price" to defend the partially-built hydro project.

Citing a pair of colonial-era treaties, Egypt argues that it is entitled to noless than two-thirds of the Nile's water and has veto power over any upstream water projects such as dams or irrigation networks.

Accords drawn up by the British in 1929 and amended in 1959 divvied upthe Nile's waters between Egypt and Sudan without ever consulting the upstream states that were the source of those waters.

The 1959 agreement awarded Egypt 55.5 billion cubic meters of the Nile's84 billion cubic meter average annual flow, while Sudan received 18.5 billion cubic meters. Another 10 billion cubic meters is lost to evaporation in Lake Nasser, which was created by Egypt's Aswan High Dam in the 1970s, leaving barely a drop for the nine other states that share the Nile'swaters.

While the treaty's water allocations appear gravely unfair to upstream Nilestates, analysts point out that unlike the mountainous equatorial nations, which have alternative sources of water, the desert countries of Egypt andSudan rely almost entirely on the Nile for their water needs.

"One reason for the high level of anxiety is that nobody really knows howthis dam is going to affect Egypt's water share," Richard Tutwiler, a specialist in water resource management at the American University in Cairo (AUC), tells IPS. "Egypt is totally dependent on the Nile. Without it,there is no Egypt."

Egypt's concerns appear warranted as its per capita water share is just 660 cubic meters, among the world's lowest. The country's population is

forecast to double in the next 50 years, putting even further strain onscarce water resources.
But upstream African nations have their own growing populations to feed,and the thought of tapping the Nile for their agriculture or drinking water needs is all too tempting.
The desire for a more equitable distribution of Nile water rights resulted inthe 2010 Entebbe Agreement, which replaces water quotas with a clause that permits all activities provided they do not “significantly” impact the water security of other Nile Basin states. Five upstream countries – Ethiopia, Kenya, Uganda, Tanzania and Rwanda – signed the accord.
Burundi signed a year later.
Egypt rejected the new treaty outright. But after decades of wielding its political clout to quash the water projects of its impoverished upstream neighbors, Cairo now finds itself in the uncomfortable position of watchingits mastery over the Nile’s waters slip through its fingers.
“Ethiopia’s move was unprecedented. Never before has an upstream stateunilaterally built a dam without downstream approval,” Ayman Shabaana of the Cairo-based Institute for Africa Studies had told IPS last June. “If other upstream countries follow suit, Egypt will have a serious water emergency on its hands.”
Ethiopia has sought to assure its downstream neighbors that the Grand Renaissance Dam is a hydroelectric project, not an irrigation scheme. Butthe dam is part of a broader scheme that would see at least three more dams on the Nile.
Cairo has dubbed the proposal “provocative”.
Egypt has appealed to international bodies to force Ethiopia to halt construction of the dam until its downstream impact can be determined. And while officials here hope for a diplomatic solution to diffuse the crisis, security sources say Egypt’s military leadership is prepared to use force toprotect its stake in the river.
Former president Hosni Mubarak floated plans for an air strike on any damthat Ethiopia built on the Nile, and in 2010 established an airbase in southeastern Sudan as a staging point for just such an operation, according to leaked emails from the global intelligence company Stratfor posted on Wikileaks.
Egypt’s position was weakened in 2012 when Sudan, its traditional ally onNile water issues, rescinded its opposition to the Grand Renaissance Damand instead threw its weight behind the project. Analysts attribute Khartoum’s change of heart to the country’s revised domestic priorities following the secession of South Sudan a year earlier.
According to AUC’s Tutwiler, once Sudan felt assured that the dam wouldhave minimal impact on its water allotment, the mega-project’s other benefits became clear. The dam is expected to improve flood control, expand downstream irrigation capacity and, crucially, allow Ethiopia to export surplus electricity to power-hungry Sudan via a cross-border link.Some studies indicate that properly managed hydroelectric dams in Ethiopia could mitigate damaging floods and increase Egypt’s overall water share. Storing water in the cooler climes of Ethiopia would ensure

far less water is lost to evaporation than in the desert behind the AswanHigh Dam.

Egypt, however, is particularly concerned about the loss of water share during the five to ten years it will take to fill the dam's reservoir. Tutwilersays it is unlikely that Ethiopia will severely choke or stop the flow of water. Some 85 million Egyptians depend on the Nile for water.

Nile Dam Agreement: Full text of the signed doc by Egypt, Sudan andEthiopia'

(The oversigned doc on March 23, 2014)
